CATEGORY: **A-5(b) & 5(f)**

REF: **EIA NOTIFICATION OF MoEF DATED SEPT. 14, 2006**

Dear Sir,

This has reference to the above mentioned subject matter. We are submitting herewith Draft Environmental Impact & Risk Assessment Report & Brief Summary for public hearing.

We hope you would find the same in order and request your kind self to guide us for further procedure and oblige.

Thanking you
Yours faithfully,

Mr. G. Sankara Subramanian
(President)

Encl: Draft EIA report & Brief Summary

Responsible Care®

(Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii)
MINISTRY OF ENVIRONMENT AND FORESTS
New Delhi 14th September, 2006
Notification

S.O. 1533(E). - Whereas, a draft notification **under sub-rule (3) of Rule 5 of the Environment (Protection) Rules, 1986 for imposing** certain restrictions and prohibitions on new projects or activities, or on the expansion or modernization of existing projects or activities based on their potential environmental impacts as indicated in the Schedule to the notification, being undertaken in any part of India[1], unless prior environmental clearance has been accorded in accordance with the objectives of National Environment Policy **as approved by the Union Cabinet on 18th May, 2006** and the procedure specified in the notification, by the Central Government or the State or Union territory Level Environment Impact Assessment Authority (SEIAA), to be constituted by the Central Government in consultation with the State Government or the Union territory Administration concerned under sub-section (3) of section 3 of the Environment (Protection) Act, 1986 for the purpose of this notification, was published in the Gazette of India ,Extraordinary, Part II, section 3, sub-section (ii) vide number S.O. 1324 (E) dated the 15th September ,2005 inviting objections and suggestions from all persons likely to be affected thereby within a period of sixty days from the date on which copies of Gazette containing the said notification were made available to the public;

And whereas, copies of the said notification were made available to the public on 15th September, 2005;

And whereas, all objections and suggestions received in response to the above mentioned draft notification have been duly considered by the Central Government;

Now, therefore, in exercise of the powers conferred by sub-section (1) and clause (v) of sub-section (2) of section 3 of the Environment (Protection) Act, 1986, read with clause (d) of sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986 and in supersession of the notification number S.O. 60 (E) dated the 27th January, 1994, except in respect of things done or omitted to be done before such supersession, the Central Government hereby directs that on and from the date of its publication the required construction of new projects or activities or the expansion or modernization of existing projects or activities listed in the Schedule to this notification entailing capacity addition with change in process and or technology shall be

undertaken in any part of India only after the prior environmental clearance from the Central Government or as the case may be, by the State Level Environment

Impact Assessment Authority, duly constituted by the Central Government under sub-section (3) of section 3 of the said Act, in accordance with the procedure specified hereinafter in this notification.

_____

[1]Includes the territorial waters

2. Requirements of prior Environmental Clearance (EC):- The following projects or activities shall require prior environmental clearance from the concerned regulatory authority, which shall hereinafter referred to be as the Central Government in the Ministry of Environment and Forests for matters falling under Category 'A' in the Schedule and at State level the State Environment Impact Assessment Authority (SEIAA) for matters falling under Category 'B' in the said Schedule, before any construction work, or preparation of land by the project management except for securing the land, is started on the project or activity:

(i) All new projects or activities listed in the Schedule to this notification;

(ii) Expansion and modernization of existing projects or activities listed in the Schedule to this notification with addition of capacity beyond the limits specified for the concerned sector, that is, projects or activities which cross the threshold limits given in the Schedule, after expansion or modernization;

(iii) Any change in product - mix in an existing manufacturing unit included in Schedule beyond the specified range.

3. State Level Environment Impact Assessment Authority:- (1) A State Level Environment Impact Assessment Authority hereinafter referred to as the SEIAA shall be constituted by the Central Government under sub-section (3) of section 3 of the Environment (Protection) Act, 1986 comprising of three Members including a Chairman and a Member – Secretary to be nominated by the State Government or the Union territory Administration concerned.

(2) The Member-Secretary shall be a serving officer of the concerned State Government or Union territory administration familiar with environmental laws.

(3) The other two Members shall be either a professional or expert fulfilling the eligibility criteria given in Appendix VI to this notification.

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

(4) One of the specified Members in sub-paragraph (3) above who is an expert in the Environmental Impact Assessment process shall be the Chairman of the SEIAA.

(5) The State Government or Union territory Administration shall forward the names of the Members and the Chairman referred in sub- paragraph 3 to 4 above to the Central Government and the Central Government shall constitute the SEIAA as an authority for the purposes of this notification within thirty days of the date of receipt of the names.

(6) The non-official Member and the Chairman shall have a fixed term of three years (from the date of the publication of the notification by the Central Government constituting the authority).

[I] "(7) All decisions of the SEIAA shall be taken in a meeting and shall ordinarily be unanimous:

Provided that, in case a decision is taken by majority, the details of views, for and against it, shall be clearly recorded in the minutes and copy thereof sent to MoEF."

4. Categorization of projects and activities:-

(i) All projects and activities are broadly categorized in to two categories - Category A and Category B, based on the spatial extent of potential impacts and potential impacts on human health and natural and man made resources.

(ii) All projects or activities included as Category 'A' in the Schedule, including expansion and modernization of existing projects or activities and change in product mix, shall require prior environmental clearance from the Central Government in the Ministry of Environment and Forests (MoEF) on the recommendations of an Expert Appraisal Committee (EAC) to be constituted by the Central Government for the purposes of this notification;

(iii) All projects or activities included as Category 'B' in the Schedule, including expansion and modernization of existing projects or activities as specified in sub paragraph (ii) of paragraph 2, or change in product mix as specified in sub paragraph (iii) of paragraph 2, but excluding those which fulfill the General Conditions (GC) stipulated in the Schedule, *will* require prior environmental clearance from the State/Union territory Environment Impact Assessment Authority (SEIAA). The SEIAA shall base its decision on the recommendations of a State or Union territory level Expert Appraisal Committee (SEAC) as to be constituted for in this notification. [II] "In the absence of a duly constituted SEIAA

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

or SEAC, a Category 'B' project shall be considered at Central Level as a Category 'B' project;"

5. Screening, Scoping and Appraisal Committees:-

The same Expert Appraisal Committees (EACs) at the Central Government and SEACs (hereinafter referred to as the (EAC) and (SEAC) at the State or the Union territory level shall screen, scope and appraise projects or activities in Category 'A' and Category 'B' respectively. EAC and SEAC's shall meet at least once every month.

(a) The composition of the EAC shall be as given in Appendix VI. The SEAC at the State or the Union territory level shall be constituted by the Central Government in consultation with the concerned State Government or the Union territory Administration with identical composition;

(b) The Central Government may, with the prior concurrence of the concerned State Governments or the Union territory Administrations, constitutes one SEAC for more than one State or Union territory for reasons of administrative convenience and cost;

(c) The EAC and SEAC shall be reconstituted after every three years;

(d) The authorised members of the EAC and SEAC, concerned, may inspect any site(s) connected with the project or activity in respect of which the prior environmental clearance is sought, for the purposes of screening or scoping or appraisal, with prior notice of at least seven days to the applicant, who shall provide necessary facilities for the inspection;

(e) The EAC and SEACs shall function on the principle of collective responsibility. The Chairperson shall endeavour to reach a consensus in each case, and if consensus cannot be reached, the view of the majority shall prevail.

6. Application for Prior Environmental Clearance (EC):-

An application seeking prior environmental clearance in all cases shall be made in the prescribed Form 1 annexed herewith and Supplementary Form 1A, if applicable, as given in Appendix II, after the identification of prospective site(s) for the project and/or activities to which the application relates, before commencing any construction activity, or preparation of land, at the site by the applicant. The applicant shall furnish, along with the application, a copy

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

of the pre-feasibility project report except that, in case of construction projects or activities (item 8 of the Schedule) in addition to Form 1 and the Supplementary Form 1A, a copy of the conceptual plan shall be provided, instead of the pre-feasibility report.

7. Stages in the Prior Environmental Clearance (EC) Process for New Projects:-

7(i) The environmental clearance process for new projects will comprise of a maximum of four stages, all of which may not apply to particular cases as set forth below in this notification. These four stages in sequential order are:-

- Stage (1) Screening (Only for Category 'B' projects and activities)
- Stage (2) Scoping
- Stage (3) Public Consultation
- Stage (4) Appraisal

I. **Stage (1) - Screening**:

In case of Category 'B' projects or activities, this stage will entail the scrutiny of an application seeking prior environmental clearance made in Form 1 by the concerned State level Expert Appraisal Committee (SEAC) for determining whether or not the project or activity requires further environmental studies for preparation of an Environmental Impact Assessment (EIA) for its appraisal prior to the grant of environmental clearance depending up on the nature and location specificity of the project . The projects requiring an Environmental Impact Assessment report shall be termed Category 'B1' and remaining projects shall be termed Category 'B2' and will not require an Environment Impact Assessment report. For categorization of projects into B1 or B2 except item 8 (b), the Ministry of Environment and Forests shall issue appropriate guidelines from time to time.

II. **Stage (2) - Scoping**:

(i) "Scoping": refers to the process by which the Expert Appraisal Committee in the case of Category 'A' projects or activities, and State level Expert Appraisal Committee in the case of Category 'B1' projects or activities, including applications for expansion and/or modernization and/or change in product mix of existing projects or activities, determine detailed and comprehensive Terms Of Reference (TOR) addressing all relevant environmental concerns for the preparation of an Environment Impact Assessment (EIA) Report in respect of the project or activity for which prior environmental clearance is sought. The Expert Appraisal Committee or State level Expert Appraisal Committee

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

concerned shall determine the Terms of Reference on the basis of the information furnished in the prescribed application Form1/Form 1A including Terns of Reference proposed by the applicant, a site visit by a sub- group of Expert Appraisal Committee or State level Expert Appraisal Committee concerned only if considered necessary by the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned, Terms of Reference suggested by the applicant if furnished and other information that may be available with the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned. All projects and activities listed as Category 'B' in Item 8 of the Schedule (Construction/Township/Commercial Complexes /Housing) shall not require Scoping and will be appraised on the basis of Form 1/ Form 1A and the conceptual plan.

(ii) The Terms of Reference (TOR) shall be conveyed to the applicant by the Expert Appraisal Committee or State Level Expert Appraisal Committee as concerned within sixty days of the receipt of Form 1. In the case of Category A Hydroelectric projects Item 1(c) (i) of the Schedule the Terms of Reference shall be conveyed along with the clearance for pre-construction activities .If the Terms of Reference are not finalized and conveyed to the applicant within sixty days of the receipt of Form 1, the Terms of Reference suggested by the applicant shall be deemed as the final Terms of Reference approved for the EIA studies**.** The approved Terms of Reference shall be displayed on the website of the Ministry of Environment and Forests and the concerned State Level Environment Impact Assessment Authority.

(iii) Applications for prior environmental clearance may be rejected by the regulatory authority concerned on the recommendation of the EAC or SEAC concerned at this stage itself. In case of such rejection, the decision together with reasons for the same shall be communicated to the applicant in writing within sixty days of the receipt of the application.

III. **Stage (3) - Public Consultation**:

(i) "Public Consultation" refers to the process by which the concerns of local affected persons and others who have plausible stake in the environmental impacts of the project or activity are ascertained with a view to taking into account all the material concerns in the project or activity design as appropriate. All Category 'A' and Category B1 projects or activities shall undertake Public Consultation, except the following:-

(a) modernization of irrigation projects (item 1(c) (ii) of the Schedule).

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

(b) all projects or activities located within industrial estates or parks (item 7(c) of the Schedule) approved by the concerned authorities, and which are not disallowed in such approvals.

(c) expansion of Roads and Highways (item 7 (f) of the Schedule) which do not involve any further acquisition of land.

[III] "(cc) maintenance dredging provided the dredged material shall be disposed within port limits.";

[III] "(d) All Building or Construction projects or Area Development projects (which do not contain any category 'A' projects and activities) and Townships (item 8(a) and 8(b) in the Schedule to the notification)."

e) all Category 'B2' projects and activities.

f) all projects or activities concerning national defence and security or involving other strategic considerations as determined by the Central Government.

(ii) The Public Consultation shall ordinarily have two components comprising of:-

(a) a public hearing at the site or in its close proximity- district wise, to be carried out in the manner prescribed in Appendix IV, for ascertaining concerns of local affected persons;

(b) obtain responses in writing from other concerned persons having a plausible stake in the environmental aspects of the project or activity.

(iii) the public hearing at, or in close proximity to, the site(s) in all cases shall be conducted by the State Pollution Control Board (SPCB) or the Union territory Pollution Control Committee (UTPCC) concerned in the specified manner and forward the proceedings to the regulatory authority concerned within 45(forty five) of a request to the effect from the applicant.

(iv) in case the State Pollution Control Board or the Union territory Pollution Control Committee concerned does not undertake and complete the public hearing within the specified period, and/or does not convey the proceedings of the public hearing within the prescribed period directly to the regulatory authority concerned as above, the regulatory

---

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

authority shall engage another public agency or authority which is not subordinate to the regulatory authority, to complete the process within a further period of forty five days,.

(v) If the public agency or authority nominated under the sub paragraph (iii) above reports to the regulatory authority concerned that owing to the local situation, it is not possible to conduct the public hearing in a manner which will enable the views of the concerned local persons to be freely expressed, it shall report the facts in detail to the concerned regulatory authority, which may, after due consideration of the report and other reliable information that it may have, decide that the public consultation in the case need not include the public hearing.

(vi) For obtaining responses in writing from other concerned persons having a plausible stake in the environmental aspects of the project or activity, the concerned regulatory authority and the State Pollution Control Board (SPCB) or the Union territory Pollution Control Committee (UTPCC) shall invite responses from such concerned persons by placing on their website the Summary EIA report prepared in the format given in Appendix IIIA by the applicant along with a copy of the application in the prescribed form, within seven days of the receipt of a written request for arranging the public hearing. Confidential information including non-disclosable or legally privileged information involving Intellectual Property Right, source specified in the application shall not be placed on the web site**.** The regulatory authority concerned may also use other appropriate media for ensuring wide publicity about the project or activity. The regulatory authority shall, however, make available on a written request from any concerned person the Draft EIA report for inspection at a notified place during normal office hours till the date of the public hearing. All the responses received as part of this public consultation process shall be forwarded to the applicant through the quickest available means.

(vii) After completion of the public consultation, the applicant shall address all the material environmental concerns expressed during this process, and make appropriate changes in the draft EIA and EMP. The final EIA report, so prepared, shall be submitted by the applicant to the concerned regulatory authority for appraisal. The applicant may alternatively submit a supplementary report to draft EIA and EMP addressing all the concerns expressed during the public consultation.

IV. Stage (4) - Appraisal:

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

(i) Appraisal means the detailed scrutiny by the Expert Appraisal Committee or State Level Expert Appraisal Committee of the application and other documents like the Final EIA report, outcome of the public consultations including public hearing proceedings, submitted by the applicant to the regulatory authority concerned for grant of environmental clearance. This appraisal shall be made by Expert Appraisal Committee or State Level Expert Appraisal Committee concerned in a transparent manner in a proceeding to which the applicant shall be invited for furnishing necessary clarifications in person or through an authorized representative. On conclusion of this proceeding, the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned shall make categorical recommendations to the regulatory authority concerned either for grant of prior environmental clearance on stipulated terms and conditions, or rejection of the application for prior environmental clearance, together with reasons for the same.

(ii) The appraisal of all projects or activities which are not required to undergo public consultation, or submit an Environment Impact Assessment report, shall be carried out on the basis of the prescribed application Form 1 and Form 1A as applicable, any other relevant validated information available and the site visit wherever the same is considered as necessary by the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned.

(iii) The appraisal of an application be shall be completed by the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned within sixty days of the receipt of the final Environment Impact Assessment report and other documents or the receipt of Form 1 and Form 1 A, where public consultation is not necessary and the recommendations of the Expert Appraisal Committee or State Level Expert Appraisal Committee shall be placed before the competent authority for a final decision within the next fifteen days .The prescribed procedure for appraisal is given in Appendix V ;

7(ii). Prior Environmental Clearance (EC) process for Expansion or Modernization or Change of product mix in existing projects:

All applications seeking prior environmental clearance for expansion with increase in the production capacity beyond the capacity for which prior environmental clearance has been granted under this notification or with increase in either lease area or production capacity in the case of mining projects or for the modernization of an existing unit with increase in

---

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

the total production capacity beyond the threshold limit prescribed in the Schedule to this notification through change in process and or technology or involving a change in the product –mix shall be made in Form I and they shall be considered by the concerned Expert Appraisal Committee or State Level Expert Appraisal Committee within sixty days, who will decide on the due diligence necessary including preparation of EIA and public consultations and the application shall be appraised accordingly for grant of environmental clearance.

8. Grant or Rejection of Prior Environmental Clearance (EC):

(i) The regulatory authority shall consider the recommendations of the EAC or SEAC concerned and convey its decision to the applicant within forty five days of the receipt of the recommendations of the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned or in other words within one hundred and five days of the receipt of the final Environment Impact Assessment Report, and where Environment Impact Assessment is not required, within one hundred and five days of the receipt of the complete application with requisite documents, except as provided below.

(ii) The regulatory authority shall normally accept the recommendations of the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned. In cases where it disagrees with the recommendations of the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned, the regulatory authority shall request reconsideration by the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned within forty five days of the receipt of the recommendations of the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned while stating the reasons for the disagreement. An intimation of this decision shall be simultaneously conveyed to the applicant. The Expert Appraisal Committee or State Level Expert Appraisal Committee concerned, in turn, shall consider the observations of the regulatory authority and furnish its views on the same within a further period of sixty days. The decision of the regulatory authority after considering the views of the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned shall be final and conveyed to the applicant by the regulatory authority concerned within the next thirty days.

(iii) In the event that the decision of the regulatory authority is not communicated to the applicant within the period specified in sub-paragraphs (i) or (ii) above, as applicable, the

applicant may proceed as if the environment clearance sought for has been granted or denied by the regulatory authority in terms of the final recommendations of the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned.

(iv) On expiry of the period specified for decision by the regulatory authority under paragraph (i) and (ii) above, as applicable, the decision of the regulatory authority, and the final recommendations of the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned shall be public documents.

(v) Clearances from other regulatory bodies or authorities shall not be required prior to receipt of applications for prior environmental clearance of projects or activities, or screening, or scoping, or appraisal, or decision by the regulatory authority concerned, unless any of these is sequentially dependent on such clearance either due to a requirement of law, or for necessary technical reasons.

(vi) Deliberate concealment and/or submission of false or misleading information or data which is material to screening or scoping or appraisal or decision on the application shall make the application liable for rejection, and cancellation of prior environmental clearance granted on that basis. Rejection of an application or cancellation of a prior environmental clearance already granted, on such ground, shall be decided by the regulatory authority, after giving a personal hearing to the applicant, and following the principles of natural justice.

9. Validity of Environmental Clearance (EC):

The "Validity of Environmental Clearance" is meant the period from which a prior environmental clearance is granted by the regulatory authority, or may be presumed by the applicant to have been granted under sub paragraph (iv) of paragraph 7 above, to the start of production operations by the project or activity, or completion of all construction operations in case of construction projects (item 8 of the Schedule), to which the application for prior environmental clearance refers. The prior environmental clearance granted for a project or activity shall be valid for a period of ten years in the case of River Valley projects (item 1(c) of the Schedule), project life as estimated by Expert Appraisal Committee or State Level Expert Appraisal Committee subject to a maximum of thirty years for mining projects and five years in the case of all other projects and activities. However, in the case of Area Development projects and Townships [item 8(b)], the validity

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

period shall be limited only to such activities as may be the responsibility of the applicant as a developer. This period of validity may be extended by the regulatory authority concerned by a maximum period of five years provided an application is made to the regulatory authority by the applicant within the validity period, together with an updated Form 1, and Supplementary Form 1A, for Construction projects or activities (item 8 of the Schedule). In this regard the regulatory authority may also consult the Expert Appraisal Committee or State Level Expert Appraisal Committee as the case may be.

10. Post Environmental Clearance Monitoring:

[IV] "(i)(a) In respect of Category 'A' project, it shall be mandatory for the project proponent to make public the environment clearance granted for their project along with the environmental conditions and safeguards at their cost by prominently advertising it at least in two local newspapers of the district or State where the project is located and in addition, this shall also be displayed in the project proponent's website permanently.

(b) In respect of Category 'B' projects, irrespective of its clearance by MoEF / SEIAA, the project proponent shall prominently advertise in the newspapers indicating that the project has been accorded environment clearance and the details of the MoEF website where it is displayed.

(c) The Ministry of Environment and Forests and the State/Union Territory Level Environmental Impact Assessment Authorities (SEIAAs), as the case may be, shall also place the environmental clearance in the public domain on Governmental portal.

(d) The copies of the environmental clearance shall be submitted by the project proponents to the Heads of local bodies, Panchayats and Municipal Bodies in addition to the relevant offices of the Government who in turn has to display the same for 30 days from the date of receipt.";

[IV] (ii) It shall be mandatory for the project management to submit half-yearly compliance reports in respect of the stipulated prior environmental clearance terms and conditions in hard and soft copies to the regulatory authority concerned, on 1st June and 1st December of each calendar year.

[IV] (iii) All such compliance reports submitted by the project management shall be public documents. Copies of the same shall be given to any person on application to the

---

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

concerned regulatory authority. The latest such compliance report shall also be displayed on the web site of the concerned regulatory authority.

11. Transferability of Environmental Clearance (EC):

A prior environmental clearance granted for a specific project or activity to an applicant may be transferred during its validity to another legal person entitled to undertake the project or activity on application by the transferor, or by the transferee with a written "no objection" by the transferor, to, and by the regulatory authority concerned, on the same terms and conditions under which the prior environmental clearance was initially granted, and for the same validity period. No reference to the Expert Appraisal Committee or State Level Expert Appraisal Committee concerned is necessary in such cases.

12. Operation of EIA Notification, 1994, till disposal of pending cases:

From the date of final publication of this notification the Environment Impact Assessment (EIA) notification number S.O.60 (E) dated 27th January, 1994 is hereby superseded, except in suppression of the things done or omitted to be done before such suppression to the extent that in case of all or some types of applications made for prior environmental clearance and pending on the date of final publication of this notification, the Central Government may relax any one or all provisions of this notification except the list of the projects or activities requiring prior environmental clearance in Schedule I , or continue operation of some or all provisions of the said notification, for a period not exceeding one year from the date of issue of this notification.

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

SCHEDULE

(See paragraph 2 and 7)

LIST OF PROJECTS OR ACTIVITIES REQUIRING PRIOR ENVIRONMENTAL CLEARANCE

Project or Activity		Category with threshold limit		Conditions if any
		A	B	
1		Mining, extraction of natural resources and power generation (for a specified production capacity)		
(1)	(2)	(3)	(4)	(5)
[v] "1(a)	(i) Mining of minerals.	≥ 50 ha. of mining lease area in respect of non-coal mine lease. > 150 ha of mining lease area in respect of coal mine lease. Asbestos mining irrespective of mining area	<50 ha ≥ 5 ha .of mining lease area in respect of non-coal mine lease. ≤ 150 ha ≥ 5 ha of mining lease area in respect of coal mine lease.	General Condition shall apply Note: Mineral prospecting Is exempted.";
	(ii) Slurry pipelines (coal lignite and other ores) passing through national parks / sanctuaries / coral reefs, ecologically sensitive areas.	All projects.		
1(b)	Offshore and onshore oil and gas exploration, development & production	All projects		Note Exploration Surveys (not involving drilling) are exempted provided the concession areas have got previous clearance for physical survey
1(c)	River Valley pojects	(i) ≥ 50 MW hydroelectric power generation; (ii) ≥ 10,000 ha. of culturable command area	(i) < 50 MW ≥ 25 MW hydroelectric power generation; (ii) < 10,000 ha. of culturable command area	[v] "General Condition shall apply. Note: Irrigation projects not involving submergence or inter-state domain shall be appraised by the SEIAA as Category 'B' Projects.";

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

(1)	(2)	(3)	(4)	(5)
1(d)	Thermal Power Plants	[V] " ≥ 500 MW (coal / lignite / naphtha & gas based); ≥ 50 MW (Pet coke diesel and all other fuels including refinery residual oil waste except biomass); ≥ 20 MW (based on biomass or non hazardous municipal waste as fuel).”;	< 500 MW (coal / lignite / naphtha & gas based); <50 MW ≥ 5MW (Pet coke, diesel and all other fuels including refinery residual oil waste except biomass); ≥ 20 MW > 15 MW (based on biomass or non hazardous municipal waste as fuel).”;	[V] “General Condition shall apply. Note: (i) Power plant up to 15 MW, based on biomass and using auxiliary fuel such as coal / lignite / petroleum products up to 15% are exempt. (ii) Power plant up to 15 MW, based on non-hazardous municipal waste and using auxiliary fuel such as coal / lignite / petroleum products up to 15% are exempt. (iii) Power plants using waste heat boiler without any auxiliary fuel are exempt.”;
1(e)	Nuclear power projects and processing of nuclear fuel	All projects		
2		Primary Processing		
2(a)	Coal washeries	≥ 1 million ton/annum throughput of coal	<1million ton/annum throughput of coal	General Condition shall apply (If located within mining area the proposal shall be appraised together with the mining proposal)
2 (b)	Mineral beneficiation	≥ 0.1million ton/annum mineral throughput	< 0.1million ton/annum mineral throughput	General Condition shall apply (Mining proposal with Mineral beneficiation shall be appraised together for grant of clearance)

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

3		Materials Production		
(1)	(2)	(3)	(4)	(5)
3(a)	Metallurgical industries (ferrous & non ferrous)	a)Primary metallurgical industry All projects b) Sponge iron manufacturing ≥ 200TPD c) Secondary metallurgical processing industry All toxic and heavy metal producing units ≥ 20,000 tonnes /annum	Sponge iron manufacturing <200TPD Secondary metallurgical processing industry i.)All toxic and heavy metal producing units <20,000 tonnes /annum ii.)All other non –toxic secondary metallurgical processing industries >5000 tonnes/annum	[V] "General condition shall apply. Note: (i) The recycling industrial units registered under the HSM Rules, are exempted. (ii) In case of secondary metallurgical processing industrial units, those projects involving operation of furnaces only such as induction and electrical arc furnace, submerged arc furnace, and cupola with capacity more than 30,000 tonnes per annum (TPA) would require environmental clearance. (iii) Plant / units other than power plants (given against entry no. 1(d) of the schedule), based on municipal solid waste (non-hazardous) are exempted."
3(b)	Cement plants	≥ 1.0 million tonnes/annum production capacity	<1.0 million tonnes/annum production capacity. All Stand alone grinding units	General Condition shall apply
4		Materials Processing		
(1)	(2)	(3)	(4)	(5)
4(a)	Petroleum refining industry	All projects	-	-
4(b)	Coke oven plants	≥2,50,000 tonnes/annum	<2,50,000 & ≥25,000 tonnes/annum	[V] "General Condition shall apply."
4(c)	Asbestos milling and asbestos based products	All projects	-	-

---

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

(1)	(2)	(3)	(4)	(5)
4(d)	Chlor-alkali industry	≥300 TPD production Capacity or a unit located out side the notified industrial area/ estate	v "(i) All projects irrespective of the size, if located in a Notified Industrial Area/ Estate. (ii) <300 tonnes per day (TPD) and located outside a Notified Industrial Area/ Estate."	v "General as well as specific condition shall apply. No new Mercury Cell based plants will be permitted and existing units converting to membrane cell technology are exempted from this notification."
4(e)	Soda ash Industry	All projects	-	-
4(f)	Leather/skin/hide processing industry	New projects outside the industrial area or expansion of existing units out side the industrial area	All new or expansion of projects located within a notified industrial area/ estate	v "General as well as specific condition shall apply."
5		Manufacturing / Fabrication		
5(a)	Chemical fertilizers	v "All projects except Single Super Phosphate."	v "Single Super Phosphate."	-
5(b)	Pesticides industry and pesticide specific intermediates (excluding formulations)	All units producing technical grade pesticides	-	-
5(c)	Petro-chemical complexes (industries based on processing of petroleum fractions & natural gas and/or reforming to aromatics)	All projects -	-	-
5(d)	Manmade fibers manufacturing	Rayon	Others	General Condition shall apply
5(e)	Petrochemical based processing (processes other than cracking & reformation and not covered under the complexes)	Located out side the notified industrial area/ estate -	Located in a notified industrial area/ estate	v "General as well as specific condition shall apply."

Note: 1. Capital dredging inside and outside the ports or harbors and channels are included; 2. Maintenance dredging is exempt provided it formed part of the original proposal for which Environment Management Plan (EMP) was prepared and environmental clearance obtained."
7(f)	Highways	i) New National High ways; and ii) Expansion of National High ways greater than 30 KM, involving additional right of way greater than 20m involving land acquisition and passing through more than one State.	[V] " i) All State Highway Project; and ii) State Highway expansion projects in hilly terrain (above 1,000 m AMSL) and or ecologically sensitive areas."	General Condition shall apply. Note: Highways include expressways."
7(g)	Aerial ropeways	[V(xvi)(a)] "(i) All projects located at altitude of 1,000 mtr. And above. (ii) All projects located in notified ecologically sensitive areas."	[V(xvi)(b)] "All projects except those covered in column (3)."	General Condition shall apply
7(h)	Common Effluent Treatment Plants (CETPs)		All projects	General Condition shall apply
7(i)	Common Municipal Solid Waste Management Facility (CMSWMF)		All projects	General Condition shall apply
8		Building /Construction projects/Area Development projects and Townships		
8(a)	Building and Construction projects		≥20000 sq.mtrs and <1,50,000 sq.mtrs. of built-up area#	#(built up area for covered construction; in the case of facilities open to the sky, it will be the activity area)
8(b)	Townships and Area Development projects.		Covering an area ≥ 50 ha and or built up area ≥1,50,000 sq .mtrs ++	++All projects under Item 8(b) shall be appraised as Category B1

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

Note:-

[V(xvii)] **"General Condition (GC):**
Any project or activity specified in Category 'B' will be treated as Category A, if located in whole or in part within 10 km from the boundary of: (i) Protected Areas notified under the Wild Life (Protection) Act, 1972, (ii) Critically Polluted areas as identified by the Central Pollution Control Board from time to time, (iii) Eco-sensitive areas as notified under section 3 of the Environment (Protection) Act, 1986, such as, Mahabaleshwar Panchgani, Matheran, Pachmarhi, Dahanu, Doon Valley, and (iv) inter-State boundaries and international boundaries:

Provided that the requirement regarding distance of 10 km of the inter-State boundaries can be reduced or completely done away with by an agreement between the respective States or U.Ts sharing the common boundary in case the activity does not fall within 10 kilometres of the areas mentioned at item (i), (ii) and (iii) above."

Specific Condition (SC):
If any Industrial Estate/Complex / Export processing Zones /Special Economic Zones/Biotech Parks / Leather Complex with homogeneous type of industries such as Items 4(d), 4(f), 5(e), 5(f), or those Industrial estates with pre –defined set of activities (not necessarily homogeneous, obtains prior environmental clearance, individual industries including proposed industrial housing within such estates /complexes will not be required to take prior environmental clearance, so long as the Terms and Conditions for the industrial estate/complex are complied with (Such estates/complexes must have a clearly identified management with the legal responsibility of ensuring adherence to the Terms and Conditions of prior environmental clearance, who may be held responsible for violation of the same throughout the life of the complex/estate).

19.	If yes, date of submission	
20.	If no, reason	
21.	Whether the proposal involves approval/ clearance under: If yes, details of the same and their status to be given. (a) The Forest (Conservation) Act, 1980 ? (b) The Wildlife (Protection) Act, 1972 ? (c) The C.R.Z. Notification, 1991 ?	
22.	Whether there is any Government Order/Policy relevant/ relating to the site ?	
23.	Forest land involved (hectares)	
24.	Whether there is any litigation pending against the project and/or land in which the project is propose to be set up ? (a) Name of the Court. (b) Case No. (c) Orders/directions of the Court, if any and its relevance with the proposed project.	

(II) Activity

1. Construction, operation or decommissioning of the Project involving actions, which will cause physical changes in the locality (topography, land use, changes in water bodies, etc.)

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities /rates, wherever possible) with source of information data
1.1	Permanent or temporary change in land use, land cover or topography including increase in intensity of land use (with respect to local land use plan)		
1.2	Clearance of existing land, vegetation and buildings?		
1.3	Creation of new land uses?		
1.4	Pre-construction investigations e.g. bore houses, soil testing?		
1.5	Construction works?		
1.6	Demolition works?		
1.7	Temporary sites used for construction works or housing of construction workers?		
1.8	Above ground buildings, structures or earthworks including linear structures, cut And fill or excavations		

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

1.9	Underground works including mining or tunneling?		
1.10	Reclamation works?		
1.11	Dredging?		
1.12	Offshore structures?		
1.13	Production and manufacturing processes?		
1.14	Facilities for storage of goods or materials?		
1.15	Facilities for treatment or disposal of solid waste or liquid effluents?		
1.16	Facilities for long term housing of operational workers?		
1.17	New road, rail or sea traffic during construction or operation?		
1.18	New road, rail, air waterborne or other transport infrastructure including new or altered routes and stations, ports, airports etc?		
1.19	Closure or diversion of existing transport routes or infrastructure leading to changes in traffic movements?		
1.20	New or diverted transmission lines or pipelines?		
1.21	Impoundment, damming, culverting, realignment or other changes to the ydrology of watercourses or aquifers?		
1.22	Stream crossings?		
1.23	Abstraction or transfers of water form ground or surface waters?		
1.24	Changes in water bodies or the land surface affecting drainage or run-off?		
1.25	Transport of personnel or materials for construction, operation or decommissioning?		
1.26	Long-term dismantling or decommissioning or restoration works?		
1.27	Ongoing activity during decommissioning which could have an impact on the environment?		
1.28	Influx of people to an area in either temporarily or permanently?		
1.29	Introduction of alien species?		

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

1.30	Loss of native species or genetic diversity?		
1.31	Any other actions?		

2. Use of Natural resources for construction or operation of the Project (such as land, water, materials or energy, especially any resources which are non-renewable or in short supply):

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities /rates, wherever possible) with source of information data
2.1	Land especially undeveloped or agricultural land (ha)		
2.2	Water (expected source & competing users) unit: KLD		
2.3	Minerals (MT)		
2.4	Construction material – stone, aggregates, sand / soil (expected source – MT)		
2.5	Forests and timber (source – MT)		
2.6	Energy including electricity and fuels (source, competing users) Unit: fuel (MT), energy (MW)		
2.7	Any other natural resources (use appropriate standard units)		

3. Use, storage, transport, handling or production of substances or materials, which could be harmful to human health or the environment or raise concerns about actual or perceived risks to human health.

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities /rates, wherever possible) with source of information data
3.1	Use of substances or materials, which are hazardous (as per MSIHC rules) to human health or the environment (flora, fauna, and water supplies)		
3.2	Changes in occurrence of disease or affect disease vectors (e.g. insect or water borne diseases)		
3.3	Affect the welfare of people e.g. by changing living conditions?		
3.4	Vulnerable groups of people who could be affected by the project e.g. hospital patients, children, the elderly etc.,		
3.5	Any other causes		

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

4. Production of solid wastes during construction or operation or decommissioning (MT/month)

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
4.1	Spoil, overburden or mine wastes		
4.2	Municipal waste (domestic and or commercial wastes)		
4.3	Hazardous wastes (as per Hazardous Waste Management Rules)		
4.4	Other industrial process wastes		
4.5	Surplus product		
4.6	Sewage sludge or other sludge from effluent treatment.		
4.7	Construction or demolition wastes		
4.8	Redundant machinery or equipment		
4.9	Contaminated soils or other materials		
4.10	Agricultural wastes		
4.11	Other solid wastes		

5. Release of pollutants or any hazardous, toxic or noxious substances to air (Kg/hr)

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
5.1	Emissions from combustion of fossil fuels from stationary or mobile sources.		
5.2	Emissions from production processes		
5.3	Emissions from materials handling including storage or transport		
5.4	Emissions from construction activities including plant and equipment		
5.5	Dust or odours from handling of materials including construction materials, sewage and waste		

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

5.6	Emissions from incineration of waste		
5.7	Emissions from burning of waste in open air (e.g. slash materials, construction debris)		
5.8	Emissions from any other sources		

6. Generation of Noise and Vibration, and Emissions of Light and Heat:

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
6.1	From operation of equipment e.g. engines, ventilation plant, crushers		
6.2	From industrial or similar processes		
6.3	From construction or demolition		
6.4	From blasting or piling		
6.5	From construction or operational traffic		
6.6	From lighting or cooling systems		
6.7	From any other sources		

7. Risks of contamination of land or water from releases of pollutants into the ground or into sewers, surface waters, groundwater, coastal waters or the sea:

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
7.1	From handling, storage, use or spillage of hazardous materials		
7.2	From discharge of sewage or other effluents to water or the land (expected mode and place of discharge)		
7.3	By deposition of pollutants emitted to air into the land or into water		
7.4	From any other sources		
7.5	Is there a risk of long term build up of pollutants in the environment from these sources?		

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

8. Risk of accidents during construction or operation of the Project, which could affect human health or the environment

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
8.1	From explosions, spillages, fires etc from storage, handling, use or production of hazardous substances		
8.2	From any other causes		
8.3	Could the project be affected by natural disasters causing environmental damage (e.g. floods, earthquakes, landslides, cloudburst etc)?		

9. Factors which should be considered (such as consequential development) which could lead to environmental effects or the potential for cumulative impacts with other existing or planned activities in the locality

S.No.	Information/Checklist confirmation	Yes/No	Details thereof (with approximate quantities/rates, wherever possible) with source of information data
9.1	Lead to development of supporting**.** lities, ancillary development or development stimulated by the project which could have impact on the environment e.g.: • Supporting infrastructure (roads, power supply, waste or waste water treatment, etc.) • housing development • extractive industries • supply industries • other		
9.2	Lead to after-use of the site, which could have an impact on the environment		
9.3	Set a precedent for later developments		
9.4	Have cumulative effects due to proximity to other existing or planned projects with similar effects		

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

(III) Environmental Sensitivity

S.No.	Areas	Name/ Identity	Aerial distance (within 15 km.) Proposed project location boundary
1	Areas protected under international conventions, national or local legislation for their ecological, landscape, cultural or other related value		
2	Areas which are important or sensitive for ecological reasons - Wetlands, watercourses or other water bodies, coastal zone, biospheres, mountains, forests		
3	Areas used by protected, important or sensitive species of flora or fauna for breeding, esting, foraging, resting, over wintering, migration		
4	Inland, coastal, marine or underground waters		
5	State, National boundaries		
6	Routes or facilities used by the public for access to recreation or other tourist, pilgrim areas		
7	Defence installations		
8	Densely populated or built-up area		
9	Areas occupied by sensitive man-made land uses *(hospitals, schools, places of worship, community facilities)*		
10	Areas containing important, high quality or scarce Resources *(ground water resources, surface resources, forestry, agriculture, fisheries, tourism, minerals)*		
11	Areas already subjected to pollution or environmental damage. *(those where existing legal environmental standards are exceeded)*		
12	Areas susceptible to natural hazard which could cause the project to present environmental Problems (*earthquakes, subsidence, landslides, erosion, Flooding or extreme or adverse climatic conditions*)		

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

(IV). Proposed Terms of Reference for EIA studies

VI(b) "I hereby given undertaking that the data and information given in the application and enclosures are true to the best of my knowledge and belief and I am aware that if any part of the data and information submitted is found to be false or misleading at any stage, the project will be rejected and clearance give, if any to the project will be revoked at our risk and cost."

Date: _____

Place: _____

Signature of the applicant
With Name and Full Address
(Project Proponent/Authorised Signatory)

NOTE:

1. The projects involving clearance under Coastal Regulation Zone Notification, 1991 shall submit with the application a C.R.Z. map duly demarcated by one of the authorized agencies, showing the project activities, w.r.t. C.R.Z. (at the stage of TOR) and the recommendations of the State Coastal Zone Management Authority (at the stage of EC). Sinmultaneous action shall also be taken to obtain the requisite clearance under the provisions of the C.R.Z. Notification, 1991 for the activities to be located in the CRZ.
2. The projects to be located within 10 km of the National Prks, Sancturies, Biosphere Reserves, Migratory Corridors of Wile Animals, the project proponenet shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden thereon (at the stage of EC)."
3. All correspondence with the Ministry of Environment & Forests including aubmission of application for TOR/Environmental Clearance, subsequent clarifications, as may be required from time to time, participation in the EAC Meeting on behalf of the project proponent shall be made by the authorized signatory only. The authorized signatory should also submit a document in support of his claim of being and authorized signatory for the specific project."

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

APPENDIX II
(See paragraph 6)

FORM-1 A (only for construction projects listed under item 8 of the Schedule)

CHECK LIST OF ENVIRONMENTAL IMPACTS

(Project proponents are required to provide full information and wherever necessary attach explanatory notes with the Form and submit along with proposed environmental management plan & monitoring programme)

1. LAND ENVIRONMENT

(Attach panoramic view of the project site and the vicinity)

1.1. Will the existing landuse get significantly altered from the project that is not consistent with the surroundings? (Proposed landuse must conform to the approved Master Plan / Development Plan of the area. Change of landuse if any and the statutory approval from the competent authority be submitted). Attach Maps of (i) site location, (ii) surrounding features of the proposed site (within 500 meters) and (iii) the site (indicating levels & contours) to appropriate scales. If not available attach only conceptual plans.

1.2. List out all the major project requirements in terms of the land area, built up area, water consumption, power requirement, connectivity, community facilities, parking needs etc.

1.3. What are the likely impacts of the proposed activity on the existing facilities adjacent to the proposed site? (Such as open spaces, community facilities, details of the existing landuse, disturbance to the local ecology).

1.4. Will there be any significant land disturbance resulting in erosion, subsidence & instability? (Details of soil type, slope analysis, vulnerability to subsidence, seismicity etc may be given).

1.5. Will the proposal involve alteration of natural drainage systems? (Give details on a contour map showing the natural drainage near the proposed project site)

1.6. What are the quantities of earthwork involved in the construction activity-cutting, filling, reclamation etc. (Give details of the quantities of earthwork involved, transport of fill materials from outside the site etc.)

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

1.7. Give details regarding water supply, waste handling etc during the construction period.

1.8. Will the low lying areas & wetlands get altered? (Provide details of how low lying and wetlands are getting modified from the proposed activity)

1.9. Whether construction debris & waste during construction cause health hazard? (Give quantities of various types of wastes generated during construction including the construction labour and the means of disposal)

2. WATER ENVIRONMENT

2.1. Give the total quantity of water requirement for the proposed project with the breakup of requirements for various uses. How will the water requirement met? State the sources & quantities and furnish a water balance statement.

2.2. What is the capacity (dependable flow or yield) of the proposed source of water?

2.3. What is the quality of water required, in case, the supply is not from a municipal source? (Provide physical, chemical, biological characteristics with class of water quality)

2.4. How much of the water requirement can be met from the recycling of treated wastewater? (Give the details of quantities, sources and usage)

2.5. Will there be diversion of water from other users? (Please assess the impacts of the project on other existing uses and quantities of consumption)

2.6. What is the incremental pollution load from wastewater generated from the proposed activity? (Give details of the quantities and composition of wastewater generated from the proposed activity)

2.7. Give details of the water requirements met from water harvesting? Furnish details of the facilities created.

2.8. What would be the impact of the land use changes occurring due to the proposed project on the runoff characteristics (quantitative as well as qualitative) of the area in the post construction phase on a long term basis? Would it aggravate the problems of flooding or water logging in any way?

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

2.9. What are the impacts of the proposal on the ground water? (Will there be tapping of ground water; give the details of ground water table, recharging capacity, and approvals obtained from competent authority, if any)

2.10. What precautions/measures are taken to prevent the run-off from construction activities polluting land & aquifers? (Give details of quantities and the measures taken to avoid the adverse impacts)

2.11. How is the storm water from within the site managed?(State the provisions made to avoid flooding of the area, details of the drainage facilities provided along with a site layout indication contour levels)

2.12. Will the deployment of construction labourers particularly in the peak period lead to unsanitary conditions around the project site (Justify with proper explanation)

2.13. What on-site facilities are provided for the collection, treatment & safe disposal of sewage? (Give details of the quantities of wastewater generation, treatment capacities with technology & facilities for recycling and disposal)

2.14. Give details of dual plumbing system if treated waste used is used for flushing of toilets or any other use.

3. VEGETATION

3.1. Is there any threat of the project to the biodiversity? (Give a description of the local ecosystem with it's unique features, if any)

3.2. Will the construction involve extensive clearing or modification of vegetation? (Provide a detailed account of the trees & vegetation affected by the project)

3.3. What are the measures proposed to be taken to minimize the likely impacts on important site features (Give details of proposal for tree plantation, landscaping, creation of water bodies etc along with a layout plan to an appropriate scale)

4. FAUNA

4.1. Is there likely to be any displacement of fauna- both terrestrial and aquatic or creation of barriers for their movement? Provide the details.

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

4.2. Any direct or indirect impacts on the avifauna of the area? Provide details.

4.3. Prescribe measures such as corridors, fish ladders etc to mitigate adverse impacts on fauna

5. AIR ENVIRONMENT

5.1. Will the project increase atmospheric concentration of gases & result in heat islands? (Give details of background air quality levels with predicted values based on dispersion models taking into account the increased traffic generation as a result of the proposed constructions)

5.2. What are the impacts on generation of dust, smoke, odorous fumes or other hazardous gases? Give details in relation to all the meteorological parameters.

5.3. Will the proposal create shortage of parking space for vehicles? Furnish details of the present level of transport infrastructure and measures proposed for improvement including the traffic management at the entry & exit to the project site.

5.4. Provide details of the movement patterns with internal roads, bicycle tracks, pedestrian pathways, footpaths etc., with areas under each category.

5.5. Will there be significant increase in traffic noise & vibrations? Give details of the sources and the measures proposed for mitigation of the above.

5.6. What will be the impact of DG sets & other equipment on noise levels & vibration in & ambient air quality around the project site? Provide details.

6. AESTHETICS

6.1. Will the proposed constructions in any way result in the obstruction of a view, scenic amenity or landscapes? Are these considerations taken into account by the proponents?

6.2. Will there be any adverse impacts from new constructions on the existing structures? What are the considerations taken into account?

6.3. Whether there are any local considerations of urban form & urban design influencing the design criteria? They may be explicitly spelt out.

6.4. Are there any anthropological or archaeological sites or artefacts nearby? State if any other significant features in the vicinity of the proposed site have been considered.

7. SOCIO-ECONOMIC ASPECTS

7.1. Will the proposal result in any changes to the demographic structure of local population? Provide the details.

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

7.2. Give details of the existing social infrastructure around the proposed project.

7.3. Will the project cause adverse effects on local communities, disturbance to sacred sites or other cultural values? What are the safeguards proposed?

8. BUILDING MATERIALS

8.1. May involve the use of building materials with high-embodied energy. Are the construction materials produced with energy efficient processes? (Give details of energy conservation measures in the selection of building materials and their energy efficiency)

8.2. Transport and handling of materials during construction may result in pollution, noise & public nuisance. What measures are taken to minimize the impacts?

8.3. Are recycled materials used in roads and structures? State the extent of savings achieved?

8.4. Give details of the methods of collection, segregation & disposal of the garbage generated during the operation phases of the project.

9. ENERGY CONSERVATION

9.1. Give details of the power requirements, source of supply, backup source etc. What is the energy consumption assumed per square foot of built-up area? How have you tried to minimize energy consumption?

9.2. What type of, and capacity of, power back-up to you plan to provide?

9.3. What are the characteristics of the glass you plan to use? Provide specifications of its characteristics related to both short wave and long wave radiation?

9.4. What passive solar architectural features are being used in the building? Illustrate the applications made in the proposed project.

9.5. Does the layout of streets & buildings maximise the potential for solar energy devices? Have you considered the use of street lighting, emergency lighting and solar hot water systems for use in the building complex? Substantiate with details.

9.6. Is shading effectively used to reduce cooling/heating loads? What principles have been used to maximize the shading of Walls on the East and the West and the Roof? How much energy saving has been effected?

9.7. Do the structures use energy-efficient space conditioning, lighting and mechanical systems? Provide technical details. Provide details of the transformers and motor efficiencies, lighting intensity and air-conditioning load assumptions? Are you using CFC and HCFC free chillers? Provide specifications.

9.8. What are the likely effects of the building activity in altering the micro-climates? Provide a self assessment on the likely impacts of the proposed construction on

---

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

creation of heat island & inversion effects?

9.9. What are the thermal characteristics of the building envelope? (a) roof; (b) external walls; and (c) fenestration? Give details of the material used and the U-values or the R values of the individual components.

9.10. What precautions & safety measures are proposed against fire hazards? Furnish details of emergency plans.

9.11. If you are using glass as wall material provides details and specifications including emissivity and thermal characteristics.

9.12. What is the rate of air infiltration into the building? Provide details of how you are mitigating the effects of infiltration.

9.13. To what extent the non-conventional energy technologies are utilised in the overall energy consumption? Provide details of the renewable energy technologies used.

10. Environment Management Plan

The Environment Management Plan would consist of all mitigation measures for each item wise activity to be undertaken during the construction, operation and the entire life cycle to minimize adverse environmental impacts as a result of the activities of the project. It would also delineate the environmental monitoring plan for compliance of various environmental regulations. It will state the steps to be taken in case of emergency such as accidents at the site including fire.

APPENDIX III

(See paragraph 7

GENERIC STRUCTURE OF ENVIRONMENTAL IMPACT ASSESSENT DOCUMENT

S.NO	EIA STRUCTURE	CONTENTS
1.	Introduction	• Purpose of the report • Identification of project & project proponent • Brief description of nature, size, location of the project and its importance to the country, region • Scope of the study – details of regulatory scoping carried out (As per Terms of Reference)
2.	Project Description	• Condensed description of those aspects of the project (based on project feasibility study), likely to cause environmental effects. Details should be provided to give clear picture of the following: • Type of project • Need for the project • Location (maps showing general location, specific location, project boundary & project site layout) • Size or magnitude of operation (incl. Associated activities required by or for the project • Proposed schedule for approval and implementation • Technology and process description • Project description. Including drawings showing project layout, components of project etc. Schematic representations of the feasibility drawings which give information important for EIA purpose • Description of mitigation measures incorporated into the project to meet environmental standards, environmental operating conditions, or other EIA requirements (as required by the scope) • Assessment of New & untested technology for the risk of technological failure

---

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

3.	Description of the Environment	• Study area, period, components & methodology • Establishment of baseline for valued environmental components, as identified in the scope • Base maps of all environmental components
4.	Anticipated Environmental Impacts & Mitigation Measures	• Details of Investigated Environmental impacts due to project location, possible accidents, project design, project construction, regular operations, final decommissioning or rehabilitation of a completed project • Measures for minimizing and / or offsetting adverse impacts identified • Irreversible and Irretrievable commitments of environmental components • Assessment of significance of impacts (Criteria for determining significance, Assigning significance) • Mitigation measures
5.	Analysis of Alternatives (Technology & Site)	• In case, the scoping exercise results in need for alternatives: • Description of each alternative • Summary of adverse impacts of each alternative • Mitigation measures proposed for each alternative and • Selection of alternative
6.	Environmental Monitoring Program	• Technical aspects of monitoring the effectiveness of mitigation measures (incl. Measurement methodologies, frequency, location, data analysis, reporting schedules, emergency procedures, detailed budget & procurement schedules)
7.	Additional Studies	• Public Consultation • Risk assessment • Social Impact Assessment. R&R Action Plans
8.	Project Benefits	• Improvements in the physical infrastructure • Improvements in the social infrastructure

---

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

		• Employment potential –skilled; semi-skilled and unskilled • Other tangible benefits
9.	Environmental Cost Benefit Analysis	If recommended at the Scoping stage
10.	EMP	• Description of the administrative aspects of ensuring that mitigative measures are implemented and their effectiveness monitored, after approval of the EIA
11	Summary & Conclusion (This will constitute the summary of the EIA Report)	• Overall justification for implementation of the project • Explanation of how, adverse effects have been mitigated
12.	Disclosure of Consultants engaged	• The names of the Consultants engaged with their brief resume and nature of Consultancy rendered

APPENDIX III A

(See paragraph 7)

CONTENTS OF SUMMARY ENVIRONMENTAL IMPACT ASSESSMENT

The Summary EIA shall be a summary of the full EIA Report condensed to ten A-4 size pages at the maximum. It should necessarily cover in brief the following Chapters of the full EIA Report: -

1. Project Description
2. Description of the Environment
3. Anticipated Environmental impacts and mitigation measures
4. Environmental Monitoring Programme
5. Additional Studies
6. Project Benefits
7. Environment Management Plan

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

APPENDIX IV

(See paragraph 7)

PROCEDURE FOR CONDUCT OF PUBLIC HEARING

1.0 The Public Hearing shall be arranged in a systematic, time bound and transparent manner ensuring widest possible public participation at the project site(s) or in its close proximity District -wise, by the concerned State Pollution Control Board (SPCB) or the Union Territory Pollution Control Committee (UTPCC).

2. 0 **The Process:**

2.1 The Applicant shall make a request through a simple letter to the Member Secretary of the SPCB or Union Territory Pollution Control Committee, in whose jurisdiction the project is located, to arrange the public hearing within the prescribed statutory period. In case the project site is covering more than one District or State or Union Territory, the public hearing is mandated in each District, State or Union Territory in which the project is located and the applicant shall make separate requests to each concerned SPCB or UTPCC for holding the public hearing as per this procedure.

2.2 The Applicant shall enclose with the letter of request, at least 10 hard copies and an equivalent number of soft (electronic) copies of the draft EIA Report with the generic structure given in Appendix III including the Summary Environment Impact Assessment report in English and in the official languageof the state/local language, prepared strictly in accordance with the Terms of
Reference communicated after Scoping (Stage-2). Simultaneously the applicant shall arrange to forward copies, one hard and one soft, of the above draft EIA Report along with the Summary EIA report to the following authorities or offices, within whose jurisdiction the project will be located:

(a) District Magistrate/District collector/Deputy commissioner/s
(b) Zila Parishad or Municipal Corporation or Panchayats Union
(c) District Industries Office
(d) Urban Local Bodies (ULBs) / PRIs Concerned / Development authorities.
(d) Concerned Regional Office of the Ministry of Environment and Forests

2.3 On receiving the draft Environmental Impact Assessment report, the abovementioned authorities except the Regional Office of MoEF, shall arrange to widely publicize it within their respective jurisdictions requesting the interested persons to send their comments to the concerned regulatory authorities. They shall also make available the draft EIA Report for inspection electronically or otherwise to the public during normal office hours till the Public Hearing is over.

2.4 The SPCB or UTPCC concerned shall also make similar arrangements for giving publicity about the project within the State/Union Territory and make available the Summary of the draft Environmental Impact Assessment report (Appendix III A) for

---

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

inspection in select offices or public libraries or any other suitable location etc. They shall also additionally make available a copy of the draft Environmental Impact Assessment report to the above five authorities/offices as given in para 2.2.

3.0 Notice of Public Hearing:

3.1 The Member-Secretary of the concerned SPCB or UTPCC shall finalize the date, time and exact venue for the conduct of public hearing within 7(seven) days of the date of receipt of the draft Environmental Impact Assessment report from the project proponent, and advertise the same in one major National Daily and one Regional vernacular Daily / Official State Language. A minimum notice period of 30(thirty) days shall be provided to the public for furnishing their responses;

3.2 The advertisement shall also inform the public about the places or offices where the public could access the draft Environmental Impact Assessment report and the Summary Environmental Impact Assessment report before the public hearing**.** In places where the newspapers do not reach, the Competent Authority should arrange to inform the local public about the public hearing by other means such as by way of beating of drums as well as advertisement / announcement on radio / television.

3.3 No postponement of the date, time, venue of the public hearing shall be undertaken, unless some untoward emergency situation occurs and then only on the recommendation of the concerned District Magistrate/District collector/Deputy Commissioner, the postponement shall be notified to the public through the same National and Regional vernacular dailies and also prominently displayed at all the identified offices by the concerned SPCB or Union Territory Pollution Control Committee;

3.4 In the above exceptional circumstances, fresh date, time and venue for the public consultation shall be decided by the Member – Secretary of the concerned SPCB or UTPCC only in consultation with the District Magistrate/District collector/Deputy Commissioner and notified afresh as per procedure under 3.1 above.

4.0 Supervision and Presiding over the Hearing:

4.1 The District Magistrate/District collector/Deputy Commissioner or his or her representative not below the rank of an Additional District Magistrate assisted by a representative of SPCB or UTPCC**,** shall Supervise and preside over the entire public hearing process.

5.0 Videography

5.1 The SPCB or UTPCC shall arrange to video film the entire proceedings. A copy of the videotape or a CD shall be enclosed with the public hearing proceedings while Forwarding it to the Regulatory Authority concerned.

6.0 Proceedings

6.1 The attendance of all those who are present at the venue shall be noted and annexed with the final proceedings.

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

6.2 There shall be no quorum required for attendance for starting the proceedings.

6.3 A representative of the applicant shall initiate the proceedings with a presentation on the project and the Summary EIA report.

6.4 Persons present at the venue shall be granted the opportunity to seek information or clarifications on the project from the Applicant. The summary of the public hearing proceedings accurately reflecting all the views and concerns expressed shall be recorded by the representative of the SPCB or UTPCC and read over to the audience at the end of the proceedings explaining the contents in the local/vernacular language and the agreed minutes shall be signed by the District Magistrate/District collector/Deputy Commissioner or his or her representative on the same day and forwarded to the SPCB/UTPCC concerned**.**

6.5 A Statement of the issues raised by the public and the comments of the Applicant shall also be prepared in the local language or the Official State language, as the case may be, and in English and annexed to the proceedings:

6.6 The proceedings of the public hearing shall be conspicuously displayed at the office of the Panchyats within whose jurisdiction the project is located, office of the concerned Zila Parishad, District Magistrate/District collector/Deputy Commissioner, and the SPCB or UTPCC . The SPCB or UTPCC shall also display the proceedings on its website for general information. Comments, if any, on the proceedings which may be sent directly to the concerned regulatory authorities and the applicant concerned.

7.0 **Time period for completion of public hearing**

7.1 The public hearing shall be completed within a period of 45 (forty five) days from date of receipt of the request letter from the Applicant. Thereafter the SPCB or UTPCC concerned shall sent the public hearing proceedings to the concerned regulatory authority within 8(eight) days of the completion of the public hearing.Simultaneously, a copy will also be provided to the project proponent.The applicant may also directly forward a copy of the approved public hearing proceedings to the regulatory authority concerned along with the final Environmental Impact Assessment report or supplementary report to the draft EIA report prepared after the public hearing and public consultations incorporating the concerns expressed in the public hearing along with action plan and financial allocation, item-wise, to address those concerns.".

7.2 If the SPCB or UTPCC fails to hold the public hearing within the stipulated 45(forty five) days, the Central Government in Ministry of Environment and Forests for Category 'A' project or activity and the State Government or Union Territory Administration for Category 'B' project or activity at the request of the SEIAA, shall engage any other agency or authority to complete the process, as per procedure laid down in this notification.

APPENDIX –V

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

(See paragraph 7)

PROCEDURE PRESCRIBED FOR APPRAISAL

1. The applicant shall apply to the concerned regulatory authority through a simple communication enclosing the following documents where public consultations are mandatory:

- Final Environment Impact Assessment Report [20(twenty) hard copies and 1 (one) soft copy)]
- A copy of the video tape or CD of the public hearing proceedings
- A copy of final layout plan (20 copies)
- A copy of the project feasibility report (1 copy)

2. The Final EIA Report and the other relevant documents submitted by the applicant shall be scrutinized in office within 30 days from the date of its receipt by the concerned Regulatory Authority strictly with reference to the TOR and the inadequacies noted shall be communicated electronically or otherwise in a single set to the Members of the EAC /SEAC enclosing a copy each of the Final EIA Report including the public hearing proceedings and other public responses received along with a copy of Form -1or Form 1A and scheduled date of the EAC /SEAC meeting for considering the proposal.

3. Where a public consultation is not mandatory, the appraisal shall be made on the basis of the prescribed application Form 1 and EIA report, in the case of all projects and activities other than Item 8 of the Schedule. In the case of Item 8 of the Schedule, considering its unique project cycle, the EAC or SEAC concerned shall appraise all Category B projects or activities on the basis of Form 1, Form 1A and the conceptual plan and make recommendations on the project regarding grant of environmental clearance or otherwise and also stipulate the conditions for environmental clearance."

4. Every application shall be placed before the EAC/SEAC and its appraisal completed within 60 days of its receipt with requisite documents / details in the prescribed manner.

5. The applicant shall be informed at least 15 (fifteen) days prior to the scheduled date of the EAC /SEAC meeting for considering the project proposal.

6. The minutes of the EAC /SEAC meeting shall be finalised within 5 working days of the meeting and displayed on the website of the concerned regulatory authority. In case the project or activity is recommended for grant of EC, then the minutes shall clearly list out the specific environmental safeguards and conditions. In case the recommendations are for rejection, the reasons for the same shall also be explicitly stated.

Note: The principal rules were published in the Gazette of India, Extraordinary, Part II, Section 3, Sub-section (ii) vide notification number S.O. 1533 (E), dated 14th September, 2006 and amended vide S.O. 1737 (E), dated the 11th October, 2007.

APPENDIX VI

(See paragraph 5)

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

COMPOSITION OF THE SECTOR/ PROJECT SPECIFIC EXPERT APPRAISAL COMMITTEE (EAC) FOR CATEGORY A PROJECTS AND THE STATE/UT LEVEL EXPERT APPRAISAL COMMITTEES (SEACs) FOR CATEGORY B PROJECTS TO BE CONSTITUTED BY THE CENTRAL GOVERNMENT `

1. The Expert Appraisal Committees (EAC(s) and the State/UT Level Expert Appraisal Committees (SEACs) shall consist of only professionals and experts fulfilling the following eligibility criteria:

Professional: The person should have at least (i) 5 years of formal University training in the concerned discipline leading to a MA/MSc Degree, or (ii) in case of Engineering /Technology/Architecture disciplines, 4 years formal training in a professional training course together with prescribed practical training in the field leading to a B.Tech/B.E./B.Arch. Degree, or (iii) Other professional degree (e.g. Law) involving a total of 5 years of formal University training and prescribed practical training, or (iv) Prescribed apprenticeship/article ship and pass examinations conducted by the concerned professional association (e.g. Chartered Accountancy),or (v) a University degree , followed by 2 years of formal training in a University or Service Academy (e.g. MBA/IAS/IFS). In selecting the individual professionals, experience gained by them in their respective fields will be taken note of.

Expert: A professional fulfilling the above eligibility criteria with at least 15 years of relevant experience in the field, or with an advanced degree (e.g. Ph.D.) in a concerned field and at least 10 years of relevant experience.

Age: Below 70 years. However, in the event of the non-availability of /paucity of experts in a given field, the maximum age of a member of the Expert Appraisal Committee may be allowed up to 75 years

2. The Members of the EAC shall be Experts with the requisite expertise and experience in the following fields /disciplines. In the event that persons fulfilling the criteria of “Experts” are not available, Professionals in the same field with sufficient experience may be considered:

- **Environment Quality Experts**: Experts in measurement/monitoring, analysis and interpretation of data in relation to environmental quality

- **Sectoral Experts in Project Management**: Experts in Project Management or Management of Process/Operations/Facilities in the relevant sectors.

- **Environmental Impact Assessment Process Experts**: Experts in conducting and carrying out Environmental Impact Assessments (EIAs) and preparation of Environmental Management Plans (EMPs) and other Management plans and who have wide expertise and knowledge of predictive techniques and tools used in the EIA process

- **Risk Assessment Experts**

- **Life Science Experts in floral and faunal management**

- **Forestry and Wildlife Experts**

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

- **Environmental Economics Expert with experience in project appraisal**

3. The Membership of the EAC shall not exceed 15 (fifteen) regular Members. However the Chairperson may co-opt an expert as a Member in a relevant field for a particular meeting of the Committee.

4. The Chairperson shall be an outstanding and experienced environmental policy expert or expert in management or public administration with wide experience in the relevant development sector.

5. The Chairperson shall nominate one of the Members as the Vice Chairperson who shall preside over the EAC in the absence of the Chairman /Chairperson.

6. A representative of the Ministry of Environment and Forests shall assist the Committee as its Secretary.

7. The maximum tenure of a Member, including Chairperson, shall be for 2 (two) terms of 3 (three) years each.

8. The Chairman / Members may not be removed prior to expiry of the tenure without cause and proper enquiry.

I; II; III (i), (ii); IV (a), (b); V (i), (ii), (iii)(a), (b), (c), (iv), (v), (vi) (a), (b), (vii), (viii) (a), (b), (ix), (x), (xi), (xii) (a), (b) , (xiii), (xiv) (a), (b), (xv) (a), (b), (xvi) (a), (b), (xvii); VI (a), (b); VII & VIII of the Notification, S.O. 3067(E) dated 01.12.2009 of the Ministry of Environment and Forests, (Published in the Gazette of India, Extraordinary, Part-II, and Section 3, Sub-section (ii), No. 2002] New Delhi, Tuesday, November 1, 2009; an amendment to EC notification S.O.1533(E) dated 14.09.2006

Sir/Madam,

This has reference to the proposal submitted in the Ministry of Environment, Forest and Climate Change to prescribe the Terms of Reference (TOR) for undertaking detailed EIA study for the purpose of obtaining Environmental Clearance in accordance with the provisions of the EIA Notification, 2006. For this purpose, the proponent had submitted online information in the prescribed format (Form-1) along with a Pre-feasibility Report. The details of the proposal are given below:

1. Proposal No.:	IA/TN/IND3/406642/2022
2. Name of the Proposal:	M/s. Chemplast Sanmar Limited
3. Category of the Proposal:	Industrial Projects - 3
4. Project/Activity applied for:	5(b) Pesticides industry and pesticide specific intermediates (excluding formulations) 5(f) Synthetic organic chemicals industry (dyes & dye intermediates; bulk
5. Date of submission for TOR:	03 Dec 2022

In this regard, under the provisions of the EIA Notification 2006 as amended, the Standard TOR for the purpose of preparing environment impact assessment report and environment management plan for obtaining prior environment clearance is prescribed with public consultation as follows:

ACTIVITY 5(b)- PESTICIDES INDUSTRY

SPECIFIC TERMS OF REFERENCE FOR EIA STUDIES FOR PESTICIDE INDUSTRIES

GENERIC CONDITIONS

1) Executive Summary

2) Introduction

i. Details of the EIA Consultant including NABET accreditation

ii. Information about the project proponent

iii. Importance and benefits of the project

3) Project Description

i. Cost of project and time of completion.

ii. Products with capacities for the proposed project.

iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.

iv. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications.

v. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications.

vi. List of raw materials required and their source along with mode of transportation.

vii. Other chemicals and materials required with quantities and storage capacities

viii. Details of Emission, effluents, hazardous waste generation and their management.

ix. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)

x. Details of boiler/gensets (including stacks/exhausts) and fuels to be used

x. Details of boiler/gensets (including stacks/exhausts) and fuels to be used

xi Process description along with major equipment's and machineries, process flow sheet (quantitative) from raw materials to products to be provided

xi. Hazard identification and details of proposed safety systems.

xii. Expansion/modernization proposals:

a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Integrated Regional Office of the Ministry of Environment, Forest and Climate Change as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental

clearances including Amendments shall be provided. In addition, copy of the latest CTO and status of compliance of Consent to Operate for the ongoing/existing operation of the project from SPCB shall be attached with the EIA-EMP report.

b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.

4) Site Details

i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.

ii. A topo-sheet of the study area of radius of 10km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet. (including all eco-sensitive areas and environmentally sensitive places)

iii. Details w.r.t. option analysis for selection of site

iv. Co-ordinates (lat-long) of all four corners of the site.

v. Google map-Earth download of the project site.

vi. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.

vii. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.

viii. Land-use break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc shall be included. (not required for industrial area)

ix. A list of major industries with name and type within study area (10km radius) shall be incorporated. Land use details of the study area

x. Geological features and Geo-hydrological status of the study area shall be included.

xi. Details of Drainage of the project upto 5km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)

xii. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land. Documents related to conversion of land for Industrial purpose.

xiii. R&R details in respect of land in line with state Government policy

5. Forest, wildlife and CRZ related issues (if applicable):

i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable)

ii. Land-use map based on High resolution satellite imagery of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha)

iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted.

iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon

v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area

vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife

vii. Recommendations and NOC from the concerned State/UT Coastal Zone Management Authority on CRZ angle

5) Environmental Status

i. Determination of atmospheric inversion level at the project site and site-specific micro-meteorological data using temperature, relative humidity, hourly wind speed and direction and rainfall.

- AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests. Study should indicate minimum, maximum value of different parameters for the period (3 months) collected. Collected data should be supported by the reference data of either CPCB or SPCB. AAQ data & GLC of pollutants from stack emissions should suggest technology/ measures- Best Practiced Technology (BPT) indicating best achieved results.

ii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min., max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.

iii. Surface water quality of nearby River (100m upstream and downstream of discharge point) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.

iv. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC, if yes give details.

v. Ground water monitoring at minimum at 8 locations shall be included.

vi. Noise levels monitoring at 8 locations within the study area.

vii. Soil Characteristic as per CPCB guidelines.

viii. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.

ix. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.

x. Socio-economic status of the study area.

6) Environment Impact and Environment Management Plan

i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be assessed. Details of the model used and the input data used for modelling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.

ii. Water Quality Modelling – in case of discharge in water body

iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail-cum road transport or conveyor-cum-rail transport shall be examined.

iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under E(P) Rules 1986.

v. Details of stack emission and action plan for control of emissions to meet standards.

vi. Measures for fugitive emission control

vii. Details of hazardous waste generation and their storage, utilization and management. Copies of MOU regarding utilization of solid and hazardous waste in cement plant shall also be included. EMP shall include the concept of waste-minimization, recycle/reuse/recover techniques, Energy conservation, and natural resource conservation.

viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.

ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 2,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.

x. Action plan for rainwater harvesting measures at plant site shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.

xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.

xii. Action plan for post-project environmental monitoring shall be submitted.

xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan.

7) Occupational health

i. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers

ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre-placement and periodical examinations give the details of the same. Details regarding last month analyzed data of above mentioned parameters as per age, sex, duration of exposure and department wise.

iii. Details of existing Occupational & Safety Hazards. What are the exposure levels of hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved,

iv. Annual report of health status of workers with special reference to Occupational Health and Safety.

8) Corporate Environment Policy

i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.

ii. Does the Environment Policy prescribe for standard operating process / procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.

iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.

iv. Does the company have system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report

v. Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.

10) Corporate Environmental Responsibility (CER)

i. Adequate funds, as per the Ministry's OM/Guidelines, shall be earmarked towards the Corporate Environmental Responsibility based on Public Hearing issues/socio-economic issues and item-wise details along with time bound action plan shall be included (CER activities shall be related to environment). Socio-economic development activities need to be elaborated upon. For the projects where public hearing is not conducted, CER plan shall be provided based on socio-economic study of the area.

9) Additional studies/Measures to be considered

(i). Provide latest and ecofriendly technology for product manufacturing.

(ii). Emphasize on Green chemistry/Clean Manufacturing

(iii). Provide CAS No. of products along with product list.

(iv). Provide details of amount of carbon sequestered in their unit through greenbelt/other modes, in case of expansion project.

(v). Life structure and sustainability for carbon and water foot print.

(vi). Detailed pollution Load estimation.

(vii). Transportation of Hazardous substance, effluents etc shall be carriedout through authorized and GPS enable vehicles/Trucks only.

(viii). Category of Hazardous Wastes shall be mentioned in the EIA/EMP report and in presentation.

(ix). Details of greenhouse gases and emissions shall be provided.

(x). Greenbelt shall be developed in the first year of the project and wind breaks shall be erected.

(xi). Study area map shall be overlapped with all the associated features.

(xii). Emphasize on green fuels.

(xiii). The project from NCR shall not use Coal as fuel. Further, PP shall avoid use of Coal in the CPAs and elsewhere also if alternatives are available.

(xiv). Provide the Cost-Benefit analysis with respect to the environment due to the project.

(xv). Details of carbon foot prints and carbon sequestration study w.r.t. proposed project

needs to spelled out. Proposed mitigation measures also needs to be analyzed and submitted for further appraisal of the EAC

11) Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.

12) A tabular chart with index for point wise compliance of above TORs and its details needs to be submitted in the EIA/EMP Report.

SPECIFIC CONDITIONS

1. Commitment that no banned pesticides will be manufactured.
2. Details on solvents to be used, measures for solvent recovery and for emissions control.
3. Details of process emissions from the proposed unit and its arrangement to control.
4. Ambient air quality data should include VOC, other process-specific pollutants* like NH3*,chlorine*, HCl*, HBr*, H2S*,HF*, CS2etc.,(*-as applicable)
5. Work zone monitoring arrangements for hazardous chemicals.
6. Detailed effluent treatment scheme including segregation for units adopting 'Zero' liquid discharge.
7. Action plan for odour control to be submitted.
8. A copy of the Memorandum of Understanding signed with cement manufacturers indicating clearly that they co-process organic solid/hazardous waste generated.
9. Authorization/Membership for the disposal of liquid effluent in CETP and solid/hazardous waste in TSDF, if any.
10. Material Safety Data Sheet for all the Chemicals are being used/will be used.
11. Authorization/Membership for the disposal of solid/hazardous waste in TSDF.
12. Details of incinerator if to be installed.
13. Risk assessment for storage and handling of hazardous chemicals/solvents. Action plan for handling & safety system to be incorporated.
14. Arrangements for ensuring health and safety of workers engaged in handling of toxic materials
15. Details of carbon foot prints and carbon sequestration study w.r.t. proposed project needs to spelled out. Proposed mitigation measures also needs to be analysed and submitted for further appraisal of the EAC.

ACTIVITY 5(f)- SYNTHETIC ORGANIC CHEMICALS INDUSTRY

STANDARD TERMS OF REFERENCE FOR EIA STUDIES FOR SYNTHETIC ORGANIC CHEMICALS INDUSTRY (DYES & DYE INTERMEDIATES; BULK DRUGS AND INTERMEDIATES EXCLUDING DRUG FORMULATIONS; SYNTHETIC RUBBERS; BASIC ORGANIC CHEMICALS, OTHER SYNTHETIC ORGANIC CHEMICALS AND CHEMICAL INTERMEDIATES)

GENERIC CONDITIONS

1) Executive Summary

2) Introduction

i. Details of the EIA Consultant including NABET accreditation

ii. Information about the project proponent

iii. Importance and benefits of the project

3) Project Description

i. Cost of project and time of completion.

ii. Products with capacities for the proposed project.

iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.

iv. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications.

v. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications.

vi. List of raw materials required and their source along with mode of transportation.

vii. Other chemicals and materials required with quantities and storage capacities

viii. Details of Emission, effluents, hazardous waste generation and their management.

ix. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)

x. Details of boiler/gensets (including stacks/exhausts) and fuels to be used

x. Details of boiler/gensets (including stacks/exhausts) and fuels to be used

xi Process description along with major equipment's and machineries, process flow sheet (quantitative) from raw materials to products to be provided

xi. Hazard identification and details of proposed safety systems.

xii. Expansion/modernization proposals:

a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Integrated Regional Office of the Ministry of Environment, Forest and Climate Change as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental clearances including Amendments shall be provided. In addition, copy of the latest CTO and status of compliance of Consent to Operate for the ongoing/existing operation of the project from SPCB shall be attached with the EIA-EMP report.

b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.

4) Site Details

i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.

ii. A topo-sheet of the study area of radius of 10km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet. (including all eco-sensitive areas and environmentally sensitive places)

iii. Details w.r.t. option analysis for selection of site

iv. Co-ordinates (lat-long) of all four corners of the site.

v. Google map-Earth download of the project site.

vi. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.

vii. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.

viii. Land-use break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc shall be included. (not required for industrial area)

ix. A list of major industries with name and type within study area (10km radius) shall be incorporated. Land use details of the study area

x. Geological features and Geo-hydrological status of the study area shall be included.

xi. Details of Drainage of the project upto 5km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood

Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)

xii. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land. Documents related to conversion of land for Industrial purpose.

xiii. R&R details in respect of land in line with state Government policy

5. Forest, wildlife and CRZ related issues (if applicable):

i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable)

ii. Land-use map based on High resolution satellite imagery of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha)

iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted.

iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon

v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area

vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife

vii. Recommendations and NOC from the concerned State/UT Coastal Zone Management Authority on CRZ angle

5) Environmental Status

i. Determination of atmospheric inversion level at the project site and site-specific micro-meteorological data using temperature, relative humidity, hourly wind speed and direction and rainfall.

- AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests. Study should indicate minimum, maximum value of different parameters for the period (3 months) collected. Collected data should be supported by the reference data of either CPCB or SPCB. AAQ data & GLC of pollutants from stack emissions should suggest technology/ measures- Best Practiced Technology (BPT) indicating best achieved results.

ii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min., max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.

iii. Surface water quality of nearby River (100m upstream and downstream of discharge point) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.

iv. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC, if yes give details.

v. Ground water monitoring at minimum at 8 locations shall be included.

vi. Noise levels monitoring at 8 locations within the study area.

vii. Soil Characteristic as per CPCB guidelines.

viii. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.

ix. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.

x. Socio-economic status of the study area.

6) Environment Impact and Environment Management Plan

i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be assessed. Details of the model used and the input data used for modelling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.

ii. Water Quality Modelling – in case of discharge in water body

iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail-cum road transport or conveyor-cum-rail transport shall be examined.

iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under E(P) Rules 1986.

v. Details of stack emission and action plan for control of emissions to meet standards.

vi. Measures for fugitive emission control

vii. Details of hazardous waste generation and their storage, utilization and management. Copies of MOU regarding utilization of solid and hazardous waste in cement plant shall also be included. EMP shall include the concept of waste-minimization, recycle/reuse/recover techniques, Energy conservation, and natural resource conservation.

viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.

ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 2,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.

x. Action plan for rainwater harvesting measures at plant site shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.

xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.

xii. Action plan for post-project environmental monitoring shall be submitted.

xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan.

7) Occupational health

i. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers

ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre-placement and periodical examinations give the details of the same. Details regarding last month analyzed data of above mentioned parameters as per age, sex, duration of exposure and department wise.

iii. Details of existing Occupational & Safety Hazards. What are the exposure levels of hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved,

iv. Annual report of health status of workers with special reference to Occupational Health and Safety.

8) Corporate Environment Policy

i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.

ii. Does the Environment Policy prescribe for standard operating process / procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.

iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.

iv. Does the company have system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report

v. Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.

10) Corporate Environmental Responsibility (CER)

i. Adequate funds, as per the Ministry's OM/Guidelines, shall be earmarked towards the Corporate Environmental Responsibility based on Public Hearing issues/socio-economic issues and item-wise details along with time bound action plan shall be included (CER activities shall be related to environment). Socio-economic development activities need to be elaborated upon. For the projects where public hearing is not conducted, CER plan shall be provided based on socio-economic study of the area.

9) Additional studies/Measures to be considered

(i). Provide latest and ecofriendly technology for product manufacturing.

(ii). Emphasize on Green chemistry/Clean Manufacturing

(iii). Provide CAS No. of products along with product list.

(iv). Provide details of amount of carbon sequestered in their unit through greenbelt/other modes, in case of expansion project.

(v). Life structure and sustainability for carbon and water foot print.

(vi). Detailed pollution Load estimation.

(vii). Transportation of Hazardous substance, effluents etc shall be carriedout through authorized and GPS enable vehicles/Trucks only.

(viii). Category of Hazardous Wastes shall be mentioned in the EIA/EMP report and in presentation.

(ix). Details of greenhouse gases and emissions shall be provided.

(x). Greenbelt shall be developed in the first year of the project and wind breaks shall be erected.

(xi). Study area map shall be overlapped with all the associated features.

(xii). Emphasize on green fuels.

(xiii). The project from NCR shall not use Coal as fuel. Further, PP shall avoid use of Coal in the CPAs and elsewhere also if alternatives are available.

(xiv). Provide the Cost-Benefit analysis with respect to the environment due to the project.

(xv). Details of carbon foot prints and carbon sequestration study w.r.t. proposed project needs to spelled out. Proposed mitigation measures also needs to be analyzed and submitted for further appraisal of the EAC

11) Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.

12) A tabular chart with index for point wise compliance of above TORs and its details needs to be submitted in the EIA/EMP Report.

SPECIFIC CONDITION

1. Details on solvents to be used, measures for solvent recovery and for emissions control.
2. Details of process emissions from the proposed unit and its arrangement to control.
3. Ambient air quality data should include VOC, other process-specific pollutants* like NH_3*,chlorine*,HCl*,HBr*,H_2S*,HF*,etc.,(*-as applicable)
4. Work zone monitoring arrangements for hazardous chemicals.
5. Detailed effluent treatment scheme including segregation of effluent streams for units adopting 'Zero' liquid discharge.
6. Action plan for odour control to be submitted.
7. A copy of the Memorandum of Understanding signed with cement manufacturers indicating clearly that they co-process organic solid/hazardous waste generated.
8. Authorization/Membership for the disposal of liquid effluent in CETP and solid/hazardous waste in TSDF, if any.
9. Action plan for utilization of MEE/dryers salts.
10. Material Safety Data Sheet for all the Chemicals are being used/will be used.
11. Authorization/Membership for the disposal of solid/hazardous waste in TSDF.
12. Details of incinerator if to be installed.
13. Risk assessment for storage and handling of hazardous chemicals/solvents. Action plan

for handling & safety system to be incorporated.

14. Arrangements for ensuring health and safety of workers engaged in handling of toxic materials.

15. Details of carbon foot prints and carbon sequestration study w.r.t. proposed project needs to spelled out. Proposed mitigation measures also needs to be analysed and submitted for further appraisal of the EAC.

ACTIVITY 5(b)- PESTICIDES INDUSTRY

SPECIFIC TERMS OF REFERENCE FOR EIA STUDIES FOR PESTICIDE INDUSTRIES

GENERIC CONDITIONS

1) Executive Summary

2) Introduction

i. Details of the EIA Consultant including NABET accreditation

ii. Information about the project proponent

iii. Importance and benefits of the project

3) Project Description

i. Cost of project and time of completion.

ii. Products with capacities for the proposed project.

iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.

iv. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications.

v. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications.

vi. List of raw materials required and their source along with mode of transportation.

vii. Other chemicals and materials required with quantities and storage capacities

viii. Details of Emission, effluents, hazardous waste generation and their management.

ix. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)

x. Details of boiler/gensets (including stacks/exhausts) and fuels to be used

x. Details of boiler/gensets (including stacks/exhausts) and fuels to be used

xi Process description along with major equipment's and machineries, process flow sheet (quantitative) from raw materials to products to be provided

xi. Hazard identification and details of proposed safety systems.

xii. Expansion/modernization proposals:

a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Integrated Regional Office of the Ministry of Environment, Forest and Climate Change as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental

clearances including Amendments shall be provided. In addition, copy of the latest CTO and status of compliance of Consent to Operate for the ongoing/existing operation of the project from SPCB shall be attached with the EIA-EMP report.

b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.

4) Site Details

i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.

ii. A topo-sheet of the study area of radius of 10km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet. (including all eco-sensitive areas and environmentally sensitive places)

iii. Details w.r.t. option analysis for selection of site

iv. Co-ordinates (lat-long) of all four corners of the site.

v. Google map-Earth download of the project site.

vi. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.

vii. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.

viii. Land-use break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc shall be included. (not required for industrial area)

ix. A list of major industries with name and type within study area (10km radius) shall be incorporated. Land use details of the study area

x. Geological features and Geo-hydrological status of the study area shall be included.

xi. Details of Drainage of the project upto 5km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)

xii. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land. Documents related to conversion of land for Industrial purpose.

xiii. R&R details in respect of land in line with state Government policy

5. Forest, wildlife and CRZ related issues (if applicable):

i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable)

ii. Land-use map based on High resolution satellite imagery of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha)

iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted.

iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden-thereon

v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area

vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife

vii. Recommendations and NOC from the concerned State/UT Coastal Zone Management Authority on CRZ angle

5) Environmental Status

i. Determination of atmospheric inversion level at the project site and site-specific micro-meteorological data using temperature, relative humidity, hourly wind speed and direction and rainfall.

- AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests. Study should indicate minimum, maximum value of different parameters for the period (3 months) collected. Collected data should be supported by the reference data of either CPCB or SPCB. AAQ data & GLC of pollutants from stack emissions should suggest technology/ measures- Best Practiced Technology (BPT) indicating best achieved results.

ii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min., max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.

iii. Surface water quality of nearby River (100m upstream and downstream of discharge point) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.

iv. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC, if yes give details.

v. Ground water monitoring at minimum at 8 locations shall be included.

vi. Noise levels monitoring at 8 locations within the study area.

vii. Soil Characteristic as per CPCB guidelines.

viii. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.

ix. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.

x. Socio-economic status of the study area.

6) Environment Impact and Environment Management Plan

i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be assessed. Details of the model used and the input data used for modelling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.

ii. Water Quality Modelling – in case of discharge in water body

iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail-cum road transport or conveyor-cum-rail transport shall be examined.

iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under E(P) Rules 1986.

v. Details of stack emission and action plan for control of emissions to meet standards.

vi. Measures for fugitive emission control

vii. Details of hazardous waste generation and their storage, utilization and management. Copies of MOU regarding utilization of solid and hazardous waste in cement plant shall also be included. EMP shall include the concept of waste-minimization, recycle/reuse/recover techniques, Energy conservation, and natural resource conservation.

viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.

ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 2,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.

x. Action plan for rainwater harvesting measures at plant site shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.

xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.

xii. Action plan for post-project environmental monitoring shall be submitted.

xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan.

7) Occupational health

i. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers

ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre-placement and periodical examinations give the details of the same. Details regarding last month analyzed data of above mentioned parameters as per age, sex, duration of exposure and department wise.

iii. Details of existing Occupational & Safety Hazards. What are the exposure levels of hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved,

iv. Annual report of health status of workers with special reference to Occupational Health and Safety.

8) Corporate Environment Policy

i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.

ii. Does the Environment Policy prescribe for standard operating process / procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.

iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.

iv. Does the company have system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report

v. Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.

10) Corporate Environmental Responsibility (CER)

i. Adequate funds, as per the Ministry's OM/Guidelines, shall be earmarked towards the Corporate Environmental Responsibility based on Public Hearing issues/socio-economic issues and item-wise details along with time bound action plan shall be included (CER activities shall be related to environment). Socio-economic development activities need to be elaborated upon. For the projects where public hearing is not conducted, CER plan shall be provided based on socio-economic study of the area.

9) Additional studies/Measures to be considered

(i). Provide latest and ecofriendly technology for product manufacturing.

(ii). Emphasize on Green chemistry/Clean Manufacturing

(iii). Provide CAS No. of products along with product list.

(iv). Provide details of amount of carbon sequestered in their unit through greenbelt/other modes, in case of expansion project.

(v). Life structure and sustainability for carbon and water foot print.

(vi). Detailed pollution Load estimation.

(vii). Transportation of Hazardous substance, effluents etc shall be carriedout through authorized and GPS enable vehicles/Trucks only.

(viii). Category of Hazardous Wastes shall be mentioned in the EIA/EMP report and in presentation.

(ix). Details of greenhouse gases and emissions shall be provided.

(x). Greenbelt shall be developed in the first year of the project and wind breaks shall be erected.

(xi). Study area map shall be overlapped with all the associated features.

(xii). Emphasize on green fuels.

(xiii). The project from NCR shall not use Coal as fuel. Further, PP shall avoid use of Coal in the CPAs and elsewhere also if alternatives are available.

(xiv). Provide the Cost-Benefit analysis with respect to the environment due to the project.

(xv). Details of carbon foot prints and carbon sequestration study w.r.t. proposed project

needs to spelled out. Proposed mitigation measures also needs to be analyzed and submitted for further appraisal of the EAC

11) Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.

12) A tabular chart with index for point wise compliance of above TORs and its details needs to be submitted in the EIA/EMP Report.

SPECIFIC CONDITIONS

1. Commitment that no banned pesticides will be manufactured.
2. Details on solvents to be used, measures for solvent recovery and for emissions control.
3. Details of process emissions from the proposed unit and its arrangement to control.
4. Ambient air quality data should include VOC, other process-specific pollutants* like NH3*,chlorine*, HCl*, HBr*, H2S*,HF*, CS2etc.,(*-as applicable)
5. Work zone monitoring arrangements for hazardous chemicals.
6. Detailed effluent treatment scheme including segregation for units adopting 'Zero' liquid discharge.
7. Action plan for odour control to be submitted.
8. A copy of the Memorandum of Understanding signed with cement manufacturers indicating clearly that they co-process organic solid/hazardous waste generated.
9. Authorization/Membership for the disposal of liquid effluent in CETP and solid/hazardous waste in TSDF, if any.
10. Material Safety Data Sheet for all the Chemicals are being used/will be used.
11. Authorization/Membership for the disposal of solid/hazardous waste in TSDF.
12. Details of incinerator if to be installed.
13. Risk assessment for storage and handling of hazardous chemicals/solvents. Action plan for handling & safety system to be incorporated.
14. Arrangements for ensuring health and safety of workers engaged in handling of toxic materials
15. Details of carbon foot prints and carbon sequestration study w.r.t. proposed project needs to spelled out. Proposed mitigation measures also needs to be analysed and submitted for further appraisal of the EAC.

5(b): STANDARD TERMS OF REFERENCE FOR CONDUCTING ENVIRONMENT IMPACT ASSESSMENT STUDY FOR PESTICIDES INDUSTRY AND PESTICIDE SPECIFIC INTERMEDIATES (EXCLUDING FORMULATIONS) AND INFORMATION TO BE INCLUDED IN EIA/EMP REPORT

SR. NO.	TERMS OF REFERENCES	COMPLIANCE
1.	**Executive Summary**	**Executive Summary** is referred as Chapter-11.
2.	**Introduction**	
	i. Details of the EIA Consultant including NABET accreditation	EIA Consultants, M/s. Aqua-Air Environmental Engineers Pvt. Ltd. has obtained NABET- QCI accreditation scheme of MoEFCC, New Delhi. NABET accreditation certificate no. NABET/EIA/2023/IA0062 (Rev. 03) valid till October 7,2023. Please refer **Annexure-7**, (Page No. A-14).
	ii. Information about the project proponent	**M/s. Chemplast Sanmar Limited**, having eight Partners/Directors. The detail of project proponent is refer as Section 1.1.1. of Chapter 1 (Page No.2)
	iii. Importance and benefits of the project	**Importance and benefits of the project** • We have well equipped and established R&D to develop and scale up the new products from the group of Synthetic Organic chemicals and Pesticide intermediates. • We have both Technical and non-technical man power in existing facility and hence readily available to oversee the expansion and commissioning. • Existing Manufacturing facility is well equipped with advanced technologies and this project is just the expansion similar to existing facility. Following are the benefits which may occur due to proposed project; • Use of existing skills in the region for minor developments, required for the proposed project • Increased transportation and handling requirements, that could benefit the local economy • Increased taxes to the State and Central Governments, which would add to the public good

3.	**Project Description**	
	i. Cost of project and time of completion.	Total capital investment for the project will be Rs. 2292.398 Crores [Existing: 292.398 Crore + Proposed: 2000 Crore]. Time of completion =2 Year after getting EC and NOC.
	ii. Products with capacities for the proposed project.	**List of Products Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum to 20031.4 MT/Annum)** is referred as Table 2.3, Section 2.6, and Chapter-2 in EIA Report (Page No. 46).
	iii. If expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.	**Reference of earlier EC details is given below:** **Unit has obtained ECs with Past Productions** EC vide letter F.No.J-11011/104/2009-IA II (I) dated 29/04/2009. **Products with capacities** are referred as Table 2.2, Section 2.7, and Chapter-2 in EIA Report (Page No. 46). Company has adequate land area for expansion in existing area and it is given in Section 2.2, Chapter-2 in EIA Report (Page No. 15).
	iv. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications. v. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications.	**Products with capacities** are referred as Table 2.2, Section 2.7, and Chapter-2 in EIA Report (Page No. 46).
	vi. List of raw materials required and their source along with mode of transportation.	**List of raw materials** required and their source along with mode of transportation is referred as Table-2.3, Section 2.8 and Chapter-2 in EIA Report (Page No. 53-72). Most of the Raw Materials will be purchased from Local Market. Some Raw Material are not available in Local Market, so it will be imported. Transportation of Raw Material is Primarily by Road/ Sea/Air.
	vii. Other chemicals and materials required with quantities and storage capacities	**Total nos. of 30 Other chemicals and materials** details with quantities, maximum storage and mode of storage are referred as Table 7.1, Chapter-7 in EIA Report (Page No. 335).
	viii. Details of Emission, effluents, hazardous waste	**Details of Effluent & its Management:**

	generation and their management.	➢ The total wastewater generation will be 705 KL/Day. Industrial process wastewater = 600 KL/Day + washing = 75 KL/Day + Boiler/cooling = 30 KL/Day). and will be segregated into two stream High COD Stream & Low COD stream. • Low COD stream: Low COD effluent (105 KL/Day) will be treated through the conventional wastewater treatment system and the pass through RO system. • High TDS Stream: Neutralized concentrate effluent (600 KL/Day) and rejects from RO (225 KL/Day) will be evaporated in multi effective evaporator (MEE). The treated wastewater will be totally recycled and the solid waste generated will be disposed to TSDF (Common disposal Facility). • Domestic wastewater (100 KL/Day) will send to STP and Reuse in domestic and gardening purpose after treatment. **Details of Emission & its Management:** • In existing, company is using Furnace Oil in Steam Boiler & HSD in Thermic Fluid Heater and DG Set. Mechanical Dust collector & Adequate Stack will be provided to control of flue gas emission. In proposed expansion, company will use Furnace Oil and Briquettes in Steam Boiler & HSD in Thermic Fluid Heater and DG Set. Mechanical Dust collector, ESP & Adequate Stack will be provided to control of flue gas emission. The source of process gas emission will be from reactor vent. **Details of Hazardous Waste and Its Disposal Management:** • Empty barrels/ containers/liners contaminated with hazardous chemicals /wastes, Used / Spent Oil, spent solvents will be disposed Disposal to TNPCB Authorized Recyclers (Recyclable). • Chemical sludge from waste water treatment, Distillation residues, Contaminated aromatic, aliphatic or naphthenic solvents may fit for

<table>
<tr><td></td><td></td><td>reuse, Contaminated cotton rags or other cleaning materials, Spent Carbon or Filter medium disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016.
• Spent Carbon or Filter medium disposal to Common TSDF site / Co-processor by following protocol of Hazardous Waste Rule – 2016.</td></tr>
<tr><td></td><td>ix. Requirement of water, power, with source of supply, status of approval, water balance diagram, man-power requirement (regular and contract)</td><td>Total Power Requirement
Power requirement will be 14000 KVA which will be taken from State Electricity Department.

Fuel Requirement:
<table>
<tr><th>Sl. No.</th><th>Type of Fuel</th><th>Existing (MT/day)</th><th>Proposed (MT/day)</th><th>Total (MT/day)</th></tr>
<tr><td>1</td><td>Furnace Oil</td><td>8</td><td>90</td><td>98</td></tr>
<tr><td>2</td><td>Briquettes</td><td>00</td><td>250</td><td>250</td></tr>

</table>
Requirement of Water:
Total Domestic Water: 100.0 KL/Day [Existing: 12.0 KL/Day + Proposed: 88.0 KL/Day]
Total Gardening Water: 30.5 KL/Day [Existing: 25.5 KL/Day + Proposed: 5 KL/Day]
Total Water Quantity: 1207.5 KL/Day [Existing: 207.5 KL/Day + Proposed: 1000 KL/Day]

Source of water: The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source.

Status of Approval: Unit has obtained CGWA letter wide letter no. 21-4(134)/SECR/CGWA/2009-3708 dated: 01/06/2012 for 207.5 KLD.

Water Balance Diagram is referred as Fig. 2.4,</td></tr>
</table>

		Section 2.10.3. in Chapter-2 in EIA Report (Page No. 135). **Man-power requirement:** Company will be appointed Approximately 1350 people [Existing: 350 people + proposed: 1000 people] local skilled and unskilled people based on qualification and requirement as per prevailing norms of state government.
	x. Details of boiler/gensets (including stacks/exhausts) and fuels to be used	Details of boiler is refer as Section 2.11.5 (Page No. 150-151). & fuels to be used is refer as Section 2.11.4. Chapter-2 in EIA Report (Page No. 149).
	xi. Process description along with major equipments and machineries, process flow sheet (quantities) from raw material to products to be provided	**Process description** along with major equipments and machineries, process flow sheet (quantities) from raw material to products is referred as Section 2.9, Chapter-2 in EIA Report (Page No. 73).
	xii. Hazard identification and details of proposed safety systems.	**Hazard Identification** major risk areas are as follows: • Bulk storage area for Raw Materials at ambient temperature and atmospheric pressure. • Process Plant involving pumping, transportation, reactors, distillation, heating, cooling, etc. • Bulk loading and unloading from storage tanks to road takers and vice versa. Safety precautions are referred as Section 7.4, Chapter-7 of EIA Assessment Report (Page No. 341)
	xii. Expansion/modernization proposals: a. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Regional Office of the Ministry of Environment and Forests as per circular dated 30th May, 2012 on the status of compliance of conditions stipulated in all the existing environmental clearances	This is an Expansion project. a. Unit has obtained EC from MOEF vide file No. J-11011/104/2009-IA-II(I) dated 29/04/2009. Certified EC Compliance Report from MoEFCC, Tamilnadu has been obtained vide file no. E.P.12.1/862/TN/1206 dated 8th December 2021 is attached in Annexures. Unit has obtained CTO & CTE. Renewal of **CTE** (Air) & (Water) vide no.: **2206241783392** dated: 03/06/2022 and Consent to establish for Expansion is valid upto **March 31, 2027.** Renewal of CTO (Air) & (Water) vide no.:

	including Amendments shall be provided. In addition, status of compliance of Consent to Operate for the ongoing /existing operation of the project from SPCB shall be attached with the EIA-EMP report.	**2208242904446** dated: 1/08/2022 and Consent to establish for Expansion is valid upto **March 31, 2027.**
	b. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.	b. Unit has obtained EC from MOEF vide file No. J-11011/104/2009-IA-II(I) dated 29/04/2009. Certified EC Compliance Report from MoEFCC, Tamilnadu has been obtained vide file no. E.P.12.1/862/TN/1206 dated 8th December 2021 is attached in Annexures. Visit date: 6/12/2021 Unit has obtained CTO & CTE. Renewal of **CTE** (Air) & (Water) vide no.: **2206241783392** dated: 03/06/2022 and Consent to establish for Expansion is valid upto **March 31, 2027.** Renewal of CTO (Air) & (Water) vide no.: **2208242904446** dated: 1/08/2022 and Consent to establish for Expansion is valid upto **March 31, 2027.**
4.	**Site Details**	
	i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.	Location the project site: S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3,10/1,2,3A,3B, 4,12/1A,1B,13/1,14/1A,2A, Suligunta Village, Berigai 635105. Shoolagiri Taluk, Krishnagiri District, Tamil Nadu, India. Justification for selecting the site: ● Minor site clearance activities shall be carried out to clear shrubs and weed. ● The project site is located on level ground, which does not require any major land filling for area grading work. ● No sanctuaries or archeological sites are located in the vicinity of the area. ● No rehabilitation or resettlement of local

		people required. ● Site is very well connected by road and railway. ● Availability of Fuel, Power, TSDF, etc. within the estate. Proposed Expansion activities are carried out within Existing Premises and No additional investigations are required for the present proposal. Hence no alternative sites were examined.
	ii. A topo sheet of the study area of radius of 10km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet. (including all eco-sensitive areas and environmentally sensitive places)	A topo sheet of the study area is referred as Figure 3.13, Section 3.10, Chapter-3 in EIA Report (Page No.229).
	iii. Details w.r.t. option analysis for selection of site	Major factors involved in the selection of site are listed below: • Proposed Expansion activities are carried out within Existing Premises and No additional investigations are required for the present proposal. ● Minor site clearance activities shall be carried out to clear shrubs and weed. ● The project site is located on level ground, which does not require any major land filling for area grading work. ● No sanctuaries or archeological sites are located in the vicinity of the area. ● No rehabilitation or resettlement of local people required. ● Site is very well connected by road and railway. ● Availability of Fuel, Power, TSDF, etc. within the estate.
	iv. Co-ordinates (lat-long) of all four corners of the site.	**Co-ordinates (lat-long)** of all corners of the site. 12°48'21.69"N 77°59'2.03"E 12°48'18.20"N 77°59'14.32"E 12°48'17.79"N 77°59'19.40"E 12°48'14.08"N 77°59'18.40"E 12°48'10.76"N 77°59'18.31"E

		12°48'6.70"N 77°59'16.68"E 12°48'13.67"N 77°58'57.08"E
	v. Google map-Earth downloaded of the project site	**Google map-Earth** downloaded of the project site is referred as Figure – 2.2, Section- 2.3.1, Chapter-2 in EIA Report (Page No.35).
	vi. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.	**Layout maps** are referred as Figure – 2.1, Section-2.2, Chapter-2 in EIA Report (Page No. 17).
	vii. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.	Photographs of the proposed and existing (if applicable) plant site and greenbelt developed within the plant premises is referred as Section 2.3.1 and Chapter-2 in EIA Report (Page no. 36-38)
	viii. Landuse break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc. shall be included. (not required for industrial area)	**Total land area of the Unit is 16.64 Hectares and break-up of total land of the project site** is referred as Table 1.3, Section 1.2.2, and Chapter-1 in EIA Report (Page No. 4).
	ix. A list of major industries with name and type within study area (10km radius) shall be incorporated. Land use details of the study area	There is no factory around 10 km of the plant surrounding. Land use details of the study area is referred as Section 3.9, Chapter-3 in EIA Report (Page No. 237).
	x. Geological features and Geo-hydrological status of the study area shall be included.	**Geological features** is referred as Section 3.8.6 (Page No. 224) **and Geo-hydrological status** of the study area are referred as Section 3.8.4, Chapter-3 in EIA Report (Page No. 222).
	xi. Details of Drainage of the project up to 5 km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)	**Drainage pattern** of the project is referred as Section 3.8.5, and Chapter-3 in EIA Report (Page No. 223).

	xii. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.	Unit has already obtained acquisition of land. Land possession documents are attached as Section 2.2.1. , Chapter-2 in EIA Report(Page no. 20)
	xiii. R&R details in respect of land in line with state Government policy	The unit is located outside Notified Industrial Area. There is no habitation on the proposed expansion project activity area and it is inside the existing industry land. There shall not be displacement of any population in project area. The increasing industrial activity will boost the commercial and economical status of the locality up to some extent. Hence, R & R is not applicable to this project.
5.	**Forest and wildlife related issues (if applicable)**	
	i. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable)	Forest and wildlife related issues are not applicable. As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	ii. Landuse map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha)	Forest and wildlife related issues are not applicable. As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	iii. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted.	Forest and wildlife related issues are not applicable. As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	iv. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project location and the recommendations or comments of the Chief Wildlife Warden there on.	Forest and wildlife related issues are not applicable. As, no forest and no sanctuaries are located in 10 km radial of study area.

	v. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area	Not applicable, As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	vi. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife	Forest and wildlife related issues are not applicable. As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	vii. Recommendations and NOC from the concerned State/UT Coastal Zone Management Authority on CRZ angle	Not applicable.
5.	**Environmental Status**	
	i. Determination of atmospheric inversion level at the project site and site-specific micrometeorological data using temperature, relative humidity, hourly wind speed and direction and rainfall.	**Determination of atmospheric inversion level** at the project site and site-specific micrometeorological data using temperature, relative humidity, hourly wind speed and direction and rainfall is referred as Section 3.3, Chapter-3 in EIA Report (Page No. 176).
	• AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests.	Ambient Air Quality Monitoring (AAQM) was carried out at eleven locations during the study period. The conventional and project specific parameters such as Suspended Particulate Matter, RSPM-PM_{10}, RSPM-$PM_{2.5}$, SO_2, NOx, O_3, Pb, C_6H_6, BaP, As, Ni, CO & VOCs were monitored at site. AAQ data is referred in Table-3.10, Section-3.4, Chapter-3 in EIA Report. (Page No. 188-189).
	ii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min., max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be provided as an annexure to the EIA Report.	**Raw data of all AAQ measurement** for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 is referred as Table-3.10, Section-3.4, Chapter-3 in EIA Report. (Page No. 188-189).
	iii. Surface water quality of nearby River (100 m upstream and downstream of discharge point) and other surface drains at eight	11 nos. of ground water and 2 nos. of surface water samples were collected from the study area. Surface water quality is referred in Table-3.13, Section-3.6.1, Chapter-3 in EIA Report. (Page

	locations as per CPCB/MoEF&CC guidelines.	No.196-199).
	iv. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC, if yes give details.	No falls
	v. Ground water monitoring at minimum at 8 locations shall be included.	11 nos. of ground water and 2 nos. of surface water samples were collected from the study area. Ground water monitoring is referred in Table-3.13, Section-3.6.1, Chapter-3 in EIA Report. (Page No.196-199).
	vi. Noise levels monitoring at 8 locations within the study area.	Noise levels monitoring for 11 location of Residential Area, along with project site is referred as Table No. 3.12, Section 3.5, Chapter-3 in EIA Report (Page No194-195).
	vii. Soil Characteristic as per CPCB guidelines.	**Soil Characteristic for 11 Location** is referred as Table No. 3.14, Section 3.7.1, Chapter-3 in EIA Report (Page No. 203-207).
	viii. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.	Car/jeep/ van & four wheelers - 219 Nos. Bus/ coach -192 Nos. Heavy motor vehicle - 12 Nos. Trucks - 15 Nos. Motor cycle & scooter - 309 Nos. Three wheelers-10 Nos. Cycle-9 Nos. Farm vehicle (tractor/ combine harvester)-162 Nos. Detailed traffic study of the area is refer as Section 3.11, Chapter-3 in EIA report (Page no. 231-235)
	ix. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.	**Flora** existing in the study area is referred as Section 3.12.5, Chapter-3 in EIA Report (Page No. 243-248) and **Fauna (terrestrial and aquatic)** existing in the study area is referred as Section 3.12.6, Chapter-3 in EIA Report (Page No. 248-253).
	x. Socio-economic status of the study area.	**Socio-economic** status of the study area is referred as Section 3.13, Chapter-3 in EIA Report (Page No. 254).
6.	**Impact and Environment Management Plan**	
	i. Assessment of ground level concentration of pollutants from	**Assessment of ground level concentration** of pollutants is referred as Table 4.2, Chapter-4 in

	the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be assessed. Details of the model used and the input data used for modelling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.	EIA Report (Page No. 290 to 298). Details of the model used and the input data used for modeling: 1) Conc. of all pollutants 2) Meteorological Data 3) Ram file, Sam File, Met File, Mixing Height 4) Village Co-Ordinates Predicted Ambient Air Quality is referred in Table-4.4, Section-4.2.2, Chapter-4 in EIA Report. (Page No.306). Details of the model used and the input data used for modeling also be provided in Section-4.2.2, Chapter-4 in EIA Report. (Page No.290-298). The air quality contours is referred in Figure-4.2, Chapter-4 in EIA Report. (Page No.299-303).
	ii. Water Quality modelling – in case of discharge in water body	Not Applicable, As No effluent is/will be discharged into any surface water body. Hence, Water Quality modeling is not required.
	iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail-cum road transport or conveyor-cum-rail transport shall be examined.	Impact of the transport of the raw materials and end products is referred in Section-4.8, Chapter-4 in EIA Report. (Page No. 316-317). Action plan for transportation of raw materials and products is referred in Section-10.13, Chapter-10 in EIA Report. (Page No. 502)
	iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under E(P) Rules 1986.	➢ The total wastewater generation will be 705 KL/Day. Industrial process wastewater = 600 KL/Day + washing = 75 KL/Day + Boiler/cooling = 30 KL/Day). and will be segregated into two stream High COD Stream & Low COD stream. • Low COD stream: Low COD effluent (105 KL/Day) will be treated through the conventional wastewater treatment system and the pass through RO system. • High TDS Stream: Neutralized concentrate effluent (600 KL/Day) and rejects from RO (225 KL/Day) will be evaporated in multi effective evaporator (MEE). The treated

		wastewater will be totally recycled and the soild waste generated will be disposed to TSDF (Common disposal Facility). • Domestic wastewater (100 KL/Day) will send to STP and Reuse in domestic and gardening purpose after treatment. Detailed effluent treatment scheme including segregation of effluent streams of wastewater shall be treated in effluent treatment plant consist of MEE treatment is referred as section-2.10.4 & Section 2.10.5, Chapter-2 in EIA Report (Page No. 102 to 104).
	v. Details of stack emission and action plan for control of emissions to meet standards.	**Details of stack emission** • In existing, company is using Furnace Oil in Steam Boiler & HSD in Thermic Fluid Heater and DG Set. Mechanical Dust collector & Adequate Stack will be provided to control of flue gas emission. In proposed expansion, company will use Furnace Oil/Briquettes in Steam Boiler & HSD in Thermic Fluid Heater and DG Set. Mechanical Dust collector, ESP / wet Scrubber & Adequate Stack will be provided to control of flue gas emission. • The source of process gas emission will be from reactor vent. Company has installed adequate Scrubber systems to control process gas emission. Details of stack emission is referred as Table 4.2, Section 4.2.2, Chapter-4 in EIA Report (Page No. 290-298) and action plan for control of emissions is referred as Section 2.11.6, Chapter-2 in EIA Report (Page No. 152-153).
	vi. Measures for fugitive emission control	**Measures for fugitive emission control**: • The Solvent used in the processes is handled in a closed loop and in process materials are stored in drums will be kept under structured roof. • Equipment where volatile solvents distilled is provided with reflux condensers and after

		coolers and the receivers are connected to the scrubber. • Pumps of compatible MOC with Single and Double Mechanical seals are used for handling corrosive and hazardous chemicals • Periodic preventive maintenance and inspection is done for all the equipments by the in-house Engineering team and LDAR study carried yearly once by External lab • All the rotating equipment like pumps are installed with Mechanical Seals to arrest any sort of emissions. • Proper ventilation in storage area is ensured and all materials are stored in suitable packing to prevent contamination of air due to particulates & volatile emissions from storage area. • All the Flange joints of the pipe lines which carry solvents are covered with flange guards. • Adequate Dust Suppression System including Water Sprinkling System is installed for control of fugitive emission during loading of raw material and product. • Work place monitoring within plant, storage & other area and AAQM will be done as per 'Post project monitoring plan' as well as regulatory requirement as per factory act. • Properly designed method & practices of transportation, storage & handling of materials are established and maintained along with necessary facilities to reduce airborne particle of materials and VOCs.
	vii. Details of hazardous waste generation and their storage, utilization and management. Copies of MOU regarding utilization of solid and hazardous waste in cement plant shall also be included. EMP shall include the	Details of hazardous waste generation and their disposal: **Details of Hazardous Waste and Its Disposal Management:** • Empty barrels/ containers/liners contaminated with hazardous chemicals

	concept of waste-minimization, recycle/reuse/recover techniques, Energy conservation, and natural resource conservation.	/wastes, Used / Spent Oil, spent solvents will be disposed Disposal to TNPCB Authorized Recyclers (Recyclable). • Chemical sludge from waste water treatment, Distillation residues, Contaminated aromatic, aliphatic or naphthenic solvents may fit for reuse, Contaminated cotton rags or other cleaning materials, Spent Carbon or Filter medium disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016. • Spent Carbon or Filter medium disposal to Common TSDF site / Co-processor by following protocol of Hazardous Waste Rule – 2016. Details of hazardous waste generation and their storage, utilization and management is referred as Table 2.5, Section 2.12.1, Chapter-2 in EIA Report (Page No. 153).
	viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.	Fly ash (18250 MT/Annum) will be collected, stored, transported and sent for brick manufacturer or in cement industries.
	ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 1,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.	Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (33 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) within the plant premises. Name of species planted are as below 1. Neem 2. Silver Oak 3. Eucalyptus 4. Pongamia 5. Gulmohur 6. Spathodia 7. Ashoka 8. Banyan 9. Bamboo 10. Peapal
	x. Action plan for rainwater harvesting measures at plant site	Unit will harvest rainwater from the rooftop of the buildings. Rain water harvesting is under

<table>
<tr><td></td><td>shall be submitted to harvest rainwater from the roof tops and storm water drains to recharge the ground water and also to use for the various activities at the project site to conserve fresh water and reduce the water requirement from other sources.</td><td>process.
Rainwater harvesting is attached in Section 10.4.3.1 in Chapter 10 of EIA report (Page no. 488).</td></tr>
<tr><td></td><td>xi. Total capital cost and recurring cost/annum for environmental pollution control measures shall be included.</td><td>Total capital investment for the project will be Rs. 2292.398 Crores [Existing: 292.398 Crore + Proposed: 2000 Crore]. Capital cost of air & water pollution control system and environmental monitoring equipments will be Rs. 118.482 Crores.</td></tr>
<tr><td></td><td>xii. Action plan for post-project environmental monitoring shall be submitted.</td><td>Post-project environmental monitoring is referred as Table 6.1, Section 6.3 Chapter-6 in EIA Report (Page No. 323).</td></tr>
<tr><td></td><td>xiii. Onsite and Offsite Disaster (natural and Man-made) Preparedness and Emergency Management Plan including Risk Assessment and damage control. Disaster management plan should be linked with District Disaster Management Plan.</td><td>Disaster Management Plan- On site &off Site Emergency Management Plan is referred as Section 7.10, Chapter-7 in EIA Report (Page No. 410).</td></tr>
<tr><td>7.</td><td>Occupational health</td><td></td></tr>
<tr><td></td><td>i. Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers</td><td>Company will allot Rs. 102 Lakh per annum for the occupational health & safety of all contract and casual workers.
<table>
<tr><th>One time investment for Occupational safety</th><th>In lakhs</th></tr>

	ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre-placement and periodical examinations give the details of the same. Details regarding last month analyzed data of above mentioned parameters as per age, sex, duration of exposure and department wise.	Health Evaluation of Workers is referred as Section 7.12.6, Chapter-7 in EIA Report (Page No. 452). Workers are checked for physical fitness with special reference to the possible health hazards likely to be presented where he/she is being expected to work before being employed for that purpose. Tests carried out: 1)Physical test 2)General Examination like Temp., Pulse, Pressure, Haemoglobin/Total W.B.C/ Platelet/others 3)Microscopic Examination 4) Systematic Examination 5) Vision Testing 6) Blood Glucose analysis 7) Haemogram Profile
	iii. Details of existing Occupational & Safety Hazards. What are the exposure levels of hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved,	**EMP for the Occupational Safety & Health hazards** so that such exposure can be kept within permissible exposure level (PEL)/Threshold Level value (TLV) so as to protect health of workers is referred as, Section 7.12.3, Chapter-7 in EIA Report (Page No. 450).
	iv. Annual report of health status of workers with special reference to Occupational Health and Safety	Annual report of health status of workers with special reference to Occupational Health and Safety is referred as Section 7.12.6 Chapter-7 in EIA Report (Page No. 453). There was not found any abnormality of any employees and workers. All employees and

		workers are found fit. Occupational health surveillance program is undertaken as regular exercise for all employees specifically for those engaged in handling substances. Medical records of each employee are maintained separately.
8.	**Corporate Environment Policy**	
	i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.	Environment Policy is referred in Section-6.4, Chapter – 6 in EIA Report(Page No.325).
	ii. Does the Environment Policy prescribe for standard operating process / procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.	Environment Policy is referred in Section-6.4, Chapter – 6 in EIA Report(Page No.325).
	iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.	Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions is referred in Figure-6.1, Section-6.5, Chapter-6 in EIA Report(Page No.327).
	iv. Does the company have system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report	An organogram to report of non-compliances / violations of environmental norms to the Board of Directors of the company. is referred in Section-6.6, Chapter-6 in EIA Report(Page No.328).
	v. Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.	Company will provide the sanitation facility only to the Labour force during construction as well as to the casual workers including truck drivers during operation phase.
10.	**Enterprise Social Commitment (ESC)**	
	i. Adequate funds (at least 2.5 % of the project cost) shall be	CER @ 0.25 % of the additional project cost (i.e. 2000 Crore) and CSR will be carried out by the

	earmarked towards the Enterprise Social Commitment based on Public Hearing issues and item-wise details along with time bound action plan shall be included. Socio-economic development activities need to be elaborated upon.	company in the surrounding villages. This fund will be administered by a local area development committee in accordance with the orders of the appropriate Government.
9.	**Additional studies/Measures to be considered**	
	i. Provide latest and ecofriendly technology for product manufacturing.	Latest and ecofriendly technology for product manufacturing are as follows: 1. Usage of Non-fossil fuel source for boiler (Briquettes) 2. Adiabatic Cooling Towers instead of conventional type Cooling Towers 3. Low-Power Exercise Equipment -Energy efficient (IE3) motors 4. Variable Speed Drives (VSD). 5. LED Lighting 6. Monofluid Temperature Control 7. Steam Condensate Recovery System and Flash Steam Recovery System 8. Rainwater harvesting 9. Double Scrubbing system for all reactors 10. Scrubber for all open Reactor and Chemical storage Detailed Latest and ecofriendly technology for product manufacturing is refer as Section 2.5, Chapter-2 in EIA report (Page no. 42)
	ii. Emphasize on Green chemistry/Clean Manufacturing	Unit has emphasizing on green chemistry /clean manufacturing in following ways: **1. Scrubbing system** All reaction vessels vent is connected with vent scrubber with capacity of 2500 m3/hr is installed to control fugitive emission Emphasize on green chemistry/clean manufacturing **2. Double condenser for solvent recovery** For solvent recovery equipment connected with primary and secondary condensers with chilled water / brine. For filtration and drying well designed ANFD with condensers are available for minimizing solvent emission in environment. **3. Usage of Non-fossil fuel source for boiler (Briquettes)**

		replacing the Usage of furnace oil by non-fossil fuel source (Briquettes) for Boiler. Using fossil fuel would generate 2.8 to 3 T of CO2 emission per ton of fuel Usage of non-fossil fuel source (Briquettes) is increasing the Energy-efficiency and Reduction of greenhouse gas emissions **4. Adiabatic Cooling Towers instead of conventional type Cooling Towers** We are going with Adiabatic Cooling Towers, which is saving 75% of water consumption with compare to conventional type Cooling Towers.Adiabatic cooler uses wetted pads to pre-cool the ambient air entering the tower. This pre-cooled air is used to cool process water. This helps achieve a lower temperature than the ambient dry bulb temperature. **5. Low-Power Exercise Equipment -Energy efficient (IE3) motors** a. 93% efficiency as against 88% for conventional IE1 motors – 5% increase in efficiency – 1 GWh electrical energy accounts for releasing 790 tons of CO2[Source: as per CEA data, Govt. of India.] – Yearly reduction in CO2 emissions due to IE3 otors: 2 X 790 = 1580 tonnes **6. Variable Speed Drives (VSD)** – Selected IE3 motors are with VSD – 1 GWh electrical energy accounts for releasing 790 tons of CO2 [Source: as per CEA data, Govt. of India.] – Yearly reduction in CO2 emissions due to VSD: 0.3 X 790 = 237 tonnes **7. LED Lighting** We are going with 100% of LED lightings over the plant, it's better than other by, they are brighter, Require lesser energy to function and Last longer. – LED lamps consume 20% energy for heating – Metal halide lamps consume 75% energy – 1 GWh electrical energy accounts for releasing 790 tones of CO2 – Yearly reduction in CO2 emissions due to VSD : 0.3 X 790 = 237 tonnes **8. Monofluid Temperature Control**

<table>
<tr><td></td><td></td><td>a. Precise temperature control in addition to reduction in lean waste generation
9. Steam Condensate Recovery System and Flash Steam Recovery System
– Condensate headers are routed to the receiver wherein pressure powered/ mechanical pump transfers the condensate to boiler feed water tank
– High pressure condensate from process will be diverted to a flash vessel to generate LP steam. Thermo compressor option will be validated based on LP pressure
10. Bio-degradable Goods
Company has to use Bio-degradable Goods (wood) for packing and palleting purpose instead of plastic</td></tr>
<tr><td></td><td>iii. Provide CAS No. of products along with product list.</td><td>Provide CAS No. of products along with product list is in Table 2.2, Section 2.7, and Chapter-2 in EIA Report (Page No. 46).</td></tr>
<tr><td></td><td>iv. Provide details of amount of carbon sequestered in their unit through greenbelt/other modes, in case of expansion project.</td><td>Amount of carbon sequestered in their unit is 20.36 ton CO2 eq./year.
Calculation of CO2 sequestered per is referred as Section 10.14, Chapter-10 in EIA Report (Page no. 503-506)</td></tr>
<tr><td></td><td>v. Life structure and sustainability for carbon and water foot print.</td><td>Life structure and sustainability for carbon and water foot print is attached in Annexure-8 in EIA report.(Page no.A-15)</td></tr>
<tr><td></td><td>vi. Detailed pollution Load estimation.</td><td>For proposed project,
Worst case scenario for water consumption:

<tr><td></td><td>viii. Category of Hazardous Wastes shall be mentioned in the EIA/EMP report and in presentation.</td><td>Category of Hazardous Wastes is referred as Table 2.5, Section 2.12.1, Chapter-2 in EIA Report (Page No. 153).</td></tr>
<tr><td></td><td>ix. Details of greenhouse gases and emissions shall be provided.</td><td>• Greenhouse gas is the property of absorbing infrared radiation (net heat energy) emitted from Earth’s surface and reradiating it back to Earth’s surface, thus contributing to the greenhouse effect. Carbon dioxide, methane, and water vapour are the most important greenhouse gases. A number of processes influence greenhouse gas</td></tr>
</table>

		concentrations. Industrial activities increase atmospheric CO_2 levels primarily through the burning of fossil fuels. • Greenhouse gas emissions from existing unit are Carbon dioxide (CO_2), PM, SO2, NO_2 & CO • Company has planted trees which helps to reduce greenhouse gases through photosynthesis absorbing large quantities of CO_2 and producing oxygen.
	x. Greenbelt shall be developed in the first year of the project and wind breaks shall be erected.	Agreed, Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (32 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) Company has planted trees in a row or shrubs planted in such a manner as to provide shelter from the wind and to protect soil from erosion. The windbreaks are formed in North-West direction.
	xi. Study area map shall be overlapped with all the associated features.	The baseline parameters such as Land use / Land cover, Ecological status, Geology, Hydrology, Soil, Drainage Pattern and infrastructure establishment is studied within the 10 km aerial radius from the center where the site is located. A map depicting major land use/ land cover classes comprising lands under agriculture, allow land, open/degraded vegetation; lands falling under water bodies, scrub and lands under inhabitations is presented. The map also marks the area within 10 km of the project site as the area of interest. Area and distance calculations have been carried out using GIS software after geo-referencing the interpreted data with the help of Survey of India (SoI) topographical maps of the scale 1:50,000. Study area map overlapped with all the associated features are referred in Figure 3.13, Section 3.10, Chapter-3 in EIA Report (Page No.229).
	xii. Emphasize on green fuels.	As of now company is using FO & HSD. However, company will review the viability of other fuels.
	xiii. The project from NCR shall not use Coal as fuel. Further,	Not Applicable, as unit is located in Berigai, Tamil Nadu.

	PP shall avoid use of Coal in the CPAs and elsewhere also if alternatives are available.	
	xiv. Provide the Cost-Benefit analysis with respect to the environment due to the project.	CER @ 0.25 % of the additional project cost (i.e. 2000 Crore) and CSR will be carried out by the company in the surrounding villages. This fund will be administered by a local area development committee in accordance with the orders of the appropriate Government.
	xv. Details of carbon foot prints and carbon sequestration study w.r.t. proposed project needs to spelled out. Proposed mitigation measures also needs to be analyzed and submitted for further appraisal of the EAC	Details of carbon foot prints and carbon sequestration as Section 10.14, Chapter-10 in EIA Report (Page no. 503-506)
11.	Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.	There is no any litigation pending against the project and/or any direction/order passed by any Court of Law against the project.
12.	'A tabular chart with index for point wise compliance of above TORs.	Complied

SPECIFIC TERMS OF REFERENCE

SR. NO.	TERMS OF REFERENCES	COMPLIANCE
1	Commitment that no banned pesticides will be manufactured.	**Undertaking** stating that no banned pesticides will be manufactured is referred as **Annexure-15,** (Page No. A-108).
2	Details on solvents to be used, measures for solvent recovery and for emissions control.	**Solvents such as** Toluene, TBA, MCB, MTBE, ODCB, Methanol & Benzene will be used**, measures for solvent recovery** is referred in Section-7.12, Chapter-7 in EIA Report (Page No. 499).
3	Details of process emissions from the proposed unit and its arrangement to control.	Process gas emissions from the proposed unit are SO_2, NO_2 & CO and **Measures for fugitive emission control are as following**: • The Solvent used in the processes is handled in a closed loop and in process materials are stored in drums will be kept under structured roof. • Equipment where volatile solvents distilled is provided with reflux condensers and after coolers and the receivers are connected to the scrubber. • Pumps of compatible MOC with Single and Double Mechanical seals are used for handling corrosive and hazardous chemicals • Periodic preventive maintenance and inspection is done for all the equipments by the in-house Engineering team and LDAR study carried yearly once by External lab • All the rotating equipment like pumps are installed with Mechanical Seals to arrest any sort of emissions. • Proper ventilation in storage area is ensured and all materials are stored in suitable packing to prevent contamination of air due to particulates & volatile emissions from storage area. • All the Flange joints of the pipe lines which carry solvents are covered with flange

		guards. • Adequate Dust Suppression System including Water Sprinkling System is installed for control of fugitive emission during loading of raw material and product. • Work place monitoring within plant, storage & other area and AAQM will be done as per 'Post project monitoring plan' as well as regulatory requirement as per factory act. • Properly designed method & practices of transportation, storage & handling of materials are established and maintained along with necessary facilities to reduce airborne particle of materials and VOCs. Details of process emissions proposed scenario is referred as section - 2.11.1, Chapter-2 in EIA Report (Page No. 147).
4	Ambient air quality data should include VOC, other process- specific pollutants* like NH_3*,chlorine*, HCl*, HBr*, H_2S*, HF*, CS2 etc., (*- as applicable)	Ambient air samples were collected and analyzed for SPM, PM_{10}, $PM_{2.5}$, SO_2, NO_X, O_3, Pb, CO, NH_3, C_6H_6, Benzo (a) Pyrene (BaP), Arsenic (As), Nickel (Ni) & VOCs for identification, prediction, evaluation and assessment of potential impact on ambient air environment. Ambient air quality data is referred in Table-3.10 Section-3.4, Chapter-3 in EIA Report (Page No.188).
5	Work zone monitoring arrangements for hazardous chemicals.	Work zone monitoring arrangements is referred in Table 6.1, Section 6.3 Chapter-6 in EIA Report (Page No. 323).
6	Detailed effluent treatment scheme including segregation of effluent streams for units adopting 'Zero' liquid discharge.	Unit has full-fledged Effluent Treatment Plant to treat the wastewater with multiple effect evaporators (MEE),Biological conventional treatment and RO system. The water recovered is totally reused in the process plant itself. The domestic waste water is also treated in the STP. The cyanide bearing wastewater is chemically treated with Sodium hypochlorite solution and taken for evaporation in the MEE. No effluent is/will be discharged into any surface water body. **Hence, this unit is/will be total Zero Liquid Discharge unit.** Detailed effluent treatment scheme including

		segregation of effluent streams of wastewater shall be treated in effluent treatment plant consist of MEE treatment is referred as section-2.10.4 & Section 2.10.5, Chapter-2 in EIA Report (Page No. 102 to 104).
7	Action plan for odor control to be submitted.	Action plan for odour control measure are as follows: • All liquid raw materials charged into Reactors with pumps or under gravity through closed pipes. • Suction Hoods placed near the Man-holes & Charging funnels of Reactors & Filters so that chemical vapors and dust do not escape into the Plant & surroundings, when the man-hole covers are opened for inspection or charging of RM. • All storage tanks of low boiling chemicals provided with Conservation Vents. • Vent lines of Dosing vessels shall be connected back to the vents of storage tanks to prevent contaminated air release during material transfer. • All pumps handling hazardous chemicals provided with mechanical seals to prevent fugitive emission. • Wherever possible magnetic coupled pumps are used. • Any spillage from drums etc. absorbed with saw dust / soda ash and moped clean. • The contaminated absorbent are safely dispose off along with hazardous waste.
8	A copy of the Memorandum of Understanding signed with cement manufacturers indicating clearly that they co-process organic solid/hazardous waste generated.	Unit has agreement with TNWML for co-processing of hazardous waste is referred as section-2.12.3 Chapter-2 in EIA Report (Page No.180)
9	Authorization/Membership for the disposal of liquid effluent in CETP and solid/hazardous waste in TSDF, if any.	Authorization/Membership for the disposal of **liquid effluent** in CETP is not applicable as this is zero liquid discharge unit and Unit has agreement with TNWML referred as Section-2.11.4, Chapter-2 in EIA Report (Page No.158).
10	Material Safety Data Sheet for all the Chemicals are being used/will	**Material Safety Data Sheet** for all the Chemicals is referred to **Annexure-15**, (Page No. A-98).

	be used.	
11	Authorization/Membership for the disposal of solid/hazardous waste in TSDF.	Unit has agreement with TNWML referred as Section-2.11.4, Chapter-2 in EIA Report (Page No.158).
12	Details of incinerator if to be installed.	Not Applicable, Unit will not install the incinerator for existing as well as Proposed scenario. Incinerable Waste will be disposed to M/s. TNWML
13	Risk assessment for storage and handling of hazardous chemicals/solvents. Action plan for handling & safety system to be incorporated.	Risk assessment for storage and handling of hazardous chemicals are referred as Section-7.3.4.3, Chapter-7 in EIA Report (Page No. 333) & Action plan for handling & safety system to be incorporated are referred as Section-7.4, Chapter-7 in EIA Report (Page No. 341)
14	Arrangements for ensuring health and safety of workers engaged in handling of toxic materials.	Arrangements for ensuring health and safety of workers engaged in handling of toxic materials is referred in Section-7.12.4, Chapter-7 in EIA Report (Page No. 451)
15	Details of carbon foot prints and carbon sequestration study w.r.t. proposed project needs to spelled out. Proposed mitigation measures also needs to be analysed and submitted for further appraisal of the EAC.	Details of carbon foot prints and carbon sequestration as Section 10.14, Chapter-10 in EIA Report (Page no. 503-506).

5(f): STANDARD TERMS OF REFERENCE FOR EIA STUDIES FOR SYNTHETIC ORGANIC CHEMICALS INDUSTRY (DYES & DYE INTERMEDIATES; BULK DRUGS AND INTERMEDIATES EXCLUDING DRUG FORMULATIONS; SYNTHETIC RUBBERS; BASIC ORGANIC CHEMICALS, OTHER SYNTHETIC ORGANIC CHEMICALS AND CHEMICAL INTERMEDIATES)

SR. NO.	TERMS OF REFERENCES	COMPLIANCE
1.	**Executive Summary**	**Executive Summary** is referred as Chapter-11.
2.	**Introduction**	
	iii. Details of the EIA Consultant including NABET accreditation	EIA Consultants, M/s. Aqua-Air Environmental Engineers Pvt. Ltd. has obtained NABET- QCI accreditation scheme of MoEFCC, New Delhi. NABET accreditation certificate no. NABET/EIA/2023/IA0062 (Rev. 03) valid till October 7,2023. Please refer **Annexure-7**, (Page No. A-14)
	ii. Information about the project proponent	**M/s. Chemplast Sanmar Limited**, having eight Partners/Directors. The detail of project proponent is refer as Section 1.1.1. of Chapter 1 (Page No.2)
	iii. Importance and benefits of the project	**Importance and benefits of the project** • We have well equipped and established R&D to develop and scale up the new products from the group of Synthetic Organic chemicals and Pesticide intermediates. • We have both Technical and non-technical man power in existing facility and hence readily available to oversee the expansion and commissioning. • Existing Manufacturing facility is well equipped with advanced technologies and this project is just the expansion similar to existing facility. Following are the benefits which may occur due to proposed project; • Use of existing skills in the region for minor developments, required for the proposed project • Increased transportation and handling requirements, that could benefit the local economy • Increased taxes to the State and Central Governments, which would add to the public good
3.	**Project Description**	
	ii. Cost of project and time of	Total capital investment for the project will be Rs.

	completion.	2292.398 Crores [Existing: 292.398 Crore + Proposed: 2000 Crore]. Time of completion =2 Year after getting EC and NOC.
	iv. Products with capacities for the proposed project.	**List of Products Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum to 20031.4 MT/Annum)** is referred as Table 2.3, Section 2.6, and Chapter-2 in EIA Report (Page No. 46).
	xiii. f expansion project, details of existing products with capacities and whether adequate land is available for expansion, reference of earlier EC if any.	**Reference of earlier EC details is given below:** **Unit has obtained ECs with Past Productions** EC vide letter F.No.J-11011/104/2009-IA II (I) dated 29/04/2009. **Products with capacities** are referred as Table 2.2, Section 2.7, and Chapter-2 in EIA Report (Page No. 46). Company has adequate land area for expansion in existing area and it is given in Section 2.2, Chapter-2 in EIA Report (Page No. 15).
	xiv. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications. xv. Details of existing products and production, if any, along with present product/production details in tabular format, to verify the compliance of the EIA Notifications.	**Products with capacities** are referred as Table 2.2, Section 2.7, and Chapter-2 in EIA Report (Page No. 46).
	xvi. ist of raw materials required and their source along with mode of transportation.	**List of raw materials** required and their source along with mode of transportation is referred as Table-2.3, Section 2.8 and Chapter-2 in EIA Report (Page No. 53-72). Most of the Raw Materials will be purchased from Local Market. Some Raw Material are not available in Local Market, so it will be imported. Transportation of Raw Material is Primarily by Road/ Sea/Air.
	xvii. Other chemicals and materials required with quantities and storage capacities	**Total nos. of 30 Other chemicals and materials** details with quantities, maximum storage and mode of storage are referred as Table 7.1, Chapter-7 in EIA Report (Page No. 335).
	xviii. Details of Emission, effluents, hazardous waste	**Details of Effluent & its Management:**

	generation and their management.	➢ The total wastewater generation will be 705 KL/Day. Industrial process wastewater = 600 KL/Day + washing = 75 KL/Day + Boiler/cooling = 30 KL/Day). and will be segregated into two stream High COD Stream & Low COD stream. • Low COD stream: Low COD effluent (105 KL/Day) will be treated through the conventional wastewater treatment system and the pass through RO system. • High TDS Stream: Neutralized concentrate effluent (600 KL/Day) and rejects from RO (225 KL/Day) will be evaporated in multi effective evaporator (MEE). The treated wastewater will be totally recycled and the solid waste generated will be disposed to TSDF (Common disposal Facility). • Domestic wastewater (100 KL/Day) will send to STP and Reuse in domestic and gardening purpose after treatment. **Details of Emission & its Management:** • In existing, company is using Furnace Oil in Steam Boiler & HSD in Thermic Fluid Heater and DG Set. Mechanical Dust collector & Adequate Stack will be provided to control of flue gas emission. In proposed expansion, company will use Furnace Oil and Briquettes in Steam Boiler & HSD in Thermic Fluid Heater and DG Set. Mechanical Dust collector, ESP & Adequate Stack will be provided to control of flue gas emission. The source of process gas emission will be from reactor vent. **Details of Hazardous Waste and Its Disposal Management:** • Empty barrels/ containers/liners contaminated with hazardous chemicals /wastes, Used / Spent Oil, spent solvents will be disposed Disposal to TNPCB Authorized Recyclers (Recyclable). • Chemical sludge from waste water treatment, Distillation residues, Contaminated aromatic, aliphatic or naphthenic solvents may fit for

<table>
<tr><td></td><td></td><td>reuse, Contaminated cotton rags or other cleaning materials, Spent Carbon or Filter medium disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016.

Requirement of Water:
Total Domestic Water: 100.0 KL/Day [Existing: 12.0 KL/Day + Proposed: 88.0 KL/Day]
Total Gardening Water: 30.5 KL/Day [Existing: 25.5 KL/Day + Proposed: 5 KL/Day]
Total Water Quantity: 1207.5 KL/Day [Existing: 207.5 KL/Day + Proposed: 1000 KL/Day]

Source of water: The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source.

Status of Approval: Unit has obtained CGWA letter wide letter no. 21-4(134)/SECR/CGWA/2009-3708 dated: 01/06/2012 for 207.5 KLD.

Water Balance Diagram is referred as Fig. 2.4,</td></tr>
</table>

		Section 2.10.3. in Chapter-2 in EIA Report (Page No. 135). **Man-power requirement:** Company will be appointed Approximately 1350 people [Existing: 350 people + proposed: 1000 people] local skilled and unskilled people based on qualification and requirement as per prevailing norms of state government.
	xx. etails of boiler/gensets (including stacks/exhausts) and fuels to be used	Details of boiler is refer as Section 2.11.5 (Page No. 150-151). & fuels to be used is refer as Section 2.11.4. Chapter-2 in EIA Report (Page No. 149).
	xxi. Process description along with major equipments and machineries, process flow sheet (quantities) from raw material to products to be provided	**Process description** along with major equipments and machineries, process flow sheet (quantities) from raw material to products is referred as Section 2.9, Chapter-2 in EIA Report (Page No. 73).
	xxii. Hazard identification and details of proposed safety systems.	**Hazard Identification** major risk areas are as follows: • Bulk storage area for Raw Materials at ambient temperature and atmospheric pressure. • Process Plant involving pumping, transportation, reactors, distillation, heating, cooling, etc. • Bulk loading and unloading from storage tanks to road takers and vice versa. Safety precautions are referred as Section 7.4, Chapter-7 of EIA Assessment Report (Page No. 341)
	xiii. xpansion/modernization proposals: c. Copy of all the Environmental Clearance(s) including Amendments thereto obtained for the project from MOEF/SEIAA shall be attached as an Annexure. A certified copy of the latest Monitoring Report of the Regional Office of the Ministry of Environment and Forests as per circular dated 30th May, 2012 on the status of compliance of conditions	This is an Expansion project. c. Unit has obtained EC from MOEF vide file No.J-11011/104/2009-IA-II(I) dated 29/04/2009. Certified EC Compliance Report from MoEFCC, Tamilnadu has been obtained vide file no. E.P.12.1/862/TN/1206 dated 8th December 2021 is attached in Annexures. Unit has obtained CTO & CTE. Renewal of **CTE** (Air) & (Water) vide no.: **2206241783392** dated: 03/06/2022 and Consent to establish for Expansion is valid upto **March 31, 2027.**

	stipulated in all the existing environmental clearances including Amendments shall be provided. In addition, status of compliance of Consent to Operate for the ongoing /existing operation of the project from SPCB shall be attached with the EIA-EMP report.	Renewal of CTO (Air) & (Water) vide no.: **2208242904446** dated: 1/08/2022 and Consent to establish for Expansion is valid upto **March 31, 2027.**
	d. In case the existing project has not obtained environmental clearance, reasons for not taking EC under the provisions of the EIA Notification 1994 and/or EIA Notification 2006 shall be provided. Copies of Consent to Establish/No Objection Certificate and Consent to Operate (in case of units operating prior to EIA Notification 2006, CTE and CTO of FY 2005-2006) obtained from the SPCB shall be submitted. Further, compliance report to the conditions of consents from the SPCB shall be submitted.	d. Unit has obtained EC from MOEF vide file No.J-11011/104/2009-IA-II(I) dated 29/04/2009. Certified EC Compliance Report from MoEFCC, Tamilnadu has been obtained vide file no. E.P.12.1/862/TN/1206 dated 8th December 2021 is attached in Annexures. Visit date: 6/12/2021 Unit has obtained CTO & CTE. Renewal of **CTE** (Air) & (Water) vide no.: **2206241783392** dated: 03/06/2022 and Consent to establish for Expansion is valid upto **March 31, 2027.** Renewal of CTO (Air) & (Water) vide no.: **2208242904446** dated: 1/08/2022 and Consent to establish for Expansion is valid upto **March 31, 2027.**
4.	**Site Details**	
	i. Location of the project site covering village, Taluka/Tehsil, District and State, Justification for selecting the site, whether other sites were considered.	Location the project site: S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3,10/1,2,3A,3B, 4,12/1A,1B,13/1,14/1A,2A, Suligunta Village, Berigai 635105. Shoolagiri Taluk, Krishnagiri District, Tamil Nadu, India. Justification for selecting the site: ● Minor site clearance activities shall be carried out to clear shrubs and weed. ● The project site is located on level ground, which does not require any major land filling for area grading work. ● No sanctuaries or archeological sites are

		located in the vicinity of the area. ● No rehabilitation or resettlement of local people required. ● Site is very well connected by road and railway. ● Availability of Fuel, Power, TSDF, etc. within the estate. Proposed Expansion activities are carried out within Existing Premises and No additional investigations are required for the present proposal. Hence no alternative sites were examined.
	ii. A topo sheet of the study area of radius of 10km and site location on 1:50,000/1:25,000 scale on an A3/A2 sheet. (including all eco-sensitive areas and environmentally sensitive places)	A topo sheet of the study area is referred as Figure 3.13, Section 3.10, Chapter-3 in EIA Report (Page No.229).
	iii. Details w.r.t. option analysis for selection of site	Major factors involved in the selection of site are listed below: • Proposed Expansion activities are carried out within Existing Premises and No additional investigations are required for the present proposal. ● Minor site clearance activities shall be carried out to clear shrubs and weed. ● The project site is located on level ground, which does not require any major land filling for area grading work. ● No sanctuaries or archeological sites are located in the vicinity of the area. ● No rehabilitation or resettlement of local people required. ● Site is very well connected by road and railway. ● Availability of Fuel, Power, TSDF, etc. within the estate.
	iv. Co-ordinates (lat-long) of all four corners of the site.	**Co-ordinates (lat-long)** of all corners of the site. 12°48'21.69"N 77°59'2.03"E 12°48'18.20"N 77°59'14.32"E

		12°48'17.79"N 77°59'19.40"E 12°48'14.08"N 77°59'18.40"E 12°48'10.76"N 77°59'18.31"E 12°48'6.70"N 77°59'16.68"E 12°48'13.67"N 77°58'57.08"E
	v. Google map-Earth downloaded of the project site	**Google map-Earth** downloaded of the project site is referred as Figure – 2.2, Section- 2.3.1, Chapter-2 in EIA Report (Page No.35).
	vi. Layout maps indicating existing unit as well as proposed unit indicating storage area, plant area, greenbelt area, utilities etc. If located within an Industrial area/Estate/Complex, layout of Industrial Area indicating location of unit within the Industrial area/Estate.	**Layout maps** are referred as Figure – 2.1, Section-2.2, Chapter-2 in EIA Report (Page No. 17).
	vii. Photographs of the proposed and existing (if applicable) plant site. If existing, show photographs of plantation/greenbelt, in particular.	Photographs of the proposed and existing (if applicable) plant site and greenbelt developed within the plant premises is referred as Section 2.3.1 and Chapter-2 in EIA Report (Page no. 36-38)
	viii. Landuse break-up of total land of the project site (identified and acquired), government/private - agricultural, forest, wasteland, water bodies, settlements, etc. shall be included. (not required for industrial area)	**Total land area of the Unit is 16.64 Hectares and break-up of total land of the project site** is referred as Table 1.3, Section 1.2.2, and Chapter-1 in EIA Report (Page No. 4).
	ix. A list of major industries with name and type within study area (10km radius) shall be incorporated. Land use details of the study area	There is no factory around 10 km of the plant surrounding. Land use details of the study area is referred as Section 3.9, Chapter-3 in EIA Report (Page No. 237).
	x. Geological features and Geo-hydrological status of the study area shall be included.	**Geological features** is referred as Section 3.8.6 (Page No. 224) **and Geo-hydrological status** of the study area are referred as Section 3.8.4, Chapter-3 in EIA Report (Page No. 222).
	xi. Details of Drainage of the project up to 5 km radius of study area. If the site is within 1 km radius of any major river, peak and lean season river discharge as well as flood occurrence frequency based on peak rainfall data of the past 30 years. Details of Flood	**Drainage pattern** of the project is referred as Section 3.8.5, and Chapter-3 in EIA Report (Page No. 223).

	Level of the project site and maximum Flood Level of the river shall also be provided. (mega green field projects)	
	xii. Status of acquisition of land. If acquisition is not complete, stage of the acquisition process and expected time of complete possession of the land.	Unit has already obtained acquisition of land. Land possession documents are attached as Section 2.2.1. , Chapter-2 in EIA Report(Page no. 20)
	xiii. R&R details in respect of land in line with state Government policy	The unit is located outside Notified Industrial Area. There is no habitation on the proposed expansion project activity area and it is inside the existing industry land. There shall not be displacement of any population in project area. The increasing industrial activity will boost the commercial and economical status of the locality up to some extent. Hence, R & R is not applicable to this project.
5.	**Forest and wildlife related issues (if applicable)**	
	viii. Permission and approval for the use of forest land (forestry clearance), if any, and recommendations of the State Forest Department. (if applicable)	Forest and wildlife related issues are not applicable. As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	ix. Landuse map based on High resolution satellite imagery (GPS) of the proposed site delineating the forestland (in case of projects involving forest land more than 40 ha)	Forest and wildlife related issues are not applicable. As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	x. Status of Application submitted for obtaining the stage I forestry clearance along with latest status shall be submitted.	Forest and wildlife related issues are not applicable. As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	xi. The projects to be located within 10 km of the National Parks, Sanctuaries, Biosphere Reserves, Migratory Corridors of Wild Animals, the project proponent shall submit the map duly authenticated by Chief Wildlife Warden showing these features vis-à-vis the project	Forest and wildlife related issues are not applicable. As, no forest and no sanctuaries are located in 10 km radial of study area.

	location and the recommendations or comments of the Chief Wildlife Warden there on.	
	xii. Wildlife Conservation Plan duly authenticated by the Chief Wildlife Warden of the State Government for conservation of Schedule I fauna, if any exists in the study area	Not applicable, As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	xiii. Copy of application submitted for clearance under the Wildlife (Protection) Act, 1972, to the Standing Committee of the National Board for Wildlife	Forest and wildlife related issues are not applicable. As, no forest and no wildlife sanctuaries are located in 10 km radial of study area.
	xiv. Recommendations and NOC from the concerned State/UT Coastal Zone Management Authority on CRZ angle	Not applicable.
5.	**Environmental Status**	
	i. Determination of atmospheric inversion level at the project site and site-specific micrometeorological data using temperature, relative humidity, hourly wind speed and direction and rainfall.	**Determination of atmospheric inversion level** at the project site and site-specific micrometeorological data using temperature, relative humidity, hourly wind speed and direction and rainfall is referred as Section 3.3, Chapter-3 in EIA Report (Page No. 176).
	• AAQ data (except monsoon) at 8 locations for PM10, PM2.5, SO2, NOX, CO and other parameters relevant to the project shall be collected. The monitoring stations shall be based CPCB guidelines and take into account the pre-dominant wind direction, population zone and sensitive receptors including reserved forests.	Ambient Air Quality Monitoring (AAQM) was carried out at eleven locations during the study period. The conventional and project specific parameters such as Suspended Particulate Matter, RSPM-PM_{10}, RSPM-$PM_{2.5}$, SO_2, NOx, O_3, Pb, C_6H_6, BaP, As, Ni, CO & VOCs were monitored at site. AAQ data is referred in Table-3.10, Section-3.4, Chapter-3 in EIA Report. (Page No. 188-189).
	ii. Raw data of all AAQ measurement for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 along with – min., max., average and 98% values for each of the AAQ parameters from data of all AAQ stations should be	**Raw data of all AAQ measurement** for 12 weeks of all stations as per frequency given in the NAQQM Notification of Nov. 2009 is referred as Table-3.10, Section-3.4, Chapter-3 in EIA Report. (Page No. 188-189).

	provided as an annexure to the EIA Report.	
	iii. Surface water quality of nearby River (100 m upstream and downstream of discharge point) and other surface drains at eight locations as per CPCB/MoEF&CC guidelines.	11 nos. of ground water and 2 nos. of surface water samples were collected from the study area. Surface water quality is referred in Table-3.13, Section-3.6.1, Chapter-3 in EIA Report. (Page No.196-199).
	iv. Whether the site falls near to polluted stretch of river identified by the CPCB/MoEF&CC, if yes give details.	No falls
	v. Ground water monitoring at minimum at 8 locations shall be included.	11 nos. of ground water and 2 nos. of surface water samples were collected from the study area. Ground water monitoring is referred in Table-3.13, Section-3.6.1, Chapter-3 in EIA Report. (Page No.196-199).
	vi. Noise levels monitoring at 8 locations within the study area.	Noise levels monitoring for 11 location of Residential Area, along with project site is referred as Table No. 3.12, Section 3.5, Chapter-3 in EIA Report (Page No194-195).
	vii. Soil Characteristic as per CPCB guidelines.	**Soil Characteristic for 11 Location** is referred as Table No. 3.14, Section 3.7.1, Chapter-3 in EIA Report (Page No. 203-207).
	viii. Traffic study of the area, type of vehicles, frequency of vehicles for transportation of materials, additional traffic due to proposed project, parking arrangement etc.	Car/jeep/ van & four wheelers - 219 Nos. Bus/ coach -192 Nos. Heavy motor vehicle - 12 Nos. Trucks - 15 Nos. Motor cycle & scooter - 309 Nos. Three wheelers-10 Nos. Cycle-9 Nos. Farm vehicle (tractor/ combine harvester)-162 Nos. Detailed traffic study of the area is refer as Section 3.11, Chapter-3 in EIA report (Page no. 231-235)
	ix. Detailed description of flora and fauna (terrestrial and aquatic) existing in the study area shall be given with special reference to rare, endemic and endangered species. If Schedule-I fauna are found within the study area, a Wildlife Conservation Plan shall be prepared and furnished.	**Flora** existing in the study area is referred as Section 3.12.5, Chapter-3 in EIA Report (Page No. 243-248) and **Fauna (terrestrial and aquatic)** existing in the study area is referred as Section 3.12.6, Chapter-3 in EIA Report (Page No. 248-253).
	x. Socio-economic status of the study area.	**Socio-economic** status of the study area is referred as Section 3.13, Chapter-3 in EIA Report

		(Page No. 254).
6.	**Impact and Environment Management Plan**	
	i. Assessment of ground level concentration of pollutants from the stack emission based on site-specific meteorological features. In case the project is located on a hilly terrain, the AQIP Modelling shall be done using inputs of the specific terrain characteristics for determining the potential impacts of the project on the AAQ. Cumulative impact of all sources of emissions (including transportation) on the AAQ of the area shall be assessed. Details of the model used and the input data used for modelling shall also be provided. The air quality contours shall be plotted on a location map showing the location of project site, habitation nearby, sensitive receptors, if any.	**Assessment of ground level concentration** of pollutants is referred as Table 4.2, Chapter-4 in EIA Report (Page No. 290 to 298). Details of the model used and the input data used for modeling: 5) Conc. of all pollutants 6) Meteorological Data 7) Ram file, Sam File, Met File, Mixing Height 8) Village Co-Ordinates Predicted Ambient Air Quality is referred in Table-4.4, Section-4.2.2, Chapter-4 in EIA Report. (Page No.306). Details of the model used and the input data used for modeling also be provided in Section-4.2.2, Chapter-4 in EIA Report. (Page No.290-298). The air quality contours is referred in Figure-4.2, Chapter-4 in EIA Report. (Page No.299-303).
	ii. Water Quality modelling – in case of discharge in water body	Not Applicable, As No effluent is/will be discharged into any surface water body. Hence, Water Quality modeling is not required.
	iii. Impact of the transport of the raw materials and end products on the surrounding environment shall be assessed and provided. In this regard, options for transport of raw materials and finished products and wastes (large quantities) by rail or rail-cum road transport or conveyor-cum-rail transport shall be examined.	Impact of the transport of the raw materials and end products is referred in Section-4.8, Chapter-4 in EIA Report. (Page No. 316-317). Action plan for transportation of raw materials and products is referred in Section-10.13, Chapter-10 in EIA Report. (Page No. 502)
	iv. A note on treatment of wastewater from different plant operations, extent recycled and reused for different purposes shall be included. Complete scheme of effluent treatment. Characteristics of untreated and treated effluent to meet the prescribed standards of discharge under E(P) Rules 1986.	➢ The total wastewater generation will be 705 KL/Day. Industrial process wastewater = 600 KL/Day + washing = 75 KL/Day + Boiler/cooling = 30 KL/Day). and will be segregated into two stream High COD Stream & Low COD stream. • Low COD stream: Low COD effluent (105 KL/Day) will be treated through the conventional wastewater treatment system

		and the pass through RO system. • High TDS Stream: Neutralized concentrate effluent (600 KL/Day) and rejects from RO (225 KL/Day) will be evaporated in multi effective evaporator (MEE). The treated wastewater will be totally recycled and the soild waste generated will be disposed to TSDF (Common disposal Facility). • Domestic wastewater (100 KL/Day) will send to STP and Reuse in domestic and gardening purpose after treatment. Detailed effluent treatment scheme including segregation of effluent streams of wastewater shall be treated in effluent treatment plant consist of MEE treatment is referred as section-2.10.4 & Section 2.10.5, Chapter-2 in EIA Report (Page No. 102 to 104).
	v. Details of stack emission and action plan for control of emissions to meet standards.	**Details of stack emission** • In existing, company is using Furnace Oil in Steam Boiler & HSD in Thermic Fluid Heater and DG Set. Mechanical Dust collector & Adequate Stack will be provided to control of flue gas emission. In proposed expansion, company will use Furnace Oil/Briquettes in Steam Boiler & HSD in Thermic Fluid Heater and DG Set. Mechanical Dust collector, ESP / wet Scrubber & Adequate Stack will be provided to control of flue gas emission. • The source of process gas emission will be from reactor vent. Company has installed adequate Scrubber systems to control process gas emission. Details of stack emission is referred as Table 4.2, Section 4.2.2, Chapter-4 in EIA Report (Page No. 290-298) and action plan for control of emissions is referred as Section 2.11.6, Chapter-2 in EIA Report (Page No. 152-153).
	vi. Measures for fugitive emission control	**Measures for fugitive emission control**: • The Solvent used in the processes is handled

		in a closed loop and in process materials are stored in drums will be kept under structured roof. • Equipment where volatile solvents distilled is provided with reflux condensers and after coolers and the receivers are connected to the scrubber. • Pumps of compatible MOC with Single and Double Mechanical seals are used for handling corrosive and hazardous chemicals • Periodic preventive maintenance and inspection is done for all the equipments by the in-house Engineering team and LDAR study carried yearly once by External lab • All the rotating equipment like pumps are installed with Mechanical Seals to arrest any sort of emissions. • Proper ventilation in storage area is ensured and all materials are stored in suitable packing to prevent contamination of air due to particulates & volatile emissions from storage area. • All the Flange joints of the pipe lines which carry solvents are covered with flange guards. • Adequate Dust Suppression System including Water Sprinkling System is installed for control of fugitive emission during loading of raw material and product. • Work place monitoring within plant, storage & other area and AAQM will be done as per 'Post project monitoring plan' as well as regulatory requirement as per factory act. • Properly designed method & practices of transportation, storage & handling of materials are established and maintained along with necessary facilities to reduce airborne particle of materials and VOCs.
	vii. Details of hazardous waste	Details of hazardous waste generation and their

	generation and their storage, utilization and management. Copies of MOU regarding utilization of solid and hazardous waste in cement plant shall also be included. EMP shall include the concept of waste-minimization, recycle/reuse/recover techniques, Energy conservation, and natural resource conservation.	disposal: **Details of Hazardous Waste and Its Disposal Management:** • Empty barrels/ containers/liners contaminated with hazardous chemicals /wastes, Used / Spent Oil, spent solvents will be disposed Disposal to TNPCB Authorized Recyclers (Recyclable). • Chemical sludge from waste water treatment, Distillation residues, Contaminated aromatic, aliphatic or naphthenic solvents may fit for reuse, Contaminated cotton rags or other cleaning materials, Spent Carbon or Filter medium disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016. • Spent Carbon or Filter medium disposal to Common TSDF site / Co-processor by following protocol of Hazardous Waste Rule – 2016. Details of hazardous waste generation and their storage, utilization and management is referred as Table 2.5, Section 2.12.1, Chapter-2 in EIA Report (Page No. 153).
	viii. Proper utilization of fly ash shall be ensured as per Fly Ash Notification, 2009. A detailed plan of action shall be provided.	Fly ash (18250 MT/Annum) will be collected, stored, transported and sent for brick manufacturer or in cement industries.
	ix. Action plan for the green belt development plan in 33 % area i.e. land with not less than 1,500 trees per ha. Giving details of species, width of plantation, planning schedule etc. shall be included. The green belt shall be around the project boundary and a scheme for greening of the roads used for the project shall also be incorporated.	Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (33 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) within the plant premises. Name of species planted are as below 1. Neem 2. Silver Oak 3. Eucalyptus 4. Pongamia 5. Gulmohur 6. Spathodia 7. Ashoka

<table>

		and safety / **lakhs/Annum** Employee periodical medical check-up / 27 OHC operating cost / 24 Ambulance / 12 Personal protective equipments / 34 Training and awareness / 5 Total / 102
	ii. Details of exposure specific health status evaluation of worker. If the workers' health is being evaluated by pre designed format, chest x rays, Audiometry, Spirometry, Vision testing (Far & Near vision, colour vision and any other ocular defect) ECG, during pre-placement and periodical examinations give the details of the same. Details regarding last month analyzed data of above mentioned parameters as per age, sex, duration of exposure and department wise.	Health Evaluation of Workers is referred as Section 7.12.6, Chapter-7 in EIA Report (Page No. 452). Workers are checked for physical fitness with special reference to the possible health hazards likely to be presented where he/she is being expected to work before being employed for that purpose. Tests carried out: 1)Physical test 2)General Examination like Temp., Pulse, Pressure, Haemoglobin/Total W.B.C/ Platelet/others 3)Microscopic Examination 4) Systematic Examination 5) Vision Testing 6) Blood Glucose analysis 7) Haemogram Profile
	iii. Details of existing Occupational & Safety Hazards. What are the exposure levels of hazards and whether they are within Permissible Exposure level (PEL). If these are not within PEL, what measures the company has adopted to keep them within PEL so that health of the workers can be preserved,	**EMP for the Occupational Safety & Health hazards** so that such exposure can be kept within permissible exposure level (PEL)/Threshold Level value (TLV) so as to protect health of workers is referred as, Section 7.12.3, Chapter-7 in EIA Report (Page No. 450).
	iv. Annual report of health status of workers with special reference to Occupational Health and Safety	Annual report of health status of workers with special reference to Occupational Health and Safety is referred as Section 7.12.6 Chapter-7 in EIA Report (Page No. 453). There was not found any abnormality of any employees and workers. All employees and

		workers are found fit. Occupational health surveillance program is undertaken as regular exercise for all employees specifically for those engaged in handling substances. Medical records of each employee are maintained separately.
8.	**Corporate Environment Policy**	
	i. Does the company have a well laid down Environment Policy approved by its Board of Directors? If so, it may be detailed in the EIA report.	Environment Policy is referred in Section-6.4, Chapter – 6 in EIA Report(Page No.325).
	ii. Does the Environment Policy prescribe for standard operating process / procedures to bring into focus any infringement / deviation / violation of the environmental or forest norms / conditions? If so, it may be detailed in the EIA.	Environment Policy is referred in Section-6.4, Chapter – 6 in EIA Report(Page No.325).
	iii. What is the hierarchical system or Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions? Details of this system may be given.	Administrative order of the company to deal with the environmental issues and for ensuring compliance with the environmental clearance conditions is referred in Figure-6.1, Section-6.5, Chapter-6 in EIA Report(Page No.327).
	iv. Does the company have system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the company and / or shareholders or stakeholders at large? This reporting mechanism shall be detailed in the EIA report	An organogram to report of non-compliances / violations of environmental norms to the Board of Directors of the company. is referred in Section-6.6, Chapter-6 in EIA Report(Page No.328).
	v. Details regarding infrastructure facilities such as sanitation, fuel, restroom etc. to be provided to the labour force during construction as well as to the casual workers including truck drivers during operation phase.	Company will provide the sanitation facility only to the Labour force during construction as well as to the casual workers including truck drivers during operation phase.
10.	**Enterprise Social Commitment (ESC)**	
	i. Adequate funds (at least 2.5 % of the project cost) shall be	CER @ 0.25 % of the additional project cost (i.e. 2000 Crore) and CSR will be carried out by the

	earmarked towards the Enterprise Social Commitment based on Public Hearing issues and item-wise details along with time bound action plan shall be included. Socio-economic development activities need to be elaborated upon.	company in the surrounding villages. This fund will be administered by a local area development committee in accordance with the orders of the appropriate Government.
9.	**Additional studies/Measures to be considered**	
	vi. Provide latest and ecofriendly technology for product manufacturing.	Latest and ecofriendly technology for product manufacturing are as follows: 11. Usage of Non-fossil fuel source for boiler (Briquettes) 12. Adiabatic Cooling Towers instead of conventional type Cooling Towers 13. Low-Power Exercise Equipment -Energy efficient (IE3) motors 14. Variable Speed Drives (VSD). 15. LED Lighting 16. Monofluid Temperature Control 17. Steam Condensate Recovery System and Flash Steam Recovery System 18. Rainwater harvesting 19. Double Scrubbing system for all reactors 20. Scrubber for all open Reactor and Chemical storage Detailed Latest and ecofriendly technology for product manufacturing is refer as Section 2.5, Chapter-2 in EIA report (Page no. 42)
	xvii. Emphasize on Green chemistry/Clean Manufacturing	Unit has emphasizing on green chemistry /clean manufacturing in following ways: **11. Scrubbing system** All reaction vessels vent is connected with vent scrubber with capacity of 2500 m3/hr is installed to control fugitive emission Emphasize on green chemistry/clean manufacturing **12. Double condenser for solvent recovery** For solvent recovery equipment connected with primary and secondary condensers with chilled water / brine. For filtration and drying well designed ANFD with condensers are available for minimizing solvent emission in environment. **13. Usage of Non-fossil fuel source for boiler (Briquettes)**

		replacing the Usage of furnace oil by non-fossil fuel source (Briquettes) for Boiler. Using fossil fuel would generate 2.8 to 3 T of CO_2 emission per ton of fuel Usage of non-fossil fuel source (Briquettes) is increasing the Energy-efficiency and Reduction of greenhouse gas emissions **14. Adiabatic Cooling Towers instead of conventional type Cooling Towers** We are going with Adiabatic Cooling Towers, which is saving 75% of water consumption with compare to conventional type Cooling Towers.Adiabatic cooler uses wetted pads to pre-cool the ambient air entering the tower. This pre-cooled air is used to cool process water. This helps achieve a lower temperature than the ambient dry bulb temperature. **15. Low-Power Exercise Equipment -Energy efficient (IE3) motors** a. 93% efficiency as against 88% for conventional IE1 motors – 5% increase in efficiency – 1 GWh electrical energy accounts for releasing 790 tons of CO_2[Source: as per CEA data, Govt. of India.] – Yearly reduction in CO_2 emissions due to IE3 otors: 2 X 790 = 1580 tonnes **16. Variable Speed Drives (VSD)** – Selected IE3 motors are with VSD – 1 GWh electrical energy accounts for releasing 790 tons of CO_2 [Source: as per CEA data, Govt. of India.] – Yearly reduction in CO_2 emissions due to VSD: 0.3 X 790 = 237 tonnes **17. LED Lighting** We are going with 100% of LED lightings over the plant, it's better than other by, they are brighter, Require lesser energy to function and Last longer. – LED lamps consume 20% energy for heating – Metal halide lamps consume 75% energy – 1 GWh electrical energy accounts for releasing 790 tones of CO_2 – Yearly reduction in CO_2 emissions due to VSD : 0.3 X 790 = 237 tonnes **18. Monofluid Temperature Control**

<table>
<tr><td></td><td></td><td>a. Precise temperature control in addition to reduction in lean waste generation
19. Steam Condensate Recovery System and Flash Steam Recovery System
– Condensate headers are routed to the receiver wherein pressure powered/ mechanical pump transfers the condensate to boiler feed water tank
– High pressure condensate from process will be diverted to a flash vessel to generate LP steam. Thermo compressor option will be validated based on LP pressure
20. Bio-degradable Goods
Company has to use Bio-degradable Goods (wood) for packing and palleting purpose instead of plastic</td></tr>
<tr><td></td><td>viii. Provide CAS No. of products along with product list.</td><td>Provide CAS No. of products along with product list is in Table 2.2, Section 2.7, and Chapter-2 in EIA Report (Page No. 46).</td></tr>
<tr><td></td><td>xix. Provide details of amount of carbon sequestered in their unit through greenbelt/other modes, in case of expansion project.</td><td>Amount of carbon sequestered in their unit is 20.36 ton CO2 eq./year.
Calculation of CO2 sequestered per is referred as Section 10.14, Chapter-10 in EIA Report (Page no. 503-506)</td></tr>
<tr><td></td><td>xx. Life structure and sustainability for carbon and water foot print.</td><td>Life structure and sustainability for carbon and water foot print is attached in Annexure-8 in EIA report.(Page no.A-15)</td></tr>

<tr><td></td><td>xiii. Category of Hazardous Wastes shall be mentioned in the EIA/EMP report and in presentation.</td><td>Category of Hazardous Wastes is referred as Table 2.5, Section 2.12.1, Chapter-2 in EIA Report (Page No. 153).</td></tr>
<tr><td></td><td>xiv. Details of greenhouse gases and emissions shall be provided.</td><td>• Greenhouse gas is the property of absorbing infrared radiation (net heat energy) emitted from Earth’s surface and reradiating it back to Earth’s surface, thus contributing to the greenhouse effect. Carbon dioxide, methane, and water vapour are the most important greenhouse gases. A number of processes influence greenhouse gas</td></tr>
</table>

		concentrations. Industrial activities increase atmospheric CO_2 levels primarily through the burning of fossil fuels. • Greenhouse gas emissions from existing unit are Carbon dioxide (CO_2), PM, SO2, NO_2 & CO • Company has planted trees which helps to reduce greenhouse gases through photosynthesis absorbing large quantities of CO_2 and producing oxygen.
	xxv. Greenbelt shall be developed in the first year of the project and wind breaks shall be erected.	Agreed, Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (32 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) Company has planted trees in a row or shrubs planted in such a manner as to provide shelter from the wind and to protect soil from erosion. The windbreaks are formed in North-West direction.
	xvi. Study area map shall be overlapped with all the associated features.	The baseline parameters such as Land use / Land cover, Ecological status, Geology, Hydrology, Soil, Drainage Pattern and infrastructure establishment is studied within the 10 km aerial radius from the center where the site is located. A map depicting major land use/ land cover classes comprising lands under agriculture, allow land, open/degraded vegetation; lands falling under water bodies, scrub and lands under inhabitations is presented. The map also marks the area within 10 km of the project site as the area of interest. Area and distance calculations have been carried out using GIS software after geo-referencing the interpreted data with the help of Survey of India (SoI) topographical maps of the scale 1:50,000. Study area map overlapped with all the associated features are referred in Figure 3.13, Section 3.10, Chapter-3 in EIA Report (Page No.229).
	xvii. Emphasize on green fuels.	As of now company is using FO & HSD. However, company will review the viability of other fuels.
	viii. The project from NCR shall not use Coal as fuel. Further,	Not Applicable, as unit is located in Berigai, Tamil Nadu.

	PP shall avoid use of Coal in the CPAs and elsewhere also if alternatives are available.	
	xix. Provide the Cost-Benefit analysis with respect to the environment due to the project.	CER @ 0.25 % of the additional project cost (i.e. 2000 Crore) and CSR will be carried out by the company in the surrounding villages. This fund will be administered by a local area development committee in accordance with the orders of the appropriate Government.
	xxx. Details of carbon foot prints and carbon sequestration study w.r.t. proposed project needs to spelled out. Proposed mitigation measures also needs to be analyzed and submitted for further appraisal of the EAC	Details of carbon foot prints and carbon sequestration as Section 10.14, Chapter-10 in EIA Report (Page no. 503-506)
11.	Any litigation pending against the project and/or any direction/order passed by any Court of Law against the project, if so, details thereof shall also be included. Has the unit received any notice under the Section 5 of Environment (Protection) Act, 1986 or relevant Sections of Air and Water Acts? If so, details thereof and compliance/ATR to the notice(s) and present status of the case.	There is no any litigation pending against the project and/or any direction/order passed by any Court of Law against the project.
12.	'A tabular chart with index for point wise compliance of above TORs.	Complied

SPECIFIC CONDITION

SR. NO.	TERMS OF REFERENCES	COMPLIANCE
1	Details on solvents to be used, measures for solvent recovery and for emissions control.	**Solvents such as** Toluene, TBA, MCB, MTBE, ODCB, Methanol & Benzene will be used**, measures for solvent recovery** is referred in Section-7.12, Chapter-7 in EIA Report (Page No. 499).
2	Details of process emissions from the proposed unit and its arrangement to control.	Process gas emissions from the proposed unit are SO_2, NO_2 & CO and **Measures for fugitive emission control are as following**: • The Solvent used in the processes is handled in a closed loop and in process materials are stored in drums will be kept under

		structured roof. • Equipment where volatile solvents distilled is provided with reflux condensers and after coolers and the receivers are connected to the scrubber. • Pumps of compatible MOC with Single and Double Mechanical seals are used for handling corrosive and hazardous chemicals • Periodic preventive maintenance and inspection is done for all the equipments by the in-house Engineering team and LDAR study carried yearly once by External lab • All the rotating equipment like pumps are installed with Mechanical Seals to arrest any sort of emissions. • Proper ventilation in storage area is ensured and all materials are stored in suitable packing to prevent contamination of air due to particulates & volatile emissions from storage area. • All the Flange joints of the pipe lines which carry solvents are covered with flange guards. • Adequate Dust Suppression System including Water Sprinkling System is installed for control of fugitive emission during loading of raw material and product. • Work place monitoring within plant, storage & other area and AAQM will be done as per 'Post project monitoring plan' as well as regulatory requirement as per factory act. • Properly designed method & practices of transportation, storage & handling of materials are established and maintained along with necessary facilities to reduce airborne particle of materials and VOCs. Details of process emissions proposed scenario is referred as section - 2.11.1, Chapter-2 in EIA

		Report (Page No. 147).
3	Ambient air quality data should include VOC, other process- specific pollutants* like NH_3*,chlorine*, HCl*, HBr*, H_2S*, HF*, CS2 etc., (*- as applicable)	Ambient air samples were collected and analyzed for SPM, PM_{10}, $PM_{2.5}$, SO_2, NO_X, O_3, Pb, CO, NH_3, C_6H_6, Benzo (a) Pyrene (BaP), Arsenic (As), Nickel (Ni) & VOCs for identification, prediction, evaluation and assessment of potential impact on ambient air environment. Ambient air quality data is referred in Table-3.10 Section-3.4, Chapter-3 in EIA Report (Page No.188).
4	Work zone monitoring arrangements for hazardous chemicals.	Work zone monitoring arrangements is referred in Table 6.1, Section 6.3 Chapter-6 in EIA Report (Page No. 323).
5	Detailed effluent treatment scheme including segregation of effluent streams for units adopting 'Zero' liquid discharge.	Unit has full-fledged Effluent Treatment Plant to treat the wastewater with multiple effect evaporators (MEE),Biological conventional treatment and RO system. The water recovered is totally reused in the process plant itself. The domestic waste water is also treated in the STP. The cyanide bearing wastewater is chemically treated with Sodium hypochlorite solution and taken for evaporation in the MEE. No effluent is/will be discharged into any surface water body. **Hence, this unit is/will be total Zero Liquid Discharge unit.** Detailed effluent treatment scheme including segregation of effluent streams of wastewater shall be treated in effluent treatment plant consist of MEE treatment is referred as section-2.10.4 & Section 2.10.5, Chapter-2 in EIA Report (Page No. 102 to 104).
6	Action plan for odor control to be submitted.	Action plan for odour control measure are as follows: • All liquid raw materials charged into Reactors with pumps or under gravity through closed pipes. • Suction Hoods placed near the Man-holes & Charging funnels of Reactors & Filters so that chemical vapors and dust do not escape into the Plant & surroundings, when the man-hole covers are opened for inspection or charging of RM. • All storage tanks of low boiling chemicals provided with Conservation Vents. • Vent lines of Dosing vessels shall be

		connected back to the vents of storage tanks to prevent contaminated air release during material transfer. • All pumps handling hazardous chemicals provided with mechanical seals to prevent fugitive emission. • Wherever possible magnetic coupled pumps are used. • Any spillage from drums etc. absorbed with saw dust / soda ash and moped clean. The contaminated absorbent are safely dispose off along with hazardous waste.
7	A copy of the Memorandum of Understanding signed with cement manufacturers indicating clearly that they co-process organic solid/hazardous waste generated.	Unit has agreement with TNWML for co-processing of hazardous waste is referred as section-2.12.3 Chapter-2 in EIA Report (Page No.180)
8	Authorization/Membership for the disposal of liquid effluent in CETP and solid/hazardous waste in TSDF, if any.	Authorization/Membership for the disposal of **liquid effluent** in CETP is not applicable as this is zero liquid discharge unit and Unit has agreement with TNWML referred as Section-2.11.4, Chapter-2 in EIA Report (Page No.158).
9	Action plan for utilization of MEE/dryers salts.	MEE salt will be collected, Store, Transport and disposed at TNWML.
10	Material Safety Data Sheet for all the Chemicals are being used/will be used.	**Material Safety Data Sheet** for all the Chemicals is referred to **Annexure-14**, (Page No. A-98).
11	Authorization/Membership for the disposal of solid/hazardous waste in TSDF.	Unit has agreement with TNWML referred as Section-2.11.4, Chapter-2 in EIA Report (Page No.158).
12	Details of incinerator if to be installed.	Not Applicable, Unit will not install the incinerator for existing as well as Proposed scenario. Incinerable Waste will be disposed to M/s. TNWML
13	Risk assessment for storage and handling of hazardous chemicals/solvents. Action plan for handling & safety system to be incorporated.	Risk assessment for storage and handling of hazardous chemicals are referred as Section-7.3.4.3, Chapter-7 in EIA Report (Page No. 333) & Action plan for handling & safety system to be incorporated are referred as Section-7.4, Chapter-7 in EIA Report (Page No. 341)

ENVIRONMENTAL IMPACT & RISK ASSESSMENT REPORT

MoEF&CC CERTIFICATE FOR LABORATORY ACCREDITATION

F. No. Q-15018/04/2019-CPW
Government of India
Ministry of Environment, Forest and Climate Change
(CP Division)

Agni-233, Indira Paryavaran Bhavan,
Jor Bagh Road,
New Delhi – 110 003.
Dated, the 14th October, 2019

To

M/s ABC Techno Labs India Private Limited
ABC Tower No. 400, 13th Street , SIDCO
Industrial Estate North Phase, Ambattur
Chennai, TamilNadu-600098

Subject: -Recognition of M/s ABC Techno Labs India Private Limited, ABC Tower No. 400, 13th Street, SIDCO, Industrial Estate North Phase, Ambattur, Chennai, TamilNadu-600098, as Environmental Laboratory under the Environment (Protection) Act, 1986 – regarding.

Sir,

I am directed to refer to your application dated:04.02.2019 for renewal of recognition of your laboratory under Environment (Protection) Act, 1986. Based on the recommendations of the Expert Committee for Recognition of Environmental Laboratories in its 60th meeting held on 30.08.2019 and your acceptance of the revised terms and conditions at Annexure-III & IV of the Guidelines for recognition of Environmental Laboratories, this Ministry approves the renewal of recognition of M/s ABC Techno Labs India Private Limited, ABC Tower No. 400, 13th Street , SIDCO, Industrial Estate North Phase , Ambattur, Chennai, TamilNadu-600098, for five years, as shall be notified in the Gazette of India.

2. As sought in your aforementioned application, M/s ABC Techno Labs India Private Limited, Chennai may undertake the following tests:

i. **Physical Tests:** Conductivity, Colour, pH, Fixed & volatile solids, Total solids, Total dissolved solids, Total suspended solids, Turbidity, Temperature, Velocity & discharge measurement of industrial effluent stream, Flocculation test (Jar Test), Odour, Salinity, Settleable solids and Sludge volume index.

ii. **Inorganic (General & Non-metallic):** Acidity, Alkalinity, Ammoniacal nitrogen, Chloride, Chlorine residual, Dissolved oxygen, Fluoride, Total hardness, Total kjehldal nitrogen (TKN), Nitrite nitrogen, Nitrate nitrogen, Phosphate, Sulphate, Bromide, Carbon dioxide, Chlorine demand, Iodine, Sulphite, Silica, Cyanide and Sulphide.

iii. **Inorganic (Trace metals):** Boron, Cadmium, Calcium, Chromium Total, Chromium Hexavalent, Copper, Iron, Lead, Magnesium, Mercury, Nickel, Potassium, Sodium, Sodium absorption ratio, Zinc, Arsenic, Aluminum, Beryllium, Barium, Lithium, Manganese, Selenium, Silver, Strontium, Tin, Antimony, Cobalt and Vanadium.

iv. **Organics (General) and Trace Organics:** Bio-chemical oxygen demand (BOD), Chemical oxygen demand (COD), Oil & grease, Phenol, Pesticide ((Organo-chlorine, Organo nitrogen-phosphorous), Total organic carbon, Surfactants, Tannin & lignin, Poly-Chlorinated biphenyl (PCB's) each, Polynuclear aromatic hydrocarbon (PAH), Organic Carbon (in Solid) and Carbon/Nitrogen ratio.

v. **Microbiological Tests:** Total Coliform, Faecal Coliform, Faecal streptococci, E. coli, Total Plate count and Enterococcus.

vi. **Toxicological Tests:** Bioassay method for evaluation of toxicity using fish, Bio-accumulation, bio magnification and bio-transformation studies, Measurement of toxicity using Daphnia or other organism.

vii. **Biological Tests:** Benthic organism identification and count, Planktonic identification count, Measurement of various diversity index, Chlorophyll and Primary productivity.

viii. **Hazardous Waste:** Preparation of Leachate (TCLP extract/water extract), Corrosivity, Ignibility (Flash Point), Reactivity, Toxicity and Measurement of heavy metals/ pesticides in the waste/ leachate

ix. **Soil/ Sludge/ Sediment and Solid Waste:** Boron, Cation Exchange Capacity (CEC), Electrical Conductivity, Nitrogen available, Organic carbon/ matter (chemical method), pH, Phosphorus

(available), Phosphate (ortho), Phosphate (total), Potassium, SAR in soil extract, Sodium, Soil moisture, TKN, Calorific value, Ammonia, Bicarbonate, Calcium, Calcium Carbonate, Chloride, Colour, Exchangeable Sodium Percentage, Heavy metal, Magnesium, Nitrate, Nitrite, PAH, Pesticide, Potash (available), Sulphate, Sulphur, TOC, Total water soluble salt and Water holding capacity.

x. **Ambient Air/ Fugitive Emissions:** Nitrogen dioxide (NO_2), Sulphur dioxide (SO_2), Suspended particulate matter, Respirable suspended particulate matter (PM_{10}), Ammonia, Carbon monoxide, Chlorine, Fluoride, Lead, Ozone, Benzene Toluene Xylene, Polycyclic aromatic hydrocarbon (PAH), Benzoapyrine & others, Fine Particulate Matter $PM_{2.5}$ and Volatile Organics Compounds.

xi. **Stack Gases/ Source Emission:** Particulate matter, Sulphur dioxide, Velocity & flow, Carbon dioxide, Carbon Monoxide, Temperature, Oxygen, Oxides of nitrogen, Acid mist, Ammonia, Chlorine, Fluoride(Gaseous), Hydrochloric acid, Total Hydro Carbon, Hydrogen Sulphide.

xii. **Noise Level:** Noise level measurement (20 to 130 dba), Ambient Noise & Source-specific Noise .

xiii. **Meteorological:** Ambient temperature, Wind direction, Wind speed, Relative Humidity and Rainfall.

3. Further, the following analysts have been approved for recognition as Government Analysts.
   (i) Mr. S. Ravi
   (ii) Mr. K.G. Swaminathan
   (iii) Mr. A. Robson Chinnadurai

4. The laboratory shall compulsorily participate in the Analytical Quality Control (AQC) exercise conducted by the Central Pollution Control Board (CPCB) at least once a year to ascertain the capability of the laboratory and analyses carried out and shall submit quarterly progress reports to this Ministry.

5. Periodic surveillance of the recognized environmental laboratory will be undertaken by this Ministry/ CPCB to assess its proper functioning, systematic operation and reliability of data generated at the laboratory.

6. It is also mandatory for the laboratory to have requisite accreditations of the NABL/ ISO 9001 and OHSAS and its renewal as per accreditation rules. Permission in para 2 above is subject to such accreditations and renewal, as applicable.

7. The laboratory should compulsorily follow the accepted Terms & Conditions. In case of serious non-compliance of any of the Terms and Conditions, the laboratory may be black-listed for a minimum period of two years and civil/ criminal proceedings, as applicable, may be initiated for performing functions on behalf of the Government in an unauthorized manner.

Yours faithfully,

(Dr. Susan George K.)

NABL CERTIFICATE

National Accreditation Board for Testing and Calibration Laboratories

NABL

CERTIFICATE OF ACCREDITATION

ABC TECHNO LABS INDIA PRIVATE LIMITED

has been assessed and accredited in accordance with the standard

ISO/IEC 17025:2017

"General Requirements for the Competence of Testing & Calibration Laboratories"

for its facilities at

ABC TOWER, NO 400, 13TH STREET, SIDCO INDUSTRIAL ESTATE-NORTH PHASE, AMBATTUR, CHENNAI, TAMIL NADU, INDIA

in the field of

TESTING

Certificate Number: TC-5770

Issue Date: 03/04/2022 Valid Until: 02/04/2024

This certificate remains valid for the Scope of Accreditation as specified in the annexure subject to continued satisfactory compliance to the above standard & the relevant requirements of NABL.

ENVIRONMENTAL IMPACT & RISK ASSESSMENT REPORT

INDEX

LIST OF TABLES

LIST OF FIGURES

CHAPTER – 1
INTRODUCTION

1.1 BACKGROUND

Chemplast Sanmar is over fifty years old and is a part of the SHL Chemicals Group, which in turn is a constituent of the Sanmar Group, one among the oldest and most prominent corporate groups in South India. It is a major manufacturer of Speciality Chemicals such as Specialty Paste PVC resin and Custom Manufactured Chemicals for agro-chemical, pharmaceutical and fine chemicals sector. The company also produces other chemicals such as Caustic Soda, Chlorochemicals, Hydrogen Peroxide, Refrigerant gas and Industrial Salt. The manufacturing facilities are located at Mettur, Berigai and Vedaranyam in Tamil Nadu and Karaikal in the Union Territory of Puducherry.

Chemplast Sanmar Limited, is a leading supplier of intermediates for global Agrochemical, Pharmaceutical and Fine Chemical innovators. These intermediates involve complex multi-step synthesis using unique chemistries.

The manufacturing facility is located at Berigai, Tamil Nadu.

Organic Chemicals

- Custom manufacturing of organic intermediates supplying into Pharmaceutical, Agrochemical and other fine chemical applications.
- Exclusive custom development and manufacturing of key intermediates
- Organic synthesis building blocks with capacity ranging from 100 kgs to 100's of MTPA

Phyto Chemicals

- Manufactures Active Pharmaceutical Ingredients (API) extracted from locally available biomass.
- Phyto Chemical APIs are sold globally to the Pharmaceutical industry.

M/s. Chemplast Sanmar Limited, Proposing expansion of Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum to 20031.4 MT/Annum) Manufacturing in Existing Unit at S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3, 10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A, Suligunta Village, Berigai 635105. Shoolagiri Taluk, Krishnagiri District, Tamil Nadu, India.

1.1.1 PROMOTERS AND THEIR BACK GROUND

List of directors as on 16th October 2021

Sr. no.	Names with address of the Directors of the company	Designation	Nationality	Age
1.	Mr. Vijay Sankar No.194 T T K Road Alwarpet, Chennai - 600 018 DIN: 00007875	Chairman	Indian	49 Years
2.	Mr. Ramkumar Shankar G 10, B Block, Jains Sagarika Apartments Satyadev Avenue, MRC Nagar, Chennai 600 028 DIN: 00018391	Managing Director	Indian	55 Years

8.	Ms. Lakshmi Vijayakumar 25 Ranjit Road Kotturpuram Chennai 600 085 DIN: 09115998	Director	Indian	67 Years

1.1.2 REGULATORY PROVISION

For proposed expansion project; following assumptions have been considered:

1) The reason of applying in category A [5(b) & 5(f)] Environmental Clearance at MoEF & CC, New Delhi.
   - Chemplast Sanmar Limited has proposed for the Pesticide Industrial Product [Sector-17; 5(b)],
   - Unit is located outside Industrial estate, &
   - Inter-state boundary was there within 10 Kms from the existing project site (i.e. Karnataka state boundary at 0.89 km from the project site)
2) Capacity of Plant Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum to 20031.4 MT/Annum) Manufacturing in existing unit.
3) Consent to Establish/Consent to operate for proposed expansion project from TNPCB, Tamil Nadu.
4) Total working days in a year 365
5) Raw material storage facility for 30 days
6) Finished product storage for 15 days
7) Solvent Storage facility for 30 days
8) Factory Act License
9) Public Liability Insurance
10) The Motor Vehicles Act
11) The Bureau of Indian Standards Act
12) The Petroleum Act 1934 & The Petroleum Rules 2002.
13) Poisons act, 1919
14) Hazardous Waste management rule,2016
15) Manufacturing, storage and import of hazardous chemical rules 2016
16) Chemical Weapons Convention 1997

1.1.3 JUSTIFICATION OF PROJECT

Chemplast Sanmar Limited, is a leading supplier of intermediates for global Agrochemical, Pharmaceutical and Fine Chemical innovators. These intermediates involve complex multi-step synthesis using unique chemistries.

The manufacturing facility is located at Berigai, Tamil Nadu.

1.2 PROJECT DETAILS

1.2.1 TOTAL PROJECT COST

Total capital investment for the project will be Rs. 2292.398 Crores [Existing: 292.398 Crore + Proposed: 2000 Crore]. Capital cost of air & water pollution control system and environmental monitoring equipments will be Rs. 118.482 Crores.

TABLE 1.1

BREAK UP OF PROJECT COST

Sr. No.	Particulars	Existing Amount (Rs. In Crore)	Proposed Amount (Rs. In Crore)	Total Proposed Amount (Rs. In Crore)
1	Land	5.915	-	5.915
2	Building and site development	81.446	374	455.446
3	Plant and machinery	186.555	1526	1712.555
4	Total Capital cost Environment protection measures (includes cost of ETP, Tree Plantation, Evaporator System and Rain Water Harvesting etc.)	18.482	100	118.482
	Total Cost of Project	**292.398**	**2000**	**2292.398**
5	Recurring Cost of Environment protection measures (includes cost of ETP, Tree Plantation, Evaporator System etc.)			6.932 Crores/Annum

1.2.2 PLOT AREA

Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (32 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectares area) for green belt (3.33 %) within the plant premises.

TABLE 1.2

BREAK UP OF DIFFERENT LAND USE OF FACTORY

Sr. No.	land use	Area (sq. mt.)		
		Existing	Proposed	Total
1	Production Plants	33467	23201	56668
2	Parking	40	1160	1200
3	Security Building	20	280	300
4	Effluent Treatment plant	4800	625	5425
5	Utility	460	525	985
6	Raw Material and Finished Products Storage	611	2002	2613
8	Tank Farm Area	6325	4575	10900
9	Green Belt	53400	5400	58800
10	Road	8577	7632	16209

11	Solid waste storage / disposal area	1700	6600	8300
12	Vacant area	57000	-52000	5000
	Total	**166400**	**0**	**166400**

1.2.3 EXACT DETAILS ABOUT INFRASTRUCTURAL FACILITIES, PLANT MACHINERIES, ETC. REQUIRED FOR THE PROPOSED PROJECT

TABLE 1.3

LIST OF MACHINERIES AND EQUIPMENTS

S. No	Equipment Description	Unit	Existing		Proposed		Total proposed	
			No	Capacity	No	Capacity	No	Capacity
1	Air compressor	CFM	7	2100	5	4000	12	6100
2	Agitated Nutsche Filter	KL	10	63	10	100	20	163

1.3 PURPOSE OF EIA

The EIA study is carried out to assess the pollution potential and evaluate the adequacy and efficiency of proposed Pollution Control & Environmental Management System.

Environmental Impact Assessment (EIA) is the process of evaluating likely environmental impacts, both positive and negative, of proposed expansion project by taking into account natural, social and economic aspects. It also comprises of suggesting mitigation measures, for the possible negative impacts, before implementation of the project.

The purpose of the EIA study is identifying existing environmental condition in the study area, predicting and assessing environmental impacts due to the proposed expansion project and suggesting measures to mitigate the adverse impacts and to delineate a comprehensive environment management plan along with recommendations and suggestions. The different activities that are likely to take place in the proposed expansion project have been identified and mitigation measures have been proposed.

This report is prepared based on Generic Structure of EIA Document' given in Appendix III and IIIA to EIA Notification dated 14th September 2006.

1.4 OBJECTIVES OF EIA

Detailed EIA/EMP report has been prepared in line with approved ToR issued by MOEFFCC, New Delhi and as per generic structure as per the guideline provided by MoEF & CC. The EIA/EMP report includes collection of baseline data with respect to major environmental components, viz. Air, Noise, Water, Land, Biological and Socio-economic components for one season.

1.5 METHODOLOGIES FOR EIA

Taking into consideration proposed expansion project activities and guidelines, an area of 10 km radius from the center of the project has been selected and is designated as the study area for the purpose of EIA studies.

1.5.1 BASE LINE CONDITION

The samples of ambient air, ground and surface water and soil are collected and analyzed as per the standard methods for establishing the baseline data and to determine the impact of proposed activity on the same.

1.5.2 AMBIENT AIR ENVIRONMENT

The air environment around the plant was studied by setting up eleven locations within the study area of 10 km radius from the project site and collection and monitoring the site specific meteorological data, viz. wind speed, wind direction, humidity, rainfall and ambient temperature was carried out. Design of network for ambient air quality monitoring locations is based on guidelines provided by CPCB. The ambient air samples were collected and analyzed for SPM, PM_{10}, $PM_{2.5}$, SO_2, NO_2, O_3, Pb, CO, NH_3, C_6H_6, Benzo (a) Pyrene (BaP), Arsenic (As), & Nickel (Ni), for identification, prediction, evaluation and assessment of potential impact on ambient air environment.

1.5.3 GROUND AND SURFACE WATER ENVIRONMENT

The water required for domestic and industrial use is being made available from the CGWA & State government Water Authority. Hence, to assess the physico-chemical quality of the water, a number of water samples were collected and analyzed for pollution parameters viz., pH, Temperature, TDS, Turbidity, BOD, COD, TSS, DO, fluorides, Chlorides, Sulphates, Nitrates, Ammonical Nitrogen, Total Hardness, Total Alkalinity, Oil & Grease, Calcium, Mg, Ni, T-Cr+3, Cu, Hg, As, Mn, Pb, Fe, Zn, Cd and Microbiological Parameter.

1.5.4 NOISE ENVIRONMENT

Noise pollution survey was conducted in the study zone. The anticipated noise sources were industrial activities, which are likely to be increased due to proposed activity. Noise levels were also recorded in surrounding villages for evaluating general scenario of the study area. Hourly equivalent sound levels (Leq) were also recorded for calculating Day and Night noise levels in the surrounding villages.

1.5.5 SOIL ENVIRONMENT

Soil sampling and analysis was carried out to assess physico-chemical characteristics of the soils and delineate existing cropping pattern, existing land use and topography, within the study area.

1.5.6 BIOLOGICAL ENVIRONMENT

Keeping in view, the importance of biological component of total environment due to the proposed expansion project, biological characterization of terrestrial and aquatic environments, changes in species diversity of flora and fauna in terrestrial as well as aquatic systems were studied for impact analysis due to proposed expansion project activity, if any.

1.5.7 SOCIO-ECONOMIC ENVIRONMENT

Demographic and related socio-economic data was collected from census handbook to assess socio-economic status of the study area. Assessment of impact on significant historical, cultural, and archeological sites/places in the area and economic and employment benefit arisen out from the project is given special attention.

1.5.8 IDENTIFICATION OF POLLUTION SOURCE

Detailed study of manufacturing process for proposed expansion scenario is carried out along with input and output of materials, water and wastewater as well as infrastructure facilities available.

1.5.9 EVALUATION OF POLLUTION CONTROL AND ENVIRONMENTAL MANAGEMENT SYSTEM

The qualitative and quantitative analysis of various pollution sources as well as evaluation of pollution control system is carried out.

1.5.10 EVALUATION OF IMPACT

A comprehensive evaluation of environmental impact with reference to proposed expansion activities is carried out.

1.5.11 PREPARATION OF ENVIRONMENTAL MANAGEMENT PLAN

A comprehensive Environmental Management Plan has been prepared covering all the aspects of pollution prevention measures, Air and Water Pollution Control measures, Hazardous Waste Management, Environmental Surveillance and Environmental Management Plan.

The present report is an EIA conducted during Pre Monsoon Season, 2022 (July, 2022 to September, 2022). The baseline environmental conditions have been established through field monitoring and literature survey.

1.6 STRUCTURE OF REPORT

The objective of the EIA study is preparation of Environment Impact Assessment (EIA) report based on the guidelines of the Ministry of Environment, Forests & Climate Change (MoEFCC), CPCB and TNPCB. It incorporates the following.

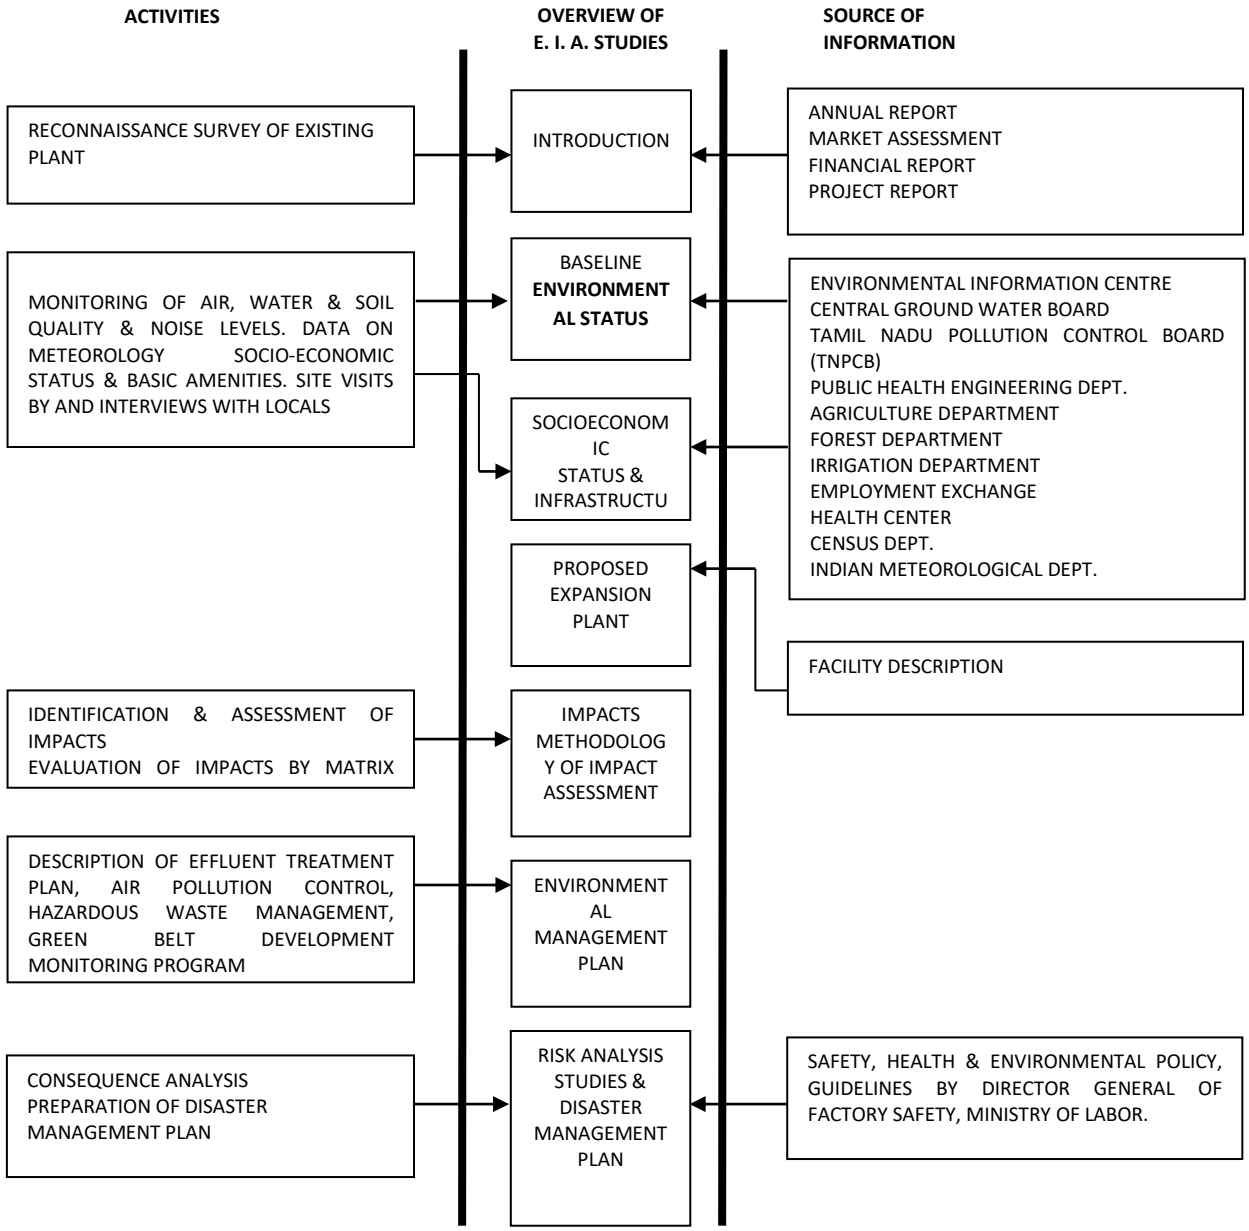
- **Chapter 1** is an Introduction to the Industry and its premises. It also expresses the basic objectives and methodologies for EIA studies and work to be covered under each Environmental component.
- **Chapter 2** presents Project Description and Infrastructural facilities including all industrial and environmental aspects of M/s. Chemplast Sanmar Limited, as well as

manufacturing process details. This chapter also gives information about raw material storage and handling, water and wastewater quantitative details, air pollution and control system, Hazardous Waste generation, storage facility and disposal and utilities for proposed plant capacity. It also provides information about proposed Environmental Management Facilities available at the project site.

- **Chapter 3** covers Description of the environment including meteorological details, Identification of baseline status of Environmental components of the surrounding area covering air, water and land environment. Also presents a study of land use pattern, Biological Environment & Socio-Economic Environment giving details about District Krishnagiri, Taluka Shoolagiri and the study area in terms of land use pattern, biological environment, and socio-economic environment.
- **Chapter 4** deals with Anticipated Environmental Impacts & Mitigation Measures, which provides quantification of significant impacts of the proposed activities of plant on various environmental components. Evaluation of the proposed pollution control facilities has been presented.
- **Chapter 5** describes Analysis of Alternatives (Technology & Site) considered with respect to Technology & Site.
- **Chapter 6** deals with Environmental Monitoring Program
- **Chapter 7** describes Additional studies w.r.t Risk assessment and Disaster Management Plan that shall be adopted by the company, Public consultation, R&R action plan.
- **Chapter 8** describes Project Benefits
- **Chapter 9** deals with Environmental Cost Benefit Analysis
- **Chapter 10** describes Environment Management Plan (EMP) to be adopted for mitigation of anticipated adverse impacts if any and to ensure acceptable impacts.
- **Chapter 11** describes Executive Summary & Conclusion of the Project.
- **Chapter 12** describes Disclosure of Consultants Engaged.

FIGURE - 1.1

ACTIVITIES, SOURCES OF INFORMATION AND CONTENTS OF EIA REPORT



CHAPTER – 2
PROJECT DESCRIPTION

2.1 BACKGROUND

Chemplast Sanmar is over fifty years old and is a part of the SHL Chemicals Group, which in turn is a constituent of the Sanmar Group, one among the oldest and most prominent corporate groups in South India. It is a major manufacturer of Speciality Chemicals such as Specialty Paste PVC resin and Custom Manufactured Chemicals for agro-chemical, pharmaceutical and fine chemicals sector. The company also produces other chemicals such as Caustic Soda, Chlorochemicals, Hydrogen Peroxide, Refrigerant gas and Industrial Salt. The manufacturing facilities are located at Mettur, Berigai and Vedaranyam in Tamil Nadu and Karaikal in the Union Territory of Puducherry.

Chemplast Sanmar Limited, is a leading supplier of intermediates for global Agrochemical, Pharmaceutical and Fine Chemical innovators. These intermediates involve complex multi-step synthesis using unique chemistries.

The manufacturing facility is located at Berigai, Tamil Nadu.

M/s. Chemplast Sanmar Limited, Proposing expansion of Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum to 20031.4 MT/Annum) Manufacturing in Existing Unit at S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3, 10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A, Suligunta Village, Berigai 635105. Shoolagiri Taluk, Krishnagiri District, Tamil Nadu, India.

2.2 LAND REQUIREMENT FOR THE PROJECT INCLUDING ITS BREAK UP FOR VARIOUS PURPOSES, ITS AVAILABILITY

Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (32 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) within the plant premises.

No.7/1 and another extent of 1.80 Acres out of 2.80 acres comprised in Survey No.13/1 in No.44, Suligunta Village, totally measuring an extent of 2.12 Acres, to M/s. Drachem Speciality Chemicals Limited under the Sale Deed dated 28.8.1991 which was registered as Document No.720 of 1991 in the Office of the Sub-Registrar, Shoolagiri;

WHEREAS after the aforesaid sale, the Vendor herein owned the remaining lands measuring a total extent of 15.54 Acres or thereabouts;

WHEREAS Mr Khader Sahib and Mrs. Rabia Be requested the Vendor to provide 3.75 Mtrs. wide and 372 Mtrs. long passage to have an access for the land owned by them behind the lands owned by the Vendor herein and they had offered to give in exchange their lands to the Vendor herein and the Vendor had acceded to the said request;

WHEREAS the aforesaid Mr Khader Sahib and Mrs. Rabia Be and the Vendor herein executed a Deed of Exchange on 24.12.1993 and the same was registered in the Office of the Sub-Registrar, Shoolagiri. Under the said Deed of Exchange the Vendor has transferred a total extent of 35.49 cents of land situated in No.44, Suligunta Village to Mr Khader Sahib and Mrs. Rabia Be for using the said land as pathway and the said Mr. Khader Sahib and Mrs. Rabia Be. in exchange, transferred their land comprised in Survey No.9/1 situated in No.44, Suligunta Village, measuring an extent of 35.44 cents or thereabouts in favour of the Vendor herein;

WHEREAS after the execution of the aforesaid Deed of Exchange, the Vendor herein is in absolute possession and sole enjoyment of the remaining lands measuring a total extent of 15 Acres and 58.95 Cents or thereabouts, which is more fully described in the Schedule hereunder and which is hereinafter referred to as "Schedule Property", as its absolute owner;

WHEREAS the Vendor offered to sell the Schedule Property to the Purchaser herein for a price of Rs.9,96,734/-(Rupees Nine lacs ninetysix thousand seven hundred and thirtyfour only) , (the Vendor herein is the wholly owned subsidiary of the Purchaser herein) and the Purchaser herein agreed to purchase the Schedule Property for the said price, without any encumbrance whatsoever;

WHEREAS the Vendor has authorised and empowered its Director, Mr R Sukumaran, to execute this sale deed in favour of the Purchaser;

NOW THIS DEED OF ABSOLUTE SALE WITNESSETH AS FOLLOWS:

That in pursuance of the aforesaid agreement and in consideration of the sum of Rs.9,96,734/- (Rupees Nine lacs ninetysix thousand seven hundred and thirtyfour only) already paid by the Purchaser to the Vendor herein, the receipt of which sum the Vendor doth hereby acknowledge and release the Purchaser from any further payments, the Vendor doth hereby sell, transfer and assign unto the Purchaser by way of this Deed of Absolute Sale of that Punja Lands of a

For SANMAR CHEMPLAST LIMITED

DIRECTOR

total extent of 15 Acres and 53.95 Cents or thereabouts, which is more fully described in the Schedule hereunder, together with all hedges, ridges, ditches, ways, waters, waterways and water courses, and all the easements, privileges, advantages, and appurtenances whatsoever appertaining thereto and all the estate, right, title and interest of the Vendor in and upon the said piece and parcel of lands and every part thereof TO HAVE AND TO HOLD the same unto the Purchaser absolutely and forever free from all encumbrances.

The Vendor hereby assures the Purchaser that the Vendor is absolutely entitled to the Schedule Property hereby conveyed and have full powers to convey the same and that it has not done knowingly suffered any act or thing whereby the Schedule Property hereby conveyed is encumbered or charged in any manner. The Vendor doth hereby declare and assure the Purchaser that the Property described in the Schedule hereby conveyed is not subject to any encumbrance, charge or lien or mortgage or agreement for sale or lispendens or the subject matter of any pending proceedings or litigation or acquisition by State or Central Government or attachment in or by any Court or any Municipal Panchayat or Revenue or other authority.

The Vendor further covenants with the Purchaser that the Purchaser shall and may at all times hereinafter peaceably and quietly possess and enjoy the property described in the Schedule hereunder without any lawful eviction,

For SANMAR CHEMPLAST LIMITED

DIRECTOR

interruption, claim or demand whatsoever from or by the Vendor or any one claiming from, under or in trust for the Vendor and the Vendor shall indemnify and save harmless the Purchaser from injury of any kind on account of any such claim or demand or defect in title or encumbrance over or in relation to the said property described in the Schedule hereunder.

The Vendor hereby undertakes and assures the Purchaser that in case the Purchaser is deprived of the whole or any portion of the property described in the Schedule by reasons of the action in law or any defect in title found in the title of the Vendor or any encumbrance or charge, on the same coming to light, the Vendor shall repay the whole of the sale price or any part of it as shall be proportionate to the portion of the property described in the Schedule so affected.

AND THE VENDOR shall and will from time to time and at all times hereinafter at the request and cost of the Purchaser execute and register and cause to be done or executed and registered all such acts, deeds and things whatsoever for further and more perfectly assuring the said property described in the Schedule unto the Purchaser in the manner aforesaid as shall and may reasonably required.

The Vendor hereby declares that the Vendor shall pay or has paid all taxes, rates, levies, charges, public returns and assessments payable to the Government or any authority in

For SANMAR CHEMPLAST LIMITED

DIRECTOR

respect of the said land hereby conveyed upto the date of registration of this deed and should any taxes, rates, levies, charges, public returns and assessments be found to be due the Vendor undertakes to properly discharge the same.

The Vendor has this day delivered full and complete possession of the Schedule Property to the Purchaser herein. The Vendor has also delivered to the Purchaser all the original documents of title.

From

Mr. S. Jeevanandham, D.C.E.,
Assistant Director
District Town and Country Planning Office,
83, Pidamaneri Road,
Appavu Nagar,
Dharmapuri – 636 703

To

The commissioner,
Shoolagiri Panchayat Union, Shoolagiri, Krishnagiri District.

N.K.No.143/2010/T

Dated 23.03.2010

Sir,

Subject:

Company - Office of the Deputy Director of Urban Development, Dharmapuri Zone - Krishnagiri District - Hosur Circle - Shoolagiri Panchayat Union - Shoolagonda village S.Nos.5, 7/1,2,3A,3B, 8/1,2A,2B,9/1, 2,3, 10/1PA, 2PA, 3A, 3B, 4, 12/1A, 1B, 13/1, 14/1A, 2A - Approving additional proposed institutional building plans to be located at the site - Regarding.

Reference: 1) Shoolagiri Panchayat Union letter No.885/2009/A2, dated 16.2.2010.

2) The date of receipt of details of payment of gratuity tax, infrastructure and basic facility fee by the petitioner is 19.3.2010.

The proposed company drawings received along with their letter given in reference (1) are considered and orders are issued as follows.

Pursuant to Rule 8(a) issued for regularization of industrial buildings under Section 160 of the Panchayat Act, 1994, Krishnagiri District and Hosur Circle, Choolagiri Panchayat Union, Chulikunda Village, S.Nos.5,7/1,2,3A,3B, 8/ 1, 2A, 2B, 9/1, 2, 3, 10/1PA, 2PA, 3A, 3B, 4, 12/1A, B, 13/1, 14/1A, 2A land was approved by District Town and Country Planning Office (Dharmapuri) Letter. No. 13/2010 and for additional proposed institutional building plans of 2193 HP capacity located in the said building by was approved by department of Deputy Director of Urban Development, Dharmapuri Zone letter No. 10 A to F of 2010 numbered and approved subject to the following conditions are attached hereto.

Note: No changes shall be made in the drawings to be approved without the prior approval of the department.

Deputy Director (i/c)
District Town and Country Planning,
Dharmapuri

2.3 PROJECT SETTING

M/s. Chemplast Sanmar Limited, **Berigai,** Tamil Nadu is located at longitude 77°59'9.12"E and latitude 12°48'14.27"N. Detailed Layout map of the plant is shown in Figure – 2.2.

Land area of project is 16.64 ha. and this land is developed and used as a non agricultural activity. The buildings are designed considering seismic zone II. The land is plain terrain – no scope of landslide.

There is no protected area, important or sensitive species within 15 kms from the proposed project boundary. Hosur City is about 22 kms away and has a population of about 4.95 lakh.

2.3.1 PROJECT SITE AND PLANT LAYOUT

LOCATION (MAP SHOWING GENERAL LOCATION, SPECIFIC LOCATION AND PROJECT BOUNDARY & PROJECT SITE LAYOUT) WITH COORDINATES.

2.4 LOCATION OF THE PROJECT SITE AND NEAREST HABITATS WITH DISTANCES FROM THE PROJECT SITE TO BE DEMARCATED ON A TOPOSHEET (1: 50000 SCALE).

The Land Use Land Cover study has been carried out for Chemplast Sanmar is located at Berigai, Krishnagiri District, Tamilnadu State, India.

The mapping of Land use Land Cover has been carried out with help of Bhuvan Data and Google Earth Imagery using QGIS Software and verified by reconnaissance survey.

The 10 Km Aerial buffer area was identified in with the help of Lat-Lon using Google Earth Pro. The same area is than identified from Bhuvan database and the both the layers were super imposed using Geo Reference technique in QGIS. Based on Visual interpretation the Land use classes were identified and the same was verified with the help of field survey. The area calculation was also done for each land use classes occurring in that region.

The area of industrial settlements are there in this study area along with it human settlements forms the key infrastructure in this region. As the area is having mainly industrial development the transportation facilities by Road network is quite well developed and it is well connected with villages all over in the study area. Almost every villages in this region is well connected with metalled road network. Apart from road network development the railway also present in the study area.

2.4.1 DISTANCE OF NEAREST KEY INFRASTRUCTURE FEATURES FROM PROJECT SITE

The distance of railways and National and State highways are presented in Table 2.1 below.

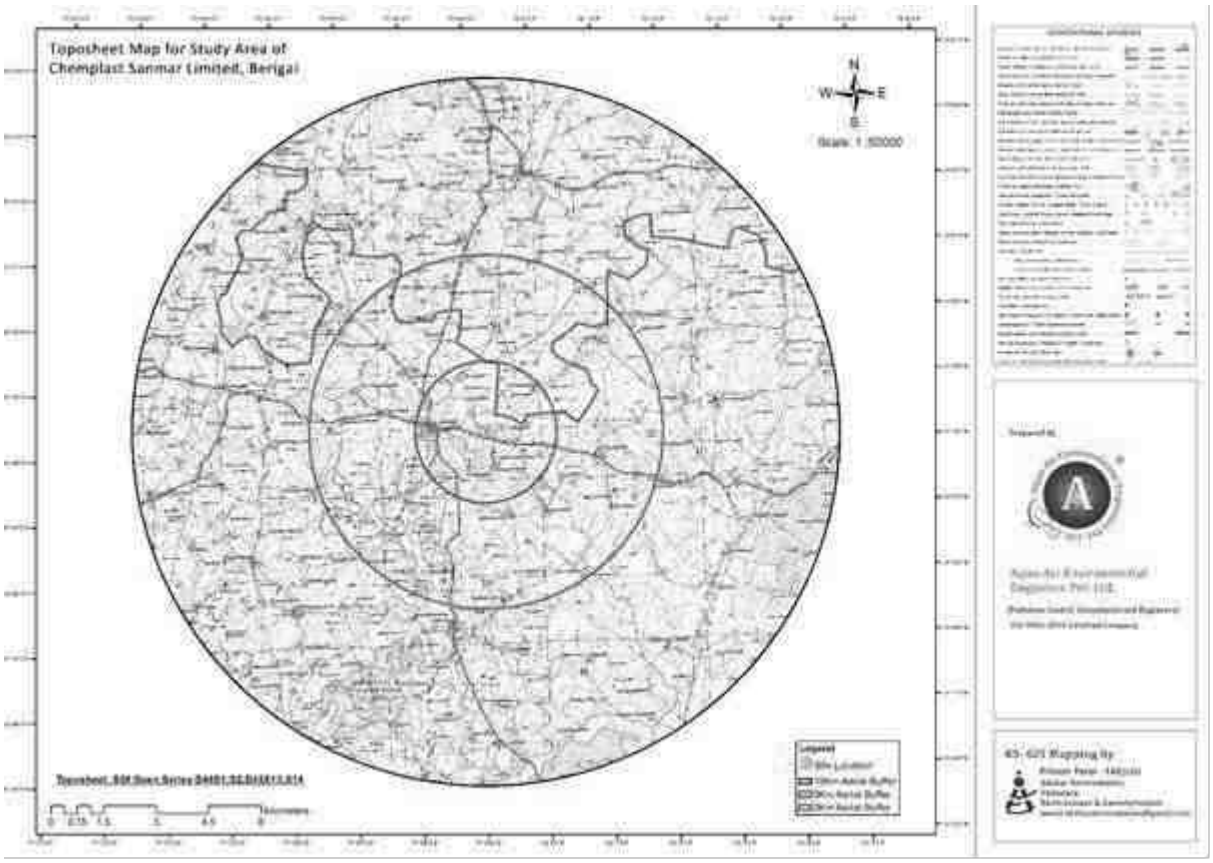
TABLE 2.1

DISTANCE OF NEAREST KEY INFRASTRUCTURE FEATURES FROM PROJECT SITE

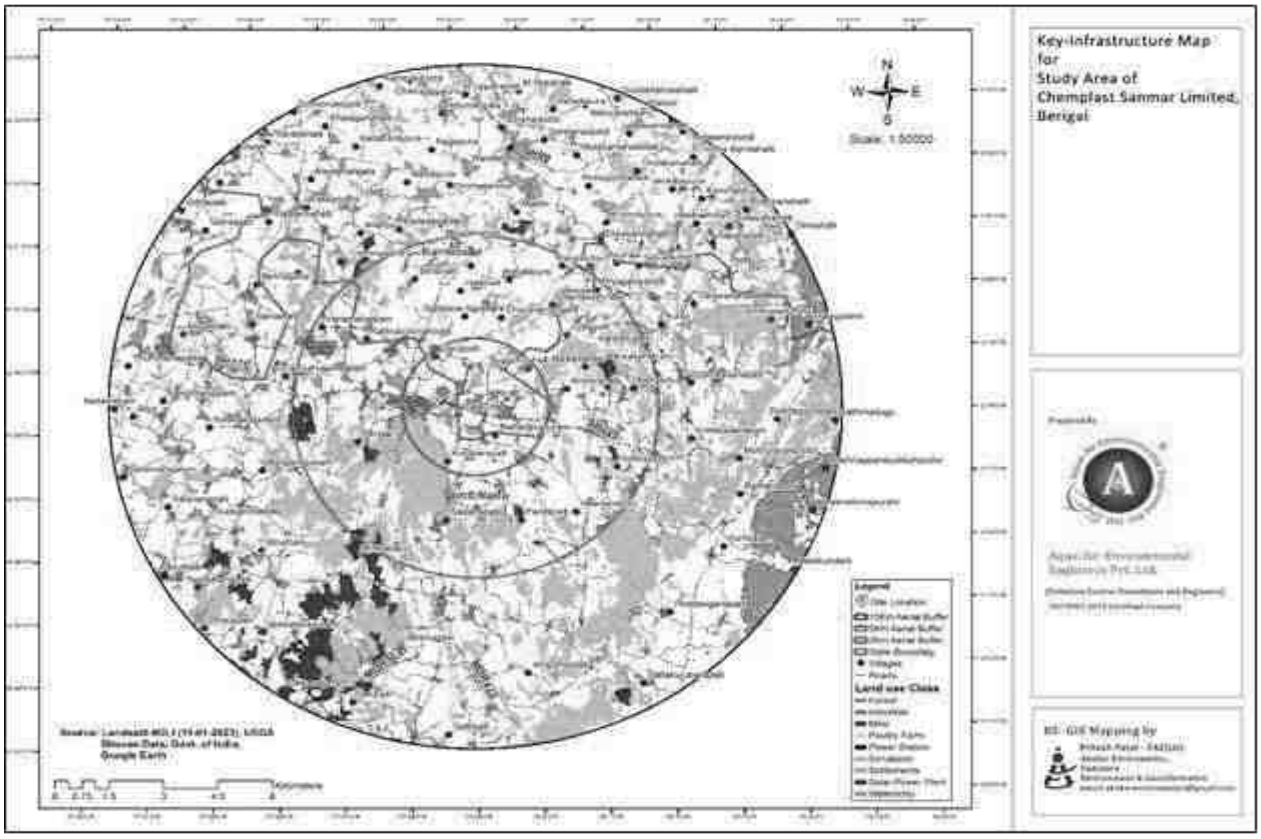
Sr. No.	Nearest Infrastructure Feature	Distance from Project Area
1	Hosur Railway Station	20.28 km South - West
2	National Highway NH-44	14.50 km South - West
3	State Highway SH-17C	7.56 km North-West
4	Hosur town	22 km South - West
5	Krishnagiri District Head quarter	40 km South - East
6	Bengaluru International Airport	52.41 Km North-West
7	Ponnaiayr River	11.35 km South-West

FIGURE – 2.3

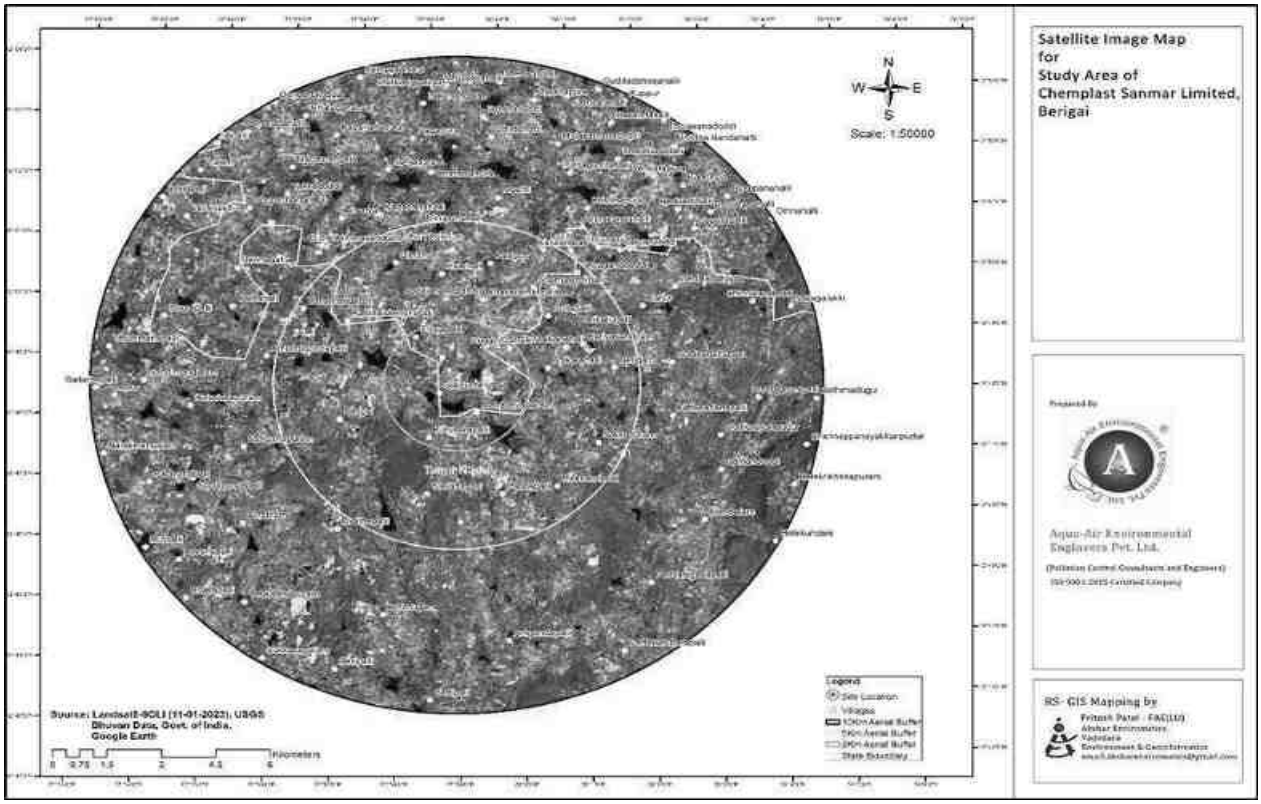
TOPOSHEET



KEY INFRASTRUCTURE



SATELLITE IMAGERY



2.5 TECHNICAL DETAILS OF THE PLANT/S ALONG WITH DETAILS ON BEST AVAILABLE TECHNOLOGIES (BAT), PROPOSED TECHNOLOGY AND REASONS FOR SELECTING THE SAME.

The plant capabilities include the following:

- Glass lined and Stainless steel reactors
- Glass and Stainless Steel Distillation Columns with Structured and Random Packing
- High Pressure Hydrogenation reactors
- Supporting process equipment typically suited for the manufacture of speciality chemicals involving complicated multi-stage synthesis

Utilities

- Stand-by power generation facility
- Brine chilling facilities
- Thermic fluid heating system
- Boiler and compressed air systems
- Chilled water facility

Eco-Friendly Technology for product manufacturing

1. **Usage of Non-fossil fuel source for boiler (Briquettes)**

- replacing the Usage of furnace oil by non-fossil fuel source (Briquettes) for Boiler. Using fossil fuel would generate 2.8 to 3 T of CO2 emission per ton of fuel
- Usage of non-fossil fuel source (Briquettes) is increasing the Energy-efficiency and Reduction of greenhouse gas emissions

2. **Adiabatic Cooling Towers instead of conventional type Cooling Towers**

   We are going with Adiabatic Cooling Towers, which is saving 75% of water consumption with compare to conventional type Cooling Towers.Adiabatic cooler uses wetted pads to pre-cool the ambient air entering the tower. This pre-cooled air is used to cool process water. This helps achieve a lower temperature than the ambient dry bulb temperature.

3. **Low-Power Exercise Equipment -Energy efficient (IE3) motors**

- 93% efficiency as against 88% for conventional IE1 motors
- 5% increase in efficiency

Estimated Power Demand (kW)	Energy consumption/year (GWh)		Energy Saving (GWh)
	88% Efficiency	93% Efficiency	
2000	17	15	2

- 1 GWh electrical energy accounts for releasing 790 tons of CO2 [Source: as per CEA data, Govt. of India.]
- Yearly reduction in CO2 emissions due to IE3 motors: 2 X 790 = 1580 tonnes

4. Variable Speed Drives (VSD)

- Selected IE3 motors are with VSD

Estimated Power Demand (kW)	Energy consumption/year (GWh)		Energy Saving (GWh)
	Without VSD	With VSD	
1565	11	9	2

- 1 GWh electrical energy accounts for releasing 790 tons of CO2 [Source: as per CEA data, Govt. of India.]
- Yearly reduction in CO2 emissions due to VSD: 2 X 790 = 1580 tonnes

5. LED Lighting

Company is going with 100% of LED lightings over the plant, it's better than other by, they are brighter, Require lesser energy to function and Last longer.

- LED lamps consume 20% energy for heating
- Metal halide lamps consume 75% energy

Estimated Power Demand (kW)	Energy consumption/year (GWh)		Energy Saving (GWh)
	Metal halide lamps	LED	
25	0.6	0.3	0.3

- 1 GWh electrical energy accounts for releasing 790 tones of CO2 [Source: as per CEA data, Govt. of India.]

- Yearly reduction in CO2 emissions due to VSD : 0.3 X 790 = 237 tonnes

6. Monofluid Temperature Control

- Precise temperature control in addition to reduction in lean waste generation
- By considering cooling water changeover in one 16KL reactor, one 10KL reactor and one final product dryer (three products at a time)

Cooling water drained per day per product	2845	L/day
Cooling water drained per day for all three products	8535	L/day
Cooling water sent to ETP per month as lean waste	85350	L/month
Total reduction of Cooling water as lean waste with MFS per year	1024	KL/year

7. Steam Condensate Recovery System and Flash Steam Recovery System

- Condensate headers are routed to the receiver wherein pressure powered/ mechanical pump transfers the condensate to boiler feed water tank
- High pressure condensate from process will be diverted to a flash vessel to generate LP steam. Thermo compressor option will be validated based on LP pressure

Steam condensate recovery metrics	Qty	Units	Remarks
Condensate available	5600	Kg/hr	80% out of 7000 kg/hr
Total Sensible Heat available	718.24	Mcal/Hr	2.84 MMBTU
Fuel equivalent/Hr	83.6	Kg of FO	13.2 % of boiler fuel consumption/hr
Co2 emission reduction per Annum	2081	MT of CO2	8000 Hrs of operation
Total flash steam available @3.5 bar as LP steam	498	Kg/hr	8% of condensate qty

8. Rainwater harvesting

- Up to 80 % of rainwater goes into underground

9. Double Stage Scrubbing system for all reactors

Double stage scrubbing system for all reactors for reduce the emission from the stack and Reduction of polluting substances and greenhouse gas emissions

10. Scrubber for all open Reactor and Chemical storage

All reactor vent and bulk storage tank vent will be connected with wet scrubbing system for reduce polluting substance to atmosphere.

2.6 PHASE WISE PROJECT IMPLEMENTATION SCHEDULE WITH BAR CHART AND TIME FRAME, IN TERMS OF SITE DEVELOPMENT, INFRASTRUCTURE PROVISION, EMS IMPLEMENTATION ETC.

All activities related to proposed project shall be started soon after getting Environmental Clearance. CTO and CTE will be obtained from the Tamil Nadu State Pollution Control Board.

PROJECT BAR CHART

Schedule

2.9 MANUFACTURING PROCESS, CHEMICAL REACTION AND MASS BALANCE OF EACH PRODUCTS

i) PHYTO CHEMICALS

1) COLCHICINE AND THIOCOLCHICOSIDE

Solvent extraction of Gloriosa superba seed followed by removal of solvent (concentration) by distillation will give the plant seed concentrate, which mainly contains Colchicine and Colchicoside. These two components were then separated by selective solvent extraction. Crude Colchicoside was converted by a synthetic reaction to Thiocolchicoside using Sodium methylmercaptide as reagent.

Colchicine Chloroform Concentrate ⟶ $C_{22}H_{25}NO_6$ 399.44.

Material Balance

1.Product: Colchicine			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Caustic Soda	0.810	Product	1.000
Hyflo	1.270	Solvent recovery	5.100
Sodium Chloride	1.170	Spent solvent (Mixed Solvent)	1.250
Acetic acid	0.140	Effluent Streams	308.220
Activated carbon	0.160		
Chloroform	7.600		
DNS	8.550		
Ethyl acetate	4.050		
Hexane	1.270		
Methanol	10.800		
Water	279.750		
Total Input	315.570	Total Output	315.570

Material Balance

2) Product: Thiocolchicoside

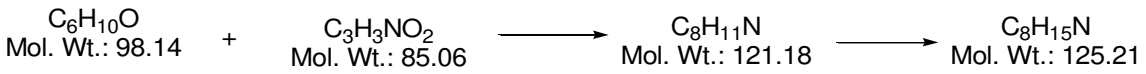
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Caustic Soda	2.500	Product	1.000

Calcium carbonate	1.800	Solvent recovery	90.405
Hyflo	0.770	Spent solvent (Mixed Solvent)	10.046
Sodium Carbonate	1.650	Solid waste	269.059
Sodium Chloride	6.510	Effluent Streams	308.230
Sodium methyl mercaptide	1.370		
Sodium Hypochlorite	12.080		
Acetic acid	1.520		
Activated Carbon	0.440		
Chloroform	47.000		
DNS	30.500		
Ethyl acetate	2.400		
G.S. Seed	269.900		
Hexane	3.370		
Isopropyl alcohol	5.350		
Methanol	11.830		
Water	279.750		
Total Input	678.740	Total Output	678.740

3) Organic Chemicals

3) CHEA

Cyclohexanone is condensed with cyanoacetic acid to get Cyclohexenylacetonitrile, which is then hydrogenated to get Cylcochexenylethylamine. The product is purified by fractional distillation.



Material Balance

3.Product: CHEA			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Cyano Acetic acid	1.026	Product	1.000
Cyclohexanone	1.300	Solvent recovery	0.004
Hydrogen	0.065	Solid waste	0.966
Ammonium acetate	0.007	Effluent Streams	1.000
Toluene	0.006	Distillation residues	0.002
Ammonium gas	0.065		
Raney cobalt	0.003		
Water	0.500		
Total Input	2.972	Total Output	2.972

4) T4C

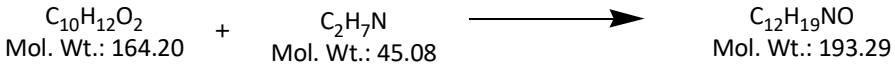
Cyclohexanone is condensed with acrylonitrile in the presence of potassium hydroxide using tert. butyl alcohol as solvent. The resulting tetra cyano compound is hydrolysed with sodium hydroxide. The product T4C is isolated by acidification of the reaction mixture.

Material Balance

4.Product: T4C			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
TBA	0.495	Product	1.000
Acrylonitrile	0.950	Solvent recovery	0.347
Potassium Hydroxide	0.050	Spent solvent (TBA)	0.149
Cyclohexanone	0.390	Solid waste	1.764
Caustic soda	0.375	Effluent Streams	1.820
Hydrochloric acid	1.000	Spent Hyflo	0.100
Hyflo+ Activated carbon	0.020	Spent Carbon	0.100
Water	2.000		
Total Input	5.280	Total Output	5.280

5) SUBSTITUTED ALKYL ARYL AMINE

4-MPA is reacts with Mono Ethyl amine abd followed by reductive ammonisation using ethylamine and 5%palladium on carbon to give Substituted Alkyl Aryl amine

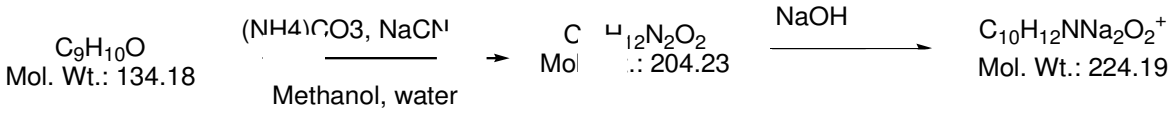


Material Balance

5.Product: Substituted Alkyl Aryl amine			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4-Methoxy phenyl acetone	0.911	Product	1.000
Mono Ethyl amine	0.667	Solvent recovery	0.197
Hydrogen	0.015	Spent solvent (Mono Ethyl amine)	0.200
Pd/c (Catalyst)	0.002	Effluent Streams	0.198
Total Input	1.595	Total Output	1.595

6) TR-1600/TR-1400:

Toluene reacts with DMS is presence of Ammonium carbonate and Sodium cyanide followed Methylation reaction to give **TR-1600**

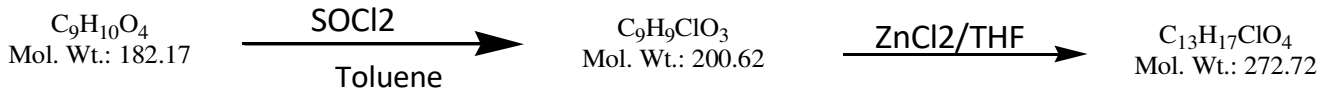


Material Balance

6. Product: TR 1600/TR 1400			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Toluene	0.844	Product	1.000
DMS	0.680	Spent solvent (Methanol)	0.197
Methanol	0.200	Contaminated aromatic, aliphatic or naphthenic solvents may or may not fit for reuse (Toluene)	0.003
Ammonium carbonate	1.180	Solid waste	1.645
Sodium hydroxide	1.660	Effluent Streams	8.500
Formic acid	0.800		
Formaldehyde	0.990		
Propiophenone	0.740		
Sodium cyanide	0.251		
Water	4.000		
Total Input	11.345	Total Output	11.345

7) 4-CHLORO-BUTYL VERATRATE

Condensation of 3,4-Dimethoxybenzoic acid with Tetrahydrofuran in the presence of zinc chloride gives 4-Chlorobutyl veratrate.

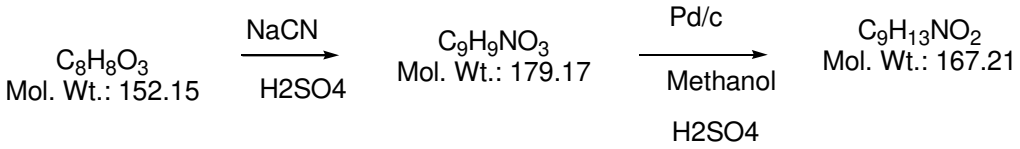


Material Balance

7.Product: : 4-Chloro-butyl veratrate			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
3,4-Dimethoxy Benzoic acid	1.050	Product	1.000
Thionyl chloride	0.880	Solvent recovery	1.080
EDC	1.050	Spent solvent (Mixed solvent)	0.600
Tetrahydrofuran	0.550	Solid waste	1.700
Zinc chloride	0.050	Effluent Streams	5.000
Sodium bi carbonate	0.170		
Toluene	0.630		
Water	5.000		
Total Input	9.380	Total Output	9.380

8) AE PHENOL

Vanillin reacts with sodium cyanide to give cyanohydrin and followed by reduction to give Substituted amino ethyl phenol.

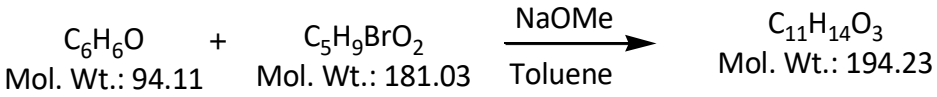


Material Balance

8.Product: AE PHENOL			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Vanilin	1.060	Product	1.000
Sodium cyanide	0.480	Solvent recovery	1.520
Sulphuric acid	0.980	Spent solvent (Methanol)	0.620
MTBE	1.060	Solid waste	2.110
Chloro acetic acid	0.020	Effluent Streams	10.500
Methanol	1.080	Spent Catalyst	0.00200
Palladium carbon (Catalyst)	0.020	Recovered catalyst	0.01800
Sodium hydroxide	0.530		
Hydrogen	0.040		
Water	10.500		
Total Input	15.770	Total Output	15.770

9) Methyl 2 phenoxy isobutyrate:

Phenol reacts with methyl 2 –bromo isobutyrate followed phenol and sodium methoxide reaction to give Methyl 2 phenoxy isobutyrate

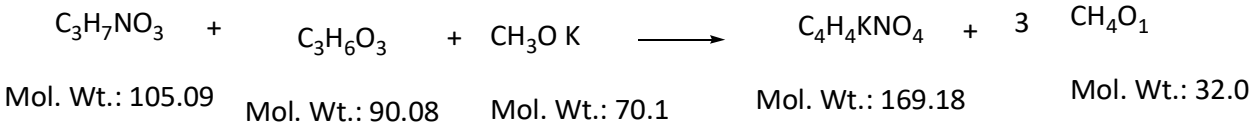


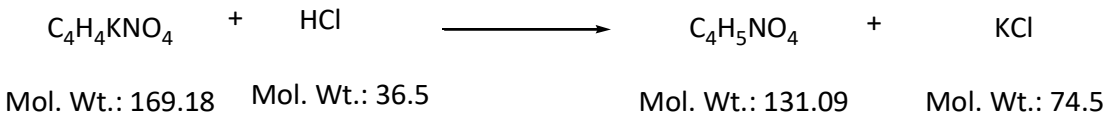
Material Balance

9.Product: Methyl 2 phenoxy isobutyrate			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Phenol	0.840	Product	1.000
Sodium methoxide	0.510	Solvent recovery	0.660
Toluene	0.880	Spent solvent (Toluene)	0.216
Methyl -2-Bromo iso utyrate	1.170	Contaminated aromatic, aliphatic or naphthenic solvents may or may not fit for reuse (Toluene)	0.004
Caustic soda	0.140	Solid waste	0.360
Water	3.500	Effluent Streams	4.800
Total Input	7.040	Total Output	7.040

10) (4R)-2-OXOOXAZOLIDINE-4-CARBOXYLIC ACID (COX)

D-Serine reacts with DMC in presence of potassium methoxide to give Potassium salt and followed with addition of MIBK and reaction with HCl to give COX.



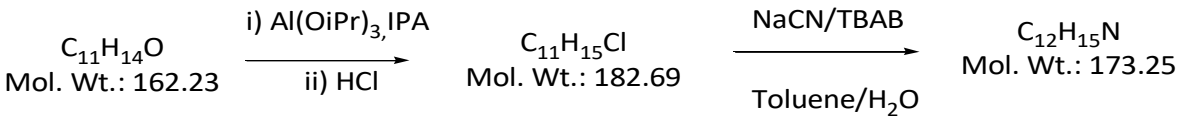


Material Balance

10.Product: 4-R-2-Oxaoxazolidine-4-Carboxylic Acid (COX)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
D-serine	0.801	Product	1.000
DMC	0.689	Solvent recovery	2.207
Potassium methoxide	0.534	Solid waste	0.568
Hydrochloric acid	0.278		
MIBK	0.363		
Acetone	1.110		
Total Input	3.775	Total Output	3.775

11) 4-t-BUTYLPHENYL ACETONITRILE (CP)

t-Butyl benzaldehyde via reduction followed by cyanation methodology to give 4-(t-Butyl phenyl acetonitrile

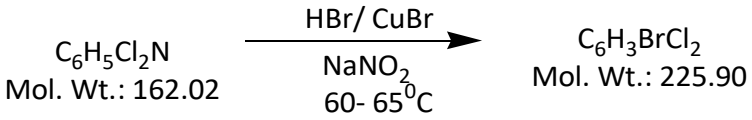


Material Balance

11.Product: 4-Tert Butylphenyl Acetonitrile			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4-tert butylbenzaldehyde	0.940	Product	1.000
Hydrogen	0.010	Solid waste	0.580
Hydrochloric Acid	0.210	Effluent Streams	0.960
Sodium cyanide	0.280		
Water	1.100		
Total Input	2.540	Total Output	2.540

12) 1-BROMO 3-5 DICHLOROBENZENE (DCBB)

Bromination of 3,5-dichloroaniline using hydrogen bromide in presence of cupric bromide to give 1-bromo-3,5-dichlorobenzene

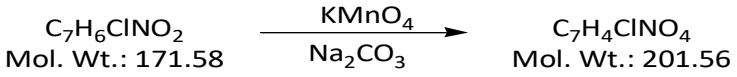


Material Balance

12.Product: DCBB-(1 Bromo 3-5 Dichlorobenzene)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
3,5 Dichloroaniline	0.720	Product	1.000
Hydrobromicacid	0.720	Solid waste	0.550
Sodium nitrite	0.310	Effluent Streams	0.160
Water	0.080	Gaseous Emission (Nitrogen)	0.120
Total Input	1.830	Total Output	1.830

13) 4-CHLORO 2-NITROBENZOIC ACID

Oxidation of 4-chloro-2-nitro toluene to give 4-chloro-2-nitro benzoic acid

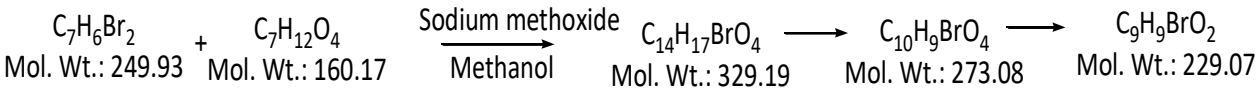


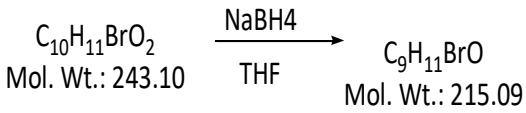
Material Balance

13.Product: 4-Chloro-2-Nitro Benzoic Acid			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4-Chloro-2-Nitro toluene	0.760	Product	1.000
Potasium permanganate	1.420	Solid waste	1.180
water	1.060	Effluent Streams	1.060
Total Input	3.240	Total Output	3.240

14) 2-(4-BROMO PHENYL) PROPANOL (BPP)

Dehydrohalogenation reaction of 4-Bromo benzylbromide and diester followed by hydrolysis and reduction using sodium bromohydride gives BPP.



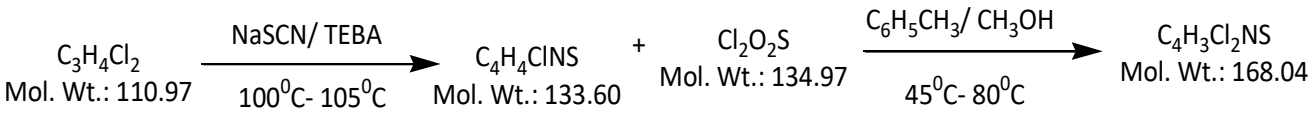


Material Balance

14.Product: 2-(4-Bromo Phenyl) Propanol			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4-Bromo benzyl bromide	0.760	Product	1.000
Diethyl malonate	0.490	Solvent recovery	1.680
Sodium methoxide	0.160	Solid waste	1.660
Water	2.520	Effluent Streams	3.700
Benzene	0.100	Gaseous Emission (CO2)	0.190
potassium Hyodroxide	0.210	Distillation residues	0.020
Hydrochloric acid	1.130		
Bromo phenyl propionic acid	0.780		
Thionyl chloride	1.400		
Methanol	0.700		
Total Input	8.250	Total Output	8.250

15) 2-CHLORO-5-CHLOROMETHYL -1,3, THIAZOLE (CCMT)

2,3-Dichloropropene react with sodium thiocyanate /TEBA to give 2-Chloroallyl isothiocyante, which was treated with sulfuryl chloride to yield 2-Chloro-5-chloromethyl 1,3-thiazole.

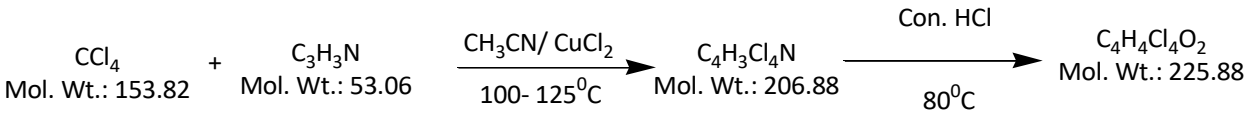


Material Balance

15.Product: 2-Chloro-5-Chloro Methyl -1,3, Thiazole(CCMT)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
2,3-Dichloro propane	0.830	Product	1.000
Sodium Thiocyanate	0.610	Solid waste	1.400
Water	1.400	Effluent Streams	2.240
Sulfuryl chloride	1.800		
Total Input	4.640	Total Output	4.640

16) TETRACHLORO BUTYRIC ACID (TCBA)

Carbon tetrachloride reacts with acrylonitrile in the presence of acetonitrile/cupric chloride to give tetrachlorobutyro nitrile followed acid hydrolysis to form Tetrachlorobutyric acid.

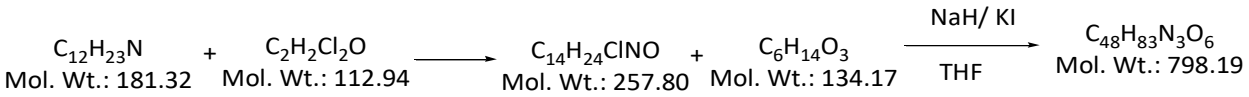


Material Balance

16.Product: Tetra Chloro Butyric acid (TCBA)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Carbon tetra chloride	0.680	Product	1.000
Acetonitrile	0.240	Solid waste	0.080
water	1.160	Effluent Streams	1.000
Total Input	2.080	Total Output	2.080

17) IONOPHOR

Dicyclohexylamine react with chloroacetyl chloride to give 2-chlorodicyclohexylacetamide followed by reaction with triol in the presence sodium hydride and KI to give the ionophor.

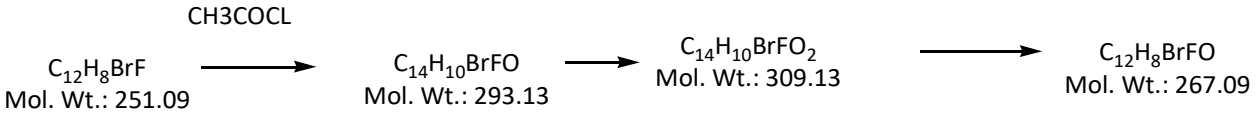


Material Balance

17.Product: Ionophor			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Dicyclohexyl amine	0.700	Product	1.00
Chloro acetyl chloride	0.440	Solid waste	0.11
Water	1.070	Effluent Streams	1.10
Total Input	2.210	Total Output	2.210

18) 4- BROMO-2-FLUORO HYDROXY BIPHENYL (BFB)

Acetylation of 4-bromo-2-fluoro-biphenyl followed by oxidation and hydrolysis gives 4-bromo-2-fluoro-biphenyl-4-ol.

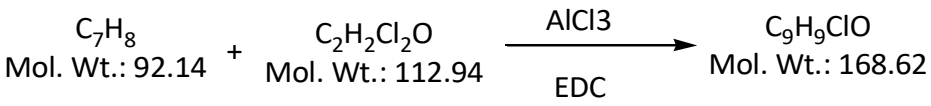


Material Balance

18.Product: 4- Bromo-2-Fluoro Hydroxy Biphenyl (BFB)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4-bromo-2- Fluoro Biphenyl	0.860	Product	1.000
Acetylchlorite	0.270	Solid waste	1.360
Water	2.550	Effluent Streams	2.900
Bromine	0.100		
Nitro benzene	0.100		
Hydrogen peroxide	1.110		
Sodium Hydroxide	0.270		
Total Input	5.260	Total Output	5.260

19) PARA-METHYL PHENCYL CHLORIDE (PMPC)

Acetylation reaction between toluene and chlorocetyl chloride gives PMPC.

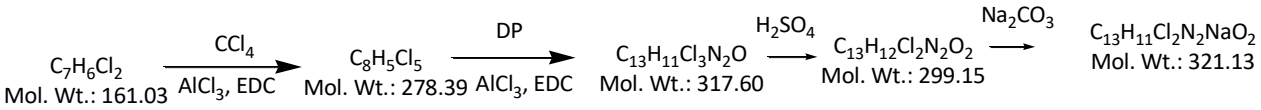


Material Balance

19.Product: TP-Methyl Phencyl Chloride (PMPC)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Toluene	0.550	Product	1.000
Chloro acetyl chloride	0.670	Spent Solvent (Toluene)	0.217
Water	1.100	Contaminated aromatic, aliphatic or naphthenic solvents may fit for reuse (Toluene)	0.002
		Effluent Streams	1.101
Total Input	2.320	Total Output	2.320

20) SODIUM 4(2-DICHLOROM-TOLYL)-1,3-DIMETHYL-5-PYRAZOLATE (MY710Na)

Reaction with 2,3-diichloro toluene and 1,3-Dimethyl-5-Pyrozolone in the presence of AlCl3 and CCl4, followed by insitu reaction with sulphuric acid and sodium carbonate to give MY710Na.

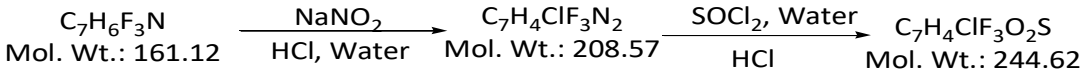


Material Balance

20.Product: (Sodium-4-(2,4dichloro-toluoyl)-5-pyrazolate) MY710Na			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
2,6-Dichloro toluene	0.500	Product	1.000
Carbon tetrachloride	0.480	Solid waste	0.660
1,3-Dimethyl pyrazolone	0.350	Effluent Streams	1.060
Sodium carbonate	0.330		
water	1.060		
Total Input	2.720	Total Output	2.720

21) 2-TRIFLUROMETHYL BENZENE SULFONAMIDE (TBSA)

2-Aminobenzotrifluoride reacts with sodium nitrite/HCl mixture to form Diazonium salt, which was treated with thionyl chloride to give sulphonyl chloride derivative. This was further reacted with ammonia solution to give TBSA.

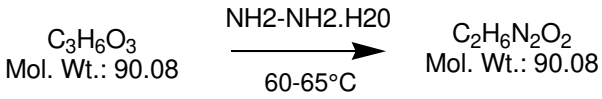


Material Balance

21.Product: 2-Triflurомethyl benzene sulfonamide(TBSA)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
2-Aminobenzotrifluoride	0.660	Product	1.000
Sodium nitrite	0.560	Solid waste	0.300
Thionyl chloride	0.490	Effluent Streams	8.343
Sodium Meta bi sulphite	0.100	Gaseous Emission (Nitrogen)	0.090
HCl	2.910	BY-Product (Dil. Hcl)	0.657
Water	4.600		
Ammonia solution	1.070		
Total Input	10.390	Total Output	10.390

22) METHYL CARBAZATE

Dimethyl carbonate reacts with hydrazine hydrate - 80% solution to give Methyl carbazate.

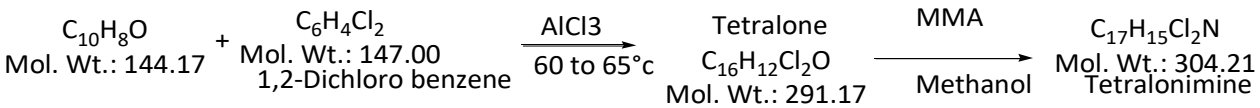


Material Balance

22.Product: Methyl Carbazate			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Dimethyl carbonate	1.000	Product	1.000
Hydrazine hydrate	0.560	Solid waste	0.360
Water	0.200	Effluent Streams	0.400
Total Input	1.760	Total Output	1.760

23) TETRALONE IMINE

1-Naphthol react with 1,2-dichloro benzene in the presence of aluminium chloride to gave tetralone compound. This was followed by reacted withmethoxy methyl amine to yield tetralone imine in good excellent yield.

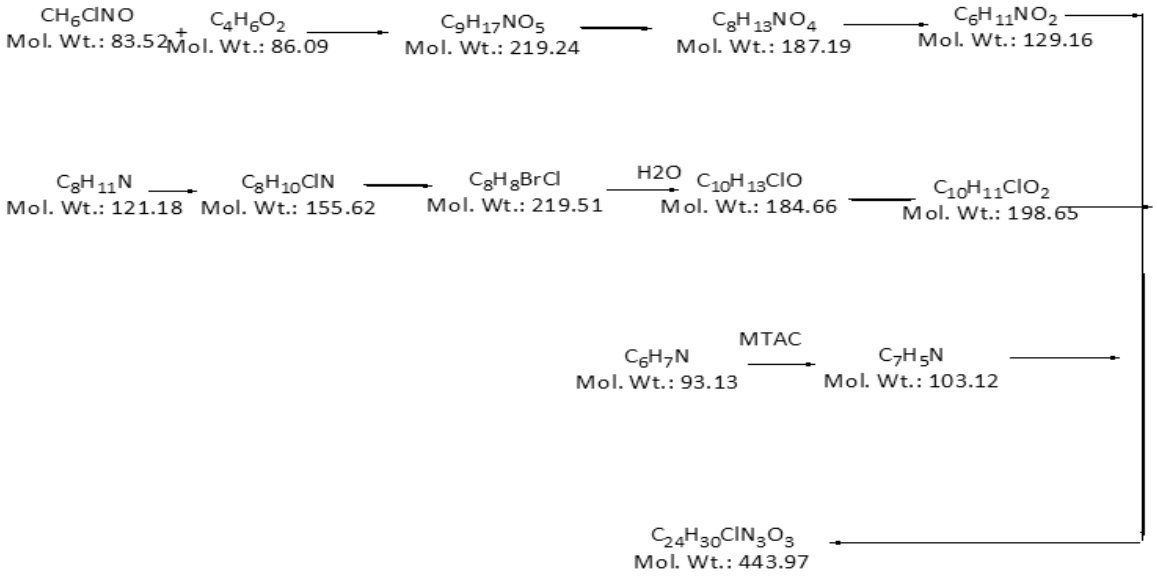


Material Balance

23. Product: Tetralone Imine			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
1-Naphthol	0.50	Product	1.000
1,2-dichloro benzene	0.50	Effluent Streams	1.000
Water	1.00		
Total Input	2.000	Total Output	2.000

24) DIAMIDE

MTA hydrochloride reacts with Methyl acrylate and followed by chlorination & Bromination to give Diamide.

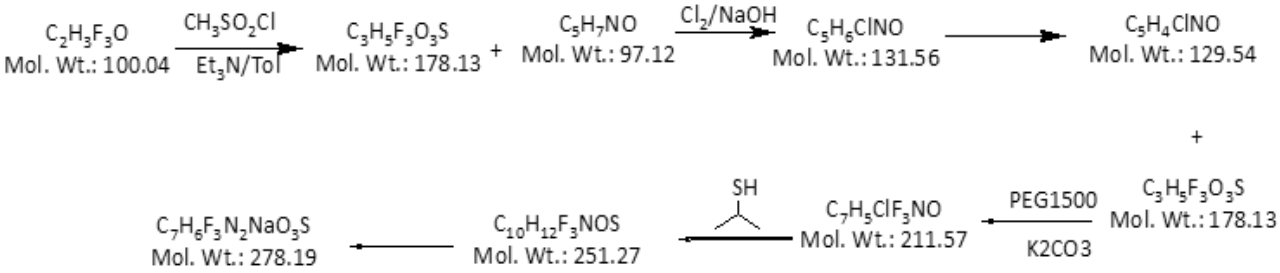


Material Balance

24. Product: Diamide			
Material balance Per kg output of product			
Input		**Output**	
RM	Input qty in Kg	Output	output qty in Kg
MTA HCl	0.56	Product	1
Methyl acrylate	0.79	Solid waste	1.25
Water	3.47	Effluent Streams	5.00
CDPAA	0.54		
Phenyl isonitrile	0.38		
Methyl amine	0.21		
Dimethylaniline	0.20		
Chlorobenzene	0.30		
Sodium bromide	0.10		
Magnesium	0.30		
Ethylene oxide	0.15		
4-Acetamido TEMPO catalyst	0.01		
Psuedocumene	0.02		
MTAAC	0.22		
Total Input	**7.25**	**Total Output**	**7.25**

25)SULFONAMIDE

TFE reacts with Methane sulfonyl chloride and followed by Chlorination & then Hydrolysis to give Sulphonamide.

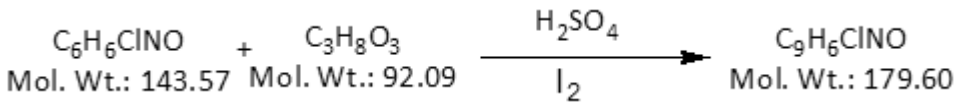


Material Balance

25.Product: Sulfonamide			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
TFE	0.560	Product	1.000
Methane sulfonyl chloride	0.640	Solvent recovery	6.200
TEA	0.570	Solid waste	1.800
Water	3.010	Effluent Streams	2.540
Furfurylomine	0.740		
n-Butanol	0.100		
Chlorine gas	0.790		
Sodium hydroxide	1.750		
Sodium Hypo chloride	0.580		
Hydrochloric acid	1.280		
Ethyl ester (TFEMS)	0.840		
IPM	0.300		
n-Heptane	0.100		
KOH	0.220		
Ammonia	0.060		
Total Input	**11.540**	**Total Output**	**11.540**

26) CHLORO-8 -HYDROXY QUINOLINE (CHQ)

Reaction of substituted aniline with glycerol in presence of sulfuric acid produces chloro hydroxyquinoline.

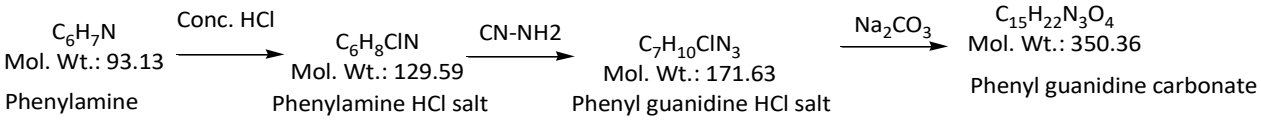


Material Balance

26.Product: 5 Chloro-8 -Hydroxy Quinoline (CHQ)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4 CAP	0.800	Product	1.000
Glycerol	0.510	Solvent recovery	0.800
Sulphuric acid	2.051	Solid waste	0.781
Sodium hydroxide	0.220	Effluent Streams	10.331
Toluene	1.000	Distillation residue	0.200
Water	9.000	By-Product (Dil. Sulphuric acid)	0.469
Total Input	**13.581**	**Total Output**	**13.581**

27) PHENYLGUANIDINE CARBONATE (PGC)

Aniline in presence of Concentrated Hydrochloric acid reacts with Hydrogen Cyanamide - 30% solution to give Phenyl guanidine carbonate.

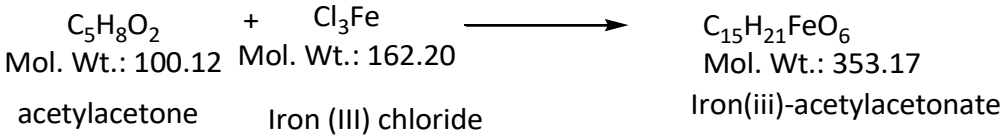


Material Balance

27. Product: Phenyl Guanidine Carbonate (PGC)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Aniline	0.530	Product	1.000
Hydrochloric Acid	0.210	Solid waste	0.330
30% Cyanamide soln	0.240	Effluent Streams	2.000
Sodium carbonate	0.300		
water	2.050		
Total Input	**3.330**	**Total Output**	**3.330**

28) Fe(III) ACETYL ACETONATE

Reaction between acetylacetone and Iron(III)chloride in the presence of ammonia to give the complex Iron(III)acetylacetone.

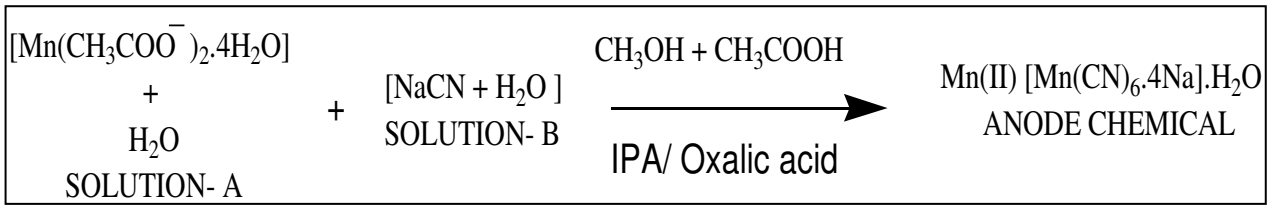


Material Balance

28.Product: Fe(III) Acetyl Acetanoate			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Acetylacetone	0.850	Product	1.000
Iron III chloride	0.460	Solid waste	0.420
Ammonium hydroxe soln	0.100	Effluent Streams	1.040
Water	1.050		
Total Input	2.460	Total Output	2.460

29) ANODE

Manganese acetate Tetra hydrate reacted with sodium cyanide in the presence of oxalic acid to give anode.

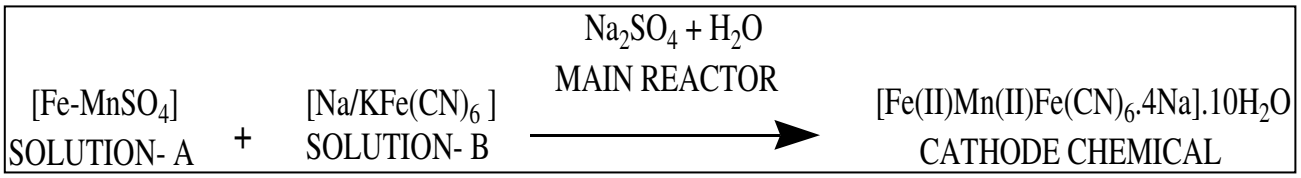


Material Balance

29.Product: : Anode			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Manganese acetate tetrahydrate	0.650	Product	1.000
Sodium cyanide	0.470	Solid waste	0.120
Water	0.240	Effluent Streams	0.240
Total Input	1.360	Total Output	1.360

30) CATHODE

Iron reacts with sodium hexacyanoferrate mixture to give Cathode.

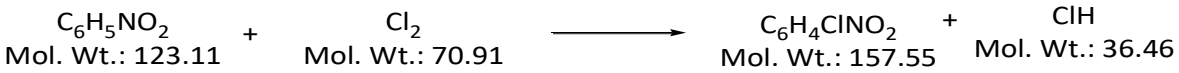


Material Balance

30.Product: : Cathode			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Iron sulfate hydrate	0.670	Product	1.000
Sodium ferrocyanide decahydrate	0.210	Solid waste	0.540
Manganese sulfate monohydrate	0.140	Effluent Streams	0.430
Sodium sulfate	0.110		
Water	0.840		
Total Input	1.970	Total Output	1.970

31. 1-Chloro-3-Nitrobenzene

Nitro benzene reacts with Chlorine gas in presence of Catalyst to give crude 1-Chloro-3-nitrobenzene. The crude product is purified by Fractional vacuum distillation.

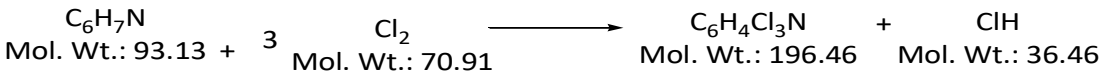


Material Balance

31. 1-Chloro-3-Nitrobenzene			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Nitro benzene	0.780	Product	1.000
Chlorine	0.450	Solid waste	0.360
Sodium hydroxide	0.250	Effluent Streams	9.920
Process Water	9.800		
Total Input	11.280	Total Output	11.280

32. 2,4,6-trichloro aniline

Aniline is reacts with HCl to produce aniline hydrochloride. The aniline hydrochloride reacts with gaseous form of chlorine to form 2,4,6-trichloroaniline.

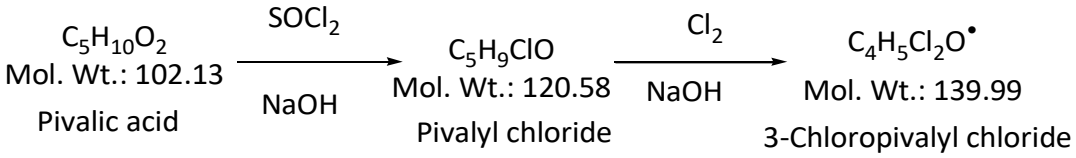


Material Balance

32. 2,4,6- Trichloro Aniline			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Aniline	0.474	Product	1.000
Chlorine	1.082	Effluent Stream	9.775
Sodium hydroxide	0.611	Solid waste	0.892
Process Water	9.500		
Total Input	11.667	Total Output	11.667

33. Pivaloyl Chloride

Pivalic acid reacts with thionyl chloride to give Pivaloyl chloride. The crude product is purified by Fractional vacuum distillation.

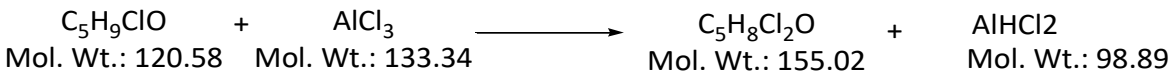


Material Balance

33. Pivaloyl Chloride			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Thionyl chloride	0.986	Product	1.000
Pivalic Acid	0.846	Effluent Stream	9.649
Sodium hydroxide	0.330	Gaseous Emission	0.530
Process water	9.500	Solid waste	0.483
Total Input	11.662	Total Output	11.662

34. 5-Chloro Valeroyl Chloride

Valeroyl chloride reacts with aluminum chloride in presence of monocholoro benzene give 5-chloro valeroyl chloride. The crude product is purified by Fractional vacuum distillation.

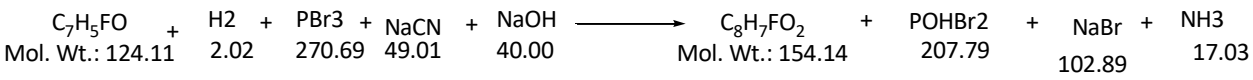


Material Balance

34. 5-Chloro Valeroyl Chloride			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Aluminium chloride powder	0.700	Product	1.000
Valeroyl chloride	0.680	Effluent Stream	9.420
Solvent (MCB)	0.680	Solvent Recovery	0.680
DM Water	9.040		
Total Input	11.100	Total Output	11.100

35. 4-FLUORO PHENYL ACETIC ACID

4-Fluorobenzaldehyde reacts with Ra-Ni in presence of hydrogen gas to give 4-Fluorobenzyl alcohol, which was reacted with PBr3 to give bromo derivative. The bromo derivative reacts with sodium cyanide gave cyano compound. Finally, cyano compound hydrolyzed with sodium hydroxide to give 4-Fluorophenyl aceticacid.

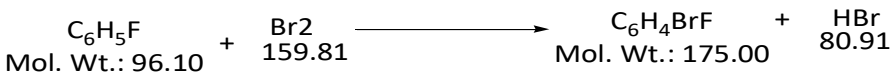


Material Balance

35. 4-FLUORO PHENYL ACETIC ACID			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Para fluorobenzaldehyde	0.800	Product	1.000
H2 gas	0.010	Effluent Stream	10.650
Phosphorus tribromide	0.590		
Soda ash	0.250		
Sodium cyanide	0.320		
Water	9.100		
Sodium hydroxide	0.260		
sulfuric acid	0.320		
Total Input	11.650	Total Output	11.650

36. 4-BROMO FLUOROBENZENE

Fluorobenzene reacts with bromine in presence of Fe catalyst to give 4-Bromo Fluorobenzene. The crude product is purified by Fractional vacuum distillation.

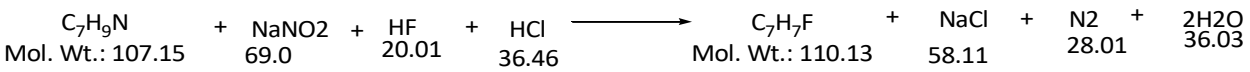


Material Balance

36. 4-BROMO FLUOROBENZENE			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
FluoroBenzene	0.549	Product	1.000
Bromine	0.913	Effluent Stream	0.103
Sodium Hydroxide	0.229	Solid waste	0.588
Total Input	1.691	Total Output	1.691

37. 3-Fluorotoluene

m-Toluidine reacts with sodium nitrite in presence of HF to give 3-Fluorobenzene.
The crude product is purified by Fractional vacuum distillation.

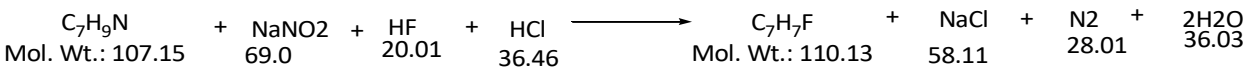


Material Balance

37. 3-Fluorotoluene			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
m-Toluidine	0.973	Product	1.000
HF	0.181	Effluent Stream	10.027
Solid NaNO2	0.626	Solid waste	0.530
Hydrochloric acid	0.331	Gaseous Emission	0.254
Process Water	9.700		
Total Input	11.811	Total Output	11.811

38. 4-Fluorotoluene

P-Toluidine reacts with sodium nitrite in presence of HF to give 4-Fluorobenzene.
The crude product is purified by Fractional vacuum distillation.



Material Balance

38. 4-Fluorotoluene			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
P-Toluidine	0.973	Product	1.000
HF	0.181	Effluent Stream	10.027
Solid NaNO2	0.626	Solid waste	0.530
Hydrochloric acid	0.331	Gaseous Emission	0.254
Process Water	9.700		
Total Input	11.811	Total Output	11.811

39. O-NITRO ANISOLE

O-Nitro chloro benzene reacts with sodium hydroxide in presence of methanol to give o-Nitro anisole. The crude product is purified by Fractional vacuum distillation.

$$\underset{\text{Mol. Wt.: 157.55}}{C_6H_4ClNO_2} + \underset{40.0}{NaOH} + \underset{32.0}{CH3OH} \longrightarrow \underset{\text{Mol. Wt.: 153.14}}{C_7H_7NO_3} + \underset{58.44}{NaCl} + \underset{18.0}{H2O}$$

Material Balance

39. Ortho Nitro Anisole			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
ONCB	1.030	Product	1.000
Methanol	0.209	Effluent Stream	10.268
Caustic Flakes	0.824	Solid waste	1.385
Process Water	9.900		
Sulphuric acid	0.690		
Total Input	12.653	Total Output	12.653

40. p-NITRO ANISOLE

p-Nitro chlorobenzene reacts with sodium hydroxide in presence of methanol gave p-Nitroanisole. The crude product is purified by Fractional vacuum distillation.

$C_6H_4ClNO_2$ + NaOH + CH_3OH ⟶ $C_7H_7NO_3$ + NaCl + H_2O

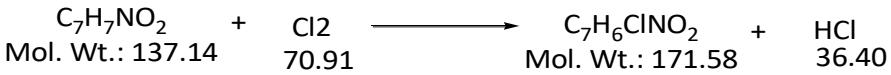
Mol. Wt.: 157.55 — 40.0 — 32.0 — Mol. Wt.: 153.14 — 58.44 — 18.0

Material Balance

40. Para Nitro Anisole			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
PNCB	1.030	Product	1.000
Methanol	0.209	Effluent Stream	10.268
Caustic Flakes	0.824	Solid waste	1.385
Process Water	9.900		
Sulphuric acid	0.690		
Total Input	12.653	Total Output	12.653

41. O-CHLORO P-NITRO TOLUENE

p-Nitro toluene reacts with chlorine gas to give o-chloro nitro toluene. The crude product is purified by Fractional vacuum distillation.

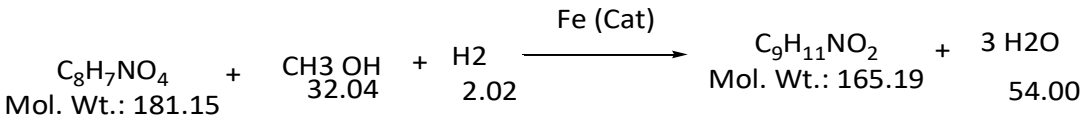


Material Balance

41. O-Chloro P-Nitro toluene			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
P-Nitro Toluene	0.799	Product	1.000
Chlorine gas	0.413	Effluent Stream	9.705
Sodium Hydroxide	0.232	Solid waste	0.339
Process Water	9.600	Solvent recovery	0.820
Methanol	1.000	Distillation residue	0.180
Total Input	12.044	Total Output	12.044

42. 3-AMINO 4- METHYL BENZOIC ACID METHYL ESTER

3-Nitro-4-methyl Benzoic Acid is reacted with Methanol in presence of Sulfuric Acid to form 3-Nitro -4-Methyl Benzoic Acid Methyl Ester. 3- Nitro -4- Methyl Benzoic Acid Methyl Ester undergoes reduction by Acetic Acid and Iron power to form 3- Amino -4- Methyl Benzoic Acid Methyl Ester.

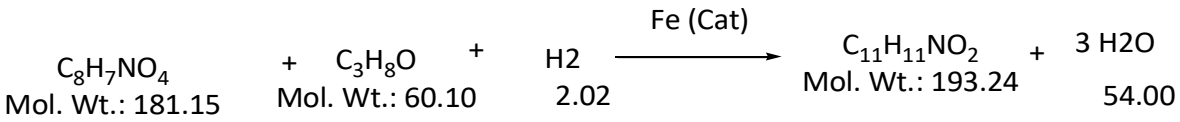


Material Balance

42. 3-Amino 4-Methyl Benzoic Acid Methyl Ester			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
3- Nitro -4- Methyl Benzoic Acid	0.957	Product	1.000
Methanol	0.318	Effluent Stream	9.887
Iron Powder	0.001		
Hydrogen	0.011		
Water	9.600		
Total Input	10.887	Total Output	10.887

43. 3-AMINO 4- METHYL BENZOIC ACID ISOPROPYL ESTER

3-Nitro-4-methyl Benzoic Acid is reacted with isopropanol in presence of Iron powder to form 3-amino -4-Methyl Benzoic Acid Isopropyl Ester.

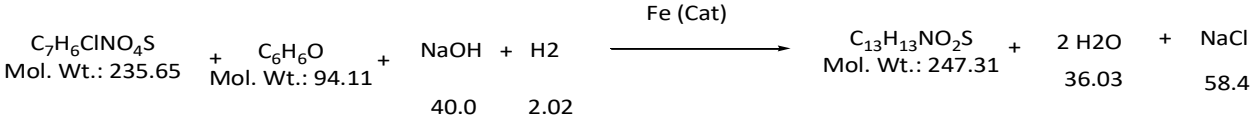


Material Balance

43. 3-Amino 4-Methyl Benzoic Acid Isopropyl Ester			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
3- Nitro -4- Methyl Benzoic Acid	0.957	Product	1.000
Iso Propyl Alcohol	0.318	Effluent Stream	9.487
Iron Powder	0.001		
Hydrogen	0.011		
Water	9.200		
Total Input	10.487	Total Output	10.487

44. 5-Amino-2-Methyl Benzene Sulphonic Acid Phenyl Ester

2- Methyl 5- Nitro Benzene Sulphonyl Chloride is reacted with Phenol in presence of Sodium Hydroxide to form 2- Methyl -5 Nitro Benzene Sulphonic Acid Phenyl Ester. Methyl -5 Nitro Benzene Sulphonic Acid Phenyl Ester undergoes reduction by Iron power to form 5- Amino - 2- Methyl Benzene Sulphonic Acid Phenyl Ester. The crude product is purified by Fractional vacuum distillation.

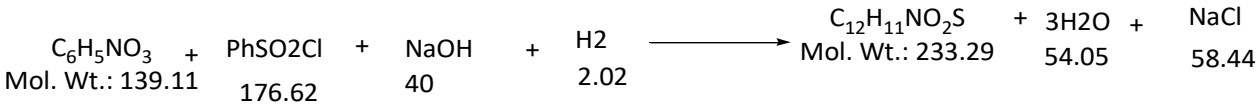


Material Balance

44. 5-Amino-2-Methyl Benzene Sulphonic Acid Phenyl Ester			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
2- Methyl -5- Nitro Benzene Sulphonyl Chloride	0.850	Product	1.000
Phenol	0.339	Effluent Stream	10.483
Sodium Hydroxide	0.707	Solid waste	1.211
Iron Powder	0.001		
Hydrogen	0.007		
Water	10.100		
Sulphuric acid	0.690		
Total Input	12.694	Total Output	12.694

45. (3-AMINOPHENYL) BENZENESULFONATE

3-Nitro Phenol is reacted with Benzene Sulphonyl Chloride in presence of Sodium Hydroxide as well as Solvent - ODCB to form Benzene Sulphonic Acid -3- Nitro Phenyl Ester. Benzene Sulphonic Acid -3- Nitro Phenyl Ester undergoes reduction by Iron Power to form Benzene Sulphonic Acid -3- Amino Phenyl Ester.

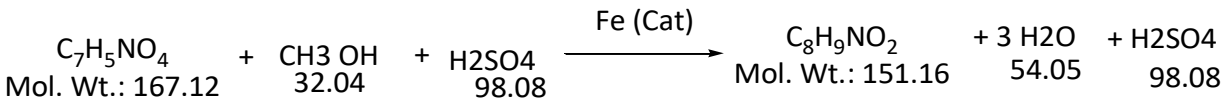


Material Balance

45. (3-Aminophenyl) benzenesulfonate			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
3- Nitro Phenol	0.567	Product	1.000
Benzene Sulfonyl chloride	0.720	Effluent Stream	10.674
Sodium Hydroxide	0.726	Solid waste	1.238
Iron Powder	0.001		
Hydrogen	0.008		
Water	10.200		
Sulphuric acid	0.690		
Total Input	12.912	Total Output	12.912

46) 4 -Amino Benzoic Acid Methyl Ester

4 - Nitro Benzoic Acid and methanol in presence of sulphuric acid and iron powder gives 4 - Amino Benzoic Acid Methyl Ester

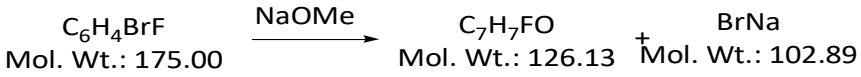


Material Balance

46. 4 -Amino Benzoic Acid Methyl Ester			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4 - Nitro Benzoic Acid	1.151	Product	1.000
Methanol	0.221	Effluent Stream	10.929
Sulfuric Acid	1.487	Solid waste	2.156
Iron Powder	0.001	Solvent Recovery	1.400
Solvent - ODCB	1.400		
Sodium Hydroxide	1.212		
Water	10.012		
Total Input	15.485	Total Output	15.485

47) 2-FLUOROANISOLE

4-Flurobromobeznene presence of Catalyst gives 2-Fluoroanisole. The final product purified from high vacuum distillation.

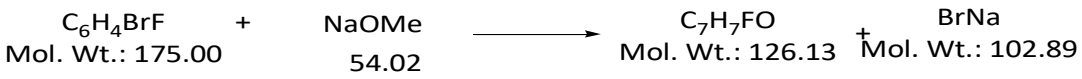


Material Balance

47. 2-FLUOROANISOLE			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
2-Bromo Fluoro Benzene	1.388	Product	1.000
Sodium Methoxide	0.428	Solid waste	0.816
Total Input	1.816	Total Output	1.816

48) 4-FLUOROANISOLE

4-Flurobromobeznene presence of Catalyst to give 4-Fluoroanisole. The final product purified from high vacuum distillation.

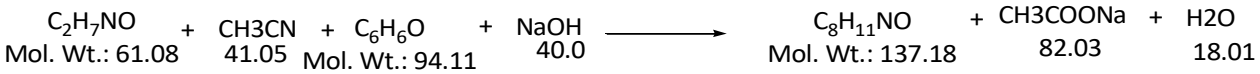


Material Balance

48. 4-FLUOROANISOLE			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4-Bromo Fluoro Benzene	1.388	Product	1.000
Sodium Methoxide	0.428	Solid waste	0.816
Total Input	1.816	Total Output	1.816

49) 2-Phenoxyethylamine

Ethnolamine with acetonitrile presence of Catalyst and than reaction with phenol and followed by hydrolysis to give 2-Phenoxyethylamine

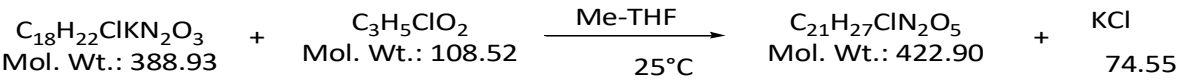


Material Balance

49. 2-Phenoxyethylamine			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Acetonitrile	0.299	Product	1.000
Ethanolamine	0.446	Solid waste	0.596
Phenol	0.687	Effluent Stream	10.230
Sodium hydroxide	0.294	Solvent recovery	0.820
Water	10.100	Distillation residue	0.180
Methanol	1.000		
Total Input	12.826	Total Output	12.826

50) Spiropidion:

Diamide reacts with KOH and NMP in presence of Catalyst and followed by addition of ECF and Me-THF to give Spiropidion.

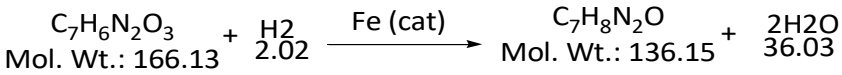


Material Balance

50 . Spiropidion(SPID)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Diamide	1.370	Product	1.000
NMP	1.580	Solid waste	0.600
Potassium hydroxide 85 %	0.220	Solvent recovery	7.000
DDOL (1-Dodecanol)	2.350	Effluent Stream	7.561
MCH	0.240		
ECF	0.410		
Caustic lye 25%	0.200		
HCl	0.060		
Sodium chloride 25 %	0.620		
BHT	0.001		
Me-THF	1.860		
MCH-2	2.130		
Process water	5.120		
Total Input	**16.161**	**Total Output**	**16.161**

51) 4-Amino Benzamide:

4-Nitro Benzamide presence of Catalyst gives 4-Amino Benzamide . The final product purified from high vacuum distillation.

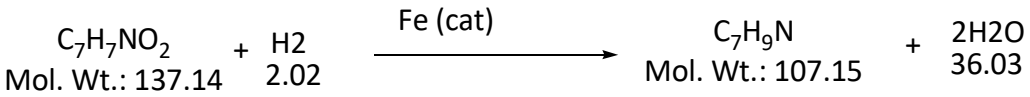


Material Balance

51. 4-Amino Benzamide			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4-Nitro benzamide	1.257	Product	1.000
Iron powder	0.001	Effluent stream	10.273
Hydrogen	0.015		
Water	10.000		
Total Input	11.273	Total Output	11.273

52) P-Toludine :

P-Nitrophenol presence of Catalyst is gives p-Toludine. The final product purified from high vacuum distillation.

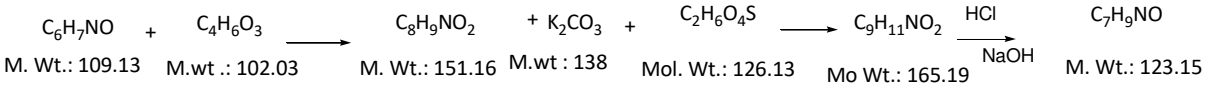


Material Balance

52. P-Toluidine			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
P-Nitro Toluene	1.330	Product	1.000
Iron powder	0.001	Effluent stream	1.350
Hydrogen	0.020	Spent catalyst	0.001
Water	1.000		
Total Input	2.351	Total Output	2.351

53) M-Anisidine

M-Anisidine prepared from m-Aminophenol and Dimethyl sulphate as a reagent and Acetone as a solvent. The final product purified from high vacuum distillation.

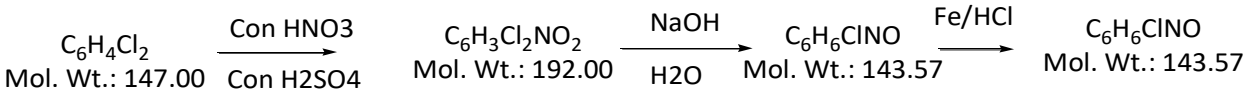


Material Balance

53.M-ANISIDINE			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
M-Aminophenol	0.886	M-Anisidine	1.000
Acetic Anhydride	0.935	Solid waste	2.128
Potassium Carbonate	1.264	Acetic acid	1.100
Dimethyl Sulphate	1.156	CO2	0.404
Hydrochloric acid	0.334	Effluent stream	10.930
Sodium Hydroxide	0.367	Spent Solvent (EDC)	0.999
Ethylene DiChloride	0.688		
Water	10.930		
Total Input	**16.561**	Total Output	**16.561**

54) 4-CHLORO,2 AMINO PHENOL (4-CAP)

1,4-Dichlorobenzene reacts with Nitration and basic hydrolysis followed hydrogenation using Fe/HCl to gives 4-CAP

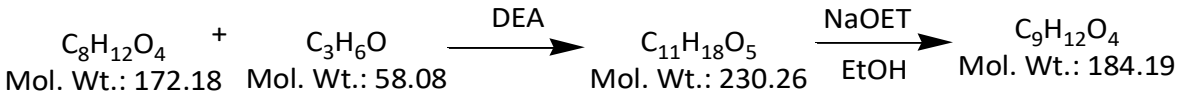


Material balance

54.4-CHLORO,2 AMINO PHENOL (4-CAP)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Aromatic substituted/ unsubstituted halides	1.030	Product	1.000
Nitric acid	1.250	Effluent stream	6.253
Sulfuric acid	1.200	Solid waste	1.230
Sodium Hydroxide flakes	1.100	solvent recovery	2.435
Fe powder	0.100		
Hydrochloric acid	1.000		
Methylene dichloride	2.435		
Process water	2.803		
Total Input	10.918	Total Output	10.918

55) Hydroxy Ester (HES)

Diethyl maleate reacts with Acetone and followed by addition of Sodium ethoxide to give hydroxy ester.

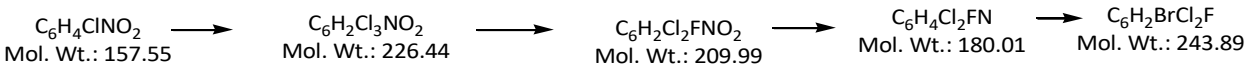


Material balance

55.Hydroxy Ester (HES)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
Diethyl maleate	1.500	Product	1.000
Sodium ethoxide	0.520	Effluent stream	7.160
Ethanol	1.750	solid waste	1.450
Ethyl acetate	0.720	solvent recovery	5.000
Xylene	2.500	Contaminated aromatic, aliphatic or naphthenic solvents may or may not fit for reuse (Xylene)	0.500
Sulfuric acid	1.000		
Process water	2.500		
Acetone	2.120		
Caustic lye	2.500		
Total Input	**15.110**	**Total Output**	**15.110**

56) Dichloro Fluoro Bromo Benzene (DCFBB)

Chlorination of Dichloro nitro Aniline and followed by Fluorination, reduction and bromination gives DCFBB.

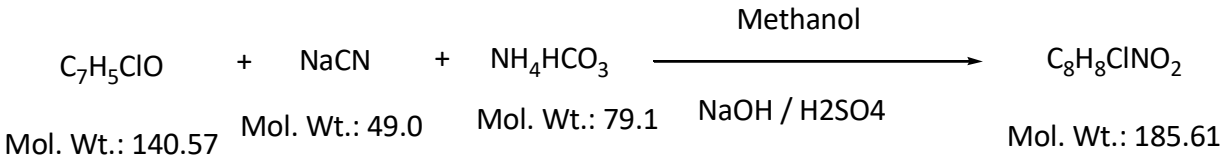


Material balance

56.Dichloro Fluoro Bromo Benzene (DCFBB)			
Material balance Per kg output of product			
Input	Input qty In Kg	Output	Out put in Kg
Dichloronitro benzene	1.700	Product	1.000
Nitric acid	1.850	Effluent stream	10.560
Sulfuric acid	1.900	solid waste	2.000
Ferric Chloride	2.160	solvent recovery	12.500
Chlorine gas	0.600		
Potassium Fluoride	0.800		
Tetra butyl Ammonium Bromide	0.200		
NMP	4.000		
Raney Nickel	0.100		
HBr in Water (48%)	1.000		
Hydrogen peroxide (50%)	0.600		
Copper(I)oxide	0.150		
Sodium nitrite	1.200		
Isopropyl alcohol	5.000		
Process water	2.900		
Caustic lye (48%)	1.900		
Total Input	**26.060**	**Total Output**	**26.060**

57) Para chloro phenyl glycine (PCPG)

Para chlorobenzaldehyde react with Sodium cyanide and presence of Ammonium bi carbonate and methanol to give PCPG

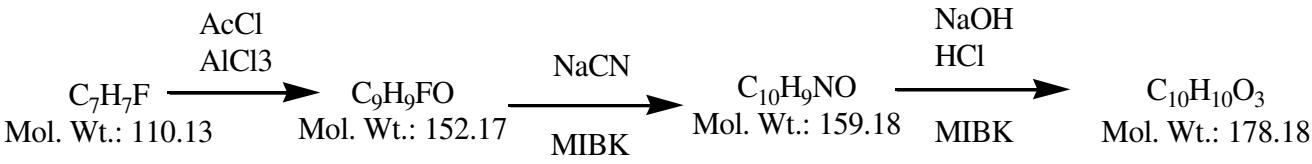


Material balance

57. Para chloro phenyl glycine (PCPG)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
4-Chlorobenzaldehyde	0.757	Product	1.000
Sodium cyanide	0.264	Solid waste	0.765
Ammonium bicarbonate	0.426	Effluent stream	1.426
Methanol	1.000	Solvent Recovery	1.000
water	1.000		
Sodium hydroxide	0.216		
Sulphuric acid	0.528		
Total Input	4.191	Total Output	4.191

58. 4-Acetyl-2-Methyl Benzoic Acid (AMBA)

2-Flurotoluene reacts with acetyl chloride to give acetylated product and hydrolysis to give 4-Acetyl-2-Methyl Benzoic Acid (AMBA)



Material balance

58. 4-Acetyl-2-Methyl Benzoic Acid (AMBA)			
Material balance Per kg output of product			
Input	Input qty in Kg	Output	Out put in Kg
2-Fluorotoluene	0.610	Product	1.000
Acetyl chloride	0.440	Solvent recovery	1.900
Sodium Cyanide	0.270	Process wastes or residues	1.500
MIBK	2.000	Effluent stream	3.340
Sodium hydroxide	0.220		
Hydrochloric acid	0.200		
Water	4.000		
Total Input	**7.740**	Total Output	**7.740**

2.10 WATER REQUIREMENT, WASTEWATER GENERATION AND MANAGEMENT

2.10.1 ASSESSMENT OF SOURCE OF THE WATER SUPPLY WITH ADEQUACY OF THE SAME TO MEET WITH THE REQUIREMENTS FOR THE PROJECT. PERMISSION OBTAINED FROM THE CONCERN AUTHORITY FOR SUPPLY OF RAW WATER.

The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source.

Central Ground Water Authority
Ministry of Water Resources
Government of India

No. 21-4(134)/SECR/CGWA/2009- 3708 Dated- 01 JUN 2012

To,

M/s Sanmer Speciality Chemicals Ltd.,
44, Theertham road Berigai-635105
Hosur Taluk, Krishnagiri District
Tamil Nadu

Sub: Renewal of Ground Water clearance in respect of M/s Sanmer Speciality Chemicals Ltd., for their organic chemicals & phytochemicals manufacturing industry located at Village Suligunta, Block Suligiri, Taluk Hosur, District Krishnagiri, Tamil Nadu - reg.

Sir,

It has been decided by the Central Ground Water Authority that NOC would be issued only once and renewal is stopped/ discontinued. There would be random site inspection of selected industries by CGWA, and in case the industry is found to be a defaulter in adhering to the laid down terms and conditions, the NOC is to be cancelled.

However, to neutralize the adverse impact of ground water withdrawal that may arise on a long term basis, the industry is advised to undertake the following measures:

1. Ground Water withdrawal shall not exceed the quantity of **207.5 m^3/day.**
2. All abstraction structures to be kept fitted with water meter by the industry and monitoring of ground water abstraction to be continued accordingly on regular basis, at least once in a month. The data may be submitted on a yearly basis to the Regional Director, Central Ground Water Board, South Eastern Coastal Region, Chennai for perusal and records.
3. The industry should continue to implement artificial recharge measures/rain water harvesting measures for augmenting the ground water resources of the area.
4. The industry shall ensure proper conservation measures, recycling and reuse of waste water after adequate treatment.
5. The industry shall continue to monitor the ambient ground water regime of the area through piezometers and submit the data on a yearly basis to the Regional Director, Central Ground Water Board, South Eastern Coastal Region, Chennai for perusal and records.

Yours faithfully,

Regional Director

Copy for information to the:

1. Member Secretary, Tamil Nadu Pollution Control Board, 76, Mount Salai, Guindy, Chennai-600032, Tamil Nadu with a request to ensure that Rain Water Harvesting and Artificial Recharge methods are being implemented by the firm and quantity of withdrawal is not exceeding 207.5 m^3/day.
2. Regional Director, Central Ground Water Board, South Eastern Coastal Region, Chennai. This has reference to your letter No. T/8/46-847 dated 7.5.2012.
3. TS to Chairman, Central Ground Water Board, NH-IV, Faridabad.

Regional Director

West Block-2, Wing-3, Ground Floor, R. K. Puram, Sector-1, New Delhi-110066

2.10.2 WATER AND WASTEWATER

- The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source.
- The total wastewater generation will be 705 KL/Day. Industrial process wastewater = 600 KL/Day + washing = 75 KL/Day + Boiler/cooling = 30 KL/Day). and will be segregated into two stream High COD Stream & Low COD stream.
  - **Low COD stream:** Low COD effluent (105 KL/Day) will be treated through the conventional wastewater treatment system and the pass through RO system.
  - **High TDS Stream:** Neutralized concentrate effluent (600 KL/Day) and rejects from RO (225 KL/Day) will be evaporated in multi effective evaporator (MEE). The treated wastewater will be totally recycled and the soild waste generated will be disposed to TSDF (Common disposal Facility).
  - Domestic wastewater (100 KL/Day) will send to STP and Reuse in domestic and gardening purpose after treatment.

TABLE 2.4

WATER CONSUMPTION & WASTE WATER GENERATION

Water Consumption

Category	Existing KL/day	Proposed (Additional) KL/day	Total after Expansion KL/day	Remarks
(A) Domestic	12	88	100	
(B) Gardening	25.5	5	30.5

Note: Fresh Water: 1207.5 KLD + Reuse water: 705 KLD

2.10.3 SEGREGATION OF WASTE STREAMS, CHARACTERIZATION AND QUALITY WITH SPECIFIC TREATMENT AND DISPOSAL OF EACH STREAM

Segregation of waste streams:

Industrial effluent will be segregated into High COD and Low COD effluent streams.

- **Low COD stream:** Low COD effluent will be treated through the conventional wastewater treatment system and the pass through RO system.
- **High TDS Stream:** Neutralized concentrate effluent and rejects from RO will be evaporated in multi effective evaporator (MEE). The treated wastewater will be totally recycled and the soild waste generated will be disposed to TSDF (Common disposal Facility).
- Domestic wastewater (100 KL/Day) will send to STP and Reuse in domestic and gardening purpose after treatment.

2.10.4 DETAILS OF ETP INCLUDING DIMENSIONS OF EACH UNIT ALONG WITH SCHEMATIC FLOW DIAGRAM.

Multiple Effect Evaporator Plant:

Suspended Solid Separation process:
Concentrated effluent transferred to the flash mixer neutralized with HCl. A polymer is dosed in the flash mixer and PAC is dosed in the Flocculator where suspended particles to help settle, the overflow from the flash mixer flows to the Clarifier. The overflow of the Clarifier feed to Stripper column.

STRIPPING COLUMN:
The TSS Outlet is feed into the stripping column through a triple pre heaters and a Heat exchanger where the low boiling solvent are stripped out

MEE PLANT:
The Stripper bottom liquid is feed into the Multiple Effect Evaporator **MEE** (Triple Effect Evaporator) where the Condensate is feed to Biological system for further treatment and Concentrate is feed into **ATFD (Agitated thin film dryer)**

ATFD:
The product from the MEE Plant is feed to the AGITATED THIN FILM DRYER where the concentrate water is dried to a solid powder which is disposing as per TNPCB norms.

Biological Treatment Plant (ETP):

Bar Screen
The raw effluent from the incoming line is received at the bar screen to separate the large debris and fine particles.

Equalization Tank
The overflow from bar screen chamber flows into the equalization tank which serves to attenuate variation in the effluent flow rate and characteristics. The feed to the downstream processes shall be uniform. Flow equalization will dampen and absorb flow rate variations so a near constant flow rate is achieved.

The Equalization tank will be provided with air diffusion system to keep the collected effluent under constant mixing, prevent any suspended solids from settling to the bottom of the tank.
The dimension of the Equalization tank is 3.0m * 5.0m * 3.0m X 2 nos and the volume is 90 m3.

Flash Mixer

The effluent from the equalization tank is pumped to flash mixer where effluent water containing turbid and suspended particles can be coagulated by dosing coagulant. Dosage rate of coagulant varies depending upon inlet turbidity & total suspended solids in feed water. The dosing tank is designed to hold solution required for 20 hours of operation. The dosing tank is connected to the pumps (1W + 1S), positive displacement type diaphragm pumps in PP construction.

After coagulant dosing, the pH of feed water may reduce. For effective coagulation, pH of water is required to be raised for which auto dosing system is provided.

The dimension of the flash mixer is 1.0 m * 1.0 m * 1.5m (LD-1.2m + FB-0.3m) and the volume is 0.25 m3.

Flocculator

The overflow from the flash mixer flows to a flocculator, a polymer is dosed in the flocculator to bridge the coagulated floc and produce a dense sludge to settle easily in the tube deck clarifier.

Tube Deck Clarifier

The heavy floc particles settle down to the bottom conical portion of the tube deck clarifier due to gravity. The settled sludge at the bottom will be discharged at regular intervals to the sludge holding tank. The overflow from the tube deck clarifier flows by gravity to the buffer tank.

Up Flow Anaerobic Sludge Blanket (UASB) Reactor

The UASB feed pump is provided to transfer effluent from buffer tank to the UASB reactor.

UASB uses an anaerobic process while forming a blanket of granular sludge which suspends in the tank. Influent wastewater is distributed at the bottom of the reactor and travels in an up-flow mode through the sludge blanket. During this, the combined organics are processed and degraded by the anaerobic microorganisms.

After the UASB process, the overflow is passed into the aeration tank to carry out the activated sludge process.

Secondary Biological Treatment

The overflow from the UASB flows by gravity to the downstream two stage aeration process, here the incoming effluent is continuously aerated, and it will be treated biologically with the help of the microorganisms for the removal of BOD, COD and other Organic pollutants. In this aerobic process, the effluent is subjected to extended aeration type activated sludge process for biodegradation of organic impurities in the presence of re-circulated biomass. Air blowers & diffused aeration system will be used for aeration.

Post aeration, the effluent will be further clarified using a secondary clarifier. The clarifier will have a slow speed agitator for inducing the flocculation reaction and ensure large floc formation. The heavy floc particles settle down to the bottom conical portion due to gravity. The settled sludge at the bottom will be discharged at regular intervals to the sludge

handling system using sludge transfer pumps. The overflow from the clarifier flows by gravity to the clear water tank.

Mechanical Dewatering System (Filter Press)

The sludge generated from Tube deck clarifier & secondary clarifier is drained into the Sludge holding tank. The collected sludge is pumped to the filter press for dewatering the sludge. The polyelectrolyte is added to the sludge handling system. Dewatering is a physical (mechanical) unit operation used to reduce the moisture content of sludge. The filtrate from filter press is taken to drain pit. Sludge generated from filter press is suitably disposed.

Disinfection

Liquid chlorine solution is dosed in the clear water tank for disinfection. Chlorination is the most common type of disinfection used worldwide. This is due to its effectiveness in providing a good pathogen kill with the relative simplicity in operation and maintenance. Clarified effluent from the secondary clarifier will be disinfected by dosing Sodium hypochlorite solution. Sodium hypochlorite solution will be prepared in the solution preparation tank and dosed by diaphragm type electronic dosing pump

Pressure Sand Filter & Activated Carbon Filter

Effluent from clear water tank is pumped to PSF followed by ACF to remove suspended solids, turbidity etc.

The arrested solids/turbidity in the PSF is removed by back washing. Solids are entrapped when raw water is passed in downward direction through the sand bed. This unit is charged with a uniform grade of filtering sand, which is supported on different grades of under-bed materials. The Pressure Sand Filter is made of MSFRP vertical vessel. It is fitted with top inlet distributor and header - lateral type of bottom collecting system.

Externally this unit is fitted with frontal pipe work and control valves. The unit is isolated for backwash, when the pressure drop across the bed exceeds the specified limit (0.8 Kg/cm^2) or quality of filtered water deteriorates, whichever is earlier. PSF backwash is done by using PSF filtrate collected into the filter back wash sump. Backwash generated from PSF is routed to drain pit.

Advanced Membrane Technology (Ultra Filtration)

The ultra-filtration membranes are used to remove the following impurities from the feed water

- Fine Colloidal particles
- Large Organic compounds
- Colloidal Silica
- Bacteria and Virus

The membranes act as an absolute barrier filtration to remove the impurities.

The Ultra-filtration membrane individual module consists of multiple fine fibers with 0.2 mm internal diameter. The membrane fibers are made of PES / PVDF to suit the filtration

applications. The filtration cycle is from out to in, the feed water passes from outside of the fibers to the inside during filtration.
Typical operation cycle for the UF will be,

- Filtration – useful water is produced
- Air scouring
- Backwash
- Soaking
- Flush / Rinse.
- Chemical Enhanced backwash at prefixed intervals.

Backwashing
Dedicated backwash pumps connected to a backwash water source will be provided as part of the equipment. The backwash water requirement will be taken from a dedicated tank or common UF filtrate storage tank. A suitable acidic/alkaline cleaner dosing and chlorine dosing system will be provided to dose chemicals as required during backwashing of the Ultra-filtration membranes. The dosing sequence will be controlled by the PLC and will be done by means of metering pumps to ensure accurate and optimum dosing.
The backwash water from the UF will be led back to the drain pit.

Reverse Osmosis: Stage -1
Reverse Osmosis is the third & final stage of treatment for removal of dissolved salts; two pass Reverse Osmosis system is provided. UF permeate is pumped by the cartridge filter feed pumps, to the cartridge filters. The capacity of the pump is such that they will pump the required quantity of UF permeates to RO skid. The system consists of following equipment in series.

pH Correction
Feed pH correction is done to ensure all sparingly soluble salts are kept within their solubility levels at the reject end of the RO. Acid is dosed to adjust pH and ensure the reject water saturation index is maintained below 2.0.
Feed pH correction can by automate based on the feed water pH online monitoring to ensure the feed pH remains within the desired band levels.
When pH correction is done using acid, CO2 is generated from the reaction with the alkalinity present in the water, the dissolved CO2 passes through the membranes, a degasser is provided to in the RO permeate to remove the CO2 generated.

Anti scalant Dosing System
To achieve higher recovery from the RO membranes it is necessary to hold the sparingly soluble salts in the water at super saturation levels, this is achieved by addition of chelating agents that prevent precipitation of the sparingly solution ions like Ca, Mg and silica. Type and quantity of antiscalant used is based on the feed water chemistry. At the design stage

software simulation are generated, this however will have to be established during the plant commissioning.

Micron Cartridge System
A cartridge type 5 / 10 micron-rating filter is provided after chemical dosing to act as a guard filter. The cartridges will be non-fiber shedding in nature. This filter serves to trap any particulate matter generated due to chemical dosing. It ensures clean water is always fed to the RO units.

High Pressure Pump
An online high-pressure booster pumps is used to pressurize the RO feed to the desired pressure to achieve the desired recovery. Multistage centrifugal booster pumps are offered for this service. The base level of these pumps is offered with CI casing and SS wetted parts. Full stainless pumps are also offered based on the feed water salinity levels.

Reverse Osmosis Block
The RO block contains the membranes housed in the FRP housings. The housing is fitted in a compact skid frame with the feed, permeate and Reject piping. The housings are arranged in such a manner that the hydraulic flows across all the housing are uniform and the off take of permeate from each membrane is uniform.
Each stage is designed for a uniform of take of permeate to maintain the required cross flow and the reject flows. This will ensure that fouling and scaling do not take place on the membrane surface. The membranes used are the latest generation spiral wound thin film composite membranes. For specific applications fouling resistant membranes will be used, however this will be decided based on the nature of the feed water.

Hardness Removal System
The pre-treatment section is designed to precipitate / coagulate and flocculate the following from the feed water,

- Total Suspended solids
- Total Hardness (Partially)

Chemical Coagulation
The process involves dosing of coagulant to precipitate the dissolved salts in the first stage, the following chemicals are dosed in the flash mixer to induce the precipitation.

- Lime Solution for precipitation of carbonate-based hardness.
- Soda ash solution to provide bicarbonate alkalinity for non-carbonate hardness precipitation.
- Ferric Chloride solution to enhance the floc formation.

The overflow from the flocculator flows by gravity to the secondary tube deck Clarifier. In the tube deck clarifier, the incoming water flows upward through the tube Pac media and heavy floc particles settle down to the bottom conical portion of the tube settler due to

gravity. At regular intervals, the settled sludge at the bottom will be discharged to sludge holding tank. The clear water overflows by gravity to the RO-2 feed tank.

Treatment units Value

Sl.No.	Treatment units	Existing (KLD)	Proposed (KLD)	Total (KLD)
1	Biological Treatment system	100	1100	1200
2	Ultra filtration system	100	1100	1200
3	Reverse Osmosis Plant	100	1100	1200
4	Multiple Effect Evaporator	70	930	1000

2.10.5 EFFLUENT TREATMENT SCHEME INCLUDING SEGREGATION OF EFFLUENT STREAMS FOR UNITS ADOPTING 'ZERO' LIQUID DISCHARGE.

Unit has full-fledged Effluent Treatment Plant to treat the wastewater with multiple effect evaporators (MEE),Biological conventional treatment and RO system. The water recovered is totally reused in the process plant itself. The domestic waste water is also treated in the STP. The cyanide bearing wastewater is chemically treated with Sodium hypochlorite solution and taken for evaporation in the MEE. No effluent is/will be discharged into any surface water body. **Hence, this unit is/will be total Zero Liquid Discharge unit.**

2.10.6 PLANS FOR MANAGEMENT, COLLECTION AND DISPOSAL OF WASTE STREAMS TO BE GENERATED FROM SPILLAGE, LEAKAGES, VESSEL WASHING, USED CONTAINER WASHING ETC. MEASURES PROPOSED FOR PREVENTING EFFLUENT DISCHARGE DURING UNFORESEEN CIRCUMSTANCES.

- All major chemical handling is done through closed system.
- All reaction vessels are connected to scrubber system.
- Smoke & fire detection system installed at ware house.
- Spillage of any chemical will be avoided to the maximum extent by closed circuit system i.e. day tanks are provided with an overflow line having bigger diameter than that of inlet of the pipe diameter. Standard operating procedures are available to handle spillage and leakage.

2.11.2 DETAILS OF THE UTILITIES REQUIRED.

Various utilities required for proper functioning of manufacturing plants. These utilities include steam boiler, cooling plant, Cooling tower, Chilling tower, Air compressor, High Vacuum System, etc.

2.11.3 TYPE AND QUANTITY OF FUEL TO BE USED FOR EACH UTILITY.

Power Requirement:

Sr. No.	Description	Existing Requirement (KVA)	Proposed Requirement (KVA)	TOTAL Requirement (KVA
1	State Electricity Department	2000	12000	14000
2	D.G. Set	3470	10000 (5 x 2000 kVA)	13470

Note: DG Set will be kept for emergency power back up.

Fuel Requirement:

Sl. No.	Type of Fuel	Existing (MT/day)	Proposed (MT/day)	Total (MT/day)
1	Furnace Oil	8	90	98
2	Briquettes	00	250	250
3	HSD	1.7	20.3	22
4	LPG	0.008	0.192	0.20

2.11.4 FLUE GAS EMISSION RATE EMISSION FROM EACH UTILITY

FLUE GAS EMISSIONS

SR. no.	Source of emission With Capacity	Stack Height (meter)	Name of the fuel	Quantity of Fuel MT/hr & MT/Day	Type of emissions i.e. Air Pollutants	APCM
EXISTING						
1	Boiler-1 (9 TPH)	40	Furnace Oil	8 MT/Day	SOX,NOX,SPM,CO	Mechanical Dust collector ,Stack
2	D.G set (600 KVA	12	HSD	80lit/Hr	SOX,NOX,SPM,CO	Stack
3	D.G set (600 KVA)	12	HSD	80lit/Hr	SOX,NOX,SPM,CO	Stack
4	D.G set (750 KVA)	12	HSD	90lit/Hr	SOX,NOX,SPM,CO	Stack
5	DG (320 KVA)	9.8	HSD	40 lit/Hr	SOX,NOX,SPM,CO	Stack
6	D.G Set (600 KVA)	12	HSD	80lit/Hr	SOX,NOX,SPM,CO	Stack
7	D.G Set (600 KVA)	12	HSD	80lit/Hr	SOX,NOX,SPM,CO	Stack
8	Thermic Fluid Heater 1 Lakh Kcal/Hr	9	HSD	20 lit/hr	SOX,NOX,SPM,CO	Stack
9	Thermic Fluid Heater 1 Lakh Kcal/Hr	9	HSD	20 lit/hr	SOX,NOX,SPM,CO	Stack
PROPOSED						
10	Boiler-1 (50 TPH)	40	Briquettes	250 MT/Day	SOX,NOX,SPM,CO	Mechanical Dust collector ,Stack or ESP
11	Boiler-1 (50 TPH)	40	Furnace Oil	90 MT/Day	SOX,NOX,SPM,CO	Mechanical Dust collector ,Stack
12	DG set -2000KVA	30	HSD	400 lit/hr/ DG set	SOX,NOX,SPM,CO	Stack
13	DG set -2000KVA	30	HSD	400	SOX,NOX,SP	Stack

				lit/hr/ DG set	M,CO	
14	DG set -2000KVA	30	HSD	400 lit/hr/ DG set	SOX,NOX,SPM,CO	Stack
15	DG set -2000KVA	30	HSD	400 lit/hr/ DG set	SOX,NOX,SPM,CO	Stack
16	DG set -2000KVA	30	HSD	400 lit/hr/ DG set	SOX,NOX,SPM,CO	Stack
17	Thermic Fluid Heater 2 Lakh Kcal/Hr	9	HSD	40 lit/hr	SOX,NOX,SPM,CO	Stack
18	Thermic Fluid Heater 2 Lakh Kcal/Hr	9	HSD	40 lit/hr	SOX,NOX,SPM,CO	Stack

2.11.5 LIST THE PROJECT SPECIFIC SOURCES OF FUGITIVE EMISSION ALONG WITH ITS QUANTIFICATION AND PROPOSED MEASURES TO CONTROL IT.

The emissions are normally defined as emissions to the atmosphere resulting from leaking piping sources and equipment such as valves, flanges, pump seals, connections, and compressor seals open end lines and pressure relief valves. The emissions are not visually observed but can be measured in relatively low concentration at each area of source.

Fugitive emissions are expected to be generated during construction and operation stages of the proposed project. During construction stage, main source of fugitive emission is dust which is expected mainly due to movement of vehicles carrying construction material and vehicles used for construction. During operation stage, leakage through valves, pumps, emission from open drum containing chemicals, open feeding; storage tanks, etc. are the major sources of fugitive emissions of organic chemicals and VOCs. Adequate dust collector is installed for control of fugitive emission during loading of raw material and product. Condensers are provided to trap VOC. All the Flange joints of the pipe lines which carry solvents are covered with flange guards. All the rotating equipment like pumps are installed with Mechanical Seals to arrest any sort of emissions. VOC detectors are installed at various places to identify any fugitive emissions. A regular preventive maintenance schedule is in place to replace or rectify all gaskets and joints etc as a part of ISO systems to ensure no fugitive emissions takes place.

The fugitive emissions control measures:

- The Solvent used in the processes is handled in a closed loop and in process materials are stored in drums will be kept under structured roof.
- Equipment where volatile solvents distilled is provided with reflux condensers and after coolers and the receivers are connected to the scrubber.
- Pumps of compatible MOC with Single and Double Mechanical seals are used for handling corrosive and hazardous chemicals
- Periodic preventive maintenance and inspection is done for all the equipments by the in-house Engineering team and LDAR study carried yearly once by External lab
- All the rotating equipment like pumps are installed with Mechanical Seals to arrest any sort of emissions.
- Proper ventilation in storage area is ensured and all materials are stored in suitable packing to prevent contamination of air due to particulates & volatile emissions from storage area.

- All the Flange joints of the pipe lines which carry solvents are covered with flange guards.
- Adequate Dust Suppression System including Water Sprinkling System is installed for control of fugitive emission during loading of raw material and product.
- Work place monitoring within plant, storage & other area and AAQM will be done as per 'Post project monitoring plan' as well as regulatory requirement as per factory act.
- Properly designed method & practices of transportation, storage & handling of materials are established and maintained along with necessary facilities to reduce airborne particle of materials and VOCs.

2.11.6 PROVISION OF CEMS (CONTINUOUS EMISSION MONITORING SYSTEM).

- Continuous online Monitoring System for Gaseous Emission as well as Effluent are installed.
- Parameters required to be monitored in the stack emissions using Continuous Emission Monitoring system, are industry specific and are specified below: - PM, SO2, & HCN
- For online continuous monitoring of effluent, the unit installed web camera with night vision capability and flow meters in the channel/drain carrying effluent within the premises.

2.12 HAZARDOUS WASTE GENERATION AND MANAGEMENT

2.12.1 MANAGEMENT PLAN FOR HAZARDOUS/SOLID WASTE INCLUDING STORAGE, HANDLING, UTILIZATION AND SAFE DISPOSAL AS PER THE HAZARDOUS AND OTHER WASTES (MANAGEMENT AND TRANSBOUNDARY MOVEMENT) RULES 2016. CPCB GUIDELINES IN RESPECT OF SPECIFIC TREATMENT, SUCH AS SOLAR EVAPORATION, INCINERATION, ETC., NEED TO BE FOLLOWED.

TABLE 2.5

DETAILS OF HAZARDOUS WASTE AND ITS DISPOSAL

Sr. No	Name of Waste	Source of Generation	Cat No.	Existing Quantity (MT/Year)	Total Proposed Quantity (MT/Year)	Disposal Method

1.	Empty barrels/ containers/liners contaminated with hazardous chemicals /wastes	Storage & handling of Raw Materials	Sch-I/ 33.1	40	500	Collection, Storage, Transportation, Decontamination & Disposal to TNPCB Authorized Recyclers (Recyclable)
2.	Used / Spent Oil	Equipment & Machineries	Sch-I/ 5.1	10	200	Collection, Storage, Transportation, Decontamination & Disposal to TNPCB Authorized Recyclers (Recyclable)
3.	Chemical sludge from waste water treatment	In-house ETP & MEE	Sch-I/ 35.3	2500	43000	Collection, Storage, Transportation & disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016.
4.	Spent solvents	Process	Sch-I/ 28.6	350	20000	Collection, Storage, Transportation, Decontamination & Disposal to TNPCB Authorized Recyclers (Recyclable)
5.	Distillation residues	Process	Sch-I/20.3	20	4000	Collection, Storage, Transportation & disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016.
6.	Contaminated aromatic, aliphatic or naphthenic solvents may fit for reuse		Sch-I/20.1	6	10000	Collection, Storage, Transportation & disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016
7.	Spent catalyst	Process	Sch-I/28.2	1	40	Collection, Storage, Transportation for Regeneration, Recovery and Reuse. (Recyclable)

8.	Contaminated cotton rags or other cleaning materials		Sch-I/ 33.2	2	40	Collection, Storage, Transportation & disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016.
9.	Spent Carbon or Filter medium	Process	Sch-I/ 36.2	NA	4000	Collection, Storage, Transportation & disposal to Common TSDF site / Co-processor by following protocol of Hazardous Waste Rule – 2016.
10.	Process wastes or residues	Process	Sch-I/ 29.1	NA	30000	Collection, Storage, Transportation & disposal to Co-processor by following protocol of Hazardous Waste Rule – 2016.
Non Hazardous waste						
11.	Fly Ash	Utility	--	--	18250	Collection, Storage, Transportation and sent for brick manufacturer and/or in cement industries.

2.12.2 METHODOLOGY OF DE-CONTAMINATION AND DISPOSAL OF DISCARDED CONTAINERS AND ITS RECORD KEEPING.

Decontamination & Disposal of Discarded Containers: The proper disposal of empty chemical containers is more important for hazardous chemicals as it can contain residual amounts of chemicals. There can be no more than 1 inch of material left in the container not more than 3% by weight of the containers capacity. In an effort to ensure that this residue is handled properly and to be able to recycle or properly dispose of these containers, the following procedure is to be followed. The below guidelines are useful for non-hazardous chemicals also.

Rinse Procedure: An empty chemical container that contains hazardous chemicals (liquid or solid), must be rinsed 3 times with water (or appropriate rinsing agent) before being discarded. The first rinse is collected as chemical waste, it can be put into any waste container of compatible chemicals, the second & third rinses then go down to drain. If the chemical is on the list of acutely hazardous waste, then all three rinses are collected. They are placed into an operating fume hood overnight without the cap to allow the vapors to disperse. After the containers are rinsed, they are discarded appropriately as described

below. All caps are let off of the discarded containers. Containers are labeled with "Empty" labels and the chemical name is crossed or blacked out prior to being discarded. Caps are discarded to regular trash.

Reuse /Recycle/ Disposal of cleaned containers:

- All chemicals must follow the above rinse except the volatile Solvents & before being discarded in any form.
- Metal containers or any plastic containers, plastic tubing or plastic beakers that do not meet the recycling criteria can be discarded into regular trash.
- Glass containers, glass tubing that do not meet the recycling criteria are to be placed into trash can for disposal.
- Plastic & glass containers that meet the recycling criteria must be placed in appropriate recycling containers.
- Empty compressed gas cylinders are returned to vendor.

2.12.3 MANAGEMENT OF BY-PRODUCTS WHICH FALL UNDER THE PURVIEW OF THE HAZARDOUS AND OTHER WASTES (MANAGEMENT AND TRANSBOUNDARY MOVEMENT) RULES 2016 AS PER THE SAID RULES AND NECESSARY PERMISSIONS FROM THE CONCERN AUTHORITY.

- Contaminated aromatic, aliphatic or naphthenic solvents may fit for reuse, Distillation residues, Chemical sludge from waste water treatment, Contaminated cotton rags or other cleaning materials will be disposed at TNWML.
- Spent solvent will be disposed to TNPCB Authorized Recycler (M/s. Pentakcoat Resins).
- Empty barrels/ containers/liners contaminated with hazardous chemicals /wastes will be sent to TNPCB Authorized Recycler (M/s. Kreethiga Chemicals)
- Spent oil will be sent to TNPCB Authorized Recycler (M/s. Sri Balaji Enterprises)

2.11.4 MEMBERSHIP OF COMMON ENVIRONMENTAL INFRASTRUCTURE LIKE TSDF, COMMON INCINERATION FACILITY (CHWIF), MEE, SPRAY DRYER ETC.

IWMA - Membership certificate

Industrial Waste Management Association

Regd. No. 256 / 2002

'Crown Court', 2nd Floor, 128, Cathedral Road, Chennai - 600 086.

SANMAR SPECIALITY CHEMICALS LIMITED

This is to certify that .....

TAMILNADU

BZ 997290

SERVICE AGREEMENT

This Service Agreement is made at 15th day of January 2021 BY AND BETWEEN

M/s Chemplast Sanmar Limited ,Sanmar Speciality Chemicals Division having its registered office at No.9 Cathedral Road, Chennai -600 086 and having production units at No.44, Theertham Road, Suliguntla Village, Berigai, Post, Shoolagiri Taluk, Krishnagiri District -635105 Tamil Nadu represented by its Dr.Kalshmikumar Rangachari on behalf of its Occupier hereinafter referred as "Generator" which expression shall unless repugnant to the subject or context include its succession and assigns);

AND

TAMILNADU WASTE MANAGEMENT LIMITED, company registered under the Companies Act, 1956 and having its registered office Ramky Grandeur, 12th & 13th floor, Ramky Tower's complex, Gachibowli, Hyderabad – 500 032, represented by its AUTHORISED SIGNATORY (hereinafter called "TNWML") of the FIRST PART (which expression include their successors and assigns, unless such inclusion is inconsistent with the context of meaning thereof)

Page 1 of 17

ANNEXURE - E

Hereinafter in this Agreement Generator and Operator shall collectively be referred to as 'Parties' and individually as 'Party'.

WHEREAS;

A. Generator Sanmar Specialty Chemicals engaged in manufacturing of Specialty Chemicals and Generating Hazardous waste at plant located in Sirlgal.

B. Operator is engaged in the business of Waste Management and presently operating 'Integrated Common Hazardous Waste Treatment Storage Disposal Facility' at Plot No.5-15, 28-33, Sipcot Industrial complex, Gummidipoondi, Thiruvallur District had been established as per the TNPCB's Consent to Establish Order AND WHEREAS the GENERATORS desire to get their Hazardous WASTE (herein after referred as WASTE) being generated at their premises collected, treated, stored and disposed of by utilizing the services of the TNWML.

C. WHEREAS Generator has approached Operator for availing its services for collection, transport, treatment, storage and disposal of the Hazardous Waste generated during the process of manufacturing of its product and the same has been accepted by Operator on the terms and conditions set out in this Agreement read with the provisions of Hazardous Rules and supervision of SPCB.

NOWTHEREFORE in consideration of the above-mentioned premises and the mutual promises contained herein, the Generator and Operator have agreed to enter into this Agreement under the terms and conditions set forth hereinafter.

1. **DEFINITIONS AND INTERPRETATION**

1.1 Definitions: In this Agreement, including in the recitals hereof, the following words, expressions and abbreviations shall have the following meanings, unless the context otherwise requires:

a. "Agreement" means this agreement including all attachments, annexure or Schedules annexed thereto.
b. "CPCB" means Central Pollution Control Board.
c. "Rules" means Hazardous & Other Wastes (Management & Handling) Rules, 2016 as amended from time to time.
d. "MoEF" means Ministry of Environment & Forests.
e. "SPCB" means State Pollution Control Board, Tamilnadu o in the state in which the TSDF operated by Operator is situated.
f. "TSDF" means the Integrated Common Hazardous Waste Treatment Storage Disposal facility by name "TAMILNADU WASTE MANAGEMENT LIMITED [illegible] operated by the Operator and located at Plot No.5-15, 28-33, Sipcot Industrial complex, Gummidipoondi, Thiruvallur District PIN-601

Page 2 of 17

ANNEXURE - E

March, 2018 under Section 25/26 of the Water (Prevention and Control of Pollution) Act, 1974, under Section 21 of Air (Prevention and Control of Pollution) Act, 1981 and Hazardous Waste Authorization No. 4498, dated 2nd January 2015, under the Provisions of Hazardous Waste (Management, Handling & Transboundary Movement) Rules, 2016

g. "Waste" means Hazardous waste generated at the premises of the Generator.

1.2 Interpretation : In this Agreement, unless the subject or context otherwise requires:

a. Reference to the singular number shall include references to the plural number and vice-versa;
b. References to a "person" shall include references to natural persons, partnership firms, companies, bodies corporate and associations, whether incorporated or not or any other organization or entity including any governmental or political sub-division, ministry, department or agency thereof;
c. References to recitals, clauses and annexure are to recitals, clauses and schedules to this Agreement;
d. Any reference herein to a statutory provision shall include such provision, as is in force for the time being and as from time to time, amended or re-enacted in so far as such amendment or re-enactment is capable of applying to any transactions covered by this Agreement.
e. Clause headings used herein are only for ease of reference and shall not affect the interpretation of this Agreement.

1.3 The Recitals & Annexure shall form an integral part of this Agreement.

1.4 All capitalized terms used in this agreement which have not been specifically defined in this Agreement shall, unless inconsistent with the context have the meanings assigned to them under the Authorization Agreement.

1.5 the GENERATOR shall be member of Industrial Waste Management Association (herein after referred to as IWMA) and enter into an agreement with ENWML and the agreement is non-transferable.

2 SCOPE OF SERVICES

2.1 The scope of services to be provided by Operator under this Agreement shall be collection, transportation, treatment, storage and disposal of Waste generated at TSDF Facility.

ANNEXURE - E

2.2 It is agreed between the Parties that Operator shall provide the above services to the Generator through Tamilnadu Waste Management Ltd (TNWML), a TSDF operated by Operator

2.3 Operator shall dispose the Waste as per the mandate of the SPCB read with the provisions of Hazardous Rules.

2.4 Operator also agrees to accept even non-hazardous wastes from the Generator provided that the concerned SPCB issues 'no objection'.

3 GENERAL CONDITIONS

3.1 The Generator shall provide to Operator, a sample of the Waste and inform the entire process details which leads to generation of such Waste, for the purpose of determining the Waste characteristics and to decide parameters for comprehensive analysis, as well as its final pathway of treatment, storage and disposal of the Waste.

3.2 Operator shall carry on the comprehensive analysis of the Waste in its laboratory at the cost of the Generator, as per the parameters identified in the Annexure. The comprehensive analysis report shall be used by Operator to determine the disposal pathway based on the waste characteristics & as per MoEF, CPCB and the SPCB rules and guidelines issued from time to time. The disposal pathway shall be mutually agreed between the Generator & Operator and shall form basis for disposal/ user charges. The comprehensive analysis report is valid for two (2) years. Any change in the process, product mix or raw material which generates the Waste needs to be informed to Operator in advance of such proposed change by the Generator.

3.3 Upon receipt of information from the Generator, Operator shall plan and schedule for collection of the Waste from the Generator and the safely during transportation is the collective responsibility of the Generator and the transporter.

3.4 The Generator shall provide the details of Waste to Operator as mentioned below:

i) Complete details of the Waste and its characteristics regarding presence of explosive / ignitable / corrosive / toxic / odorous compounds in the manifest provided to the transporter for safe transportation and disposal.

ii) Safety information in "Form 08", 'waste transportation manifest' in 'Form 09' for every Waste type as per Hazardous Waste Rules.

ANNEXURE - E

3.5 Operator shall analyze the Waste received through finger print analysis as per the parameters identified at Annexure as prescribed by the concerned SPCB.

3.6 In the event there are any differences in the analysis results of comprehensive analysis and finger print analysis, the Generator may either accept the results of Operator or send their samples to a mutually agreed third party analysis at their own cost. Any discrepancy in relation thereto shall be informed to the SPCB.
Any deviation in waste characteristics, if found at the time of receiving the waste by finger print analysis, charges will be worked out based on FPA and the same will be communicated to the generator for their clearance for which Generator should agree to depose.

3.7 The Generator shall provide a fresh comprehensive analysis report when there is a change in the waste characteristics, manufacturing processes, changes in product mix or any other changer in the process of generation of the Waste.

3.8 Generator shall be liable for any loss or damage whether directly or indirectly arising there from and/or caused during transportation, handling, treatment & disposal due to any false information or withholding of information by the Generator.

3.9 The Generator shall provide an advance declaration before the 1st day of April every yearregarding the assuring quantity of Waste they would be sending to the Operator til end of the financial year i.e. till March 31st and declare Waste quantities on annual / monthly basis as per Rules in the declaration format provided in the Annexure so as to enable the operator to equip for TSDF operations.

3.10 Operator agrees to provide its specially designed containers available at its TSDF to the Generator, provided the Generator pays the container maintenance charges to Operator as per Annexure.

3.11 The Waste supplied by the Generator shall not contain any kind of nuclear / radio active or any other prohibited material. A certificate or confirmation from Generator shall be submitted to Operator for any such suspicious consignments.

3.12 The Generator shall pay a fixed amount to Operator as minimum monthly service commitment charges every month for the purpose of utilization of Operator's services. This amount shall be adjusted against every month user Charges for a Calendar period of one year. In the event, for whatsoever

ANNEXURE - E

reason, the Generator is unable to utilize the facility services for a particular month / period, the Generator shall forfeit the amount that is unutilized in that calendar year. The charges are mentioned under the attached Annexure.

3.13 In case the generator is unable to send the assured quantity of waste, as per their declaration the actual waste quantity will be charged as per the rate agreed and the difference between the assured quantity and actual quantity received, the charges shall be at the rate of 15% of the rate per M.T.

3.14 An interest free adjustable security deposit shall be paid by the Generator to the Operator. The security deposit shall be adjustable against user charges in the event either party decides to terminate this Agreement. No financial charges are applicable on such security deposit. This security deposit shall be reviewed every year depending on the Waste committed by Generator and the actual received at the TSDF. The security deposit detail is mentioned under the attached **Annexure**

4 **USER CHARGES & TERMS OF PAYMENT**

4.1 The Generator shall pay monthly user charges to Operator for its services as per the slab agreed, which is based upon the declaration given by the Generator as per Annexure. In addition, the Generator shall also be liable for payment of applicable taxes, levies, ESCROW Charges etc., if any, on the user charges.

4.2 The user charges are subjected to be revised on the basis of Government of India wholesale price index and also in every event of escalation of fuel costs, power tariff, change in disposal technologies and/or method, wage hike and others. Any revision shall be done as per guidelines arising out of discussion between TNWML and TWMA.

4.3 The monthly bill will be sent to the Waste Generators on or before 5th of every succeeding month and the bill amount shall be paid within 15 days of receipt of bill.

4.4 Any objection and/or clarification on the waste disposal invoices and monthly bills submitted by Operator to Generator shall be communicated to Operator within seven (7) working days from the date of the invoices. In case of non-receipt of any clarification or objection it shall be deemed that the invoices are acceptable and shall fall due for payment as per clause 4.3 of this Agreement.

4.5 In case of delayed payments Generator shall be liable to pay interest at the rate of [illegible] month on the outstanding amount during the default period

ANNEXURE - E

are acceptable and shall fall due for payment as per clause 4.3 of this Agreement.

4.5 In case of delayed payments Generator shall be liable to pay interest at the rate of 1.5 % per month on the outstanding amount during the default period (As per clause 4.3). In the event of any bill amount along with interest is due for more than three (3) months, Operator reserves the right to refuse to extend its services to Generator and even to terminate this Agreement with immediate effect upon giving a prior written notice of fifteen (15) days.

5 TERM OF AGREEMENT

This Agreement shall be valid for a period of five years effective from 15.01.2021 and subject to early termination by either party in accordance with this Agreement.

6 FORCE MAJEURE

Notwithstanding anything else contained herein, neither Party hereto shall be liable for damages or to have this agreement terminated for any delay or default in the performance of such Party hereunder if such delay or default in performance derives from conditions beyond the reasonable control of such Party, including but not limited to, acts of God, strikes, fires, floods, extreme drought, shortage of supply, riots, work stoppages, embargoes, governmental actions or damage to the plant or facility or any cause unavoidable or beyond the control of either party including any arbitrary ruling by the Government prohibiting the handling of the Waste or continuing domestic or international problems such as wars or insurrections including any change of law. The Parties shall have right to terminate this Agreement upon giving a prior written notice to the other Party if the Force Majeure event continues for more than ninety (90) days.

7 INDEMNITY

Generator do hereby indemnify, keep indemnified and hold harmless the Operator, its representatives, nominees and officers (including without limitation, reimbursement of any loss suffered by Operator and / or its officers, directors, employees, agents or affiliates and their legal costs), awards, damages, losses and / or expenses, either pecuniary or non-pecuniary in nature, arising directly or indirectly, whether during collection or transportation or treatment or storage or disposal, as a result of:

a) The Waste supplied by or collected from Generator in case of any mismatch of waste from TREM Card or finger prints and any non-

ANNEXURE - E

c) Any violation or non-compliance by Generator of the provisions of Hazardous Wastes (Management, Handling and Trans-boundary Movement) Rules, 2016, Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 including any modifications, amendments made thereto and any new acts and rules legislated and promulgated governing the activity under this Agreement during the term of this Agreement or any extension thereof.

8 EVENTS OF DEFAULT

The following shall constitute Generator's events of default:

a. If the Generator fails and/or refuses to pay their bills and/or dues for the user charges payable under this Agreement;
b. If the Waste supplied by the Generator contains any radioactive, Explosives or any other / all prohibited material.
c. If the Generator commits gross violation of the terms of this Agreement.

9 TERMINATION

The Operator shall have the right to terminate this Agreement with immediate effect upon expiry of thirty (30) days from the date of the written notice upon occurrence of Generator's event of default unless the same have been rectified with thirty (30) days from the date of the notice.

Either party shall have the right to terminate this Agreement in the event of violation of any of the terms and conditions as agreed upon in this agreement or otherwise, upon giving thirty (30) days written notice to the other party..

10 ENTIRE AGREEMENT

This Agreement shall be deemed to represent the entire Agreement between the parties hereto regarding the subject matter hereof and shall supersede, cancel and replace any and all prior agreements or arrangements, if any, in this behalf, by and between the parties hereto.

11 RELATIONSHIP OF THE PARTIES

Nothing contained herein shall be deemed to constitute a partnership, joint venture, agency by and between the parties hereto.

CHEMPLAST SANMAR LTD. BENGALURU

Page 9 of 17

ANNEXURE - E

12 VARIATIONS

This Agreement may be modified or amended only by writing, duly executed by or on behalf of the parties hereto.

13 INVALIDITY

In the event that any provisions of this Agreement is held to be illegal, invalid or unenforceable under any present or future laws of the Republic of India such provisions alone shall be deemed terminable and the remaining parts & provisions of this Agreement shall remain in full force & effect.

14 NOTICES

14.1 Any notice, request, demand or other communication given or made under or in connection with the matters contemplated by this Agreement shall be in writing and shall be delivered personally or sent by registered post acknowledgement due or by facsimile or by courier.

In case of Generator to:
Attn: Mr.Yogeeswara Basappa Gowda (Vice President-Operations)
Chemplast Sanmar Limited -Sanmar Specialty Chemicals Division
No.44, Theertham Road, Suligunta Village, Berigai Post
Shoolagiri Taluk, Krishnagiri District -635105
Tamil Nadu

In case of Operator to:
Attn: Project Head,
Tamilnadu Waste Management Limited
Plot No : 5-15 & 28-33 , EMP SIPCOT Industrial Estate
Gummidipoondi – 601201, Thiruvallur Dist., Tamil Nadu

and shall be deemed to have been duly given or made as follows:

(a) If personally delivered, upon delivery at the address of the relevant Party;
(b) If sent by registered post-acknowledgement due seven (7) days after the posting;
(c) If sent by facsimile upon successful transmission report.

14.2 A Party may notify the other Party of a change to its name, relevant addresses or address number for the purposes of Clause 13.1 as provided herein.

ANNEXURE - E

15 SURVIVAL

Not withstanding any contained in this Agreement, the provisions of clause 4, 7 and 8 of this Agreement shall survive for five (5) years after termination or completion of term of this Agreement whichever is later.

16 DISPUTE RESOLUTION

In the event of any dispute, controversy, difference, disagreement or claim arising out of or in connection with or in relation to this Agreement, including any questions as to its existence, validity, interpretation, implementation or termination, the Parties hereto shall endeavor to resolve the same in an amicable manner in consonance with the intention of this Agreement. If however, after lapse of fifteen (15) days there from, the Parties are unable or otherwise fail to resolve such dispute, controversy, difference, disagreement or claim, through discussion or amicable settlement as above, then said dispute, controversy, difference, disagreement or claim shall be referred to and finally settled through arbitration by sole arbitrator as per the rules of Arbitration and Conciliation Act, 1996 as amended from time to time. The award of arbitration shall be final and binding. The seat of arbitration shall be at Hyderabad and the arbitration proceedings and all documentation shall be in English language. No party shall make public the contents of arbitration without the prior written consent of the other party. The arbitration proceedings shal be concluded within in six (6) months from the date of reference of dispute to arbitration by a party to this Agreement.

CHEMPLAST SANMAR LTD.

TAMIL NADU WASTE MANAGEMENT LTD.

ANNEXURE - E

17 GOVERNING LAW & JURISDICTION

This Agreement shall be governed in accordance with the laws of India. Operator and the Generator mutually agree that the courts of competent jurisdiction of Chennai shall have the exclusive jurisdiction over all the disputes arising out of this Agreement. Notwithstanding anything contained in this Agreement no party shall be refrained from approaching the courts of competent jurisdiction at Hyderabad for seeking any injunction or interim reliefs.

IN WITNESS WHEREOF, the parties hereto have signed this Agreement on the day, month and year first above written.

ANNEXURE - E

ANNEXURE

Common Hazardous Waste Treatment Storage & Disposal Facility

1) MEMBERSHIP DEPOSIT

The GENERATOR shall be member of Industrial Waste Management Association (herein after referred to as IWMA) and enter into an agreement with TNWML and the agreement is nontransferable.

SECURITY DEPOSIT *

The Security Deposit payable by the generator shall be determined as per the below matrix or minimum Rs.10,000/- :

$$\frac{\text{Annual Assured Qty}}{12} \times 1.5 \times \text{Disposal Chargers Per MT.}$$

* Note: this depost is adjustable only against waste disposal charges in the event, member desire to withdraw membership.

2) USER CHARGES

The Generator shall pay the following applicable User Charges based on the Waste Types.

a) Direct Landfill Charges Per MT

Direct Disposal into Landfill-Rs.1622

b) Stabilization Charges: Per MT

Cost of Direct Land Filling *Bulking Factor+ Cost of Stabilization Reagents + Rs.300.00 per MT for re-handling expenses.

Note: Bulking factor: This will be the percentage of the quantum of stabilising materials to be added to the waste to make it fit for land filling as per CPCB norms.

c) Incineration Charges: A minimum of Rs.18750/-per MT per MT or KL (also depends on Material Density)

CHEMPLAST SANMAR LTD.

TAMILNADU WASTE MANAGEMENT LTD.

ANNEXURE - E

the cost of incinerating wastes per MT or per KL is subjective to the confirmation of the waste characteristics to the design parameters of the incinerator of the TSDF viz. Calorific Value, Chlorides, Sulphates, Nitrates, Bulk Density and the risks associated with the waste.

Weighment of TNWML will be considered for billing.

d) TRANSPORTATION CHARGES

a) Waste Transport Charges:

Freight Distance / Vehicle capacity	Up to 50 Kms	>51 Kms - <100 Kms	100 Kms - <200 Kms	200 Kms - <400 Kms	>400 Kms
Up to 10 MT	Rs.5.50	Rs.5.40	Rs.5.35	Rs.5.30	Rs. 5.25
> 10 MT	Rs.5.40	Rs.5.35	Rs.5.30	Rs. 5.25	Rs. 5.20

Minimum 90 % of Container capacity or Truck shall be charged for transportation in case of lower quantity.

b) Truck Detention Charges:

Maximum time of Three hours is allowed for the truck to be detained at the Generator premises from the time of reporting at their Security Gate. In the event this period is exceeded then Rs. 500/- per hour shall be charged as detention charges.
Return of truck without waste loading in case after planning and scheduling of a truck for the generator, if the waste generator decides not to send any waste and wishes to send the empty truck to TNWML, the generator shall pay the transportation charges of actual "TO & FRO" distance at 90% loading capacity of truck.

e) CONTAINER MAINTENANCE CHARGES

(Applicable when containerized truck Services are utilized)

The Generator has to pay the following charges as mentioned below towards the services of the Container, if opted for by the Generator.

a) Container Hire Charge: The charges are: -

- 5.0 MT Hook loaders — Rs.2,50,000/- per Container
- 10.0 MT Hook Loaders — Rs.4,25,000/- per Container
- 15.0 MT Hook Loaders — Rs.5,50,000/- per Container
- [illegible] Hook Loaders — Rs. 8,10,000/- per Container

ANNEXURE - E

DECLARATION

We the Chemplast Sanmar Limited -Sanmar Speciality Chemicals Division hereby declare that based on our industry production and our annual projections we shall be disposing the following Hazardous Waste types to TNWML. (Add sheets could be used for multiple waste types)

S.No	Category No	Waste Type	Disposal Method	Accumulated Quantity (MT)	Annual Generation (MT)
1.	20.1	Contaminated aromatic, aliphatic or naphthenic solvents may or may not be fit for reuse	Incineration	-	6
2.	20.3	Distillation residues	Incineration	4.5	30
3	35.3	Chemical sludge from waste water treatment	Common Landfill	12	2800
4	33.2	Contaminated Cotton rags or Other cleaning materials	Incineration	0.2	2

- Avg. monthly generation of Hazardous Waste is expected as follows.

1. Avg. _____ MT per month of _____ type of Hazardous waste
2. Avg. _____ MT per month of _____ type of Hazardous waste
3. Avg. _____ MT per month of _____ type of Hazardous waste

FOR Chemplast Sanmar Limited
Sanmar Speciality Chemicals Division

TAMIL NADU WASTE MANAGEMENT LTD.

2.13 NOISE LEVEL AND CONTROL SYSTEM

All measures are taken to maintain noise level within premises.

- Noise level is monitored once in month for day and night in 7 locations within the factory premises. All the values are within the stipulated level.
- Acoustic enclosure on D.G. set, engineering control at high noise level areas like compressors.
- Wherever feasible; proper oiling, lubrication and maintenance of equipment.
- Safety equipment are provided at noisy area.
- Development of greenbelt within premises and around plot boundary.

2.14 SUMMARY

M/s. Chemplast Sanmar Limited, Proposing expansion of Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum to 20031.4 MT/Annum) Manufacturing in Existing Unit at S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3, 10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A, Suligunta Village, Berigai 635105. Shoolagiri Taluk, Krishnagiri District, Tamil Nadu, India.

The reason of applying in category A [5(b) & 5(f)] Environmental Clearance at MoEF & CC, New Delhi are as follows: (1) Chemplast Sanmar Limited has proposed for the Pesticide Industrial Product [Sector-17; 5(b)], (2) Unit is located outside Industrial estate, & (3) Inter-state boundary was there within 10 Kms from the existing project site (i.e. Karnataka state boundary at 0.89 km from the project site).

Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (32 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) within the plant premises. Total Requirement is 14000 KVA from State Electricity Department (13470 KVA-DG Set will be kept for emergency power back up). The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source. The total wastewater generation will be 705 KL/Day and will be segregated into two stream High COD Stream & Low COD stream. Solid/ hazardous wastes will be disposed as per Hazardous waste rules, 2016. Approximately 1350 people [Existing: 350 people + proposed: 1000 people] will be employed to local skilled and unskilled people based on qualification and requirement and preference will be given to local person for fulfilment of the manpower requirement.

CHAPTER – 3

DESCRIPTION OF THE ENVIRONMENT

3.1 INTRODUCTION

The baseline status of environmental quality in the vicinity of project site serves as the basis for identification, prediction and evaluation of impacts. The baseline environmental quality is assessed through field studies within the impact zone for various components of the environment, viz. air, noise, water, and land and socio-economic. The baseline environmental quality has been assessed in the Pre Monsoon season of July, 2022 to September, 2022 in a study area of 10 km radial distance from the project site.

The environmental setting is considered to establish the baseline conditions which are described with respect to following:

- Land environment
- Land Use Pattern
- Water Environment
- Air Environment
- Meteorology
- Noise Environment
- Ecology
- Topography
- Demography and Socio-economic Environment

3.2 METHODOLOGY

Following the guidelines of MoEFCC, the baseline environmental study was conducted. The details of the study period, frequency of sampling & method of environmental sampling & analysis are shown below in succeeding paragraphs under respective titles.

3.2.1 STUDY PERIOD & FREQUENCY OF SAMPLING

The period of study determined was July, 2022 to September, 2022. The frequency of various environmental sampling & analysis was determined following the guidelines provided by MoEF in online EIA Manual. The details of frequency of environmental sampling considered for the study are illustrated in Table – 3.1.

TABLE 3.1

FREQUENCY OF ENVIRONMENTAL MONITORING

Attributes	**Sampling**	
	Locations	**Frequency**
A. Air Environment		
Meteorological	Project Site	1 hourly continuous for Study Period
Ambient Air Quality	11 locations in the study area (10 km radius from project site)	24 Hourly Basis Twice a week for three Month
B. Noise	11 Locations within the study area (10 Km radius from project site)	Once during Study Period
C. Water		
Ground Water	Grab samples from 11 Locations from Study Area (10 km radius from project site)	Once during Study Period
Surface Water	Grab samples from 2 Locations (10 km radius from project site)	Once during Study Period
D. Soil Quality	Soil samples from 10 locations within study area	Once during Study Period
E. Land Use & Land Cover	Study area (10 km from Project Site)	Once during Study Period
F. Ecological Data	Study area (10 km from Project Site)	Once during Study Period
G. Socioeconomic Data	Study area (10 km from Project Site)	Once during Study Period

3.2.2 METHOD OF ENVIRONMENTAL SAMPLING & ANALYSIS

The method adopted for environmental sampling & analysis is illustrated in following Table - 3.2

TABLE 3.2

METHOD OF ENVIRONMENTAL SAMPLING & ANALYSIS

Attributes	METHOD

3.2.3 BASELINE ENVIRONMENTAL STATUS

The baseline environmental study was carried out for Ambient Air, Water, Land, Noise, Biological & Socioeconomic environment. The study period was July, 2022 to September, 2022. The environmental samples were collected from the selected location of the study area. The scenario of environmental condition of the area revealed from the sample & data analysis is described below in subsequent paragraphs.

3.3 MICROMETEOROLOGY

The nearby India Meteorological Department station that is generating meteorological data is 60 km from the site i.e. IMD, Bengaluru. Hence, secondary information on meteorological conditions has been collected from IMD station at Bengaluru International Airport.

Indian Meteorological Department at Bengaluru regularly monitors wind direction, wind speed, relative humidity, temperature, rainfall, evaporation and pressure at 08.30 hours and 17.30 hours every day. Wind rose diagrams are collected from IMD for the period 1971 – 2000 and are shown in Fig. 3.0

Temperature

The monthly mean maximum temperature recorded during the period 1981-2010 ranged between 26^0C to 34^0C. The monthly mean minimum temperature recorded during the same period ranged between 14^0C to 22^0C.

Relative Humidity

The monthly mean relative humidity recorded at 08.30 hours for the period 1981-2010 ranged between 70% to 86% and the monthly mean relative humidity recorded at 17.30 hours for the same period ranged from 28% to 67%.

Rainfall

The monthly total rainfall recorded for the period 1981-2010 ranged between 1.4 mm to 183.5 mm.

The annual meteorological data (Temperature, Relative Humidity, Rainfall and Wind speed) for the year 2021 was collected. An onsite meteorological station was setup to collect data about wind speed, wind direction, temperature, relative humidity, rainfall and general weather conditions were recorded throughout the study period.

3.3.1 TEMPERATURE DETAILS

Minimum, Maximum and Average Temperatures of the year 2021 are given in Table 3.3.

TABLE 3.3

TEMPERATURE DATA

Month (2021)	Minimum Temperature (^{0}C)	Maximum Temperature (^{0}C)	Average Temperature (^{0}C)
January	19	27	24
February	18	30	26
March	21	35	30
April	25	36	32
May	24	34	30
June	24	32	29
July	23	30	27
August	23	30	27
September	22	31	27
October	22	29	26
November	20	26	23
December	18	27	23

3.3.2 RELATIVE HUMIDITY (RH)

Minimum, Maximum and Average Monthly Relative Humidity of the year 2021 is given in Table 3.4.

TABLE 3.4

RELATIVE HUMIDITY DATA

Month (2021)	Minimum R.H.%	Maximum R.H.%	Average R.H.%
January	59	86	73
February	51	61	56
March	42	49	46
April	40	54	47
May	54	62	58
June	50	59	55
July	59	70	65
August	58	72	65
September	58	73	66
October	78	85	82
November	83	92	88
December	75	80	78

3.3.3 RAINFALL

Rainfall data for the year 2021 is presented in Table 3.5.

TABLE 3.5

RAINFALL DATA

Month (2021)	Monthly Total (mm)	Numbers of Rainy Days
January	35.6	2
February	16.3	3
March	0	0
April	28.7	2
May	103.9	4
June	93.2	5
July	134.7	7
August	140	10
September	14.7	1
October	104.3	5
November	107.8	10
December	22.9	3
Total	**802.1**	**52**

Total rainfall, during the monsoon period, has been recorded as 802.1 mm.

3.3.4 WIND SPEED

Wind speed of the year 2021 is given in Table 3.6.

TABLE 3.6

WIND SPEED DATA

Sr. No.	Month (2021)	Average Wind speed (KMPH)
1.	**January**	7.9
2.	**February**	8
3.	**March**	9.4
4.	**April**	9.4
5.	**May**	13.5
6.	**June**	19.1
7.	**July**	20.9
8.	**August**	16.7
9.	**September**	16.1
10.	**October**	7.4
11.	**November**	7.4
12.	**December**	6.5
Average		**11.86**

3.3.5 SUMMARY OF THE METEOROLOGICAL DATA

TABLE 3.7

Meteorological Data from IMD data, Bengaluru (A) 1981-2010

Month	Temperature (˚C)		Relative Humidity (%)		Rainfall (mm)
	Max	Min	08.30	17.30	
January	27.6	14.8	86	41	1.4
February	30.3	16.2	76	31	5.7
March	32.7	18.7	70	28	15.5

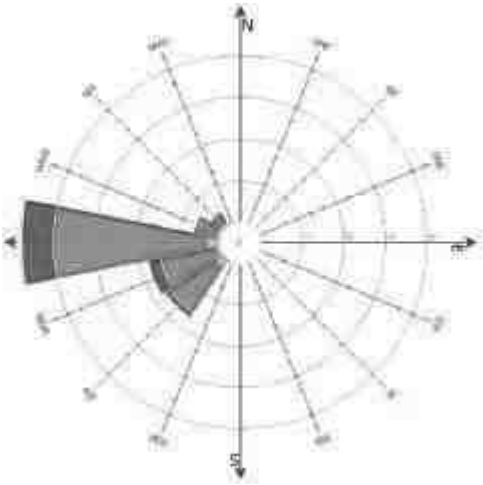
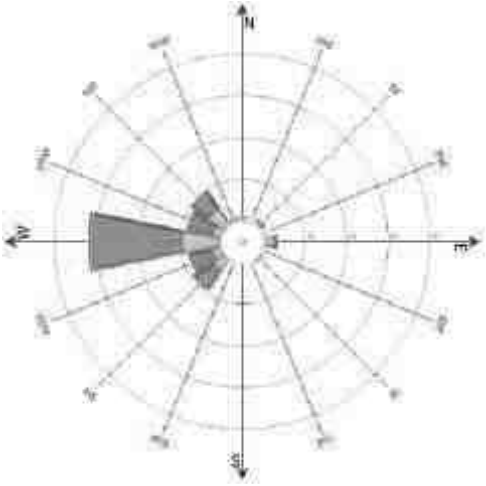
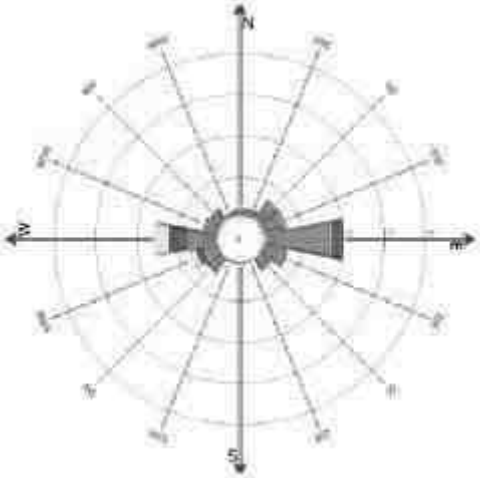
Windrose Diagram – July Month



Windrose Diagram – August Month



Windrose Diagram – September Month



Windrose Diagram – Annual

3.3.6 TEMPERATURE, RELATIVE HUMIDITY & WIND SPEED

The meteorological parameters were recorded at site on hourly basis during the study period and consists of parameters like wind speed, wind direction and temperature. The total rainfall was recorded daily once at 0830 hrs. The maximum and minimum values for all the parameters except wind speed and wind direction are presented in Table 3.8.

TABLE - 3.8

Summary of the Meteorological Data Generated at Site (Period: July, 2022 to September, 2022)

Month	Temperature (^{0}C)		Relative Humidity (%)		Rainfall (mm)
	Max	Min	Max	Min	
July 2022	31	20	100	52	109
August 2022	30	20	100	51	105
September 2022	31	19	100	28	215

Source: ABC Techno Labs India Private Limited

There was no rainfall during the study period.

Summary of Wind Pattern in Study Area

Month / Season	First Predominant Wind Direction	Second Predominant Wind Direction	Average Wind Speed (m/s)
July 2022	W	SW	8.13
August 2022	W	SW	2.23
September 2022	W	NW	3.02

Source: ABC Techno Labs India Private Limited

3.3.7 WIND ROSE

Wind rose is a graphical representation of the magnitude and direction of wind speed considering all the directions. With the help of wind rose diagram one can easily predict the direction and extent of spreading of the gaseous and particulate matter from the source. Wind rose diagrams & stability class distribution are prepared for the study area and presented in Figures - 3.1 & 3.2 respectively.

FIGURES - 3.1

3.4 AIR ENVIRONMENT

The ambient air quality monitoring was carried out in accordance with National Ambient Air Quality Standards (NAAQS) of CPCB. Ambient Air Quality Monitoring (AAQM) was carried out at elevan locations during the study period.

The air quality status in the impact zone is assessed through a network of ambient air quality monitoring locations. The tropical climatic conditions mainly control the transport and dispersion of air pollutant emissions during various seasons.

The conventional and project specific parameters such as Suspended Particulate Matter, Respirable Suspended Particulate Matter (RSPM-PM_{10}), Respirable Suspended Particulate Matter (RSPM-$PM_{2.5}$),Sulphur Dioxide (SO_2), Nitrogen dioxide (NO_2), Ammonia (NH_3), Ozone (O_3), Lead (Pb), Benzene (C_6H_6), Benzo (α) Pyrene (BaP), Hydro Carbon (HC), Arsenic (As), Nickel (Ni), & Carbon Monoxide (CO) were monitored at site.

The values for mentioned concentrations of various pollutants at all the monitoring locations were processed for different statistical parameters like arithmetic mean, minimum concentration, and maximum concentration and percentile values. The baselines levels of Suspended Particulate Matter, Respirable Suspended Particulate Matter (RSPM-PM_{10}), Respirable Suspended Particulate Matter (RSPM-$PM_{2.5}$),Sulphur Dioxide (SO_2), Nitrogen dioxide (NO_2), Ammonia (NH_3), Ozone (O_3), Lead (Pb), Benzene (C_6H_6), Benzo (α) Pyrene (BaP), Hydro Carbon (HC), Arsenic (As), Nickel (Ni), & Carbon Monoxide (CO) are expressed in terms of various statistical parameters.

To establish the baseline status around the project site of the study region monitoring was conducted at 11 Ambient Air Quality Monitoring (AAQM) Stations in and around the study region during July, 2022 to September, 2022.

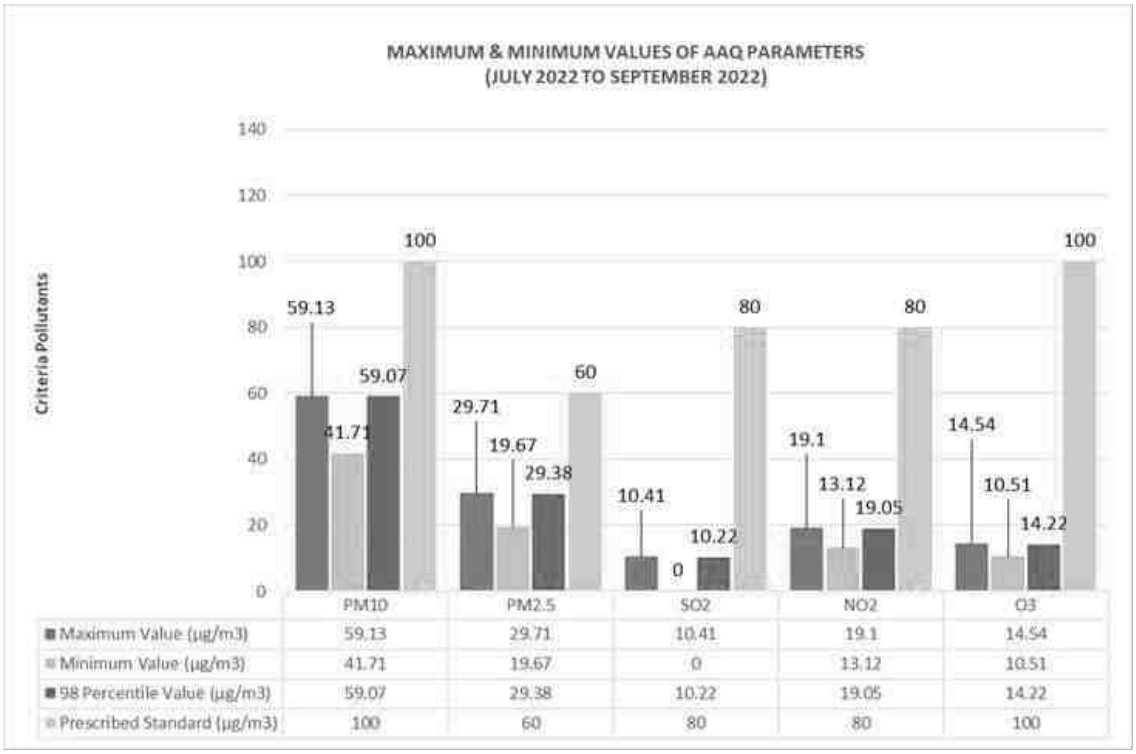
3.4.1 SUMMARY

- During the study **SPM** concentration was observed in the range of 75.08 – 118.20 µg/m^3. Maximum concentration of **SPM** was found at **Project Site (118.20 µg/m^3)**.
- During the study **$PM_{10.0}$** concentration was observed in the range of 41.71 – 62.21 µg/m^3. Maximum concentration of **$PM_{10.0}$** was found at **Project Site (62.21 µg/m^3),** which is well within the standard limit.
- During the study **$PM_{2.5}$** concentration was observed in the range of 19.67 – 29.21 µg/m^3. Maximum concentration of **$PM_{2.5}$** was found at **Project Site (29.21µg/m^3)**, which is well within the standard limit.
- During the study **SO_2** concentration was observed in the range of BDL – 10.41 µg/m^3. Maximum concentration of **SO_2** was found at **Project Site & Suligunta (10.41 µg/m^3)**, which is well within the standard limit.
- During the study **NO_2** concentration was observed in the range of 13.12 – 19.10 µg/m^3. Maximum concentration of **NO_2** was found at **Suligunta (19.10 µg/m^3)**, which is well within the standard limit.
- During the study **O_3** concentration was observed in the range of 10.51 – 14.54 µg/m^3. Maximum concentration of **O_3** was found at **Suligunta (14.54 µg/m^3)**, which is well within the standard limit.

The statistical interpretation of observed ambient air quality concentrations is presented in Fig-3.4. They represent the cross sectional distribution of the baseline air quality status of the study region.

Figure-3.4



INTERPRETATION:

The PM10 and PM2.5 concentrations at all the AAQM locations were primarily caused by local phenomena including industrial & vehicular activities and natural dust getting air borne due to manmade activities and blowing wind. PM10 and PM2.5 concentrations were observed below stipulated standards of CPCB for Residential & Other Area at all air quality monitoring locations during the monitoring period. Results of all parameters are found within limit. In Mahadevpuram, Anikarahalli & Kullur villages, SO2 values are below detection limit of 5 µg/m3. These villages are free remote area and there is no source for SO2 pollution.

3.5 NOISE ENVIRONMENT

The objective of the noise level survey around the project site was to identify existing noise sources and to measure background noise levels. Major noise sources in the study area are industries, commercial, and vehicular movements. Major human settlement in the study area is Berigai which is about 2.0 km away from project site. The noise monitoring locations are given in Table - 3.12 and while the results of noise monitoring are shown in Figure - 3.5

3.5.1 METHODOLOGY FOR NOISE MONITORING

The noise monitoring was carried out at 11 locations in day time during (6 am to 9 pm) and at night time (9 pm to 6 am) in the study area covering all the areas i.e. industrial and residential as mentioned in Noise (Pollution and Control) Rules, 2000. CPCB Recommendations for community noise exposure are attached as Annexure – 3. Hourly Equivalent noise levels Leq (day) and Leq (night) were measured at each monitoring locations. Monitoring was done on 11-07-2022 TO 16-07-2022 during day and night time was carried out at all the locations. Besides, damage risk criteria for hearing loss given by Occupational Safety & Health Administration (OSHA) are enclosed as Annexure - 2.

The noise level measured in study area at different locations is given in Table 3.8. The noise sources identified around the site are vehicular traffic, industrial and commercial activities. CPCB recommendation for community noise exposure in different category of area (i.e. residential, commercial, industrial and silence zone) is enclosed as Annexure - 3 while Damage risk criteria for hearing loss given by occupational safety & health administration (OSHA) is enclosed as Annexure - 2. The noise levels were below the stipulated standards of CPCB.

The equivalent noise level Leq (60 min average) measured at a distance of 10 m and 20 m from the edge of the road at each of the locations are presented in Table 3.12. The communities close to the project site are not exposed to major noise sources. The commercial activities and transport apart from natural sources contribute to community noise levels.

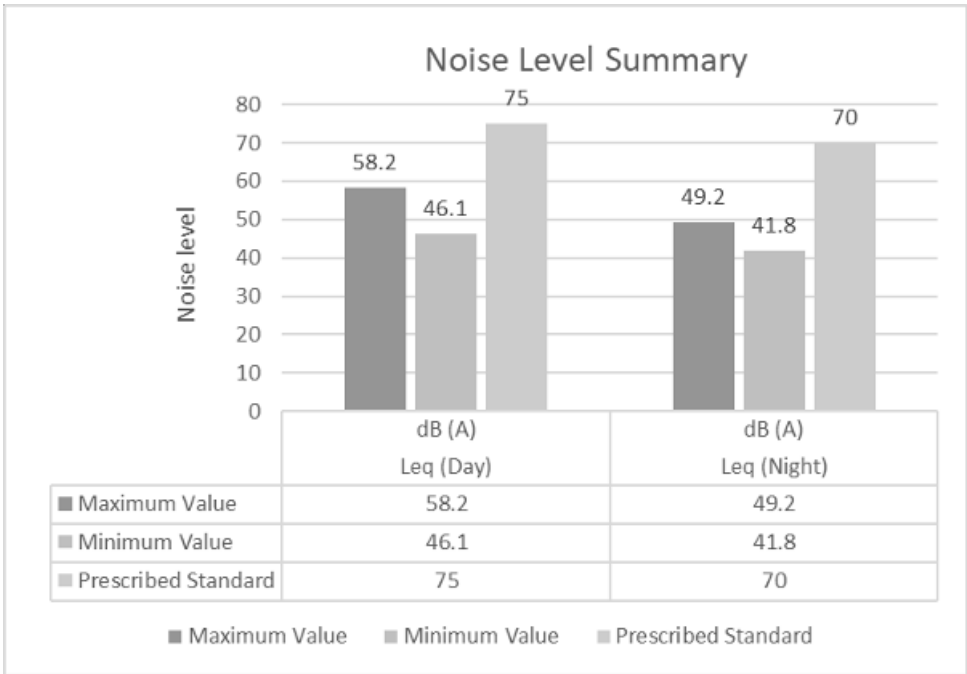
TABLE - 3.12 BACKGROUND NOISE LEVELS

Location Code	Location	Lday [dB(A)]	Lnight [dB(A)]	Leq [dB(A)]
N1	M/s. Sanmar Speciality Chemicals Limited, Berigai	58.2	49.2	56 .7
N2	Berigai	56.2	45.6	54.6
N3	Suggondahalli	47.7	42.8	46.6
N4	Kurubarapalli	54.5	44.7	53.0
N5	Anikarahalli	48.6	43.1	47.4
N6	Suligunta	57.5	47.3	55.9
N7	Pannapalli (Meenandoddi)	49.8	44	48.6
N8	Midithepalli	48.4	43.3	47.3
N9	Eluvapalli	54	44.8	52.5
N10	Mahadevapuram	48.1	43	47.0
N11	Kullur	46.1	41.8	45.1

3.5.2 SUMMARY

- During the study of noise monitoring level was observed during day time is the range of 46.1 - 58.2 dB (A) & during night time 41.8 – 49.2 dB (A). Maximum noise level in day time in night time was found at Project Site (58.2 dB (A)) & (49.2 dB (A)) respectively.

Figure-3.5



3.5.2.1 INTERPRETATION

Based on noise level data obtained during the survey, Noise level varied at some place at different times due to fluctuations in traffic movements as well as in residential due to nearest Industrial / commercial and domestic activities going on in the study area. It is interpreted that noise levels of Project site and all villages are within the standard norms prescribed by MoEF&CC.

3.6 WATER ENVIRONMENT

The annual rainfall in the region was 802.1 mm. The baseline water quality status in the region is established by analyzing surface water and ground water. Water requirement at site would be met through CGWA water supply and remaining get from government water source.

3.6.1 METHODOLOGY FOR WATER QUALITY MONITORING

11 nos. of ground water and 2 nos. of surface water samples were collected from the study area. These samples were analyzed for physic-chemical parameters to ascertain the baseline status in the existing surface water and ground water bodies. Samples were collected during the study period of July-2022 and analyzed as per the Standard Methods of Water

SUMMARY

The statistical interpretation of observed ground water & surface water quality is presented in Figure 3.5.

3.6.2 BASELINE GROUND WATER QUALITY

- **pH** of Ground water samples varied from 7.22 to 7.63 Maximum **pH** was found at **Suggondahalli (7.63)** , which is well within the standard limit.
- **Total Dissolved Solids** was varied in range of 578 to 1012 mg/L. Maximum **Total Dissolved Solids** was found at **Mahadevapuram (1012 mg/L)**, which is well within the standard limit.
- **Total Suspended Solids** was <2 mg/L **,** which is well within the standard limit.
- **DO** was varied in range of 5.4 to 5.7 mg/L. Maximum **DO** was found at **Kurubarapalli and Kullur (5.7 mg/L)**, which is well within the standard limit.
- **COD** was varied in range of <4 to 8 mg/L. Maximum **COD** was found at **Suligunta and Midithepalli (8 mg/L)**, which is well within the standard limit.
- **Total Hardness (as CaCO3)** was varied in the range of from 240 to 470 mg/L. Maximum **Total Hardness** was found at **Mahadevapuram (470 mg/L)**, which is well within the standard limit.
- **Total Alkalinity** was varied in the range of from 290 to 440 mg/L. **Total Alkalinity** was found at **Mahadevapuram (440 mg/L)**, which is well within the standard limit.
- **Chlorides** were varied in the range of 147 to 254 mg/L. Maximum **Chlorides** was found at **Mahadevapuram (254 mg/L)**, which is well within the standard limit.

3.6.3 BASELINE SURFACE WATER QUALITY

- pH of Surface water samples varied from 7.81 to 8.07. Maximum **pH** was found at **Berigai Lake (8.07)**, which is well within the standard limit.
- DO was varied in range of 5.3 to 5.6 mg/L. Maximum **DO** was found at **Berigai Lake (5.6 mg/L)**, which is well within the standard limit.
- COD was varied in range of 21 to 24 mg/L. Maximum **COD** was found at **Pond near Gandlaalli Sri Thimmaraya Swamy Temple (24 mg/L)**, which is well within the standard limit.
- **BOD_3^{27}** was varied in range of 3.3 to 3.6. Maximum **BOD_3^{27}** was found at **Pond near Gandlaalli Sri Thimmaraya Swamy Temple (3.6 mg/L)**, which is well within the standard limit.

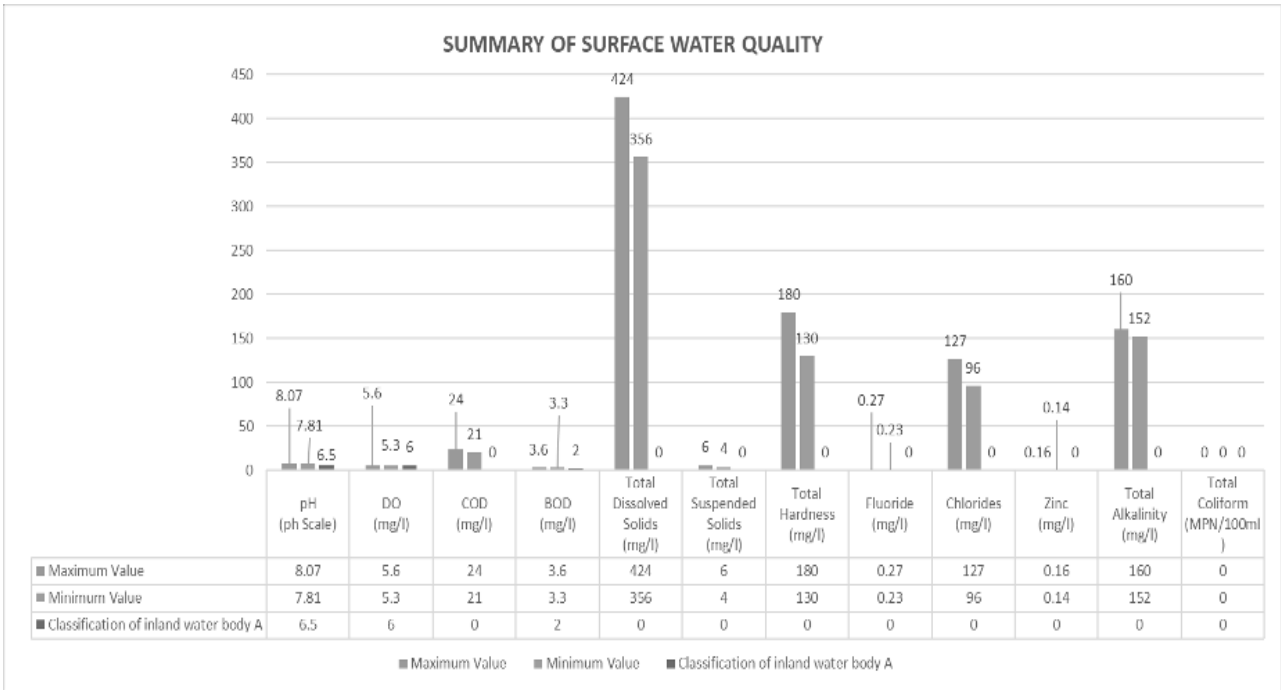
Figure-3.7



INTERPRETATION:

Ground Water Quality: Based on comparison study with drinking water standards, it is interpreted that water samples collected from the villages should not be directly used in drinking but can be used in other domestic purposes like washing, bathing and irrigation. Ground water is fit for use as domestic purpose after basic filtration and disinfection treatment.

It can be observed that ground water qualities in terms of various desirable characteristics are found within the limits specified by IS 10500:2012.

Surface Water Quality: There is one lake and one pond considered in the study area. However, these water is not used for domestic/industrial activities; as the raw water is available through pipelines of local authorities. These water sources cannot be utilized for drinking but the water of these pond & lake can be used in irrigation.

3.7 LAND ENVIRONMENT

3.7.1 SOIL QUALITY

Soil samples were collected from eleven locations during 11-7-2022 to 16-7-2022 within the study area to assess its physico-chemical characteristics. The analysis results of soil samples are given in Table 3.14.

Table 3.14

3.7.2 SUMMARY OF SOIL QUALITY

Based on the soil analysis report, the following can be concluded:

Sr. No.	Criteria Pollutants	Unit	Maximum Value	Minimum Value
1.	pH	pH Scale	7.48	6.59
2.	Nitrogen (N)	mg/Kg	178	96
3.	Phosphorus (P)	mg/Kg	77	39.3
4.	Potassium (K)	mg/Kg	394	258
5.	Electric Conductivity	mS/cm	0.218	0.077
6.	Calcium	mg/kg	18.2	14.8
7.	Magnesium	m.eq/100g	5.06	3.29
8.	Organic Carbon as C	%	1.13	0.40

- **pH** of samples varied from **6.59 to 7.48.** Maximum pH was found at **Pannapalli (Menandoddi) (7.48).**
- **Nitrogen (N)** was varied in range of **96 to 178 mg/kg**. Maximum Nitrogen (N) was found at **Berigai (178 mg/kg).**
- **Phosphorus (P)** was varied in range of **39.3 to 77 mg/kg**. Maximum Phosphorus (P) was found at **Eluvapalli (77 mg/kg).**
- **Potassium (K)** was varied in range of **258 to 394 mg/kg**. Maximum Potassium (K) was found at **Eluvapalli (394 mg/kg).**
- **Electric Conductivity** was varied in range of **0.077 to 0.218 mS/cm**. Maximum Electric Conductivity was found at **Kurubarapalli (0.218 mS/cm).**
- Calcium of samples varied from **14.8-18.2 mg/kg**. Maximum Calcium was found at **Project Site (18.2 mg/kg)**
- Magnesium of samples varied from **3.29-5.06 m.eq/100g.** Maximum Magnesium was found at **Kullur (5.06 m.eq/100g)**
- Organic Carbon as C of samples varied from **0.40-1.13%.** Maximum Organic Carbon as C was found at **Kullur (1.13%).**

INTERPRETATION

The porosity of soils can be considered as moderate to good for air and water movement in the soil. The concentration of available Nitrogen, Phosphorous and Potassium in the soil samples signifies that the soil of the area is fertile.

3.8 REPORT ON ENVIRONMENTAL PARAMETERS SUCH AS GEOLOGY, SOIL, HYDROLOGY, LAND USE PATTERN, DRAINAGE NETWORK AND KEY-INFRASTRUCTURE AND ECOLOGY AND BIODIVERSITY

3.8.1 INTRODUCTION

The Land Use Land Cover study has been carried out for Chemplast Sanmar is located at Berigai, Krishnagiri District, Tamilnadu State, India.

The mapping of Land use Land Cover has been carried out with help of Bhuvan Data and Google Earth Imagery using QGIS Software and verified by reconnaissance survey.

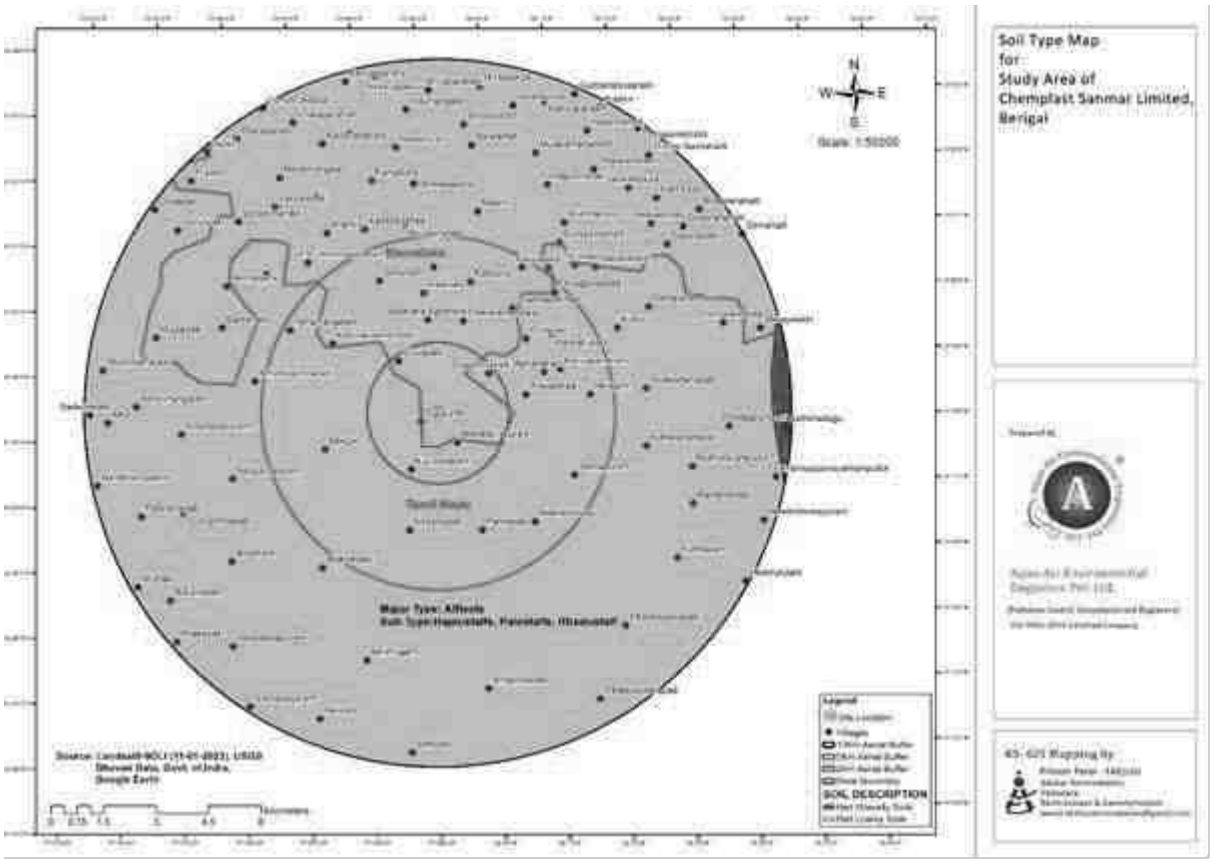
The 10 Km Aerial buffer area was identified in with the help of Lat-Lon using Google Earth Pro. The same area is than identified from Bhuvan database and the both the layers were super imposed using Geo Reference technique in QGIS. Based on Visual interpretation the Land use classes were identified and the same was verified with the help of field survey. The area calculation was also done for each land use classes occurring in that region.

3.8.2 SOIL INFORMATION

Different types of the soils such as black or mixed loamy red ferocious and gravel are found in the district. The black of rigor loam is very fertile due to its moisture absorbing character. Red soil is seen in Hosur, Shoolagiri, Thally and Kelamangalam. In general, the soil in the district is quite loose and fresh with its colour from red to dark brown. The soil has low nitrogen and phosphate content with marked variation between different taluks. The following table explains type of soils found in the district. However, based on the particulars contained in the Hydro-geological Atlas of Tamil Nadu, brought out by the Central Ground water Board, the soils in the Krishnagiri district are grouped as - mainly (i) Red sandy clay loam soils, Recent old alluvium soils and Rock outcrops with loamy sand soils in Krishnagiri district. The red sandy clay loam soils are partly matured soils and they are shallow to deep, possessing good drainage characteristics. These soils are suitable for cultivation of large variety of crops including ragi, bajra, jowar, paddy, etc., both under irrigated and rainfed conditions. The recent/old Alluvial soils are generally fertile and respond well to management practices and are suitable for cultivation of crops like paddy, sugarcane, jowar, groundnut, chillies, pulses etc., The rock outcrops with loamy sand soils respond well to irrigation, manuring and other management practices.

FIGURE – 3.10

SOIL MAP

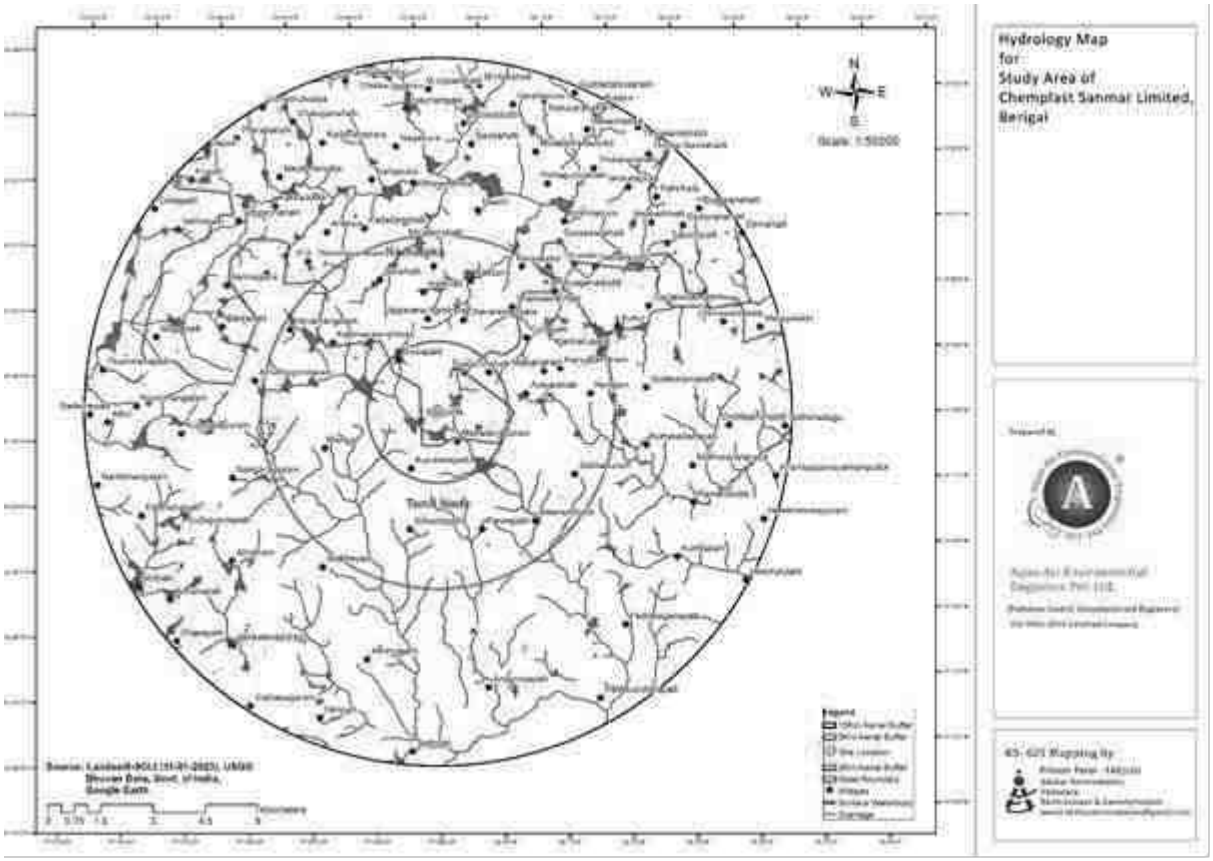


3.8.3 HYDROLOGY

The study area has no any perennial reservoirs, river or any big-large water body. There is no any seasonal river present within the study area. But due to rough terrain and altitude variations there are numerous natural drainage and its network is present in the study area which is very well connected to each other and natural water bodies. There are scattered waterbodies are there and people have made agricultural farm ponds which also contributes to the surface waterbodies within the study area. There are mining practices being done within the study area and it has also deep water bodies in the excavated regions.

FIGURE – 3.11

HYDROLOGY MAP

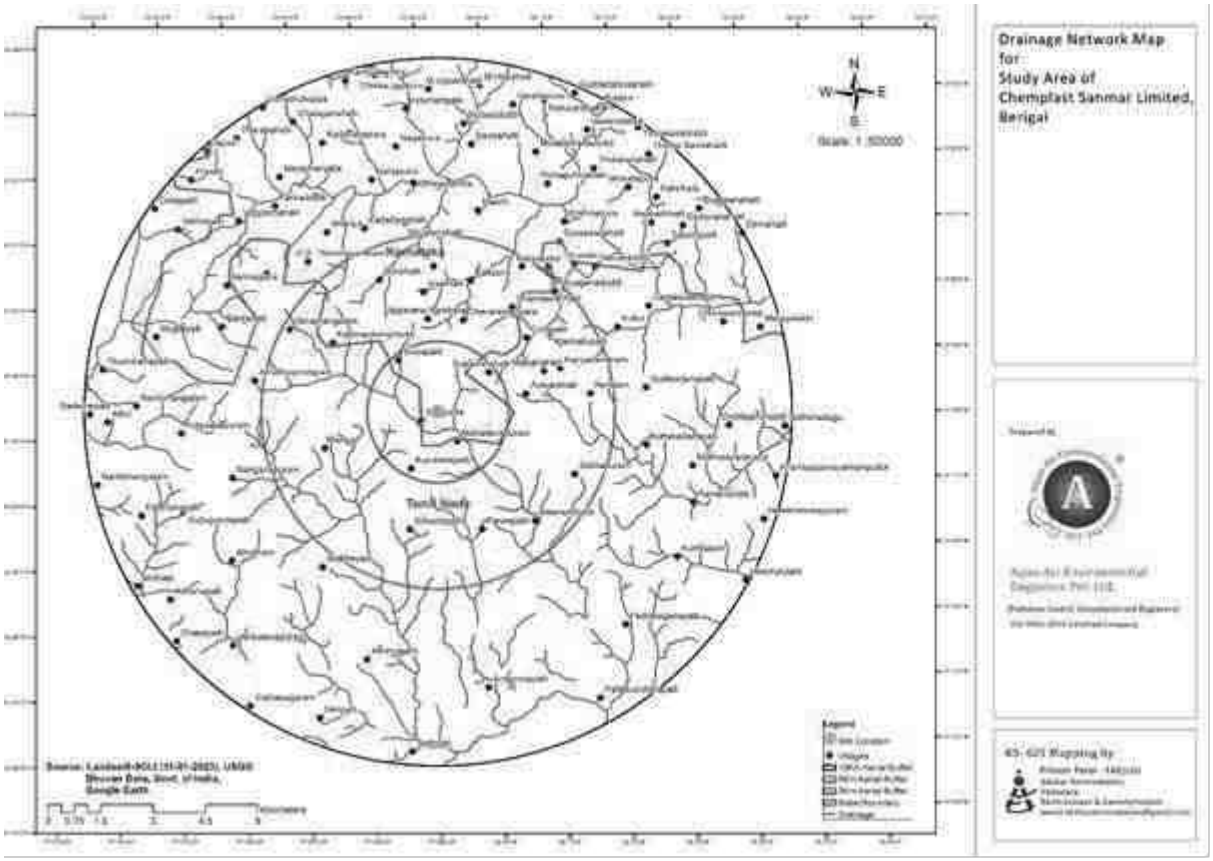


3.8.4 DRAINAGE PATTERN

Generally, by drainage system, we mean the network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those carrying both sewage and storm water are called combined sewers. However, in towns, which are not provided with such underground sewerage system, it is mentioned whether it has open drainage system. There may be possibility of the town having both closed as well as open drainage systems.

The Drainage network of the study area is prepared with line strings using QGIS. ISRO's Open Data Archive, Bhuvan Data and Topo-sheet data was used as base layer to prepare the map. Drainage layer is generated after scanning the thematic manuscripts which is further edited for line errors. Two different layers were made separately for line drainage. Drainage order was given to all the drain lines in the layer. Strahler's method of ordering is used for giving order to drainage. Wherein the smallest permanent streams are designated as the first order and the confluences of two first order streams give rise to second order stream and so on. The order of trunk stream is not altered by the addition of lower order. The order of the stream will increase only by the addition of streams of same order.

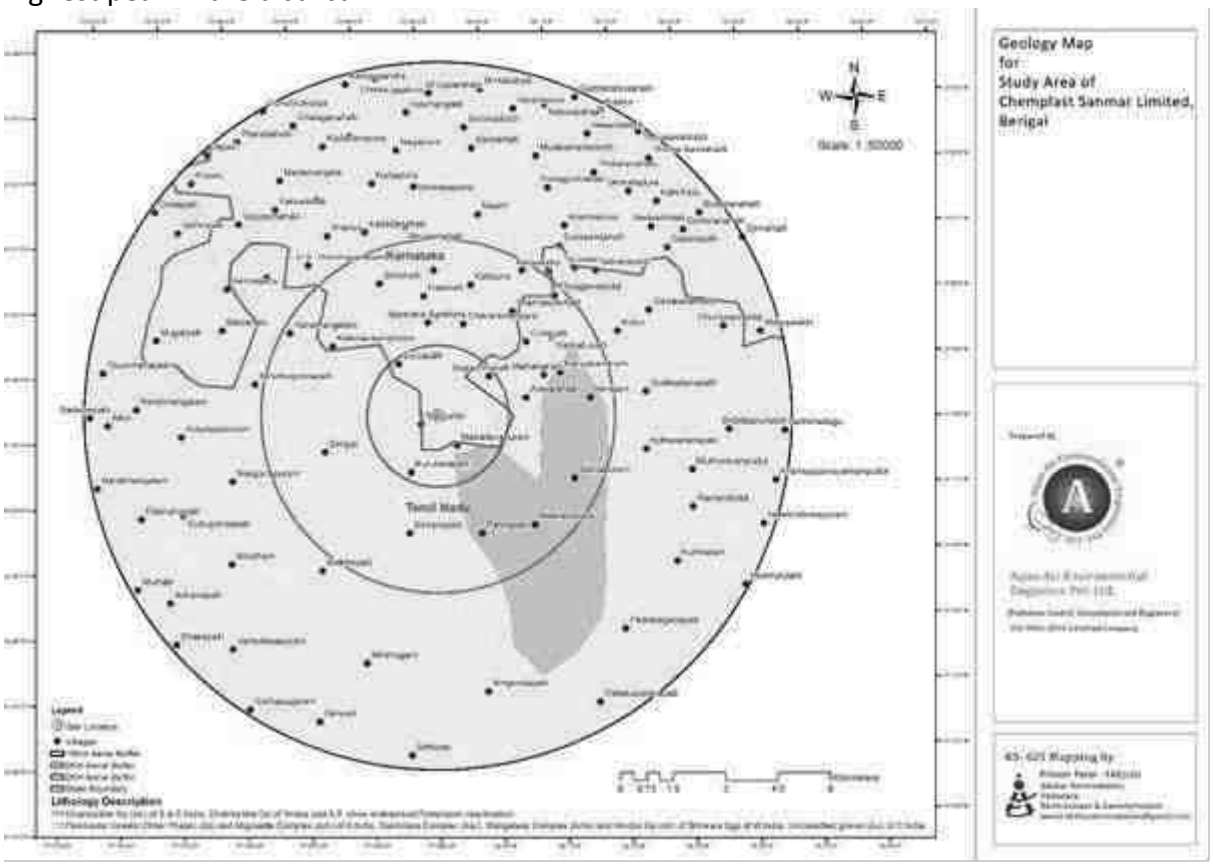
The study area has no any perennial river or any big river. There is no any seasonal river present within the study area. But due to rough terrain and altitude variations there are numerous natural drainage and its network is present in the study area which is very well connected to each other and natural water bodies.



3.8.5 GEOLOGICAL INFORMATION

The study area is mainly composed of Archaean crystalline metamorphic complex. The rock type noticed in the study area for lease is Granite Gneiss which contains mostly quartz and Feldspar with some ferromagnesian minerals. The Granite gneiss is part of peninsular gneisses, a high grade metamorphic rock. In Krishnagiri district, the predominant geological formations are Recent Alluvium, Upper Proterozoic, Lower Proterozoic and Archaeons, whereas Alluvium, Granite gneisses and Charnockite geological formations also present in the district.

The prominent geomorphic units identified in the district through interpretation of satellite imagery are structural hills in the southwestern part of the district, denudational land forms like buried pediments in the plains and inselbergs and plateaus represented by conical hills aligned with major lineaments. Krishnagiri district forms part of the upland plateau region with many hill ranges and undulating plains. The western part of the district has hill ranges of Mysore plateau with a chain of undulating hills and deep valleys extending in NNE-SSW direction. The plains of the district have an average elevation of 488 m amsl. The plateau region along the western boundary and the northwestern part of the district has an average elevation of 914 m amsl. The Guthrayan Durg with an elevation of 1395 m amsl is the highest peak in the district.



3.9 LAND USE PATTERN

Based on features interpretation from satellite data, further analyses for Landuse Land cover feature extraction is carried out. This is derived from the spectral reflectance of land features. The Land use map is finalized for the 10 Km aerial buffer from the project site using Google Earth, Bhuvan NRSC (National Remote Sensing Centre), Hyderabad, Q-GIS and Landsat-8-9OLI satellite data.

Land use pattern of the study area as well as the catchment area was carried out by standard methods of analysis of remotely sensed data and followed by ground truth collection (Benchmark) and interpretation of satellite data. The outcome of land use study has been presented below.

Land Use & Land Cover Classification Results

Land Cover is the physical material at the surface of the earth (it include grass, asphalt, trees, bare ground, water, etc.) whereas Land use is the human use of land.

Land Use involves the management and modification of natural environment or wilderness into built environment such as fields, pastures, and settlements. It has also been defined as "the arrangements, activities and inputs people undertake in a certain land cover type to produce, change or maintain it".

There is no one ideal classification of land use and land cover, and it is unlikely that one could ever be developed. There are different perspectives in the classification process, and the process itself tends to be subjective, even when an objective numerical approach is used.

Concepts concerning land cover and land use activity are closely related and in many cases have been used interchangeably. The purposes for which lands are being used commonly have associated types of cover, whether they are forest, agricultural, residential, or industrial.

The present Land use / Land cover map for the proposed project activity is prepared with help of satellite image. This report thus will enable assessing the impact on land use pattern in the study area due to the proposed project activity.

Data Used

Open Source Landsat 9 satellite image as well as Google Earth Pro along with Open data provided by Indian Government's Remote Sensing Agency is used for preparation of Landuse map of the study area. Also, Survey of India's Open Topographic sheets used as a reference map on 1:50,000 scale has been used for preparation of base layer data like road, rail network, village and mine site and for geo-rectification of satellite image.

Technical Details

Satellite Image – Landsat 8-9OLI Satellite image, USGS.

Other Data Sets- Bhuvan Data, Govt. of India

Software Used – Google Earth Pro and QGIS.

Methodology

Land use / Land cover map preparation, Base map creation; Geometric and Radiometric correction of satellite image has been processed using Q-GIS Software.

Salient features of the adopted methodology are given below:

- Acquisition of satellite data.
- Spectral Bands Combination and processing for Land use estimation.
- Rectification of Satellite Data.
- Preparation of base map from Survey of India Topo-sheets.
- Land use class layer creation and data analysis using visual interpretation techniques for satellite data.
- Further editing using Google Earth Pro
- Ground truth studies or field checks.
- Finalization of the map.
- Area calculation for statistics generation.

Interpretation of Remote Sensing Data

Satellite images are composed of array of grid, each grid has a numeric value that is known as digital number. Smallest unit of this grid is known as a pixel that captures reflectance of ground features represented in terms of Digital number, each representing specific land features. Using image classification technique, the satellite data is converted into thematic information, map based on the user's knowledge about the ground area. Hybrid technique has been used i.e. visual interpretation and digital image processing for identification of different land use and vegetation cover classes based on spectral signature of geographic feature.

Spectral signature represents various land use classes. Image interpretation keys are developed based on image characteristics like colour, tone, size, shape, texture, pattern, shadow, association etc., which enables interpretation of satellite images for ground feature. Training sites are then assigned based on their spectral signature and interpretation elements. Using image classification algorithm land use map is generated.

Table – 3.15

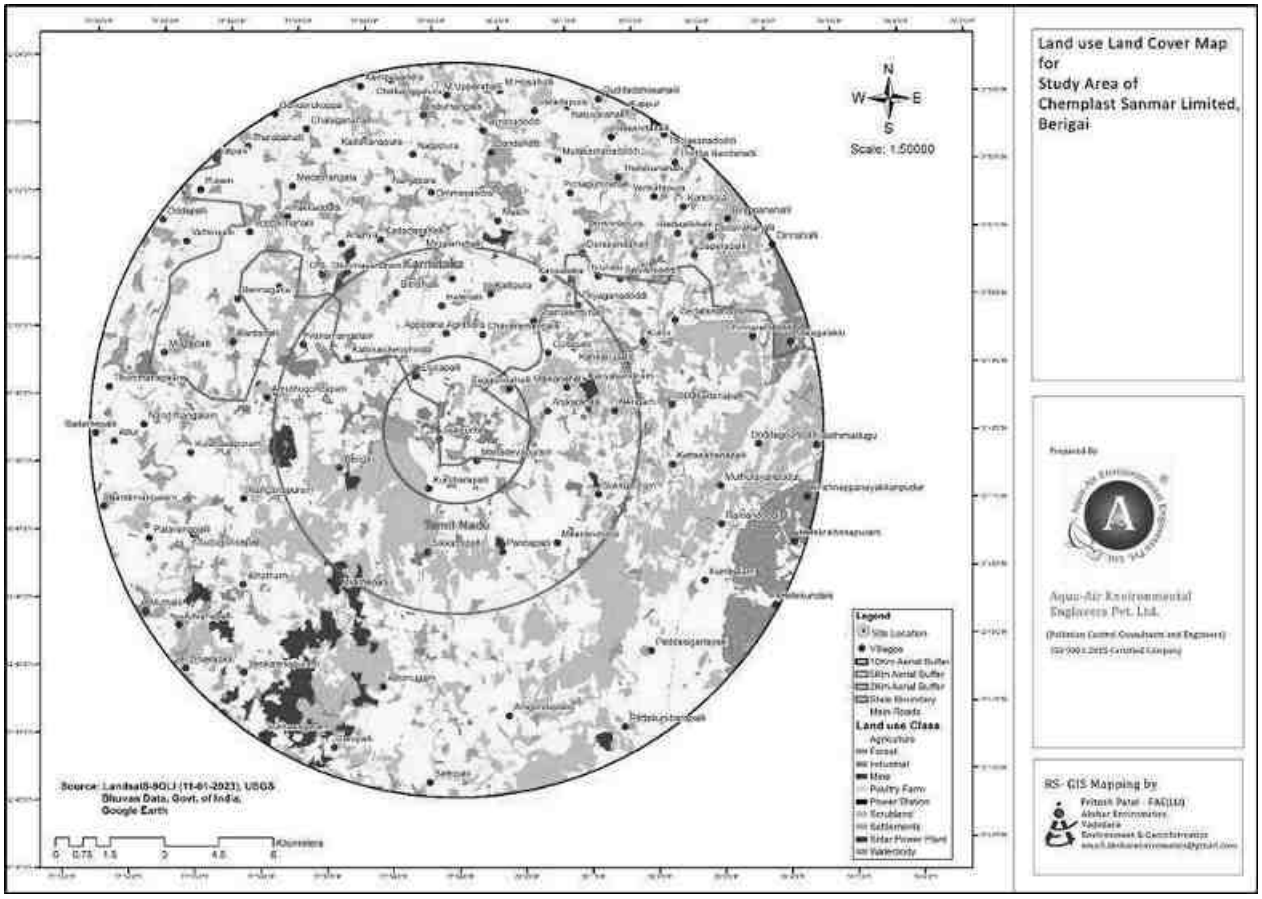
Areas Under Different Land use

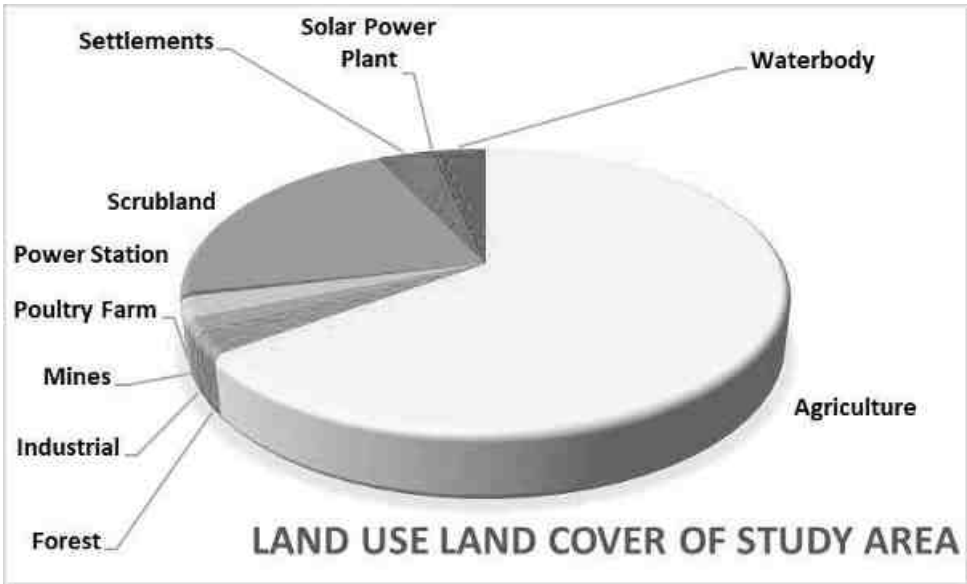
Land use Class	Area in Ha	Area in %
Agriculture	20419.27	64.89
Forest	783.21	2.49
Industrial	493.05	1.57
Mines	735.72	2.34
Poultry Farm	142.74	0.45
Power Station	1.53	0.00
Scrubland	6692.36	21.27
Settlements	1134.50	3.61
Solar Power Plant	8.95	0.03
Waterbody	1057.04	3.36
TOTAL	**31468.37**	**100**

Courtesy: Akshar Enviromatics (Environment and Geomatics), Vadodara, Gujarat

Figure – 3.12

Land use / Land cover





According to habitat condition and satellite image interpretation there are several classes derived which shows land use and its pattern in the study area.
The major of the area occupied by **Agriculture** practices in this region as it shows major area occupied by agriculture fields. There is 65% of the total area is occupied by Agriculture in which people practices mainly large scale Flower farming together with Fruits, Paddy and other Crops. Some area of **Berigai Extention forest** is also present in the study area which is 8.5 % of the total area. It is also observed that **Poultry Farming** practices are present on remarkable amount and the same has occupied 0.5% of the total study area.

The other classes observed are the **waterbodies** class includes Reservoir/ Lakes/ Ponds/ Tanks, and River bed covers around 4 % of the study area. **Scrubland** are also there in this region which is almost 21 % of the total area. There are mainly *Prosopis sp.* And other associated thorny species occupied in all these scrubland along with seasonal Herbs and some shrubs. There are stony barren land with sparse scrub also considered together in the land use class of scrub land.

There is less urbanization observed in satellite image. The area occupied under **Residential Settlement** class is 4 % of the total area which is very less as study area have scattered habitatations with less population. Industries are also present as the **Industrial Area** class is 1.5% of the total area. Apart from these major classes there are other land use classes also observed in the study area area is some portion of Solar Energy park which is situated in North direction of the study area is almost 0.03% of the total area. It is also very well reflected in satellite data that scattered **mining** practices are also there in the region and the same has contributed 2.3% of the total area.

3.10 TOPOSHEET & KEY-INFRASTRUCTURE MAP

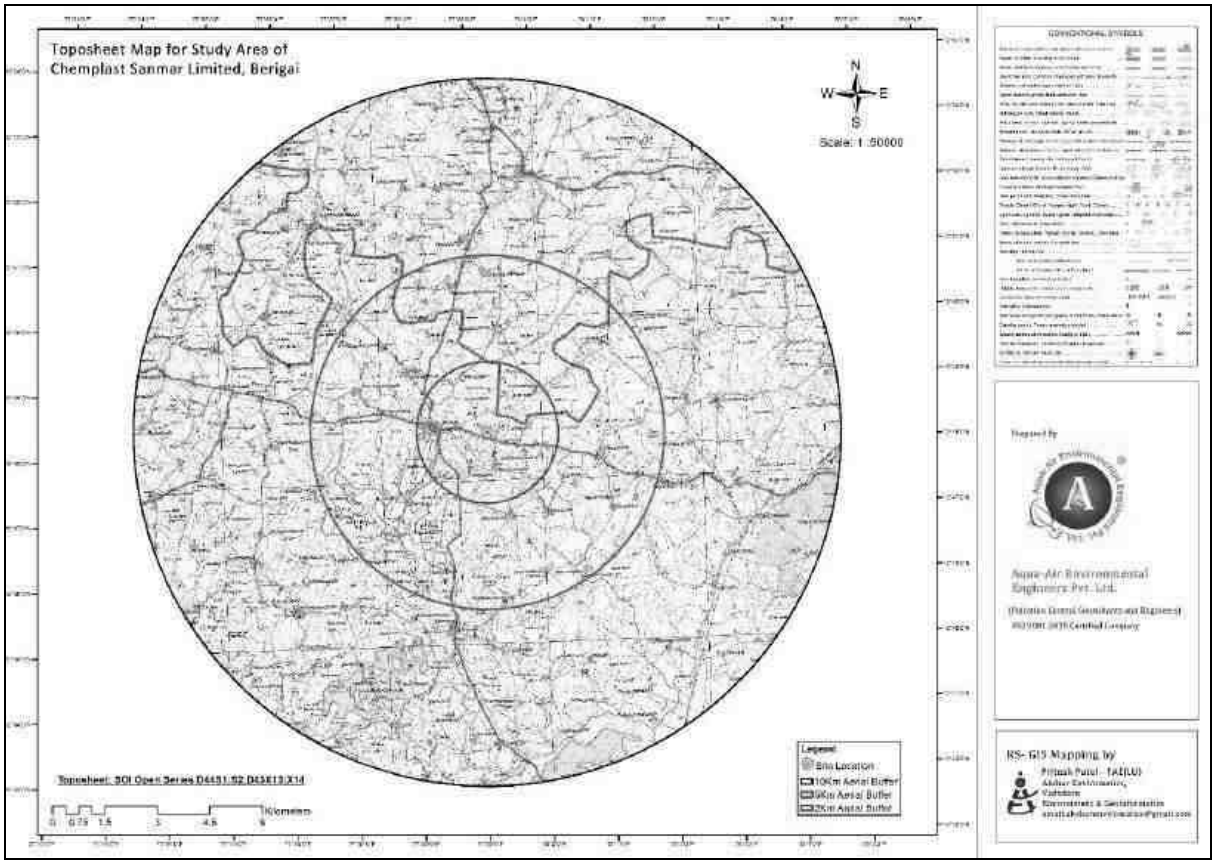
The Land Use Land Cover study has been carried out for Chemplast Sanmar is located at Berigai, Krishnagiri District, Tamilnadu State, India.

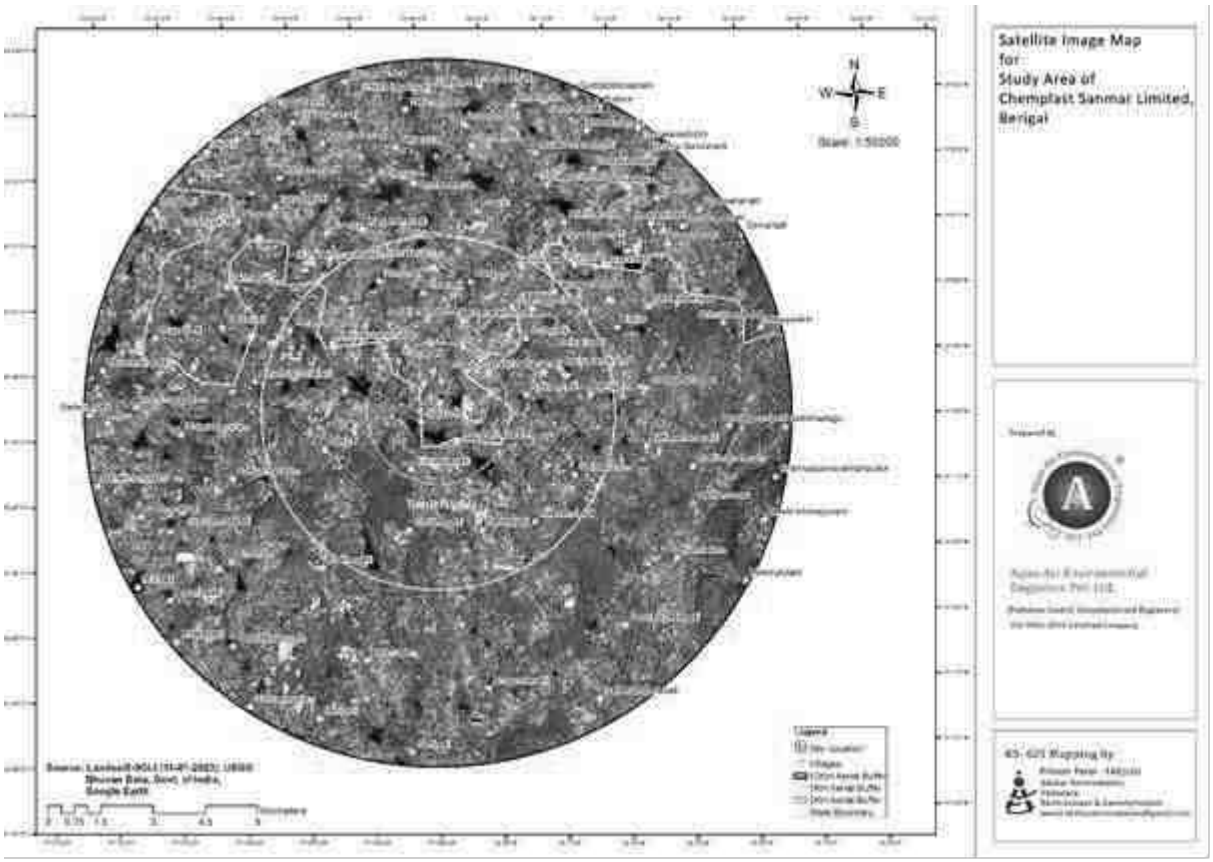
The mapping of Land use Land Cover has been carried out with help of Bhuvan Data and Google Earth Imagery using QGIS Software and verified by reconnaissance survey.

The 10 Km Aerial buffer area was identified in with the help of Lat-Lon using Google Earth Pro. The same area is than identified from Bhuvan database and the both the layers were super imposed using Geo Reference technique in QGIS. Based on Visual interpretation the Land use classes were identified and the same was verified with the help of field survey. The area calculation was also done for each land use classes occurring in that region.

Figure 3.13

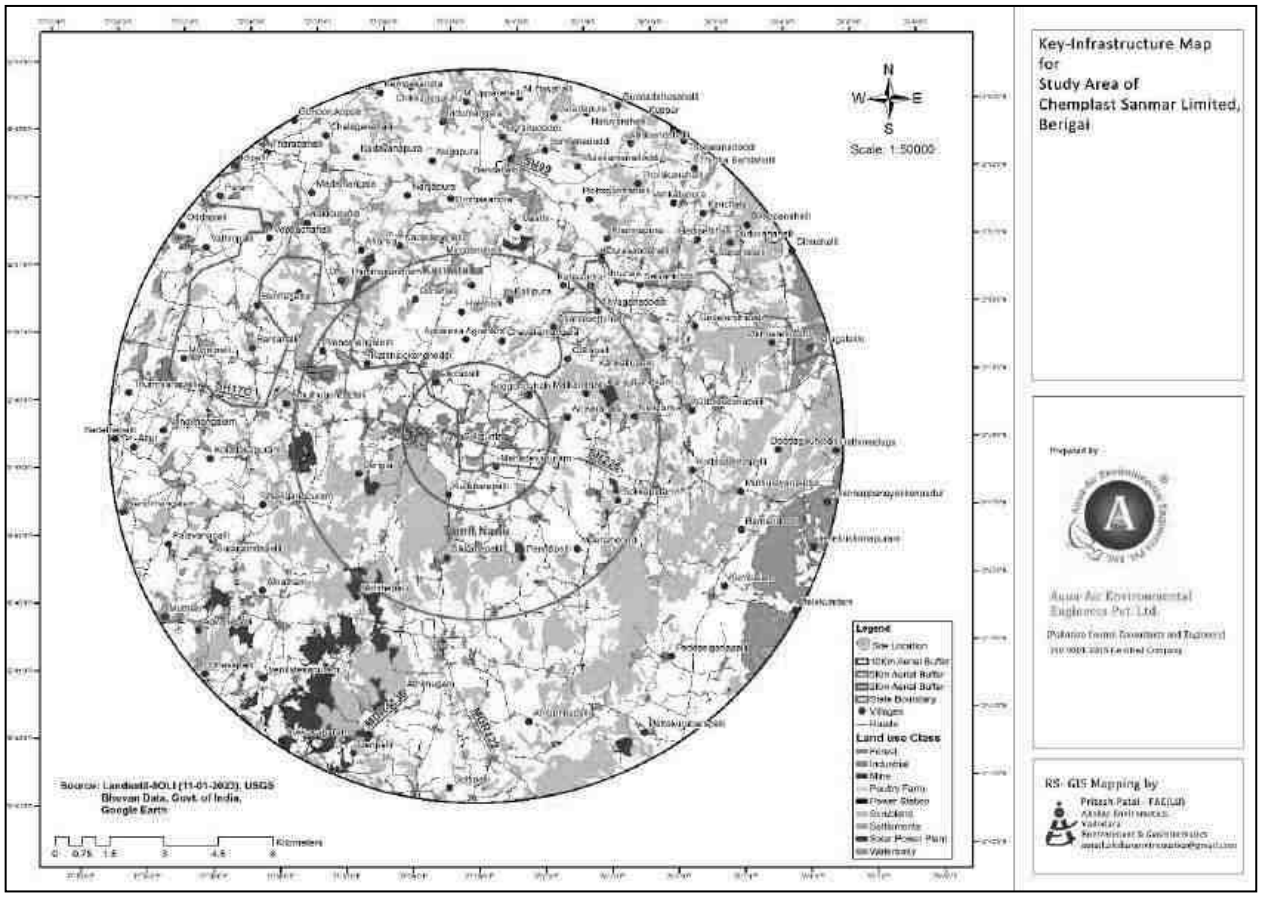
TOPOSHEET





Satellite images are the very best and perfect source of interpretation of land forms. There are different kind of scanners and sensors are there in satellite. Here we have used Multi Spectral satellite data. Each band of a multispectral image can be displayed one band at a time as a grayscale image, or as a combination of three bands at a time as a colour composite image. The three primary colours of light are red, green, and blue (RGB). Computer screens can display an image composed of three different bands, by using a different primary colour for each band. When we combine these three images, the result is a colour image with each pixel's colour determined by combination of RGB of different brightness.

Key- Infrastructure:



The area of industrial settlements are there in this study area along with it human settlements forms the key infrastructure in this region. As the area is having mainly industrial development the transportation facilities by Road network is quite well developed and it is well connected with villages all over in the study area. Almost every villages in this region is well connected with metalled road network. Apart from road network development the railway also present in the study area. There are some developments of Green energy production unit such as Solar Energy parks is also present within the study area. There are scattered mining practices are also remarkably present in the study area.

3.11 TRAFFIC STUDY

The traffic studies have been conducted to know the prevailing traffic volumes on the existing roads. It is essential to consider these details for assessing the anticipated future traffic volumes as a part of overall impacts assessment for the project. The variations of traffic densities depend upon the working days and time and also vary in day and night times. In order to assess the prevailing traffic volumes on the roads, the survey was conducted during normal working days of the week by avoiding local holidays or abnormal situations to reflect the true picture of the traffic densities.

Objectives of the Traffic Survey

- To analyze the characteristics and issues of transportation in Berigai
- To formulate basic data for traffic demand in the future
- To grasp the variation of traffic movement from the previous

Methodology

A. Vehicle Count

The vehicles passing through the road (in both ways) were counted separately for 24 hours at one location from 06:00 hrs to 06:00 hrs next day continuously. Category-wise vehicle counting has been done continuously and recorded in the traffic volume count on hourly basis under respective categories.

B. Categorization of Traffic

The engine driven vehicles were categorized into various heads viz. Trucks/Bus, Light Carriage Vehicles, Car/Jeep, Multi Axle Vehicles, Two/Three Wheelers and Cycles/others. Survey was conducted during the weekdays and weekend.

EXISTING TRAFFIC SURVEY REPORT DETAILS

Fast Vehicle					Slow Vehicle			
Day	**Car/jeep/ van & four wheelers**	**Bus/ coach**	**Heavy motor vehicle**	**Trucks**	**Motor cycle & scooter**	**Three wheelers**	**Cycle**	**Farm vehicle (tractor/ combine harvester)**
Monday	246	54	24	6	650	5	57	32
Tuesday	205	51	22	3	625	3	51	31
Wednesday	218	56	18	5	634	3	64	36
Thursday	225	51	17	5	680	11	56	28
Friday	238	57	26	6	653	3	42	30
Saturday	229	53	28	4	658	2	21	23
Sunday	170	39	26	2	425	6	8	7
Total	1531	361	161	31	4325	33	299	187
Average	219	52	23	4	618	5	43	27

ADDITINAL PROPOSAL FOR VEHICLE DISTRIPUTION

Sr. No.	Vehicles Distribution	No. of Vehicles/ Day	Passenger Car Unit	Total No. of Vehicle (PCU)	Total No. of Vehicle (PCU) / Hour
1.	Car/jeep/ van & four wheelers	219	1.0	219	9
2.	Bus/ coach	52	3.7	192	8
3.	Heavy motor vehicle	23	0.5	12	1
4.	Trucks	4	3.7	15	1
5	Motor cycle & scooter	618	0.5	309	55
6	Three wheelers	5	2.0	10	1
7	Cycle	43	0.2	9	1
8	Farm vehicle (tractor/ combine harvester)	27	6.0	162	7
	Total	**293**		**928**	**83**

TRAFFIC MANAGEMENT MEASURES

- Yellow paint junction boxes are painted at the locations to create psychological barrier for through drivers to control the speed.
- All gates are manned with efficient security who can guide the entry and exit of vehicles.
- Merging of vehicles will be performed only to left traffic from the exit gates and this ensures safety.
- An evaluation of alternative routes, that can be used in the event of difficulties
- Adequate internal road of will provided for uninterrupted movement of fire tender.
- All precautionary measures are ensured for the safety of construction laborers while working at the site.

3.12 TERRESTRIAL ECOLOGY

3.12.1. Introduction

An ecosystem is composed of plant and animal populations, and it differs from natural community designation in that it involves the total nutrient and energy economics of the system as well as the organisms involved. Ecosystems are self-maintained and self-contained. Natural ecosystems are invariably richer in species and more stable than those of artificially developed, due to their many inter-dependencies and inter-relationships.

The plant and animal populations in an area from recognizable associations called Natural communities. These are characterized by a few species called dominants. Natural communities have structure based on the life forms (e.g. grass) of the species that make them up. A hardwood forest has a given structure by virtue of the trees and shrubs that compose it. The species composition refers to the kinds of species making up to the community. The variety of species and their relative numbers are referred to as species diversity. The greater the biotic diversity, the greater the number and kind of habitats for the inhabitants of the community. Based on the physical setting and the kind of distribution of flora and fauna, the study area can be classified into crop, terrestrial and aquatic ecosystems.

Generally, biological communities are good indicators of climatic and edaphic factors because of their strong relationships with them. The studies on the biological aspects of the ecosystem are important in Environment Impact Assessment studies for the suitability of natural flora and fauna. Information on the impact of environment stress on the community structure serves as an inexpensive and efficient early warning system to check the damage on a particular ecosystem.

A change in the composition of biotic communities under stress is reflected through a change in the distribution pattern, density, diversity, frequency dominance and abundance of natural species of fauna and flora existing in the ecosystem. These changes over a span of times can be quantified and related to the existing environment.

Chemplast Sanmar Limited, is a leading supplier of intermediates for global Agrochemical, Pharmaceutical and Fine Chemical innovators has proposed to Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum TO 20031.4 MT/Annum)

Manufacturing in Existing Unit located at S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3, 10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A Suligunta Village, Berigai 635105, Shoolagiri Taluk, Krishnagiri District, Tamil Nadu with a project cost of Rs. 2292.398 Crores [Existing: 292.398 Crores + Proposed: 2000 Crores].

3.12.2 Objectives

The objectives of ecological study during the study period of EIA may be outlined as follows:

- To characterize the environmental components like land, water, flora and fauna;
- To understand their present status;
- To understand carrying capacity of the ecosystem;
- To assess present bio-diversity; and
- To identify susceptible and sensitive areas.

3.12.3 Regional Biodiversity

Tamil Nadu has a total land area of 1,30,060 km² which constitute of about 3.96% of the total geographical area of the country. Physiographically, the State can be divided into four major regions viz Coastal Plains, Eastern Ghats, Central Plateau and Western Ghats. The main rivers of the State are Cauvery, Bhavani, Palar, Vaigai etc. which drain into the Bay of Bengal. Tamil Nadu has a Humid Tropical Climate. Tamil Nadu shares the Western Ghats Biodiversity (one of the 12 Global mega biodiversity Hotspots) with Western Ghats States of Kerala, Karnataka, Maharashtra and Goa. It shares the Eastern Ghats with the States of Andhra Pradesh and Orissa. It also shares the East-coast with the States of Andhra Pradesh, Orissa and West Bengal.

The State is endowed with rich biodiversity, from marine coastal systems in the Gulf of Munnar to the terrestrial evergreen forests in the Western Ghats and temperate forests in the hilly regions. As per the Champion & Seth Classification of Forest Types (1968), the forests in Tamil Nadu belong to nine Forest Type Groups, which are further divided into 39 Forest Types. The Nilgiri Biosphere Reserve represents a unique and threatened ecosystem in the tropics inside the Western Ghats Mountain system and is one of the biodiversity hotspots. Tamil Nadu has been a pioneer State in the biodiversity conservation, particularly in Protected Area management, including conservation of marine fauna. Tamil Nadu is famous for its Teak and Sandalwood forests.

Forest Biodiversity in the State is mainly confined to Western Ghats and Eastern Ghats. Forest Cover of the State is 26,364 km² which is 20.27% of the State's geographical area (GA). In terms of forest canopy density classes, the State has 3,605 km² (2.77% of GA) very dense forest, 11,030 km² (8.48% of GA) moderately dense forest and open forest and 11,729 km² (9.02 % of GA) respectively. There is an increase of 83.02 km² in the forest cover of the state as compared to 2017 assessment (Source: www.forests.tn.gov.in).

In Tamil Nadu, during the period 1st January 2015 to 5th February 2019, a total of 542.40 hectares of forest land was diverted for non-forestry purposes under the Forest Conservation Act, 1980 (MoEF&CC, 2019). As per the information received from the State during the last two years, 74,030 ha of plantations were raised in the State.

Five National Parks, 29 Wildlife Sanctuaries and two Conservation Reserves constitute the Protected Area network of the State covering 4.97% of its geographical area (India State Forest Report, 2019). There are about 3,072 hamlets bordering the forest areas of the state.

Tropical dry Deciduous Forest covers an area of 12.23 lakh ha constituting 54.30%, Tropical Thorn Forest covers an area of 5 lakh ha constituting 22.10%, Tropical Moist Deciduous Forest covers an area of 2.60 lakh ha constituting a percentage of 11.10%. The Biodiversity rich forest types are the Tropical Wet Evergreen Forest covering an area of 0.60 lakh ha constituting 2.67%, Tropical Semi Evergreen Forest covering a area of 0.23 lakh ha constituting 1.01%, Subtropical Broad leaved Hill Forest covers an area of 1.14 lakh ha constituting 5.04%, the Tropical Dry Evergreen Forest which is a unique type of Tamil Nadu covers an area of 0.26 lakh ha constituting 1.16%, the mangrove forest covers an area of approximately 0.23 lakh ha constituting 1.01%.

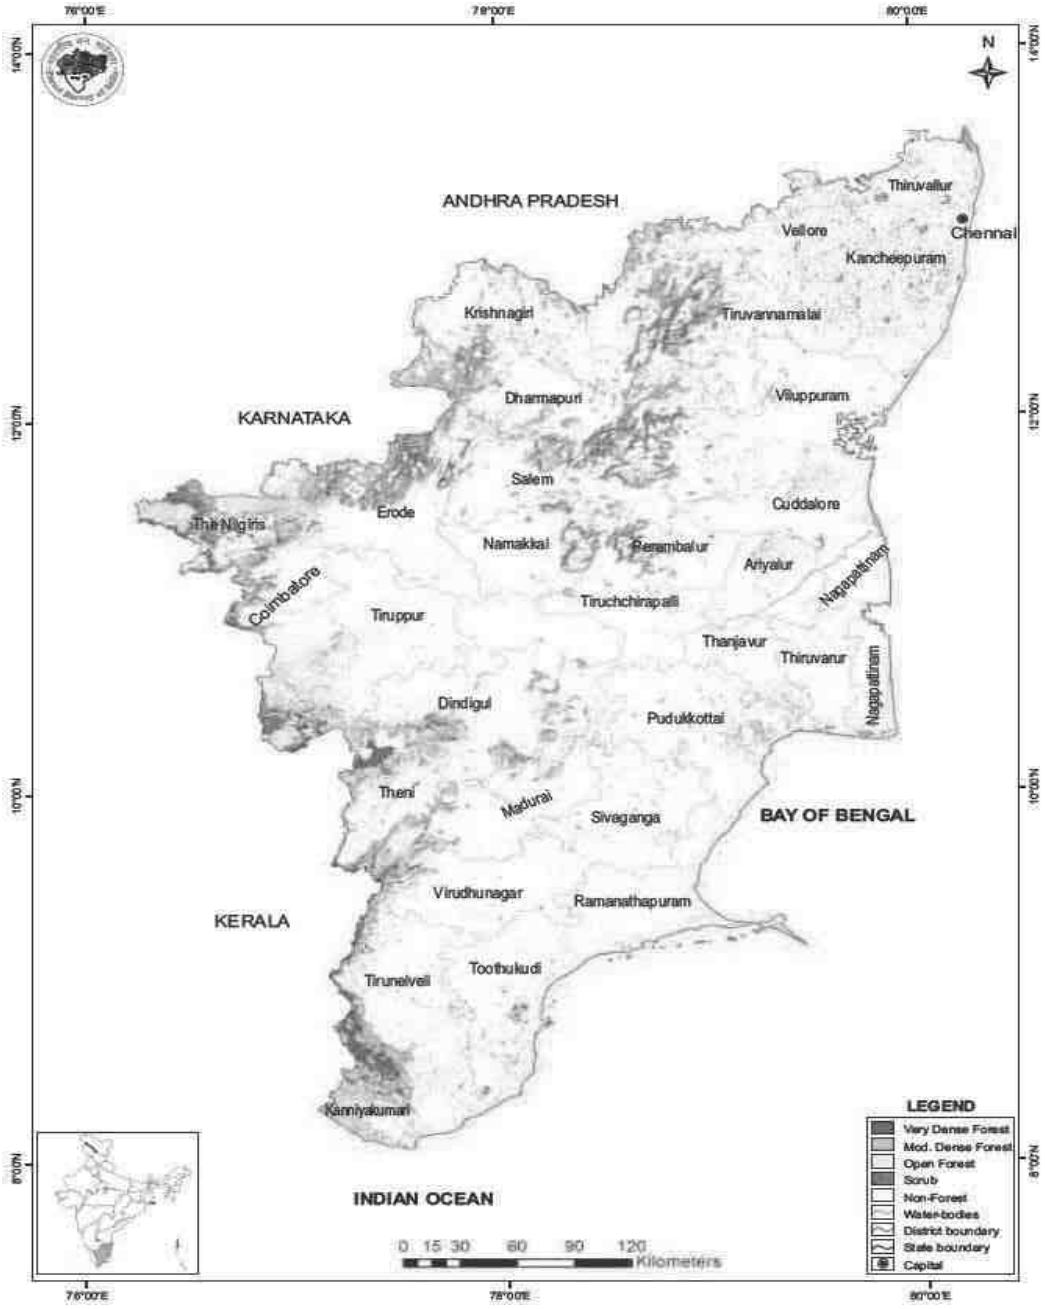


Figure : Forest Map of Tamil Nadu (Source: Forest Survey of India, 2009)

Habitat fragmentation is the process by which habitats which were once continuous become divided into separate fragments. This mainly happens due to human activities such as agriculture, rural development and urbanization. As cities and civilization grow in size, the fragmentation of habitats causes extinction of many plant and animal species and is the largest threat to biodiversity on earth. Designing with nature can improve the quality of cities for people, plants and animals. In doing so, ecosystem services can be enhanced.

The state's rich biodiversity and the natural resources are facing a serious threat from the growing human encroachments, cattle grazing, collection of fire wood, man-animal conflict, poaching, illicit felling, mass tourism and pilgrimage etc. and also from various developmental activities. Biodiversity Conservation has been structured covering the Ecosystem Diversity, Species Diversity and Genetic Diversity. Species Diversity has been structured separately for plants and animals. Wild plant diversity has been structured on the lines of Red-listed plants, Endemic plants, Medicinal plants, Wild relatives of cultivated plants, allied species of cultivated species and others.

Wild Animal diversity has been structured on the lines of Red listed animals, Endemic animals, Flagship species, Keystone species, Pollinators and others. Domesticated species diversity has been structured on the lines of Cultivated Plants and Domesticated animals.

Krishnagiri District

Krishnagiri District has a total geographical area of 5143 Sq. km. The district shares borders with Tirupattur to the southeast, Thiruvannamalai districts to the east, Dharmapuri district to the south and Kolar, Bangalore Rural, Bangalore Urban, Ramanagara and Chamarajanagar districts of the state of Karnataka to the northwest and west and Chittoor district of the state Andhra Pradesh to the north.

This district mainly has a mountainous terrain. The flatlands are irrigated by the South Pennar River. Krishnagiri district forms parts of Cauvery and Pennaiyar Rivers basins. Cauvery River forms the southwestern boundary of the district. Dodda Halla is the most important tributary of Cauvery draining the rugged terrain in the northwestern part of the district. Ponnaiyar River is another major river draining the district. It originates from Nandhi hills in Karnataka, and enters Tamil Nadu and flows almost in a southeasterly direction. Pambar and Burgur, are the important tributaries of Ponnaiyar draining in the district.

The area under forests is 2024.09 Sq. km which is only 39 % of the total geographical area of the district. The major crops cultivated in the district are paddy, maize, ragi, banana, sugarcane, cotton, tamarind, coconut, mango, groundnut, vegetables and flowers. This district is famous for mangoes, and for the granite industry with quarries and processing units spread around the district. With a 40% share, the district is the top producer of ragi in Tamil Nadu.

3.12.4 Biogeographic zone, province and Forest type

This study has been carried out during the month of August 2022 for the purpose of providing an independent and comprehensive baseline assessment of the flora, terrestrial vertebrate, aquatic fauna and associated habitat values of the site and within 10 km radius area around the project site located at S.F No. 5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3, 10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A Suligunta Village, Berigai 635105, Shoolagiri Taluk, Krishnagiri District, Tamil Nadu and a subsequent assessment of potential ecological impacts.

Shoolagiri Taluk is in Krishnagiri District with the total geographical area of total area of 10.8828 Sq. Km. It is overlooked by a hill with three peaks. Shoolagiri's name is derived from Hill, which is like Trident (Threesulam). Berigai is a village located in Shoolagiri Taluk of Krishnagiri District. The total geographical area of village is 997.95 hectares. The study area falls under semi-arid category as far as the Indian biogeographical zones (Rodger, Panwar, Mathur 2000) are concerned. Under the biogeographical provinces, the study area falls under the category of 6E-Deccan Peninsula-Deccan South.

The field investigation and satellite imagery data show that the study area is a remote dry agricultural and predominantly barren lands covered with some thorny bushes in patches, and includes water bodies such as Berigai Lake located about 2.10 km from the study area. There is no protected area, important or sensitive species within 15 kms from the proposed project boundary. Other major land use feature of the study area is comprised habitation and agricultural lands.

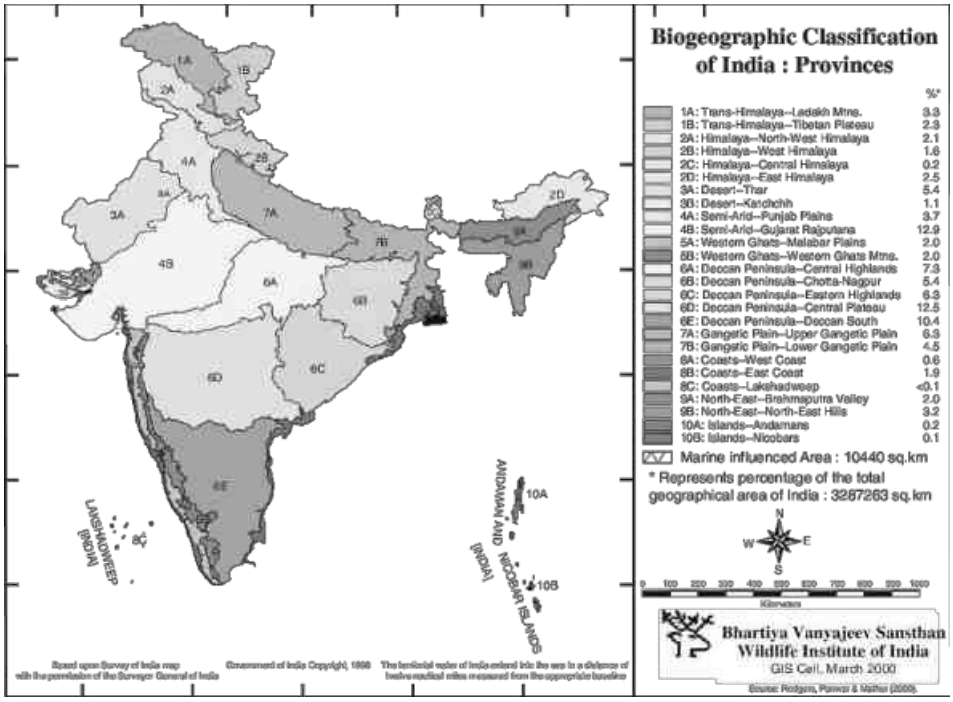

FIGURE 14: MAP SHOWING THE BIO-GEOGRAPHIC PROVINCES OF INDIA

The detailed ecological assessment of the study area has been carried out with the following objectives:

To establish the present status of ecological conditions surrounding the project location;

To study the existing anthropogenic stresses on the prevailing ecosystem.

To identify and predict the likely impacts on the local ecosystem from the proposed activities;

To list out floral species, terrestrial vertebrate and aquatic flora and fauna present within the study area, and significance status under The Wildlife (Protection) Act, 1972;

To define ecological/conservation status of each species as per IUCN categories (Red Data List).

To formulate migratory measures and a sustainable Environmental Management Plan (EMP) basing upon the likely impacts.

During survey, following aspects were considered for ecological studies:

Assessment of present status of flora and fauna;

Identification of rare and endangered species of plants and animals (if any);

Identification of ecologically sensitive areas within the study area;

Assessment of migratory route of wildlife (if any).

Methodology

A desktop review (published documents etc.) was conducted to determine the forest area through Satellite imagery, vegetation type (Champion and Seth, 1962), floral and faunal assemblage in the study area. Terrestrial investigations for flora and fauna records were collected by random field survey and a checklist was prepared. During field survey, discussions with the local people were carried-out to collect information related to local

biodiversity in and around the villages. The ecological status of the study area has been assessed based on the following methodology:

Primary field surveys to establish primary baseline of the study area;

Compilation of secondary information available in published literatures/ forest working plans etc.

Site Verification and finalization in consultation with Project proponent, local inhabitants.

- **List of the endangered and endemic species as per the schedule of The Wildlife Protection Act, 1972**

Emphasis is given to identify avifauna and mammals to determine the presence and absence of Schedule-1 species, listed in The Wildlife Protection Act 1972, as well as in Red List of IUCN. Various methods used for study animals are as follows:

A. **Point Survey Method:** Observations were made at each site for 15-20 min duration.
B. **Road Side Counts:** The observer travelled by motor vehicles from site to site and all sightings were recorded.

3.12.5 Floristic composition within the study area

The ecology and diversity survey were conducted in the 10 km radius in the study area and the surrounding area. It is observed that human settlements present in and around the project site and within the study area of 10 km radius and many of villages/ colonies have moderate ranges of plantations. Most of the vegetations observed in the study area are natural vegetation and in agricultural fields. During site assessment several floral species encountered within the 10 km radius area.

The study area does not have any forest land or permanent natural vegetation and the main land use feature of the study area is comprised of habitation and cultivating lands. From the primary observation, the tree species recorded in the study area in the plantation area were Cocos nucifera, Acacia nilotica, Azadirachta indica, Mangifera indica etc. The terrestrial flora in the study area consisting of various under shrubs and herbs is conspicuous during and after the rainy season only. Some of the common shrub species are Lantana camara, Hibiscus rosa-sinensis, Calotropis giganteaa, Datura metel, Ricinus communis etc. and Cynodon dactylon, Achyranthes aspera, Boerhavia diffusa, Tridax procumbens, Eclipta prostrate etc. among herbaceous species.

The project area covering 10 km radial distance did not reveal any notified/ protected ecologically sensitive area including National Park or wildlife sanctuary, Elephant and Tiger reserves.

However, the vegetation within the study area is sparse, with the existence of some weeds as per the survey conducted within 10 km radius of the site. The results of survey exhibited sparsy vegetation with the existence of 131 terrestrial flora. However, Coconut, Neem, Acacia, Mango and Tamarind trees are abundant widely distributed in and away from the study area.

The following species were encountered from the study area during the field visits as given in Table 15.

3.12.5.1 FLORA

TABLE 15 FLORISTIC DIVERSITY IN THE STUDY AREA

S. No.	Botanical Name	Common Name	Family	IUCN Conservation Status
Trees				
1	*Cocos nucifera*	Tennai	Arecaceae	Not Assessed
2	*Acacia nilotica*	Karuvelan	Fabaceae	Least Concern
3	*Azadirachta indica*	Vembu	Meliaceae	Not Assessed
4	*Acacia auriculiformis*	Acacia	Fabaceae	Least Concern
5	*Carica papaya*	Pappali	Caricaceae	Data Deficient
6	*Aegle marmelos*	Vilvam	Rutaceae	Not Assessed
7	*Ailanthus excels*	Perumaram	Simaroubaceae	Not Assessed
8	*Annona squamosal*	Sithapalzham	Annonaceae	Least Concern
9	*Murraya koenigii*	kariveppilai	Rutaceae	Not Assessed
10	*Syzygium cumini*	Naval	Myrtaceae	Not Assessed
11	*Ficus benghalensis*	Alai	Moraceae	Not Assessed
12	*Emblica officinalis*	Nelli	Phyllanthaceae	Not Assessed
13	*Plumeria rubra*	Nela sampangi	Apocynaceae	Not assessed
14	*Delonix regia*	Cemmayir-konrai	Caesalpiniaceae	Least Concern
15	*Diospyros melanoxylon*	Karundumbi	Ebanaceae	Not Assessed
16	*Pongamia pinnata*	Pungai	Fabaceae	Least Concern
17	*Musa paradisiaca*	Vaazha	Musaceae	Not Assessed
18	*Psidium guajava*	Koyya	Myrtaceae	Least Concern
19	*Tamarindus indica*	Puli	Fabaceae	Not Assessed
20	*Cassia fistula*	Konrai	Fabaceae	Least Concern
21	*Madhuca longifolia*	iluppai	Sapotaceae	Not Assessed

Source: ABC Techno Labs India Pvt. Ltd.

The detailed study revealed dominance of *Cocos nucifera, Acacia nilotica, Azadirachta indica, Mangifera indica* etc. Totally 52 species of trees found in the study area along with 21 shrub species, 32 herb species and 26 climber species. *Lantana camara, Hibiscus rosa-*

sinensis, Calotropis giganteaa, Datura metel, Ricinus communis are found to be the predominant species among shrub. Among the herbaceous species *Cynodon dactylon, Achyranthes aspera, Boerhavia diffusa, Tridax procumbens, Eclipta prostrate* etc. found to be abundant.

3.12.5.2 Economically important Flora of the study area

Agricultural crops: The major crops grown in study area are banana, papaya and mangoes. Different fruits like guava, custard apple and vegetables like brinjal, tomato, drumsticks, onion, and coriander also grown by the local people.

Medicinal plant species: The nearby area is also endowed with the several medicinal plants. The common medicinal plants of the region is *Azadirachta indica* (Neem).

Rare and endangered floral species: As per IUCN red list *Borassus flabellifer* (Nonkuppanai) categorized as endangered species. During the vegetation survey in the study area did not encounter any such species which are endangered or threatened under IUCN (International Union for Conservation of Nature and Natural resources) guidelines.

3.12.6 Fauna

3.12.6.1 Faunal Communities

Both direct (sighting) and indirect (evidences) observations methods were used to survey the faunal species around the study area. Additionally reference of relevant literatures (published/ unpublished) and conversations with local villagers were also carried out to consolidate the presence of faunal distribution in the area *(Smith 1933-43, Ali and Ripley 1983, Daniel 1983, Prater 1993, Murthy and Chandrasekhar 1988).*

Mammals: No wild mammalian species was directly sighted during the field survey. Conversation with local villagers around the study area also could not confirm presence of any wild animal in that area. Little Indian field mouse, House mouse, Bonnet Macaque, Common Palm Squirrel, Indian Grey Mongoose, Black rat, Rat, Short nosed fruit bat, Indian porcupine, Indian Hare, Indian mole-rat etc. were observed during primary survey.

Avifauna: Since birds are considered to be the indicators for monitoring and understanding human impacts on ecological systems *(Lawton, 1996*) attempt was made to gather quantitative data on the avifauna by walk through survey within the entire study area and surrounding areas. From the primary survey, a total of 40 species of avifauna were identified and recorded in the study area. The diversity of avifauna from this region was found to be quite high and encouraging. The list of avifauna species found in the study area is mentioned in Table 2.

The Indian Chameleon, tree lizard, common garden lizards and common toads are also seen. Variety of butterflies (like Common mime, Southern birdwing, Common Mormon, Indian Skipper, Common tiger, Common crow, Small Grass Yellow, Great Eggfly, Common Pierrot, Indian Sunbeam, Crimson rose, Lime Butterfly, Common Castor, Common rose, Common sailor) is spotted in abundance in the study zone.

TABLE 16: FAUNA RECORDED FROM THE PRIMARY SURVEY IN THE STUDY AREA AND THEIR CONSERVATION STATUS

S. No.	Scientific Name	English Name	Schedule of Wildlife Protection Act	Status as per IUCN Red Data List	Method
Mammals					
1	*Mus booduga*	Little Indian field mouse	IV	Least Concern	DS
2	*Mus musculus*	House mouse	IV	Least Concern	DS
3	*Macaca radiata*	Bonnet Macaque	II	Vulnerable	DS
4	*Funambulus palmarum*	Common Palm Squirrel	IV	Least Concern	DS
5	*Herpestes edwardsi*	Indian Grey Mongoose	II	Least Concern	DS
6	*Rattus rattus*	Black rat	IV	Least Concern	DS
7	*Bandicota indica*	Rat	IV	Least Concern	DS
8	*Cynopterus sphinx*	Short nosed fruit bat	IV	Least Concern	DS
9	*Hystrix indica*	Indian porcupine	IV	Least Concern	DS
10	*Lepus nigricollis*	Indian Hare	IV	Least Concern	DS
11	*Bandicota bengalensis*	Indian mole-rat	IV	Least Concern	DS
Birds					

S. No.	Scientific Name	English Name	Schedule of Wildlife Protection Act	Status as per IUCN Red Data List	Method
1	*Alcedo atthis*	Common Kingfisher	IV	Least Concern	DS
2	*Passer domesticus*	House Sparrow	IV	Least Concern	DS

Livestock like cattle, buffalo, goat, poultry, duck and pig are reared for dairy products, meat, egg and for agriculture purpose. Majority of cattle and buffalo are of local variety. Backyard poultry farms are mostly common in this area; however, some commercial poultry farms are also recorded in the study area.

The study area is marked with moderate population of flora and fauna. With reference to the Wildlife Protection Act 1972 total number of wildlife tabulated in this study can be characterized as given in the Table 17.

TABLE 17: CHARACTERIZATION OF FAUNA IN THE STUDY AREA (AS PER W.P ACT, 1972)

S. No.	Schedule of Wildlife Protection Act 1972	No. of species	Remark
1	Schedule I	0	-
2	Schedule II	4	-

A comprehensive Central Legislation namely Wild Life (Protection) Act was enforced in 1972 to provide protection to wild animals. Schedule-I of this act contains the list of rare and endangered species, which are completely protected throughout the country. The list of wild animals and their conservation status as per Wild Life Act (1972) presented in Table 3 are the species recorded/reported from the study area, out of which 4 species belongs to schedule-II, 2 species belongs to schedule-III, 1 species belongs to schedule-V and rest of the species belongs to schedule-IV of Wildlife protection Act, 1972.

3.13 SOCIO - ECONOMIC ENVIRONMENT

An assessment of socio - economic environment forms an integral part of an EIA study. Therefore, baseline information for the same was collected during the study period. The baseline socio - economic data collected for the study region, before the proposed expansion project is operational, has been identified for the four major indicators viz. demography, civic amenities, economy and social culture. The baseline status of the above indicators is compiled in forthcoming sections.

3.13.1 DEMOGRAPHY

The population details (i.e. population distribution and population density) of the Taluka Vagra, District Bharuch and the study area within 10 km radius are presented in Table-3.16 & its graphical representation is given in Figure-3.9.

TABLE – 3.16

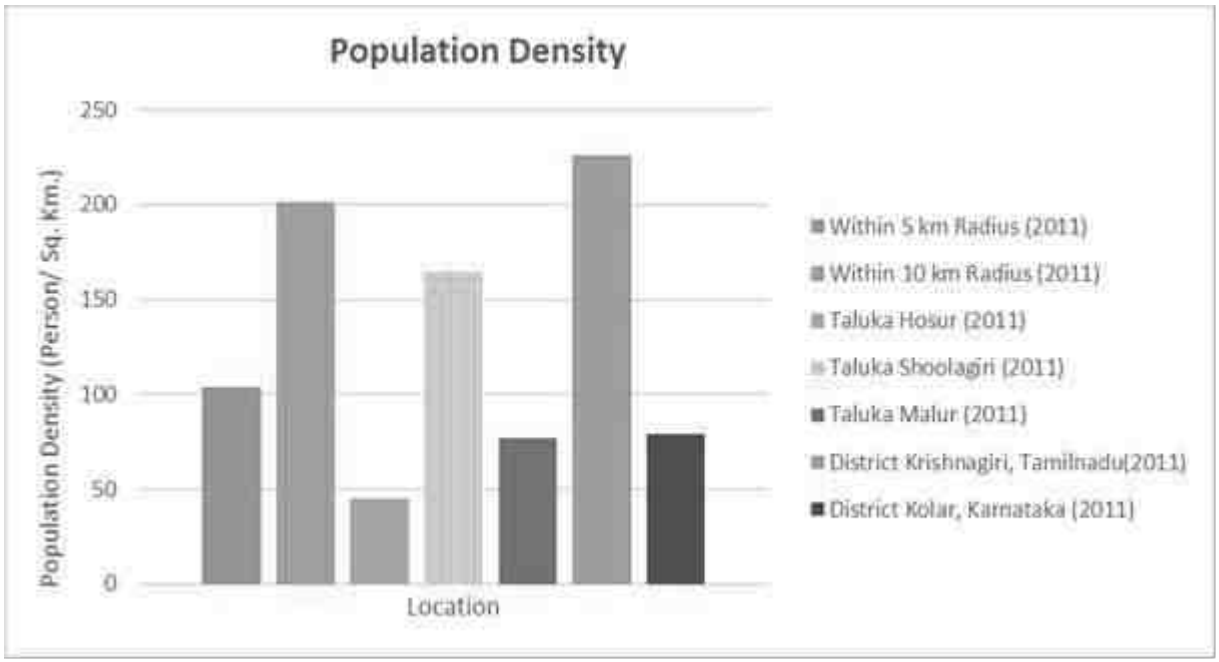
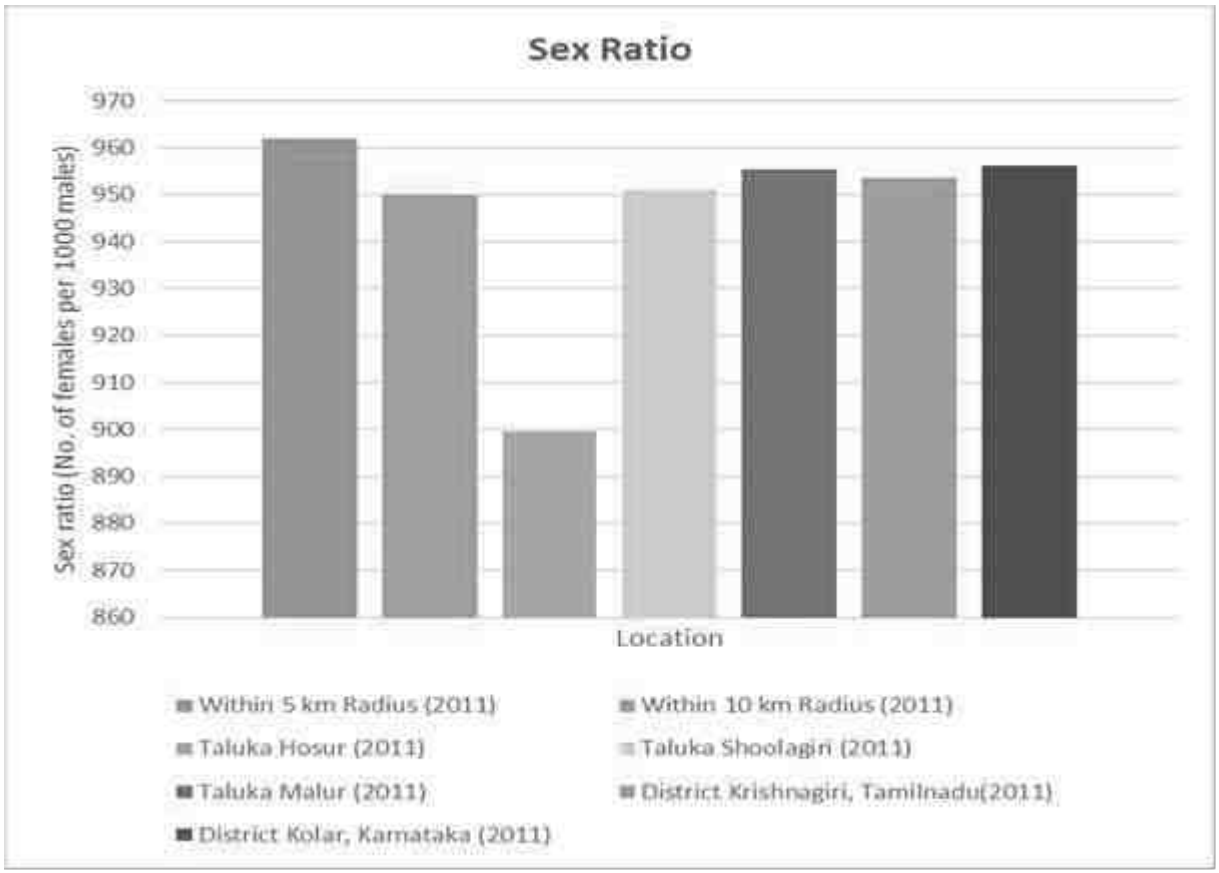
FIGURE - 3.14

POPULATION DENSITY





3.13.2 LITERACY RATE

The literacy rate is a major factor, which influences the socio-cultural condition of a particular place. Details of literacy rate in District krishnagiri & Kolar, Taluka Hosur, shoolagiri & Malur and within 10 km radius and 5 km radius of project site are given in Table 3.20 while their graphical representation is shown in Figure 3.10. It is observed that the literacy rate in krishnagiri District as per 2011 Census data is 54.06% as percentage of literate population to the total population, with 61.10 % among male and 46.67% among female. Literacy rate in Kolar District, as per 2011 Census data is 56.59%, with 69.57% among male and 46.67% among female. Literacy rate in Taluka Hosur as per 2011 Census data is 57.32% with 64.57% among males and 52.51% among females. Literacy rate in Taluka Shoolagiri as per 2011 Census data is 53.17% with 60.03% among males and 46.12% among females. Literacy rate in Taluka Malur as per 2011 Census data is 58.89% with 66.16% among males and 51.28% among females.

TABLE – 3.18

LITERACY RATE

Name	Total Literacy(%)	Male Literacy (%)	Female Literacy (%)
Within 5 km Radius (2011)	59.98	67.29	52.39
Within 10 km Radius (2011)	54.76	61.95	47.20
Taluka Hosur (2011)	72.66	79.03	65.98

INTERPRETATION:

Within 10 km radius of the study area,Population density is 202 persons per sq. km. and the literacy rate is observed to be 54.76% having 61.95% among males and 47.20% among females and it can be interpreted that there is need to promote education to more and more people specifically promotion of education to girl child. Almost all the villages have more than 50% people as non-workers. It indicates that the problem of unemployment can be solved by providing proper training and education and also the need to establish more industries so that maximum number of employment can be generated. Basic amenities like Education facilities, Health care facilities, water supply, electric power supply, mode of transportation etc. are available in all villages.

CHAPTER – 4

ANTICIPATED ENVIRONMENTAL IMPACT & MITIGATION MEASURES

4.1 IDENTIFICATION OF IMPACTS

Various sources of pollution with respect to wastewater, the flue gas / process emission, hazardous waste and noise generation along with their qualitative and quantitative analysis as well as measures taken to control them are discussed herein with details. The network method was adopted to identify potential impact, which involves understanding of cause-condition-effect relationship between an activity and environmental parameters.

4.2 PREDICTIONS AND EVALUATION OF IMPACTS

An impact can be defined as any change in physical, chemical, biological, cultural and/or socioeconomic environment that can be attributed to activities related to alternatives under study for meeting the project needs. Impact methodology provides an organized approach for prediction and assessing these impacts. Scientific techniques and methodologies based on mathematical modeling are available for studying impacts of various project activities on environmental parameters.

The nature of the impacts due to said project activities are discussed here in detail. Each parameters identified in the proceeding chapter, is singularly considered for the anticipated impact due to various activities listed. The impact is quantified using numerical scores 0, 1, 2, 3, 4 and 5 in increasing order of activity. In order to assess the impact accurately, each parameter is discussed in detail covering the following:

1) Project activities likely to generate impact
2) Quantification and prediction of impact

4.2.1 WATER ENVIRONMENT

- The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source.
- The total wastewater generation will be 705 KL/Day. Industrial process wastewater = 600 KL/Day + washing = 75 KL/Day + Boiler/cooling = 30 KL/Day). and will be segregated into two stream High COD Stream & Low COD stream.
  - **Low COD stream:** Low COD effluent (105 KL/Day) will be treated through the conventional wastewater treatment system and the pass through RO system.
  - **High TDS Stream:** Neutralized concentrate effluent (600 KL/Day) and rejects from RO (225 KL/Day) will be evaporated in multi effective evaporator (MEE). The treated wastewater will be totally recycled and the solid waste generated will be disposed to TSDF (Common disposal Facility).
  - Domestic wastewater (100 KL/Day) will send to STP and Reuse in domestic and gardening purpose after treatment.

4.2.2 AIR ENVIRONMENT

The dispersion of pollutants in the atmosphere is a function of several meteorological parameters viz. temperature, wind speed and direction, mixing depths, inversion level, etc. A number of models have been developed for the prediction of pollutant concentration at any point from an emitting source. The Industrial Source Complex – Short Term (ISCST3) dispersion model is a steady-state Gaussian plume model. It is most widely accepted for its interpretability. It gives reasonably correct values because this obeys the equation of continuity and it also takes care of diffusion, which is a random process. For the present study, this model is used for the prediction of maximum ground level concentration (GLC).

The proposed air emissions at M/s. Chemplast Sanmar Limited. are SPM, SO_2, NO_2, & CO. The site specific and monitored details considered for input data for the software "ISC-AERMOD View" by Lakes Environmental, Canada for prediction of impact on air environment are given in Table 4.2. The site-specific hourly meteorological data measured at site is given in Table 3.8. In order to conduct a refined air dispersion modeling using ISCST3 and ISC-PRIME short-term air quality dispersion models, the site specific hourly meteorological data measured at site is pre-processed using the U.S. EPA PCRAMMET and U.S. EPA AERMET programs. Before starting air dispersion modeling with ISC-AERMOD View,

a building downwash analysis using BPIP View was done. BPIP View is a graphical user interface designed to speed up the work involved in setting up input data for the U.S. EPA Building Profile Input Program (BPIP) and Building Profile Input Program – Plume Rise Model Enhancements (BPIP-PRIME).

The air pollution caused by the gaseous emissions from a single or small group of stacks is a local phenomenon. Its impacts will occur at a distance ranging from within the immediate vicinity of the stack to several kilometers away from the stack. Maximum ground level concentration will occur within this range. All plumes at more downwind distances from the source by stack emission become so diluted by diffusion in the ambient atmosphere, that concentrations of pollutants become negligible. The maximum ground level concentration for different parameters is given in Table 4.4. Equal concentration contour plots for PM_{10}, $PM_{2.5}$, SO_2, NO_2, & CO are given in Figure 4.2. Adequate measures shall be taken to minimize air pollution by providing air pollution control equipment. Flue gases are discharged from stacks at adequate height.

The methodology for Air Quality Modeling using AERMOD View model is given in Figure 4.1.

BDL = Below Detectable Limit

Conclusion: Max. GLC value is at village **Kurubarapalli**

Level of SPM at village: Kurubarapalli **is** 88.88 μg/m^3 and due to proposed project, **Max. incremental GLC of SPM –** 0.41343 μg/m^3 will increase at village: Kurubarapalli and **predicted level SPM at Village:** Kurubarapalli **-** 89.29343 μg/$m^{3.}$ Distance GLC is 2.5 Km from Project Site.

Level of SO_2 and NOx, after prediction also were found within NAAQS.

4.2.3 NOISE ENVIRONMENT

During Construction Phase

Following measures are taken for abatement of noise during construction phase:

- Noise emissions from construction equipment are kept to a minimum by regular maintenance.
- Heavy and noisy construction jobs were avoided during night hours.
- Noise generation due to movement/operation of vehicles and equipment/ machineries are well managed by restricting the movement/operation during night hours.
- Management ensures effective set up of traffic management system in order to minimize the usage of horns and other such equipment which may add to noise generation.
- Further the management decide to restricted the movement of heavy vehicles during night.
- All machineries to be used for construction purpose are of high standard of reputed make and compliance of noise pollution control norms by this equipment are emphasized by the company.
- Further, it also ensures to carried out periodic and regular maintenance of the equipment, machines and spare parts which are including lubrication, replacement of defective parts etc. in order to bring down the decibel of noise to maximum possible extent.
- Feasibility of putting up acoustic enclosure / temporary barrier around areas with high noise levels are also explored.
- Management ensures that no hazard is caused due to noise generation during the course of work. For this purpose, they ensure that the workers are provided with individual protective equipment like ear muffs or ear plugs in areas with high exposure to noise.

During Operation Phase

Following measures are adopted for abatement of noise during operation phase:

- Acoustic laggings, enclosures and silencers are provided wherever necessary for high noise generating equipment.
- Sound proof glass paneling are provided for all operating stations / control rooms as well as for shift rooms at critical places.
- Strict implementation/ compliance of all statutory norms w.r.t. noise generation, occupational exposure are done.
- Noise generating sources in the plant areas shall be monitored regularly. Monitoring of ambient noise levels are be carried out regularly both inside the premises as well as outside the greenbelt.

However, due to the attenuation of noise level within the factory and due to the fact that the project site is situated in a well developed industrial estate and not in the immediate vicinity of human settlement, significant impact is not expected in the nearest present human settlement. The volume of transport vehicles to be handled is very low. The company shall develop a green belt around the periphery of the premises, which shall act as a barrier to the propagation of noise from the factory premises. This shall further reduce the noise levels appreciably.

4.2.4 HAZARDOUS WASTE DETAILS

Hazardous wastes generation is Topic 2.12.1

4.2.5 INFRASTRUCTURE AND SERVICES

The plant is located in a well-developed industrial area, which has all essential facilities such as water, power, fuel, post, telecommunication, bank, etc. M/s. Chemplast Sanmar Limited shall get water from CGWA or government water source and re-use. The Power requirement will be 14000 KVA from State Electricity Department . The transportation of raw materials and finished products shall be by road. As stated earlier, the site is adjacent to State Highway. As a result of proposed project there will be a marginal increase in transportation activity as compared to present total traffic up to plant premises. As a result of development of industrial estate, the neighboring areas have developed for commercial use. The infrastructure services e.g. roads, state transport, post and telegraph, communication, education and medical facilities, housing, etc. have improved in the surrounding areas in recent years.

4.2.6 ENVIRONMENTAL HAZARD

Raw material such as different chemicals etc. shall be transported by road and are stored in the plant premises. On site emergency plan are prepared for storage and handling of hazardous chemicals and also be submitted to relevant authorities. This report are prepared with the consideration of hazards associated with the chemicals and taken care for all aspects of environmental hazards. The project proponent has consider all the safety aspects in planning, designing and operation of the plant as per standard practices. Hence, no adverse impact on this account is anticipated.

4.2.7 HOUSING

Enough number of dwellings are available in the town for accommodating extra workforce. On neighboring towns or villages, the impact on this account is minimal.

4.2.8 ECOLOGY

The impact due to operation of the project and its activities on the ecological parameters like natural vegetation, cropping pattern, fisheries and aquatic life, forests and species diversity could be summarized as below.

4.2.8.1 NATURAL VEGETATION

The industry has develop a green belt on the surrounding periphery. Since the effluents and emissions generated from the project activities will be treated and disposed as per the EMP provisions. Therefore any adverse impact over any of the ecological components of the environment is reduced to minimum.

4.2.8.2 CROPS

Since, the project is on a non-agricultural land, it shall not alter the crop production of the area. Further, the necessary environmental protection measures have been planned under EMP e.g. air pollution control systems shall be designed to take care of even emergency releases of the gaseous pollutants and regular environmental surveillance shall be done, so as not to have any short-term or cumulative effect on the crops and the natural vegetation of the area.

4.2.8.3 FISHERIES AND AQUATIC LIFE

Since the effluents and emissions generated from the project activities shall be treated and disposed as per the EMP provisions, proposed project shall not envisage any adverse effect on fisheries and aquatic life.

4.2.8.4 AESTHETIC ENVIRONMENT

The project will be developed on industrial land with good landscape and plantation. Increase in fugitive emission due to very limited construction activities and increase in the vehicular movement due to the proposed project may have minimal adverse impact on the visual quality. However, this impact can be minimized with implementation of an environment management plan. The proposed activities and further plantation will enhance the aesthetic environment.

4.2.8.5 DEMOGRAPHY, ECONOMICS, SOCIOLOGY AND HUMAN SETTLEMENT

M/s. Chemplast Sanmar Limited will generate direct and indirect employment as per prevailing norms of state government for skilled and unskilled people for the proposed expansion project for manufacturing pesticide & pesticide intermediate. There is a positive effect due to improved communication and health services, which have lead to economic prosperity, better educational opportunities and access to better health and family welfare facilities. There has been a beneficial effect on human settlement due to employment opportunities from various industries in region in addition to employment generated by

M/s. Chemplast Sanmar Limited proposed expansion project more direct and indirect employment will be generate.

Local quality of life has improved. This factor combined with all other mitigation measures, like proper treatment and disposal of hazardous waste; liquid effluent and gaseous emission, has minimized the adverse impact on ecology and has a beneficial impact on human settlement and employment opportunities. There has been a beneficial impact on the local socio-economic environment. There shall be no displacement of any population in plant area. Any major activity that may lead to resettlement of the people is considered as permanent impact. Hence, there is no permanent impact on this account. The increasing industrial activity will boost the commercial and economical status of the locality up to some extent.

Socio-Economic Environment

Environmental Impact Assessment is a study or an estimate of the probable positive or negative impact a proposed project or activity on the environment, consisting of natural, social and economic aspects. An assessment of socio-economic environment forms an integral part of an EIA study. Therefore, base-line information for the same was collected during the study period. The base-line Socio-Economic data collected for the study region has been identified in four major indicators namely - Demography, civic amenities, Economy and social culture.

Employment:

During construction phase of the company, skilled and un-skilled manpower were required and their requirement met with from the local community. The manpower requirement for the proposed project will generate permanent and secondary jobs for the operation and maintenance of plant. M/s. Chemplast Sanmar Limited will give direct employment to 1350 Nos. (Existing – 350 Nos. + Proposed – 1000 Nos.) local people based on qualification and requirement. In addition to direct employment, indirect employment shall generate ancillary business to some extent for the local population. With the employment opportunities, local people's income will increase and thereby, their economic status will boost up. Further, secondary jobs shall also increase in the local area to provide day-to-day needs/services to the working men. Demand for essential daily utilities in the market will also temporarily increase to some extent.

Public Health:

During construction period the workers will be provided wills safe water supply, low-cost sanitation facilities, first Aid Treatment, necessary personal protective equipment etc, to prevent an increase in diseases related to personal hygiene. With some other industrial units coming up in the surrounding area, Govt. dispensary, medical check-up, medicines,

services of nurses & doctors etc. are likely to be increased with a view to taking care of general health of the local community.

Transport:

With increased employment opportunities and higher economic status of the local community and with an increase in market conditions, transport facilities by way of buses, two-wheeler & four-wheeler vehicles will develop in future. Thus, overall development of the local community and their health is likely to become a matter of fact with the co-operation and support of industrial organizations of the local area. There is likely to be a beneficial impact on the local Socio-Economic environment. There shall be no displacement of any population in the plant area. The increasing industrial activity will boost up the commercial and economical status of the locality to some extent. To control the emission from process and utility stacks, the company would regularly examine, inspect and test its emission to make sure that the emission is below the permissible limit. With this, the status of sanitation and community health of the area would not change.

4.2.8.6 FOREST, NATIONAL PARKS / SANCTUARIES

There is no reserved forest & no national park or sanctuary within 10 km radius of the plant. There shall be no impact on the same.

4.2.8.7 PLACES OF ARCHAEOLOGICAL/HISTORICAL/RELIGIOUS/TOURIST INTEREST

There is no place of archaeological, historical, religious or tourist interest within the study area i.e.10 km radius of plant site. Hence, there shall be no impact on places of interest.

4.2.8.8. BENEFICIAL IMPACT OF GREEN-BELT

Plants grown in such a way as to function as pollutant sinks are referred to as green belts. Green belts are an effective tool in mitigating air pollution as they form a surface capable of absorbing air pollutants and forming sinks for pollutants. Leaves with their vast area in a tree crown, absorb pollutants on their surface, thus effectively reduce their concentrations in the ambient air. Apart from functioning as pollutant sinks, green belts provide other benefits like aesthetic improvement and providing possible habitats for birds and animals, thus re creating hospitable nature in an otherwise drab urban- Industrial scene. An important aspect of a green belt that is to be considered is that the plants constituting green belts are living organisms with limits to their tolerance towards air pollutants. As a result crossing the threshold limits in terms of pollution load, would lead to injury to plants causing death of tissues and reducing their absorption potential. Thus green belt is effective as pollution sink only within the tolerance limits of constituent plants.

Advantages of Green-Belt:-

- Air Pollution control- Trees help in removing carbon dioxide and other pollutants from air and by release of oxygen into the air thereby improving air quality. A green belt development can also help in removing particulate matter from the air by trapping such particulate matter.
- Noise control- A green belt reduces the intensity of sound. It functions as a barrier. Trees can either deflect, refract or may absorb sound to reduce its intensity. The intensity reduction depends on the distance sound has to travel from source. Trees can also modify suitably the humidity and climate which affects sound intensity.
- Help in soil erosion control. Plant species help in improving soil quality and bind soil particles thereby preventing erosion. Green belts also help in containing water run offs.

4.3 IMPACTS ON HUMANS

Positive Impact:

The unit will generate the local employment for the proposed project. The project is likely to give a boost to the economy of the area and provide primary and secondary sectors employment to local people.

Project will lead to development of ancillary industries and an overall economic growth of nearby towns to supplement the population of the area.

Project proponent will ensure to connect even last people with the infrastructural facility like educational, health, road etc in the locality.

Other needs and social-economic aspects of local inhabitants will be dealt with CSR activities & CER activities in the region.

Negative Impact:

There will be transformation of many aspects of human life like social structures, livelihood pattern, health institution, education etc which is subject to realization and behavioural change of the Project Affected Family (PAFs).

4.4 IMPACT AND MITIGATION MEASURES OF GEOLOGY

Impact:

During Operation, Accidents and risk assessments - Changes in soil chemistry due to addition of foreign material due to system failures and/or accidents.

In case of accidents mentioned in the risk scenarios proper actions will be taken according to the mitigation measures.

Storage, Transportation and Handling of Construction and other Raw Material and Hazardous Waste - Changes in soil texture will lead to change in porosity, permeability & other such physical characteristics of soil of the area.

Mitigation Measures:

Properly lined/paved area for the works having potential of leakage/spillage of fuel or material like area for Storage of construction and other raw material etc. Proper mitigative measures like use of efficient pollution control systems, proper stack height, use of top soil in plantation results in no significant impact on soil of the core zone. There will be no impact on soil of the study area located beyond the working area of the proposed project. Soil samples will be collected and tested at regular intervals from the nearby areas. This will help in mitigation of any harmful impact on soil due to the project activity, if any. Transportation of hazardous waste will be done as per CPCB Guidelines. The dumpers will be covered to prevent spillage or dusting. The drivers will be imparted training. The containers/ dumpers will be marked with the name of TSDF where it is to be sent, contact details and the other details required.

4.5 IMPACT AND MITIGATION MEASURES OF GEOHYDROLOGY

Impact:

Temporary contamination of groundwater may occur due to leakage and spillages. The existing water level is less than 10 m hence care is required during the transportation and storage. Contamination of groundwater may occur due to existing water level during any kind of accidents or leakage. This will affect villages located around the site and crops may also get affected.

Mitigation Measures:

Properly lined/paved area for the works having potential of leakage/spillage of fuel or material like area for Storage of raw material etc. Transportation of hazardous waste will be done as per CPCB Guidelines. The dumpers will be covered to prevent spillage or dusting. The drivers will be imparted training. The containers / dumpers will be marked with the name of TSDF where it is to be sent, contact details and the other details required.

Plant water/ wastewater treatment and its conveyance system shall be designed and proper monitoring and care shall be taken for effective management of treated effluents.

4.6 IMPACT ON ECOLOGICAL ENVIRONMENT

There will be negligible impact on Ecology and Biodiversity of the study area as the project site is located outside Notified Industrial Estate of and the unit will not be disposing any effluent on land or water body.

The land at present is barren and does not support any flora & fauna. After the commissioning greenbelt of approx. 33% developed around the periphery of the projects site which will have positive impact since it will support various Faunal & Floral diversity.

Also greenbelt will help in purifying the air and reduce noise pollution Greenbelt will increase the aesthetic value of the site and increase employment.

Hence the proposed project will create positive impact on EB environment by increasing the green area of the region.

4.7 TRAFFIC MANAGEMENT

Impact of Transportation

The vehicular traffic of trucks will increase during the construction phase. There will be increase of 4 trucks, 219 cars, 23 bikes per day and may cause additional air pollution to the surrounding areas. The effects may be more prominent.

During Operation, Trucks, tankers and other vehicles may cause traffic jam outside and within the premises and cause additional air pollution.

Mitigation Measures:

This will be temporary and restricted to construction phase only. However proper traffic management will be followed as per the specified norms.

A well-developed main road and internal road are made and having carrying capacity to take care of additional traffic due to proposed project.

Therefore no additional roads will required to be constructed therefore there will not be any change in land use of the study area.

However, Separate entry and exit gate shall be provided and trained security guards shall be deployed to ensure proper management and movement of vehicles within premises. Internal RCC road along with signboard of traffic sign will be provided. Traffic rules and discipline shall be strictly implemented.

Adequate internal road of will provided for uninterrupted movement of fire tender.

Speed break bumper shall be provided on internal road at regular interval to avoid over speed.

No vehicles will stop near weight bridge, wheel washing area after completion of activities.

To prevent Road accident following precautions to be taken :

- Transportation of waste/raw materials/ products by only authorized vehicles
- Regular training to drivers
- Organize awareness program
- Implementation of MSDS and TREM card

4.8 MATRIX REPRESENTATION

The parameters discussed are presented in the form of a matrix. The quantification of impact is done using numerical scores 0 to 5 as per the following criteria.

Score	Severity criteria
0	No impact
1	No damage
2	Slight/ Short-term effect
3	Occasional reversible effect
4	Irreversible/ Long-term effect
5	Permanent damage

4.8.1 CUMULATIVE IMPACT CHART

The total negative impact of various activities on any one parameter is represented as a cumulative score and the cumulative scores of various parameters are given in the form of a cumulative impact chart presented in Table-4.5. Any particular parameter having an individual score greater than 5 or cumulative score of 20 implies serious effects due to the project and calls for suitable mitigation measures. It is evident from the matrices that the resultant impact is beneficial to the local population.

The scores for various parameters and activities are presented in Table 4.5.

TABLE – 4.4

ENVIRONMENTAL IMPACT MATRIX

Activities	Environmental Parameter										
	Air Quality	Noise & Odour	Water Quality	Land Environment	Infrastructure	Services	Environmental Hazard	Housing	Terrestrial Ecology/ Land use	Socioeconomic Status	Aquatic Ecology

4.9 SUMMARY

Regular water sprinkling on roads and regular vehicular maintenance is done to reduce fugitive emissions during vehicle movements. Vehicles having PUC certificates will only be allowed to transport materials, equipment's and will be closed/ covered with tarpaulin sheet to avoid dust dispersion at site. Company is using Furnace Oil & Diesel for existing Boiler, Thermic Fluid Heater & D.G.Sets. After expansion, Company will use Imported Briquettes/ Furnace Oil & Diesel as fuel for proposed Boiler, TFH, & D.G.Sets. Mechanical Dust collector & Stack is provided to control flue gas emission.

After expansion, Company will provide Mechanical Dust collector or ESP + water scrubber & Stack to control flue gas emission. Adequate Scrubber system will be provided to control process gas emission and to mitigate the impact of air pollution. Unit has provided separate entry and exit for the smooth traffic movement. Power requirement supplied by State Electricity Department and D. G. set will be used only in case of power failure. The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source. The total wastewater generation will be 705 KL/Day and will be segregated into two stream High COD Stream & Low COD stream. Solid/ hazardous wastes will be disposed as per Hazardous waste rules, 2016. Approximately 1350 people [Existing: 350 people + proposed: 1000 people] will be employed to local skilled and unskilled people based on qualification and requirement and preference will be given to local person for fulfilment of the manpower requirement.

CHAPTER – 5
ANALYSIS OF ALTERNATIVES (TECHNOLOGY & SITE)

5.1 ANALYSIS OF ALTERNATIVES (TECHNOLOGY)

- Existing Manufacturing facility is well equipped with advanced technologies and this project is just the expansion similar to existing facility.
- We have well equipped and established R&D to develop and scale up the new products from the group of Synthetic Organic chemicals and Pesticide intermediates.
- We have both Technical and non-technical man power in existing facility and hence readily available to oversee the expansion and commissioning.

5.2 ANALYSIS OF ALTERNATIVES (SITE)

No other sites were considered for the proposed expansion project for the following reasons,

- Land of the existing site is classified for the industry usage.
- Adequate land is available adjacent to the existing site for the expansion.
- No rehabilitation or resettlement of local people required.
- All the existing amenities like transportation of materials, fuels, waste disposal, etc... Can continue as such for expansion project.

CHAPTER - 6

ENVIRONMENTAL MONITORING PROGRAM

6.1 PROJECT ENVIRONMENT MONITORING PLAN

M/s. Chemplast Sanmar Limited will adopt comprehensive environmental monitoring plan which is essential to take into account the changes in the environment.

The objective of monitoring is:

- To verify the result of the impact assessment study in particular with regards to new developments.
- To follow the trend of parameters which have been identified as critical
- To check or assess the efficiency of controlling measures
- To ensure that new parameters, other than those identified in the impact assessment study, do not become critical through the commissioning of new project.

To monitor effectiveness of Control Measures:

- Monitor daily, Assess effectiveness of the Control Measures being implemented, Explore the need to modify or add new Control Measures particularly if a violation is observed & Report weekly.
- Regular monitoring of environmental parameters will be made to find out any deterioration in environmental quality.
- Monitoring of the proposed project area will be regularly conducted. The attributes, which merit regular monitoring, are specified underneath.

6.2 LABORATORY FACILITIES

M/s. Chemplast Sanmar Limited has developed its own laboratory equipped with different equipment i.e. analytical balance, pH meter, COD digester (heating) apparatus, oven, incubator, Gas Chromatography (GC),High Performance Liquid Chromatography (HPLC),Liquid chromatography with Mass Spectrophotometer (LCMS),TDS meter, Filter Kit, KF titrator, moisture detector and necessary glass-wares. Equipment of quality control laboratory is also available for analysis of environment parameters**. M/s. Chemplast Sanmar Limited** has made plan of the regular monitoring to ensure that pollution will be limited to below prescribed limits and to take corrective action. In case the monitored results of environment pollution shall be found to exceed the prescribed limits, remedial actions shall be taken through the concerned plant authorities.

6.2.1 DOCUMETATION & RECORDS

The environmental department with respect to operation of pollution control facility is being/will maintain following records:

- Instruction manual for operation and maintenance of pollution control equipments.
- Log sheet for self-monitoring of pollution control equipments.
- Manual for monitoring of Air, water for ambient conditions.
- Instruction manual for monitoring of water, solid and gaseous parameter discharged from the factory and also for various parameters of pollution control facilities.
- Statutory records as per the Environmental Acts.
- Monthly and annual progress reports.
- Medical checkup of employees.
- Regularly these documents & records shall be reviewed for necessary improvement of the monitoring plan/mitigation measures/environmental technologies as well as for necessary actions of Environmental Management Cell.

6.3 POST PROJECT MONITORING PLAN

Environment monitoring plan for proposed plant has described in Table-6.1 along with Environment Components, parameter, standards to be followed, location and frequency.

TABLE - 6.1

PROJECT ENVIRONMENT MONITORING PLAN

Environmental Component	Parameters	Standards	Frequency
Air Environment			
AAQM at plant site	As prescribed by TNPCB including $PM_{2.5}$, PM_{10}, SO2, NO_2, CO	Prescribed by CPCB	Once in a month through NABL Lab.
Stack emission monitoring	Parameters prescribed by TNPCB of Flue Gas emission and Process Gas Emission	Prescribed by TNPCB	Once in a month by NABL Lab.
Fugitive emissions/ work place monitoring within the plant side	VOC	Prescribed by TNPCB	Once in a year by external Lab using LDAR study
Water Environment			
Treated effluent water and STP outlet	Parameters prescribed by TNPCB	Water quality Standards	Once in a month by external lab
Ground water quality	Parameters prescribed by TNPCB	Water quality Standards	Once in a month by external lab
Noise Environment			
Ambient Noise at plant site	Noise level in dB(A)	As per National Noise Standards	Once in a Month
Soil Environment			
At plant site	Analysis of pH, conductivity, Sulphates, calcium, magnesium, Cl^-	--	Once in a year by external lab
Meteorological data			
At plant site	Monitoring of Wind direction & velocity, relative Humidity, temperature and Rain fall	-	Daily basis at in-house

6.3.1 MONITORING METHODOLOGIES

Monitoring of environmental samples shall be collected as per the guidelines provide by MoEF&CC/ CPCB/ TNPCB. The method followed shall be recommended/standard method approved/recommended by MoEF&CC/ CPCB.

Method of Environmental Sampling & Analysis

Attributes	Method	
	Sampling / Preservation	**Analysis**
A. Air Environment 1. Micro meteorological data 2. Ambient Air Quality	Mechanical/automatic 1. Mechanical or automatic weather station/Meteorological Department 2. Samplers (Designed as per USEPA) to collect $PM_{2.5}$, PM_{10} and the gaseous samples	-- Standard methods such as IS - 5182 & CPCB guideline, ASTM, etc.
B. Noise	Instrument: Noise level meter	--

6.4 ENVIRONMENT POLICY

SANMAR

CHEMPLAST SANMAR LIMITED

Custom Manufactured Chemicals Divn.

OCCUPATIONAL HEALTH, SAFETY, ENVIRONMENT AND QUALITY POLICY

Chemplast Sanmar Limited (Custom Manufactured Chemicals Divn), Berigai, has established and applies an Occupational Health, Safety, Environmental and Quality (OHSE& Q) Management System for the Development and Manufacture of Active Pharmaceutical Ingredients, Drug Intermediates, Speciality Chemicals and Phytochemicals.

Chemplast Sanmar Limited (Custom Manufactured Chemicals Divn), is committed to combine integrity with excellence to ensure prosperity to all the stakeholders on continuous basis and improve its OHSE&Q Management System and Wellbeing performance with emphasis on

- **Compliance with the applicable legal and other requirements including Responsible Care code and Together** for Sustainability (TfS) of practices pertaining to Occupational Health, Wellbeing, Safety, Environment and Quality aspects.
- **Clear assignment of Roles, Responsibility, Accountability and Authority and providing resources, information,** instruction, supervision, training and knowledge to all the employees and contractors to improve their awareness and competencies.
- **Identifying and managing risks and opportunities throughout the organisation their by inculcating safe** working practices to prevent injuries, ill health and to ensure Occupational Health, Wellbeing and Safety at workplace by identification, eliminating the hazards and reduces the risk.
- **Regular monitoring, measuring and evaluating the Occupational Health, Wellbeing, Safety, Environment and** Quality performance for continual improvement.
- **Conducting periodic audit, assessment of Occupational Health, Wellbeing, Safety, Environment and Quality management by relevant techniques and analyze to take corrective and preventive actions.**
- **Encouraging consultation, communication, participation and respond effectively by recognizing the views of** the employees and contractors, relevant interested parties and stakeholders in periodic reviews of the Occupational Health, Wellbeing, Safety, Environment and Quality Management System.
- **Systematically determine the customer requirements and strive for continuous improvement of our people,** our processes and our products to meet the customer's satisfaction.
- **To ensure continual improvement in all its management systems by setting Occupational Health, Wellbeing, Safety, Environment and Quality objectives and achieving the same by planning, providing adequate** resources and technologies.
- **Consideration of Occupational Health, Wellbeing, Safety, Environment and Quality aspects in Product** Development, Purchase, Manufacture, Storage, Transport and Waste Disposal activities.
- **Protecting the Environment and Prevent Pollution by minimizing Waste through Process optimization,** Reduction, Recovery, Reuse and Recycle.

The Occupational Health, Wellbeing, Safety, Environment and Quality Policy will be communicated within the organisation and made available to interested parties.

The Policy will be reviewed for its adequacy once in two year or earlier if required.

R. Krishna Kumar

Dr. Krishna Kumar Rangachari
Deputy Managing Director
Date: 29/06/2022

Rev No:10

6.5 ENVIRONMENTAL MANAGEMENT CELL

Apart from having an environmental management plan, it is also necessary to have a permanent organizational set up charged with the task of ensuring effective implementation. In this effect, **M/s. Chemplast Sanmar Limited** will assign responsibilities to officers from various disciplines to co-ordinate the activities concerned with management and implementation of environment control measures.

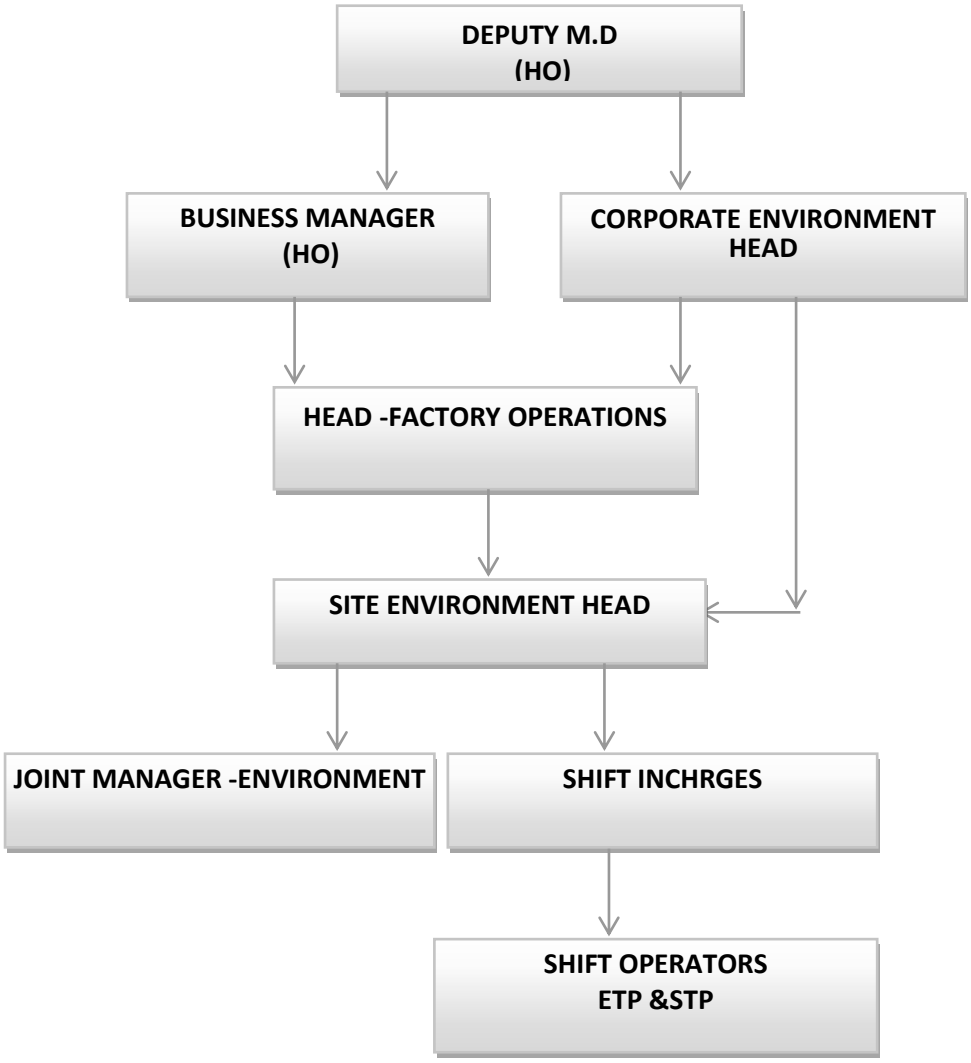
An organogram of environment management cell is shown in Figure 6.1. This department shall undertake the monitoring of environment pollution level by measuring stack emissions, Ambient air quality, water and effluent quality, Noise level, etc. either departmentally or by appointing external agency whenever necessary.

M/s. Chemplast Sanmar Limited will carry out the regular monitoring in future as well as ensure that pollution is limited below prescribed limits and shall take corrective action by providing new pollution control equipment if required. In case the monitored results of environment pollution are found to exceed the prescribed limits, remedial actions are taken through the concerned plant authorities. The actual operation and maintenance of pollution control equipment of each department is under respective department heads.

The environmental department shall also look after preparation and submission of Water Cess Return, Environmental statement and Consolidated Consent & Authorization application/ renewal under water (Prevention and Control of Pollution) Act, 1974, Air (Prevention and Control of Pollution) Act, 1981, Ambient Air Quality as per NAAQS Standards, 2009 and Hazardous & Other Wastes (Management and Transboundary Movement) Rules, 2016 under Environment Protection Act, 1986.

FIGURE - 6.1

ORGANOGRAM OF ENVIRONMENT MANAGEMENT CELL



6.6 SYSTEM OF REPORTING OF NON COMPLIANCES / VIOLATIONS OF ENVIRONMENTAL NORMS TO THE BOARD OF DIRECTORS OF THE COMPANY AND / OR SHAREHOLDERS OR STAKEHOLDERS AT LARGE.

Company have a system of reporting of non compliances / violations of environmental norms to the Partner

- Operators will be responsible for Operation of EHS system. If any problem will be observed in operation, then the operator will report the same to the shift in-charge.
- Shift in-charge will be responsible for implementing HSE Management Programs. If any non-compliances/ violations of environmental norms will be observed, then the shift in-charge will report the same to the Site Environmental Head
- Site Environmental Head will be responsible to define and monitor the key characteristics for measure of performance in production, maintenance and EHS. Site Environmental Head is responsible to report the non-compliances received to Head factory operation.
- Head factory operation (Plant Manager) will have overall responsibility for effective implementation of Occupational Health, Safety & Environment Management System (OHS & EMS) and the Head factory operation will conduct management review every twice a month to assess the effectiveness of HSE Management System. If necessary, resources will be allocated for taking Corrective and Preventive action on Non-Conformance within time period. Head factory operation is responsible to report the non-compliances received to Top management (Business manager, Corporate Environmental Head, Deputy MD).
- Top management (Business manager, Corporate Environmental Head, Deputy MD) will advise and monitor the establishment and implementation of HS & EMS.
- Verification activities, including internal HSE Audits shall be carried out at the direction of Head factory operation & \ Top management.

CHAPTER - 7
ADDITIONAL STUDIES

In order to support the environment impact assessment and environment management plan, following additional studies have been included in the report.

- Risk assessment
- Disaster Management Plan
- On-site and off-site emergency action plan
- Occupational Health and Safety Management System

7.1 PUBLIC HEARING

The TNPCB will conduct the Public Hearing/public consultation, as per the provisions of EIA notification, 2006. The Public Hearing will be chaired by an Officer not below the rank of Additional District Magistrate. The issues raised in the Public Hearing and during the consultation process and the commitments made by the project proponent on the same will be included separately in EIA-EMP Report in a separate chapter and summarized in a tabular chart with financial budget (capital and revenue) along with time-schedule of implementation for complying with the commitments made. The minutes of the public hearing will be included in this report after completion of the public hearing.

Considering scale of unit and its categorization, according to EIA notification dated 14th September 2006, by Ministry of Environment & Forest (MoEF), Government of India, unit is located outside notified industrial area & their proposed expansion project falls in category A – 5(b) & 5 (f) as per EIA Notification, 2006. So, we have applied for Environmental Clearance at MoEF & CC, New Delhi. For that unit needs Environmental clearance from Ministry of Environment, Forest & Climate Change.

7.2 REHABILITATION AND RESETTLEMENT (R & R)

The unit is located outside Notified Industrial Area. There is no habitation on the proposed expansion project activity area and it is inside the existing industry land. There shall not be displacement of any population in project area. The increasing industrial activity will boost the commercial and economical status of the locality up to some extent. Hence, R & R policy is not applicable to this project.

7.3 RISK ASSESSMENT

7.3.1 INTRODUCTION

Hazard analysis involves the identification and quantification of the various hazards (unsafe conditions). On the other hand, risk assessment deals with recognition and computation of

risks, the equipment in the plant and personnel, due to accidents resulting from the hazards present in the plant.

Risk assessment follows an extensive hazard analysis. It involves the identification and assessment of risks the neighboring populations are exposed to as a result of hazards present. This requires a thorough knowledge of failure probability, credible accident scenario, vulnerability of population etc. Much of this information is difficult to get or generate. Consequently, the risk assessment is often confined to maximum credible accident studies. It provides basis for what should be type and capacity of its on-site and off-site emergency plan also what types of safety measures shall be required.

7.3.2 APPROACH TO THE STUDY

Risk involves the occurrence or potential occurrence of some accidents consisting of an event or sequence of events. The risk assessment study covers the following:

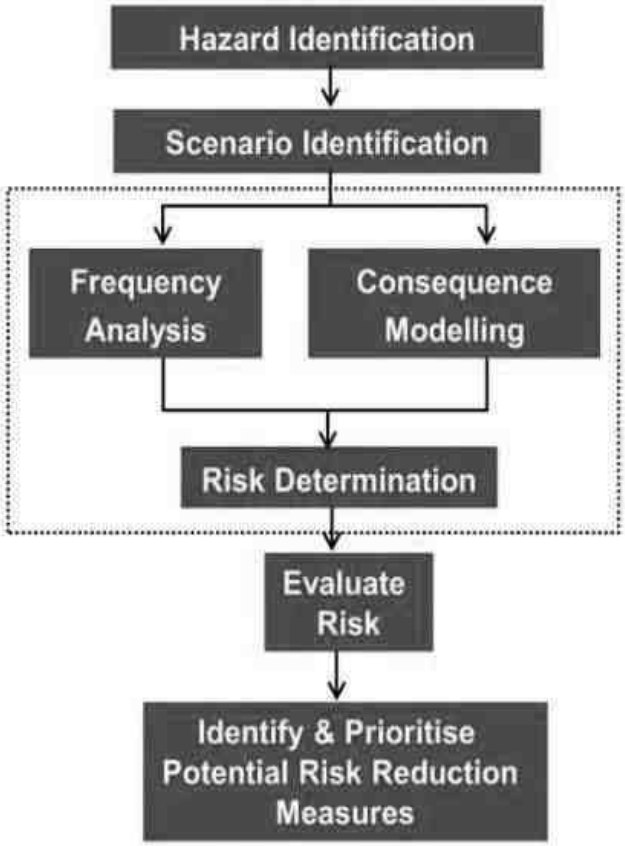
- Identification of potential hazard area;
- Identification of representative failure cases;
- Visualization of the resulting scenarios in terms of fire and explosion;
- Assess the overall damage potential of the identified hazardous events and the impact zones form the accidental scenarios;
- Furnish the recommendations on the minimization of the worst accident possibilities
- Preparation of Disaster Management Plan;
- Emergency Plan, which includes Occupational and Health Safety Plan;

7.3.3 METHODOLOGY

Quantitative risk assessment (QRA) is a means of making a systematic assessment of the risks from hazardous activities, and forming a rational evaluation of their significance, in order to provide input to a decision-making process. The term 'quantitative risk assessment' is widely used, but strictly this refers to the purely numerical assessment of risks without any evaluation of their significance. The study has been conducted based on the premises of a traditional Quantitative Risk Assessment. The key components of a QRA are explained below, and illustrated in Figure-7.1 and Figure-7.2.

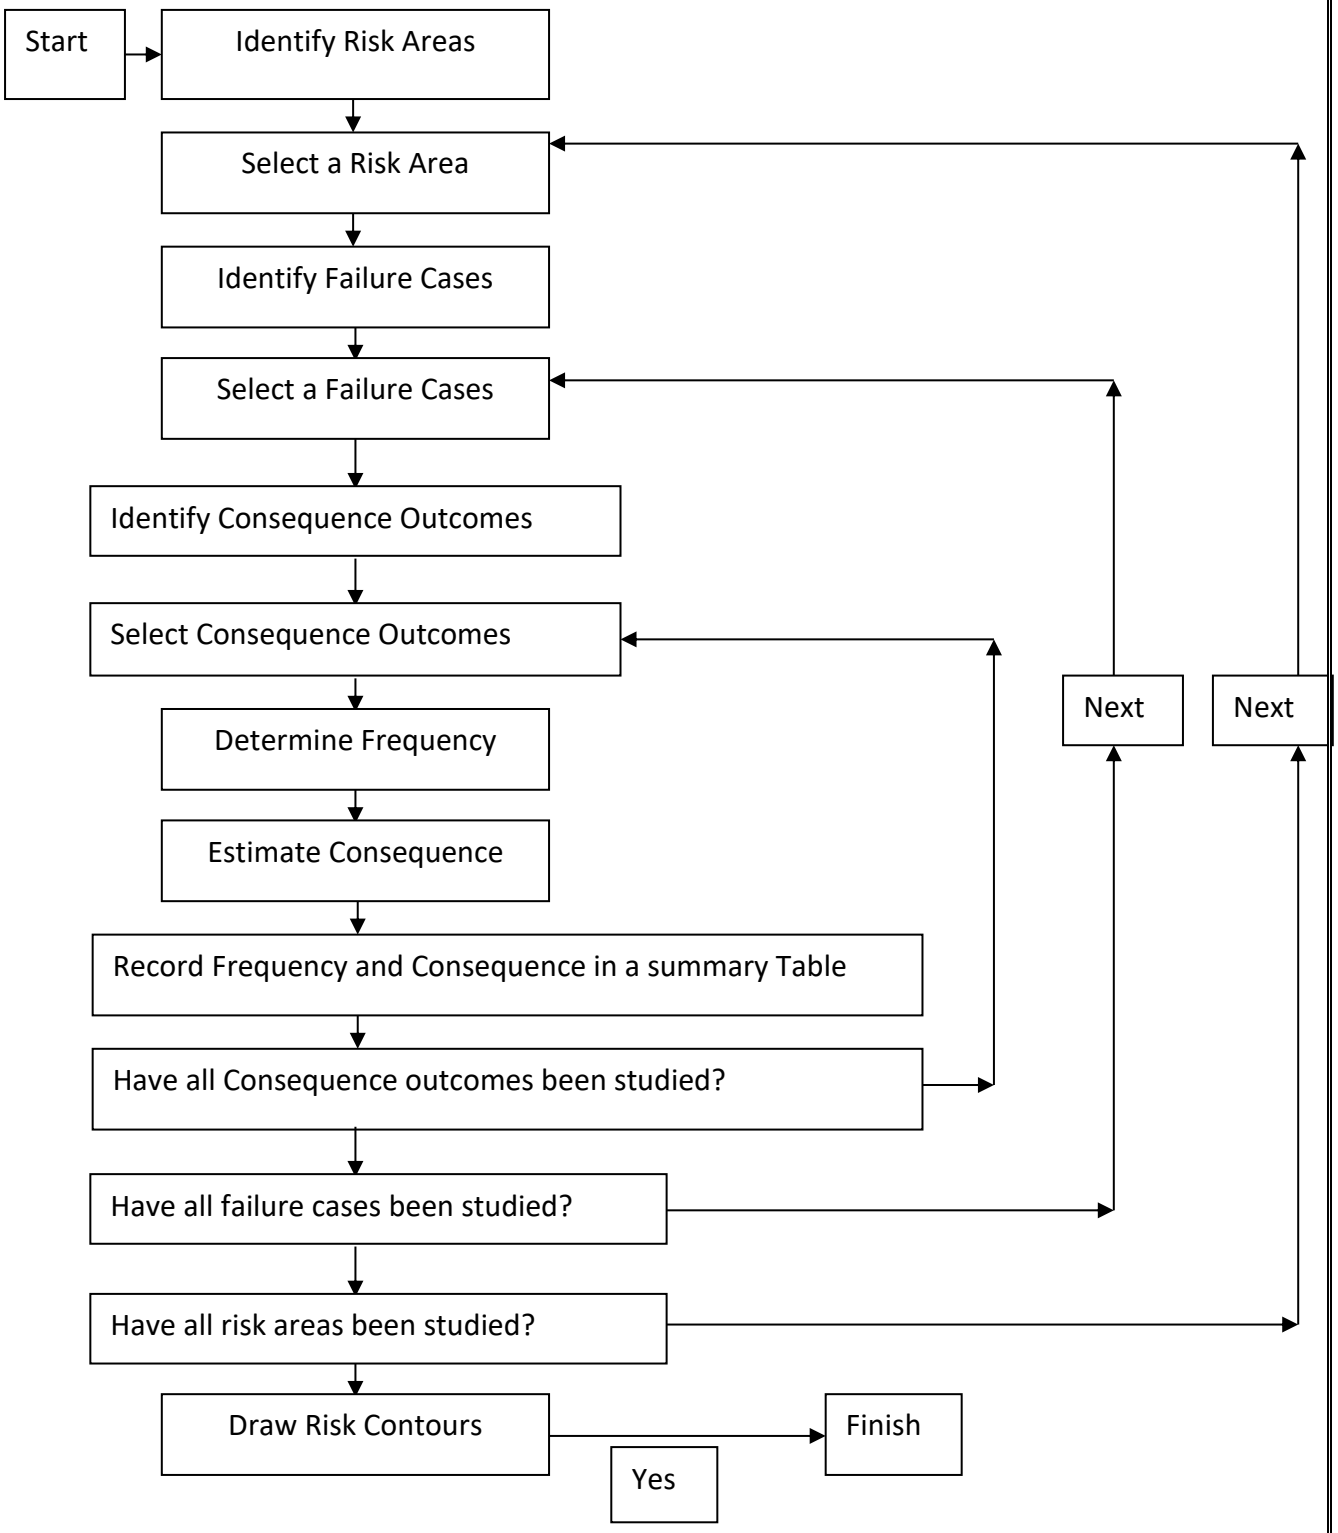
FIGURE – 7.1

QRA METHODOLOGY



FIGURE–7.2

FLOW CHART FOR QUANTITATIVE RISK ASSESSMENT



7.3.4 HAZARD IDENTIFICATION

Identification of hazards in the project activity is of primary significance of the analysis, and quantification. Hazard states the characteristics of system/plant/process that presents potential for an accident. All the components of a system/plant/process need to be thoroughly examined to assess their potential for initiating or propagating an unplanned event/sequence of events, which can be termed as an accident.

7.3.4.1 IDENTIFICATION OF HAZARDOUS AREAS

The procedure for QRA starts with identification of major risk areas in the installation. Operation carried out in specialty and agrochemical Industries usually come under certain board, general categories. At M/s. Chemplast Sanmar Limited, major risk areas are as follows:

- Bulk storage area for Raw Materials at ambient temperature and atmospheric pressure.
- Process Plant involving pumping, transportation, reactors, distillation, heating, cooling, etc.
- Bulk loading and unloading from storage tanks to road takers and vice versa.

7.3.4.2 IDENTIFICATION OF FAILURE CASES FOR HAZARDOUS AREAS

- Release due to catastrophic failure of storage tanks or process vessels.
- Rupture of connected pipe with storage tank or process vessels.
- Continuous release at significant rates for long durations transfer pipelines caused by sudden, major break of the pipeline.
- Continuous release at low rate through small holes or cracks in piping and vessels, flange leaks, and leakage from pump glands and similar seals.

  It is to be noted that for Quantitative Risk Assessment, worst case scenarios has been considered, though their frequency of occurrence is much lower than the cases of small leaks.

7.3.4.3 MAJOR HAZARDOUS AREAS AND SAFETY PRECAUTIONS

The hazardous chemical storage area is shown in Figure-7.3. The major Hazardous chemicals to be stored, transported, handled and utilized within the plot area are summarized in the Table-7.1. Other hazards and control measures are summarized in Table-7.2. Facilities / System for process safety, transportation, firefighting system and emergency capabilities to be adopted are stated below.

FIGURE-7.3

HAZARDOUS CHEMICAL STORAGE AREA

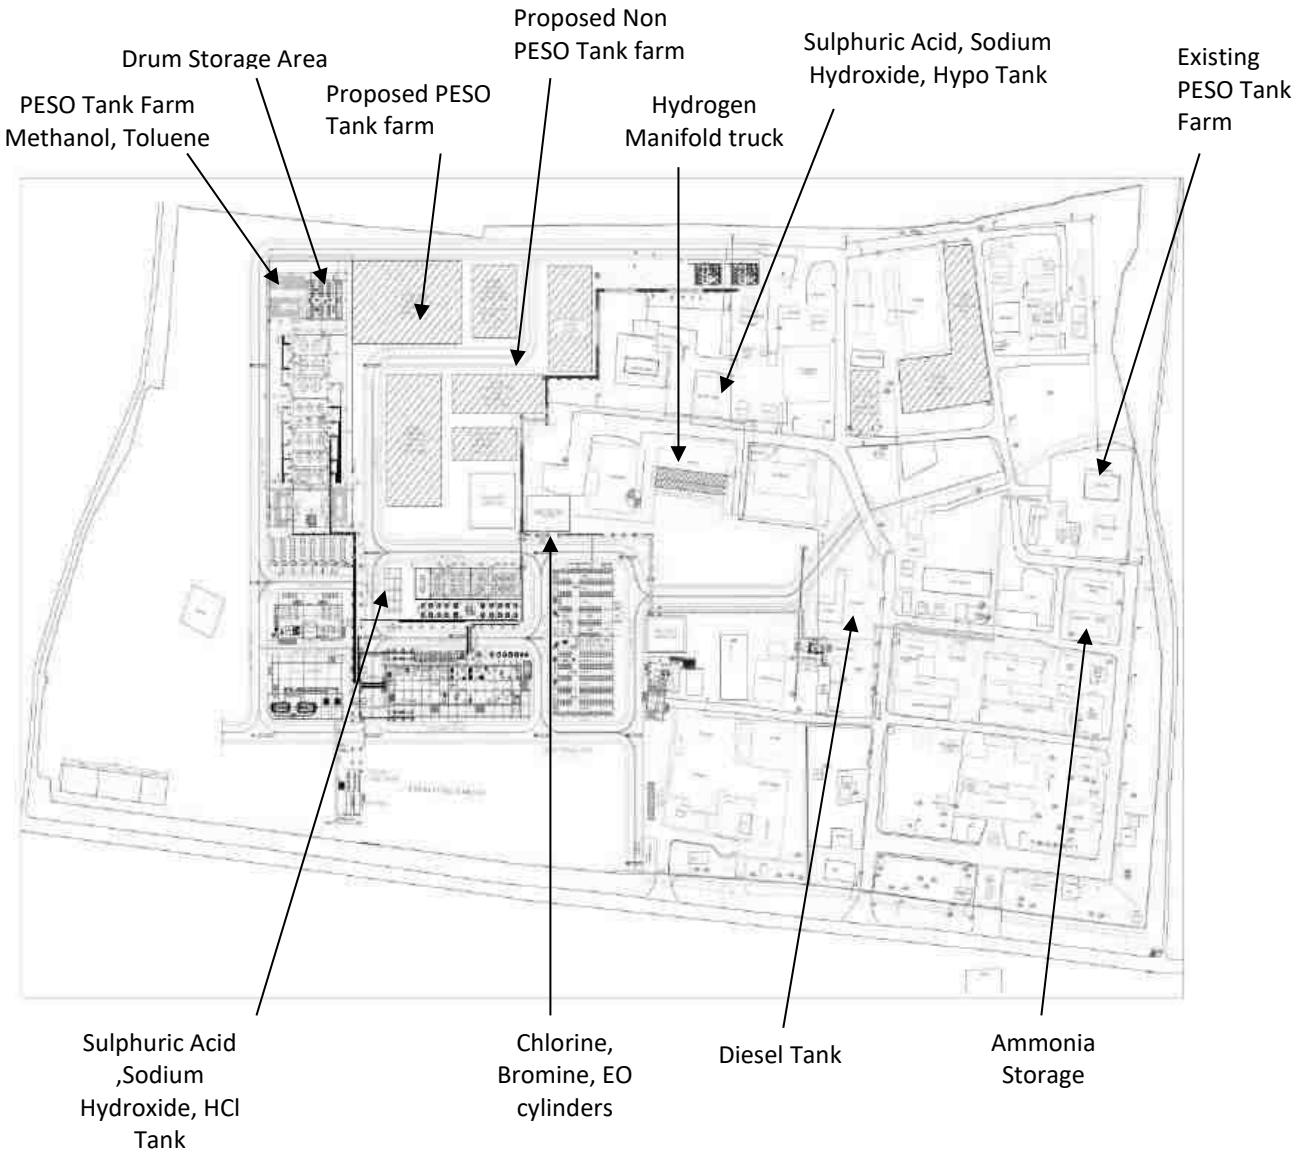


TABLE-7.1

STORAGE AND HANDLING DETAILS OF HAZARDOUS CHEMICALS

Sr. No.	Name of the Material	Type of Hazard	Kind of Storage	Max. quantity to be stored (MT)	Storage condition i.e. temp., pressure	Tank Dimensions in (m)	Dyke Dimensions
1	Acrylonitrile	Fire	MS DRUMS	5 MT	25 TO 35 C	NA	Hx34cm Wx13cm
2	Acetic Acid	corrosive	CARBOYS	1MT	25 TO 35 C	NA	Hx34cm Wx13cm

TABLE 7.2

OTHER HAZARDS AND CONTROL

SR. NO.	NAME OF THE POSSIBLE HAZARD OR EMERGENCY	ITS SOURCES & REASONS	ITS EFFECTS ON PERSONS, PROPERTY & ENVIRONMENT	PLACE OF ITS EFFECT	CONTROL MEASURES PROVIDED
1	**BOILER** (1) Burning (2) Physical injury (3) Explosion	Over pressure in the boiler if safety valve not working. Water level indicator not working. Low water level indicator fails. High temp. System fails.	Minor/Major Injury Loss of human life Loss of property (Loss of Main/ Machine Material)	Boiler House and surroun ding places	Lower & Upper Level Indication System provision. Safety valves for pressure control fixed temp. & pressure indicator provided. Blow down & blowing system provided for cleaning tube and shell. Soft water used. Inter locking provided on pumps, FD fan, ID fan. Periodical checking & inspection maintenance done. Yearly inspection done by Boiler Inspector.
2	**ELECTRICITY** (1) Burning (2) Fire (3) Shock	Loose Contacts, Weak earthling Short Circuit Improper Insulation	Burning, Shock, Death	Surroun ding the accident area	Proper Earthing, Periodical Checking of joints, proper insulations of Equipments, etc. Flame proof fitting in solvent storage area, bounding and jumpers to all solvent barrier lines provided.
3	**HOUSE KEEPING** (1) Physical (2) Burning (3) Fire (4) Chemical Exposure	Bad House keeping	Physical / Chemical Thermal Burn Injury (Major / Minor)	In all surroun ding areas i.e. Storage, Plants	Proper Handling, regular cleaning, Proper placement of material **(RIGHT THING AT THE RIGHT PLACE)**
4	**PIPE LINE LEAKAGES Spillages etc**. (1) Corrosion (2) Toxic gas release	Leaking of pipe line due to corrosion, Loose contact etc.	Physical / Chemical Thermal Burn Injury (Major / Minor)	Plant area	Proper maintenance, Proper Selection of Material for pipe lines, Immediate attention, Earthing provided, flame proof fitting, NO SMOKING Boards displayed.
5	**Structural Failure**	Inside the factory (Corrosion)	Injury/Death to persons, damage to property	Within the factory	Automatic operation Periodic Testing of safety valves Regular Inspection and Maintenance
6	**Toxic Release from outside**	Outside the factory	Injury/Death	Within & outside the unit	Alarm, Evacuation rescue & shelter/ Welfare
7	**Natural Calamity**	Nature	Injury / Death to persons, damage to property	Within & outside the unit	Alarm, Evacuation rescue & shelter/ Welfare

7.4 SAFETY PRECAUTIONS DURING STORAGE AND TRANSPORTATION OF HAZARDOUS CHEMICALS

7.4.1 Control measures provided for Solvent Tank Farm:

1. Construction & Installation of solvent storage facility is provided as per explosive act, (License & local rules / regulation followed).
2. Flame proof electrical fitting & intrinsically safe instruments are installed.
3. Flame arrestor installed on vent pipe with breather valve & emergency vent valve provided.
4. Flame arresters are provided on tank farm.
5. Earth fault relay trip installed for solvent tanker unloading system (Solvent pump having interlock with grounding of the tanker to make 100% grounding.).
6. Grounding (double earthing) & Jumper for flange joint provided for all installation & it is monitored periodically.
7. Road Tanker grounded before unloading.
8. Deep in let pipe provided inner side of the solvent tanks.
9. Check list is followed for loading & unloading.
10. Level indicator provided on the tank.
11. Adequate dyke wall (non-combustible) is provided.
12. Leakage collection bund with foam system is provided.
13. Combustible Gas Detection system, Fire (Foam / Powder) extinguisher, Foam monitors is provided.
14. F-30 coating provided for solvent storage tanks.
15. Nitrogen blanketing system is provided.
16. Closed handling system is provided.
17. Online LEL detector is provided
18. Area is covered with hard barricading for restricted person access.

7.4.2 Control measures provided for Acid / Alkali Tank Farm:

1. Adequate dyke wall (with acid proof coating) provided.
2. Level indicator with high level alarm provided on the tank.
3. Scrubber system installed storage tank & used during road tanker unloading.
4. Adequate flexible SS hose provided for tanker connection for unloading.
5. Dedicated pumps are provided and located with its close proximity to the respective tank to avoid unintentional mistake of mixing of chemicals.
6. Leakage / Spillage handling kit provided.
7. To avoid chemical exposure, closed handling system is provided.
8. Fire hydrant system provided including water curtain system.

Transportation, Unloading and handling procedure for Solvents

SR. NO.	ACTIVITY	TYPE OF POSSIBLE HAZARD	MITIGATION MEASURES
1	Transportation of Solvents by road tanker	Leakage& Spillage Fire, Toxic release	• Check the source of leakage point. • Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. • Stop leak if you can do it without risk. • Use water spray to reduce vapors; do not put water directly on leak, spill area or inside container. • Keep combustibles (wood, paper, oil, etc.) away from spilled material. • Isolate the area • Isolate the tank • Training will be provided to driver and cleaner regarding the safe driving, hazard of Flammable chemicals, emergency handling, use of SCBA sets. • Instructions will be given not to stop road tanker in populated area. • Clear Hazard Identification symbol and emergency telephone number will be displayed as per HAZCHEM CODE.
2	Road tanker unloading Solvents at site	Leakage& Spillage Fire, Toxic release	• Check the source of leakage point. • Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. • Stop leak if you can do it without risk. • Use water spray to reduce vapors; do not put water directly on leak, spill area or inside container. • Keep combustibles (wood, paper, oil, etc.) away from spilled material. • Isolate the area & Isolate the tank • Check the source of leakage point. • Spray the water on leakage • Priority will be given to Tanker to immediately enter the storage premises at site and will not be kept waiting near the gate or the main road. • Security person will check License, TREM CARD, Fire extinguisher condition; SCBA set condition, required PPEs as per SOP laid down.

			• Operator will take sample as per sampling SOP from sampling point. • After approval of QC department unloading procedure will be allowed be started. **Following precautions will be adopted during unloading** • Static earthing and earthing relay will be provided to road tanker. • Tanker unloading procedure will be followed according to check list and implemented. • The quantity remaining in the hose pipeline will be drained to a small underground storage tank, which will be subsequently transferred by nitrogen pressure to the main storage tank thus ensuring complete closed conditions for transfer from road tanker. • Finally earthing connection and wheel stopper will be removed. • Only day time unloading will be permitted.
3	Solvents Storage tank safety	Leakage& Spillage, Fire Toxic release.	• Check the source of leakage point. • Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. • Stop leak if you can do it without risk. • Use water spray to reduce vapors; do not put water directly on leak, spill area or inside container. • Keep combustibles (wood, paper, oil, etc.) away from spilled material. • Check the source of leakage point. • Spray the water on leakage • SS storage tank will be provided as per IS code. • Dyke wall will be provided to storage tank. • Level transmitter will be provided with low level high level auto cut-off provision. • Vent will be connected to water trap and vent of water trap will be provided with flame arrestor. • Water sprinkler system will be provided to storage tank. • Fire hydrant monitor with foam attachment facility will be provided. • Dumping / Drain vessel/alternate vessel will be provided to collect dyke wall spillage material. • FLP type pump will be provided.

			• Nitrogen blanketing will be provided to storage tank. • Double static earthing will be provided to storage tank. • Double Jumper clip will be provided to all Solvent handling pipeline flanges. • Online LEL detector is provided
4	Solvents transfer from storage tank to Day tank	Leakage& Spillage due to Line rupture, Flange Gasket failure, Fire, Toxic release.	• Double on / off switch will provided at tank farm and process area near day tank. Pump auto cut off with day tank high level will be provided. • Flame arrestor will be provided on day tank vent. • Over flow will be provided for additional safety and it will be connected to main storage tank. • NRV will be provided on pump discharge line. • Double Jumper clip will be provided to all solvent handling pipelines. • Double static earthing will be provided to day tank.
5	Solvents transfer from Day tank to reactor	Leakage, Spillage due to Line rupture, Flange Gasket failure, Fire, Toxic release.	• Gravity transfer. • Total quantity of day tank material will be charged in to reactor at a time. • NRV will be provided on day tank outlet line. • Static earthing will be provided to storage tank. • Double Jumpers will be provided to pipeline flanges.

7.5 HAZARD CONTROL MEASURES

A) Hazard Control Measures:		
1) Fire Hazard	**2) Others Hazard**	**3) Chemical / Solvent leakage**
▪ Flameproof electrical apparatus installed at probable fire hazard area. ▪ Well maintained Fire Fighting Apparatus (fire extinguisher, fire hydrant system) in sufficient quantity. ▪ Well defined storage facility for fire hazard substances. ▪ Copper Jumpers are provided on solvent transferring lines. ▪ Earthing/Bonding system is provided at designated areas.	❖ WH & Solvent Building located away from other plants. ❖ Online flammable gas detection meters with audible alarm / hooter. ❖ Explosion proof wall & doors of process area where such hazards are apparent. ❖ Copper Jumpers are provided on solvent transferring lines.	✓ Handling of chemicals with confined containers / drums only. ✓ Availability of spillage control kit & sand buckets on specific locations. ✓ Regular monitoring of VOC level of plant by internally and externally agency and precaution are taken to avoid exposure.

▪ Smoke detectors and fire alarm system installed at site. ▪ Process / operation handling by competent person only. ▪ Permit to work system. ▪ Round the clock availability of qualified Safety Officer & Paramedic. ▪ Mutual aid with nearby industries and Disaster Preventive Management Centre.	❖ Earthing/Bonding system is provided at designated areas. ❖ Process operated by competent person only. ❖ Regular testing / inspection of pressure vessels by competent person ❖ Installation of safety valve on probable explosion hazards vessels. ❖ Permit to work system.	✓ PPEs like organic cartridge mask, air bubbler and full body pressure suit with breathing air provision are provided as and when required. ✓ People in vicinity of area are trained to use spillage control kit. ✓ SCBA set is readily available at designated locations for emergency scenario.

7.6 CONSEQUENCE ANALYSIS

In a plant handling hazardous chemicals, the main hazard arises due to storage, handling & use of these chemicals. If these chemicals are released into the atmosphere, they may cause damage due to resulting fires or vapour clouds. Blast Overpressures depend upon the reactivity class of material between two explosive limits.

Operating Parameters

Potential vapour release for the same material depends significantly on the operating conditions. Especially for any liquefied gas, the operating conditions are very critical to assess the damage potential. If we take up an example of ammonia, if it is stored at ambient temperature, say 30^{o}C, and then the vapour release potential of the inventory is much higher as compared to the case if it is stored at 0^{o}C.

Inventory

Inventory Analysis is commonly used in understanding the relative hazards and short listing of release scenarios. Inventory plays an important role in regard to the potential hazard.
Larger the inventory of a vessel or a system, larger the quantity of potential release. The potential vapour release (source strength) depends upon the quantity of liquid release, the properties of the materials and the operating conditions (pressure, temperature). If all these influencing parameters are combined into a matrix and vapour source strength estimated for each release case, a ranking should become a credible exercise.

Loss of Containment

Plant inventory can get discharged to Environment due to Loss of Containment. Certain features of materials to be handled at the plant need to the clearly understood to firstly list out all significant release cases and then to short list release scenarios for a detailed examination. Liquid release can be either instantaneous or continuous. Failure of a vessel leading to an instantaneous outflow assumes the sudden appearance of such a major crack

that practically all of the contents above the crack shall be released in a very short time. The more likely event is the case of liquid release from a hole in a pipe connected to the vessel. The flow rate is depending on the size of the hole as well as on the pressure, which was present, in front of the hole, prior to the accident. Such pressure is basically dependent on the pressure in the vessel. The vaporisation of released liquid depends on the vapour pressure and weather conditions. Such consideration and others have been kept in mind both during the initial listing as well as during the short listing procedure. In the study, Maximum Credible Loss accident methodology is to be used, therefore, the largest potential hazard inventories have been considered for consequence estimation.

7.6.1 DAMAGE CRITERIA

In consequence analysis, use is made of a number of calculation models to estimate the physical effects of an accident (spill of hazardous material) and to predict the damage (lethality, injury, material destruction) of the effects. The calculations can roughly be divided in three major groups:

a) Determination of the source strength parameters;
b) Determination of the consequential effects;
c) Determination of the damage or damage distances.

The basic physical effect models consist of the following.

Source strength parameters

* Calculation of the outflow of liquid, vapour or gas out of a vessel or a pipe, in case of rupture. Also two-phase outflow can be calculated.
* Calculation, in case of liquid outflow, of the instantaneous flash evaporation and of the dimensions of the remaining liquid pool.
* Calculation of the evaporation rate, as a function of volatility of the material, pool dimensions and wind velocity.
* Source strength equals pump capacities, etc. in some cases.

Consequential effects

* Dispersion of gaseous material in the atmosphere as a function of source strength, relative density of the gas, weather conditions and topographical situation of the surrounding area.
* Intensity of heat radiation [in kW/ m^2] due to a fire or a BLEVE, as a function of the distance to the source.
* Energy of vapour cloud explosions [in N/m^2], as a function of the distance to the distance of the exploding cloud.
* Concentration of gaseous material in the atmosphere, due to the dispersion of evaporated chemical. The latter can be either explosive or toxic.

It may be obvious, that the types of models that must be used in a specific risk study strongly depend upon the type of material involved:

- Gas, vapour, liquid, solid

- Inflammable, explosive, toxic, toxic combustion products
- Stored at high/low temperatures or pressure
- Controlled outflow (pump capacity) or catastrophic failure?

Selection of Damage Criteria

The damage criteria give the relation between extent of the physical effects (exposure) and the percentage of the people that will be killed or injured due to those effects. The knowledge about these relations depends strongly on the nature of the exposure. For instance, much more is known about the damage caused by heat radiation, than about the damage due to toxic exposure, and for these toxic effects, the knowledge differs strongly between different materials.

In Consequence Analysis studies, in principle three types of exposure to hazardous effects are distinguished:

1. Heat radiation, from a jet, pool fire, a flash fire or a BLEVE.
2. Explosion
3. Toxic effects, from toxic materials or toxic combustion products.

In the next three paragraphs, the chosen damage criteria are given and explained.

Heat Radiation

The consequence caused by exposure to heat radiation is a function of:

- The radiation energy onto the human body [kW/m^2];
- The exposure duration [sec];
- The protection of the skin tissue (clothed or naked body).
- The limits for 1% of the exposed people to be killed due to heat radiation, and for second-degree burns are given in the table herein:

Damages to Human Life Due to Heat Radiation

Exposure Duration	Radiation for 1% lethality (kW/m^2)	Radiation for 2nd degree burns (kW/m^2)	Radiation for first degree burns (kW/m^2)
10 Sec	21.2	16	12.5
30 Sec	9.3	7.0	4.0

Since in practical situations, only the own employees will be exposed to heat radiation in case of a fire, it is reasonable to assume the protection by clothing. It can be assumed that people would be able to find a cover or a shield against thermal radiation in 10 sec. time. Furthermore, 100% lethality may be assumed for all people suffering from direct contact with flames, such as the pool fire, a flash fire or a jet flame. The effects due to relatively lesser incident radiation intensity are given below.

Effects Due to Incident Radiation Intensity

INCIDENT RADIATION kW/m^2	TYPE OF DAMAGE
0.7	Equivalent to Solar Radiation
1.6	No discomfort for long exposure

4.0	Sufficient to cause pain within 20 sec. Blistering of skin (first degree burns are likely)
9.5	Pain threshold reached after 8 sec. second degree burns after 20 sec.
12.5	Minimum energy required for piloted ignition of wood, melting plastic tubing etc.

Explosion

In case of vapour cloud explosion, two physical effects may occur:

* a flash fire over the whole length of the explosive gas cloud;
* a blast wave, with typical peak overpressures circular around ignition source.

As explained above, 100% lethality is assumed for all people who are present within the cloud proper.

For the blast wave, the lethality criterion is based on:

* A peak overpressure of 0.1 bar will cause serious damage to 10% of the housing/structures.
* Falling fragments will kill one of each eight persons in the destroyed buildings.

The following damage criteria may be distinguished with respect to the peak overpressures resulting from a blast wave:

Damage Due To Overpressures

Peak Overpressure	Damage Type
0.83 bar	Total Destruction
0.30 bar	Heavy Damage
0.10 bar	Moderate Damage
0.03 bar	Significant Damage
0.01 bar	Minor Damage

From this it may be concluded that p = 0.17 E+5 pa corresponds approximately with 1% lethality. Furthermore it is assumed that everyone inside an area in which the peak overpressure is greater than 0.17 E+ 5 pa will be wounded by mechanical damage. For the gas cloud explosion this will be inside a circle with the ignition source as its centre.

Intoxication

The consequences from inhalation of a toxic vapour/gas are determined by the toxic dose. This dose D is basically determined by:

- Concentration of the vapour in air;
- Exposure duration.

Furthermore, of course, the breathing rates of the victim, as well as the specific toxic mechanism unto the metabolism play an important role.

The dose is defined as $D = C^n.t$, with:

C = concentration of the toxic vapour, in [ppm] or [mg/m^3];

t = exposure duration, in [sec] or [min];

n = exponent, mostly > 1.0; this exponent takes into account the fact that a high concentration over a short period results in more serious injury than a low concentration over a relatively longer period of exposure. The value of n should be greater than zero but less than 5.

The given definition for D only holds if the concentration is more or less constant over the exposure time; this may be the case for a (semi) continuous source. In case of an instantaneous source, the concentration varies with time; the dose D must be calculated with an integral equation:

$D = \int C^n.dt$

For a number of toxic materials, so-called Vulnerability Models (V.M.) has been developed. The general equation for a V.M. (probit function) is:

$Pr = a + b.\ln (C^n.t)$, with

Pr = probit number, being a representation of the percentage of people suffering a certain kind of damage, for instance lethality

Pr = 2.67 means 1% of the population;

Pr = 5.00 means 50% of the population;

a and b material dependent numbers;

$C^n.t$ = dose D, as explained above.

The values for a and b are mostly derived from experiments with animals; occasionally, however, also human toxicity factors have been derived from accidents in past. In case only animal experiments are available, the inhalation experiments with rats seem to be best applicable for predicting the damage to people from acute intoxication. Although much research in this field have been done over the past decades, only for a limited number of toxic materials consequence models have been developed. Often only quite scarce information is available to predict the damage from an acute toxic exposition. Data transformation from oral intoxication data to inhalation toxicity criteria is sometimes necessary. Generally, in safety evaluations pessimistic assumptions are applied in these transformation calculations. The calculated damage (distance) may be regarded as a maximum. For the purposes of a response to a major incident, the IDLH value level has been chosen for the 'wounded' criteria. This type of injury will require medical attention.

7.6.2 MAXIMUM CREDIBLE LOSS ACCIDENT SCENARIOS

A Maximum Credible Accident (MCA) can be characterised as the worst credible accident. In other words: an accident in an activity, resulting in the maximum consequence distance that is still believed to be possible. A MCA-analysis does not include a quantification of the probability of occurrence of the accident. Another aspect, in which the pessimistic approach of MCA studies appears, is the atmospheric condition that is used for dispersion calculations.

As per the reference of the study, weather conditions having an average wind speed have been chosen.

The Maximum Credible Loss (MCL) scenarios have been developed for the Facility. The MCL cases considered, attempt to include the worst "Credible" incidents- what constitutes a credible incident is always subjective. Nevertheless, guidelines have evolved over the years and based on basic engineering judgement, the cases have been found to be credible and modelling for assessing vulnerability zones is prepared accordingly. Only catastrophic cases have been considered and not partial or small failures (as is the case in Quantitative Risk Assessment where contributions from low frequency - high outcome effect as well as high frequency - low outcome events are distinguished). The objective of the study is emergency planning, hence only holistic & conservative assumptions are used for obvious reasons. Hence though the outcomes may look pessimistic, the planning for emergency concept should be borne in mind whilst interpreting the results.

7.6.2.1 CONSEQUENCE ANALYSIS CALCULATIONS

The Consequence Analysis has been done for selected scenarios. This has been done for weather conditions having wind speed. In Consequence Analysis, geographical location of the source of potential release plays an important role. Consideration of a large number of scenarios in the same geographical location serves little purpose if the dominant scenario has been identified and duly considered.

7.6.2.2 SOFTWARE USED FOR CALCULATIONS

PHAST MICRO: Phast is the most comprehensive software available for performing Process Hazard Analysis (PHA), Quantitative Risk Assessment (QRA) and Financial Risk Analysis (FRA). Our extensively validated software for consequence and risk assessment is used by governments and industry helping them to comply with local safety regulation and their own corporate best practice. Phast contains all the discharge, dispersion, effects and risk models you will need to accurately assess all your major hazards and associated risks. Phast Consequence provides you with comprehensive hazard analysis facilities to examine the progress of a potential incident from the initial release to its far-field effects.

TOXIC AND FLAMMABLE IMPACT

It calculates the initial discharge, as the material expands from its storage conditions to atmospheric, through dispersion, as the material mixes with air and dilutes, and the subsequent toxic or flammable effects. Phast includes a wide range of models for discharge and dispersion as well as flammable, explosive and toxic effects.

DISCHARGE

- Phast requires basic information about storage or process conditions and material properties in order to perform discharge calculations
- The software comes with an integrated material property database containing more than 1,600 pre-defined pure component chemicals

- Various discharge scenario options have been implemented to represent common process failures, and model their behaviour. These include:
  - ❖ Leaks and line ruptures from long & short pipelines
  - ❖ Catastrophic ruptures
  - ❖ Relief valve and disc ruptures
  - ❖ Tank roof collapse
  - ❖ Vent from vapour spaces
  - ❖ In building release effects

DISPERSION

The dispersion models within Phast are able to model the following phenomena

- Dispersion of gas, liquid and two-phase releases
- Liquid droplet thermo dynamics calculations and liquid droplet rainout
- Pool spreading and vaporization
- Building wake dispersion effects for vapour releases

FLAMMABLE EFFECTS

For releases of flammable material Phast calculates

- Radiation profiles and contours from a range of fire scenarios including pool fires, flash fires, jet fires and fire balls, including cross-wind effects on a jet fire
- Vapour Cloud Explosion modeling using industry standards models including the TNO Multi-energy, and TNT Equivalence models

TOXIC EFFECTS

- Graphs of toxic concentration profile
- Indoor and outdoor toxic dose prediction
- Reporting of distance to specific dose and concentration
- Calculated exposure time and use as “averaging time” for passive dispersion effects

PHAST RISK

Phast Risk allows you to combine the flammable and toxic consequences from each scenario in your QRA model with their likelihood to quantify the risk of fatalities. Phast Risk allows you to take account of local population distribution, sources of ignition, land usage and local prevailing weather conditions. It is designed to perform all the analysis, data handling and results presentation elements of a QRA within a structured framework.

Phast Risk allows you to quickly identify major risk contributors so that time and efforts can be directed to mitigating these highest risk activities. Based on effects calculations and population vulnerabilities, Phast Risk can integrate over all scenarios and weather conditions to estimate the total risk. The established individual and societal risk indicators

are predicted by Phast Risk across your facility and surrounding area using the classical QRA methodology. Risk ranking reports can be produced at points of strategic importance to show the relative influence of the various failure scenarios and their contribution to both the individual and societal risk metrics.

A key benefit of Phast Risk is the ability to identify major risk contributors and differentiate these from incidents with worst case consequences which might otherwise dominate the safety reviews. Whilst medium scale incidents have lesser consequences, they may have a higher frequency, which, when combined with their hazardous effects, generate a higher level of risk. Time and effort directed to mitigating high consequence but often low frequency events may not be well spent. Phast Risk helps you direct this effort more effectively.

Phast Risk also provides facilities to help you manage large quantities of input data, including scenarios, parameters, wind roses, ignition and population, and combine these in many ways. This is critical when looking at sensitivity analyses and assessing the merits of a range of risk reduction measures.

Benefits

- Facilitates cost reduction in terms of losses and insurance
- Allows optimization of plant and process design
- Assist in compliance with safety regulators
- Enables quicker response to hazardous incidents
- Improve engineer's understanding of potential hazards
- Regular software upgrades incorporate industry experience and expertise, and advances in consequence modeling technology

7.7 SCENARIOS

TABLE 7.4

POSSIBLE ACCIDENT SCENARIOS

Scenario	MCL Scenario	Mode of storage	Quantity
1	Release of Toluene	Tank	20 MT
2	Release of Methanol	Tank	50 MT
3	Release of Diesel	Tank	35 KL & 15 KL
4	Release of Hydrochloric Acid	Tank	30 KL
5	Release of Sulphuric Acid	Tank	50 MT
6	Release of Caustic lye	Tank	23 MT
7	Release of Chlorine	Cylinder	0.05 MT
8	Release of Bromine	Cylinder	0.05 MT

9	Release of Hydrogen	Cylinder	120 m3
10	Release of Ammonia	Cylinder	0.1 MT
11	Release of Ethylene oxide	Cylinder	0.03 MT
12	Unconfined Pool Fire Simulations for Drum Storage Area	Drums	65 MT

Scenario 1: Release of Toluene

This scenario considers release of Toluene from Storage Tank:

Catastrophic Rupture		
Input Data		
Stored quantity - 20 MT		
Molecular weight -92.14		
Wind speed – 3.14 m/s		
Density (Air) – 860 kg/m^3		
Results indicate		
Pool Fire Scenario		
Radiation Level (KW/m^2)	**Distance in meter**	**Effect**
4	90.85	This level is sufficient to cause personnel if unable to reach cover within 20s; however blistering of the skin (second degree burn) is likely; 0: lethality
12.5	39.15	This level will cause extreme pain within 20 seconds and movement to a safer place is instinctive. This level indicates around 6% fatality for 20 seconds exposure.
37.5	--	This level of radiation is assumed to give 100% fatality as outlined above.
Fireball Scenario		
Fireball Radius: 10.547 m		
Fireball intensity of Heat Radiation (KW/m^2) – 149.074		
Fireball rate of Energy release (KJ/Sec)- 107389		
Fireball total energy released (KJ)- 185056		
Fireball duration (Sec) – 1.72334		
Radiation Level (KW/m^2)	**Distance in meter**	**Injury Type**
4	266.07	Pain after 20secs.
12.5	119.35	1st degree Burn
37.5	--	100% Fatal

Storage & Handling

- Use PPE, including gloves, safety goggles, face shield, coveralls and boots depending on the type of handling task.
- Practice good housekeeping when storing, loading and transferring inventory.
- Wash hands after handling toluene and similar substances.
- Ground and bond containers while dispensing and filling materials.
- Keep containers closed when not in use.
- Ensure labels are readable.
- Monitor data of employee exposure.

Safety Precaution:

- Flame proof pumping and other equipments are provided.
- Transfer done in close process,
- Double static earthling and jumper clips are provided on flanges,
- Hydrant system and fire extinguishers are provided.
- Automatic sprinklers are provided.
- Tanker unloading procedure are made and followed.
- Adequate dyke wall (non-combustible) is provided.
- Combustible Gas Detection system, Fire (Foam / Powder) extinguisher, Foam monitors is provided.
- Nitrogen blanketing system is provided.
- Area is covered with hard barricading for restricted person access.

Scenario 2: Release of Methanol

This scenario considers release of Methanol from Storage Tank:

Catastrophic Rupture

Storage & Handling

- Permanently installed fire-extinguishing equipment provided in large storage facilities.
- Water cannons are generally installed in storage tank farms to cool steel constructions and neighbouring tanks in the event of fire.
- Large tanks have permanently installed piping systems for alcohol-resistant fire-extinguishing foams.

Safety Precaution:

- Flame proof pumping and other equipments are provided.
- Transfer done in close process,
- Double static earthling and jumper clips are provided on flanges,
- Hydrant system and fire extinguishers are provided.
- Automatic sprinklers are provided.
- Tanker unloading procedure are made and followed.

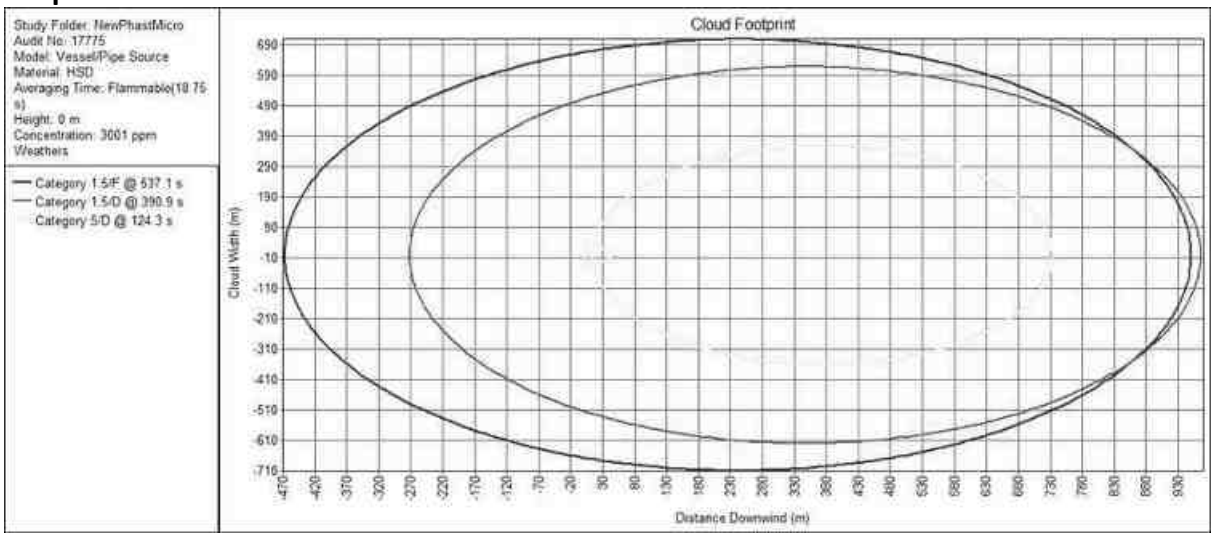
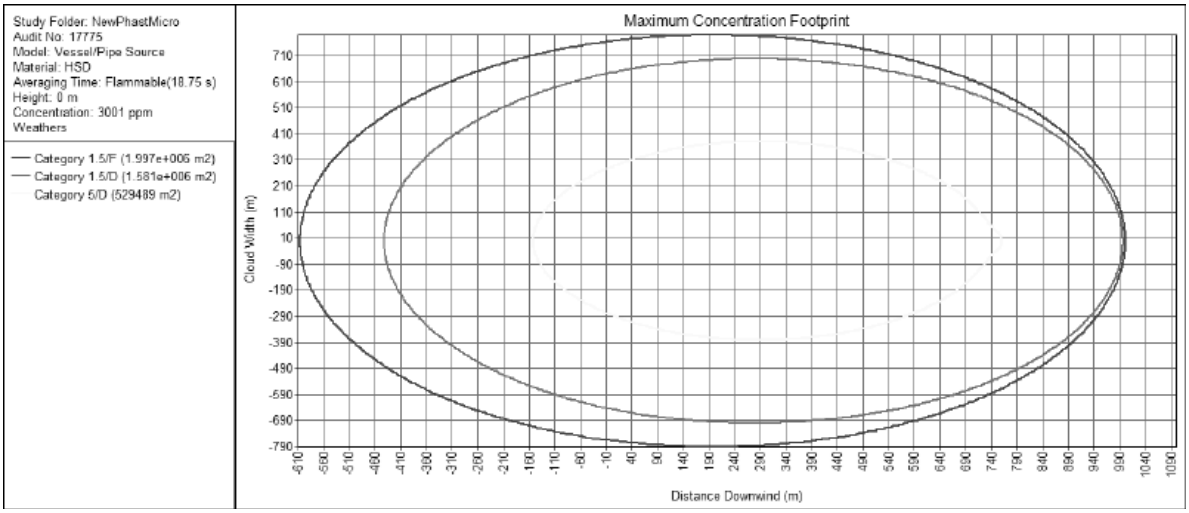
37.5	Not Reached	This level of radiation is assumed to give 100% fatality as outlined above.
Results indicate:		
Maximum Pool Radius-43.61m		

Graphs:





Storage & Handling

- Tanks designed and intended for aboveground use shall not be used as underground tanks.
- Tanks shall rest on firm, level ground or on foundations made of concrete, masonry, piling, or steel. Tanks shall be designed and built in accordance with recognized engineering standards for the material of construction being used.
- Storage tanks and their accessories shall be inspected and maintained according to manufacturer's guidelines or applicable standards.
- Every tank shall have an emergency relief venting device to relieve excessive internal pressure caused by an exposure fire.
- To prevent against accidental spills, single-wall tanks shall be protected by a diking system designed to hold the total tank capacity. An alternative to a diking system would be the use of a double-wall tank.
- Tank venting systems shall be provided with sufficient capacity to prevent blowback of vapor or liquid at the fill opening while the tank is being filled.

Safety Precaution

- Using a tank that is designated for outdoor use and has an Underwriters Listed (UL) stamp.
- Tanks that are designated to handle flammable liquids.
- Utilizing a tank that can handle several weeks to a month's worth of fuel.
- By limiting the fill ups, you reduce the risk of a spill. Keep in mind that you should not fill a tank over 95 percent capacity to allow for expansion.

- Open flames and smoking shall not be permitted in the area.
- The tanks should be installed in an east-west orientation to reduce the amount of solar radiation the tank receives.
- The tank should be marked with the name of the fuel contents and a sign with "FLAMMABLE–KEEP FIRE AND FLAME AWAY." The words should be at least six inches in height and be in a bright red color.
- "NO SMOKING" signs should also be conspicuously exhibited from various angles of approach.
- Class B type fire extinguishers should be mounted in easy to access locations.
- Do not place tanks where ignition sources such as welding and cutting torches are likely to be used.
- Tank saddles (either concrete or steel) are required by law unless tanks in contact with the ground are protected against corrosion.
- Everyone who works on or around the equipment or the fuel storage locations should be trained to identify and eliminate risks.
- Adequate dyke wall is provided.

Measures to be taken to prevent such accident

- Priority will be given to Tanker to immediately enter the storage premises at site and will not be kept waiting near the gate or the main road.
- Security person checks License, TREM CARD, Fire extinguisher condition, required PPEs as per SOP laid down.
- Store officer will take sample as per sampling SOP from sampling point.
- After approval of QC department unloading procedure is allowed be started.

Following precautions will be adopted during unloading

- Wheel stopper is provided to Tanker loading at unloading platform.
- Tanker unloading procedure is followed according to check list and implemented.
- Flexible hose connection is done at TL outlet line and checked for no leakage.
- The quantity remaining in the hose pipeline is drained to a small container, which will be subsequently transferred to the main storage tank thus ensuring complete closed conditions for transfer from road tanker.
- All Tanker loading valves will be closed.

Following precautions will be adopted Storage of such chemicals

- Storage tank is stored away from the process plant.
- Tanker unloading procedure is prepared and implemented.
- Caution note and emergency handling procedure is displayed at unloading area and trained all operators.
- NFPA label is provided.
- Required PPEs like full body protection PVC apron, Hand gloves, gumboot, Respiratory mask etc. is provided to operator.
- Neutralizing agent is kept ready for tackle any emergency spillage.
- Safety shower, eye wash with quenching unit is provided in acid storage area.
- Material is handled in close condition in pipe line.
- Dyke wall is provided to all storage tanks, collection pit with valve provision.
- Drain valve is provided.
- Level gauge is provided on all storage tanks.
- Safety permit for loading unloading of hazardous material is prepared and implemented.
- TREM CARD is provided to all transporters and trained for transportation Emergency of Hazardous chemicals.
- Fire hydrant system with jockey pump as per TAC norms is installed.

Mitigation measures to control Emergency:

- Safety Shower and eye wash is provided away from the tank and unloading station.
- Sand bags/ buckets is provided near tank area.
- Neutralizing medium (Lime and dry sand) is kept ready near tank farm.
- Emergency siren and wind sock is provided.
- Tele Communication system and mobile phone is used in case of emergency situations for communication.
- First Aid Boxes and Occupational health center is made at site.

- Emergency organization and team is prepared.
- Full body protection suite and other PPEs will be kept ready in ECC at site.
- Emergency team is prepared and trained for scenario base emergency. Like Toxic control team, Fire control team, First aid team, communication and general administration team, Medical team etc.

EMERGENCY RESPONSE

SPILL OR LEAK

· Do not touch damaged containers or spilled material unless wearing appropriate protective clothing.
· Stop leak if you can do it without risk.
· Use water spray to reduce vapors; do not put water directly on leak, spill area or inside container.
· Keep combustibles (wood, paper, oil, etc.) away from spilled material.

Small Spill

· Cover with DRY earth, DRY sand or other non-combustible material followed with plastic sheet to minimize spreading or contact with rain.
· Use clean non-sparking tools to collect material and place it into loosely covered plastic containers for later disposal.
· Prevent entry into waterways, sewers, basements or confined areas.

Scenario 5: Release of Sulfuric Acid

Spill Pool evaporation module for Sulphuric Acid Storage Tank catastrophic failure

Spill pool evaporation module for Sulphuric Acid due to Catastrophic Rupture of 50 MT Storage Tank		
Input Data		
Stored quantity -50 MT		
Molecular weight - 98.08		
Wind Speed – 3.14 m/s		
Failure Mode: Catastrophic failure of 4" bottom nozzle and loss of containment		
Density (Air) – 1840 kg/m^3		
Release rate: 1000 g/s		
Results indicate		
Input Data		**Results of Computations**
		End point (meter)
LC50 Human	460 ppm (1460 mg/m^3)	59.85
IDLH value	3.0ppm (15mg/m^3)	587.63
TLV value	0.2 ppm (1mg/m^3)	1349.6

Result:

- LC_{50} HUMAN (460 ppm) area up to 59 meter, IDLH (Immediate danger to life and health) concentration area up to 587.63 meter and TWA (0.2 ppm) area up to 1349.6 meter. Therefore 587.63 meter area in wind direction is considered as evacuation area.

MITIGATION MEASURES FOR SULPHURIC ACID LEAKAGE:

- Isolate the source if possible without risk.
- If leakage is small, dilute with water and mop up, or absorb with an inert dry material and place in an appropriate waste disposal container. If necessary: Neutralize the residue with a dilute solution of sodium carbonate.
- Absorb with DRY earth, sand or other non-combustible material.
- Do not get water inside container. Do not touch spilled material. Use water spray curtain to divert vapor drift.
- Prevent entry into sewers, basements or confined areas.
- Neutralize the residue with a dilute solution of sodium carbonate.

PREVENTIVE MEASURES TO AVOID SULPHURIC ACID LEAKAGE:

- A dyke will be provided to accommodate the full quantity in tank.
- Periodic testing of storage tank will be done by competent person.
- Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective TLVs. Storage tank vent is connected to scrubber system.
- Flange guard provided to prevent splash of material.
- Level interlock
- Keep container dry. Never add water to this product.
- In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label.
- Avoid contact with skin and eyes. Keep away from incompatibles such as oxidizing agents, organic materials, metals, alkalis, moisture.
- Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.
- While handling always use face shield. Full suit. Vapor respirator. Be sure to use an approved/certified respirator or equivalent.
- Ensure that eyewash stations and safety showers are proximal to the work-station location.

Scenario 6: Release of Caustic lye

Scenario of Caustic lye is not applicable. As the no results found during the Assessment of Caustic lye.

Scenario 7: Release of Chlorine

Input Data		
Stored quantity	0.05 MT

Handling and Precaution of Chlorine:

- Designate area for handling Chlorine and clearly label all containers.
- Prohibit eating, drinking, smoking and in room where Chlorine is handled.
- Provide proper instruction and supervision to workers responsible for chlorine equipment.
- Handle Chlorine compounds that are potentially volatile or in powder form in ventilated enclosures.
- If enhanced containment is necessary, handle volatile compounds in closed systems vented through suitable traps.
- Never store combustible or flammable materials near chlorine containers.
- Never allow any liquid or moisture to enter the chlorine container. Never apply heat directly to a chlorine container.
- Never attempt to weld an "empty" chlorine pipe line without purging it with air first.
- Install safety showers and eye wash stations near chlorine equipment.
- Never spray water on leaking containers; it can make the leak worse.
- When entering an equipment area, take shallow breaths until you are sure that there is not a chlorine gas leak.
- Rely upon chlorination equipment for direct disposal of chlorine gas.
- On completing an operation, secure all Chlorine, remove and dispose of protective clothing and coverings, monitor and decontaminate self and surfaces, wash hands and monitor them again.
- Emergency chlorine kit with SCBA is available.
- Cylinders are connected with Chlorine Hood with blower (scrubbing system).
- Emergency valve shutdown is provided

Mitigation Measures in Case of Chlorine Leakage:

EVACUATE THE AREA IN DOWN WIND DIRECTION: Evacuate area in down wind direction up to 300 meters.

- Do not direct water at spill or source of leak.
- If possible, turn leaking containers so that gas escapes rather than liquid.
- Use Chlorine Emergency Kit to attend the leak.
- Absorb the fumes through Chlorine Hood with blower.

Preventive Measures to Avoid Such Emergency:

- Chlorine Emergency Kit will be procured and kept ready at chlorine shed.
- Chlorine Hood with blower will be provided with scrubbing arrangement.
- SCBA sets will be kept ready at chlorine handling area.
- Safety Shower and eye wash will be provided in Chlorine shed area.

- Chlorine absorption system will be provided. In case of chlorine leakage in chlorine shed it will be suck through blower and it will be scrubbed in Caustic scrubber.
- Emergency siren and wind sock will be provided.
- Tele Communication system will be with walky talky, no mobile phone will be used in case of emergency situations for communication.
- First Aid Boxes and Occupational health center will be made at site.
- Emergency organization and team will be prepared as per on site-Off site emergency planning.
- Full body protection suite and other PPEs will be kept ready in ECC at site.
- Emergency team will be prepared and trained for scenario base emergency. Like Toxic control team, Fire control team, First aid team, Communication and general administration team, medical team etc.

Scenario 8: Release of Bromine

A release from the Bromine Bottle;

Catastrophic Rupture	
Input Data

3.00 ppm Area = 3255.25 sqm
0.20 ppm Area = 233600.75 sqm

Preventative / Mitigation Measures:

Storage & Handling: Protect against physical damage. Store in cool dry area, out of direct sunlight. Separate from combustible, organic or other readily oxidizable materials. Keep above 20F to prevent freezing but avoid heating above atmospheric temperatures as vapor pressure increase could rupture container. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

Firefighting: Use any means suitable for extinguishing surrounding fire. Water spray may be used to keep fire exposed containers cool.

Following Personal Protective Equipments are to be made compulsory when handling Bromine

- American National Standards Institute (ANSI) approved chemical safety goggles at all times when handling Br_2.
- Use a full face shield over eyewear.
- Full body protection PVC suite
- Eyewash fountains should be located in areas where bromine is handled, used or stored.
- When in danger of contact with liquid bromine, wear an approved chemical resistant suit.
- Leather or other non-woven ANSI approved steel-toed shoes or Gum boot
- Protective rubber boots should be worn over shoes for extra protection.
- Have NIOSH approved respirators and self-contained breathing apparatus available.
- Gloves: 100% Nitrile rubber gloves or Neoprene gloves

Safety Practices in the Work Area

We will inform our all employees of the potential hazards of contact with bromine and train them in appropriate first-aid procedures.
Bromine handling areas will be clearly marked and restricted to qualified, trained personnel only.

Ventilation

We will maintain bromine vapor concentration in the work area to less than 0.1 ppm with adequate exhaust hoods, ventilation systems and scrubbers. Analyze air for proper control.
Transfer or repackage bromine only in a controlled, closed environment.
Exhaust ventilating systems will be used in enclosed areas where bromine is handled.

Containers and Storage

- Bromine will be stored in dry and cool place and well ventilated area.

Neutralization in Case of Spillage Leakage

- Neutralization with sodium Bisulfite requires 3 moles of sodium hydroxide: 1 mole sodium Bisulfite: 1 mole bromine.

- Neutralization with sodium sulfite requires 2 moles sodium hydroxide: 1 mole sodium sulfite: 1 mole bromine.
- The weights and volumes specified include a 10% excess of sodium hydroxide and sodium bisulfate or sodium sulfite.

Emergency Procedures

- In case of bromine emergencies, follow recommended first aid and emergency response procedures adopted

Transportation Emergencies

- In emergency situations resulting from vehicle accidents:
- Notify the local police, fire departments, emergency responders and the carrier.
- Isolate the area.
- Any person not dressed in proper protective clothing and not using a NIOSH approved self-contained breathing apparatus should be kept a safe distance away.
- Call to the supplier
- Seek immediate medical assistance for those injured and follow recommended first aid procedures.

Leaking Containers

- When handling a leaking bottle personal protective clothing, goggles and NIOSH approved self-contained breathing equipment must be worn.
- Clear contaminated area of non-essential personnel and send them to assembly point.
- Maintain a slight ammonia atmosphere throughout the clean-up. Carefully release anhydrous ammonia gas to neutralize bromine vapor. The ammonia gas will convert bromine to white ammonium bromide “Smoke.”
- Do not allow liquid bromine and liquid ammonia to combine; a violent reaction will occur. Ammonia (16 to 25% by volume) can form an explosive mixture with air. Pour hypo solution*, lime and water slurry or soda ash solution over the spill. Hypo-bromine reactions produce hydrobromic acid.
- Dry sodium thiosulphate and liquid bromine produce a violent reaction; do not mix them.
- Using cold water, wash neutralized bromine into a sump for transfer to an approved waste disposal facility where the waste can be processed.
- Ventilate the area to remove the ammonium bromide and any bromine fumes. Scrub the floors and equipment with soap and water.

First Aid Procedure

Immediate medical assistance is required if bromine is swallowed, inhaled or has contacted the eyes or skin.

If bromine has been ingested, do not give anything by mouth. Seek medical attention immediately. Do not induce vomiting.

If bromine has been inhaled, move the exposed person to a well ventilated area. Seek medical attention immediately. The victim should be placed in a comfortable sitting or partly reclining position. The exposed individual should avoid exertion.

If vomiting occurs, turn the patient on his side to avoid choking. Keep the patient warm. If the patient is coughing and showing signs of respiratory distress, properly trained personnel should administer oxygen.

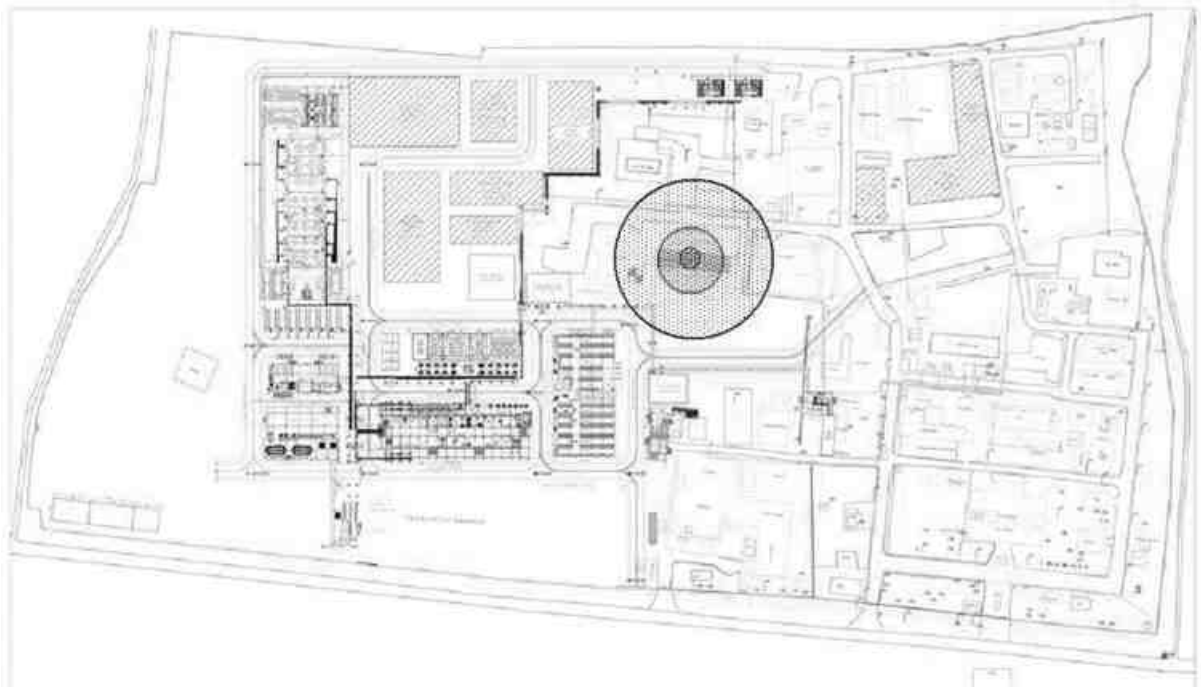
For skin contact, the affected area must be flooded immediately with large amounts of clean water from a safety shower or other appropriate source of flowing water. Seek medical attention immediately. All contaminated clothing, including shoes, should be removed as quickly as possible while the victim is under the shower. Washing should be continued for a minimum of 30 minutes. If possible, continue to wash the affected area during transport to medical facilities. (Extended wash times of two hours or more have proven beneficial.)

If bromine liquid or vapor contacts the eyes, they must be irrigated immediately with large amounts of running water. Eye wash stations are preferable for irrigation. If one is not available, a hose, water source with a liberal, gentle flow may be utilized. The eyelids must be held apart during irrigation to ensure contact of water with all accessible tissues of the eyes and lids. Eyes should be washed continuously for a minimum of 30 minutes. If possible, continue flushing the eyes while transporting the employee to a physician. In all cases of bromine injury, obtain immediate medical attention. Provide emergency personnel with information about all materials used by the person and provide appropriate information about bromine and first aid procedures.

Scenario 9: Release of Hydrogen

CATASTROPHIC RUPTURE FOR HYDROGEN		
SCENARIO : UNCONFINED FIREBALL		
Input Data		
Stored quantity		120 m3
Wind speed		3.14 m/s
Gas Density		67 kg/m^3
Incident Intensity of Heat Radiation (IHR) at ground level KW /m^2	**IHR- Isopleths Distance (Meters)**	**Effect**
37.5	9.0	Damage to process equipment. 100 % Fatal in 1 Min. 1 % fatal in 10 sec.
12.5	28.0	Min. to ignite wood (with flame contact). 1 % fatal in 1 min. 1 st deg. burn in 10 sec.
4.0	53.9	Pain after 20 secs. Blistering unlikely.

Fireball Scenario



Blue – 4 KW/m^2
Pink – 12.5 KW/m^2
Red – 37.5 KW/m^2

HYDROGEN Process Safety:

- 3 time Nitrogen purge into reactor to clean the reactor. Then charge material and hydrogen in reactor.
- Pressure of Hydrogen – 2 kg/cm^2.
- Auto damping system will be installed, in case power failure.
- Oxygen Detector will be installed.

SPECIAL PRECAUTIONS FOR HANDLING HYDROGEN:

- CCE approved premises with door having locking arrangement provided.
- Protect cylinders against physical damage.
- Store in cool, dry, well-ventilated area, away from sources of heat, ignition and direct sunlight.
- Do not allow area where cylinders are stored to exceed 52°C (125°F).
- Isolate from oxidizers such as oxygen, chlorine, or fluorine.
- Use a check valve or trap in the discharge line to prevent hazardous backflow.
- Post “No Smoking or Open Flame” signs in storage and use areas.
- Cylinders should be stored upright and be firmly secured to prevent falling or being knocked over.
- Cylinders can be stored in the open, but in such cases, should be protected against extremes of weather and from the dampness of the ground to prevent rusting.

- Never tamper with pressure relief devices in valves and cylinders. Electrical equipment should be non-sparking or explosion proof.
- Flammable high-pressure gas.
- Use only in a closed system.
- Use piping and equipment adequately designed to withstand pressures and temperatures to be encountered.
- Gas can cause rapid suffocation due to oxygen deficiency.
- Never work on a pressurized system.
- If there is a leak, close the cylinder valve. Blow the system down in a safe and environmentally sound manner in compliance with all federal, state, and local laws; then repair the leak.
- Never place a compressed gas cylinder where it may become part of an electrical circuit.
- Apron, Hand gloves, gumboot, goggles & helmet provided.
- ISI Portable fire extinguisher & Hydrant line is provided as per TAC norms.
- Flame proof fitting provided & Sufficient Nos. of SBA sets & 2 No. of Air line mask.

Following safety Measures will be taken while storage & handling of Hydrogen gas:
Measures to be taken to prevent such accident: for H2 Rack Handling

- Hydrogen Cylinder rack will be parked in barricaded Separate area
- FLP Electrical Installation provide near storage area
- Vehicle allowed with Spark Arrestor
- No Smoking / Hot work allowed
- Trained staff
- Special Vehicle with Trained Operating staff for H2 Rack
- PPE Warned
- Spark proof tools used
- Safety shower, eye wash with quenching unit will be provided in handling / storage area.

For H_2 Cylinders

- Cylinder
- Separate Isolated Cylinder manifold
- H2 cylinder stand with Chain link supporting
- Trained Operator
- Flameproof Electrical Installation
- Spark proof Spanner set
- Earthing, Grounding and Bonding on the Pipeline

- Well Supported fixed Line
- Flameproof Electrical Installation
- Trained Operator
- N2 Blanketing before batch charging
- Double Safety Relief Valve with Rupture Disc
- H2 Vent with Steam sparger and N2 Blanketing
- Well tested, inspected and well-maintained Reactor
- Proper Ventilation in the area.

SOP for Handling Hydrogen Gas

1. Design Requirements

- Hydrogenation Reactor, Manifold, piping systems are to be designed, fabricated and tested in accordance with IS 2825. Pressure relief devices are to be provided to prevent over pressure where this can occur as per the same standard. Relief devices and vents are to be routed away to a safe location.

2. Location & Buildings

- Hydrogenation system is to be physically and structurally isolated from operations. Buildings in which hydrogen systems are installed shall be of single storey construction, be designed for the purpose and be well ventilated especially at high points.

➢ **Storage area and safety system for handling of Hydrogen Gas:**

1. Hydrogen gas will be received at plant through
2. Cylinder manifold truck. Hydrogen gas is directly consumed from for process Cylinder manifold truck
3. DCS base operational plant
4. FLP type area will be provided.
5. Total enclosed process system.
6. Instrument & Plant Air System.
7. Nitrogen blanketing in Autoclave reactor.
8. Safety valve and Rupture disc provided on reactor.
9. Cooling Chilling and power alternative arrangement have been made on reactor.
10. Hydrogen and Nitrogen header will be installed away from the autoclave reactor.
11. PRV station with shut off valve, safety valve provision will be made for hydrogenation reaction safety.
12. Before Hydrogen Gas charging in to reactor and after completion of reaction Nitrogen flushing will be done.
13. Flame arrestor will be provided on vent line of reactor.

14. Safe Catalyst charging method will be adopted.
15. SOP will be prepared and operators will be trained for the same.
16. Rector vent extended outside the process area and flame arrestor provided on vent line.
17. Dumping vessel arrangement will be made.
18. Online Hydrogen detecting system is installed
19. Water sprinkler system is provided
20. Process is control by DCS with all interlock system.

Scenario 10: Release of Ammonia

Catastrophic Rupture

Storage & Handling:

- Designing of layout of area with due consideration of adequate natural or mechanical ventilation.
- Use of properly selected material for construction of plant and equipment for handling of ammonia.
- Preventive maintenance of all equipment in proper working condition.
- Avoid contact of ammonia with certain other chemicals, including mercury, chlorine iodine, bromine, calcium, silver oxide and hypo chloride.
- The building protected with automatic sprinklers, vapour tight electric equipment, good natural ventilation, good floor drainage and adequate exposition venting.
- Water sprinkler system will be provided.

Safety Precaution

- Evacuate personnel to a safe area.
- Appropriate self-contained breathing apparatus may be required.
- Approach suspected leak area with caution. Remove all sources of ignition. if safe to do so. Reverse flow into cylinder may cause rupture. Reduce gas with fog or fine water spray. Stop flow of product if safe to do so.
- Ventilate area or move container to a well-ventilated area.
- Flammable gas may spread from leak. Before entering the area, especially a confined area, check the atmosphere with an appropriate device.
- Water sprinkler system to be activated for dilute the ammonia.

Scenario 10: Release of Ethylene Oxide

Catastrophic Rupture

Storing and Handling of Drums

- The Occupational Safety and Health Administration has comprehensive rules and guidelines for the handling of hazardous materials such as chemical drums. Chemical drums are containing materials that are toxic, radioactive, corrosive, and explosive. In handling them, personnel should use the proper equipment, techniques, and protection
- Keep separate hazardous chemicals like Toxic, Flammable, corrosive etc.
- For filling from drums, special filling stations are also being used
- In order to absorb spills as quickly as possible, suitable absorbents also are provided.
- Flexible shut-off barriers or duct covers also serve to prevent environmental damage caused by the release of hazardous liquids.
- Sufficient amount of sand/soil are kept to control any spillage.
- Flame proof fitting provided.
- Eye washer cum shower are provided near storage area.
- Spark arrester are installed on all vehicles inside the premises.
- SCBA set, Canister mask and airline mask is provided.
- Earthing are provided.
- Vent line dipped in water are provided.

Safety Precautions of Solvent (Drum):

- Ventilate thoroughly prior to entry.
- Disconnect connecting pipelines.
- Prior to entry, take air samples to prove the absence of flammable or other hazardous vapors and to demonstrate that adequate levels of oxygen exist.
- Equip the entry team with appropriate respiratory protection, protective clothing, safety harnesses, and ropes.
- Equip a safety observer with appropriate respiratory protection, protective clothing, a safety harness, and ropes. Establish lifeline signals prior to entry so that the worker and safety observer can communicate by tugs on the rope.
- Have an additional person available in the immediate vicinity to assist the safety observer if needed.
- Instruct the safety observer not to enter the space until additional personnel are on scene.

7.7.1 RISK ASSESSMENT SUMMARY

- From the Risk Assessment studies conducted, it would be observed that by and large, the risks are confined almost within the factory boundary walls.

- Based on these studies company has been proposed to plan its facility sitting as well as location of operator cabin, open area, etc.
- Company has to increase awareness programme in the surrounding vicinity and educate people for safe evacuation at the time of toxic release.
- Induction safety course to be prepared and trained all new employees before starting duties in plant.
- A HAZOP study to be carried out for all product plant and storage facilities.

7.8 DISASTER MANAGEMENT PLAN

Company has developed the emergency management system to tackle the emergency situation, apart from its emergency management system. The detail of disaster management system is discussed in the following section.

7.8.1 DEFIING THE NATURE OF EMERGENCY

Various definitions on different analogy used on On-site & Off-site Emergency Plan are as follows:

- **Accident:** An accident may be defined as “an undesirable and unplanned event with or without or major damage consequence of life and /or property.
- **Major Accident:** It is a sudden, unexpected, unplanned event resulting from uncontrolled developments during an industrial activity, which causes or has the potential to cause, death or hospitalization to a number of people, damage to environment, evacuation of local population or any combination of above effects.
- **Emergency:** This can be defined as any situation, which presents a threat to safety of person's or/and property. It may require outside help also.
- **Major Emergency:** Occurring at a work is one that may affect several departments within and/or may cause serious injuries, loss of life, extensive damage to properly or serious disruption outside the works. It will require the use of outside resources to handle it effectively.
- **Disaster:** Disaster is a sudden calamitous event, bringing great damage, loss or destruction.
- **Hazards:** Hazard may be defined as “the potential of an accident”. Hazard exists in man and the system of materials and machines.
- **Chemical Hazards:** It is a hazard due to chemical(s) (including its storage, process, handling, etc.) and it is realized by fire, explosion, toxicity, corrosively, radiation, etc.

- **Risk:** Risk may be defined as the combination of consequence and probability or likelihood of an accident being caused in a given man, material– machine system.
- **On-Site Emergency plan:** It deals with measures to prevent and control emergencies within the factory and not affecting outside public or environment.
- **Off-Site Emergency plan:** It deals with measures to prevent and control emergencies affecting public and the environment outside the premises.

7.8.2 OBJECTIVES OF EMERGENCY MANAGEMENT SYSTEM

The objectives of the emergency management system are summarized as under.

- Identifying the hazard and its cause.
- Reducing vulnerability and potential losses of hazard.
- Assessing, reviewing and controlling the risk.
- To plan mode of proper communication and actions to be followed in the event of emergency.
- To keep all necessary information with respect to hazard/accident control and emergency contacts in one document for easy and speedy reference.
- To inform employees, general public and the authorities about the hazards/risk if any and the role to be played by them in the event of emergency.
- To control and contain the accident.
- To effect rescue and treatment of casualties.
- To inform and help relatives of casualties.
- To secure rehabilitation of affected area and restore normalcy.
- To provide information to media and government agencies.
- To preserve record, equipment etc. for investigating cause of emergency.
- To be ready for “mutual aid” if need arises to help neighboring units.

7.8.3 CLASSIFICATION OF EMERGENCY

The Level of Emergency can be classified in three Categories, which is given in **7.4.**

TABLE 7.5

EMERGENCY TYPES

CLASSIFICATION	DESCRIPTION	CAUSES	APPLICABILITY
Level – 1	The leakage or emergency, which is confinable within the plant/area.	Small pipe/valve rupture or similar leakages that do not affect outside premises. Release of toxic chemicals	Applicable

		for shortduration. Small fire in the plant.	
Level – 2	The emergency, which is confinable within the factory premises.	Leakage of toxic chemicals for long duration. Medium scale explosion confined to the factory premises. Medium scale fire insidethe factory premises.	Applicable
Level – 3	The emergency, which is not confinable withinthe factory premises and general public in the vicinity are likely to be affected.	Heavy / Profuse leakage of toxic / flammable gases for a long duration. Explosion of high magnitude affecting theadjacent area.	Applicable

7.9 DETAILS OF THE SEPARATE ISOLATED STORAGE AREA FOR FLAMMABLE CHEMICALS. DETAILS OF FLAME PROOF ELECTRICAL FITTINGS, DCP EXTINGUISHERS AND OTHER SAFETY MEASURES PROPOSED. DETAILED FIRE CONTROL PLAN FOR FLAMMABLE SUBSTANCES AND PROCESSES SHOWING HYDRANT PIPELINE NETWORK, PROVISION OF DG SETS, FIRE PUMPS, JOCKEY PUMP, TOXIC GAS DETECTORS ETC.

Fire Prevention Measures

- Smoking, ignition, ignition sources etc are strictly prohibited within the premises. A very strict control is exercised in this regard at all times.
- All the tanks, equipment etc are properly earthed and maintained at all times. The earth resistance values are regularly checked and kept within the permissible range.
- At the time of filling of storage tanks and road tankers, special care is exercised to avoid spillage.
- When a storage tank is filled, the tank's level is closely monitored.
- All filling operations are surveyed frequently for possible leaks that may pose a fire hazard.
- Reliable flow meters are provided, wherever required, to prevent overflow.
- The pipelines are inspected periodically.
- Free falling of the product into exercised to avoid overflow, spillage, leakage etc of the products.
- All operations in the installation are done only during general shift hours.
- The well-established color codes are followed for pipelines in the Installation.
- A strict gate entry procedure is formulated and followed. Entry of unauthorized persons is strictly prohibited.
- The road tanker is minimized to the extent possible to avoid static charge build up. The tankers are also earthed to bleed away static charges formed.
- Security watch is provided around tank farm area.
- The persons looking after the various operations are trained and experienced.
- All the staff in the installation are trained in fire fighting and monthly fire drills are carried out.
- Degreasing / Deseeding is done regularly within the licensed areas.
- All sorts of combustible materials are removed from the premises promptly.
- Work permit system is strictly followed. Critical jobs like hot jobs are carried out only after taking abundant safety precautions under the supervision of competent personnel authorized.
- All the incidents like fire are reported through prescribed formats and investigated. The causes are identified and remedial steps are promptly formulated and implemented.

- Dyke drain valves are kept normally closed. They are opened only to remove water from the dyked areas.
- Drain valves, sampling valves etc are plugged, capped or blinded. Utmost care is
- Proper concrete/tar roads are laid all around the facilities/areas for easy accessibilities. Roads, accessibilities etc are free and unobstructed everywhere.
- All the facilities in the Installation are well laid and also maintained.
- The fire fighting arrangements are well designed, laid and maintained.
- Good housekeeping is maintained throughout the Installation.

FIRE FIGHTING FACILITIES(EXISTING)

Following are the fire fighting facility provided.

Storage yard, warehouse, peripheral areas and equipment and production areas are provided with fire hydrants and fire fighting extinguishers.

The entire fire protection system has been installed as per Tariff Advisory Committee (TAC) norms.

Two Fire Water storage tanks have a total holding capacity of 1200 M^3. This is an exclusive fire protection water storage facility. Fire hydrant pumps with external and captive power supply are provided.

Fire water supply lines are laid above ground with Fire Hydrants outlet points:

Single Hydrants	40 Nos
Fire escape hydrants	04 No
Fire brigade inlet	02 No
Double Hydrants	6 Nos.
Water Monitor	12 Nos.
Sprinkler system for tank farm	2 System
Dry Raiser for ware house in AEP	1 System

Apart from firewater pumps, jockey pump has been provided to pressurize the header and keep the system at 7 kg. /cm^2 pressure.
Apart from fire hydrant system a separate sprinkler system is provided for bulk storage tanks for Solvents.

Fire Hydrant Pump Details:-

1. Electric driven Pump : 1 nos.
   a) Make : Kirloskar Brothers Ltd.,
   b) Model : DB100/26
   c) Rated Capacity : 171 m^3
   d) Total dynamic head at rated capacity : 70 mtrs.

2. Diesel Driven Pump
   a. Make : Kirloskar bros ltd
   b. Rated capacity : 171 m^3/hr
   c. Discharge Head : 70 mts
   d. RPM : 1800

3. Pressurization Pump**:**
   a) Make : Kirloskar Brothers Ltd.,
   b) Model : DB 32/26
   c) Rated Capacity : 10 M^3/hr.
   d) Total dynamic head at rated capacity : 70 mtrs.

Details of Extinguishers:

S.NO	TYPE	CAPACITY	TOTAL
1.	DCP TROLLEY	100kg	2
2.	DCP TROLLEY	50kg	2
3.	DCP	5kg	72
4.	DCP	20 kg	20
5	CO2	6.5 kg.	11
6.	CO2	4.5 kg	77
7.	CO2	2.0 kg	25
8.	A.F.F.F	9 litres	25
9.	A.F.F.F	50litres	7
10.	A.F.F.F. trolley	200 litres	3

1. Sensors:

a. 10 smoke detectors with audible alarm are installed at various strategic locations in the production unit to alert the workstation peoples.

b. Online pH meters are installed to monitors the scrubbing fluid pH.

c. Online cyanide detectors with audible alarm are installed in scrubbing system to detect the cyanide content in the vent gas to atmosphere.

d. Portable HCN detectors

e. HCN detecting strip

2. Medium velocity spray system is installed in the bulk solvent storage area to protect the bulk solvent storage tanks safeguard from fire hazard.
3. Following areas are covered under flameproof electrical accessories:
    a. Phyto and Organic production unit
    b. Solvent Tank farm area
    c. FO and HSD tank farm area

Each hydrant point is provided with one hose box or hose cabinet with two fire hoses and a nozzle. Self-contained breathing apparatus / air breathing apparatus are used during fire fighting and for controlling toxic release in the Production area.

Free face gas masks exclusively for each type of gas, acidic, organic, chloride and ammonia, are provided for normal use and for emergency handling.

Breathing Apparatus Details

Self contained breathing apparatus are positioned in the following areas in addition to the online air breathing apparatus.

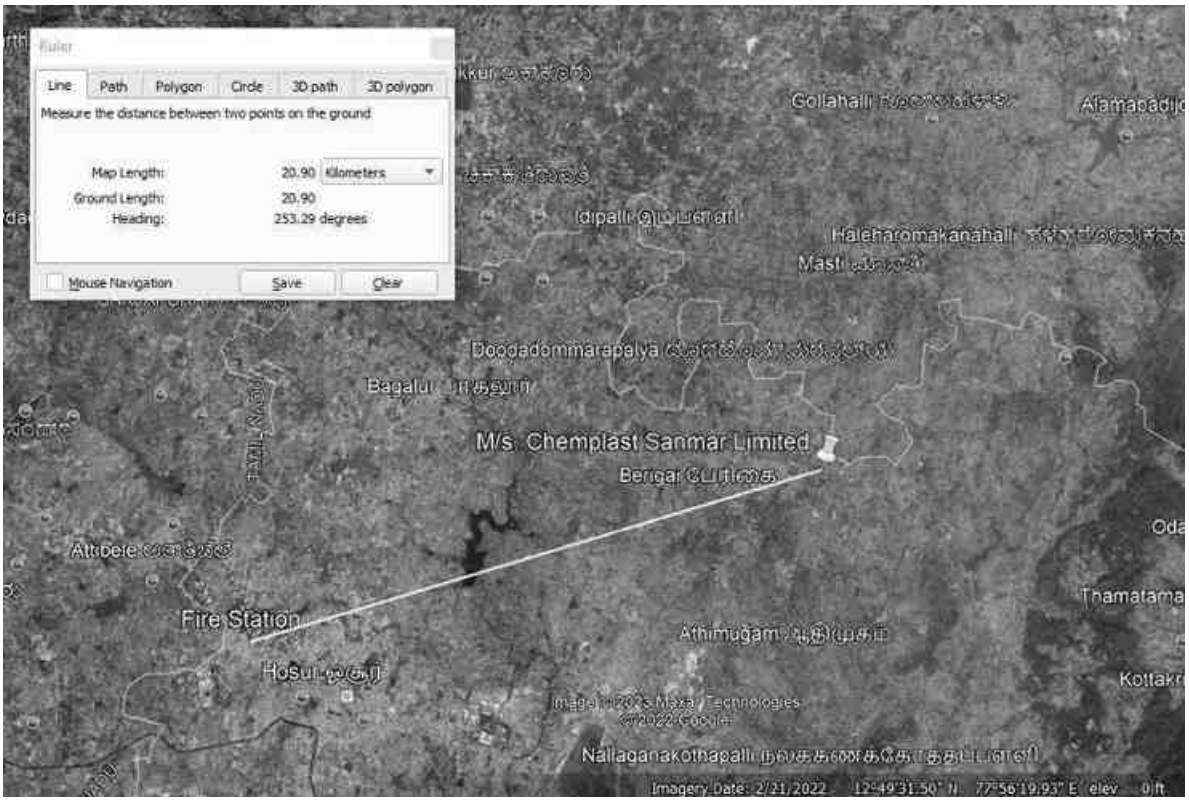
S.No	Location
1	Emergency Control Room (East)
2	Emergency Control Room (West)
3	Mechanical Room (North)
4	Mechanical Room(South)
5	AEP-PLC Room (Entrance)
6	AEP - PLC Room (Inside)
7	AEP Ground Floor (West)
8	AEP Ground Floor (East)
9	AEP Ist Floor (West)
10	AEP Ist Floor (East)
11	AEP 2nd Floor (West)
12	Plant 2C (Entrance)
13	R&D ground floor
14	Trolley type Air cylinder (SCBA)-AEP
15	4 nos spare in Safety Stores

FIRE FIGHTING FACILITIES (PROPOSED)

ABC Fire Extinguishers - 30 Nos,
CO_2 Fire Extinguisher - 35 Nos ,
Foam Extinguishers - 20 Nos.
Hose reel - 15 Nos.
Foam tank -5 Nos.

FIRE ALARM SYSTEM: Automatic fire detection & alarm system consists of Fire Detectors, Addressable MCP & Hooters Beam Detectors (Ware House) are placed at strategic locations and connected by cable to central control panel at ECC with repeater panel at DCS Control Room.

Fig. 7.4 - LOCATION OF FIRE NEAREST STATION



FIRE LOAD CALCULATION

1	Name & Address of factory	:	**M/s. Chemplast Sanmar Limited**	
			S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3, 10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A, Suligunta Village, Berigai 635105. Shoolagiri Taluk, Krishnagiri District, Tamil Nadu, India.	
2	Phone Number	:		
3	Name of Occupier	:	Mr. Ramkumar Shankar	
4	Total Floor of the factory	:	2 Floors (Plant-4) Ground+ 4 Floors (MPB)	
5	Detail of Combustible Area (In sq. Meter)			
a)	Total Floor Area	:	**6765**	M^2
b)	Open Space Area in which Combustible Material stored	:	1209	M^2
c)	Area having more than 15 meter Height	:	1444	M^2
d)	Area having Wooden material	:	0	M^2
	Total (a + b + c + d)	:	9418	M^2
6	$\frac{a + b + c + d}{20}$	:	470.9	L/Min
7	Total Requirement of Water (based on area in sr. no-6)	:	28254	Ltrs/hr
8	Current Water storage Capacity for fire hydrant (Proposed)	:	1200000	Ltrs
	Underground Tank + overhead tank + On ground Tank	:	Overhead Tank (1200000)	Ltrs
9	In case of Fire, Arrangement for water to be used in fire fighting			
a)	Is Hydrant Line available? If Yes give dimension of Pipe.	:	4inch, 8 inch	

b)	Which type of arrangement are available for Supply water on ground or upper floor i.e. Pipe line and it's Diameter (c.m.); Give detail	:	Riser points available 4 Inch pipeline	
c)	Are Fire Water Pump Available or Not? Give detail	:	Fire water pump house consist of Existing: 1 Electrical Main Pump, 1 Diesel operated pump , 1 Jockey(Booster) Pump Proposed: 1 Electrical Main Pump (410 cu.m / hr) , 1 Diesel operated pump (410 cu.m / hr) , 1 Jockey(Booster) Pump (10.8 cu.m / hr)	
10	If the Value of Sr. 6 is more than 550, then requirement of trailer Pump is applicable. If it applicable then what is the arrangement for the Same. Give detail	:	NA	
11	How many water buckets required?	:	NA	
12	How Many 9 Litres water type Extinguisher required?(Water Bucket/6)		NA	
13	Requirement of 5 Kg CO2 Type Fire Extinguisher for Class - E fire. Floor wise (1 for every 15 m length)	:	NA	
	Total requirement of Fire extinguishers (5 Kg ABC).	:	NA	
14	Extinguisher details			
	Type		Existing	
	ABC (5.0 kg)	:	ABC Fire Extinguishers	25 Nos
	CO2 (4.5 kg)	:	CO_2 Fire Extinguishers	88 Nos
	SAND BUCKET	:	Sand bucket	60 Nos
	FOAM (9 ltr)	:	Foam Extinguishers	30 Nos.
	DCP (5 kg)	:	DCP Fire Extinguishers	92 Nos
	Fire Proximity Suit	:	2 Nos	
	TOTAL	:	235 Nos	

15	Additional Fire Extinguisher Required	:	ABC Fire Extinguishers -30 Nos, CO_2 Fire Extinguisher-35 Nos , Foam Extinguishers - 20 Nos. Hose reel 15 Nos, Foam tank -5 Nos
16	Emergency Fire Exit provided to Each Floor? Ladder Provided to Each floor?	:	Emergency Exit available with stair access in all floor
17	Arrangement for Fire warning. i.e. Hooter / Ele. Bell / Other	:	Fire Alarm facility available in all floor
18	Water Sprinkler Provided?	:	Water Sprinkler system available at tank farm and Warehouse building

7.10 ON-SITE EMERGENCY PLAN

7.10.1 GENERAL

The emergency is an undesirable occurrence of events of such magnitude and nature that adversely affect business, cause loss of human lives and property as well as damage to the environment. Industrial units are vulnerable to various kinds of natural and man-made emergencies. Examples of Natural disasters are flood, cyclone, earthquake, lightening etc. and manmade disasters are major fire, explosion, sudden heavy leakage of toxic/flammable gases, building collapse, human errors, vehicle crash, sabotage, etc. It is impossible to forecast the time and nature of emergency, which might strike the unit. In spite of the fact that every industry is expected to take steps to assess, minimize and, wherever feasible, eliminate risks, accidents may still occur. Risks can only be minimized; it can never be totally eliminated. However, an effective emergency plan helps to minimize the losses in terms of human lives, plant assets and environmental damage and to resume the working condition as soon as possible. In all these steps speed is the essence. Controlling the emergency will require prompt action by the operating staff, the staff of various agencies, emergency teams and the outsiders when called for. Minimizing the effect on people may be achieved by prompt communication, rescue, evacuation etc., if the situation so warrant.

7.10.2 STATUTORY REQUIREMENT

The provisions for preparing the on-site emergency plan are explained below:

THE FACTORIES ACT, 1950:

The Tamil Nadu Factories Rules 1950 providing that every occupier, who has control of an industrial activity pertaining to hazardous chemicals shall furnish the On-Site Emergency Plan detailing how major accidents shall be dealt with along with explaining specific responsibilities and actions by various persons.

THE ENVIRONMENT (PROTECTION) ACT-1986:

Rule 13(1) under the Manufacture, Storage and Import of Hazardous Chemicals Rule 1989 (amended 1994), rules framed under The Environment (protection) Act-1986, indicates that the occupier shall prepare and keep up-to-date an on-site emergency plan containing details specified in schedule II and detailing responsibilities and actions by different person and agencies.

CHEMICAL ACCIDENTS (EMERGENCY PLANNING, PREPAREDNESS AND RESPONSE) RULE 1996.

Under these rules, framed under The Environment (Protection) Act-1986, the state government has constituted a Local Crisis Group & District Crisis Group to deal with major chemical accidents and to provide expert guidance for handling chemical accidents. Further provision is made that the Major Accident Hazard units have to prepare the on-site

emergency plan and submit the plan to the crisis groups. The local emergency plan will dovetail with the District off-site emergency plan.

7.10.3 PREPAREDNESS OF ON–SITE EMERGENCY PLAN

The On-site Emergency Plan describes planning, preparation and training for on-site action in the event of emergency. For On-Site Emergency Plan Advance planning and proper training of each employee into the emergency function is very essential to make emergency control measure more effective. It is not possible to eliminate emergency but is definitely possible to control them. The scope of onsite emergency plan is to prepare for activate the emergency time activities, to controlled and contained within the shortest time if emergency arise after failure of our pre-emergency control measures. Following stage activities are considering for the purpose, as they are co-related and provide better points for emergency preparedness.

7.10.4 EMERGENCY TIME ACTIVITIES

It is not possible to include and discuss every action, which should be taken first during emergency. It is also not possible to describe entire actions on emergency situation. The basic principle of handling emergency, that may be relied upon, who have the knowledge and experience to assess the situation and give direction as per the objectives as quickly as possible. However, the aim is to control the situation by safest way in a limited time within existing available resources. Further, it should be handle with such a care that minimum loss of life, property and environment. In short, the objective of the plan should be successfully complied with.

7.10.5 EMERGENCY FACILITIES

1.Medical Facility and setup:

Well-equipped occupational health center is located near the Emergency Control Room and a full time medical officer from Tie Up Hospital in Hosur is in charge of the Occupational Health Center. Dedicated Ambulance is kept ready near the Occupational Health Centre and the driver cum mechanic is available round the clock.

AMBULANCE FACILITIES:

Single patient transporting facility

2.**Emergency Control Room (ECR) with alternative:**

Security office room has been identified as ECR.

Phytochemical plant Security gate as alternate ECR.

3.**Telephone Communication:**

We have an EPABX setup, and there are 40 lines for common and 5 direct line. The incoming is operated through the board.

4.First Person to be contacted in case of Emergency:

Emergency Control room From External - 04344 243005 – From Intercom 2205

5.Site Meteorological data:

(i)	Minimum Temperature	: 14^0C
(ii)	Maximum Temperature	: 36^0C
(iii)	Average rainfall	: 822.3 mm.
(iv)	Weather Conditions	:
		: Wind Speed: 12 to 19 km/hr
		: Stability Class: C
	Humidity	: Dec to May-65 to 75%
		June to Nov.-80 to 85%

Major Industries: There is no factory around 10 km of the plant surrounding.

7.10.6 IDENTIFICATION AND ASSESSMENT OF HAZARDS

1.Identification of the type of emergency: -

1.1 Types of Emergencies Possible:

a. Fire.
b. Explosive
c. Chemical Spill & Toxic gas release.
d. Confined space incidents
e. Transport related incidents (involving H_2 truck, acid / alkali trucks, FG goods truck etc.,)
f. Natural calamity
g. Bomb threat

1.2 Categories of Emergencies:

a) The type of emergencies, which are restricted to one sector of the plant and which can be controlled by the manpower and facilities available in the section.

b) The type of emergencies though originating from a section, which cannot be controlled by the section. These may require shutting down of the entire plant and may require activation of On-Site Emergency Plan. However, the magnitude of emergency is restricted to plant premises.

c) The type of emergencies, originating from the plant and whose impact spills outside the plant, fall under a Category wherein there will be a requirement of both On-site and Off-site Emergency plans. Incidents due to natural phenomena may have its impact over the surrounding requiring activation of Off-site plan.

1.3 Identification of the Category:

The type of emergency identified in SSC fall under category 2.2 and can be handled with the available manpower and facilities within the plant.

The quantity of chemicals handled is below threshold level.

Risk Analysis study brings out the fact that while there can be emergencies with impact limited to plant area there will be no impact over the surroundings.

In view of the location, which is dry, with average rainfall, normal wind velocity and lying in non-seismic zone there is no possibility for an extraordinary situation with offsite potential.

2. Design for safety: -

The plant is built as per the guidelines of Factories Act 1948. Essentially the process involving chemical reactions like alkylation, hydrogenation, oxidation etc. followed by layer separation, filtration, distillation and packing. Critical reactions like hydrogenation under high pressure is carried out in small reactors.

Design consideration is given to important facilities like control room, amenity handling and access routes so as to reduce concentration of people in hazardous areas.

All the blocks are laid with adequate means of escape from all sides and for firefighting. Location of each operating block is laid in such a way that any untoward incident will be localized and shall not impact the surrounding area.

All the chemicals handled in bulk and drums are high boiling and stable liquids stored under normal temperature and pressure.

Chemical storage yard is at the rear side of the plant and stored under recommended conditions and storage is licensed under Explosives Rules and regulations. Open air storage in closed vessels with impermeable flooring and thus ensure prevention of pollution.

To control reaction rate and maintain reaction temperature chilled water and brine solution circulation facility is provided. This automatically checks uncontrolled runaway reactions.

Reactors are provided with rupture disk for release of pressure and the released gas is collected in blurb tank otherwise called as abnormal release tanks, for proper disposal.

Pressure relief valves are also provided with connections leading to blurb tank for collection. There is also facility for release through scrubbers with detector and alarm facility at the outlet set at TLV level for critical gases.

Control panel is provided with audio visual indications and high and very high alarms.
All pressure vessels are fabricated as per relevant Indian Standards. Bulk storage tanks have been designed with earthing, bonding and dyke facility towards localizing the spill and prevent movement to surroundings.

All the manufacturing and storage areas are covered under Electrical classification and the equipment provided are of Explosion proof type suitable for zone-2.

Electricity Act & Rules guidelines are followed for design of electrical equipment and earthing.
Static protection is done through proper line sizing, earthing, and provision of jumper and prevention of freefall.

All the chemicals are stored under shed and drums are stored at elevated location with facility for spill collection and transfer of spill to safe place.

Safe operating procedures are provided for all operations and maintenance and the concerned are trained for efficient performance.

Considering the reaction potential of hydrogenation reaction the hydrogenators are designed with all the safety measures.

Temperature, pressure and flow is checked through continuous online indication and recording facility.

Drainage:
The site is provided with drainage facilities adequate for all emergency water usage and provided with interceptor chambers designed to exclude storm water drains and main sewer system.

Water Supply:
Firewater source is from groundwater for make up. Firewater tank holding is used exclusively for emergency purpose only. Capacity 1200M^3

3. Storage Hazards & Controls: -

The storage is mostly class A, B & C chemicals requiring atmospheric storage facility. Class-A chemicals with high inventory requiring regular usage is held as bulk storage, though it is held in small volume.

Chemicals used in small quantity are held in sealed drums. Bulk storage tanks are held above ground and built as per Petroleum Act & rules and storage is approved by Chief Controller of Explosives, Nagpur. Electrical equipment used in solvent storage area is of Explosion proof type.

Bulk storages are dyked and the capacity of dyke has more than the required volume to hold the entire quantity stored in the event of a spill. Bonding, earthing and proper pipeline design ensures static precaution.

The dyke flooring within which storage tanks are held is provided with concrete to ensure proper spill control and prevent earth permeation. Level gauges are provided to have proper control on level and counter checked by dip rod check.

A security guard takes rounds around the tank farm area at regular intervals to ensure detection of unsafe conditions or spill.

Drum storage yard is held in an elevated place and has a roof to prevent direct sunlight and heat. Elevated facility facilitates draining of leaks, if any, for which collection and transfer facility is available.

Acidic materials are stored in non-corrosive FRP tanks with spill control facility and the locations of the tanks are at a distance from other areas to prevent corrosion. The entire area has non-corrosive acid proof tiles and flooring.
Cylinders holding Hydrogen and Ammonia are stored as per Gas cylinder rules and away from each other to prevent any reaction hazards. Special precautions are taken for handling cylinders to avoid unsafe situation.

Small quantity of Furnace oil and diesel are held in MS tanks and the installations are approved by CCE, Nagpur. Bund walls of adequate capacity, level measurement facility, bonding and earthing and impermeable flooring are the other facilities provided.

4.Process Reactor Hazards and controls:-

Process reactors are designed to withstand the maximum allowable working pressure. To take care of high pressures developed rupture disks and relief valves have been provided leading to blurb tanks.
Reactors for critical services are sized in pilot scale level, so that it will have no impact on other areas. Pressure gauge, temperature gauge and flow meters are provided and continuously monitored through indication and recording and also provided with alarms

for deviation. Pressure vessels and reactors are tested and certified by Factory Inspectorate.

5. Records and Past incidents: -

There had been no fire or explosion or toxic release in the past ten years and since the quantities handled are small and the care taken to handle and store chemicals being high there had been no event or incident relating to fire or release.

6. Identification of Hazard and Failure Scenarios: -

While past records have been quite encouraging with respect to fire, explosion or toxic release a theoretical approach to probable events and a maximum credible analysis through a Risk Analysis study identify the following areas for risk control.

- Bulk storage tank failure and pool fire
- Hydrogenation section of plant.
- Drum storage and handling areas of the plant (this would be practically all over the plant area).
- Release of gases due to scrubber failure
- Solvent fire or explosion in phyto area.

Risk Analysis Report has considered the above-identified areas for consequence analysis and the results are listed below.

7.Summary of Consequence Analysis

Scenario	Vapour Cloud Explosion		Thermal Radiation			Toxicity level in IDLH value in ppm	Distance in m
	0.3 bar	0.1 bar	37.5 Kw/m^2	12.5 Kw/m^2	4Kw/m^2		
Hydrogenation reaction explosion	37	18	-	-	-		
Methanol release	22	38	-	-	-		

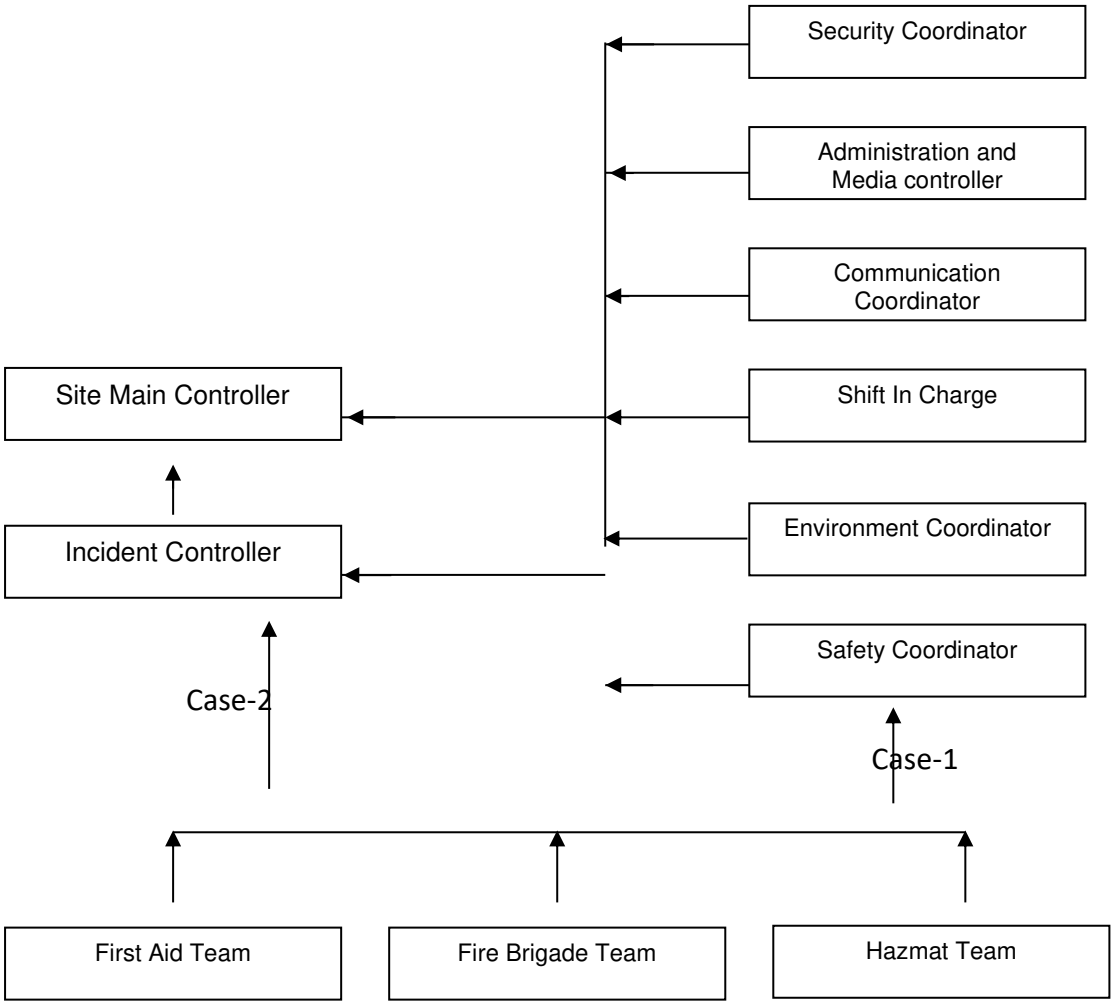
Storage tank collapse- HSD – Pool fire	-	-	-	18	30		
Toluene tank truck collapse	-	-	-	5.8	23		
Drum leakage: Acetyl chloride leak	-	-	-	-	-	125	70
Scrubber failure & Release of chemicals:							
a. HCL	-	-	-	-	-	50	50
b. Methyl Mercaptan	-	-	-	-	-	150	70
c. Ammonia	-	-	-	-	-	300	not exceeded
d. Hydrogen cyanide						50	35

8. Fire Prevention Measures and Fire Fighting facilities details are mentioned 7.9

7.10.7 EMERGENCY ORGANISATION AND RESPONSIBILITIES

The Procedure outlined in this chapter is to be followed in the event of an emergency such as fire and explosion during manufacturing activity and operational matrix for handling Emergency is given in below picture

OPERATIONAL MATRIX FOR EMERGENCY HANDLING



Note:

Case-1: First Aid, Fire Brigade and Hazmat Team will report to Safety coordinator.

Case-2: In absence of Safety coordinator, First Aid, Fire Brigade and Hazmat Team will report to Incident controller (Shift in charge).

Key Persons to combat emergency are nominated with specific responsibilities for making the best use of resources available and handling any emergency in an orderly manner without confusion. Such key personnel include site main controller and Incident controller who are responsible for leading the emergency team.

Other key personnel and essential workers play their respective limited role so that the main objective is met in controlling emergency and mitigating the sufferings.

All such key personnel with their alternates will be available in all shifts and on call on off-duty.

1. Responsibility of Key Personnel: -

Site Main Controller: Factory In-charge /Head operation

Site Main Controller has overall responsibility for directing operations and calling outside help from Emergency control centre. Security Room will be the Emergency Control Centre. He will assume full responsibility for initiating action to meet the emergency.
He will

- Relieve the Incident controller from overall responsibility.
- Exercise direct operational control over areas other than the one affected.
- Inform higher management about the incident and keep them posted with further development.
- Mobilize all manpower and resources through various sources.
- Exercise direct operational control of those parts of works outside the affected area.
- Direct the safe close down and evacuation of plant in consultation with the Incident Controller and key personnel. If necessary arrange for evacuation of neighboring population.
- Control the traffic movement within the Factory.
- Arrange for a chronological record of the emergency to be maintained.
- Issue authorized statements to the news media, and inform Corporate Office.
- Ensure that proper consideration is given to the preservation of evidences. Arrange for photographs / video.
- Liaise with Factory Inspectorate, Pollution Control Boards, Senior Police Officials, fire brigade and Medical Services.
- Ensure that the key Personnel are called in.
- Ensure that casualties receive medical attention.
- Issue authorized statements to news media and ensure that evidence is preserved for inquiries to be conducted by statutory authorities

- Revoke emergency and establish regular operation of safe areas.
- Ensure tally of head count and rescue of missing personnel.

Incident Controller : Respective Plant in charges

Alternate : Shift in-charge-Production

Incident controller reports to the Site Main Controller. He is responsible for the overall planning and control of defined emergencies. His primary duty is to take charge at the scene of the accident.

Till Site Main Controller takes control of the Emergency Control Room, Incident Controller will take decision involving the operation of other plants including the area under emergency.
Once Site Main Controller takes charge, Incident Controller will mainly handle the emergency and the area or section where emergency has overtaken. All other operations will be under the control of Site Main Controller.
On hearing of an emergency he will rush to the scene of the occurrence and take over from the shift charge. He will assess the situation and if emergency exists or likely to exist he will inform Site Main Controller, shift in charges, Supervisors and other section heads.
He will

- Assess the scale of emergency and check whether major emergency exists.
- Give instructions for emergency siren. Direct all operations within the affected area.
- Ensure that all the Key Personnel are called in.
- Secure safety of personnel and minimize damage.
- Provide advice and information to the fire brigade.
- Direct rescue and fire fighting operations.
- Ensure that all non-essential workers and staff of the affected area are moved to the assembly points.
- Search the area for casualty.
- Report on all significant developments to the Site main Controller.
- Have regard to the need of evidence so as to facilitate enquiry into the causes for the accidents.

Communicate all persons involved in fire fighting and other shift officers on restoration of normalcy.

Responsibilities of Safety Coordinator : Safety in charge .

Alternate : Asst.Safety in-charge.

The Safety Coordinator reports to the incident Controller and coordinates with the members of emergency response team & appraises the Site main controller on the emergency response form time to time.

The Safety Coordinator coordinates the activities of Fire Brigade, Hazmat Team and First aid Medical Team. Also ensures that adequate emergency response equipment is available in the plant. The Safety Coordinator may stop any activity that endangers emergency response personnel. He will be responsible for fire brigade and toxic gas control activities.

Responsibilities:

- Respond to all plant emergencies.
- Evaluate and provide the Emergency Response Equipment.
- Ensure that all Emergency Response activity is carried out in a safe manner and assist the Incident Controller in dictating the Emergency Response.
- Maintain inventory of spill control equipment to handle emergency.
- Ensure that all emergency equipment is restored to a state of readiness after the emergency is called off.
- Organize PPE required for emergency area.
- Assist incident controller in fire fighting operation.
- Arrange for additional extinguishers.

Prevent spread of fire by isolation of areas and equipment and materials.

Responsibilities of Administration and Media Controller : Admin in-charge .

Alternate \ : Officer – Admin.

- The Administration/Media Controller reports to the Site Main Controller coordinates with the members of emergency response team to tackle the emergencies.
- Establish media contact if required.
- Contact outside emergency responders as & when required.
- Notify Custom Manufactured Chemicals Divn Limited, top management and corporate affairs department & appraise of the situation.
- Inform local Hospitals
- Advice Ambulance services and local hospitals to keep them prepared for treating injured.
- Call for trained fist aiders for handling large number of casualties.
- Arrange to send injured for specialized treatment.
- Arrangement transport for injured either through accompany vehicle or outside ambulance.
- Arrange for monitory resources for medical facilities under the instructions of site controller.

Organize refreshment/catering facility if the emergency is prolonged.

Communication Coordinator : HR In charge
Alternate : Officer – HR.

Communication coordinator will handle all communications and he will act as one point source for receiving and transferring communication.
He will take his instructions from the Site Controller and respond to Administration Controller.
Upon hearing emergency he will take up his role as Communication Coordinator and locate himself at the Emergency centre.
He will

- Inform company doctor regarding the nature of emergency to receive casualties for offering appropriate treatment.
- Inform security to keep ambulance and other vehicles to handle emergency.
- Inform fire brigade for fire fighting.
- Establish contact with Incident controller to know the situation inside emergency area and transfer the details to site controller.
- Maintain log of Incidents.
- Check the Head count at assembly point with attendance and report to site controller and Incident controller about tally & figures.

Responsibilities of Operations Officer: Shift In-charge organic

The Operations Officer will normally be the Shift in-charge at that time emergency. Once the emergency is declared shift in charge will take care of plant area other than the area under emergency and ensure normalcy.

He will report to Incident Controller during emergency and take instructions for controlling the activities associated with non-emergency operating plants.

When the Emergency Situation arises after office hours/holidays, the shift in charge will do the role of Incident Controller till the arrival of Site Main Controller/Incident Controller. Trained First aid, Fire fighting and Hazmat team is available round the clock and they report to Incident controller (Shift incharge)
Responsibilities:

- Will depute asst. shift incharge in the Emergency control centre during emergency after office hours.
- Maintain communication with the Site Main Controller through security.
- Recommend emergency shutdown and or evacuation of plant personnel of non-affected areas.
- Ensure that emergency does not spread to normally operating areas.

Responsibilities of Environment Coordinator : Environment in-charge
Alternate : Asst. Environment incharge

- The Environment Coordinator reports to the Incident Controller and coordinates with the members of emergency response team to tackle emergencies.
- The Environmental Coordinator, assesses the environmental impact of the incident, advises the Incident Controller in spill control and mitigation, and contacts outside Environmental agencies as & when required.
- Assess environmental impact of any release to the environment, which includes analytical monitoring as required.
- File follow-up reports with environmental agencies.

Responsibilities of Security Coordinator : Head Guard
Alternate : Asst Head Guard-Security

The Security Coordinator reports to the Site Main Controller and coordinates with the members of emergency response team to tackle the emergencies.

- Respond to all plant emergencies.
- Control all incoming and outgoing traffic.
- Block all non-essential entry into plant.
- Take head counts during emergencies.
- To keep control of the employees assembled near the gate.
- Prevent employees and others approaching the area of accident.

Responsibilities of First Aid and Rescue Team:

When there is a Medical Emergency the employees of the affected area informs the Emergency control centre for getting assistance.
The medial team will be informed by the security about which area is affected & will proceed to the affected area.

- They report to the Safety Coordinator/Incident Controller at the time of medical emergency.
- Medical Team provided First aid to injured personnel.
- Bring the injured to the Medical Centre for first aid.
- Medical team is trained on First Aid.
- Evacuation of persons from emergency area to assembling points.
- They will coordinate with the External medical personnel as & when required during the emergency.

Medical team members will have their identification badges.31 no.s of employees are trained first aider.

Responsibilities of Fire Brigade:

- The Fire Brigade team works under the direction of the Safety Coordinators/Site main controller.
- The Fire Brigade shall respond to all fire emergencies as & when called, be prepared to extinguish all fires, prevent the spread of fire and prevent the damage caused by a fire.

- The Fire Brigade will fight the incipient fire inside or outside of an enclosed structure or building & has to perform full-fledged fire fighting in the open area only.
- When there is a fire alarm signal, the Fire Brigade members will call the Security Dept & get the details about which area is affected & proceed to the fire scene from an upwind direction.

Members of the Fire Brigade will have their identification badges. 34 no.s of employees are trained for fire fighting.

Responsibilities of Hazardous Materials Team: (HAZMAT TEAM)

When there is leak or spill of hazardous substances the employee of the affected area informs the Emergency control centre (security office) for getting assistance.

The HAZMAT members will be informed by the security about which area is affected & will proceed to the affected area. HAZMAT Team members handle and control leak or spills of hazardous substances.

HATMAT Team members coordinate with the Safety Coordinator or Incident Controller tackling the emergency. Also, the HAZMAT members will be in regular contact with the Incident Controller/Environmental Coordinator & appraise of the emergency so that proper monitoring can be done during the incident/post incident. HAZMAT members will have their identification badges. 24 no.s of employees are trained for rescue for hazardous

In case, if the emergency is after office hours/holidays the Security in-charge will inform the Key personnel immediately. chemical.

Responsibilities of Essential Worker:
A task force of essential trained workers is available to implement the instructions of Incident controller. Such workmen, on emergency will take permission from the departmental head and join the task force to fight emergency.

- Fire fighting as per instructions of safety officer, as part of Fire Brigade.
- Shutting down and making it safe.
- Safe transfer of material, urgent repairing or replacement.
- Provision of emergency power, lighting, equipment, material etc.
- Search, evacuation, rescue & welfare.
- First aid and medical help.
- Manning assembly points.
- To act as messengers wherever called for.

General Guidelines: -

- On hearing the fire alarm all the workstation in charges of the plant should carryout the following:

- Identified emergency brigade will go to the area of emergency.
- Stop all feed and ensure smooth stoppage of all production units.
- Stop all loading and unloading operations and keep transport vehicles in, as is where is condition without blocking emergency passage. Before leaving the vehicle transport drivers must leave the key in the vehicle and then move to assembly point.
- Under all circumstances, whenever an emergency is suspected, Hydrogen supply from cylinder will be isolated and the truck should be safely moved to the nearest safe spot. Ensure Nitrogen supply and power availability.
- Plant restart will be done only after hearing all clear siren and getting clearance from Site Controller. Head of production department will personally visit plant for restart of the plant.
- Restart of each plant will be through personal inspection and clearance from Incident Controller to respective plant Head.

Notification and Documentation: -
Notification to Statutory Authorities:
Depending on the scale & type of emergency, the appropriate statutory authorities will be informed in the appropriate formats by the Factory in-charge, at the immediate opportunity.

Documentation:
The person first witnessing the accident/incident will inform the Shift in charge. The Accident/Incident will be reported in FOR/FIC/001 & submitted to the SHE department. The Accident/Incident is investigated, the probable root cause will be identified & necessary corrective & preventive action will be taken.

ASSEMBLY POINTS: -

There are four Assembly Points. The locations are as follows:

Assembly point 1	Near Security office
Assembly point 2	Near Stores
Assembly point 3	Near Phyto entrance
Assembly point 4	Near Plant 4

7.10.8 EMERGENCY CONTROL ROOM: -MAIN SECURTY OFFICE.

ALTERNATE EMERGENCY CONTROL ROOM: – NEAR PHYTO SECURITY OFFICE.

Security Office will be the Emergency Control Centre for any major emergency. It is the place from which the operation to handle the emergency are directed and coordinated. It will be attended by the Site Main Controller, key personnel and Senior Officers of Fire and rescue department, Police, Factory Inspectorate, District Authorities and Emergency Services.

The Centre is equipped to receive and transmit information and direction from and to the Incident Controller and areas of the Works as well as outside. Emergency contact no is 205

The established Emergency control room contains the following equipment/information:

- Self contained breathing apparatus
- Onsite Emergency plan, which contains safe shut down procedures, Information Emergency team members etc.
- Emergency contact numbers.
- Important contact numbers of government offices.
- Topo sketch showing the adjoining facilities.
- Site plan showing Entry & exit, Emergency assembly points, safety shower
- Location Fire hydrants points and portable fire extinguishers, Occupational health
  centre and Emergency Control Room etc.

Additional layout of the plant which may be required to mark up during the emergency to show:

- Areas affected or endangered.
- Deployment of Emergency vehicles.
- Particular problem areas.
- Areas evacuated.
- Other relevant information
- Nominal roll of employees.
- List of key personnel addresses and telephone numbers.
- Emergency Preparedness plan.
- Material safety data sheets of various chemicals used.
- Details of various manufacturing processes.

7.10.9 COMMUNICATION SYSTEM

The communication system is crucial factor in handling an emergency. For the purpose of onsite emergency plan, the plant has a quick and effective communication.

a) Inside the factory.
b) To key personnel outside normal working hours.
c) To the outside Emergency services and Authorities and
d) To neighboring Factories and Public in vicinity.

The facility available for communication in the plant area is through Telephone& walky talky. Office and Residential Telephones provided by the company, Intercom facility within plant area.

The communication system beginning with raising the alarm, declaring the major emergency and procedure to make it known to others is explained below in brief.

1.Raising the Alarm: -

When there is an emergency, the personnel working inside the plant will be notified by emergency alarm (Fire alarm / Toxic gas alarm). The activating buttons for the alarm system are located at:

Siren: 1-Near pilot plant.
Siren: 2-Phytochemical Plant.
Siren: 3-Plant 4
Siren: 4-Organic

An individual who has discovered an unusual situation should inform Shift In-charge, who in turn will take a decision whether to communicate to seniors or declare emergency by activating the siren, depending upon the contingency.

- **Fire alarm- (30 seconds-5 seconds-30 seconds)**
- **Toxic gas alarm- (30 seconds-5 seconds-30 seconds-5 seconds-30 seconds)**
- **All Clear (Continuous siren for 1 minute)**

In addition to the alarm, the emergency to be announced through the Public Announcement System to alert all the personnel inside the plant and to summon the ERT members of the respective plant to begin the initial fire fighting measure.
The siren will alert key elements and essential workers who will proceed to the accident site and initiate emergency response actions.
The alarm system is connected to the UPS system so even during power failure the alarm can be activated.
If an individual attempting to report an emergency is unable to activate the emergency alarm, or if the emergency alarm is not working, he can use the intercom facility, which is nearest to him.
The security in–charge who sits in the ECR will inform the plant personnel through intercom & Walky talky & Public Announcement system.If there is power failure immediately alternate power is restored through generators. Internal telephones & Walky talky are available throughout the factory, which serves as the major source of communication.

The siren is checked every Monday afternoon for its reach and performance. Short sirens followed by gap are kept on to indicate an emergency situation. When the emergency is cleared as per procedure long siren is activated to indicate end of emergency and return of normalcy.

1.Declaring On-site emergency: -

Since declaration of emergency is a critical decision it calls for clearance from Site Main Controller or Incident Controller or their alternates.
But declaration of emergency is an important and timely decision requiring quick action without loss of time.

1.Telephone Messages: -

After hearing the emergency alarm and emergency declaration, the person attending the telephone will play an important role. He will be very precise, sharp, attentive and quick in receiving and noting the message and then for immediate subsequent action of further communication.

List of telephone numbers are displayed in main gate.

LIST OF EMERGENCY CONTACT NUMBERS

Sl.no	Name	Designation	Intercom nos.	Mobile no

1.Communication on possible Emergency: -

Inside the factory to workers:

All workmen are kept informed through dissemination of hazard information, storage details, safe handling procedures and role of workmen during emergency.

a. To Key personnel outside normal working hours:

Generally the key personnel and essential workers will be available in all shifts or on short call. But due to some reasons, if some are not available or not on duty and are outside and if their help is required, their updated lists are kept in the Emergency Control Centre from which the call-in will be made.

The names are listed in order of priority. Communicators are told to call-in the personnel in the order given. On making contact, the communicator will give a short prearranged message to the effect that an Emergency has been declared at works. Those contacted will not try to elicit further information at this stage, thereby delaying other calls.

b. To outside emergency services & Authorities:

The emergency will be communicated to authorities such as Police, Factory Inspectorate and Pollution Control Board for information and their involvement.

Since the levels of chemicals handled are small in volume off site emergencies are not possible and hence the information will be the statutory intimation and will not require their participation or help.

c. To neighboring Firms and Public:

Since no Off-site emergency or spill of on-site is contemplated such an exercise is not called for. However the emergency siren will work as a communicative for under standing the existence of emergency inside the plant.

5. Post-Emergency Activities / Recovery:

- Incident Controller will inspect the affected area and other operating sections.
- Only after clearance from Incident Controller, Plants will be started, one by one.
- Incident Controller will ensure proper functioning of utilities before clearing restart of the plant.
- The affected area will be started only after total study, enquiry and incorporation of correction. It necessary statutory clearance will be obtained.
- Post emergency activities comprise of the steps to be taken after the emergency had been controlled. The actions involved are
    - Collection of records.
    - Conducting enquiries and concluding preventive measures.
    - Making insurance claims.
    - Preparation of enquiry reports and suggestion scheme.
    - Implementation of enquiry reports and recommendations.
    - Rehabilitate the affected persons within and outside the premises.
    - To restart the plant.
    - Administrative Controller will follow up with hospitals on treatment of injured.

7.10.10 EMERGENCY RESPONSE PLAN / ACTION ON SITE

1. FIRST RESPONSE: -

Copy of Plant Layout marking the hazardous areas in the plant is enclosed as Annexure-V.

Any employee noticing fire or toxic release will shout for help and to attract attention. Shift in charge will be informed through telephone or walky talky regarding location of emergency. Shift in charge officer, depending upon the nature, will declare emergency and activate suitable alarm.

Any employee/person noticing the fire will shout 'Fire' 'Fire' to attract attention of others, shift incharge will be informed through phone or walky talky regarding fire and the location. He will rush to the site and arrange for controlling the fire. Meanwhile he will organize communication through phone or walky talky to the security office regarding emergency and location. He will inform security to blow the fire siren.

- On hearing the fire siren the nominated Incident Controller will take over from the shift incharge and execute the responsibilities of Incident controller.
- Site Controller viz Manager of the Plant will proceed to the Emergency Control Room and call assistance from key elements.
- Safety Officer/Fire fighting coordinator or alternate will proceed to location and start fire-fighting activity.
- Communication coordinator will proceed to the Telephone section and take over the function of receiving and transferring messages.
- Administration coordinator will wait for instructions from Site Main Controller.
- Security Coordinator will take charge of entry operations at the gate and prevent movement of Transport vehicles inside the plant. Soon after hearing the siren main gate will be kept open for free movement of vehicles.
- Ambulance Van will be kept ready for emergency movement of injured.
- Company Medical Officer will reach his first aid centre and prepare the dispensary for receiving affected persons. He will take instructions from site main controller for necessary emergency action.
- Security Officer will ensure that roads inside plant are not blocked and free space is available for movement of vehicles.

2. Fire Brigade Team: -

The team members to go into action such as: -

1. Rush to the spot of the fire with all available fire extinguishers and try to put out the fire at the earliest.
2. Stop all other activities and concentrate only on fire fighting and prevention of spread of fire.
3. As other members rush to the scene of fire tell them about the nature of emergency and inform about the extinguisher to be used.
4. All the combat activities will have clearance from Fire Fighting coordinator, the team to report to Fire fighting coordinator.

3. First Aid/Rescue Team:-

The assigned operations are such as: -

1. Inform Site Controller through communication coordination about the situation available at emergency spot.
2. Ensure that transport trucks are moved away and do not block the escape routes.
3. Bring stretchers from the dispensary and move the injured to the dispensary.
4. Help company medical officer and work as per his instructions.

4. What should not be done: -

1. Do not take unnecessary risk.
2. Do not run in panic.
3. Do not argue or discuss in the scene of fire.
4. Do not operate extinguishers if you do not have proper training.
5. Take instructions and act as per instructions of Incident Controller.
6. Only authorized team / persons will carry out respective role.

5. First Response Common to All: -

- If you notice the fire first try to extinguish the fire or take immediate steps called for
- and shout "Fire" "Fire" and take the help of others. Shift Officer should be contacted
- immediately.

- The employees shall observe the windsocks, move crosswind to the nearest
- assembly point in case of Fire / Toxic gas alarm.

- All the personnel other than the Emergency response team personnel are to report to the nearest assembly point:
    - Assembly point 1 - In front of Emergency control room.
    - Assembly point 2 – Alternate Assembly point in Phyto plant

- A head count shall be performed to account for all personnel.
- The most senior SSC employee, present at each assembly point, will take charge of making a head count for that location.
- They will report the results to the Emergency control room.
- The total head count will include the persons handling emergency situations (this includes Site main controller, Shift in charge, Safety Coordinator, Environment Coordinator, and Emergency Response Team (Fire Brigade team, Hazmat team, First Aid Team) The total headcount should match the gate entry record of the personnel.
- All visitors and contractors shall follow directions given by the SSC representative during the time of emergency. The SSC Representatives shall direct visitors and contractors to the nearest safe assembly point.
- Contractors and visitors should not leave the plant site until a Head Count has been completed.
- When the Fire alarm / Toxic gas alarm is activated all the work permits shall come to a stand still.
- The employees shall observe the windsocks, move crosswind to the nearest safe assembly point.

- Finally, when the emergency is brought under control, **"All Clear"** alarm will be signaled out by the Site main controller. **The "all clear" alarm will be a continuous alarm for 60seconds.**

Process shutdown:

When the alarm is activated, depending on the type of emergency, the shift in charge will order for shutting down the process.
Emergency shutdown procedures are product specific as these depend on the type of raw materials used and the process.
All operating personnel shall follow the standard emergency shutdown procedure as per the BMR and report to the nearest Assembly points.

Total Plant Evacuation:

The Site main controller will consult with the members of Emergency response team to decide total evacuation of plant if the situation warranted.

The Plant Evacuation Exit points are located at

- Evacuation Exit point 1 - Front Gate near Main Security Office.
- Evacuation Exit point 2- Gate in Phytochemical Plant

6. Procedures in the event of a Fire: -

1. The person, who first notices the fire, if he is confident on the nature of fire, shall try to extinguish with the appropriate portable extinguisher, which is near to the fire scene.
2. If the situation is beyond his control he will activate the emergency fire alarm & simultaneously information is passed on to the ECR.
3. When the fire alarm signal is heard, the Fire Brigade members will rush to the fire scene & respond to the emergency.
4. The Emergency Response Team will provide necessary help to the Fire Brigade both internal & external as per the requirement.
5. If the fire fighting operation is prolonged for a longer period, Site main controller will arrange additional resource for water.

6.1 Procedure in the event of Hydrogen related Fire:

Hydrogen will burn with a pale blue, almost invisible flame.
Hydrogen fires will have the flame characteristic of a torch or jet and will originate at the point where the hydrogen is discharging.

Procedure:

1. Shut off the flow of Hydrogen supply by closing the valve in the main header located in the Hydrogen shed.
2. If the fire is of small nature use CO_2 / DCP fire extinguishers to extinguish the fire.

3. Cool the surrounding equipment / environment in the event of a hydrogen fire.
4. If the fire is of serious nature follow the normal procedure as described above.

6.2. Procedure for fire fighting in tank farm area:

1. The first person to come across the fire shall activate the emergency fire alarm & simultaneously inform ECR.
2. Immediately the Fire Brigade team will rush to the spot & will respond to the emergency.
3. The tanks which are not under fire will be cooled by water spray / sprinklers.
4. The barrels stored in the storage shed will be cooled by water spray to avoid any mishap.
5. If required the Site main controller will order for emergency shut down of all the processes in the plant.
6. Based on the nature and extent of fire, Site main controller will requisition assistance from Tamil Nadu Fire & Rescue services.

7. **Chemical Spill & Toxic Gas release: -**

7.1 Procedures for Major Spills & Toxic Gas release:

The spill or toxic release may happen due to abnormal working conditions, dangerous occurrences, human error, and dangerous chemical reaction involving toxic chemicals & hazardous chemicals

The primary concern in the event of a major spill / toxic gas release are:

- Protecting the environment.
- Protecting the employees and people in neighboring communities.
- Stop, contain the leak or spill and clean up.
- Determine the extent and material involved in the leak or spill and mitigate the damage caused to the people environment and the assets.

Procedure

1. When there is a major spill the employee who first saw the spill will inform the Emergency control room.
2. Processes will be shut down as required to stop any atmospheric releases; this will be carried out as per the emergency shut down procedure as described in the BMR.
3. Primarily, the spread of the spill will be controlled by the HAZMAT team in the facility by constructing make shift dikes of dirt and / or absorbent material (including granular absorbent, spill pads,)
4. Closing valves, blocking lines, and / or sealing openings as needed, shall control spills.
5. Air monitoring will be conducted as & when required to evaluate the environment and determine chemical concentrations.
6. Clean-up of the area will continue by use of absorbent material, or other appropriate methods, until all of the spilled material has been removed.

7. If there is a possibility of spill escaping into adjacent waterways, control will be accomplished by making barricade or by other methods, which will contain or divert the material for collection.
8. All the above procedures will be carried out only with necessary PPE.
9. If necessary, the Site main controller will obtain external resources to fully contain the spill or toxic gas release.
10. The Site main controller will call the emergency off & initiate action to mitigate the damage caused.

7.2 Procedure for toxic gas release:

1. When there is toxic gas release in the process area / scrubber.
2. The workstation in-charge will activate the Toxic gas alarm & simultaneously informs ECR about the toxic gas release.
3. The workstation in-charge involved in that operation will wear appropriate PPE such as nose mask, air breathing apparatus or self-contained breathing apparatus (SCBA) & control the situation
4. The HAZMAT team members when they hear the toxic gas alarm will rush to the affected area with SCBA to control the release.
5. Simultaneously, HAZMAT team will also search out for any persons who are trapped inside the affected area.
6. If anyone is found in an unconscious stage, the affected person will be shifted out immediately to the near by hospital for treatment.
7. When the release is controlled, the HAZMAT team will carry out atmospheric monitoring. If everything is normal, the message will be passed on to the ECR.
8. All the above procedures will be carried out only after wearing necessary PPE.
9. HAZMAT team will be in regular contact with the ECR & appraise of the situation to the Site main controller.
10. The Site main controller will call the emergency off & initiate action to mitigate the damage caused.

7.3 Possible Toxic gas releases in the plant:

1. Hydrogen cyanide gas emission from the scrubber.
2. Ammonia.
3. HCL vapours. (This is not toxic but corrosive in nature.)

The procedure for handling the above abnormal releases is as follows: -

7.3.1 Procedure for handling Hydrogen Cyanide Emission from the scrubber:

The HCN online detector is installed in the Scrubber & Reactor area, if Hydrogen Cyanide emission is **above 5 ppm** then there will be an audible alarm in the Shift in charge station.

1. The workstation in-charge will wear the air breathing apparatus / SCBA.

2. Steam, reactant dosing in the reaction involving cyanation will be stopped automatically through PLC interlock.
3. If acidic reaction media is suspected as the cause for the emission, addition of sodium hydroxide solution from the emergency dosing tank, which is kept ready for mitigating emergency situation.
4. If the scrubber fails the agitator will be stopped, in addition to closing the steam valve and dosing valve.
5. If higher temperature is suspected cooling water will be circulated in the jacket
6. HCN level in the atmospheric air will be checked using Drager tube by standing around 50 mts. away from the scrubber. If the HCN content is more than **5 ppm** and if it is not reducing further, the Site main controller will take action for evacuating the people.
7. All the above procedures will be carried out **only after wearing necessary PPE.**

7.3.2 Procedure for handling Ammonia gas emission from the Scrubber / Reactor:

1. The workstation in-charge will immediately wear Air-breathing apparatus / Respirator for Ammonia handling.
2. Identify the cause for gas emission.
3. If the gas emission is from the reactor or from the pipeline, agitation will be stopped to control the progress of reaction.
4. Circulation of coolant (Chilled brine / chilled water) in the reactor jacket will be continued.
5. If the gas emission is from the scrubber due to scrubber failure, change over of scrubber and scrubbing solution line will be done.
6. Alternatively, the raw water will be allowed to flow in the scrubber.
7. Level of ammonia in the atmosphere will be checked by using Drager tube in the wind direction within the radius of about 50 m away from the scrubber. If the ammonia concentration is more than 5 **ppm** and if it is not reducing further, the Site main controller will take further action for evacuating the people in the area.
8. The above procedures will be carried out only after wearing necessary PPE.

7.3.3 Procedure for handling Hydrogen chloride (HCl) gas emission from the Scrubber / Reactor:

1. The workstation in-charge will wear SCBA / air breathing apparatus / respirator for the Acid vapours.
2. Identify the cause for emission.
3. If the gas emission is from the reactor or from the pipeline, agitation will be stopped to control the progress of reaction.
4. Circulation of coolant (Chilled brine / chilled water) in the reactor jacket will be continued.
5. If the gas emission is from the scrubber due to scrubber failure, change over of scrubber and scrubbing solution line will be done.
6. Alternatively the sodium hydroxide solution will be allowed to flow in the scrubber.
7. Level HCl in the atmosphere will be checked by using Drager tube in the wind direction within the radius of about 50 m away from scrubber. If the HCl concentration is more than **5 ppm** and if it is not reducing further, the Site main controller will take further action for evacuating the people in that area.

8. The above procedures will be carried out only after wearing necessary PPE**.**

8. Response to Medical Emergencies: -

Procedure for handling Medical Emergencies:

1. The first person to come across a grievous medical emergency shall inform ECR.
2. The ECR will immediately inform the Medical Team.
3. The medical team will rush to the emergency scene & administer first-aid.
4. All the responders attending on the medical emergency shall protect themselves from contact with the body fluids of the injured persons.
5. If the medical emergency is of serious nature & if External medical responders have to attend on it, then the medical team member attending on the emergency will contact the ECR for arranging the external responders.

9. End of Emergency: -

After the emergency comes under control, Incident controller along with safety coordinator will go around all the areas and confirm total control of the situation. Communication coordinator will check for head count and tally of employees and organize further efforts through Incident Controller for search of missing persons. After ensuring tally of Head count and confirming control of emergency Incident controller will communicate end of emergency to site coordinator who in turn will inform security to go on long-siren to declare “End of Emergency”. Plant start-up will be done stage by stage after taking separate clearance for each plant from Incident controller.

7.10.11 NATURAL CALAMITIES AND BOMB THREATS

1 Natural Hazards like floods, Earthquakes etc.

In view of the high elevation of the plant compared to the surroundings flooding cannot take place and has a tendency for quick draining towards the water stream. There had been no incidence of flooding or severe earthquake in the last five decades history of the plant. However the following precautions are considered as a matter of abundant preparation.
If no advance warning is received, employees are to seek shelter in the administration / amenities building basement, ground level interior rooms and rest room. If this is not possible, employees should seek safety under a table or heavy piece of equipment that offers protection from falling debris.
If a high wind warning is issued in TV or Radio, personnel should be assigned to monitor weather conditions and report on threatening conditions.

When a warning issued by TV (meaning that a high wind has actually been sighted in the area) the following steps to be taken immediately:

a. Personnel in the plant will be notified through PA/Paging system
b. Emergency brigade will be placed on alert
c. Plant personnel are to seek shelter in the (administration / amenities building basement, ground level interior rooms and rest room)
d. All non essential utilities should be shut off

After the passing of a high wind, personnel should inspect their areas for damage. If the plant was struck, emergency brigade personnel will bring rescue, first-aid and damage control activities. Damage assessment, cleanup and restoration and other activities should follow.

Lightning:

The purpose of this section is to outline activities to be taken and following lightning to protect employees and to continue vital operations.

Employee Safety:

During these emergencies, all personnel will evacuate from buildings and proceed to safer areas. The shift in charge should contact operators by page phone for a report on employee safety and a condition of plant facilities and equipment. The emergency brigade should begin rescue, first aid and damage control activities.

Emergency Shutdown:
As soon as possible, emergency shutdown procedures should be implemented, including,

a. Closing of batches
b. Shutdown of Power
c. Close main inflow gate and assess damage.

In case of vent fire during lightning isolate vent or supply inert gas and after fire is extinguished isolate vent.
It is preferable to have flash back arresters on process vents where fire probability exists.
Tall structures, vents and chimneys are protected against lightning as per code.

2 Bomb Threats

Regarding emergency arising out of bombs or bomb threats the person receiving the call should inform Emergency Site main controller (Plant in charge) or his alternate.

- Person noticing an object that could be a bomb, should bring it to the notice of the nearest available officer.
- The officer should observe the same from a distance and raise an alarm to declare an emergency.
- Officer should cordon off the area, nobody should be authorized to go near the object.
- Police control room and fire station should be informed by Plant Manager.
- On arrival of the police and fire personnel, they should be allowed entry in the cordoned off area.
- After the bomb is diffused or found to be a hoax, clear siren should be given by watchman at gate number one.

The key persons associated with bomb threats will consist of

1. Emergency Site Main Controller or Alternate
2. Inspector or Station-in-charge of nearest Police Stations
3. District Fire Officer, Krishnagiri
4. District Superintendent of Police, Krishnagiri
5. District Collector, Krishnagiri
6. District Medical Officer, Krishnagiri

Responsibility of Site Main Controller:

- Collect detailed information from the person receiving the first call on bomb threat.
- Soon after receipt of bomb threat inform all members of Bomb Threat Evaluation Committee, mainly Police Control Room, Fire station and District collector.
- The first responder should be informed to be available for further clarification.
- Close down all operations except utilities like cooling water circulation to ensure safety of the plant.

Responsibility of Plant Security Officer – Security:

- Cordoning off the affected area
- Stop movement of vehicles
- Assist bomb search teams
- Collect intelligence and surveillance.

Search team will be through external experts from Police department. They will carry the following in working condition:

a. Metal Detector
b. Search mirror
c. Emergency Lights
d. Flash Lights
e. Tools
f. Marking facility

Snifter dogs may be employed at the discretion of Police authorities, but taking into consideration toxic hazard.
It bombs threat is confirmed or suspected evacuation should be carried out leaving minimum number of persons for assistance and located in safe area.

3 .Evacuation Procedure:

1. Employees should be calm and walkout to designated place in orderly manner.
2. Follow instructions from guides regarding the route to be followed.
3. Remain in the Assembly or safe area till further instructions.

Follow the rule of 'Taking away the employees and not taking away the bomb'.

All clear signal:
All clean siren is to be communicated once the bomb is diffused or the threat is proved as hoax, subject to clearance from Plant authorities. After the siren the routine procedure for restart with clearance from all levels should be followed before startup of the plant.

4. Recovery Process

Introduction:-
Towards re-establishing normal operations at the earliest after an emergency the following procedure will be followed.

The section is divided into six parts:

1. Reconstruction of the accident scenario
2. Incident investigation
3. Establishing a recovery team
4. Damage Assessment
5. Clean-up and restoration
6. Post-Emergency and Recovery Reporting

After the major emergency has been cleared the scene needs reconstruction with the help of persons who were associated with the scenario.

Incident Investigation:-

To investigate the cause of the emergency and to prevent recurrence the incident requires through investigation. The investigation team should immediately seal off the incident scene and commence its investigation to minimize the loss of any physical evidence. The investigation of the scene should include photographing the area, identifying equipment from fragments and note unusual items

Written or recorded statements are to be taken from all operators involved, potential witnesses and others who might have pertinent knowledge about the incident.

Report: -
A final report will be prepared giving details about the basic reason for the accident and will work as a failure report covering equipment, maintenance, procedure, training, human error etc.

Recovery Team: -
In order to facilitate the restoration of normal operations of the company after an emergency, a team is to be constituted by Chief Executive to manage recovery activities, including damage assessment. As a general rule, however, individuals representing Maintenance, Production, Safety, Quality Control, Accounts, Engineering etc., will be involved.
The recovery team is responsible for damage assessment, clean-up and salvage operations and the restoration of normal operations. A primary function of the recovery team will be to assess the damage to structures, equipment and materials.

5. Clean-up and Restoration Operations:-

As soon as incident investigations are completed and restoration plans have been made, clean-up and restoration activities will commence.

Damaged Equipment:-

Prior to restoration of normal operations, all affected equipments are to be tested and checked according to procedures established.

6.Post-Emergency Recovery Reports:-

The Plant- in-charge will hold review sessions with emergency response personnel to evaluate.

1. The adequacy of emergency response procedures.
2. The adequacy of the investigation of the cause of the incident.
3. Summaries the post-emergency activities.

7.10.12 TRAINING, REHEARSAL AND RECORDS

1. NEED OF TRAINING & REHEARSAL

Training is important in order to –

- Teach worker's how to handle chemicals safely, how to act as a runner/messenger, how to use PPE, how to start and shut down the plant, how to carry out emergency repairs etc.
- Teach one to be a safe and alert worker.

Rehearsal is essential for -

- Explaining and making key personnel and essential workers aware of their role in case of an emergency.

- Testing the emergency procedure, emergency arrangements and ability of all involved with it to grasp the procedure and implement the same.
- Testing the effectiveness of communication system including the alternative arrangement in case of failure.
- Testing the speed of mobilization of resources, search, rescue and treatment of casualties, emergency isolation and shut down.
- Detecting the shortcomings in the emergency plan and incorporating remedial measures.
- Allowing professional emergency services to test their parts of the plan and testing co-ordination.
- Building confidence in workers which is helpful in facing real situations.

Training will be given to regular employees and contract personnel also. Effective and latest teaching aids will be used to train workers and supervisory staff. Such training courses will be conducted once in a year and co-ordination with offsite personnel shall be sought during such training. Records will be maintained for training.

7.11 OFF-SITE EMERGENCY PLAN

7.11.1 Need of the Site Emergency Plan

Depending upon the wind direction and velocity of the effects of accident in factory may spread to outside its premises. To avert major disaster, it is essential to seek guidance/assistance of statutory authorities, police and health department. The movement of traffic may have to be restricted. Required information will be given to the authority and consultation will be sought for remedial measures.

A purpose of the off-site emergency plan is:

- To provide the local/district authorities, police, fire, brigade, doctors, surrounding industries and public the basic information of risk and environmental impact assessment and appraise them of the consequences and the protection/prevention measures and to seek their help to communicate with public in case of major emergency.
- To assist district authorities for preparing the off-site emergency plan for district or particular area and to organize rehearsals from time to time and initiate corrective actions on experience.

7.11.2 Structure of the Off-Site Emergency Plan

Available with concerned authorities.

7.11.3 Role of the Factory Management

The site main controller will provide a copy of action plan to the statutory authorities in order to facilitate preparedness of district/area off-site emergency plan.

7.11.4 Role of Emergency Co-ordination Office (ECO):

He will be a senior police or fire officer co-ordination with site main controller. He will utilize emergency control centre.

7.11.5 Role of Local Authority

Preparation of Off Site Plan lies with local authorities. An emergency planning officer (EPO) works to obtain relevant information for preparing basis for the plan and ensures that all that organization involved in offsite emergency and to know their role and responsibilities.

7.11.6 Role of Fire Authorities:

The fire authorities will take over the site responsibility from incident controller after arrival. They will be familiarized with site of flammable materials, water and foam applies points, fire-fighting equipment.

7.11.7 Role of the Police and Evacuation Authorities:

Senior Police Officer designed, as emergency co-ordination officer shall take over all control of an emergency. The duties include protection of life, property and control of traffic movement. Their functions include controlling standards, evacuating public and identifying dead and dealing with casualties and informing relatives of dead or injured. There may be separate authorities/agencies to carry out evacuation and transportation work. Evacuation depends upon the nature of accident, in case of fire only neighbouring localities shall be alerted. Whole areas have to be evacuated in case of toxic release.

7.11.8 Role of Health Authorities

After assessing the extent of effect caused to a person the health authorities will treat them.

7.11.9 Role of Mutual Aid Agencies

Various types of mutual aid available from the surrounding factories and other agencies will be utilized.

7.11.10 Role of Factory Inspectorate

In the event of an accident, the Factory Inspector will assist the District Emergency Authority for information and helping in getting Neighbouring Industries/mutual aid from surrounding factories. In the aftermath, Factory Inspector may wish to ensure that the affected areas are rehabilitated safely.

7.12 OCCUPATIONAL HEALTH HAZARD AND SAFETY PROGRAM FOR THE PROJECT

Occupational Health is eventually a branch of preventive medicine which examines the relationship between work and health and effects of work on the health of the worker. Occupational health service is operated to achieve the statutory declared aim of occupational health by medical and technical measures. Its role is mainly preventive and to

give first aid and emergency treatment. It is certainly useful in early detection of any occupational or non-occupational disease or any man-adjustment of the man-job relationship.

- The Occupational health center (OHC) will be declared as Emergency communication center (ECC) which is near the administrative building and out of reach all the hazardous area. Its internal telephone contacts will be provided.
- Occupational health surveillance of the workers are done on a regular basis and records maintained as per the Factories Act in Form No. 32.
- Medical checkup of each employee and workers carry out yearly basis.
- ECC is facilitated with,

(1) External telephone line,
(2) The list of contact details of key personnel and list of internal Telephone numbers
(3) List of external emergency services contact telephone numbers.
(4) Site plan of the factory and Plot plan showing surrounding areas.
(5) List of Fire Fighters and First Aider.
(6) Copy of On-site Emergency Plan.

Plan and fund allocation to ensure the occupational health & safety of all contract and casual workers.

One time investment for Occupational safety	**In lakhs**
Hydrant system, smoke detector & Sprinkler and Fire fighting devices	200
Process control, censor, interlock,guard and other instrumentation for safety	3000
Emergency shower, SCBA,ECC,gas detector	100
Total	**3300**

Annual plan for occupation Heath and safety	**In lakhs/Annum**
Employee periodical medical check-up	27
OHC operating cost	24
Ambulance	12
Personal protective equipments	34
Training and awareness	5
Total	**102**

7.12.1 OCCUPATIONAL HEALTH AND SAFETY PROGRAM:

1. Medical examinations: Pre-employment, periodic and others

2. Supervision of the working environment industrial hygiene, safety, job analysis and adaptation of the job to the worker in good working conditions.
3. Advice to management and worker.
4. Health education and training.
5. Health statistics.
6. Medical treatment-first aid, emergency and ambulatory treatment.
7. Health counseling-individual.
8. Nutrition.
9. Research in occupational health.
10. Co-operation with other services in the undertaking.
11. Collaboration with external services.

Other purposes of industrial medical services are:

I) Identifying the Hazards

II) Preventing or minimizing the Hazards

III) Curative treatment in case of exposure

IV) Determining the Compensation for damages

The working personnel shall be given the following appropriate **personnel protective equipments**.

- Industrial Safety Helmet;
- Face shield
- Welders equipment for eye and face protection;
- Ear muffs;
- Self contained breathing apparatus;
- Leather apron;
- Aluminized fiber glass fix proximity suit with hood and gloves;
- Boiler suit;
- Safety belt/line man's safety belt;
- Leather hand gloves;
- Acid/Alkali proof rubberized hand gloves;
- Canvas cum leather hand gloves with leather palm;
- Electrically tested electrical resistance hand gloves; and
- Industrial safety shoes with steel toe.

EXPECTED OCCUPATIONAL HEALTH HAZARDS & SAFETY

- Physical Hazards: Noise, Heat, Dust
- Chemical Hazards: Corrosive, Toxic Substances, Irritants, Carcinogens, Chemical emissions

- Psychological hazards resulting from stress and strain
- Hazards associated with the non-application of ergonomic principles, for example badly designed machinery, mechanical devices and tools used by workers, improper seating and workstation design, or poorly designed work practices

EXPECTED CHEMICAL HAZARDS IN WORK ENVIRONMENT

NAME OF CHEMICAL	HEALTH HAZARD DUE TO EXPOSURE TO THESE CHEMICALS
Acrylonitrile	Causes skin irritation May cause an allergic skin reaction Causes serious eye damage May cause respiratory irritation May cause cancer Suspected of damaging fertility or the unborn child Toxic if swallowed, in contact with skin or if inhaled
Acetic Acid	Causes severe skin burns and eye damage
Ammonia Gas	Contains gas under pressure; may explode if heated. May displace oxygen and cause rapid suffocation. Harmful if inhaled. Causes severe skin burns and eye damage.
Acetonitrile	Causes serious eye irritation Harmful if swallowed, in contact with skin or if inhaled
Acetone	Avoid breathing dust/fume/gas/mist/vapours/spray. Causes serious eye irritation May cause drowsiness or dizziness
Acetyl Chloride	Vapor irritates mucous membranes. Ingestion of liquid or contact with eyes or skin causes severe irritation.
Aluminum chloride	Causes severe skin burns and eye damage, May cause respiratory irritation
Ammonium carbonate	Inhalation causes irritation of nose and throat. Ingestion may cause gastric irritation. Contact with eyes or skin causes irritation
Ammonium Chloride	Inhalation of fumes irritates respiratory passages. Ingestion irritates mouth and stomach. Fumes are irritating to eyes. Contact with skin may cause irritation.
Caustic Soda	Causes severe burns of eyes, skin, and mucous membranes
Cyano acetic acid	Contact irritates eyes and may irritate skin.
Chloroform	It is classified as moderately toxic. Probable oral lethal dose for humans is 0.5 to 5 g/kg (between 1 ounce and 1 pint) for a 150 lb.

	person. The mean lethal dose is probably near 1 fluid ounce (44 g). It is a human suspected carcinogen. Also, it is a central nervous system depressant and a gastrointestinal irritant. It has caused rapid death attributable to cardiac arrest and delayed death from liver and kidney damage.
Cyclohexanone	Inhalation of vapors from hot material can cause narcosis. The liquid may cause dermatitis.
Formic Acid	Liquid causes skin and eye burns. Vapors are irritating and painful to breath. Vapor exposure may cause nausea and vomiting.
Hexane	INHALATION causes irritation of respiratory tract, cough, mild depression, cardiac arrhythmias. ASPIRATION causes severe lung irritation, coughing, pulmonary edema; excitement followed by depression. INGESTION causes nausea, vomiting, swelling of abdomen, headache, depression.
Hydro chloric acid	Causes severe skin burns and eye damage May cause respiratory irritation
Isopropyl Alcohol	Vapors cause mild irritation of eyes and upper respiratory tract; high concentrations may be anesthetic. Liquid irritates eyes and may cause injury; harmless to skin; if ingested causes drunkenness and vomiting.
Hydrogen gas	Vapors may cause dizziness or asphyxiation without warning. Some may be irritating if inhaled at high concentrations. Contact with gas or liquefied gas may cause burns, severe injury and/or frostbite. Fire may produce irritating and/or toxic gases.
Methanol	Exposure to excessive vapor causes eye irritation, head- ache, fatigue and drowsiness. High concentrations can produce central nervous system depression and optic nerve damage. 50,000 ppm will probably cause death in 1 to 2 hrs. Can be absorbed through skin. Swallowing may cause death or eye damage.
Potassium Hydroxide Flakes	Causes severe burns of eyes, skin, and mucous membranes.
Phenol	Toxic if swallowed, Harmful if swallowed, Toxic in contact with skin Harmful in contact with skin Causes severe skin burns and eye damage Causes serious eye damage Causes serious eye irritation Toxic if inhaled Harmful if inhaled May cause genetic defects Suspected of causing genetic defects May damage fertility or the unborn child

	Causes damage to organs Causes damage to organs through prolonged or repeated exposure May cause damage to organs through prolonged or repeated exposure
Sodium Cyanide	Super toxic; probable oral lethal dose in humans is less than 5 mg/kg or a taste (less than 7 drops) for a 70 kg (150 lb.) person. Sodium cyanide is poisonous and may be fatal if inhaled, swallowed or absorbed through the skin. Contact with sodium cyanide may cause burns to skin and eyes. Individuals with chronic diseases of the kidneys, respiratory tract, skin, or thyroid are at greater risk of developing toxic cyanide effects.
Sulphuric acid	Causes severe skin burns and eye damage May cause respiratory irritation
Ethylene oxide	It can cause death. Lowest inhalation concentration causing toxic effects is 12500 ppm/10 seconds. It is a strong skin irritant. Neurological disorders and even death have been reported.
Thionyl Chloride	CORROSIVE and/or TOXIC; inhalation, ingestion or contact (skin, eyes) with vapors, dusts or substance may cause severe injury, burns or death. Fire will produce irritating, corrosive and/or toxic gases. Reaction with water may generate much heat that will increase the concentration of fumes in the air. Contact with molten substance may cause severe burns to skin and eyes. Runoff from fire control or dilution water may cause environmental contamination.
Toluene	Vapors irritate eyes and upper respiratory tract; cause dizziness, headache, anesthesia, respiratory arrest. Liquid irritates eyes and causes drying of skin. If aspirated, causes coughing, gagging, distress, and rapidly developing pulmonary edema. If ingested causes vomiting, griping, diarrhea, depressed respiration.
Chlorine Gas	Poisonous; may be fatal if inhaled. Contact may cause burns to skin and eyes. Bronchitis or chronic lung conditions.
Bromine	Inhalation exposure to 11-23 mg/m3 produces severe choking. 30-60 mg/m3 is extremely dangerous. 200 mg/m3 is fatal in a short time. Vapors can cause acute as well as chronic poisoning. It has cumulative properties. It is irritating to the eyes and respiratory tract. Poisoning is due to the corrosive action on the gastrointestinal tract. Nervous, circulatory and renal disturbances occur after ingestion. Ingestion of liquid can cause death due to circulatory collapse and asphyxiation from swelling of the respiratory tract. The lowest oral lethal dose reported for humans is 14 mg/kg. The lowest lethal inhalation concentration reported for humans is 1000 ppm.

Nitric acid	TOXIC; inhalation, ingestion or contact (skin, eyes) with vapors, dusts or substance may cause severe injury, burns or death. Reaction with water or moist air may release toxic, corrosive or flammable gases. Reaction with water may generate much heat that will increase the concentration of fumes in the air. Fire will produce irritating, corrosive and/or toxic gases. Runoff from fire control or dilution water may be corrosive and/or toxic and cause environmental contamination

List of Occupational Hazards, Control Measures and Review

S.No	Location	Occupational Hazard	Control Measures	Test Done	Remark
1	Boiler	Heat	Proper Breaks, Insulation of steam line& Apron, Rotation of shift, Separate monitoring room & Water facility	Audiometric Test	--
2	Compressor	Noise &Vibration	Proper Breaks, Ear plug/Ear Muff, Rotation of shift & medical testing, Silencer, Vibration pad, Vibration monitoring & proper PM	Audiometric Test	--
3	Charging of powder material-AEP & Organic	Dust	Dust collection system, Online Breathing apparatus or Dust cartridge, Industrial Dust monitoring at work place, PPE	Pulmonary Function Test(PFT)	--
4	Charging of Acidic/Organic material-AEP & Organic	Irritation, Fumes	Scrubbing system, Room scrubber , Mask with cartridge, monitoring at work place	Pulmonary Function Test(PFT)	--
5	MEE	Noise & Biological	Proper PPE & Rotation of shift, Ear plug/Ear Muff, Rotation of shift & medical testing,	Blood test, Audiometric Test	--

7.12.2 PERIODIC MEDICAL EXAMINATION

It is proposed that client ensure that…

(1) Workers employed are medically examined by a qualified medical practitioner/Factory Medical Officer, in the following manner:

(a) Once in a period of 6 months, to ascertain physical fitness of the person to do the Particular job;

(b) Once in a period of 6 months, to ascertain the health status of all the workers in respect of occupational health hazards to which they are exposed and in cases where in the opinion of the Factory Medical Officer it is necessary to do so at a shorter interval in respect of any workers;

(c) In periodic and pre-medical examinations, various parameters are checked. Viz., LIVER FUNCRION TESTS, Chest X-rays, Audiometry, Spirometry, Vision testing (Far& Near vision, color vision and any other ocular defect) ECG and other parameters as found are necessary as per the opinion of Factory Medical officer.

(2) No person employed for the first time without a certificate of granted by the Factory Medical Officer.

7.12.3 EMP FOR THE OCCUPATIONAL SAFETY & HEALTH HAZARDS SO THAT SUCH EXPOSURE CAN BE KEPT WITHIN PERMISSIBLE EXPOSURE LEVEL (PEL)/THRESHOLD LEVEL VALUE (TLV) SO AS TO PROTECT HEALTH OF WORKERS.

Mitigation Measures for OSH: It is proposed to formulate and implement a structure for Occupational Safety and Health with following aims…

- To keep air-borne concentration of toxic and hazardous chemicals below PEL and TLV.
- Protect general health of workers likely to be exposed to such chemicals
- Providing training, guidelines, resources and facilities to concerned department for occupational health hazards.
- It is proposed that this EMP be formulated on the guidelines issued by Bureau of Indian Standards on OH&S Management Systems: IS 18001:2000 Occupational Health and Safety Management Systems
- Proposed EMP will be incorporated in Standard Operating Procedure also.

The proposed EMP also include measure to keep air-born concentration of toxic and hazardous chemicals below its PEL and TLV, like…

- Leak Surveys
- Separate storage for toxic chemicals
- Exhaust Ventilation
- Proper illumination
- Close processes to avoid spills and exposures
- Automation of process operations to hazards of manual handling of chemicals

- Supply of proper PPEs like Air mask, Berating canisters, SCBA sets, On-line breathing apparatus at the places where there is possibility of presence of toxic chemicals
- Decontamination procedure for empty drums and carboys.
- Regular maintenance program for pumps, equipment, instruments handling toxic and corrosive chemicals
- Training to persons handling toxic and corrosive chemicals

7.12.4 ARRANGEMENTS FOR ENSURING HEALTH & SAFETY OF WORKERS ENGAGED IN HANDLING OF TOXIC MATERIALS

- The top management is committed towards safety & employees' well-being is the numerous no and safety always takes precedence over production.
- Each and every process assessed with safety tools like HAZOP, JSA, PSSR, JRA etc.
- Emergency Response Team formed and mock drills are conducted regularly.
- Appropriate engineering controls are provided to prevent any mishap.
- Scheduled preventive maintenance are carried out in the plant including that of safety equipment.
- Standard Operating Procedures are provided to workers to ensure that all the work is done in a safe manner.
- Signage's are provided wherever required, instructing them to use PPEs and other safety equipment.
- MSDS are displayed at strategic locations. PPE matrix, Brief SOPs and chemical compatibility charts shall be displayed at prominent locations.
- Contract workmen are imparted induction training, Safety training on process and Health & safety awareness on a regular basis.
- Well established permit to work system are in place.
- All incidents including near misses are Investigated and learning's shared with all relevant personals.
- All employees undergo pre-employment& periodical medical check-up ensuring their well-being.
- Workplace monitoring are carried out to ensure there are no adverse health effect on workers.

7.12.5 WORKPLACE MONITORING PLAN

- It is proposed that a Workplace Monitoring Plan to be prepared & implemented in consultation with FMO and industrial hygienists.
- Each workplace must be evaluated to identify potential hazards from toxic substances or harmful physical agents. Air-borne concentration of toxic chemicals will be measured and record will be kept.
- The current state-of-the-art exposure measurement model is as follows: For purposes of measuring worker exposure across a single shift it is sufficient to place a reasonably

accurate exposure measuring device on the worker, within the worker's breathing zone, and have it operate for nearly the full shift. Client will propose to study the exposure data when the plant is operative.

- Permanent changes to workplace procedures or work location to be done if it is found necessary on the basis of findings from workplace Monitoring Plan.

7.12.6 HEALTH EVALUATION OF WORKERS

M/s. Chemplast Samar Limited committed towards the Health and Safety of workers and provided a facility of pre-medical and regular medical check-up of employees for detecting any kind of adverse effect on the health of employee due to the chemical or work place condition and will provide opportunity to improve the working condition. The workers exposed to fugitive emission provided with some protective devices like dust mask to prevent respiratory disorders. The workers exposed to higher noise level is provided with ear muffs/ ear plugs. The protective devices are provided to the employees who are exposed to any kind of hazard. Proper handling of the materials and the maintenance of Material Safety Data Sheet (MSDS) are following to ensure safety within the plant area. A regular monitoring of the Occupational Health and Safety will reduce the chances of accidents hence all the records of job-related accidents and illness shall be maintained as per the requirements of factory act.

Workers are checked for physical fitness with special reference to the possible health hazards likely to be presented where he/she is being expected to work before being employed for that purpose.

Tests carried out:

1)Physical test

2)General Examination like Temp., Pulse, Pressure, Haemoglobin/Total W.B.C/ Platelet/others

3)Microscopic Examination

4) Systematic Examination

5) Vision Testing

6) Blood Glucose analysis

7) Haemogram Profile

Occupational health surveillance of the employees is done on a regular basis and records maintained as per rule 62N of the Tamil nadu Factories rules,1950.

Medical checkup of each employee and workers carry out yearly basis.

Annual Health Report of Employee:

MEDICAL RECORD

NABH

Name: Mr. Karthick Muniraj

Age / Sex: 21 yrs / Male

E.NO: MK47

Date of Medical Examination: 20.01.2022

**Company: Chemplast Sanmar Ltd,
Custom Manufactured Chemical
Divn, Berigai.**

MEDICAL EXAMINATION

1 . Physical Examination:

a. BP	- 120/80 mm of Hg
b. Pulse	- 82 b/mt
c. Spo2	- 97
d. Vision	- Right: 6/6 Left: 6/6 Colour: Normal
2. Respiratory System:	- NVBS +
3. Cardiovascular system:	- S1, S2 Heard, No murmurs
4. Abdominal Examinations:	- Soft
5. ENT	- Nil
6. Specific Ailment	**- Nil**
7. IMPRESSION:	- Certified that the above **Medical Examinee is Medically Fit**

Signature of the medical examiner

*This is a medical form which cannot be used for other purpose.

Pure Tone Audiometry

Name: Mr. Karthick Muniraj
Date: 20/01/2022
Age/Gender: 21 yrs / M
Informant: Self
C/o: Hearing Screening

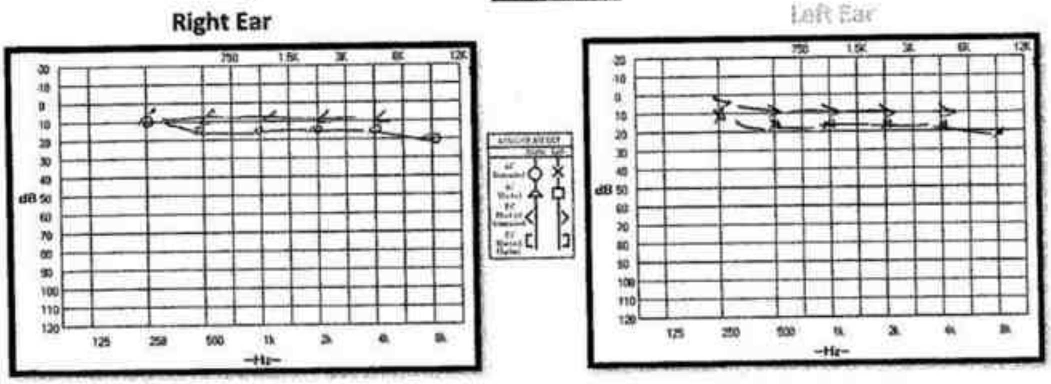
Tuning fork tests:

Rinne:
Right Ear: } +ve
Left Ear: }

Weber: R ↑ L

Audiogram

Right Ear — Left Ear



Note:

Pure Tone Average		
Right Ear	15	dBHL
Left ear	15	dBHL

Audiometric Weber	R	L
500 Hz	↑	
1000 Hz		
2000 Hz		

Diagnosis:
Right Ear: } Hearing – Normal limits
Left Ear: }

Recommendations:

- –

Krishnaa.M, B.A.S.L.P
Audiologist & Speech-Language Pathologist
Psychotherapist, Early Interventionist & CI Rehabilitationist
RCI CRR No: A53166

Services Offered

Hearing Evaluation for children / adults · Middle Ear Evaluation · New born Hearing Screening · Speech & Language Therapy · Special Education · Psychological Intervention · BERA · Hearing Aids

There was not found any abnormality of any employees and workers. All employees and workers are found fit.
Occupational health surveillance program is undertaken as regular exercise for all employees specifically for those engaged in handling substances.
Medical records of each employee are maintained separately.

7.13 SAFETY PLAN

Safety of both men and materials during construction and operation phases is of concern. Safety plan shall be prepared and implemented in the project activity. The preparedness of an industry for the occurrence of possible disasters is known as emergency plan. The disaster in the plant is possible due to collapse of structures and fire/explosion etc.

- The project would formulate safety policy keeping in view the safety requirement during construction, operation, maintenance phases, with the following regulations:
- To allocate sufficient resources to maintain safe and healthy conditions of work;
- To take steps to ensure that all known safety factors are taken into account in the design, construction, operation and maintenance of plants, machinery and equipment;
- To ensure that adequate safety instructions are given to all employees;
- To provide wherever necessary protective equipment, safety appliances and clothing and to ensure their proper use;
- To inform employees about materials, equipment or processes used in their work which are known to be potentially hazardous to health or safety;
- To keep all operations and methods of work under regular review for making necessary changes from the point of view of safety in the light of experience and up to date knowledge;
- To provide appropriate facilities for first aid and prompt treatment of injuries and illness at work;
- To provide appropriate instruction, training, retraining and supervision to employees in health and safety, first aid and to ensure that adequate publicity is given to these matters;
- To ensure proper implementation of fire prevention methods and an appropriate fire fighting service together with training facilities for personnel involved in this service;
- To organize collection, analysis and presentation of data on accident, sickness and incident involving people injury or injury to health with a view to taking corrective, remedial and preventive action;
- To promote through the established machinery, joint consultation in health and safety matters to ensure effective participation by all employees;
- To publish/notify regulations, instructions and notices in the common language of employees;

- To prepare separate safety rules for each type of occupation/processes involved in a plant; and
- To ensure regular safety inspection by a competent person at suitable intervals of all buildings, equipment's, work places and operations.

7.14 HEALTH AND SAFETY MONITORING PLAN

The health of all employees shall be periodically monitored for early detection of any ailment due to exposure to heat and noise.

7.15 TRAINING, REHERASAL & RECORDS

7.15.1 NEED OF TRAINNING & REHEARASAL

Training is important in order to –

- Teach worker's how to handle chemicals safely, how to act as a runner/messenger, how to use PPE, how to start and shut down the plant, how to carry out emergency repairs etc.
- Teach one to be a safe and alert worker.

Rehearsal is essential for -

- Explaining and making key personnel and essential workers aware of their role in case of an emergency.
- Testing the emergency procedure, emergency arrangements and ability of all involved with it to grasp the procedure and implement the same.
- Testing the effectiveness of communication system including the alternative arrangement in case of failure.
- Testing the speed of mobilization of resources, search, rescue and treatment of casualties, emergency isolation and shut down.
- Detecting the shortcomings in the emergency plan and incorporating remedial measures.
- Allowing professional emergency services to test their parts of the plan and testing co-ordination.
- Building confidence in workers which is helpful in facing real situations.

Training shall be given to regular employees and contract personnel also. Effective and latest teaching aids will be used to train workers and supervisory staff. Such training courses shall be conducted once in a year and co-ordination with offsite personnel shall be sought during such training. Records will be maintained for training.

7.15.2 RECORDS AND UPDATING THE PLAN

All records of On-Site and Off-Site Emergency Plan and modifications by experience and suggestion, the rehearsals and conclusions of such plans and the enquiries shall be well maintained and preserved. The necessary data bank shall be also maintained for the utility of industries and others. New information and the deficiencies identified during the rehearsal is reviewed and incorporated in the document for continual updating of the plan and such information shall be communicated to the concerned authorities.

7.16 CHECKLIST IN THE FORM OF DO'S & DON'TS OF PREVENTIVE MAINTENANCE, STRENGTHENING OF HSE, MANUFACTURING UTILITY STAFF FOR SAFETY RELATED MEASURES.

Do's:

- Store used oil at proper place as per plant guidelines.
- Use lubricating oil carefully to avoid spillage on ground.
- Use lubricating oil as per requirement.
- Use minimum amount of water wherever it is required as per plant guidelines.
- Waste disposal system for all plants should be separate.
- Avoid spillage of liquid, hand gloves, cotton waste on road, which will cause pollution. Recycle or dispose that material.
- Use cleaning equipment carefully. (i.e. cotton waste, oil & chemicals)
- Place all the equipments (i.e. Fire Hose, Rubber Pipe and Chisel) at proper place.
- Handling of chemicals should be as per plant guidelines to avoid undesired chemical reaction.
- Safety training and correct use of PPE's must for all the employees.
- Environment guidelines should follow during cleaning of vessels, Tank, channels etc.
- Follow shift in charge's instructions during loading or unloading of chemicals.
- In case of fire or any accident, immediately inform responsible person.
- In case of emergency, follow the site emergency procedure.
- Area of work during excavation, lifting work and any hot work shall be cordoned with warning tags of "work in progress", "no entry" etc.
- Switch off lights and computers when not in use.

- Shut the water cock properly when not in use.
- Always follow safety rule during the plant operation.

Do's during shut down:

- All equipment, vessels, lines where hot work is envisaged shall be purged, flushed thoroughly and positively isolated. Similar precautions should be taken for vessel entry also.
- Back flow of materials from sewers, drains should be avoided by proper isolations.
- In case of confined space entry and other cleaning jobs etc. which are to be carried out by the concern department trained person, confined space permit should be followed for all vessel entry issued by shift in charge by authorization of production head and plant operation head. This permit should be renewed by incoming shift in charge during every shift.
- Hoist, Platform, cages used for lifting persons or to send persons inside vessels by such means must be of sound construction with wire ropes slings, etc. to avoid failure.
- All steam, condensate, hot water connections should be made tight with clamps.
- Nitrogen hazard should be kept in mind. All nitrogen sources should be positively isolated from vessels/confined spaces to avoid oxygen deficiency where vessel entry is required.
- All underground sewers shall be flushed, protected from sparks.
- Full PPEs like PVC suits, gum boots, face shield & other required shall be used while draining, flushing and other reclaiming activities to avoid burn, poisoning etc.
- Wet asbestos cloth/metallic plate should be used to collect flying sparks.
- Water, steam flushing, nitrogen blanketing shall be continued where spontaneous combustion takes place. Precautions should be taken for pyrophoric nature of material.
- Temporary electrical connections, cords, boards and other electrical fixtures should be of sound material to prevent electrical shock.
- Oil spillage in the pit of oil slope tank should be cleaned with water/sand.
- Proper approach like aluminium ladder should be provided to reach to the platforms of scaffolding and ladder must be tied.
- All clumps of scaffolding should be tightened properly and planks should be tied at both ends and supported at proper distances along span to avoid sagging and failure.
- Always use safety belt while working at height of more than 2 meters and ensure tieing the life line of safety belt with firm support.

- Ensure area cordoning for hot work, X-ray, excavation, hazard material temporary storage.
- Ensure proper tagging of valves, switches etc to prevent its use.
- Ensure proper guidance to workman and make him aware about local area hazards before start of the job.
- All welding machines should be provided with power isolation switch of suitable rating.
- Portable electrical appliances/tools earthing should be in good working condition. Insulation portion should be free from damages.
- All electrical cables should be joints free and connection taken by using three pin plugs.
- While inserting fuse all care should be taken so that no one touches conductor to avoid the shock to the persons.
- During hydro jetting work workers should wear hand gloves, safety helmet goggles and PVC suit.

Don'ts:

- Do not use fire hydrant water for washing/bath purpose.
- Do not use water for cleaning purpose, use broomstick if possible.
- Do not wash or clean trolley, tractor or trucks which are used for chemical/fertilizer's transportation. Wash them at proper place.
- Smoking & carrying matchbox, cigarettes, lighter, bidis etc. are prohibited.
- Photography & carrying cameras/Mobile phones are strictly prohibited in all areas.
- Do not spill liquid or chemicals in open atmosphere.
- The use of Radio Active Source within the plant shall not be allowed without obtaining valid permission/work permit and intimation in the form of a circular to all plant persons shall be given in advance.
- Unauthorized entry of plant is strictly prohibited.

Don'ts during shut down:

- Do not use gasket or other blinds as it can fail during job. All blinds should be metallic.
- No toxic/corrosive/irritating materials should remain plants or sections where hot work is to be carried out.
- No hot work should be permitted near sewers till areas have been cleaned flushed properly.
- No hot work irrespective of place of area shall be done without valid permit.
- No combustible material shall be there in flare line for taking up of flare line job. Isolations shall be ensured.

7.17 DETAILS ON VARIOUS SOP

LIST OF ENVIRONMENT, HEALTH & SAFETY RELATED PROCEDURES
TITLE
EHS
Sop For Treatment Of Concentrated Effluent
Sop For Treatment Of Lean Effluent
Sop For Handling And Disposal Of Waste
Sop For Packaging, Labeling & Transport Of Hazardous Waste
Sop For Operation Of Reverse Osmosis Plant
Sop For Operation Of Multiple Effect Evaporator Plant
Standard operating procedure for method of analysis of effluent.
Standard operating procedure for chemical treatment of RO feed water.
Standard Operating Procedure For Operation Of Agitated Thin Film Dryer
Standard Operating Procedure For Operation Of Sewage Treatment Plant
Standard Operating Procedure for Imparting First Aid
Standard Operating Procedure for Maintaining Overall Safety Including On-site Emergency.
Standard Operating procedure for General Do's and Dont's
Standard Operating Procedure for Operation of Fire protection system
Standard Operating Procedure for Noise Level Survey
Standard Operating Procedure for work inside Confined Space
Standard Operating Procedure for Carrying out Hot work
Standard Operating Procedure for Working at Height
Standard Operating Procedure for Incident Reporting Investigation
Standard Operating Procedure for Safety Committee
Standard Operating Procedure for LOTO Master Key Requisition
Standard Operating Procedure for Role and Responsibilities of Safety Stewards
Standard Operating Procedure for Identification of Personal Productive Equipments and it's Usage
Standard Operating Procedure for Operation of Occupational Health Center (OHC)
SOP for Transport Emergency Plan

Standard Operating Procedure for Hazard Identification and Risk assessment and Job safety analysis
Standard Operating Procedure Vehicle movement inside plan
Standard Operating Procedure General Plant safety rules
Standard Operating Procedure for Occupational Health Programme
Standard Operating Procedure for Acrophobia Test for Height Worker
PLANT
SOP for Manufacture of Synthetic Organic Chemicals
SOP for Planning Production
SOP for Planning Raw Material and Packing Material
SOP Product Identification and Traceability
SOP for Blending and Packing of Liquid Product
SOP for Labeling of Process Material and Finished Product
SOP for Autoclave Cleaning
SOP for Utility Changing Over In a Reactor Jacket
SOP for Operating The Oil Vacuum Pump (OVP)
SOP for Operating Water Ring Vacuum Pump (WRP)
SOP for Reactors Cleaning - GLR, SSR And Distillation
SOP for Solid- Liquid Filtration Using a NF, CFG And ANF
SOP for Transferring A Liquid Product Into A Reactor Or Vessel Using Air Pump And Vacuum
SOP for Drying Operations In TD/FBD/RPVD/RCVD
SOP for Operating The Steam Jet Ejector
SOP for Blending And Packing Of Solid Product
SOP for Cleaning Of Accessories Equipments
SOP for Qualifying The Reactor And Pressure Vessel
SOP for Receiving Of The Batch Manufacturing Records
SOP for Recycling Of Packing Material
SOP for Handling Work-In-Process Material
SOP for Prevention Of Mix Up And Contamination
SOP for Assigning Lot Numbers And Batch Numbers To The Products
SOP for Cleaning And Disposal Of Empty Containers
SOP for Rodent Control
SOP for Maintaining Health And Hygiene In Manufacturing Area
SOP for Emergency Shutdown
SOP for Sodium Cyanide Charging In To a SS Reactor And Disposal Of Empty Drums
SOP for Material Weighing In Weigh Balance
SOP for Operation Of Glass Condenser
SOP for Dry Vacuum Pump Operation
SOP for Bag Lifting Centrifuge Machine – CFG-5 and CFG-6
SOP for Bromine Charging Into A Glass Lined Reactor
SOP for AU-2 Seal [Plan-54] Operation
SOP for Operating the PLC-Plant-4

SOP for sodium cyanide charging system
SOP for sodium cyanide cleaning system
SOP for Cleaning of Process Area
SOP for Plant Start-up after Long Term Shutdown
SOP for Plant Shutdown
Standard Operating Procedure for Gowning and De-Gowning Procedure in Organic plant Centrifuge room
Standard Operating Procedure for Gowning and De-Gowning Procedure in Organic plant Blending and Packing room
Standard Operating Procedure for Unloading of Liquid product into Drums from Reactor or Vessel using hose pipes
Standard Operating Procedure for Candle Filter Operation
Standard Operating Procedure for maintaining Equipment Log book
Standard Operating Procedure for Operation of Reactor
Standard Operating Procedure for Post campaign of equipment and its accessories.
Standard Operating Procedure for Double cone blender and Blending in RCVD
Standard Operating Procedure for Handling of Hydrogen gas cylinders
HR
Standard Operating Procedure for Safety Related Training
Standard Operating Procedure for Training validation
Standard Operating Procedure for Re-training
Standard Operating Procedure for Planning of Training for the New Recruits
Standard Operating Procedure for Planning of Training for all the Employees
Standard Operating Procedure for Evaluation of Training Effectiveness

7.18 PROCESS SAFETY

- Safety measures will be adopted from the design stage.
- Safety Valve and pressure gauge will be provided on reactor and its jacket (if jacket is provided).
- Utility like Chilling, cooling, vacuum, steaming and its alternative will be provided to control reaction parameters in a safe manner.
- Free Fall of any flammable material in the vessel will be avoided.
- Static earthing provision will be made at design stage to all solvent handling equipments, reactors, vessels & powder handling equipments.
- Any reaction upsets will be confined to the reaction vessel itself.
- All emergency valves and switches and emergency handling facilities will be easily assessable.
- Further all the vessels will be examined periodically by a recognized competent person under the Tamil nadu Factory Rules.
- All the vessels and equipments will be earthed appropriately and protected against Static Electricity. Also for draining in drums proper earthing facilities will be provided.

- Materials will be transferred by pumping through pipeline or by vacuum from drums.
- All solvents and flammable material storage tanks will be stored away from the process plant and required quantity of material will be charge in reactor by pump or by N2 pressure transfer.
- Jump over clamp will be provided on all solvent handling pipeline flanges.
- Caution note, safety posters, stickers, periodic training & Updation in safety and emergency preparedness plan will be displayed and conducted.
- Flame proof light fittings will be installed in the plant.
- All the Plant Personnel will be provided with Personal Protection
- Equipment's to protect against any adverse health effect during operations, leakage, spillages or splash. PPE like Helmets, Safety Shoes, Safety
- Glasses, Acid-Alkali Proof Gloves etc. will be provided to the employees.
- All employees will be given and updated in Safety aspects through periodic training in safety.
- Material Safety Data Sheets of Raw Materials & Products will be readily available that the shop floor

7.18.1 FOR HAZARDOUS STORAGE FARM

- Farm will be constructed as per explosive department requirement and separation distance will be maintained.
- Tanks shall be located and marked in designated area of hazardous chemical storage.
- Static earthing provision will be made for road tanker as well as storage tank.
- Tanks of proper MOC will be selected.
- Flame arrestor with breather valve will be provided on vent line.
- Road tanker unloading procedure will be prepared and implemented.
- Fire load calculation will be done and as per fire load Hydrant System will be provided as per NFPA std. and Fire extinguishers will be provided as per fire load calculation.
- Spark arrestor will be provided to all vehicles in side premises.
- Flame proof type equipment's and lighting will be provided.
- Lightening arrestor will be provided on the top of chimney.
- Trained and experience operator will be employed for tank farm area.
- NFPA label (hazard identification) capacity and content will be displayed on storage tank.
- Solvents will be transferred by pump only in plant area and day tank will be provided. Overflow line will be return to the storage tank or Pump On-Off switch will be provided near day tank in plant.
- Jumpers will be provided on solvent handling pipe line flanges.
- Flexible SS hose will be used for road tanker unloading purpose and other temperature connection.
- All tanks shall be uniformly tagged.

- Level indicator shall be provided in tanks.
- Dyke will be provided.
- Industrial type electric fittings shall be provided.
- Adequate fire-fighting equipment's will be provided.
- Anti corrosive paint shall be done.
- Safety instruction board will be displayed.

7.18.2 FOR DRUM/CARBOY STORAGE AREA

Some chemicals will be received at plant in drums/Carboys by closed containers and stored in a drum/Carboy storage area.

- FLP type light fittings will be provided.
- Proper ventilation will be provided in go down.
- Proper label and identification board /stickers will be provided in the storage area.
- Conductive drum pallets will be provided.
- Drum handling trolley / stackers/fork lift will be used for drum handling.
- Separate dispensing room with local exhaust and static earthing provision will be made.
- Materials will be stored as per its compatibility study and separate area will be made for flammable, corrosive and toxic chemical drums storage.
- Smoking and other spark, flame generating item will be banned from the Gate.

7.18.3 TRANSPORTATION

- Road tanker unloading procedure will be in place and will be implemented for safe unloading of road tanker.
- Static earthing provision will be made for tanker unloading.
- Earthed Flexible Steel hose will be used for solvent unloading from the road tanker.
- Fixed pipelines with pumps will be provided for solvent transfer up to Day tanks/reactors.
- Double mechanical seal type pumps will be installed.
- NRV provision will be made on all pump discharge line.

CHAPTER - 8

PROJECT BENEFITS

8.1 BACKGROUND

M/s. Chemplast Sanmar Limited, Proposing expansion of Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum to 20031.4 MT/Annum) manufacturing in existing unit at S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3, 10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A, Suligunta Village, Berigai 635105. Shoolagiri Taluk, Krishnagiri District, Tamil Nadu, India.

8.2 IMPROVEMENTS IN THE PHYSICAL INFRASTRUCTURE

There will be increase in some small scale businesses like tea stall, catering services/ hotels, grocery, sweet marts, cycle shop etc. in study area.

8.3 IMPROVEMENTS IN THE SOCIAL INFRASTRUCTURE

Following are the improvement which may occur due to proposed project;

- There will be no land acquisition, no Loss of livelihood to local communities as proposed project is in existing site area.
- There will be No Displacement of people because the proposed project is in existing site area.
- Use of existing skills in the region for minor developments, required for the proposed project
- Increased transportation and handling requirements, that could benefit the local economy
- Increased taxes to the State and Central Governments, which would add to the public good

  Consequently, the project would have beneficial impacts on the socio-economic conditions of the study area and the Region.

8.4 EXPORT

Majority of the products will be used for international market and some products will be used in domestic market depending on the market. Chemplast Sanmar Limited is a premier company that exports and imports goods from countries including China, France, Japan and Switzerland and host of other countries. Depending on the international demand of products we shall explore the possibility of exporting the products.

8.5 EMPLOYMENT GENERATION

The Chemplast Sanmar Group employs a diverse and competent workforce. A conducive and invigorating work atmosphere provides employees opportunities for growth and excellence. As project will have considerable employment & trade opportunities with the commencement of the production activities. This will increase the employment opportunity. Employment would be as per prevailing norms of state government for skilled and unskilled people for the proposed project. approximately 1350 people [Existing: 350 people + proposed: 1000 people] will be employed.

The project will benefit the people living in the neighboring villages by giving preference to them in relation to direct employment associated with the various project activities. Construction and operation phase of the proposed project will involve a certain number of laborers. There is a possibility that local people for construction phase as well as a number of local skilled and unskilled people will be engaged in the employment which will improve the existing employment scenario of the region.

There will direct employment generation as per following details:

During project phase:
Permanent employment: 40
Temporary employment: 350 to 500

During operation phase:
Permanent employment: 350
Temporary employment: 800

Total Employment: 1200 to 1400

However, indirect employment is likely to be about 1000 persons.
Enhanced direct employment for technical/administrative works and indirect employment opportunities for transporters of raw materials and finished goods;

Business opportunities for local people as there will be scope of hiring vehicle like tractors & trolleys.

8.6 SOCIO-ECONOMIC DEVELOPMENTAL ACTIVITIES

CER @ 0.25 % of the additional project cost (i.e. 2000 Crore) and CSR will be carried out by the company in the surrounding villages. This fund will be administered by a local area development committee in accordance with the orders of the appropriate Government. This fund will be used for the creation of infrastructure and overall economic development of the project area. Such activities are stated as below:

Action plan for the CER activity are as follows:

S. No.	CER activity
1	Desilting of lakes and Increasing the depth; improving beautification of surrounding pond (7 Nos)
2	Tree plantation at schools and villages
3	Installing of Solar Light and panels in the villages to promote green energy
4	Afforestation programmes: Joining hand with Tamil Nadu Forest department and develop the Sanmar forest with fencing
5	Rain Harvesting in schools and villages

Details of CSR Projects for Financial Year 2021-22

S.No	Location /Area	Description of CSR
1	Berigai Panchayat office	Issued Covid-19 Kit PP Suits - 50Nos Disinfection Spray Machine- 1 No and Hypo Solution-100L
2	Shoolagiri & Berigai PHC	PC and Printer
3	B-Kurubarapalli Panchayat	Provided Bore well for common drinking water
4	Berigai PHC	Polio Camp organized
5	Berigai Panchayat	Constructed OHT (Over Head Tank) for storage and supply of drinking water

Details of CSR Projects for Financial Year 2022-2023

S.No	Location /Area	Description of CSR
1	B.Singiripalli	Temple compound wall painting work
2	Barigai police station	Provided the entrance gate
3	Suligunta Village	Panchayat union preliminary school painting work
4	B.Kuruparapalli village	Panchayat union preliminary School road revamping work
5	Kurubarapalli	Constructed Bus stop
6	Sikkanapalli	Constructed Bus stop

8.7 CONCLUSION

It can be concluded that the proposed project is beneficial in the interest of common person, the society, the state and as the country as a whole. The benefits can be summarized as below:

- Substantial Socio-economic benefits;
- Good Techno-commercial viability;
- Employment to the semi-skilled and unskilled workmen located around the project site during operation phase;
- Infrastructure facilities will be improved due to the proposed expansion.
- The proposed project will provide quality product at lower cost to the users.
- To generate local employment.
- These products also have export potential. Hence, possibility of earning foreign exchange.
- There should be positive impact on the socio-economic condition of the area in terms of direct and indirect employment due to the proposed project.

CHAPTER - 9
ENVIRONMENTAL COST BENEFIT ANALYSIS

9.1 ENVIRONMENTAL COST BENEFIT ANALYSIS

The environmental cost benefit analysis is not recommended during scoping stage. Hence, environmental cost benefit analysis was not carried out.

CHAPTER - 10
ENVIRONMENTAL MANAGEMENT PLAN

10.1 BACKGROUND

Environmental Management Plan is required to ensure sustainable development in the area surrounding the proposed project. EMP consists of the set of mitigation, management, monitoring and institutional measures to be taken during implementation and operation phase to eliminate adverse environmental impacts or reduce them to acceptable levels. The environmental management plan shall address the components of the environment affected during construction and operation of the plant and by the different activities forming part of the processes of the proposed plant. Mitigation measures at the source level and an overall Management Plan at the site level are elicited so as to preserve the surrounding environment. The EMP is herein outlined after taking into account the various Acts, Rules and Regulations /Standards concerned with the environmental management.

10.2 OBJECTIVES OF ENVIRONMENTAL MANAGEMENT PLAN

- To treat and dispose off all the pollutants viz. liquid, gaseous and solid waste so as to meet statutory requirements (Relevant Pollution Control Acts) with appropriate technology.
- To support and implement work to achieve environmental standards and to improve the methods of environmental management.
- To promote green-belt development.
- To reduce fire and accident hazards.
- Budgeting and allocation of funds for the environment management system.
- To adopt cleaner production technology and waste minimization programs.
- Identification of mitigating strategies, such as prevention and control, for each environmental component, as well as a restoration and resettlement strategy.

The Environment Management area handled by a Qualified Manager with adequate training and experience in operation of ETP and management of other pollution control measures. He will be assisted by a Qualified Executive and three operator (in each shift) to run ETP and other pollution control system. All the necessary controls w.r.t. management of Liquid/ Hazardous/ Gaseous pollutants will be exercised. All the necessary controls w.r.t. management of Liquid / Hazardous / Gaseous pollutants will be exercised. For all liquid effluents, full-fledged effluent treatment plant consisting of primary treatment will be installed to ensure adequate treatment prior to discharge.

Process stacks will be equipped at safe height with scrubbers where required to ensure emissions within prescribed limits. DG sets will be provided with acoustic enclosure and stack.

To handle hazardous waste as per Hazardous & Other Wastes (Management and Transboundary Movement) Rules, 2016 of Environment Protection Act, 1986. Hazardous waste will be disposed off at the secured land fill facility available in the nearby vicinity.

- Fixed gas detection system will be installed in the workplace area.
- Work place monitoring will be carried out regularly through continuous monitoring systems and periodic checking.
- Ambient air quality will be monitored regularly.
- Sufficient green belt will be maintained inside and outside the premises by planting local species of trees.
- R&D team will work for continuous improvement in process to reduce Pollution Load & moving towards adopting cleaner production technology.

10.3 ENVIRONMENTAL MANAGEMENT CELL

Apart from having an environmental management plan, it is also necessary to have a permanent organizational set up charged with the task of ensuring effective implementation. In this effect, **M/s. Chemplast Sanmar Limited** will assign responsibilities to officers from various disciplines to co-ordinate the activities concerned with management and implementation of environment control measures.

An organogram of Environment management cell is shown in in Chapter 6. This department shall undertake the monitoring of environment pollution level by measuring stack emissions, Ambient air quality, water and effluent quality, Noise level, etc. either departmentally or by appointing external agency whenever necessary.

M/s. Chemplast Sanmar Limited shall carry out the regular monitoring in future as well as ensure that pollution is limited below prescribed limits and shall take corrective action by providing new pollution control equipment if required. In case the monitored results of environment pollution are found to exceed the prescribed limits, remedial actions are taken through the concerned plant authorities. The actual operation and maintenance of pollution control equipment of each department is under respective department heads.

The environmental department shall also look after preparation and submission of Water Cess Return, Environmental statement and Consolidated Consent & Authorization application/ renewal under water (Prevention and Control of Pollution) Act, 1974, Air (Prevention and Control of Pollution) Act, 1981, Ambient Air Quality as per NAAQS Standards, 2009 and Hazardous & Other Wastes (Management and Transboundary Movement) Rules, 2016 under Environment Protection Act, 1986.

10.4 ENVIRONMENT MANAGEMENT PLAN

The Environment Management plan is meant for mitigation/ management of the adverse impacts and the strengthening positive impacts during proposed project. Environment Management Plan is tabulated in Table: -10.1

TABLE - 10.1

ENVIRONMENT MANAGEMENT PLAN

CONSTRUCTION STAGE POTENTIAL IMPACTS & MITIGATION MEASURES

Environmental Components	Sources of Impact	Mitigative Measure
Water Environment	Construction activity & abstraction of water for construction requirement and sanitation for workers.	➢ Company has provided the sanitation facility for workers and domestic wastewater treated in STP and will reuse for domestic and gardening purpose.
Air Environment	There will be generation of dust & vehicular emission due to transportation of construction machineries and raw materials	➢ At frequent interval water sprinkling is done on the roads and work zone areas to reduce the fugitive dust. ➢ Vehicles having PUC certificates only be allowed to transport materials and equipment's at project site.
	Construction equipment and machineries	➢ Construction equipment shall be maintained and serviced regularly such that the gaseous emissions from this equipment are maintained within the design specifications
	Dust generation due to site preparation	➢ Unit has store raw materials stored in silos or in covered areas to prevent dust pollution and other fugitive emissions. ➢ Dust masks are provided to the workers.
Noise Environment	Noise generation during construction work	➢ If possible, provide noise protection devices like earmuffs, ear plug to worker, Rotation of work to minimize exposure.

	Noise generation from vehicular movement for transportation of construction material and waste	➢ Well maintained vehicles and properly designed equipment are used. ➢ Restrict movement of vehicle between 10 p.m. to 6 a.m. if possible.
	Condition of equipment and machineries during construction work	➢ All machineries to be used for construction purpose will be of highest standard of reputed make and compliance of noise pollution control norms
Land Environment	Generation of Debris due to Excavation and paving of site	➢ Debris reused in filling low lying area
	Soil degradation due to spillage/leakage of oil & grease.	➢ Designated construction area for prevention of oil & grease getting mixed with soil. ➢ Construction of RCC roads and pavements to avoid soil contamination due to spillage/leakage of oil & grease.
	Generation of scraps due to construction activity	➢ Sold to scrap vendors
Green belt Development	There shall be positive impact of greenbelt development as it will act natural barrier for dust emissions.	➢ Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (33 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) within the plant premises. ➢ Good greenery is maintained in and around the site by planting various types of local tress.
Hazardous/Solid Waste	Wastes generated due to spillage/leakage, handling and disposal of construction wastes and other wastes.	➢ Construction waste categorized in to recyclable and non-recyclable and stored separately. ➢ Recyclable construction waste sent for recycling and non-recyclable waste will be sent to authorize dealers for disposal.

		➢ Other wastes disposed off adequately.
Ecology and Biodiversity	The habitual activities of the birds and butterflies species will be affected.	➢ Idle vehicles to be shut off when it not in use. ➢ Speed limit of vehicles maintained. ➢ Loud horn in the vehicles are not be allowed.
	Noise from construction will create stress on animals and disturb their daily activities	➢ Acoustic enclose provided to construction machineries and equipments. ➢ Preference to be given that maximum construction activities are carried out during day time only.
Other Risk and Hazards	Chances of accident during transportation of material	➢ All transportation within the working area carried out directly under the supervision and control of the management. ➢ Speed limit of vehicles maintained. ➢ Banksman to be available for all heavy vehicles. ➢ Driver competency to be ensured and adequate training to be provided
	Fall from height, cut injury and fall injury during construction activities.	➢ Height work protection to be followed all height work. i.e. Ensured Full body harness to be used by all height work employees. Handrails to be provided for all working platforms. Safety net to be provided ➢ Escape ladders are providing in case of emergency ➢ Vehicles are strictly not allowing to work too close to excavated areas ➢ Safe construction practices are followed under supervisor‘s inspection. ➢ PPEs are provided to workers for safety against potential risk. ➢ All portable power equipment to be inspected and certificated by authority person on periodical interval. ➢ "No-Guard No-Work to be followed for all equipment

OPERATION STAGE POTENTIAL IMPACTS & MITIGATIVE MEASURES

Environmental Components	Sources of Impact	Mitigative Measure
Water Environment	Chances of contamination of surface water due to generation of Low COD effluent from process and utility effluent.	➢ Low COD effluent will be treated through the conventional wastewater treatment system and the pass through RO system. ➢ Operating by ZLD plant
	Chances of contamination of surface water due to generation of High COD stream	➢ Neutralized concentrate effluent and rejects from RO will be evaporated in multi effective evaporator (MEE). The treated wastewater will be totally recycled and the solid waste generated will be disposed to TSDF (Common disposal Facility).
	Chances of contamination of ground water due to waste stream generated from spillage, leakages, vessel washing, used container washing etc.	➢ The spilled/ leaked material should be collected and diluted as per required properties of the leaked material. ➢ The diluted material is collected/ stored separately/treated in ETP and then sent to MEE.
Air Environment	Generation of flue gas emission likes SPM, SO2 and NOx from diesel operated vehicles and machineries.	➢ Valid PUC Certified vehicles used for transportation of material and equipment.
	Fugitive dust generation due to vehicle movement for transportation of raw material and finished goods.	➢ Plot premises is well developed with concrete roads.
	Generation of Fugitive emission and VOC due to vaporization of raw material and product handling.	➢ The raw materials are stored in closed containers and handled through closed system to avoid the handling losses.
	Generation of SPM, SO_2,	➢ Company is using Furnace Oil & Diesel for

	NOx from flue gas emission sources like Boiler, TFH and D.G. Set.	existing Boiler, Thermic Fluid Heater & D.G.Sets. ➢ After expansion, Company will use Briquettes/ Furnace Oil & HSD as fuel for proposed Boiler, TFH, & D.G.Sets. ➢ Mechanical Dust collector & Stack is provided to control flue gas emission. ➢ After expansion, Company will provide Mechanical Dust collector or ESP + water scrubber & Stack to control flue gas emission.
	Emissions from production processes	➢ Company has installed adequate Wet Alkali Scrubber & Wet scrubber with stack systems to control process gas emission. ➢ All the process equipment will be connected to the scrubbers and equipment where solvents distilled are provided with condensers and after coolers and the receivers are connected to the scrubber. The scrubbers are circulated with appropriate scrubbing solution like caustic, hypochlorite, water etc. The pH indicator and pressure switches are provided to ensure quality of scrubbing liquid for effective scrubbing.
	Emissions from materials handling storage or transport.	➢ All liquid raw materials shall be procured in tankers / Barrels / Carbouys and shall be transferred through a closed circuit pipe lines. ➢ Solid raw material charged through closed system into reactors and the dust collection hopper shall be connected to a bag filter and ID fan.
	Chances of odour from septic tank/ETP processing area and waste storage area may cause nuisance	➢ Working areas are kept clean and maintained.
Land Environment	Proposed expansion project will not be	--

	distinct as there will be no major changes in the present land use of the site. In existing most of the development has already been matured. Hence, any additional impact on land environment will be insignificant.	
Noise Environment	Increase noise level due to Operation of equipment and machineries	➢ Noise emissions kept to a minimum by regular maintenance of machineries. ➢ Regular oiling, lubrication and maintenance of the equipment carried out to minimize noise generation. ➢ Noise generating equipments to be isolated from operating area with adequate enclosure ➢ Workers/ Operators working near to high noise generating machinery to be provided with ear mufflers/ ear plug
	Noise generation from pumps and blowers at ETP	➢ Preventive maintenance of pumps and blowers done periodically
Socio-Economic	Overall growth & development of area, increased employment, improvement in infrastructure and growth of downstream industries	Positive impact on the Socio-Economic of the country & region: ➢ The budget for CER approx. Rs.5.0 Crore i.e 0.25 % of proposed expansion project cost should be allotted for development of locals and surrounding villages.
Ecology and Biodiversity	Impact due to emission on surrounding flora and fauna	➢ Transportation of products and raw material avoided in the early morning and evening. ➢ Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (33 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54

		Hectors area) for green belt (3.33 %) within the plant premises.
	The impact on terrestrial ecology will be due to emission of pollutants like PM, NO2 and SO2.	➢ Mechanical Dust collector or ESP + water scrubber & Stack will be provided for the Boiler, TFH and DG sets to to control flue gas emission.
Other Risks & Hazards	Chances of vehicle collision due to vehicle failure.	➢ Well trained and licensed driver hire for transportation of raw material and final product.
	Tilting of moving vehicle due to overloading.	➢ Transport vehicles are properly examined before transportation. ➢ Concern officer ensure for loading will be done as per vehicle capacity.
	Chances of fatal incident, severe injury and loss of property due to explosion of boiler and thermic fluid heater.	➢ All critical chemical storage, process, and equipment are properly safety study carried out and implement the all safety precautions. ➢ Dedicated safety department is available to advise and implement the safety precaution in all level.
	Chances of accident to workers due to spillage, leakage of hazardous chemicals during handling	➢ Trained Competent person is involved the handling of hazardous chemical ➢ All hazardous chemicals storage area followed by layer of protection ➢ Closed loop handling system is used for hazardous chemicals handling ➢ Adequate PPE‘s are provided to workers for handling hazardous chemical. ➢ Safety interlock system, sensor and safety alarm system is installed all hazardous chemicals storage
	Corrosion and leaching due to spillage and leakage of hazardous chemicals during handling.	➢ Closed loop handling system is used for hazardous chemicals handling ➢ Standard operating procedure prepare and be strictly followed by workers. ➢ Periodically scheduled preventive maintenance is carried by concern department for all hazardous chemicals handling equipments.

		➢ Periodical inspection and replacement of equipment is followed
	Occupational health hazard to workers work with hazardous chemicals	➢ All the employees will be eligible for pre-employment medical check-up. Employees will be expected to complete their mandatory check-up in an approved hospital before joining to the organization. ➢ Periodical medical examination will be carried out as per Factories Act and Rules for employees ➢ Occupational Health Centre is established at site and Doctor will be available on daily basis. Medical records of employees made available with the doctor. ➢ Products and raw material handled, stored and transported as per manufacture, storage and import of hazardous chemical rules, 1989. ➢ The training for awareness of MSDS provided.
	Risk of fire/explosion within product/raw material storage area	➢ All chemicals are stored as per compatibility. ➢ A additional full-fledge fire hydrant system with ring main will be provided and designed as per TAC (Tariff Advisory committee) regulations. ➢ A full-fledged fire hydrant system with ring main is provided and designed as per TAC (Tariff Advisory committee) regulations. The system is automatic and pressurized system. It is kept automatically under pressure with the help of a jockey pump. One electrical driven pump works as the main pump with a diesel driven pump as standby. A dedicated water reservoir for fire protection is provided with two-fire water storage of total capacity 1200 KL. 21 no. of emergency 'manual call point' and 43 no. of smoke detector was installed around

		the factory. Sprinkler system provided for Flammable bulk storage and unloading areas. Apart from fixed fire fighting system, portable fire extinguishers are provided at various locations of the plant so that in the incipient stage itself fires can be handled and extinguished.
Green belt Development	There shall be positive impact of greenbelt development as it will act natural barrier for dust emissions.	➢ Regular water sprinkling and maintenance of greenbelt.
	Improvement in soil quality due to binding of top soil materials due to root structure.	➢ Maintenance of Greenbelt will be done regularly.

10.4.1 WATER ENVIRONMENT

Water requirement will meet through the CGWA and TWAD. However, record of water consumption for different usages should be maintained.

The following measures would be taken to minimize the water usage in the operational phase:

- ✓ Endeavor to reduce the actual process water consumption by way of improvement in operation of processing units.
- ✓ Water conservation practice shall be done by recycling of treated water. The Effluent water will be completely recycled in Plant to reduce the fresh water demand.
- ✓ Water saving by shower head flow controls, spray taps and faucet aerators and photo-sensitive taps.
- ✓ Exploring other options of reusing the treated effluent besides fire water make up and cooling tower makeup
- ✓ The treated domestic water will be reuse for gardening purpose to reduce fresh water demand.

10.4.1.1 WATER CONSERVATION AND RECHARGING

Water Conservation:

- Water conservation measures will be taken to optimize the fresh water requirement and record of water consumption shall be maintained for each usage in future.
- Aware employees/workers to avoid wasting water during operation phase.

- Taps shall be closed when not in use.
- Explore **3 R's** for conservation viz, **Re-use, Reduce and Re-cycle**.

Recharging (Rain Water Harvesting System):

Unit will harvest rainwater from the rooftop of the buildings. Rain water harvesting is under process.

10.4.2 AIR ENVIRONMENT

10.4.2.1 Odor Control Measures

The chemicals used or manufactured related to the proposed project do not release any disagreeable odor. However, if any spillage or leakage of such chemicals are taken place then following material handling procedures are being followed to reduce the Odour and release of chemical vapors in atmosphere.

- All liquid raw materials charged into Reactors with pumps or under gravity through closed pipes.
- Suction Hoods placed near the Man-holes & Charging funnels of Reactors & Filters so that chemical vapors and dust do not escape into the Plant & surroundings, when the man-hole covers are opened for inspection or charging of RM.
- All storage tanks of low boiling chemicals provided with Conservation Vents.
- Vent lines of Dosing vessels shall be connected back to the vents of storage tanks to prevent contaminated air release during material transfer.
- All pumps handling hazardous chemicals provided with mechanical seals to prevent fugitive emission.
- Wherever possible magnetic coupled pumps are used.
- Any spillage from drums etc. absorbed with saw dust / soda ash and moped clean.
- The contaminated absorbent are safely dispose off along with hazardous waste.

Spill control measures

The accidental spill of chemicals is handled in a systematic manner to reduce the odor.

1. The area where the chemical spillage can take place is covered with appropriate adsorbent material like soda ash, saw dust or even an earth using all necessary Personal Protective equipment (PPE).
2. Contaminated area is then cleaned with soap and water and the water used is transferred to ETP.
3. Masking agents (e.g. PIION, ECOPEARL) spray is then used to reduce the impact of lingering odors.

10.4.3 NOISE ENVIRONMENT

The sound pressure level generated by a noise source decreases with increasing distance from the source due to wave divergence. The propagation and attenuation of noise pressure wave is dependent on many parameters amongst which, the medium of travel and the ambient conditions are the most significant parameters. In order to minimize adverse impact on the noise environment, due attention shall be given for implementing noise control measures. Comprehensive measures shall be taken at design stage for noise from proposed unit.

10.4.4 LAND ENVIRONMENT

- During the site clearing, excavated earth shall be stored in stockpiles and covered with plastic/tarpaulin sheets or stored in a closed room and reused for landscape development along the corridor.
- To avoid water logging, gradient of the area will be maintained during leveling.
- The construction material and diesel /oil to be used for various construction activities will be stored in designated storage yards to reduce the spills into unwarranted areas.
- Segregation, collection, storage and disposal of waste material generated during the construction phase to minimize its impact on soil quality.
- The construction debris as well as debris from demolition work will be utilized within the site for leveling purpose and base course preparation of internal roads.

10.4.4.1 HAZARDOUS WASTE MANAGEMENT

Storage of Hazardous Waste:

- Hazardous waste shall not be stored for a period more than 90 days. And shall maintain records and make them available for inspection.
- Store at a designated Onsite-secured area with impervious floor that affords protection from sun & rain fall, spreading of leachate, mixing of wastes etc.

Transportation of Hazardous Waste:

- Properly packed & labeled waste transport through dedicated vehicle to a captive facility/ authorized TSDF facility.

10.5 SOCIO-ECONOMIC ENVIRONMENT

- The activities of the proposed expansion in the production capacity will produce some improvements in the socio-economic levels in the study area.
- The unit will generate the local employment for the proposed project.
- Better literacy rates are possible due to assumed better economic conditions of the people.
- Project will lead to development of ancillary industries and an overall economic growth of nearby towns to supplement the population of the area.
- Project proponent will ensure to connect even last people with the infrastructural facility like educational, health, road etc in the locality.
- Other needs and social-economic aspects of local inhabitants will be dealt with CSR activities & CER activities in the region.
- The existing plant activities have already provided employment to persons of different skills and trades.

10.6 ECOLOGICAL ENVIRONMENT

The baseline flora and fauna has been referred in Chapter-3. There is no protected area, important or sensitive species within 15 kms from the proposed project boundary. There are no significant aquatic bodies & no forest land involved within the study area. The treated effluents will not be discharged into any surface water streams. Hence, no impact is envisaged from the proposed expansion project on aquatic bodies.

33% of greenbelt is already developed around the periphery of the projects site which will have positive impact since it will support various Faunal & Floral diversity. It helps in purifying the air and reduce noise pollution. Greenbelt will increase the aesthetic value of the site and increase employment. Hence, the propose expansion project will create positive impact on EB environment by increasing the green area of the region.

10.7 IDENTIFICATION OF RECYCLE/REUSE, CLEANER PRODUCTION AND CO-PROCESSING OPTION OF HAZARDOUS WASTE

- It is recommended to analyze each hazardous waste periodically and maintain records.
- Check the calorific value of the ETP Sludge and process waste and then explore possibilities of Co-Processing in Cement Industry as alternative fuel or raw materials. Waste materials used for co-processing are referred to as alternative fuels and raw materials (AFR).
    1. Reduce water consumption by proper housekeeping, utilizing low-flow, drip or micro-spray irrigation systems and technologies that reduce water loss.
    2. Repairing leaks to pipes, glands, seals and gaskets can significantly saves energy costs and water conservation.
    3. Recycle of product wash water in this process i.e. Second wash water will be re-used as first wash in the subsequent batch to reduce fresh water consumption.

10.8 GREEN BELT DEVELOPMENT

Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (33 %) area is covered as greenbelt. The company has planted total 17000 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) within the plant premises.

Trees species are planted at plant in line with trees species recommended in CPCB's guidelines for developing Greenbelts.

GREEN BELT DEVELOPMENT PLAN

YEAR	NO. OF TREES	COST INCURED
Till-2022	16250	1,13,75,000/-
2022-2023	1000	7,00,000/-
TOTAL	**17250**	**1,20,75,000/-**

Cost of Maintenance of Green Belt: - Rs. 10, 50, 000/- Per Annum

S. No	Area	Saplings available	Species Name
1	North Side boundary	1710	1. Neem 2. Silver Oak 3. Eucalyptus 4. Pongamia 5. Gulmohur 6. Spathodia 7. Ashoka 8. Banyan 9. Bamboo 10. Peapal
2	West side boundary	1650	
3	South side boundary	1850	
4	East side boundary	1650	
5	Process Plants	3420	
6	Eucalyptus grove	5970	
	Total Number of trees	16250	

10.9 MEASURES FOR CONSERVATION OF ENERGY

M/s. Chemplast Sanmar Limited, has adopted various measures for energy conservation:

- Company is going with 100% of LED lightings over the plant, it's better than other by, they are brighter, Require lesser energy to function and Last longer.
  - LED lamps consume 20% energy for heating
  - Metal halide lamps consume 75% energy
- Energy efficient machineries used during operation phase.
- Installation of economizer & high efficiency burner on steam boilers.
- Company has try to utilize renewable sources of energy for conservation of non-renewable sources of energy.
- Enough care taken to prevent/minimize energy losses at each stage.
- Energy audit is used as a tool for monitoring purpose.
- External lights are control through timers for auto on/off function based on timings.
- The cable size is selected so as to minimize the power losses.
- The power factor improvement capacitors provided individually for AC loads.
- Using water cooled chillers, variable frequency drives for secondary pumps and building management system for HVAC equipments with non-CFC and non-HCFC based refrigerants.
- Installation of insulation over the steam line to reduce the heat loss.
- All rotating equipment are provided with variable frequency drive
- Steam condensate shall be recovered and reused.
- Boiler blow down are controlled by automatic system to save heat up losses.
- Batch processes are monitored stringently for heating and cooling operations so that there is minimum loss of energy and material by way of temperature, pressure and flow controls.

10.10 SKILLED AND TRAINED MANPOWER

Employment would be as per prevailing norms of state government for skilled and trained people for the project. **M/s. Chemplast Sanmar Limited.** has 1350 people [Existing: 350 people + proposed: 1000 people] of employment based on qualification and requirement. In addition to direct employment, indirect employment shall generate ancillary business to some extent for the local population.

10.11 CAPITAL COST FOR ENVIRONMENTAL MANGEMENT

Total capital investment for the project will be Rs. 2292.398 Crores [Existing: 292.398 Crore + Proposed: 2000 Crore]. Capital cost of air & water pollution control system and environmental monitoring equipments will be Rs. 118.482 Crores.

Sr. No.	Particulars	Existing Amount (Rs. In Crore)	Proposed Amount (Rs. In Crore)	Total Proposed Amount (Rs. In Crore)
1	Land	5.915	-	5.915
2	Building and site development	81.446	374	455.446
3	Plant and machinery	186.555	1526	1712.555
4	Total Capital cost Environment protection measures (includes cost of ETP, Tree Plantation, Evaporator System and Rain Water Harvesting etc.)	18.482	100	118.482
	Total Cost of Project	**292.398**	**2000**	**2292.398**
5	Recurring Cost of Environment protection measures (includes cost of ETP, Tree Plantation, Evaporator System etc.)			6.932 Crores/Annum

10.12 SOLVENT MANAGEMENT PLAN

Solvent management will be carried out as follows:

- Chillier water circulation is provided for primary condenser and chilled brine circulation for secondary condenser is provided to condensate solvent vapours and reduces solvent losses. Solvent recovery.
- Double stage condensers are used for solvent recovery system
- Reactor and solvent handling pump have mechanical seals to prevent leakages.
- Automatic process control and interlocking system is provided for solvent recovery system.
- Continuous VOC monitoring system is provided in solvent storage area.
- The condensers will provided with sufficient HTA and residence time so as to achieve more than 97% recovery.

- Vent trap is provided with cooling and scrubbing system for solvent recovery system
- Solvents will store in a separate space specified with all safety measures.
- Proper earthing provided in all the electrical equipment wherever solvent handling is done.
- Entire plant is flame proof. The solvent storage tanks will be provided with breather valve to prevent losses.
- All the solvent storage tanks are connected with vent condensers with chilled brine circulation.

Coolant to be used

Primary Condensers	Chiller Water
Secondary Condensers	Chilled Brine up to -5^{0}C
Vent Condensers	Chilled Brine up to -10^{0}C

FIGURE-10.1

10.12.1 LEAK DETECTION AND REPAIR (LDAR) PROGRAM

Periodic preventive maintenance and inspection is done for all the equipments by the in-house Engineering team and LDAR study carried yearly once by External lab and its report submitted to TNPCB, Hosur.

- Leak Free Pumps for Transfer of Solvents
- MSW Gaskets in Solvent Pipelines to Prevent Leakage from flanges
- Minimum Number of Flanges, Joints and Valves in Pipelines.
- To Eliminate Chances of Leakages from glands of pumps, mechanical seal will be provided at all solvent pumps.
- All the rotating equipments like pumps will be installed with mechanical seals to arrest any sort of emissions.
- Condenser and scrubber post reactor with cooling arrangement
- Enclosures to chemical storage area, collection of emission from loading of raw materials in particular solvents through hoods and ducts by induced draft, and control by scrubber / dust collector to be ensured.
- In case the small spillage or leakage observed, first pour the china clay (vermiculate) on material and collect the contaminated china clay (vermiculate) and send to ETP.
- If the spillage is of inflammable liquid, switch off all the power supply in the area to prevent electric spark.

MONITORING OF SOLVENT LOSSES

- In warding, storage and consumption of solvents in various products shall be measured through level transmitters and load cells weighing systems resp. The quantity at each stage shall be reconciled periodically to arrive at losses.
- Periodic monitoring of work area will be carried out to check the fugitive emission.
- VOC Detectors will be installed at various places to detect leak.

PREVENTIVE MAINTENANCE TO PREVENT LEAKAGES

In order to prevent leakage from pump, seals, valves etc, preventive maintenance shall be carried out periodically as per plan. Regular maintenance of valves, pumps, flanges, joints and other equipment will be done to prevent leakages and thus minimizing the fugitive emissions of VOCS.

SR. NO	Component	Preventive Maintenance Schedule
1	Pump seals with visible liquid dripping	Daily
2	Valves/flanges	Quarterly
3	Compressor seals	Quarterly
4	Pressure relief devices	Yearly
5	Pipeline thickness testing	Yearly

IMMEDIATE REPAIR OF DEVICES IN CASE OF LEAKAGES

- A regular preventive maintenance schedule will be in place to replace or rectify all gaskets and joints etc to ensure no fugitive emissions shall take place.
- Plant shall also maintain adequate number of spares and consumables required to repair the leaking device
- Plant shall also have competent contractor team to handle leakages and can repair the same immediately
- Standby equipments like pumps, valves etc shall be kept basis the criticality and usage
- Plant shall also have access equipments like boom lift to handle leakages at height immediately

10.13 ACTION PLAN FOR TRANSPORTATION OF RAW MATERIALS AND PRODUCTS

1. Every material (FG and or Raw material) container are with TREM CARD, Material Safety Data Sheet.
2. Container marked with Emergency Information Panel (includes Correct Technical Name, Class Label, UN NO, HAZCHEM, Emergency Dial, Specialist advice etc).
3. Container or Tank thoroughly hydraulically tested and test certificate are available with driver.
4. Only trained driver having valid driving license are allowed to carry out transportation of material.
5. Driver is allowed with attendant to enter inside or going outside from the company.

6. Driver and attendant well trained on Driving rules, Chemical Properties, Emergency Preparedness (Communication, Leakage spillage handling, Use of PPE, First-aid, Fire fighting measures, Toxic release measures).
7. Container are certified for road worthiness, PUC certificate.
8. Vehicle are equipped with fire-fighting equipment, first aid box, Toolbox, Antidotes, PPEs and Emergency Exit.
9. Conditions of Valves and fittings should be checked at security gate and proper corrective action will be taken in case of any abnormality.

Transportation of all the raw material and products shall primarily by road only. The raw material and products received delivered in Tanks, MS/HDPE/FIBRE drums, and cylinders as well as through tankers & containers and stores at ambient temperature. All the storage tanks of hazardous flammable substance are located within premises in separate storage area i.e. solvent farm area at ambient temperature. Solvents are stored in cool and dry place with all precautionary process instrumentation and safety appliance.

Large area covered by well-designed warehouse, which is containing store office, raw material store, finished product stores etc. In case of any abnormality reported to site regarding road accident, company's emergency response team will reach at the site and take proper corrective action and information of such incident will be provided to local police station and other government authority as per situation.

10.14. DETAILS OF CARBON FOOTPRINT AND CARBON SEQUSTRATION STUDY

We have submitting carbon foot print for last 3 year and Publish Sustainability report conforming to GRI standards with

• Assurance by external agency (Ernst &Young sustainability service)

Scope 1 Emissions

Fuel type	Fuel consumption	Total emissions(kg CO2 eq./year)	Total emissions (t CO2 eq. /year)
Furnace Oil	1992.5 t/ year	6177980	6177.98
Diesel	61.96 t/ year	197420	197.420
Total Category 1 emissions (t CO2 eq. /year)			6375.400

Reference

Net Cal. Value for FO = 42.3 TJ/Gg (IPPC)
Emission Factor = 77.4 tco2/TJ

Net Cal. Value for Diesel = 43 TJ/Gg (IPPC)
Emission Factor = 74.1 tCO2/TJ

Scope 2 Emissions

Category	Consumption (kWh/ year)	Total emissions (kg CO2 eq./year)	Total emissions (t CO2 eq. /year)
non renewable	8897208	7028794	7028.794
renewable	534000		
Total Category 2 emissions (t CO2 eq. /year)			**7028.794**

Reference
Grid emission factor of 0.790 tCO2/MWh has been considered as per CEA data, Govt. of India..

Scope 3 Emissions

Raw material transportation

Material type	Means of Transportation	Material transported (t-Km/year)	Total emissions(t CO2 eq. /year)
Raw materials	By road	396545	212.27
Total emissions due to raw material transportation			**212.27**

Emission factor of 74100 KG/TJ has been considered as per CEA data, Govt. of India..

finished good transportation

Category	Quantity (t/year)	Total emissions (t CO2 eq. /year)
final product	1046.42	44.65
Emissions due to solid waste generation (t CO2 eq./year)		**44.65**

Emission factor of 74100 KG/TJ has been considered as per CEA data, Govt. of India..

Total Scope 3 emissions

Category	**Emissions (t CO2 eq. /year)**
Raw material Transportation	212.27
finished good transportation	44.65
Total Category 3 emissions (tCO2 eq. /year)	**256.92**

Total emissions= 13661.114 t CO2 eq. / year
Emissions by Scope

Scope	**Emissions (t CO2 eq./year)**
1	6375.400
2	7028.794
3	256.920
Total emissions (t CO2 eq. /year)	13661.114

Scope	**Performance indicator value**
Hazardous waste per MT of the product	2.39 MT/MT
Water withdrawal	63096 KL/Annum

Carbon Sequestration

The Total Carbon sequestration done is as follows:

Initiatives to provide energy-efficient or renewable energy based products and services, and reductions in energy requirements as a result of these initiatives and initiatives to reduce the indirect energy consumption & reduction achieved

Scope	Energy savings KWh	Emissions (t CO2 eq./year)
Energy saved due to averting of travel of employees by carrying out the Microsoft / Google Meet	9965	9.22
Energy saved due to replacement of Energy efficient motors	7982	7.38
Replacement of conventional type Light fittings by "Go-Green" LED luminaries ,250W to 100W - 5Nos	765	0.71
Replacement of conventional type Light fittings by "Go-Green" LED luminaries: 125W to 45W - 10Nos	3302	3.05
Total emissions (t CO2 eq. /year)	**22014**	**20.36**

CHAPTER - 11
SUMMARY & CONLCUSION

11.1 INTRODUCTION

Chemplast Sanmar is over fifty years old and is a part of the SHL Chemicals Group, which in turn is a constituent of the Sanmar Group, one among the oldest and most prominent corporate groups in South India. It is a major manufacturer of Specialty Chemicals such as Specialty Paste PVC resin and Custom Manufactured Chemicals for agro-chemical, pharmaceutical and fine chemicals sector. The company also produces other chemicals such as Caustic Soda, Chlorochemicals, Hydrogen Peroxide, Refrigerant gas and Industrial Salt. The manufacturing facilities are located at Mettur, Berigai and Vedaranyam in Tamil Nadu and Karaikal in the Union Territory of Puducherry.

Chemplast Sanmar Limited, is a leading supplier of intermediates for global Agrochemical, Pharmaceutical and Fine Chemical innovators. These intermediates involve complex multi-step synthesis using unique chemistries.

The manufacturing facility is located at Berigai, Tamil Nadu.

Organic Chemicals

- Custom manufacturing of organic intermediates supplying into Pharmaceutical, Agrochemical and other fine chemical applications.
- Exclusive custom development and manufacturing of key intermediates
- Organic synthesis building blocks with capacity ranging from 100 kgs to 100's of MTPA

Phyto Chemicals

- Manufactures Active Pharmaceutical Ingredients (API) extracted from locally available biomass.
- Phyto Chemical APIs are sold globally to the Pharmaceutical industry.

11.2 PROJECT DESCRIPTION

M/s. Chemplast Sanmar Limited, Proposing expansion of Synthetic Organic Chemicals & Pesticide Specific Intermediates (From 1601.4 MT/Annum to 20031.4 MT/Annum) Manufacturing in Existing Unit at S.F No.5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3, 10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A, Suligunta Village, Berigai 635105. Shoolagiri Taluk, Krishnagiri District, Tamil Nadu, India.

For proposed expansion project; following assumptions have been considered:

ENVIRONMENTAL IMPACT & RISK ASSESSMENT REPORT

The reason of applying in category A [5(b) & 5(f)] Environmental Clearance at MoEF & CC, New Delhi.

- Chemplast Sanmar Limited has proposed for the Pesticide Industrial Product [Sector-17; 5(b)],
- Unit is located outside Industrial estate, &
- Inter-state boundary was there within 10 Kms from the existing project site (i.e. Karnataka state boundary at 0.89 km from the project site)

Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (32 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) within the plant premises. Total Requirement is 14000 KVA from State Electricity Department (13470 KVA-DG Set will be kept for emergency power back up). The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source. The total wastewater generation will be 705 KL/Day and will be segregated into two stream High COD Stream & Low COD stream. Solid/ hazardous wastes will be disposed as per Hazardous waste rules, 2016. Approximately 1350 people [Existing: 350 people + proposed: 1000 people] will be employed to local skilled and unskilled people based on qualification and requirement and preference will be given to local person for fulfilment of the manpower requirement.

11.3 PRODUCT AND CAPACITY

11.4 DESCRIPTION OF THE ENVIRONMENT

BASELINE ENVIRONMENTAL STATUS

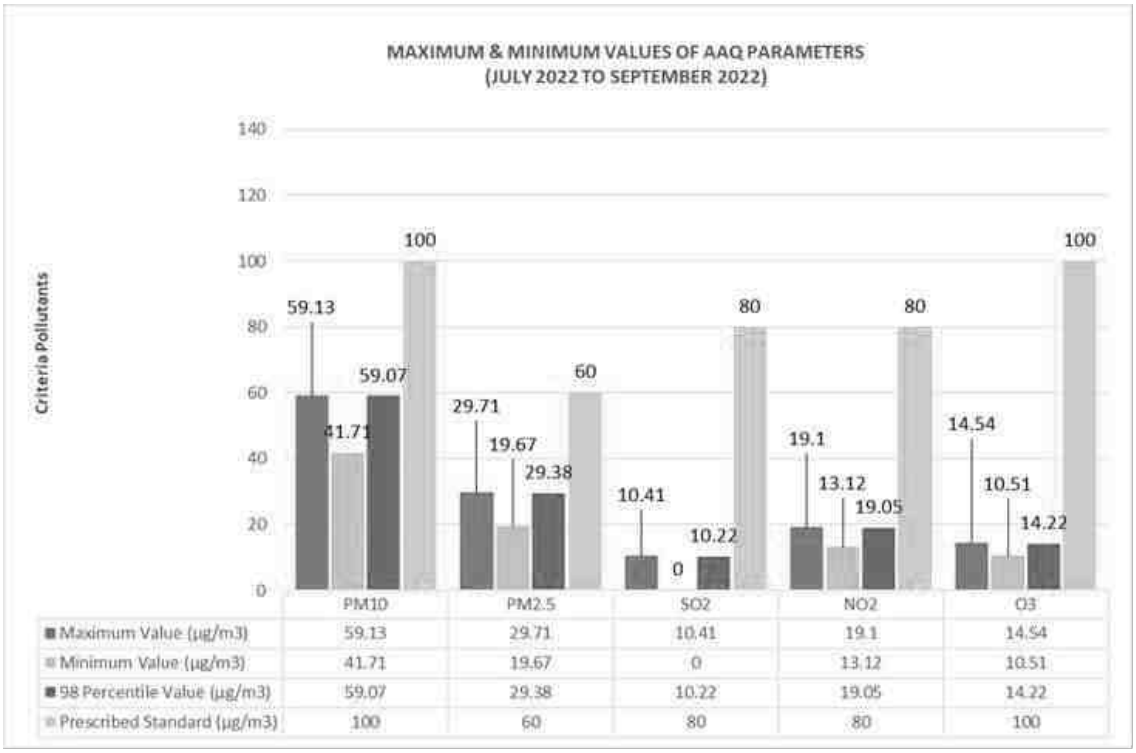
The baseline environmental quality has been assessed in the Pre Monsoon Season, 2022 (July, 2022 to September, 2022) in a study area of 10 km radial distance from the project site.

AIR ENVIRONMENT

The dispersion of pollutants in the atmosphere is a function of several meteorological parameters viz. temperature, wind speed and direction, mixing depths, inversion level, etc. The ambient air samples were collected and analyzed for Suspended Particulate Matter, Respirable Suspended Particulate Matter (RSPM-PM_{10}), Respirable Suspended Particulate Matter (RSPM-$PM_{2.5}$), Sulphur Dioxide (SO_2), Nitrogen dioxide (NOx), Ammonia (NH_3), Ozone (O_3), Lead (Pb), Benzene (C_6H_6), Benzo (α) Pyrene (BaP), Hydro Carbon (HC), Arsenic (As), Nickel (Ni), & Carbon Monoxide (CO) were monitored at site and nearby villages for identification, prediction, evaluation and assessment of potential impact on ambient air environment.

SUMMARY

- During the study **SPM** concentration was observed in the range of 75.08 – 118.20 µg/m^3. Maximum concentration of **SPM** was found at **Project Site (118.20 µg/m^3)**.
- During the study **$PM_{10.0}$** concentration was observed in the range of 41.71 – 62.21 µg/m^3. Maximum concentration of **$PM_{10.0}$** was found at **Project Site (62.21 µg/m^3),** which is well within the standard limit.
- During the study **$PM_{2.5}$** concentration was observed in the range of 19.67 – 29.21 µg/m^3. Maximum concentration of **$PM_{2.5}$** was found at **Project Site (29.21µg/m^3)**, which is well within the standard limit.
- During the study **SO_2** concentration was observed in the range of BDL – 10.41 µg/m^3. Maximum concentration of **SO_2** was found at **Project Site & Suligunta (10.41 µg/m^3)**, which is well within the standard limit.
- During the study **NO_2** concentration was observed in the range of 13.12 – 19.10 µg/m^3. Maximum concentration of **NO_2** was found at **Suligunta (19.10 µg/m^3)**, which is well within the standard limit.
- During the study **O_3** concentration was observed in the range of 10.51 – 14.54 µg/m^3. Maximum concentration of **O_3** was found at **Suligunta (14.54 µg/m^3)**, which is well within the standard limit.



The PM10 and PM2.5 concentrations at all the AAQM locations were primarily caused by local phenomena including industrial & vehicular activities and natural dust getting air borne due to manmade activities and blowing wind. PM10 and PM2.5 concentrations were observed below stipulated standards of CPCB for Residential & Other Area at all air quality monitoring locations during the monitoring period. Results of all parameters are found within limit. In Mahadevpuram, Anikarahalli & Kullur villages, SO2 values are below detection limit of 5 µg/m3. These villages are free remote area and there is no source for SO2 pollution.

WATER ENVIRONMENT

11 nos. of ground water and 2 nos. of surface water samples were collected from the study area. These samples were analyzed for physic-chemical parameters to ascertain the baseline status in the existing surface water and ground water bodies. Samples were collected during the study period of July-2022 and analyzed as per the Standard Methods of Water.

BASELINE GROUND WATER QUALITY

- **pH** of Ground water samples varied from 7.22 to 7.63 Maximum **pH** was found at **Suggondahalli (7.63)** , which is well within the standard limit.
- **Total Dissolved Solids** was varied in range of 578 to 1012 mg/L. Maximum **Total Dissolved Solids** was found at **Mahadevapuram (1012 mg/L)**, which is well within the standard limit.
- **Total Suspended Solids** was <2 mg/L **,** which is well within the standard limit.
- **DO** was varied in range of 5.4 to 5.7 mg/L. Maximum **DO** was found at **Kurubarapalli and Kullur (5.7 mg/L)**, which is well within the standard limit.

- **COD** was varied in range of <4 to 8 mg/L. Maximum **COD** was found at **Suligunta and Midithepalli (8 mg/L)**, which is well within the standard limit.
- **Total Hardness (as CaCO3)** was varied in the range of from 240 to 470 mg/L. Maximum **Total Hardness** was found at **Mahadevapuram (470 mg/L)**, which is well within the standard limit.
- **Total Alkalinity** was varied in the range of from 290 to 440 mg/L. **Total Alkalinity** was found at **Mahadevapuram (440 mg/L)**, which is well within the standard limit.
- **Chlorides** were varied in the range of 147 to 254 mg/L. Maximum **Chlorides** was found at **Mahadevapuram (254 mg/L)**, which is well within the standard limit.

Sr. No.	Criteria Pollutants	Unit	Maximum Value	Minimum Value	Desirable Limit (Maximum)	Permissible Limit (Maximum)
1.	pH	pH Scale	7.63	7.22	6.5-8.5	No Relaxation
2.	Total Dissolved Solids	mg/l	1012	578	500	2000
3.	Total Suspended Solids	mg/l	<2	<2	--	--
4.	Total Hardness	mg/l	470	240	200	600
5.	Fluoride	mg/l	0.63	0.37	1	1.5
6.	Chlorides	mg/l	254	147	250	1000
7.	Zinc	mg/l	0.14	0.03	5	15
8.	Total Alkalinity	mg/l	440	290	200	600

	pH (pH Scale)	Total Suspended Solids (mg/L)	Total Hardness (mg/L)	Total Dissolved Solids (mg/L)	Fluoride (mg/L)	Chlorides (mg/L)	Zinc (mg/L)	Total Alkalinity
Maximum Value	7.63	0	270	1012	0.39	254	0.14	440
Minimum Value	7.22	0	240	578	83	147	0.03	290
Desirable Limit	0	0	200	500	1	250	5	200
Maximum Permissible Limit	0	0	600	2000	1.5	1000	15	600

BASELINE SURFACE WATER QUALITY

- pH of Surface water samples varied from 7.81 to 8.07. Maximum **pH** was found at **Berigai Lake (8.07)**, which is well within the standard limit.
- DO was varied in range of 5.3 to 5.6 mg/L. Maximum **DO** was found at **Berigai Lake (5.6 mg/L)**, which is well within the standard limit.
- COD was varied in range of 21 to 24 mg/L. Maximum **COD** was found at **Pond near Gandlaalli Sri Thimmaraya Swamy Temple (24 mg/L)**, which is well within the standard limit.
- **BOD_3[27]** was varied in range of 3.3 to 3.6. Maximum **BOD_3[27]** was found at **Pond near Gandlaalli Sri Thimmaraya Swamy Temple (3.6 mg/L)**, which is well within the standard limit.

Sr. No.	Criteria Pollutants	Unit	Maximum Value	Minimum Value	Classification of inland water body

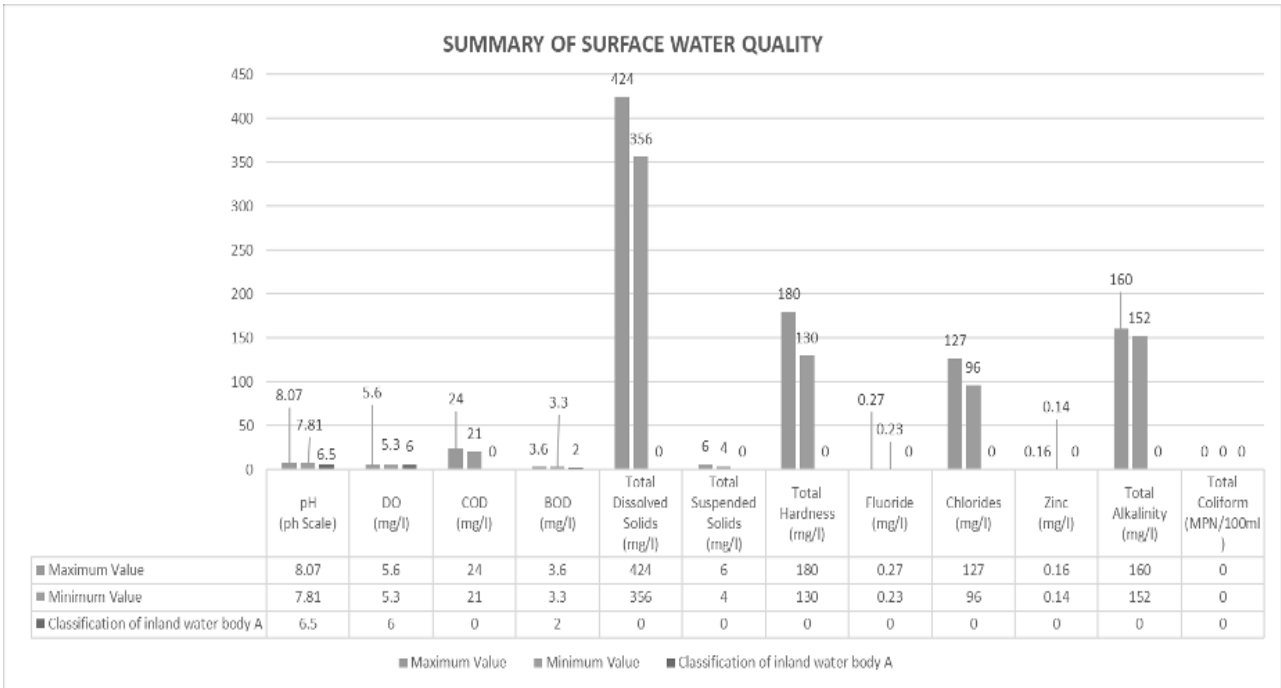
12	Total Coliform	MPN/ 100ml	2	<2	--



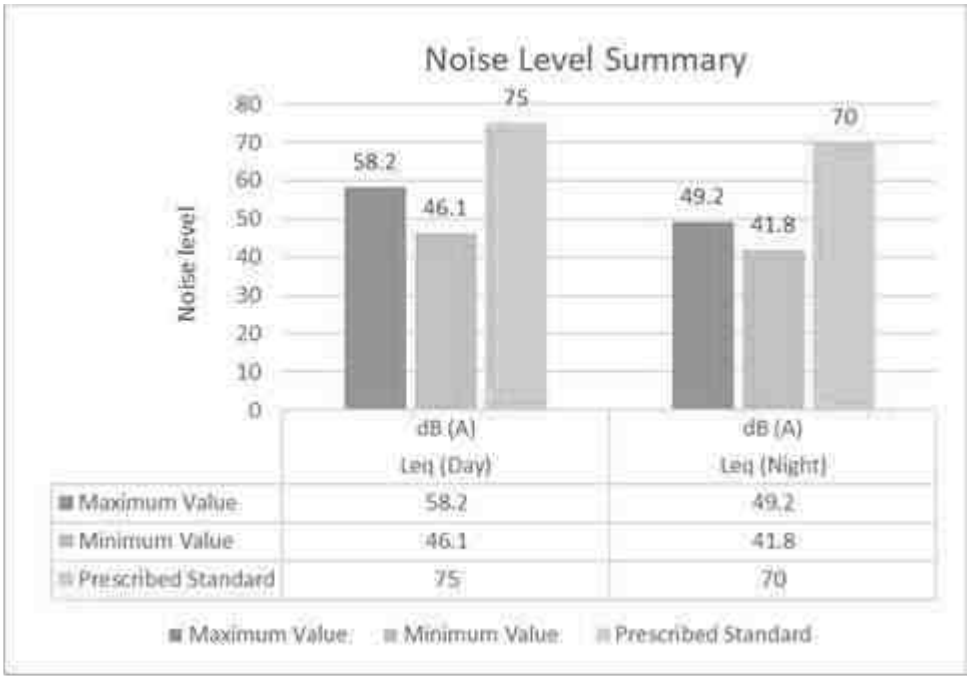
NOISE ENVIRONMENT

The noise monitoring was carried out at 11 locations in day time during (6 am to 9 pm) and at night time (9 pm to 6 am) in the study area covering all the areas i.e. industrial and residential as mentioned in Noise (Pollution and Control) Rules, 2000. Hourly Equivalent noise levels Leq (day) and Leq (night) were measured at each monitoring locations.

Monitoring was done on 11-07-2022 TO 16-07-2022 during day and night time was carried out at all the locations.

NOISE SUMMARY

During the study of noise monitoring level was observed during day time is the range of 46.1 - 58.2 dB (A) & during night time 41.8 – 49.2 dB (A). Maximum noise level in day time in night time was found at Project Site (58.2 dB (A)) & (49.2 dB (A)) respectively.



Based on noise level data obtained during the survey, Noise level varied at some place at different times due to fluctuations in traffic movements as well as in residential due to nearest Industrial / commercial and domestic activities going on in the study area. It is interpreted that noise levels of Project site and all villages are within the standard norms prescribed by MoEF&CC.

LAND ENVIRONMENT

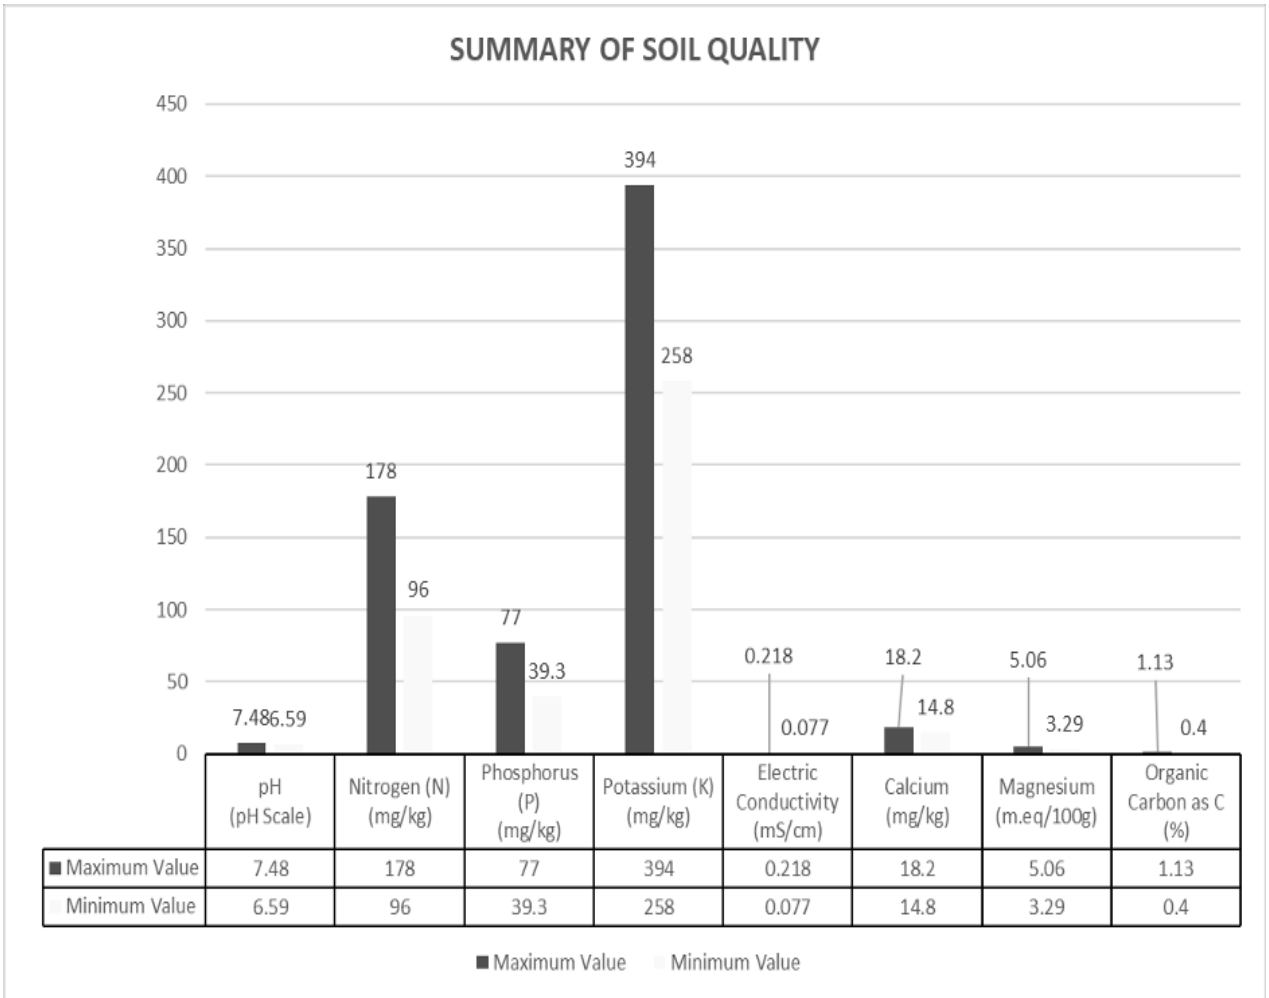
Soil samples were collected from eleven locations during 11-7-2022 to 16-7-2022 within the study area to assess its physico-chemical characteristics.

- **pH** of samples varied from **6.59 to 7.48.** Maximum pH was found at **Pannapalli (Menandoddi) (7.48).**
- **Nitrogen (N)** was varied in range of **96 to 178 mg/kg**. Maximum Nitrogen (N) was found at **Berigai (178 mg/kg).**
- **Phosphorus (P)** was varied in range of **39.3 to 77 mg/kg**. Maximum Phosphorus (P) was found at **Eluvapalli (77 mg/kg).**

- **Potassium (K)** was varied in range of **258 to 394 mg/kg**. Maximum Potassium (K) was found at **Eluvapalli (394 mg/kg).**
- **Electric Conductivity** was varied in range of **0.077 to 0.218 mS/cm**. Maximum Electric Conductivity was found at **Kurubarapalli (0.218 mS/cm).**
- Calcium of samples varied from **14.8-18.2 mg/kg**. Maximum Calcium was found at **Project Site (18.2 mg/kg)**
- Magnesium of samples varied from **3.29-5.06 m.eq/100g.** Maximum Magnesium was found at **Kullur (5.06 m.eq/100g)**
- Organic Carbon as C of samples varied from **0.40-1.13%.** Maximum Organic Carbon as C was found at **Kullur (1.13%).**

Based on the soil analysis report, the following can be concluded:

Sr. No.	Criteria Pollutants	Unit	Maximum Value	Minimum Value
1.	pH	pH Scale	7.48	6.59
2.	Nitrogen (N)	mg/Kg	178	96
3.	Phosphorus (P)	mg/Kg	77	39.3
4.	Potassium (K)	mg/Kg	394	258
5.	Electric Conductivity	mS/cm	0.218	0.077
6.	Calcium	mg/kg	18.2	14.8
7.	Magnesium	m.eq/100g	5.06	3.29
8.	Organic Carbon as C	%	1.13	0.40



11.5 WATER REQUIREMENT, WASTE WATER GENERATION AND TREATMENT

- The Total water requirement is 1207.5 KL/Day. Out of that 207.5 KLD ground water for which NOC from CGWA/PWD available and remaining 1000 KLD applied to get from government water source.
- The total wastewater generation will be 705 KL/Day. Industrial process wastewater = 600 KL/Day + washing = 75 KL/Day + Boiler/cooling = 30 KL/Day). and will be segregated into two stream High COD Stream & Low COD stream.
  - **Low COD stream:** Low COD effluent (105 KL/Day) will be treated through the conventional wastewater treatment system and the pass through RO system.
  - **High TDS Stream:** Neutralized concentrate effluent (600 KL/Day) and rejects from RO (225 KL/Day) will be evaporated in multi effective evaporator (MEE). The treated wastewater will be totally recycled and the solid waste generated will be disposed to TSDF (Common disposal Facility).
  - Domestic wastewater (100 KL/Day) will send to STP and Reuse in domestic and gardening purpose after treatment.

11.6 AIR POLLUTION SOURCE AND CONTROL MANAGEMENT
FLUE GAS EMISSION RATE EMISSION FROM EACH UTILITY

SR. no.	Source of emission With Capacity	Stack Height (meter)	Name of the fuel	Quantity of Fuel MT/hr & MT/Day	Type of emissions i.e. Air Pollutants	APCM

11.7 HAZARDOUS WASTE

11 Categories of Hazardous/Solid Wastes shall be generated from this Unit.

Sr. No	Name of Waste	Source of Generation	Cat No.	Existing Quantity (MT/Year)	Total Proposed Quantity (MT/Year)	Disposal Method
1.	Empty barrels/ containers/liners contaminated with hazardous chemicals /wastes	Storage & handling of Raw Materials	Sch-I/ 33.1	40	500	Collection, Storage, Transportation, Decontamination & Disposal to TNPCB Authorized Recyclers (Recyclable)
2.	Used / Spent Oil	Equipment & Machineries	Sch-I/ 5.1	10	200	Collection, Storage, Transportation, Decontamination & Disposal to TNPCB Authorized Recyclers (Recyclable)
3.	Chemical sludge from waste water treatment	In-house ETP & MEE	Sch-I/ 35.3	2500	43000	Collection, Storage, Transportation & disposal to Common

						TSDF site by following protocol of Hazardous Waste Rule – 2016.
4.	Spent solvents	Process	Sch-I/ 28.6	350	20000	Collection, Storage, Transportation, Decontamination & Disposal to TNPCB Authorized Recyclers (Recyclable)
5.	Distillation residues	Process	Sch-I/20.3	20	4000	Collection, Storage, Transportation & disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016.
6.	Contaminated aromatic, aliphatic or naphthenic solvents may fit for reuse		Sch-I/20.1	6	10000	Collection, Storage, Transportation & disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016
7.	Spent catalyst	Process	Sch-I/28.2	1	40	Collection, Storage, Transportation for Regeneration, Recovery and Reuse. (Recyclable)
8.	Contaminated cotton rags or other cleaning materials		Sch-I/ 33.2	2	40	Collection, Storage, Transportation & disposal to Common TSDF site by following protocol of Hazardous Waste Rule – 2016.
9.	Spent Carbon or Filter medium	Process	Sch-I/ 36.2	NA	4000	Collection, Storage, Transportation & disposal to Common TSDF site / Co-processor by following protocol of Hazardous Waste Rule – 2016.
10.	Process wastes or residues	Process	Sch-I/ 29.1	NA	30000	Collection, Storage, Transportation & disposal to Co-processor by following protocol of Hazardous Waste Rule – 2016.
Non Hazardous waste						

11.	Fly Ash	Utility	--	--	18250	Collection, Storage, Transportation and sent for brick manufacturer and/or in cement industries.

11.8 GREEN BELT

Total 16.64 Hectares land area is available at site; out of this area about 5.34 Hectares (32 %) area is covered as greenbelt. The company has planted total 16250 nos. of trees for green belt within the plant premises. Company will plant additional 1000 Nos. of trees (in 0.54 Hectors area) for green belt (3.33 %) within the plant premises.

11.9 POWER REQUIREMENTS & FUEL REQUIREMENT

Power Requirement:

Sr. No.	Description	Existing Requirement (KVA)	Proposed Requirement (KVA)	TOTAL Requirement (KVA
1	State Electricity Department	2000	12000	14000
2	D.G. Set	3470	10000 (5 x 2000 kVA)	13470

Note: DG Set will be kept for emergency power back up.

Fuel Requirement:

Sl. No.	Type of Fuel	Existing (MT/day)	Proposed (MT/day)	Total (MT/day)
1	Furnace Oil	8	90	98
2	Briquettes	00	250	250
3	HSD	1.7	20.3	22
4	LPG	0.008	0.192	0.20

11.10 DETAILS OF HAZARDOUS CHEMICALS STORAGE

The detail of Hazardous Chemical Storage & Handling is as under…

Sr. No.	Name of the Material	Type of Hazard	Kind of Storage	Max. quantity to be stored (MT)	Storage condition i.e. temp., pressure	Tank Dimensions in (m)	Dyke Dimensions

1	Acrylonitrile	Fire	MS DRUMS	5 MT	25 TO 35 C	NA	Hx34cm Wx13cm

31	Nitric acid	corrosive	Carboy	0.5 MT	25 TO 35 C	NA	Hx34cm Wx13cm

11.11 CAPITAL AND RECURRING COST EARMARKED FOR ENVIRONMENTAL PROTECTION MEASURES

Total capital investment for the project will be Rs. 2292.398 Crores [Existing: 292.398 Crore + Proposed: 2000 Crore]. Capital cost of air & water pollution control system and environmental monitoring equipments will be Rs. 118.482 Crores.

Sr. No.	Particulars	Existing Amount (Rs. In Crore)	Proposed Amount (Rs. In Crore)	Total Proposed Amount (Rs. In Crore)
1	Land	5.915	-	5.915

2	Building and site development	81.446	374	455.446
3	Plant and machinery	186.555	1526	1712.555
4	Total Capital cost Environment protection measures (includes cost of ETP, Tree Plantation, Evaporator System and Rain Water Harvesting etc.)	18.482	100	118.482
	Total Cost of Project	**292.398**	**2000**	**2292.398**
5	Recurring Cost of Environment protection measures (includes cost of ETP, Tree Plantation, Evaporator System etc.)			6.932 Crores/Annum

11.12 CONCLUSION

The EIA study of **M/s. Chemplast Sanmar Limited** has been carried out with respect to the Std. TORs awarded by MoEF&CC, Delhi. All the impacts likely to have an effect on the environment have been identified and efficient/adequate mitigation measures have been proposed for the same.

- The proposed expansion project will provide quality product at lower cost to the users.
- There should be positive impact on the socio-economic condition of the area in terms of direct and indirect employment due to the proposed expansion project.
- Country will save valuable foreign exchange as import of these products will be reduced by corresponding amount.

CHAPTER – 12
DISCLOSURE OF CONSULTANTS ENGAGED

Aqua-Air Environmental Engineers Pvt. Ltd.

Environmental Consultants, Engineers &Turnkey Project Executors

NABET/QCI ACCREDITED EIA CONSULTANT

MoEFCC APPROVED LABORATORY

NABL ACCREDITED TESTING LABORATORY

ISO 9001:2015 Certified Company

ISO 45001:2018 Certified Company

12.1COMPANY PROFILE

Aqua-Air Environmental Engineers Pvt. Ltd. is a Surat based company; one of the leading and multidiscipline Environmental Management Consulting firms of the region.

Aqua-Air Environmental Engineers Pvt. Ltd. was founded by Mr. Jayesh S. Patel & Mrs. Archana J. Patel on May 7, 2008 and Aqua-Air Environmental Engineers Pvt. Ltd. was registered under the companies Acton May 7, 2008.

Office having 6,756 Sq. Ft. of area covering EC/EIA Department, R & D Centre (Environmental Laboratory), Consent (CTE &CC&A) Department, ETP/Project Department, Solar Department and Account Department, Library, Conference room and Administration Department, etc. with experienced and qualified staff to render services in the field of Environmental Management of various types of industries.

Aqua-Air Environmental Engineers Pvt. Ltd. has a well-established track record in monitoring legislation and developing and implementing strategies for organizations that enable them to manage the impact of environmental issues on their business.

The company has built a reputation for delivering innovative and practical solutions to environment related business issues. These solutions help our clients to achieve successful business outcomes and make sustainable environment serving improvements within their business operations.

M/s. Aqua-Air Environmental Engineers Pvt. Ltd. has applied to get the recognition as Environmental Laboratory under Environment (Protection) Act, 1986 on June 12, 2019. Based on recommendations of the Expert Committee for recognition of Environmental Laboratories in its 63rd meeting held on 1st October, 2020, Ministry of Environment, Forest and Climate Change (MoEFCC) approves the recognition of M/s. Aqua Air Environmental Engineers Pvt. Ltd., considering the current validity of mandatory accreditation / certifications of the laboratory. This recognition shall be valid up to Dec 3rd, 2023.

Aqua-Air Environmental Engineers Pvt. Ltd. started the process for “EIA Consultant Organization” accreditation under National Accreditation Board for Education And Training (NABET)/Quality Council of India (QCI), New Delhi on January 7, 2010 and submitted the application (Rev. 06) for “EIA Consultant Organization” accreditation under NABET, New Delhi on April 8, 2010. Office assessment was done by external NABET/QCI auditors on Feb. 3 & 4, 2011. NABET/QCI closed the application of Aqua-Air Environmental Engineers Pvt. Ltd. on March 15, 2011. Aqua-Air Environmental Engineers Pvt. Ltd. filed SCA in Hon’ble High Court of Gujarat against MoEFCC, QCI & NABET, New Delhi on April 13, 2012. Hon’ble High Court of Gujarat issued stay order against operation of all OMs (related to NABET/QCI Scheme) of MoEFCC, New Delhi for the company on Jan. 24, 2013. MoEFCC, New Delhi published Notification regarding mandatory implementation accreditation scheme of NABET/QCI on March 3, 2016. Aqua-Air Environmental Engineers P. Ltd. along with 11 EIA Consultants of Gujarat filed SCA No. 5312 of 2016 in Hon'ble High Court of Gujarat. Hon'ble High Court of Gujarat gave Stay Order on Apr. 5, 2016 against implementation of Notification dated March 3, 2016 of MoEFCC, New Delhi till further orders.

M/s. Aqua-Air Environmental Engineers Pvt. Ltd. have written letter to withdraw their name from Court case from Hon’ble High Court of Gujarat and have received the Withdrawal receipt copy from their Advocate.

M/s. Aqua-Air Environmental Engineers Pvt. Ltd. has applied for NABET/QCI Accreditation on March 11, 2020 along with Desktop Assessment – 1 (DA-1) fees covering 22 Sectors. M/s. Aqua-Air Environmental Engineers Pvt. Ltd.'s Desktop Assessment – 1 (DA-1) is already completed and all NC’s generated by QCI/NABET secretariat have been closed by Aqua-Air. Aqua-Air has paid the Desktop Assessment – 2 (DA-2) fees and DA-2 was completed on May 28, 2020. Aqua-Air’s Office Assessment took place during Oct. 5 to 8, 2020 & NABET’s Accreditation committee granted accreditation on Nov. 6, 2020 (valid till Oct. 7, 2023) for 28 sectors i.e. Mining of minerals (opencast) & Mining of minerals including opencast / underground mining, Onshore oil and gas exploration, development & production, Mineral beneficiation, Metallurgical industries (ferrous only), Cement plants, Petroleum refining industry, Chlor-alkali industry, Soda ash Industry, Chemical fertilizers, Pesticides industry and pesticide specific intermediates , Petro-chemical complexes, Manmade fibers manufacturing, Petrochemical based processing, Synthetic organic chemicals industry, Distilleries, Pulp & paper industry, Sugar Industry, Oil & gas transportation pipeline, Air ports, Industrial estates/ parks/ complexes/areas, Common

hazardous waste treatment, storage and disposal facilities (TSDF), Bio-medical waste treatment facilities, Ports, harbours, break waters and dredging, Highways, Common Effluent Treatment Plants (CETPs), Common Municipal Solid Waste Management Facility (CMSWMF), Building and construction projects.

M/s. Aqua-Air Environmental Engineers Pvt. Ltd. started the process for ISO/IEC 17025:2005 Accreditation by NABL, New Delhi for the Competence Testing & Calibration Laboratories on June 24, 2008 and submitted the application (Version No. 10) to NABL, New Delhi for ISO/IEC 17025:2005 registration on October 7, 2008. After final assessment and Non-Conformances resolved and corrective actions taken against the Non-Conformances, Laboratory Department, M/s. Aqua-Air Environmental Engineers Pvt. Ltd. was accredited with the certification of ISO/IEC 17025:2005 on Oct. 15, 2010 and was valid up to Oct. 14, 2012. Re-accreditation of ISO/IEC 17025:2005 was received on June 5, 2013 and was valid up to June 4, 2015. Re-accreditation of ISO/IEC 17025:2005 was received on Jan. 6, 2016 and was valid up to Jan. 5, 2018. Re-accreditation of ISO/IEC 17025:2005 was received on May 28, 2018 and is valid up to May 27, 2020. We have obtained ISO 9001:2015 which was received on December 04, 2018 which is valid up to December 03, 2024.

M/s. Aqua-Air Environmental Engineers Pvt. Ltd. started the process for ISO 9001:2008 registration for Quality Management System on December 1, 2009 and submitted the application for ISO 9001:2008 registration on March 4, 2010. After final assessment, M/s. Aqua-Air Environmental Engineers Pvt. Ltd. was certified from ANAB by M/s. Intertek System Certification on May 4, 2010 and it was valid up to May 4, 2013.We were re-certified on May 4, 2013 and it was valid up to May 4, 2016. We were re-certified on May 30, 2016 and it was valid up to Sept. 14, 2018. M/s. Aqua-Air Environmental Engineers Pvt. Ltd. got ISO 9001:2015 from M/s. Equalitas Certifications Ltd. on Dec, 4, 2018 and it is valid up to Dec. 3, 2021. M/s. Aqua-Air Environmental Engrs. Pvt. Ltd. got OHSAS18001:2007 from M/s. Equalitas Certifications Ltd. on March 16, 2019 and it is valid up to March 15, 2022. We have obtained ISO 45001:2018 which was received on March 16, 2019 which is valid up to November 23, 2024.

M/s. Aqua-Air Environmental Engrs. Pvt. Ltd. applied for recognition as "Schedule–II Environmental Auditor" with Gujarat Pollution Control Board (GPCB) on Sept. 11, 2008 and got its first recognition as "Schedule–II Environmental Auditor" from the GPCB on Dec. 24, 2008 and it was valid from Jan. 1, 2009 to Dec. 31, 2010. M/s. Aqua-Air Environmental Engrs. Pvt. Ltd. applied for renewal of recognition as

"Schedule–II Environmental Auditor" with Gujarat Pollution Control Board (GPCB) on Dec. 21, 2010 and got its second recognition as "Schedule–II Environmental Auditor" from the GPCB on Oct. 24, 2011 and it was valid from Jan. 1, 2011 to Dec. 31, 2012. M/s. Aqua-Air Environmental Engrs. Pvt. Ltd. applied for renewal of recognition as "Schedule–II Environmental Auditor" with Gujarat Pollution Control Board (GPCB) on Dec. 12, 2012 and got its third recognition as "Schedule–II Environmental Auditor" from the GPCB on Jan. 4, 2014and it was valid from Jan. 1, 2013 to Dec. 31, 2014. M/s. Aqua-Air Environmental Engrs. Pvt. Ltd. applied for renewal of recognition as "Schedule–II Environmental Auditor" with Gujarat Pollution Control Board (GPCB) on Dec. 6, 2014 and got its fourth recognition as "Schedule–II Environmental Auditor" from the GPCB on Jan. 17, 2015 and it was valid from Jan. 1, 2015 to Dec. 31, 2016. M/s. Aqua-Air Environmental Engrs. Pvt. Ltd. applied for renewal of recognition as "Schedule–II Environmental Auditor" (under Modified Environmental Audit Scheme dated Jan. 23, 2015) with Gujarat Pollution Control Board (GPCB) on Nov. 27, 2017 and got its fifth recognition as "Schedule–II Environmental Auditor" from the GPCB on Feb. 13, 2017 and it was valid from Jan. 1, 2017 to Dec. 31, 2018. M/s. Aqua-Air Environmental Engrs. Pvt. Ltd. applied for renewal of recognition as "Schedule–II Environmental Auditor" with Gujarat Pollution Control Board (GPCB) on Nov. 5, 2018 and got its sixth recognition as "Schedule–II Environmental Auditor" from the GPCB on March 28, 2019 and it is valid from Jan. 1, 2019 to Dec. 31, 2020. Last Certificate of Gujarat Pollution Control Board Recognized Schedule – II Environmental Auditor is valid up to Dec. 31, 2022.

M/s. Aqua-Air Environmental Engineers Pvt. Ltd. received the Certificate of Registration of Trade Mark, Section 23 (2), Rule 62 (1) from Trade Marks Registry, Govt. of India on January 18, 2011.

The company’s work is spread all over Gujarat in India & Oman. Company have already prepared 578 Form-1, 496 EIA & EMP reports, 477 Risk Assessment & DMP reports, conducted 90 Public Hearings and obtained 453 Environmental Clearances so far that includes Mining of minerals including opencast / underground mining, Thermal power plants, Mineral beneficiation, Metallurgical industries (ferrous & non-ferrous), Cement Plants, Chlor-alkali industry, Soda ash Industry, Chemical fertilizers, Pesticides industry and pesticide specific intermediates (excluding formulations), Manmade fibers manufacturing, Petrochemical based processing (processes other than cracking & reformation and not covered under the complexes), Synthetic organic chemicals industry (dyes & dye intermediates; bulk drugs and intermediates excluding drug formulations; synthetic rubbers; basic organic chemicals, other synthetic organic chemicals and chemical intermediates), Distilleries, Pulp and Paper Industry, Sugar Industry,

Industrial estates/ parks/ complexes/areas, export processing Zones (EPZs), Special Economic Zones (SEZs), Biotech Parks, Leather Complexes, Common hazardous waste treatment, storage and disposal facilities (TSDFs), Bio-medical waste treatment facilities, Common Effluent Treatment Plants (CETPs), Common Municipal Solid Waste Management Facility (CMSWMF), Building and construction projects & Townships and Area development projects.

Company's MoEFCC Approved Laboratory & NABL Accredited Testing Laboratory has conducted Environmental Monitoring & Analysis with Environmental Institute and Gujarat Pollution Control Board in Industrial Estates of Ankleshwar, Panoli & Jhagadia. Company is also doing Turnkey/Consulting Projects for M/s. BASF (Detail Engineering for Effluent Treatment Plant) & M/s. Reva Proteins Ltd. (Design of Effluent Treatment Plant, supply of mechanical items, Commissioning and operation of Effluent Treatment Plant).

12.2 ABOUT US

Aqua-Air Environmental Engineers Pvt. Ltd. has registered office in one of the top five fastest growing cities of India – Surat. We are one of the most trusted and reliable environmental engineering and consultancy service providers. With complete hold in the related domain and proficiency, we execute our work all over India as well as in Oman.

In addition to engineering consultancy, we also execute turnkey projects for effluent treatment plants at the client's site.

Aqua-Air Environmental Engineers Pvt. Ltd is:

- One of the leading companies in the region providing high quality services in environmental engineering and consulting to the best of client's satisfaction.
- Posses a well - developed design office with Computer Center and Laboratory -cum- R&D Center to carry out designing and analysis in the field of environmental engineering.
- Recognized as Schedule-II Environmental Auditor under the Environment Audit Scheme proposed by the Hon'ble High Court of Gujarat.
- Listed with Gujarat Pollution Control Board as Consultants and proposing to get enlisted with GPCB as Pollution Control Equipment Suppliers.
- Going to become a member of Consulting Engineers Association of India.

- Having well-developed library to render services in the field of environmental auditing, consulting, monitoring and analysis.

12.3 ACHIEVEMENTS

1. Registered under the companies Act on May 7, 2008.
2. Gujarat Pollution Control Board Recognized Schedule – II Environmental Auditor on Dec. 24, 2008. Gujarat Pollution Control Board Recognized Schedule – II Environmental Auditor on May 4, 2011. Latest Certificate of Gujarat Pollution Control Board Recognized Schedule – II Environmental Auditor is valid up to Dec. 31, 2020. Latest Certificate of Gujarat Pollution Control Board Recognized Schedule – II Environmental Auditor is valid up to Dec. 31, 2022.
3. Certificate of ISO 9001:2008 received on May 4, 2010. Certificate of ISO 9001:2015 received on Dec. 4, 2018 & Certificate is valid up to Dec. 03. 2024
4. Import Export License received from Government of India on May 31, 2010.
5. Solvency Certificate of Rs. 1,40,00,000/- received from Bank of India, Gopipura branch, Surat on Sept. 3, 2010.
6. Certificate of National Accreditation Board for Testing and Calibration Laboratories (NABL) received on Oct. 15, 2010. And last Certificate of NABL is valid up to May 27, 2020. Latest Certificate of NABL is valid up to Jun 2, 2023.
7. Certificate of Registration of Trade Mark, Section 23 (2), Rule 62 (1) from Trade Marks Registry, Govt. of India on Jan. 18, 2011.
8. Certificate of Authorization as dealer in India received from Spectrum Technologies, Inc., USA on May 1, 2011.
9. Gujarat Pollution Control Board Recognized Schedule – II Environmental Auditor on May 4, 2011.
10. SMERA solar grading SMERA SP 2A.
11. Ministry of New and renewable Energy (MNRE) and Gujarat Energy Development Agency (GEDA) Channel Partner for grid connected Roof Top division.
12. Got registered with Ministry of Micro, Small & Medium Enterprises (MSME) (UAN: GJ22D0183036) on Dec. 5, 2017.
13. Got Certificate of ISO 9001:2015 on Dec. 4, 2018 and valid up to Dec. 03, 2024
14. Got Certificate of OHSAS 18001:2007 on March 16, 2019 and valid up to March 15, 2022. ISO 45001:2018 which was received on March 16, 2019 which is valid up to November 23, 2024.

15. M/s. Aqua-Air Environmental Engineers Pvt. Ltd. have received NABET/QCI Accreditation on December 08, 2020 covering 14 Sectors. Then after M/s. Aqua-Air Environmental Engineers Pvt. Ltd. applied for Supplementary Assessment - 1 for Additional Sectors and Functional Areas, for which Revised NABET/QCI Accreditation Certificate (Rev. 01) was issued on July 16, 2021 covering 23 Sectors. Then M/s. Aqua-Air Environmental Engineers Pvt. Ltd. again applied for Supplementary Assessment - 2 for Additional Sectors, for which Revised NABET/QCI Accreditation Certificate (Rev. 02) was issued on April 01, 2022 covering 25 Sectors. Then after again applied for Supplementary Assessment - 3 for Additional Sectors, for which Revised NABET/QCI Accreditation Certificate (Rev. 03) was issued on May 12, 2022 covering 28 Sectors. Certificate is valid up to Oct. 07, 2023

12.4 SERVICE PROVIDE

M/s. AQUA-AIR ENVIRONMENTAL ENGINEERS PVT. LTD. offers following specialized services in Environmental Engineering, Water Supply Engineering and Civil Engineering.

4.1 TURN KEY/BOOT/BOO PROJECTS

4.1.1 ENVIRONMENTAL ENGINEERING

- Detailed design
- Construction
- Fabrication
- Piping
- Water Treatment Plants (WTPs)
- Common Effluent Treatment Plants (CETPs)
- Recycling Plants (RPs)
- Zero Discharge Plants (ZDPs)

- Electrification
- Supply
- Erection
- Testing and Commissioning of Effluent Treatment Plants (ETPs)
- Sewage Treatment Plants (STPs)
- Incineration System Plants (ISPs)
- Hazardous waste Storage areas (HWSAs)
- Secured/ Sanitary Landfill Facilities
- Bio–Medical Waste (BMW) Treatment Facilities on a turnkey or BOOT/BOO basis.

4.1.2 CIVIL ENGINEERING

Construction of

- Water Treatment Plan
- Sewage Treatment plant
- Industrial Wastewater Treatment plant
- Elevated Service Reservoirs (ESRs)
- Underground Reservoirs (UGRs)
- Sewage Pumping Stations, etc.

4.2 CONSULTING

4.2.1 ENVIRONMENTAL ENGINEERING

1. Complete study of the Pollution Problem in industries from wastes generation to disposal and providing necessary technical knowledge like–

- Know how including design
- Basic engineering, detailed engineering
- Water Treatment Plants (WTPs)
- Tender preparation for Effluent Treatment Plants (ETPs) for industrial wastewater
- Sewage Treatment Plants (STPs) for residential wastewater
- Common Effluent Treatment Plants (CETPs)
- Zero Discharge Plants (ZDPs)
- Recycling plants (RPs) for reuse of water upto maximum extent
- Incineration System Plants (ISPs) for various non-biodegradable or toxic industrial wastes
- Design of Hazardous waste Storage area and Secured/ Sanitary Landfill Facilities
- Design and Consultancy Services for Bio – Medical Waste Treatment Facilities.

2. Water Supply Distribution System

- Analysis
- Design
- Tender preparation

3. Laboratory Analysis of

- Ambient Air/Stack/Vent
- Water
- Sewage
- Industrial Waste Water
- Soil
- Industrial Sludge

4. Process Study

- Reduce the pollution at source
- Reuse / Recycle effluent

5. Pollution Control Facility

- Performance study of existing
- Suggesting scheme for the optimization of the facility

6. Environment Management

- Environmental Clearance from
  - MoEFCC, New Delhi
  - SEAC & SEIAA, Gandhinagar
- Environmental Impact Assessment Studies (EIAs)
  - Short term (Rapid)
  - Long term (Comprehensive)
- Environmental statements
- Environmental Auditing

7. Statutory Requirements under Factory Act

- Safety Audit
- On-site / Off-site Emergency Plan
- HAZOP study

8. For Various Energy Conservation Schemes

- Energy Audit
- Design

9. Environmental Management System

- Preparing Adequacy Report
- Preparing Efficacy Report

10. Operation and Maintenance (O & M)

- Effluent Treatment Plants (ETPs)
- Sewage Treatment Plants (STPs)
- Water Treatment Plants (WTPs)
- Common Effluent Treatment Plants (CETPs)

11. Air Monitoring

- Ambient Air
- Vent
- Stack

12. Pollution Control

- Effluent Survey
- Environmental review of Pollution control equipment and systems
- Feasibility Studies
- Laboratory bench scale Treatability studies
- Pilot Plant studies, etc.

13. Consulting Service

• Consent to Establish (CTE)/NOC • CTE for revised product mix	• Consolidated Consents & Authorization (CCA) • Rule-9 Permission, etc.

14. As per requirements under Factory Act-1948 and Gujarat Factory Rules

• Monitoring • Monitoring &Analysis of Work Area Environment	• Filling up Form-37

15. Technical Consultation & assistance to ensure and assure compete Environ-Legal compliance

• Required permits from statutory bodies	• Clearance • Consents

LIST OF ANNEXURES

ANNEXURE - 1

NATIONAL AMBIENT AIR QUALITY STANDARDS (NAAQS) (2009)

Sr. No.	Pollutant	Time Weighted Average	Concentration in Ambient Air		
			Industrial Residential, Rural and Other Area	Ecologically Sensitive Area (notified by Central Government)	Methods of Measurement
(1)	(2)	(3)	(4)	(5)	(6)
1	Sulphur Dioxide (SO_2), µg/m^3	Annual* 24 Hours**	50 80	20 80	• Improved West and Geake • Ultraviolet fluorescence
2	Nitrogen Dioxide (NOx), µg/m^3	Annual* 24 Hours**	40 80	30 80	• Modified Jacob & Hochheiser (Na-Aresenite) • Chemiluminescence
3	Particular Matter (size less than 10 µm) or PM10 µg/m^3	Annual* 24 Hours**	60 100	60 100	• Gravimetric • TOEM • Beta attenuation
4	Particular Matter (size less than 2.5 µm) or PM2.5 µg/m^3	Annual* 24 Hours**	40 60	40 60	• Gravimetric • TOEM • Beta attenuation
5	Ozone (O_2) µg/m^3	8 Hours** 1 Hour**	100 180	100 180	• UV photometric • Chemiluminescence • Chemical Method
6	Lead (Pb) µg/m^3	Annual* 24 Hours**	0.50 1.0	0.50 1.0	• AAS/ICP method after sampling on EPM 2000 or equivalent filter paper • ED-XRF using Teflon filter
7	Carbon Monoxide (CO) mg/m^3	8 Hours** 1 Hour**	02 04	02 04	• Non Dispersive Infra Red (NDIR) Spectrology
8	Ammonia (NH_3) µg/m^3	Annual* 24 Hours**	100 400	100 400	• Chemiluminescence • Indophenol blue method
9	Benzene (C_6H_6) µg/m^3	Annual*	05	05	• Gas chromatography based continuous analyzer • Absorption and Desorption followed by GC analysis
10	Benzo (a) Pyrene (BaP) particulate phase only, g/m^3	Annual*	01	01	• Solvent extraction followed by HPCL/GC analysis
11	Arsenic (AS), ng/m^3	Annual*	06	06	• AAS/ICP method after sampling on EPM 2000 or equivalent filter paper
12	Nickel (Ni), ng/m^3	Annual*	20	20	• AAS/ICP method after sampling on EPM 2000 or equivalent filter paper

***** Annual arithmetic mean of minimum 104 measurements in a year at a particular site taken twice a week 24 hours at uniform intervals.

****** 24 hourly or 08 hourly or 01 hourly monitored values, as applicable, shall be complied with 98% of the time in a year. 2% of the time, they may exceed he limits but not on two consecutive days of monitoring.

Note: Whenever and wherever monitoring results on two consecutive days of monitoring exceed the limits specified above for the respective category, it shall be considered adequate reason to institute regular or continuous monitoring and further investigation.

ANNEXURE - 2

CPCB RECOMMENDATIONS FOR COMMUNITY NOISE EXPOSURE

CATEGORY OF AREA	Leq (dBA) (DAY TIME) (06:00 TO 21:00 HRS)	Leq (dBA) (NIGHT TIME) (21:00 TO 06:00 HRS)
Industrial Area	75	70
Commercial Area	65	55
Residential Area	55	45
Silence Zone	50	40

ANNEXURE - 3

CLASSIFICATION OF INLAND SURFACE WATER (CPCB STANDARDS)

SR. NO.	CHARACTERISTICS	A@	B@	C@	D@	E@
1	Dissolved Oxygen (mg/L), Min	6	5	4	4	-
2	Biochemical Oxygen Demand (mg/L), Min	2	3	3	-	-
3	Total Coliform Organisms, MPN/100 ml, Max.	50	500	5000	-	-
4	Total Dissolved Solids (mg/L), Max	500	-	1500	-	2100
5	Chlorides (as Cl^-), mg/L, Max.	250	-	600	-	600
6	Colour, Hazen units, Max	10	300	300	-	-
7	Sodium absorption ratio, Max	-	-	-	-	26
8	Boron (as B), mg/L, Max	-	-	-	-	2
9	Sulphates (as SO_4^{-2}), mg/L, Max.	400	-	400	-	1000
10	Nitrates (as NO_3^-), mg/L, Max	20	-	50	-	-
11	Free Ammonia (as N), mg/L, Max	-	-	-	1.2	-
12	Conductivity at 25°C, micromhos/cm, Max	-	-	-	1.0	2.25
13	pH value	6.5-8.5	6.5-8.5	6.5-8.5	6.5-8.5	6.0-8.0
14.	Arsenic (as As), mg/L, Max	0.05	0.2	0.2	-	-
15	Iron (as Fe), mg/L, Max	0.3	-	50	-	-
16	Fluorides (as F), mg/L, Max	1.5	1.5	1.5	-	-
17	Lead (as Pb), mg/L, Max	0.1	-	0.1	-	-
18	Copper (as Cu), mg/L, Max	1.5	-	1.5	-	-
19	Zinc (as Zn), mg/L, Max	15	-	15	-	-

*: If the Coliform count is found to be more than the prescribed tolerance limits, the criteria for coliforms shall be satisfied if not more than 20 percent of samples show more than the tolerance limits specified, and not more than 5 percent of samples show values more than 4 times the tolerance limit. Further, the feacal coliform should not be more than 20 percent of the coliform.

ANNEXURE - 4

INDIAN STANDARDS/SPECIFICATIONS FOR DRIINKING WATER IS: 10500-1991

SR. NO.	SUBSTANCES OR CHARCTERISTICS MAX	REQUIRE MENT (DESIRABLE LIMIT)	UNDESIRABLE EFFECTS OUT-SIDE THE DESIRABLE LIMIT	PERMISSIBLE LIMIT IN ABSENCE OF ALTERNATE SOURCE	METHOD OF TEST CI REF OF IS: 3025	REMARKS
ESSENTIAL CHARACTERISTICS						
1	Colour, Hazen unit	5	Above this, consumer acceptance decreases	25	4 of 3025, 1983	Extended upto 25 only if toxic substances are not suspected in absence of alternate Source.
2	Odour		Unobjectionable	-	5 of 3025,1983	a. Test cold and when heated b. Test at several dilutions
3	Taste		Agreeable	-	-	Test to be conducted only after safety has been established
4	Turbidity, NTU	5	Above this, consumer acceptance decreases	10	8	Test to be conducted only after safety has been established
5	pH Value	6.5-8.5	Beyond this range the water will affect the mucous membrane and/or water supply system	No relaxation	8	-
6	Total Hardness mg/L (as $CaCO_3$)	300	Encrustation on water supply structure and adverse effects on domestic use	600	-	-
7	Iron (as Fe), mg/L	0.3	Beyond this limit,, taste/appearance are affected has adverse effect on domestic uses and water supply structures & promotes iron bacteria	1.0	32 of 3025, 1964	-

8	Chlorides (as Cl^-) mg/L	250	Beyond this limit taste, corrosion and palatability are affected	1000	32 of 3025	-
9	Residual free chlorine, mg/L	0.2	-	-	26 of 3025, 1986	To be applicable only when water is chlorinated tested at consumer end, when protection against viral infection is required it should be min 0.5 mg/L
DESIRABLE CHARACTERISTICS						
10	Dissolved Solids, mg/L	500	Beyond this palatability decrease and may cause gastrointestinal irritation	2000	16 of 3025	
11	Calcium (as Ca) mg/L	75	-	200	40 of 3025, 1984	
12	Copper (as Cu), mg/L	0.05	Astringent,taste discoloration of pipes, fittings and utensils will be caused beyond this	1.5	36 of 3025, 1964	
13	Manganese (as Mn), mg/L	0.1	Astringent, taste discoloration of pipes, fittings and utensils will be caused beyond this	0.3	35 of 3025,1964	
14	Sulphate (as SO_4^{-2}), mg/L	200	Beyond this causes gastrointestinal irritation when magnesium or sodium are present	400	24 of 3025, 1986	May be extended upto 400 provided (as Mg) does not exceed 30 mg/l
15	Nitrate (as NO_3^-), mg/L	45	Beyond this methaemoglo- binemia	100	-	-
16	Fluoride (as F^-), mg/L	1.0	Fluoride may be kept as low as possible. High fluoride may cause fluorosis	1. 5	23 of 3025, 1964	-
17	Phenolic	0.001	Beyond this, it may	0.002	54 of	

	substances mg/L (as C_6H_5OH)		cause objectionable taste and odour		3025	
18	Mercury (as Hg), mg/L	0.01	Beyond this, the water becomes toxic	No relaxation	See note mercury ion analyzer	To be tested when pollution is suspected
19	Cadmium (as Cd), mg/L	0.01	Beyond this the water becomes toxic	No relaxation	See note mercury ion analyser	To be tested when pollution is suspected
20	Selenium (as Se) mg/L	0.01	Beyond this the water becomes toxic	No relaxation	28 of 3025, 1964	To be tested when pollution is suspected
21	Arsenic (As), mg/L	0.05	Beyond this the water becomes toxic	No relaxation	37 of 3025, 1988	To be tested when pollution is suspected
22	Cyanide (CN^-), mg/L	0.05	Beyond this the water becomes toxic	No relaxation	27 of 3025, 1986	To be tested when pollution is suspected
23	Lead (Pb), mg/L	0.05	Beyond this the water becomes toxic	No relaxation	See note 86	To be tested when pollution plumbosolvency is suspected
24	Zinc (as Zn), mg/L	5	Beyond this limit it can cause astringent taste and an opalescence in water	15	39 of 3025,1964	To be tested when pollution is suspected
25	Anionic detergents mg/L (as MBAS)	0.2	Beyond this limit undesirable taste and odour after Chlorination takes place	1.0	Methylene blue extraction method	To be tested when pollution is suspected
26	Chromium (as Cr^{+6}), mg/L	0.01	May be carcinogenic above this limit	0.05	28 0f 3025	To be tested when pollution is suspected
27	Polynuclear aromatic hydrocarbons, mg/L	-	May be carcinogenic	-	28 of 3025,1964	To be tested when pollution is suspected
28	Mineral Oil,	0.01	Beyond this limit	0.03	Gas	To be tested when

	mg/L		undesirable taste and odour after Chlorination takes place		chromato graphic method	pollution is suspected
29	Pesticides mg/L	Absent	Toxic	0.001	58 of 3025, 1964	-
30	Radioactive materials a. Alpha emitters Bq/L b. Beta emitters pci/L	- -	- -	0.1 1.0	- -	- -
31	Alkalinity (as $CaCO_3$), mg/L	200	Beyond this limit taste becomes unpleasant	600	13 of 3025,1964	-
32	Aluminum (as Al), mg/L	0.03	Cumulative effect is reported to cause dementia	0.2	31 0f 3025,1964	-
33	Boron (as B), mg/L	1	-	5	29 of 3025,1964	-

ANNEXURE - 5

INDIAN STANDARDS FOR INDUSTRIAL AND SEWAGE EFFLUENTS DISCHARGE IS: 2490-1982

SR. NO.	PARAMETERS	INDUSTRIAL EFFLUENT			
		INTO INLAND SURFACE WATER	ON LAND FOR IRRIGATION	INTO MARINE COASTAL AREA	INTO PUBLIC SEWERS
1	Colour / odour	-	-	-	-
2	Suspended Solids (mg/L)	100	200	100 (for Process Waste)	600
3	Particle Size Suspended Solids	Shall pass 850 micron IS sieve	-	Floatable Solids Max 3 mm Settable Solids Max 850 micron	-
4	Dissolved Solids (Inorganic), mg/L	2100	2100	-	2100
5	pH Value	5.5-9.0	5.5-9.0	5.5-9.0	5.5-9.0
6	Temperature °C	Shall not exceed 40 in any section of the stream within 15 mts. downstream from the effluent outlet	-	45 at the point of discharge	-
7	Oil & Grease, mg/L, Max.	10	10	20	20
8	Total Residual Chlorine, mg/L, Max	1	-	1	-
9	Ammonical Nitrogen (as N) mg/l max	50	-	50	50
10	Total Kjeldahl Nitrogen (as N), mg/L, Max	100	-	100	-
11	Free Ammonia (as NH_3) mg/L, Max.	5	-	5	-
12	Biochemical Oxygen Demand, 5 Days at 20 ° C	30	100	100	350
13	Chemical Oxygen Demand, mg/L, Max.	250	-	250	-
14	Arsenic (as As), mg/L,	0.2	0.2	0.2	0.2

	Max.				
15	Mercury (as Hg) mg/L	0.01	-	0.01	0.01
16	Lead (as Pb), mg/L, Max	0.1	-	1.0	1.0
17	Cadmium (as Cd), mg/L, Max	2	-	2	1
18	Hexavalent Chromium (As Cr^{+6}), mg/L, Max.	0.1	-	1	2
19	Total Chromium (as Cr) mg/L, Max	2	-	2	2
20	Copper (as Cu), mg/L, Max	3	-	3	3
21	Zinc (as Zn), mg/L, Max.	5	-	15	15
22	Selenium (as Se), mg/L, Max	0.05	-	0.05	0.05
23	Nickel (as Ni), mg/L, Max	3	-	5	3
24	Boron (as B), mg/L, Max	2	2	-	2
25	Percent Sodium, Max	-	60	60	-
26	Residual Sodium Carbonate, mg/L, Max	-	50	-	-
27	Cyanide (as CN^{-}), mg/L, Max	0.2	0.2	0.2	0.2
28	Chloride (as Cl^{-}), mg/L, Max	1000	600	-	1000
29	Fluoride (as F^{-}) mg/L, Max	2	-	15	15
30	Dissolved Phosphate (as P), mg/l, Max	5	-	-	-
31	Sulphate (as SO_4^{-2}) mg/L, Max	1000	1000	-	1000

ANNEXURE-8

LIFE STRUCTURE & SUSTAINABILITY FOR CARBON AND WATER FOOT PRINT.

A **carbon footprint** is the total greenhouse gas (GHG) emissions caused by an individual, event, organization, service, place or product, expressed as carbon dioxide equivalent (CO_2).

Carbon footprint from energy consumption can be reduced through the development of a zero carbon emissions energy source and alternative energy projects, such as solar and wind energy, which are renewable resources.

Life cycle assessment and carbon footprint analysis are two of the most common evaluations. Both can be helpful in assessing environmental impact and providing a business with information about how to create greener systems.

The Water Footprint concept is primarily rooted in the desire to illustrate the hidden links between human consumption and water use and between global trade and water resources management.

The carbon and water footprint concepts complement each other, addressing different environmental issues: climate change and freshwater scarcity.

	Carbon footprint (CF)	**Water footprint (WF)**
What is measured	The anthropogenic emission of greenhouse gases (GHG).	The human appropriation of freshwater resources in terms of volumes of water consumed and polluted.
Unit of measurement	Mass of carbon dioxide (CO2)-equivalents per unit of time or per unit of product.	Water volume per unit of time or per unit of product.
Footprint Components	CF per type of GHG: SO2, NO2, CO, CO2, CH4. Emissions per type of gas are weighted by their global warming potential before adding.	Blue, green and grey WF. If added, the three components are added without weighting.
Entities for which the footprint can be calculated	Processes, products, companies, industry sectors, individual consumers, groups of consumers, geographically delineated areas.	Processes, products, companies, industry sectors, individual consumers, groups of consumers, geographically delineated areas.

Scope	1. Direct emissions 2. Indirect emissions from electricity used 3. Other indirect emissions	Always includes direct and indirect WF.
Sustainability of the footprint	Additional information is required to assess the sustainability of the CF. For the planet as a whole, a maximum allowable GHG concentration needs to be estimated, which needs to be translated to a CF cap. For specific processes and products, CF benchmarks can be used.	Additional information is required to assess the sustainability of the WF. Per catchment area, freshwater availability and waste assimilation capacity need to be estimated, which form a WF cap for the catchment. For specific processes and products, WF benchmarks can be used.

ANNEXURE-9

EC FOR MODERNIZATION OF EXISTING UNIT WITH CHANGE IN PRODUCT MIX

Sub: **Modernization of existing unit with Change in products mix for M/s Sanmar Specialty Chemicals Limited at 44, Theertham Road, Suligunta village, Berigai, Hosur Taluka Krishangiri District Tamil Nadu by M/s Sanmar Specialty Chemicals Limited - Environmental Clearance reg.**

Sir,

This has reference your letter no. MV/mdk/MoEF/081205 dated January 28, 2009 along with Form-I and detailed feasibility report seeking environment clearance under EIA Notification 2006 for the above-mentioned project and subsequent communication vide letter no. MV/rt/MoEF/090113 dated 28th January 2009 and letter no. MV/MoEF/090306 dated 9th March 2009.

2.0 The Ministry of Environment and Forests has examined the proposal and noted that the proposal is for environment clearance for modernization of existing unit with Change in products mix for M/s Sanmar Specialty Chemicals Limited at 44, Theertham Road, Suligunta village, Berigai, Hosur Taluka Krishangiri District Tamil Nadu by M/s Sanmar Specialty Chemicals Limited. M/s Sanmar Specialty Chemicals Limited (SSCL) (erstwhile M/s Drachem Speciality Chemicals Ltd.) was established in 1991 to manufacture organic chemicals. In the year 1998, M/s Naturchem India Limited (NCIL), another company was merged with SSCL. M/s Naturchem India Limited (NCIL) was commissioned in the year of 1997, after obtaining environmental clearance from MoEF and the consent to operate from TNPCB to manufacture 1.4 MT of Phyto chemicals. In the year 2001-02 TNPCB granted consent orders under Water and Air Acts to manufacture 1084.6 MT/Annum of organic chemicals & 0.45 MT of Phyto chemicals and it is valid till date. Now the company has proposed to replace some of the existing products of speciality chemical. The total cost of the project will be Rs. 30 Crores. The total land required for the project will be 40 acres. No eco-sensitive areas are located within 15 km periphery of the plant. Details of the existing and proposed products are as given below:

	List of Existing Products			List of Proposed Products	
S.No	Product	Existing (MTPA)	S.No	Product	Proposed (MTPA)
				Synthetic Organic chemicals	
	PHYTO CHEMICALS			PHYTO CHEMICALS (BULK DRUGS)	
1	Colchicine	0.45	1	Colchicine	1.4

36	Forskolin		36	Phenoxyethylamine	
			37	Substituted benzophenone	
			38	2-S-Aminobutramide HCl	
	Total	**1084.6**		**Total**	**1080**
	Grand Total	1085.05		**Grand Total**	1081.4

3.0 All the process equipments will be connected to the scrubbers and equipment where solvents are distilled will be provided with condensers, vent condensers and after coolers and the receivers will be connected to the scrubber. The scrubbers will be circulated with appropriate scrubbing solution like caustic, hypochlorite, water etc. The pH indicator and pressure switches will be provided to ensure quality of scrubbing liquid for effective scrubbing. All the storage tanks of solvents will be provided vent condensers with chilled water/chilled brine circulation to prevent emission from storage tanks. The total water requirement of 207.5 KLD for the proposed plant will be sourced from existing bore wells. The waste water generated from the plant will be segregated into two streams (lean and concentrate effluent). The lean effluent is treated through the conventional wastewater treatment system and then passed through Reverse Osmosis (RO) system. The rejects from the RO system and the neutralized concentrate effluent bearing high TDS will be evaporated in the Multiple Effect Evaporator (MEE). The treated wastewater will be totally recycled and the solid waste generated is deodorized and disposed in the secured landfill constructed as per CPCB guidelines and approved by TNPCB located within the premises. The zero liquid discharge effluent treatment is fully operational. No additional water pollution is envisaged due to the proposed modernization project with change in the product mix.

4.0 The project activity is listed at S.N. 5(f) under Category 'A' hence the proposal was considered and appraised at central level in 92nd meeting of the Expert Appraisal Committee (Industry) held during 18th - 20th March, 2009. The Public hearing was exempted as per para 7(ii) of the EIA Notification, 2006.

5.0 Based on the information submitted by the Project Authorities, the Ministry of Environment and Forests hereby accords the environmental clearance to the above project under the provisions of EIA Notification dated 14th September, 2006 subject to compliance of the following specific and general conditions:

A. SPECIFIC CONDITIONS:

i) The project authorities shall install full-fledged own Effluent Treatment Plant (ETP) to treat the wastewater and ensure zero discharge from the plant through recycling/reuse of the treated wastewater or evaporation. The domestic wastewater shall be disposed of through the septic tanks and soak pits. The company shall segregate and treat the cyanide bearing effluent chemically to ensure that treated effluent conform to prescribed limits.

ii) The Company shall obtain permission for drawl of ground water from the Central Ground Water Authority or State ground Water Board and copy of the same shall be submitted to the Ministry's Regional Office at Bangalore.

iii) The Company shall install sufficient air pollution control arrangements to achieve the standards prescribed by the Tamil Nadu Pollution Control Board (TNPCB).

iv) Data on ambient air quality stack emission and fugitive emissions shall be uploaded on the company's website and also regularly submitted online to Ministry's Regional office at Bangalore, Tamil Nadu Pollution Control Board and Central Pollution Control Board as well as hard copy once in six months. Data on SPM, SO_2 and NOx shall also be displayed prominently outside the premises at the appropriate place for the general public.

v) The Company shall provide the monitoring arrangement with stacks/vents and regular monitoring shall be carried out and reports submitted to the TNPCB, CPCB and Ministry's Regional Office at Bangalore.

vi) Fugitive emissions in the work zone environment, product, raw materials storage area etc. shall be regularly monitored. The emissions shall conform to the limits imposed by TNPCB.

vii) For control of fugitive emission and VOCs following steps shall be followed :

A. Closed handling system shall be provided for solvents.
B. Reflux condenser shall be provided over reactors wherever volatile solvents are used.
C. Pumps shall be provided with mechanical seals to prevent leakages.
D. System of leak detection and repair of pump/pipeline based on preventive maintenance.
E. Solvents shall be taken from underground storage tanks to reactors through closed pipeline. Solvent Storage tanks in the tank farm shall be vented through condenser operated on chilled water.

viii) The process emissions and particulate matter from various units shall conform to the standards prescribed by the concerned authorities from time to time. At no time, the emission levels shall go beyond the stipulated standards. In the event of failure of

pollution control system(s) adopted by the unit, the unit shall be immediately put out of operation and shall not be restarted until the desired efficiency has been achieved.

ix) The project authorities shall sale spent oil shall be sold to approved recycler. The empty containers and bags shall be sold to TNPCB registered dealers.

x) During transfer of materials, spillages shall be avoided and garland drains be constructed to avoid mixing of accidental spillages with domestic waste and storm drains.

xi) The project authorities shall develop greenbelt in 33% of project area as per the guidelines of CPCB to mitigate the effect of fugitive emission.

xii) Adequate financial provision shall be made in the budget of the project for implementation of the above suggested environmental safeguards. Fund so earmarked shall not be diverted for any other purposes.

xiii) Occupational health surveillance of the workers shall be done on a regular basis and records maintained as per the Factories Act.

xiv) The company shall make the arrangement for protection of possible fire hazards during manufacturing process in material handling.

xv) Provision shall be made for the housing of construction labour within the site with all necessary infrastructure and facilities such as fuel for cooking, mobile toilets, mobile STP, Safe drinking water, medical health care, creche etc. The housing may be in the form of temporary structures to be removed after the completion of the project.

GENERAL CONDITIONS

i. The project authorities shall strictly adhere to the stipulations of the SPCB/state government or any statutory body.

ii. No further expansion or modifications in the plant shall be carried out without prior approval of the Ministry of Environment and Forests. In case of deviations or alterations in the project proposal from those submitted to this Ministry for clearance, a fresh reference shall be made to the Ministry to assess the adequacy of conditions imposed and to add additional environmental protection measures required, if any.

iii. The project authorities shall strictly comply with the rules and regulations under Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989 as amended. Authorization from the SPCB shall be obtained for collection, treatment, storage, and disposal of hazardous wastes.

iv. Ambient air quality monitoring stations shall be set up in the downwind direction as well as where maximum ground level concentration are anticipated in consultation with the State Pollution Control Board.

v. For control of process emissions, stacks of appropriate height as per the Central Pollution Control Board guidelines shall be provided. The scrubbed water shall be sent to ETP for further treatment.

vi. The company shall undertake following Waste Minimization measures :-

- Metering of quantities of active ingredients to minimize waste.
- Reuse of by-products from the process as raw materials or as raw material substitutes in other processes.
- Maximizing recoveries
- Use of automated material transfer system to minimize spillage.
- Use of "Closed Feed" system into batch reactors.

vii) The project authorities must strictly comply with the rules and regulations with regard to handling and disposal of hazardous wastes in accordance with the Hazardous Wastes (Management and Handling) Rules, 2003. Authorization from the SPCB shall be obtained for collections/treatment/ storage/disposal of hazardous wastes.

viii. The overall noise levels in and around the plant area shall be kept well within the standards (85 dBA) by providing noise control measures including acoustic hoods, silencers, enclosures etc. on all sources of noise generation. The ambient noise levels shall conform to the standards prescribed under Environment (Protection) Act, 1986 Rules, 1989 viz. 75 dBA (day time) and 70 dBA (night time).

ix. A separate Environmental Management Cell equipped with full fledged laboratory facilities shall be set up to carry out the environmental management and monitoring functions.

x. The project authorities shall provide rainwater harvesting system and ground water recharge.

xi. The implementation of the project vis-à-vis environmental action plans shall be monitored by Ministry's Regional Office /SPCB / CPCB. A six monthly compliance status report shall be submitted to monitoring agencies.

xii. The project proponent shall inform the public that the project has been accorded environmental clearance by the Ministry and copies of the clearance letter are available with the SPCB and may also be seen at Website of the Ministry at http://envfor.nic.in. This shall be advertised within seven days from the date of issue of the clearance letter, at least in two local newspapers that are widely circulated in the region of which one shall be in the vernacular language of the locality concerned and a copy of the same shall be forwarded to the Ministry's Regional Office.

xiii. The project authorities shall inform the Regional Office as well as the Ministry, the date of financial closure and final approval of the project by the concerned authorities and the date of start of the project.

6.0 The Ministry may revoke or suspend the clearance, if implementation of any of the above conditions is not satisfactory.

7.0 The Ministry reserves the right to stipulate additional conditions, if found necessary. The company in a time bound manner shall implement these conditions.

8.0 Any appeal against this environmental clearance shall lie with the National Environment Appellate Authority, if preferred within a period of 30 days as prescribed under Section 11 of the National Environment Appellate Authority Act, 1997.

9.0 The above conditions shall be enforced, inter-alia under the provisions of the Water (Prevention & Control of Pollution) Act, 1974, Air (Prevention & Control of Pollution) Act, 1981, the Environment (Protection) Act, 1986, Hazardous Wastes (Management and Handling) Rules, 2003 and the Public Liability Insurance Act, 1991 alongwith their amendments and rules.

CERTIFIED COPY OF THE COMPLIANCE REPORT

Subject: **Modernization of existing unit with change in products mix for M/s Sanmar Speciality Chemicals Limited at 44, Theertham Road, Suligunta village, Berigai, HosurTaluka, Krishnagiri District, Tamil Nadu by M/s Sanmar Speciality Chemicals Limited-Environmental Clearance reg.**

Reference No: J-11011/104/2009-IA-II (I) dated 29th April 2009

Present status of the project:

The Ministry of Environment, Forest and Climate Change, New Delhi was accorded Environmental Clearance to the above said project for manufacturing Phytochemicals (Extracted from the seeds of *GloriosaSuperba*, the alkaloids, Thiocolchiocoside and Colchicine are sold globally to pharmaceutical industries) and Organic Chemicals (Various organic chemicals used in agrochemicals, pharmaceuticals, fine chemicals are being manufactured to the requirements of customers). Briefly, ChemplastSanmar Limited- Sanmar Speciality Chemicals Division, Berigai started in 1991, is a leading supplier of intermediates for global Agrochemical, Pharmaceutical and Fine Chemical innovators.These intermediates involve complex multi-step synthesis using unique chemistries. The manufacturing facility is located at Berigai.

The detailed productsprofiles are given by the Project Authority (PA)are as follows:

Current number of Products manufactured: 40
Number of products to be dropped: 31
Number of products to be added: 21
Hence Number of products post approval: 30

Now, the PA is proposed to change the product mix with 50 percent increase in production capacity from 1081.4 MTPA to 1601.4 MTPA with no increase in pollution load as they have proposed to drop 31 No's of existing products and introduce 21 new products.

The PA has obtained CFO renewal from SPCB vide proceedings No. T5/TNPCB/F.0027HSR/RL/HSR/RL/HSR/A/2020 dated 19.08.2020 which is valid up to 31.03.2022. At present, the industry is running well and production is going on.

In view of the above, the PA has requested the Integrated Regional Office of MoEF&CC, Chennai vide letter dated 30.10.2021 to provide the Certified Compliance Report to the said project.

Accordingly, the above project was monitored on 24.11.2021 along with the representative of the Project Authorities. The status of compliance on the stipulated conditions contained in the EC cited above is given below in Part III.

Date of site visit: 24.11.2021

Name of the officer: Dr. C. Palpandi, Scientist 'D'

PART-III

A. SPECIFIC CONDITIONS		
S. No.	**Conditions**	**Compliance status**
1.	The project authorities shall install full-fledged own Effluent Treatment Plant (ETP) to treat the wastewater and ensure zero discharge from the plant through wastewater or evaporation. The domestic wastewater shall be disposed recycling/reuse of the treated of through the septic tanks and soak pits. The company shall segregate and treat the cyanide bearing effluent chemically to ensure that treated effluent conform to prescribed limits.	**Complied.** The Project Authority (PA) has installed Effluent Treatment Plant (ETP) with the capacity of 100 KLD. All effluents are being segregated into High Total Dissolved Solids (HTDS) and Low Total Dissolved Solids (LTDS). All HTDS effluents are treated through stripper followed by Multi Effect Evaporator (MEE) and Agitated thin film dryer (ATFD). The condensates generated from MEE and ATFD are mixed with LTDS effluent and further treated in biological ETP and RO Plant. The salts generated from ATFD are being disposed to TSDF for secured landfill. The LTDS effluents are being treated in Biological ETP and outlet of Biological ETP final is sent to RO plant for

C. Palpandi

		recycle. The treated waste water is being utilized for utilities. The ETP sludge generated from ETP operations are being sent to TSDF for secure landfill. They have established Sewage Treatment Plant with the capacity of 25 KLD for treatment of domestic effluents. The treated water is being used for the plantation purpose. The cyanide bearing wastewater is chemically treated with Sodium hypochlorite solution and taken for evaporation in the MEE. Monitoring of ETP and STP inlet and outlet water is being carried out on monthly basis through MoEF&CC recognized third party laboratory. The monitored data shows that the values are within the limits. ETP and STP photos are at **Annexure-I & Annexure-II.**
2.	The Company shall obtain permission for drawl of ground water from the Central Ground Water Authority or State ground Water Board and copy of the same shall be submitted to the Ministry's Regional Office at Chennai.	**Complied.** As informed by the PA that the source of water is from bore well (6 Nos.). However, the PA informed that water is drawl only from three Bore wells. At present, the water requirement is 207.5 KLD as informed. The PA has obtained permission for drawl of ground water from Central Ground Water Authority vide letter No. No.21-4(134)/SECR/CGWA/09-3708 dated 01.06.2012.
3.	The Company shall install sufficient air pollution control arrangements to achieve the standards prescribed by the Tamil Nadu	**Refer below.** All the process equipments are

C-Formerly

	Pollution Control Board (TNPCB).	connected to the scrubbers and equipment where solvents distilled are provided with condensers and after coolers and the receivers are connected to the scrubber. The scrubbers are circulated with appropriate scrubbing solution like caustic, hypochlorite, water etc. Scrubbers are monitored and maintained to ensure quality of scrubbing liquid for effective scrubbing. Monitoring of stack emission is being carried out on monthly basis by MoEF&CC authorized third party laboratory and monitoring is also being carried out twice in a year by the District Environment Laboratory, TNPCB, Hosur. The monitored data shows that the values are within the limits.
4.	Data on ambient air quality stack emission and fugitive emissions shall be uploaded on the company's website and also regularly submitted online to Ministry's Regional office at Bangalore, Tamil Nadu Pollution Control Board and Central Pollution Control Board as well as hard copy once in six months. Data on SPM, SO2 and NOx shall also be displayed prominently outside the premises at the appropriate place for the general public.	**Refer below.** The PA has not uploaded the data on ambient air quality stack emission and fugitive emissions on the company's website. However, the PA has agreed to upload the data in future. Ambient air quality and stack monitoring reports are being regularly submitted along with six monthly compliance reports to the Integrated Regional Office, MoEF&CC, Chennai. During the visit, it was observed that Data of SPM, SO_2 and Nox were displayed outside the factory premises by the Project Authority.
5.	The Company shall provide the monitoring arrangement with stacks/vents and regular monitoring shall be carried out and reports submitted to the TNPCB, CPCB and Ministry's Regional Office at Chennai.	**Refer below.** They have engaged a third party environment-monitoring agency to monitor process stack emissions on monthly basis and they are sending the

C. Rajamurthy

		report to TNPCB, Chennai every month and to the Integrated Regional Office, MoEF&CC, Chennai once in six months.
6.	Fugitive emissions in the work zone environment, product, raw materials storage area etc. shall be regularly monitored. The emissions shall conform to the limits imposed by TNPCB.	**Complied.** Fugitive emissions in the work zone environment, product and raw material storage areas are being monitored regularly through MoEF&CC recognized third party laboratory. Monitoring report shows that emissions are within the limit. They are cleaning the work area including the flooring every shift regularly by a dedicated team of people. They have stored raw materials in a separate warehouse. The raw material storage area is kept neat and clean. In view of this, there are no much fugitive emissions in the work zone environment.
7.	For control of fugitive emission and VOCs following steps shall be followed: A. Closed handling system shall be provided for solvents B. Reflux condenser shall be provided over reactors wherever volatile solvents are used. C. Pumps shall be provided with mechanical seals to prevent leakages. D. System of leak detection and repair of pump/pipeline based on preventive maintenance. E. Solvents shall be taken from underground storage tanks to	 A. Closed handling system is provided for chemicals. B. Closed handling system is provided for chemicals. C. Closed handling system is provided for chemicals. D. System of leak detection and repair of pump/pipeline based on preventive maintenance. E. Tanks used for the bulk Storage of solvents is provided with

	reactors through closed pipeline. Solvent Storage tanks in the tank farm shall be vented through condenser operated on chilled water.	condensers circulated with chilled water and are also provided with flash back flame arrestors. Solvents are handled through closed pipelines.
8.	The process emissions and particulate matter from various units shall conform to the standards prescribed by the concerned authorities from time to time. At no time, the emission levels shall go beyond the stipulated standards. In the event of failure of pollution control system(s) adopted by the unit, the unit shall be immediately put out of operation and shall not be restarted until the desired efficiency has been achieved.	**Complied.** The source of gaseous emissions are from Boiler (1 No.- 6 TPH), four DG sets (4x600 KVA), one Thermic Fluid Heater and reactors (51 Nos.). Furnace oil is used as the fuel for Boiler. Two stage wet scrubbers are provided for process vents. The various process gas emissions containing SPM, SO_2, HCl and NOx are controlled by passing through scrubbers containing media solutions like lye, bicarbonate etc. depending on the type of gas and effluent generated in the respective operations are being sent to ETP for treatment and disposal. Monitoring of gaseous emissions and particulate matter from various process units was carried out on monthly basis through MoEF&CC recognized third party laboratory. The monitored data shows that the values are within the limits. The PA informed that at no time, the emissions levels has exceeded the prescribed limits and assured that in the event of failure of any pollution control system adopted by the unit, the unit will be put out of operation immediately and will not be restarted until the desired efficiency has been achieved. Boiler photo is at **Annexure-III.**

9.	The project authorities shall sale spent oil shall be sold to approved recycler. The empty containers and bags shall be sold to TNPCB registered dealers.	**Complied.** As informed by PA that the used oil/waste lubricant oil/Grease is being disposed to TNPCB authorized recyclers. The HDPE drums, containers, plastic bags and wastes are being sent to TNPCB authorized recyclers. Inorganic & evaporation salts and ETP sludge is being disposed to TSDF for secured land fill.
10.	During transfer of materials, spillages shall be avoided and garland drains be constructed to avoid mixing of accidental spillages with domestic waste and storm drains.	**Complied.** They have provided pipelines for transferring the chemicals/materials to prevent the spillages. They have constructed garland drains to avoid accidental spillages with domestic waste and storm drains. Dyke wall is provided for material storage tanks.
H.	The project authorities shall develop greenbelt in 33% of project area as per the guidelines of CPCB to mitigate the effect of fugitive emission.	**Complied.** Green belt has been developed in an area of 16.1 acres of the total project area of 43.00 acres by planting Eucalyptus, Teak wood, Mango, Pongamia, neem, etc. in consultation with the local DFO and survival of the Green belt is good. Green belt development photographs enclosed as **Annexure-IV.**
12.	Adequate financial provision shall be made in the budget of the project for implementation of the above-suggested environmental safeguards. Fund so earmarked shall not be diverted for any other purposes.	**Refer below.** The fund provided / allocated was not diverted for any other purpose as informed. The PA informed that an amount of Rs. 100 Lakhs has been

		earmarked for environmental protection measures for the year 2021-22 and operation cost for sustaining Zero liquid discharge (ZLD) is around Rs. 900 Lakhs per annum.
13.	Occupational health surveillance of the workers shall be done on a regular basis and records maintained as per the Factories Act.	**Complied.** Occupational health centre has been set up in the premises of the Industry. They have engaged full time Doctor and three male nurses. One ambulance is provided especially to the workers. The occupational health surveillance of the workers is being carried out regularly and the records are being maintained as per Factories Act. OHC Centre photo is at **Annexure-V.**
14.	The company shall make the arrangement for protection of possible fire hazards during manufacturing process in material handling.	**Complied.** A full-fledged fire hydrant system with ring main is provided and designed as per TAC (Tariff Advisory committee) regulations. The system is automatic and pressurized system. It is kept automatically under pressure with the help of a jockey pump. One electrical driven pump works as the main pump with a diesel driven pump as standby. A dedicated water reservoir for fire protection is provided with two-fire water storage of total capacity 1200 KL. 21 no. of emergency 'manual call point' and 43 no. of smoke detectors were installed around the factory. Sprinkler system provided for

		Flammable bulk storage and unloading areas. Apart from fixed firefighting system, portable fire extinguishers are provided at various locations of the plant so that in the incipient stage itself fires can be handled and extinguished. Firefighting system photo is at **Annexure-VI.**
15.	Provision shall be made for the housing of construction labour within the site with all necessary infrastructure and facilities such as fuel for cooking, mobile toilets, mobile STP, Safe drinking water, medical health care, crèche etc. The housing may be in the form of temporary structures to be removed after the completion of the project.	**Refer below.** The necessary infrastructure and facilities such as fuel for cooking, toilets, STP, drinking water, medical health care etc. were provided during the construction time. The housing was in the form of temporary structures and was removed after the completion of the project construction works.
	B. GENERAL CONDITIONS	
1.	The project authorities shall strictly adhere to the stipulations of the SPCB/state government or any statutory body.	**Refer below.** The PA informed that all the stipulations made by the State Pollution Control Board are being adhered.
2.	No further expansion or modifications in the plant shall be carried out without prior approval of the Ministry of Environment and Forests. In case of deviations or alterations in the project proposal from those submitted to this Ministry for clearance, a fresh reference shall be made to the Ministry to assess the adequacy of conditions imposed and to add additional environmental protection measures required, if any.	**Complied.** No further expansion or modifications in the plant were carried out without prior approval of the Ministry of Environment, Forest and Climate Change. Now, the PA is proposed to change the product mix with 50 percent increase in production capacity from 1081.4 MTPA to 1601.4 MTPA with no increase in pollution load as they have proposed to drop 31 No's of existing products and introduce 21 new products.

3.	The project authorities shall strictly comply with the rules and regulations under Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989 as amended. Authorization from the SPCB shall be obtained for collection, treatment, storage, and disposal of hazardous wastes	**Refer below.** The project authorities informed that they are strictly complying with the rules and regulations under manufacture, Storage and Import of Hazardous Chemical Rules, 1989 as amended in October 1994 and January 2000. Authorization from the TNPCB has been obtained for collection, treatment, storage, and disposal of hazardous wastes and it is valid up to 31.03.2026.
4.	Ambient air quality monitoring stations shall be set up in the downwind direction as well as where maximum ground level concentration are anticipated in consultation with the State Pollution Control Board.	**Complied.** Ambient air quality monitoring stations have been set up in the downwind direction as well as where maximum ground level concentrations are anticipated in consultation with the SPCB as informed. Monitoring of ambient air quality was carried out at Four locations (Near Tank Form area, near phyto gate area, near ETP plant area & near canteen) on monthly basis through MoEF&CC recognized third party laboratory. In addition to the above, ambient air quality monitoring is also carried out twice in a year by the TNPCB, Hosur. The monitored data shows that the values are within the limits.
5.	For control of process emissions, stacks of appropriate height as per the Central Pollution Control Board guidelines shall be provided. The scrubbed water shall be sent to ETP for further treatment.	**Complied.** Stacks of appropriate height are provided as per the CPCB guidelines. The scrubbed water is being sent to ETP for further treatment. Stack Photo is at **Annexure-VII.**
6.	The company shall undertake following Waste Minimization measures: -	**Complied.** The Industry has adopted following waste minimization measures:

	a) Metering of quantities of active ingredients to minimize waste. b) b) Reuse of by-products from the process as raw materials or as raw material substitutes in other processes c) Maximizing recoveries. d) Use of automated material transfer system to minimize spillage. e) Use of "Closed Feed" system into batch Reactors.	a) All raw materials taken by Metering and Weighing. b) At present no by-products have been produced. c) Solvent recovery is about 81%. d) Use of automated filling to minimize spillage. e) Closed feed system for charging of raw materials into reactors
7.	The project authorities must strictly comply with the rules and regulations with regard to handling and disposal of hazardous wastes in accordance with the Hazardous Wastes (Management and Handling) Rules, 2003. Authorization from the SPCB shall be obtained for collections/treatment/ storage/disposal of hazardous wastes.	**Refer below.** The PA has obtained Authorisation from TNPCB to handle Hazardous waste as per notification and they are implementing the stipulations. During the visit they informed that MEE salts is collected, stored and being disposed to Authorised recyclers. Process organic residue and spent carbon is being sent to Authorised recyclers. The Hazardous Waste Authorization is valid'ty up to 31.03.2026.
8.	The overall noise levels in and around the plant area shall be kept well within the standards (85 dBA) by providing noise control measures including acoustic hoods, silencers, enclosures etc. on all sources of noise generation. The ambient noise levels shall conform to the standards prescribed under Environment (Protection) Act, 1986 Rules, 1989 viz. 75 dBA (day time) and 70 dBA (night time).	**Complied.** The ambient noise levels in and around the plant area are being monitored on monthly basis at 20 locations both day and night through authorised third party and the values are within the limit. Noise control equipments such as acoustic hoods, enclosures, silencers etc. are provided.
9.	A separate Environmental Management Cell (EMC) equipped with full-fledged laboratory facilities shall be set up to carry out the environmental management and	**Complied.** A dedicated EMC is established, which is headed by Senior Vice President

	monitoring functions.	(operations) contained team of 16 members. Full-fledged laboratory facility established with all necessary equipment for waste water analysis. The Environmental parameters are monitored through external agencies.
10.	The project authorities shall provide rainwater harvesting system and ground water recharge.	**Complied.** Rainwater harvesting system is implemented for ground water recharge in the plant. Photo is at **Annexure-VIII.**
11.	The implementation of the project vis-à-vis environmental action plans shall be monitored by Ministry's Regional Office /SPCB / CPCB. A six monthly compliance status report shall be submitted to monitoring agencies.	**Complied.** They are submitting six monthly compliance reports along with the monitored data regularly to the Integrated Regional Office of MoEF&CC, Chennai.
12.	The project proponent shall inform the public that the project has been accorded environmental clearance by the Ministry and copies of the clearance letter are available with the SPCB and may also be seen at Website of the Ministry at http://envfor.nic.in. This shall be advertised within seven days from the date of issue of the clearance letter, at least in two local newspapers that are widely circulated in the region of which one shall be in the vernacular language of the locality concerned and a copy of the same shall be forwarded to the Ministry's Regional Office	**Complied.** Paper advertisement had been given in The Hindu (English) and The Daily Thanthi (Tamil) on 19.5.2009. Copies of advertisements were submitted to the Integrated Regional Office of the MoEF&CC.
13.	The project authorities shall inform the Regional Office as well as the Ministry, the date of financial closure and final approval of the project by the concerned authorities and the date of start of the project.	**Refer below.** There is no project activity at present. However while starting new project, they will inform the Integrated

		Regional Office as well as the Ministry about the financial closure and final approval of the project. Start of the project was: 2009 (May); Financial closure of the project: 2011 (August), as informed.
6.0	The Ministry may revoke or suspend the clearance, if implementation of any of the above conditions is not satisfactory.	**Agreed to comply.**
7.0	The Ministry reserves the right to stipulate additional conditions if found necessary. The company in a time bound manner will implement these conditions.	**Agreed to comply.** No additional conditions were stipulated. The PA has agreed to comply with as and when the additional conditions stipulated.
8.0	Any appeal against this environmental clearance shall lie with the National Environmental Appellate Authority, if preferred within a period of 30 days as prescribed under Section 11 of the National Environment Appellate Authority Act, 1997.	**Complied** The PA informed that no such appeals are made against this Environmental Clearance.
9.0	The above conditions will be enforced, inter-alia under the provisions of the Water (Prevention & Control of Pollution) Act, 197 4, Air (Prevention &. Control of Water Pollution) Act, 1981, the Environment (Protection) Act, 1986 Hazardous Wastes (Management and Handling) Rules, 2003/ 2008 and the Public Liability Insurance Act, 1991 along with their amendments and rules.	**Complied.** (i) They have obtained CFO and is valid up to 31.03.2022. (ii) Copy of the Public Liability Insurance was provided and valid up to 31.03.2022.

This has the approval of the competent authority vide diary No. 632 dated 06.12.2021.

ANNEXURE-11

NO INCREASE IN POLLUTION LOAD CERTIFICATE (FROM TNPCB)

By SPEED POST

TAMIL NADU POLLUTION CONTROL BOARD

From
Thiru R.Kannan, M.Tech.,
Member Secretary (i/c).
Tamil Nadu Pollution Control Board
76, Mount Salai, Guindy
Chennai – 600 032.

To
The Director
M/S. Chemplast Sanmar Lismited- Sanmar Speciality chemicals division S.F.No.5, 7/1, 2, etc., Suligunta Village, Berigai, Shulagiri Taluk, Hosur, Krishnagiri District

Lr No. TNPCB/T6/F.13598HSR/2021 Dated : 17.03.2022

Sir,

Sub: TNPCB- Industries – M/S. Chemplast Sanmar Lismited- Sanmar Speciality chemicals division S.F.No.5, 7/1, 2, 3A, 3B, 8/1, 2A, 2B, 9/1, 2, 3, 10/1,2, 3A, 3B, 4, 12/1A,1B, 13/1, 14/1A, 2A, Suligunta Village, Berigai, Shulagiri Taluk, Hosur, Krishnagiri District – application for " No Increase in Pollution Load Certificate - decision of Pollution Load Assessment Committee meeting held on 27.01.2022 - communicated - Reg

Ref:
1. Environmental Clearance issued by MoEF F.No.J-11011/104/2009-IA-II(I) dated: 29.04.2009
2. Your application submitted for requesting " No increase in Pollution Load Certificate Dt. 5.11.2021
3. Minutes of PLAC meeting held on 27.01.2022

******

Your kind attention is invited to the reference 1st cited, wherein you have applied for "No Increase in Pollution Load Certificate" for the following modification/increase in production in the existing unit of M/s. Chemplast Sanmar Lismited- Sanmar Speciality chemicals division S.F.No.5, 7/1, 2, 3A, 3B, 8/1, 2A, 2B, 9/1, 2, 3, 10/1,2, 3A, 3B, 4, 12/1A,1B, 13/1, 14/1A, 2A, Suligunta Village, Berigai, Shulagiri Taluk, Hosur, Krishnagiri District

The difference between existing and proposed pollution load of the water air and solid waste parameters:

Maximum pollution load derived for each environmental parameters like COD, BOD, TDS, TSS, Air emission load is given in below table:

Sr. No	Parameters	Existing		Proposed Value in Kg/day		Remark	
		Value in Kg/day	Value in Kg/MT	Value in Kg/day	Value in Kg/MT		
A	**Water pollution**						
1.	COD	1814.94	613.15	1804.81	412.05	Reduced by 10.13 Kg/day	Reduced by 201.1 Kg/MT
2.	BOD	604.34	204.16	599.44	136.85	Reduced by 4.90 Kg/day	Reduced by 67.31 Kg/MT
3.	TDS	6802.07	2298.0	6798.43	1552.15	Reduced by 3.64 Kg/Day	Reduced by 745. 85 Kg/MT
4.	TSS	47.91	16.19	47.65	10.85	Reduced by 0.26 Kg/day	Reduced by 5.33 Kg/MT

Sr. No	Parameters	Existing		Proposed		Remark
		Value in Kg/day	Value in Kg/MT	Value in Kg/day	Value in Kg/MT	
B	**Air pollution**					
1.	Air emission Load	239.30	80.84	237.12	54.13	Reduced by 2.18 Kg/Day Reduced by 26.71 Kg/MT

TAMIL NADU POLLUTION CONTROL BOARD

This subject was discussed in detail in the PLAC meeting held on 27.01.2022 and the committee decided to certify that there is no increase in pollution load due to the above said modification/increased in production by the unit. Hence the committee has recommended that request of the unit to grant Consent without Environmental Clearance can be considered by TNPCB subject to the following conditions:

1. The unit shall comply with all the conditions imposed in the Environmental Clearance issued by MOEF vide F.No.J-11011/104/2009-IA-II(I) dated: 29.04.2009 and EC amendment from SEIAA videLr No. SEIAA/TN/EC/IND2/C.No.14969/Amendment /2020 dated: 06.08.2020.
2. The unit shall comply with all existing norms of discharge and emission as well as changes if any made by Authorities like MoEF& CC, CPCB and TNPCB from time to time.
3. The unit shall comply with all the conditions imposed by the TNPCB in the consent order when granted.
4. The TNPCB shall monitor the unit periodically to confirm the real time pollution load after operation.
5. The unit shall not go for any expansion or installation of new machineries without prior consent of the Board.
6. The unit shall under take to work out the pollution loads after commencing the operation of product mix change and submit report to TNPCB.
7. Sewage to be monitored for quantity and quality on monthly basis and the reports to be submitted to TNPCB.
8. Ambient Air Quality and stack emission to be monitored by external agency once in a month and the reports to be submitted to TNPCB on regular basis.
9. Hazardous wastes to be segregated and stored in designated areas and properly disposed for recycling/TNWML for disposal.
10. The unit shall furnish Environmental Management Plan and 3rd party Audit.
11. The unit shall install the approved retrofit emission control device in the DG sets for reduction of emission of Particulate matter before 31.03.2022.

76, MOUNT SALAI, GUINDY, CHENNAI - 600 032.
Tel :22353134, 22353135, 22353136, 22353137, 22353138, 22353139, 22353140, 22353141
Fax : 044-22353068
Email : tnpcb@md3.vsnl.net.in www.tnpcb.gov.in

12. The unit shall provide online monitors for effluent, ambient and emission parameters and shall make proper connectivity with WQW and CAC of TNPCB for continuous monitoring of water and Air Quality.
13. The unit shall comply with the consent order conditions, various directions issued by TNPCB/CPCB/NGT etc., from time to time.
14. The unit shall obtain NOC from the Tamil Nadu bio Diversity Board-National Bio diversity Authority if the unit is using any Biological resources or knowledge associated thereto as per the provisions of Biological Diversity Act 2002.
15. As per EIA notification, if on verification the TNPCB holds that the change or expansion or modernization will result or has resulted in increase in pollution load, the exemption claimed under this clause shall not be valid and it shall be deemed that the project proponent was liable to obtain prior Environmental clearance before undertaking such changes or increase , as per the clause (a) of sub para (ii) of para 7 of EIA notification and the provisions of Environment (Protection) Act, 1986 shall apply accordingly.
16. It shall be the responsibility of the project proponent to satisfy itself about "no increase in pollution load" as a result of changes, expansion or modernization, as the case may be, before under taking such changes or increase, and the project proponent shall be liable for action under the provisions of the Environment (Protection) Act, 1986 if on verification of facts or claim it is found that such change or expansion or modernization involves increase in pollution load.

Receipt of this letter shall be acknowledged

ENVIRONMENTAL CLEARANCE (EC) AMENDMENT

Lr No. SEIAA/TN/ EC/IND2/C.No.14969/Amendment/2020 Dated: 06.08.2020.

To,

M/s. Chemplast Sanmar Limited
No.9, Cathedral Road,
Chennai -600 086.

Sir,

Sub: SEIAA, TN - Name change Amendment in the Environmental Clearance from M/s. Sanmar Specialty Chemicals Limited to M/s. Chemplast Sanmar Limited - Manufacturing of the Phyto Chemicals (Bulk drugs) at 44, Theertham Road, Suligunta Village, Berigai, Hosur Taluk, Krishangiri District, Tamil Nadu - Reg.

Ref: 1. F.No.J-11011/104/2009-IA-II(I) dated 29.04.2009.
2. MoEF&CC Notification No.S.O.1223 (E) dated 27.03.2020.
3. Online Proposal No. SIA/TN/IND2/162859/2020 dated 22.07.2020.
4. The Hon'ble National Company Law Tribunal, Single Bench, Chennai dated 26.04.2019.
5. Minutes of 387th SEIAA meeting held on 06.08.2020.

****

This has reference to your online application dated 22.07.2020, for change of name from Sanmar Specialty Chemicals Limited, Suligunta Village, Berigai, Hosur Taluk, Krishnagiri

MEMBER SECRETARY
SEIAA-TN

District to M/s. Chemplast Sanmar Limited as per the Hon'ble National Company Law Tribunal, Single Bench, Chennai.

1. The MoEF&CC has earlier accorded Environment Clearance vide F.No.J-11011/104/2009-IA-II(I) dated 29.04.2009 in the name of M/s. Sanmar Specialty Chemicals Limited, for the modernization of existing unit with change in products mix.

2. The unit M/s. Sanmar Speciality Chemicals Limited (SSCL), has been amalgamated with its subsidiary company Chemplast Sanmar Limited (hereinafter referred to as "CSL"), having registered office at 9, Cathedral Road, Chennai 600 086, under a Scheme of Amalgamation/Arrangement approved by the Hon'ble National Company Law Tribunal, Chennai Bench ("NCLT"), vide its order dated 26th April 2019 under the provisions of Companies Act, 2013 read with rules there under. Under the said Scheme as approved by NCLT, the Company has been amalgamated with CSL as a going concern and all assets, liabilities, contracts, arrangements, Permits, Licenses, approvals , employees etc. of their Company have been transferred to and vested in CSL.

3. The unit has submitted the Memorandum of Association in the companies Act, 1956 company limited by shares in the name of M/s. Chemplast Sanmar Limited.

4. The MoEF&CC has issued the amendment Notification dated 27.03.2020 in this notification , it is stated that " All the proposals for projects or activities in respect of Active Pharmaceutical Ingredients(API) received up to 30th September 2020 shall be apprised as category B2 projects ".

5. The proposal was placed in the 387th SEIAA meeting held on 06.08.2020. The Authority decided to issue the name change amendment as per the request of the proponent. The name of the said company shall be read hereafter as "M/s. Chemplast Sanmar Limited- M/s. Sanmar Speciality chemicals Limited" instead of Sanmar Speciality Chemicals in the Environment Clearance and all other conditions stipulated in the Environment Clearance accorded vide reference 1st cited is remains unaltered.

3.	MEE	Noise	PPE	
4.	DG Set(4Nos)	Noise	Acoustic enclosures with stack	
5.	ETP Blower	Noise	Silencers and Bellow with Acoustic Enclosures	

3 **Special Additional Conditions:**

i. The unit shall install the approved retrofit emission control device/equipment with at least 70% Particulate matter reduction efficiency on all DG sets with capacity of 125 KVA and above or otherwise the unit shall be shift to gas based generators within the time frame prescribed in the notification No. TNPCB/Labs/DD(L)02151/2019 dated 10.06.2020 issued by TNPCB.

ii. The unit shall obtain No Objection Certificate (NOC) from the Tamil Nadu Bio Diversity Board /National Bio Diversity Authority if the unit is using any Biological resources or knowledge associated thereto as per the provisions of Biological Diversity Act 2002.

4 **Additional Conditions:**

1. The unit shall operate and manufacture the products as per the existing consented quantity (Annual production should be within the consented capacity) till getting CTO Expansion from the Board and also the unit shall start their construction and other establishing activities towards expansion only after getting CTE Expansion from the Board.
2. The unit shall operate and maintain the existing APC measures efficiently and continuously so as to bring the quality of emission to satisfy the NAAQ/SM /ANL standards as prescribed by the Board and also unit establish the proposed emission sources as mentioned in the application with APC measures only after getting CTE Expansion from the Board .
3. The unit shall ensure the online connectivity with Care Air Centre of TNPCB, Chennai/CPCB to provide proper quality data at all times for the existing.
4. The unit shall comply with emission standards as prescribed in MOEF &CC notification dated 25.08.2014 and 09.05.2016.
5. The unit shall continue to develop green belt within the premises.
6. The unit shall comply with the provisions contained in this Ministry's OM vide F.No. 22-65/2017-IA.II dated 1st May 2018, as applicable, regarding Corporate Environment Responsibility.
7. The unit shall comply all the conditions as mentioned in the 'No increase in Pollution load' certificate issued to the unit by PLAC vide Board's Lr. No. TNPCB/T6/F.13598 HSR/2021/dated: 17.03.2022 strictly without any lapse.
8. The unit shall ensure and comply with CPCB directions dated 05/02/2014 and 27/07/2015.
9. The unit shall continue to develop adequate green belt with thick canopy within the premises, so as to attenuate air and noise pollution furnish the exact green belt area ear marked/developed as per norms in the unit premises and furnish photographs along with latitude and longitude co-ordinates.
10. The unit shall liable to pay the consent fee and shall remit the difference in amount in case of any revision of consent fee by the Government.
11. The unit shall not evoke any complaint from the nearby public due to its establishment activity.
12. In case of revision of consent fee by the Government, the unit shall remit the difference in amount within one month from the date of notification. failing to remit the consent fee, this consent order will be withdrawn without any notice and further action will be initiated against the unit as per law.

GENERAL CONDITIONS

1. This consent to establish cannot be construed as consent to operate and the unit shall not commence the operation without obtaining the Consent to operate.
2. The applicant shall make a request for grant of consent to operate at least thirty days, before the commissioning of trial production.
3. Any Change in the details furnished in the conditions has to be brought to the notice of the Board and got approved by the Board, before obtaining consent to operate under the said Act.
4. The unit has to comply with the provisions of Public Liability Insurance Act, 1991 to provide immediate relief in the event of any hazard to human beings, other living creatures/plants and properties while handling and storage of hazardous substances (wherever applicable).
5. Consent to operate will not be issued unless the unit complies with the conditions of consent to establish.
6. The unit shall provide adequate water sprinklers for the control of dust emission during the loading and unloading of construction material so as to minimize the dust emission.
7. The unit shall provide water sprinklers along the temporary roads inside the premises to avoid fugitive dust emission during the vehicle movements.
8. The unit shall develop green belt of adequate width around the premises.
9. In case there is any change in the management, the unit shall inform the change with relevant documents immediately.

19.	Activated Carbon Filter	1	0.5 m2
20.	Pressure Sand Filter	1	0.5 m2
21.	Equalization Tank	2	5x3x3.5
22.	Collection Tank (Syntex)	4	10 KL
23.	Collection Tank (Syntex)	1	5 KL
24.	Multiple Effect Evaporator	1	70 KLD
25.	ATFD	1	300kg/Hr @30-35% sol
26.	Filter Press	1	0.83m2 (25 plates)
27.	Ultra Filtration	1	110 KLD
28.	RO Plant	1	100 KLD

3. This consent to establish for Expansion is valid for establishing the facility with the below mentioned outlets for the discharge of sewage/trade effluent. Any change in the outlets and the quantity has to be brought to the notice of the Board and fresh consent has to be obtained.

Outlet No.	Description of Outlet	Maximum daily discharge in KLD	Point of disposal
Effluent Type : Sewage			
1.	Sewage	12.0	On Industrys own land
Effluent Type : Trade Effluent			
1.	Trade effluent	68.0	Reuse to Cooling Tower Makeup

4. **Special Additional Conditions:**

The unit shall obtain No Objection Certificate (NOC) from the Tamil Nadu Bio Diversity Board /National Bio Diversity Authority if the unit is using any Biological resources or knowledge associated thereto as per the provisions of Biological Diversity Act 2002.

5. **Additional Conditions:**

1. The unit shall operate and manufacture the products as per the existing consented quantity (Annual production should be within the consented capacity) till getting CTO Expansion from the Board and also the unit shall start their construction and other establishing activities towards expansion only after getting CTE Expansion from the Board.
2. The unit shall operate and maintain the STP efficiently and continuously so as to achieve the standards as prescribed by the Board.
3. The unit shall not increase the quantity of sewage in the CTE Expansion activity without prior permission of the Board and also EC.
4. The unit shall operate and maintain the ETP, RO, RMS(MEE & ATFD) efficiently and continuously so as to achieve the standards as prescribed by the Board and to achieve the ZLD at all times.
5. The unit shall not increase the quantity of trade effluent in the CTE Expansion activity without prior permission of the Board and also EC.
6. The unit shall ensure that the entire treated sewage shall be used for gardening purpose within the premises.
7. The unit shall ensure the online connectivity with WQW, of TNPCB, Chennai to provide proper quality data at all times.
8. The unit shall comply all the conditions as mentioned in the 'No increase in Pollution load ' Certificate issued to the unit by PLAC vide Board's Lr. No. TNPCB/T6/F.13598 HSR/2021/dated: 17.03.2022 strictly without any lapse.
9. The unit shall comply with the provisions contained in this Ministry's OM vide F.No. 22-65/2017-IA.II dated 1st May 2018, as applicable, regarding Corporate Environment Responsibility.
10. The unit shall not evoke any complaint from the nearby public due to its establishment activity.
11. The unit shall not use 'use and throwaway plastics' such as plastic sheets used for food wrapping, spreading on dining table etc., plastic plates, plastic coated tea cups, plastic tumbler, water pouches and packets, plastic straw, plastic carry bag and plastic flags irrespective of thickness, within the industry premises. Instead it shall encourage use of eco friendly alternative such as banana leaf, areca nut palm plate, stainless steel, glass, porcelain plates/cups, cloth bag, Jute bag etc..
12. In case of revision of consent fee by the Government, the unit shall remit the difference in amount within one month from the date of notification, failing to remit the consent fee, this consent order will be withdrawn without any notice and further action will be initiated against the unit as per law.

CONSENT ORDER NO. 2208242904446 DATED: 01/08/2022.

PROCEEDINGS NO.T6/TNPCB/F.0027HSR/RL/HSR/A/2022 DATED: 01/08/2022

SUB: Tamil Nadu Pollution Control Board - RENEWAL OF CONSENT –M/s. CHEMPLAST SANMAR LIMITED-SANMAR SPECIALITY CHEMICALS DIVISION , S.F.No. 5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3,10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A, SULIGUNTA village, Shoolagiri Taluk and Krishnagiri District - Renewal of Consent for the operation of the plant and discharge of emissions under Section 21 of the Air (Prevention and Control of Pollution) Act, 1981 as amended in 1987 (Central Act 14 of 1981) –Issued- Reg.

REF: 1. TNPCB Proc. No. T5/TNPCB/F.0027HSR/RL/HSR/A&W/2020 dated: 19/08/2020
2. Application No. 42904446 dated: 29/01/2022 for CTO-Renewal
3. IR.No : F.0027HSR/RL/JCEE-M/HSR/2022 dated: 16/06/2022

RENEWAL OF CONSENT is hereby granted under Section 21 of the Air (Prevention and Control of Pollution) Act, 1981 as amended in 1987 (Central Act 14 of 1981) (hereinafter referred to as "The Act") and the rules and orders made there under to

The Director
M/s CHEMPLAST SANMAR LIMITED-SANMAR SPECIALITY CHEMICALS DIVISION,
S.F.No. 5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3,10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A,
SULIGUNTA village,
Shoolagiri Taluk,
Krishnagiri District.

Authorizing the occupier to operate the industrial plant in the Air Pollution Control Area as notified by the Government and to make discharge of emission from the stacks/chimneys.

This is subject to the provisions of the Act, the rules and the orders made there under and the terms and conditions incorporated under the Special and General conditions stipulated in the Consent Order issued earlier and subject to the special conditions annexed.

This RENEWAL OF CONSENT is valid for the period ending March 31, 2027

For Member Secretary,
Tamil Nadu Pollution Control Board,
Chennai

This is computer generated order. Signature is not required. 1

SPECIAL CONDITIONS

1. This renewal of consent is valid for operating the facility for the manufacture of products (Col. 2) at the rate (Col. 3) mentioned below. Any change in the products and its quantity has to be brought to the notice of the Board and fresh consent has to be obtained.

Sl. No.	Description	Quantity	Unit
	Product Details		
1.	PHYTO CHEMICALS (1.Colchicine,2.Thiocolchicoside)	1.4	Tons/Year
2.	ORGANIC CHEMICALS (1.Mahagonate, 2.Vetikone, 3.Anisyl Acetone, 4.Para Methyl Acetophenone, 5.Para Methoxy Phenyl Acetone, 6.Para Methoxy Benzyl Cyanide, 7.Para Methoxy Phenyl Ethylamine, 8.Tyramine/Thyramine HCL, 9. CHEA, 10. BHBA, 11. ATSC, 12. Sandur-3, 13. T4C, 14. 4-Hydoxy Indanone, 15. Substituted Aryl Alkyl Amine, 16. Nitroaniline, 17. Aminobenzenetricarboxylic acid, 18. TR1600 / TR1400, 19. Aminophthalic acid, 20.PSH, 21. Cyanodiester, 22. Cabsans, 23. Aloin, 24. CD675, 25. 2-Fluro acetophenone, 26. Methoxy tetralone, 27.Methyl-2 phenoxy isobutyrate, 28. 4-Chloro-Butyl veratrate, 29. 2-Thionyl methyl malonic mono ester, 30. AE Phenol, 31. Long chain alchohol Ester, 32. 3,4 Dichoro Benzamideamine, 33. 2-Choro-N,N-Dimethylpropylamine, 34. Benzhydrol, 35. PAPT, 36. Phenoxyethlamine, 37. Substituted Benzophenone, 38. 2-S- Aminobutramide HCL)	1080	Tons/Year

2. This renewal of consent is valid for operating the facility with the below mentioned emission/noise sources along with the control measures and/or stack. Any change in the emission source/control measures/change in stack height has to be brought to the notice of the Board and fresh consent/Amendment has to be obtained.

I	Point source emission with stack :			
Stack No.	Point Emission Source	Air pollution Control measures	Stack height from Ground Level in m	Gaseous Discharge in Nm3/hr
1	Scrubber at Plant - I	Wet Alkali Scrubber,stack	6.1	35715.214
2	Scrubber at Plant - II	Wet Alkali Scrubber,stack	17	35528.924
3	Scrubber at Plant - II	Wet Alkali Scrubber,stack	17	35528.924
4	Scrubber at Plant - II	Wet Alkali Scrubber,stack	15	35715.214
5	Absorber at Plant -I	Wet Alkali Scrubber,stack	4	
6	Scrubber at R & D plant	Two stage wet alkali scrubber,stack	12	35892.46
7	Phyto Plant Scrubber (Process)	Wet Alkali Scrubber,stack	19	11106.18
9	Boiler - 6 MT/Hr	Stack	40	58362.913
11	Thermic Fluid Heater (1 Lakh Kcal/Hr)	Stack	9	10194.795
15	Scrubber at Plant - II	Wet Alkali Scrubber,stack	15	34273.728
16	Scrubber at Pilot Plant	Wet Alkali Scrubber,stack	6.1	24205.255
17	Scrubber at Plant - IV	Wet Alkali Scrubber,stack	17	800
18	Scrubber at Plant - IV	Wet Alkali Scrubber,stack	17	8600
19	Scrubber at Plant - IV	Wet Alkali Scrubber,stack	17	416
20	Diesel Generator Set 600 KVA	Stack	12	7080
21	Diesel Generator Set 600 KVA	Stack	12	7080
22	Diesel Generator Set 600 KVA	Stack	12	7080
23	Diesel Generator Set 600 KVA	Stack	12	7080
II	Fugitive/Noise emission :			
Sl. No.	Fugitive or Noise Emission sources	Type of emission	Control measures	
1.	MEE	Noise	PPE	
2.	DG Set(4Nos)	Noise	Acoustic enclosures with stack	
3.	FBD(2Nos)	Noise	Bag Filter	
4.	Compressor	Noise	PPE	
5.	ETP Blower	Noise	Silencers and Bellow with Acoustic Enclosures	

Special Additional Conditions:

i. The unit shall install the approved retrofit emission control device/equipment with at least 70% Particulate matter reduction efficiency on all DG sets with capacity of 125 KVA and above or otherwise the unit shall be shift to gas based generators within the time frame prescribed in the notification No. TNPCB/Labs/DD(L)02151/2019 dated 10.06.2020 issued by TNPCB.

ii. The unit shall obtain No Objection Certificate (NOC) from the Tamil Nadu Bio Diversity Board /National Bio Diversity Authority if the unit is using any Biological resources or knowledge associated thereto as per the provisions of Biological Diversity Act 2002.

Additional Conditions:

1. The unit shall operate and maintain the Air Pollution Control measures provided for the control of process emissions/Acoustic measures efficiently and continuously so as to satisfy the National Ambient Air Quality/ Emission standards & Ambient Noise Level Standards prescribed by the Board.
2. The unit shall conduct periodical survey for Ambient Air Quality/ Noise Level/Stack Emission through TNPC Board's lab every year and submit the report regularly to the TNPC Board.
3. The unit shall maintain Online Continuous Emission Monitoring System (OCEMS) attached to boiler & Thermic Fluid Heaters & process stacks properly to ensure continuous connectivity with CAC of TNPCB/CPCB server for transmission of emission data of PM, SO2 and HCN without any interruption.
4. Any problem in uploading the emission data to the Care Air Centre, TNPCB shall be brought to the notice of the TNPCB immediately
5. The unit shall provide interlocking system in such a way that whenever the pollution control system fails, the feed of raw material is cut off automatically and the emissions are controlled
6. The unit shall continue to develop adequate green belt (33% of total area) within the premises with native species.
7. The unit shall obtain revised consent under Air Act in case of any name change, supporting with certificate of Incorporation issued by Registrar of Companies in this regard.
8. The unit shall obtain consent (CTO-Expansion) before commissioning of expansion activity and comply with conditions of CTE expansion issued vide proc dated 03/06/2022 based on minutes of PLAC meeting held on 27.01.2022.
9. In case of revision of consent fee by the Government, the unit shall remit the difference in amount within one month from the date of notification. Failing to remit the consent fee, this consent order will be withdrawn without any notice and further action will be initiated against the unit as per law.

TAMIL NADU POLLUTION CONTROL BOARD

Category of the Industry :

RED

CONSENT ORDER NO. 2208142904446 DATED: 01/08/2022.

PROCEEDINGS NO.T6/TNPCB/F.0027HSR/RL/HSR/W/2022 DATED: 01/08/2022

SUB: Tamil Nadu Pollution Control Board - RENEWAL OF CONSENT – M/s. CHEMPLAST SANMAR LIMITED-SANMAR SPECIALITY CHEMICALS DIVISION , S.F.No. 5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3,10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A, SULIGUNTA village, Shoolagiri Taluk and Krishnagiri District - Renewal of Consent for the operation of the plant and discharge of sewage and/or trade effluent under Section 25 of the Water (Prevention and Control of Pollution) Act, 1974 as amended in 1988 (Central Act 6 of 1974) – Issued- Reg.

REF: 1. TNPCB Proc. No. T5/TNPCB/F.0027HSR/RL/HSR/A&W/2020 dated: 19/08/2020
2. Application No. 42904446 dated: 29/01/2022 for CTO-Renewal
3. IR.No : F.0027HSR/RL/JCEE-M/HSR/2022 dated: 16/06/2022

RENEWAL OF CONSENT is hereby granted under Section 25 of the Water (Prevention and Control of Pollution) Act, 1974 as amended in 1988 (Central Act, 6 of 1974) (hereinafter referred to as "The Act") and the rules and orders made there under to

The Director
M/s.CHEMPLAST SANMAR LIMITED-SANMAR SPECIALITY CHEMICALS DIVISION,
S.F.No. 5,7/1,2,3A,3B,8/1,2A,2B,9/1,2,3,10/1,2,3A,3B,4,12/1A,1B,13/1,14/1A,2A,
SULIGUNTA village,
Shoolagiri Taluk,
Krishnagiri District.

Authorising the occupier to make discharge of sewage and /or trade effluent.

This is subject to the provisions of the Act, the rules and the orders made there under and the terms and conditions incorporated under the Special and General conditions stipulated in the Consent Order issued earlier and subject to the special conditions annexed.

This RENEWAL OF CONSENT is valid for the period ending March 31, 2027

For Member Secretary,
Tamil Nadu Pollution Control Board,
Chennai

This is computer generated order. Signature is not required. 1

SPECIAL CONDITIONS

1. This renewal of consent is valid for operating the facility for the manufacture of products/byproducts (Col. 2) at the rate (Col 3) mentioned below. Any change in the product/byproduct and its quantity has to be brought to the notice of the Board and fresh consent has to be obtained.

Sl. No.	Description	Quantity	Unit
	Product Details		
1.	PHYTO CHEMICALS (1.Colchicine,2.Thiocolchicoside)	1.4	Tons/Year
2.	ORGANIC CHEMICALS (1.Mahagonate, 2.Vetikone, 3.Anisyl Acetone, 4.Para Methyl Acetophenone, 5.Para Methoxy Phenyl Acetone, 6.Para Methoxy Benzyl Cyanide, 7.Para Methoxy Phenyl Ethylamine, 8.Tyramine/Thyramine HCL, 9. CHEA, 10. BHBA, 11. ATSC, 12. Sandur-3, 13. T4C, 14. 4-Hydoxy Indanone, 15. Substituted Aryl Alkyl Amine, 16. Nitroaniline, 17. Aminobenzenetricarboxylic acid, 18. TR1600 / TR1400, 19. Aminophthalic acid, 20.PSH, 21. Cyanodiester, 22. Cabsans, 23. Aloin, 24. CD675, 25. 2-Fluro acetophenone, 26. Methoxy tetralone, 27.Methyl-2 phenoxy isobutyrate, 28. 4-Chloro-Butyl veratrate, 29. 2-Thionyl methyl malonic mono ester, 30. AE Phenol, 31. Long chain alchohol Ester, 32. 3,4 Dichoro Benzamideamine, 33. 2-Choro-N,N-Dimethylpropylamine, 34. Benzhydrol, 35. PAPT, 36. Phenoxyethlamine, 37. Substituted Benzophenone, 38. 2-S- Aminobutramide HCL)	1080	Tons/Year

2. This renewal of consent is valid for operating the facility with the below mentioned outlets for the discharge of sewage/trade effluent. Any change in the outlets and the quantity has to be brought to the notice of the Board and fresh consent has to be obtained.

Outlet No.	Description of Outlet	Maximum daily discharge in KLD	Point of disposal
Effluent Type : Sewage			
1.	Sewage	12.0	On Industrys own land
Effluent Type : Trade Effluent			
1.	Trade effluent	68.0	Zero Liquid Discharge system

Special Additional Conditions:

The unit shall obtain No Objection Certificate (NOC) from the Tamil Nadu Bio Diversity Board /National Bio Diversity Authority if the unit is using any Biological resources or knowledge associated thereto as per the provisions of Biological Diversity Act 2002.

Additional Conditions:

1) The unit shall operate and maintain the Sewage Treatment Plant (STP) continuously and efficiently for the treatment of sewage [12 KLD] so as to bring the quality of treated sewage to satisfy the discharge standards prescribed by the Board at all times.
2) The unit shall utilise the treated sewage for gardening/green belt development within the premises without stagnation/ponding.
3) The unit shall operate and maintain the Effluent Treatment Plant (ETP), RO system, MEE & ATF effectively & continuously for the treatment of trade effluent [68 KLD] so as to bring the quality of treated effluent to satisfy the discharge standards prescribed by the Board at all times.
4) The unit shall maintain Zero Liquid Discharge (ZLD) of trade effluent by recycling RO permeate & MEE condensate completely in the process & evaporating entire MEE concentrate thro' AFTD.
5) The unit shall comply with CPCB Guidelines issued during Jan. 2015 regarding implementing & achieving ZLD for water polluting industries including pharmaceutical units.
6) It shall be ensured that there is no discharge of treated/untreated effluent either directly or indirectly outside the premises under any circumstances.
7) The unit shall maintain the connectivity of ten EMFMs provided at the STP & ETP area with Water Quality Watch of TNPCB / CPCB portals properly for continuous monitoring of flow & also maintain surveillance camera at treatment area with connectivity for ensuring ZLD of trade effluent.
8) The unit shall collect the solid wastes properly and dispose the same for beneficial use without accumulation within the premises.
9) The unit shall comply with the provisions of the Hazardous and Other Wastes (Management & Transboundary Movement) Rules, 2016 as amended from time to time while handling of hazardous waste.
10) It shall be ensured that the hazardous wastes generated are collected, stored properly and disposed as per the permission granted vide Authorisation under HOWM Rules, 2016.
11) The unit shall obtain REVISED Authorisation under HOWM Rules, 2016 for the handling & management of mixed salt generation from ATFD, Off-Specification products & Date-expired products etc within one month. It shall be ensured that HWs such as Off-Specification products & Date-expired products are disposed scientifically in safe manner with valid permission of TNPCB.
12) The unit shall have valid permission from Competent Authority for drawl of ground water from bore well to meet its raw water requirements and adopt reuse of treated sewage to extend possible to reduce raw water consumption. Water audit shall be conducted in this regard & furnished to TNPCB.
13) The unit shall ensure and comply with CPCB directions dated 05/02/2014 and 27/07/2015
14) The unit shall handle the hazardous chemicals by adhering to the MSDS. The MSDS of the said chemicals shall be displayed in the storage and working area.
15) The unit shall submit Environmental Statement for every financial year ending the 31st March in Form -V as per the Rule 14 of the Environment (Protection) Rules, 1986.
16) The unit shall obtain revised consent under Water Act in case of any name change, supporting with certificate of Incorporation issued by Registrar of Companies in this regard.
17) The unit shall furnish audited balance sheet showing GFA value every year to TNPCB.
18) The unit shall obtain consent (CTO-Expansion) before commissioning of expansion activity and comply with conditions of CTE expansion issued vide proc dated 03/06/2022 based on minutes of PLAC meeting held on 27.01.2022.
19) The unit shall not use 'single use and throwaway plastics' such as plastic sheets used for food wrapping, spreading on dining table etc., plastic plates, plastic coated tea cups, plastic tumbler, water pouches and packets, plastic straw, plastic carry bag and plastic flags irrespective of thickness, within the industry premises. Instead it shall encourage use of eco friendly alternative such as banana leaf, arecanut palm plate, stainless steel, glass, porcelain plates/cups, cloth bag, Jute bag etc.,
20) In case of revision of consent fee by the Government, the unit shall remit the difference in amount within one month from the date of notification. Failing to remit the consent fee, this consent order will be withdrawn without any notice and further action will be initiated against the unit as per law.

For Member Secretary,
Tamil Nadu Pollution Control Board,
Chennai

To

ANNEXURE-14

MATERIAL SAFETY DATA SHEET

PRAXAIR
Making our planet more productive

Chlorine

Safety Data Sheet P-4580

This SDS conforms to U.S. Code of Federal Regulations 29 CFR 1910.1200, Hazard Communication.

Date of issue: 01/01/1979 Revision date: 11/30/2016 Supersedes: 10/17/2016

SECTION 1: Product and company identification

1.1. Product identifier

Product form	: Substance
Name	: Chlorine
CAS No	: 7782-50-5
Formula	: Cl2

1.2. Relevant identified uses of the substance or mixture and uses advised against

Use of the substance/mixture	: Industrial use. Use as directed.

1.3. Details of the supplier of the safety data sheet

Praxair, Inc.
10 Riverview Drive
Danbury, CT 06810-6268 - USA
T 1-800-772-9247 (1-800-PRAXAIR) - F 1-716-879-2146
www.praxair.com

1.4. Emergency telephone number

Emergency number	: Onsite Emergency: 1-800-645-4633

CHEMTREC, 24hr/day 7days/week
— Within USA: 1-800-424-9300, Outside USA: 001-703-527-3887
(collect calls accepted. Contract 17729)

SECTION 2: Hazard identification

2.1. Classification of the substance or mixture

GHS-US classification

Ox. Gas 1	H270
Liquefied gas	H280
Acute Tox. 2 (inhalation: gas)	H330
Skin Corr. 1A	H314
Eye Dam. 1	H318
STOT SE 3	H335
Aquatic Acute 1	H400

2.2. Label elements

GHS-US labeling

Hazard pictograms (GHS-US) :

GHS03 GHS04 GHS05 GHS06 GHS07 GHS09

Signal word (GHS-US)	: DANGER
Hazard statements (GHS-US)	: H270 - MAY CAUSE OR INTENSIFY FIRE; OXIDIZER H280 - CONTAINS GAS UNDER PRESSURE; MAY EXPLODE IF HEATED H314 - CAUSES SEVERE SKIN BURNS AND EYE DAMAGE H330 - FATAL IF INHALED H400 - VERY TOXIC TO AQUATIC LIFE CGA-H322 - CORROSIVE TO THE RESPIRATORY TRACT
Precautionary statements (GHS-US)	: P202 - Do not handle until all safety precautions have been read and understood P244 - Keep reduction valves/valves and fittings free from oil and grease P260 - Do not breathe gas P264 - Wash hands thoroughly after handling P271+P403 - Use and store only outdoors or in a well-ventilated place P273 - Avoid release to the environment

P280+P284 - Wear protective gloves, protective clothing, eye protection, respiratory protection, and/or face protection
P370+P376 - In case of fire: Stop leak if safe to do so
P405 - Store locked up
P501 - Dispose of contents/container Dispose in a safe manner in accordance with local/national regulations
CGA-PG05 - Use a back flow preventive device in the piping
CGA-PG20+CGA-PG10 - Use only with equipment of compatible materials of construction and rated for cylinder pressure
CGA-PG12 - Do not open valve until connected to equipment prepared for use
CGA-PG16 - When returning cylinder, install leak tight valve outlet cap or plug
CGA-PG06 - Close valve after each use and when empty
CGA-PG02 - Protect from sunlight when ambient temperature exceeds 52°C (125°F)

2.3. Other hazards

Other hazards not contributing to the classification : None.

2.4. Unknown acute toxicity (GHS US)

No data available

SECTION 3: Composition/information on ingredients

3.1. Substance

Name	Product identifier	%
Chlorine (Main constituent)	(CAS No) 7782-50-5	100

3.2. Mixture

Not applicable

SECTION 4: First aid measures

4.1. Description of first aid measures

First-aid measures after inhalation : Remove to fresh air and keep at rest in a position comfortable for breathing. If not breathing, give artificial respiration. If breathing is difficult, trained personnel should give oxygen. Call a physician. WARNING: To avoid possible chemical burns, the rescuer should avoid breathing any exhaled air from the victim.

First-aid measures after skin contact : Avoid breathing vapors. In case of contact, immediately flush affected areas with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. Wash clothing before reuse. Discard contaminated shoes.

First-aid measures after eye contact : Immediately flush eyes thoroughly with water for at least 15 minutes. Hold the eyelids open and away from the eyeballs to ensure that all surfaces are flushed thoroughly. Contact an ophthalmologist immediately.

First-aid measures after ingestion : Ingestion is not considered a potential route of exposure.

4.2. Most important symptoms and effects, both acute and delayed

Symptoms/injuries after inhalation : Overexposure to concentrations moderately above the TLV of 1 ppm irritates the eyes and respiratory tract. Very brief exposure to a concentration of 1000 ppm may be fatal. Acts as an asphyxiant at high concentrations. Inhalation of high concentrations (e.g. greater than 15 ppm) causes choking, coughing, burning of the throat, and severe irritation of the upper respiratory tract; additionally, pulmonary edema, bronchitis, and pneumonitis may result.

4.3. Indication of any immediate medical attention and special treatment needed

Obtain medical assistance.

SECTION 5: Firefighting measures

5.1. Extinguishing media

Suitable extinguishing media : Use extinguishing media appropriate for surrounding fire.

5.2. Special hazards arising from the substance or mixture

Fire hazard : Oxidizer. May accelerate the burning of other combustible materials.

Reactivity : No reactivity hazard other than the effects described in sub-sections below.

5.3. Advice for firefighters

Firefighting instructions	: Evacuate all personnel from the danger area. Use self-contained breathing apparatus (SCBA) and protective clothing. Immediately cool containers with water from maximum distance. Stop flow of gas if safe to do so, while continuing cooling water spray. Remove ignition sources if safe to do so. Remove containers from area of fire if safe to do so. On-site fire brigades must comply with OSHA 29 CFR 1910.156 and applicable standards under 29 CFR 1910 Subpart L—Fire Protection.
Protection during firefighting	: **DANGER! Toxic, corrosive, high-pressure gas.**
Special protective equipment for fire fighters	: Standard protective clothing and equipment (Self Contained Breathing Apparatus) for fire fighters.
Specific methods	: Use fire control measures appropriate for the surrounding fire. Exposure to fire and heat radiation may cause gas containers to rupture. Cool endangered containers with water spray jet from a protected position. Prevent water used in emergency cases from entering sewers and drainage systems Stop flow of product if safe to do so. Use water spray or fog to knock down fire fumes if possible.
Other information	: Containers are equipped with a pressure relief device. (Exceptions may exist where authorized by DOT.)

SECTION 6: Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

General measures : **DANGER: Oxidizing gas. Corrosive.** Evacuate personnel to a safe area. Wear a self-contained breathing apparatus and appropriate personal protective equipment (PPE). (gas tight, chemical-protective) Approach suspected leak area with caution. Remove all sources of ignition. Toxic, corrosive vapor can spread from spill. Contact with flammable materials may cause fire or explosion. Ventilate area or move container to a well-ventilated area. Before entering the area, especially a confined area, check the atmosphere with an appropriate device. Prevent from entering sewers, basements and workpits, or any place where its accumulation can be dangerous.

6.1.1. For non-emergency personnel

No additional information available

6.1.2. For emergency responders

No additional information available

6.2. Environmental precautions

Prevent waste from contaminating the surrounding environment. Prevent soil and water pollution. Dispose of contents/container in accordance with local/regional/national/international regulations. Contact supplier for any special requirements.

6.3. Methods and material for containment and cleaning up

No additional information available

6.4. Reference to other sections

See also sections 8 and 13.

SECTION 7: Handling and storage

7.1. Precautions for safe handling

Precautions for safe handling : Do not breathe gas/vapor. Avoid all contact with skin, eyes, or clothing. Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure.

Wear leather safety gloves and safety shoes when handling cylinders. Protect cylinders from physical damage; do not drag, roll, slide or drop. While moving cylinder, always keep in place removable valve cover. Never attempt to lift a cylinder by its cap; the cap is intended solely to protect the valve. When moving cylinders, even for short distances, use a cart (trolley, hand truck, etc.) designed to transport cylinders. Never insert an object (e.g. wrench, screwdriver, pry bar) into cap openings; doing so may damage the valve and cause a leak. Use an adjustable strap wrench to remove over-tight or rusted caps. Slowly open the valve. If the valve is hard to open, discontinue use and contact your supplier. Close the container valve after each use; keep closed even when empty. Never apply flame or localized heat directly to any part of the container. High temperatures may damage the container and could cause the pressure relief device to fail prematurely, venting the container contents. For other precautions in using this product, see section 16.

7.2. Conditions for safe storage, including any incompatibilities

Storage conditions : Avoid oil, grease and all other combustible materials.

Store only where temperature will not exceed 125°F (52°C). Post "No Smoking/No Open Flames" signs in storage and use areas. There must be no sources of ignition. Separate packages and protect against potential fire and/or explosion damage following appropriate codes and requirements (e.g. NFPA 30, NFPA 55, NFPA 70, and/or NFPA 221 in the U.S.) or according to requirements determined by the Authority Having Jurisdiction (AHJ). Always secure containers upright to keep them from falling or being knocked over. Install valve protection cap, if provided, firmly in place by hand when the container is not in use. Store full and empty containers separately. Use a first-in, first-out inventory system to prevent storing full containers for long periods. For other precautions in using this product, see section 16.

OTHER PRECAUTIONS FOR HANDLING, STORAGE, AND USE: When handling product under pressure, use piping and equipment adequately designed to withstand the pressures to be encountered. Never work on a pressurized system. Use a back flow preventive device in the piping. Gases can cause rapid suffocation because of oxygen deficiency; store and use with adequate ventilation. If a leak occurs, close the container valve and blow down the system in a safe and environmentally correct manner in compliance with all international, federal/national, state/provincial, and local laws; then repair the leak. Never place a container where it may become part of an electrical circuit.

7.3. Specific end use(s)

None.

SECTION 8: Exposure controls/personal protection

8.1. Control parameters

Chlorine (7782-50-5)		
ACGIH	ACGIH TLV-TWA (ppm)	0.5 ppm
ACGIH	ACGIH TLV-STEL (ppm)	1 ppm
USA OSHA	OSHA PEL (Ceiling) (mg/m³)	3 mg/m³
USA OSHA	OSHA PEL (Ceiling) (ppm)	1 ppm
USA IDLH	US IDLH (ppm)	10 ppm

8.2. Exposure controls

Appropriate engineering controls : Use only in a closed system. A corrosion-resistant, forced-draft fume hood is preferred. LOCAL EXHAUST: A corrosion-resistant system is acceptable.

Eye protection : Wear safety glasses with side shields. Wear goggles and a face shield when transfilling or breaking transfer connections. Provide readily accessible eye wash stations and safety showers. Wear safety glasses with side shields or goggles when transfilling or breaking transfer connections.

Skin and body protection	: Wear metatarsal shoes and work gloves for cylinder handling, and protective clothing where needed. Wear appropriate chemical gloves during cylinder changeout or wherever contact with product is possible. Select per OSHA 29 CFR 1910.132, 1910.136, and 1910.138.
Respiratory protection	: When workplace conditions warrant respirator use, follow a respiratory protection program that meets OSHA 29 CFR 1910.134, ANSI Z88.2, or MSHA 30 CFR 72.710 (where applicable). Use an air-supplied or air-purifying cartridge if the action level is exceeded. Ensure that the respirator has the appropriate protection factor for the exposure level. If cartridge type respirators are used, the cartridge must be appropriate for the chemical exposure. For emergencies or instances with unknown exposure levels, use a self-contained breathing apparatus (SCBA).
Thermal hazard protection	: Wear cold insulating gloves when transfilling or breaking transfer connections.

SECTION 9: Physical and chemical properties

9.1. Information on basic physical and chemical properties

Physical state	: Gas
Appearance	: Greenish-yellow gas. Amber liquid (under pressure).
Molecular mass	: 71 g/mol
Color	: Greenish gas.
Odor	: Pungent.
Odor threshold	: Odor threshold is subjective and inadequate to warn for overexposure. 0.23 mg/m³ (Dixon and Ikels)
pH	: Not applicable.
Relative evaporation rate (butyl acetate=1)	: No data available
Relative evaporation rate (ether=1)	: Not applicable.
Melting point	: -101 °C (-149.85 °F)
Freezing point	: No data available
Boiling point	: -34.05 °C (-29.29 °F)
Flash point	: Not applicable.
Critical temperature	: 144 °C
Auto-ignition temperature	: Not applicable.
Decomposition temperature	: No data available
Flammability (solid, gas)	: No data available
Vapor pressure	: 6.9 bar (100 psia) (@20°C [68°F])
Critical pressure	: 77.11 bar (1118.4 psia)
Relative vapor density at 20 °C	: No data available
Relative density	: 1.6
Density	: 2.7 kg/m³ (at 50 °C)
Relative gas density	: 2.5
Solubility	: Water: 8620 mg/l
Log Pow	: Not applicable.
Log Kow	: Not applicable.
Viscosity, kinematic	: Not applicable.
Viscosity, dynamic	: Not applicable.
Explosive properties	: Not applicable.
Oxidizing properties	: Oxidizer.
Explosion limits	: Non flammable.

9.2. Other information

Gas group	: Liquefied gas
Additional information	: Gas/vapor heavier than air. May accumulate in confined spaces, particularly at or below ground level.

SECTION 10: Stability and reactivity

10.1. Reactivity

No reactivity hazard other than the effects described in sub-sections below.

10.2. Chemical stability

Stable under normal conditions.

10.3. Possibility of hazardous reactions

May occur.

10.4. Conditions to avoid

Air contact. High temperature. Moisture. Incompatible materials.

10.5. Incompatible materials

Chlorine reacts with most materials, especially flammable materials, other reducing agents, and nearly all metals. At temperatures below 250°F (121°C) certain common metals (e.g. iron, copper, steel, lead, nickel) resist reaction with dry chlorine, but others (e.g. aluminum, arsenic, gold, mercury, tin, titanium) react. Moist chlorine is highly corrosive except to glass, stoneware, porcelain, and certain alloys and only at low pressure. Titanium ignites spontaneously on contact with dry chlorine. Carbon steel ignites in chlorine at temperatures near 483°F (251°C).

10.6. Hazardous decomposition products

Toxic fumes. Chlorides.

SECTION 11: Toxicological information

11.1. Information on toxicological effects

Acute toxicity : Inhalation:gas: FATAL IF INHALED.

Chlorine (\f)7782-50-5	
LC50 inhalation rat (ppm)	146.5 ppm/4h
ATE US (gases)	146.500 ppmV/4h

Skin corrosion/irritation : CAUSES SEVERE SKIN BURNS AND EYE DAMAGE.
pH: Not applicable.

Serious eye damage/irritation : CAUSES SERIOUS EYE DAMAGE.
pH: Not applicable.

Respiratory or skin sensitization : Not classified

Germ cell mutagenicity : Not classified

Carcinogenicity : Not classified

Reproductive toxicity : Not classified

Specific target organ toxicity (single exposure) : MAY CAUSE RESPIRATORY IRRITATION.

Specific target organ toxicity (repeated exposure) : Not classified

Aspiration hazard : Not classified

Symptoms/injuries after inhalation : Overexposure to concentrations moderately above the TLV of 1 ppm irritates the eyes and respiratory tract. Very brief exposure to a concentration of 1000 ppm may be fatal. Acts as an asphyxiant at high concentrations. Inhalation of high concentrations (e.g. greater than 15 ppm) causes choking, coughing, burning of the throat, and severe irritation of the upper respiratory tract; additionally, pulmonary edema, bronchitis, and pneumonitis may result.

SECTION 12: Ecological information

12.1. Toxicity

Ecology - general : VERY TOXIC TO AQUATIC LIFE.

Chlorine (7782-50-5)	
LC50 fish 1	0.44 mg/l (Exposure time: 96 h - Species: Lepomis macrochirus [flow-through])
EC50 Daphnia 1	0.017 mg/l (Exposure time: 48 h - Species: Daphnia magna)

Chlorine (7782-50-5)	
LC50 fish 2	0.014 mg/l (Exposure time: 96 h - Species: Oncorhynchus mykiss [flow-through])

12.2. Persistence and degradability

Chlorine (7782-50-5)	
Persistence and degradability	Not applicable for inorganic gases.

12.3. Bioaccumulative potential

Chlorine (7782-50-5)	
BCF fish 1	(no bioaccumulation expected)
Log Pow	Not applicable.
Log Kow	Not applicable.
Bioaccumulative potential	No data available.

12.4. Mobility in soil

Chlorine (7782-50-5)	
Mobility in soil	No data available.
Ecology - soil	Because of its high volatility, the product is unlikely to cause ground or water pollution.

12.5. Other adverse effects

Other adverse effects : May cause pH changes in aqueous ecological systems.

Effect on ozone layer : None.

SECTION 13: Disposal considerations

13.1. Waste treatment methods

Waste disposal recommendations : Do not attempt to dispose of residual or unused quantities. Return container to supplier.

SECTION 14: Transport information

In accordance with DOT

Transport document description : UN1017 Chlorine, 2.3

UN-No.(DOT) : UN1017

Proper Shipping Name (DOT) : Chlorine

Class (DOT) : 2.3 - Class 2.3 - Poisonous gas 49 CFR 173.115

Hazard labels (DOT) : Poison Gas
2.3 - Poison gas

DOT Special Provisions (49 CFR 172.102) : 2 - This material is poisonous by inhalation (see 171.8 of this subchapter) in Hazard Zone B (see 173.116(a) or 173.133(a) of this subchapter), and must be described as an inhalation hazard under the provisions of this subchapter.
B9 - Bottom outlets are not authorized.
B14 - Each bulk packaging, except a tank car or a multi-unit-tank car tank, must be insulated with an insulating material so that the overall thermal conductance at 15.5 C (60 F) is no more than 1.5333 kilojoules per hour per square meter per degree Celsius (0.075 Btu per hour per square foot per degree Fahrenheit) temperature differential. Insulating materials must not promote corrosion to steel when wet.
N86 - UN pressure receptacles made of aluminum alloy are not authorized.
T50 - When portable tank instruction T50 is referenced in Column (7) of the 172.101 Table, the applicable liquefied compressed gases are authorized to be transported in portable tanks in accordance with the requirements of 173.313 of this subchapter.
TP19 - The calculated wall thickness must be increased by 3 mm at the time of construction. Wall thickness must be verified ultrasonically at intervals midway between periodic hydraulic tests (every 2.5 years). The portable tank must not be used if the wall thickness is less than that prescribed by the applicable T code in Column (7) of the Table for this material.

Marine pollutant	: P

Additional information

Emergency Response Guide (ERG) Number	: 124;173
Other information	: No supplementary information available.
Special transport precautions	: Avoid transport on vehicles where the load space is not separated from the driver's compartment. Ensure vehicle driver is aware of the potential hazards of the load and knows what to do in the event of an accident or an emergency. Before transporting product containers: - Ensure there is adequate ventilation. - Ensure that containers are firmly secured. - Ensure cylinder valve is closed and not leaking. - Ensure valve outlet cap nut or plug (where provided) is correctly fitted. - Ensure valve protection device (where provided) is correctly fitted.

Transport by sea

UN-No. (IMDG)	: 1017
Proper Shipping Name (IMDG)	: CHLORINE
Class (IMDG)	: 2 - Gases
MFAG-No	: 124

Air transport

UN-No. (IATA)	: 1017
Proper Shipping Name (IATA)	: Chlorine
Class (IATA)	: 2
Civil Aeronautics Law	: Gases under pressure/Gases toxic under pressure

SECTION 15: Regulatory information

15.1. US Federal regulations

Chlorine (7782-50-5)	
Listed on the United States TSCA (Toxic Substances Control Act) inventory Listed on the United States SARA Section 302 Subject to reporting requirements of United States SARA Section 313	
CERCLA RQ	10 lb
SARA Section 302 Threshold Planning Quantity (TPQ)	100 lb
SARA Section 311/312 Hazard Classes	Immediate (acute) health hazard Delayed (chronic) health hazard Sudden release of pressure hazard Fire hazard
SARA Section 313 - Emission Reporting	1.0 %

15.2. International regulations

CANADA

Chlorine (7782-50-5)
Listed on the Canadian DSL (Domestic Substances List)

EU-Regulations

Chlorine (7782-50-5)
Listed on the EEC inventory EINECS (European Inventory of Existing Commercial Chemical Substances)

15.2.2. National regulations

Chlorine (7782-50-5)
Listed on the AICS (Australian Inventory of Chemical Substances)
Listed on IECSC (Inventory of Existing Chemical Substances Produced or Imported in China)
Listed on the Korean ECL (Existing Chemicals List)
Listed on NZIoC (New Zealand Inventory of Chemicals)
Listed on PICCS (Philippines Inventory of Chemicals and Chemical Substances)
Japanese Poisonous and Deleterious Substances Control Law
Listed on the Canadian IDL (Ingredient Disclosure List)
Listed on INSQ (Mexican National Inventory of Chemical Substances)
Listed on CICR (Turkish Inventory and Control of Chemicals)

15.2. US State regulations

Chlorine(7782-50-5)	
U.S. - California - Proposition 65 - Carcinogens List	No
U.S. - California - Proposition 65 - Developmental Toxicity	No
U.S. - California - Proposition 65 - Reproductive Toxicity - Female	No
U.S. - California - Proposition 65 - Reproductive Toxicity - Male	No
State or local regulations	U.S. - Massachusetts - Right To Know List U.S. - New Jersey - Right to Know Hazardous Substance List U.S. - Pennsylvania - RTK (Right to Know) - Environmental Hazard List U.S. - Pennsylvania - RTK (Right to Know) List

SECTION 16: Other information

Other information : When you mix two or more chemicals, you can create additional, unexpected hazards. Obtain and evaluate the safety information for each component before you produce the mixture. Consult an industrial hygienist or other trained person when you evaluate the end product. Before using any plastics, confirm their compatibility with this product.

Praxair asks users of this product to study this SDS and become aware of the product hazards and safety information. To promote safe use of this product, a user should (1) notify employees, agents, and contractors of the information in this SDS and of any other known product hazards and safety information, (2) furnish this information to each purchaser of the product, and (3) ask each purchaser to notify its employees and customers of the product hazards and safety information.

The opinions expressed herein are those of qualified experts within Praxair, Inc. We believe that the information contained herein is current as of the date of this Safety Data Sheet. Since the use of this information and the conditions of use are not within the control of Praxair, Inc, it is the user's obligation to determine the conditions of safe use of the product.

Praxair SDSs are furnished on sale or delivery by Praxair or the independent distributors and suppliers who package and sell our products. To obtain current SDSs for these products, contact your Praxair sales representative, local distributor, or supplier, or download from www.praxair.com. If you have questions regarding Praxair SDSs, would like the document number and date of the latest SDS, or would like the names of the Praxair suppliers in your area, phone or write the Praxair Call Center (Phone: 1-800-PRAXAIR/1-800-772-9247; Address: Praxair Call Center, Praxair, Inc, P.O. Box 44, Tonawanda, NY 14151-0044)

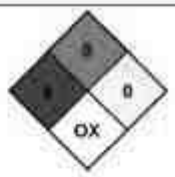
Chlorine

Safety Data Sheet P-4580

This SDS conforms to U.S. Code of Federal Regulations 29 CFR 1910.1200, Hazard Communication.

Date of issue: 01/01/1979 Revision date: 11/30/2016 Supersedes: 10/17/2016

NFPA health hazard	: 4 - Very short exposure could cause death or serious residual injury even though prompt medical attention was given.
NFPA fire hazard	: 0 - Materials that will not burn.
NFPA reactivity	: 0 - Normally stable, even under fire exposure conditions, and are not reactive with water.
NFPA specific hazard	: OX - This denotes an oxidizer, a chemical which can greatly increase the rate of combustion/fire.



HMIS III Rating

Health	: 3 Serious Hazard - Major injury likely unless prompt action is taken and medical treatment is given
Flammability	: 0 Minimal Hazard
Physical	: 2 Moderate Hazard

SDS US (GHS HazCom 2012) - Praxair

The information is based on our current knowledge and is intended to describe the product for the purposes of health, safety and environmental requirements only. It should not therefore be construed as guaranteeing any specific property of the product.

ANNEXURE-15

UNDERTAKING FOR NO USE OF BANNED PRODUCTS

Chemplast Sanmar Limited
Sanmar Speciality Chemicals Divn.

44 Theertham Road Berigai 635 105
Shoolagiri Taluk Krishnagiri District Tamil Nadu India
