		Total	6.80.0Ha		
	TOTAL CLUSTER EXTENT 16.44.9 Ha				

Note: -

• Cluster area is calculated as per MoEF & CC Notification – S.O. 2269 (E) Dated: 01.07.2016

As per above notification S.O.2269(E) dated : 01.07.2016 in para (b) in Appendix XI,- (ii)(5): The lease not operative for three years or more and leases which have got environmental clearance as on 15th January, 2016 shall not be counted for calculating the area of cluster, but shall be included in the Environment Management Plan and the Regional Environmental Management Plan"

TERMS OF REFERENCE (ToR) COMPLIANCE

M/s. Sri Devaraajaa 'M' Sand -P1

ToR Obtained vide Lr No. SEIAA-TN/F.No.10244/2023/SEAC/ToR- 1681/2024 Dated:14.02.2024

	SPECIFIC CONDITIONS			
Sl. No.	ToR Condition	Reply		
1	The PP shall submit the'Action Plan' on the issues raised during the Public Hearing with budgetary provisions for the same.	Noted and agreed		
2	The PP shall submit the Comprehensive EIA with detailed mitigation measures including the controlled blasting measures for reducing the impacts due to the blasting operation air pollution and water pollution, etc on the surrounding structures existing within 1 km of the proposed quarry.	Chapter-4 detailed mitigation measures including Blasting, water, Air, etc.,		
3	The PP shall exhibit the action plan for carrying out the quarrying activities systematically and scientifically keeping the structures belonging to the owner that exist within 300 m distance.	Noted and agreed		
4	The PP shall submit a 'Conceptual Mining Plan' indicating the accessible ramp from the surface to the pit bottom keeping the benches intact for the dimension as stipulated in the Approved Mining Plan	Submit annexure Scheme of approved mining plan and approved mining plan.		
5	The PP shall submit the nature of buildings/structures, occupants, and their profession, etc located within 500m radius of the proposed quarry	Chapter-3 Socioeconomic environment including 300m and 500m radius structure map with details.		
6	The project proponent shall furnish Certified Compliance Report (CCR) obtained from IRO(SZ), MoEF&CC and with mitigation measures along with the budgetary allocation for the non-compliance stated therein.	Proponent obtained Certified Compliance report from the MoEF & CC, Regional Office, Chennai vide F.No EP/12.1.2023-24/SEIAA/65/TN/967 dated 09.08.2023 Proponent has carried out Mitigation measures for the Non compliances addressed in the CCR and ensure the remaining activities will be completed after Starting the mining Operation.		
7	The proponent is requested to carry out a survey and enumerate on the structures located within the radius i)50m ii)100m iii)200m and iv)500m shall be enumerated with details such as dwelling houses with number of occupants, whether it belongs to the owner (or) not, place of worship, industries, factories, sheds, etc with indicating the owner of the building, nature of construction, age of the building number of residents, their profession and income, etc.,	Chapter-3 Socio economic environment details in structure map 300m Radius with table.		
8	The PP shall furnish the ownership details of the physical structures located near the proposed mine lease area, number of workers, time period of working etc	Tmt.K.M. Vijaya, 4.00Ha, 21 nos of workers M/s. A.M. Quality Stone, 4.74.90Ha, 18 nos of workers 300days per year		
9	If the existing depth of quarry has already reached 30 m, for the safety of the persons employed in the quarry, the PP shall aarry out the scientific studies and to furnish the report with assessing the slope stability of the working benches and existing quarry walls for evaluating the slope stabilization & protective measures while designing the proposed benches, by involving any one of the reputed Research and Academic Institutions - CSIR-Central Institute of Mining &	Existing quarry Existing Pit Dimension 210m(L) x 97m (W) x20m(D) (Avg) Preparing for EIA NABET/QCI consulation.		

	Fuel Research / Dhanbad, NIRM/Bangalore,	
	Division of Geotechnical Engineering-IlTMadras,	
	NIT-Dept of Mining Engg, Surathkal, and Anna	
	University Chennai-CEG Campus. A copy of such	
	scientific study report shall be submitted to the	
	SEIAA, MoEF, TNPCB, AD/Mines-DGM and	
	DMS, Chennai as a part of Environmental	
	Compliance without any deviation.	
	Annexu	ure-1
1	In the case of existing/operating mines, a letter	Yes. Existing quary
	obtained from the concerned AD (Mines) shall be	
	submitted and it shall include the following	
	i. Original pit dimension of the existing quarry	Existing Pit Dimension = 210m(L) x 97m (W) x20m(D) (Avg)
	ii. Quantity achieved vs EC approved quantity	Quantity achieved = $4,06,000$ for five years
		EC Quantity: 10,25,995m ³ Depth 71m (25m agl & 46m Bgl) period of 5 years
	iii. Balance quantity as per Mineable Reserve	Operated Without EC and reserve estimation carried out
	calculated	after deducting excavated quantum as below –
		Available Mineable Reserves 5,13,365 m ³
		of Rough Stone (Volume)
	iv. Mined out Depth as on date vs EC permitted depth	Mined out depth is 20m, Operate EC Permit Depth 71m (25m agl & 46m Bgl) period of 5 years
	v. Details of illegal/Illicit Mining carried out, if any	Non Illigal
	vi. Non-Compliance / violation in the quarry during the past working	Non violence
	vii. Quantity of material mine out outside the mine	NO
	lease area (or) in the adjacent quarry/field	
	viii. condition of safety / benches	Addressed in the Mining Plan by providing adequate safety and making bench formations.
	ix. Revised/Modified Mining Plan showing the	287m (L) X 121m (W) X 41m (D)
	benches of not exceeding 6 m height and ultimate	
	depth of not exceeding 50m.	
2	Details of habitations around the proposed mining	The letter detailing habitations around the proposed
	area and latest VAO certificate regarding the location	mining is obtained from Kothapetta Village
	of habitations within 300m radius from the periphery	Administrative Office vide Letter Nil Dated: 04.11.2022
	of the site.	and enclosed as Annexure – 3
3	The proponent is requested to carry out a survey and	
	enumerate on the structures located within the radius	
	i)50m ii)100m iii)200m and iv)500m shall be	
	enumerated with details such as dwelling houses with	Chapter-3 Socio economic environment details in
	number of occupants, whether it belongs to the owner	structure man 300m Radius with table
	(or) not, place of worship, industries, factories, sheds,	structure map 500m Radius with table.
	etc with indicating the owner of the building, nature	
	of construction, age of the building number of	
	residents, their profession and income, etc.,	
4	The PP shall submit a detailed hydrological report	The hydro-geological study was conducted to evaluate
	indicating the impact of proposed quarrying	the possible impact on the ground water table. No
	operations on the waterbodies like lake, water tanks,	significant impacts are anticipated on the water bodies
	etc are located within 1km of the proposed quarry.	around the project area. Details are discussed under
		Chapter No. 4
5	The proponent shall carry out Bio diversity study	The Bio diversity study has been conducted by the
	through reputed institution and the same shall be included in EIA Report.	Functional Area Expert approved by the NABET. The same has been detailed in the Chapter No 3
6	The DFO letter stating that the proximity distance of	The same has been dealled in the enapter 1(0,5
0	Reserve Forests, Protected Areas Sanctuaries Tiger	Request to consider the secondary source data detailing
	reserve etc., up to a radius of 25 km from the	the nearest reserve forest from Tamil Nadu Geographical
	proposed site.	Information System (TNGIS).
	proposed bite:	1

		The Nearest Reserve Forest is Peddathalapalli R.F -
		3.46km – South East
7	In the case of proposed lease in an existing (or old) quarry where the benches are not formed (or) partially formed as per the approved Mining Plan, the Project Proponent (PP) shall the PP shall carry out the scientific studies to assess the slope stability of the working benches to be constructed and existing quarry wall, by involving any one of the reputed Research and Academic Institutions - CSIR-Central Institute of Mining & Fuel Research / Dhanbad, NIRI/Bangalore, Division of Geotechnical Engineering-IIT-Madras, NIT-Dept of Mining Engg, Surathkal, and Anna University Chennai-CEG Campus" The PP shall submit a copy of the aforesaid report indicating the stability status of the quarry wall and possible mitigation measures during the time of appraisal for obtaining the EC.	The applied area has an Existing Pit Dimension 210m(L) x 97m (W) x20m(D) (Avg). This was operated without Prior Environmental Clearance. Now, the Mining Plan is prepared considering the bench formation and working safety parameters and approve by Department of Geology & Mining.
8	However, in case of the fresh/virgin quarries, the	It is an Existing quarry
	Plan' for the proposed quarry during the appraisal while obtaining the EC when the depth of the	EC depth is 71m
	working is extended beyond 30 m below ground level.	Proposal depth is 41m
9	The PP shall furnish the affidavit stating that the blasting operation in the proposed quarry is carried out by the statutory competent person as per the MMR 1961 such as blaster, mining mate, mine foreman, II/I Class mines manager appointed by the proponent.	The PP affirms that post execution of Quarry Lease Deed the application for Notice of Opening of the Mine along with Notice of Appointment of Competent Person shall be submitted to Director General Mines Safety, Chennai as per MMR, 1961. And ensure the quarry is operated under the Competent Person Employed.
10	The PP shall present a conceptual design for carrying out only controlled blasting operation involving line drilling and muffle blasting in the proposed quarry such that the blast-induced ground vibrations are controlled as well as no fly rock travel beyond 30 m from the blast site.	The details of design for carrying out controlled blasting operation involving line drilling and muffle blasting to minimize blast-induced ground vibrations and controlled fly rock travel beyond 30 m from the blast site is detailed in Chapter 4.
11	The EIA Coordinators shall obtain and furnish the details of quarry/quarries operated by the proponent in the past, either in the same location or elsewhere in the State with video and photographic evidences.	The PP has submitted self-declaration affidavit that there are no other quarries applied or existing in his name elsewhere in the state.
12	If the proponent has already carried out the mining activity in the proposed mining lease area after 15.01.2016, then the proponent shall furnish the following details from AD/DD mines,	Yes. DEIAA – KGI Lr No 35/DEIAA-KGI/Ec.No. 27/2018 Dated 27.02.2018
13	What was the period of the operation and stoppage of the earlier mines with last work permit issued by the AD/DD mines?	This is an Existing quarry
14	Quantity of minerals mined out.	This is an Existing quarry
	c) Highest production achieved in any one year	1,14,000 (2019-2020)
	d) Detail of approved depth of mining.	EC Depth 71m
	e) Actual depth of the mining achieved earlier.	Depth 20m
	t) Name of the person already mined in that leases	M/s. Sri Devaraajaa 'M' Sand (Thiru. D.Mathiazhagan-
	area. a) If FC and CTO already obtained the copy of the	$\frac{1}{1000} \frac{1}{1000} \frac{1}{1000} \frac{1}{1000} \frac{1}{1000} \frac{1}{1000} \frac{1}{10000} \frac{1}{10000000000000000000000000000000000$
	same shall be submitted.	27/2018 Dated 27.02.2018

		CTO: F.1682HSR/RS/DEE/TNPCB/HSR/A/2022 Dated: 22.08.2022
	h) Whether the mining was carried out as per the approved mine plan (or EC if issued) with stipulated benches.	EC depth is 71m, but actual depth is 20m.
15	All corner coordinates of the mine lease area, superimposed on a high-resolution Imagery/Toposheet, Geomorphology, Lithology and geology of the mining lease area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and Buffer zone area).	Satellite imagery of the project area along with boundary coordinates is given in the Chapter No 2,
16	The PP shall carry out Drone video survey covering the cluster, green belt, fencing etc.,	The Drone Video of the project site is taken covering the Greenbelt and Fencing around the Project and enclosed as soft copy as CD.
17	The proponent shall furnish photographs of adequate fencing, green belt along the periphery including replantation of existing trees & safety distance between the adjacent quarries & water bodies nearby provided as per the approved mining plan.	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000 Nos of trees were planted as a part of greenbelt development programme all along the periphery of the lease applied area and approach roads and village roads. As well the pp has provided wire fencing as recommended all along the boundary of the lease applied area.
18	The Project proponent shall provide the details of mineral reserves and mineable reserves, planned production capacity, proposed working methodology justifications, with the anticipated impacts of the mining operations on the surrounding environment and the remedial measures for the same.	Details of mineral reserves and mineable reserves, planned production capacity, proposed working methodology justifications are provided in Chapter 2. The anticipated impacts of the mining operations on the surrounding environment and the remedial measures for the same are provided in Chapter 4
19	The Project proponent shall provide the Organization chart indicating the appointment of various statutory officials and other competent persons to be appointed as per the provisions of Mines Act, 1952 and the MMR, 1961 for carrying out the quarrying operations scientifically and systematically in order to ensure safety and to protect the environment.	The Organization chart indicating the appointment of various statutory officials and other competent persons to be appointed as per the provisions of Mines Act, 1952 and the MMR, 1961 for carrying out the quarrying operations scientifically and systematically in order to ensure safety and to protect the environment.
20	The Project Proponent shall conduct the hydro- geological study considering the contour map of the water table detailing the number of ground water pumping & open wells, and surface water bodies such as rivers' tanks, canals, ponds etc. within 1 km (radius) along with the collected water level data for both monsoon and non-monsoon seasons from the PWD / TWAD so as to assess the impacts on the wells due to mining activity. Based on actual monitored data' it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be Provided.	The hydro-geological study was conducted to evaluate the possible impact on the ground water table. No significant impacts are anticipated on the water bodies around the project area. Details are discussed under Chapter No. 3.
21	The proponent shall furnish the baseline data for the environmental and ecological parameters with regard to surface water/ground water quantity, air quality, soil quality & flora/fauna including Traffic/vehicular movement study.	Baseline Data were collected for (Post Monsoon) Oct 2023 to Dec 2023. Details in Chapter No. 3. baseline data for the environment.
22	The Proponent shall carry out the Cumulative impact study due to mining operations carried out in the quarry specifically with reference to the specific environment in terms of soil, health, biodiversity, air	Cumulative impact study has been carried out covering proposed and existing quarries in the cluster and results related to air pollution, water pollution, & health impacts have been given in chapter No.7, Based on the results,

	pollution, water pollution, climate change and flood control & health impacts. Accordingly, the Environment Management plan should be prepared keeping the concerned quarry and the surrounding habitations in the mind.	environmental management plan has been prepared and given in Chapter No. 10.
23	Rain water harvesting management with recharging details along with water balance (both monsoon & non-monsoon) be submitted.	The lower part of the mine pit will be utilized as rain water harvesting structure (Temporary) and the water will be used for the water sprinkling on haul roads and Greenbelt development purpose. Rainwater harvesting structure will be constructed near the mine office.
24	Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompass pre operational, operational and post operational phases and submitted. Impact, if any, of change of land use should be given.	Land use and land cover of the study area is discussed in Chapter No. 3. Land use plan of the project area showing pre- operational, operational and post-operational phases are discussed in Chapter No. 3, Table No 3.3
25	Details of the land for storage of Overburden/Waste Dumps (or) Rejects outside the mine lease, such as extent of land area, distance from mine lease, its land use, R&R issues, if any, should be provided.	Not applicable
26	Proximity to Areas declared as 'Critically Polluted' (or) the Project areas which attracts the court restrictions for mining operations, should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the TNPCB (or) Dept. of Geology and Mining should be secured and furnished to the effect that the proposed mining activities could be considered.	Not Applicable. Project area / Study area is not declared in 'Critically Polluted' Area and does not come under 'Aravalli Range.
27	Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.	The lower part of the mine pit will be utilized as rain water harvesting structure (Temporary) and the water will be used for the water sprinkling on haul roads and Greenbelt development purpose. Rainwater harvesting structure will be constructed near the mine office.
28	Impact on local transport infrastructure due to the Project should be indicated.	Traffic density survey was carried out to analyze the impact of transportation in the study area as per IRC guidelines 1961 and it is inferred that there is no significant impact due to the proposed transportation from the project area. Details have been provided in Chapter No.2
29	A tree survey study shall be carried out (nos., name of the species, age, diameter etc.,) both within the mining lease applied area & 300m buffer zone and its management during mining activity.	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000Nos of trees were planted as a part of greenbelt development programme all along the periphery of the lease applied area and approach roads and village roads.
30	A detailed mine closure plan for the proposed project shall be included in EIA/EMP report which should be site-specific.	Noted & agreed. Mine closure plan is detailed in Chapter:4.
31	As a part of the study of flora and fauna around the vicinity of the proposed site, the EIA coordinator shall strive to educate the local students on the importance of preserving local flora and fauna by involving them in the study, wherever possible.	Noted, the EB study has been conducted covering the local students and importance of flora and fauna was explained.
32	The purpose of green belt around the project is to capture the fugitive emissions. Carbon sequestration	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a

improving the aschetics. A vide range of indigenous plant species should be planted as given in the Apriculture University. The plant species with dense/inoderate canopy of native origin should be planted as per the advectory of native origin should be planted as per the advectory of native origin should be planted as per the advectory of native origin should be planted as per the advectory of native origin should be planted as per the advector of local forest rathorities' botanis / Horitculturist with regard to site specific choices. The proponent shall carmark the greenhelt area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in hertveen blocks in an organized manner. As per the recommendations during SEAC TOR Presentation of the proposal and commitment of PP a count of 2000 Nos of trees were planted as a part of the project site with at least 3 meters wide and in hertveen blocks in an organized manner. 34 A Dasater management Plan shall be prepared and included in the ELA/EMP Report. Disaster management Plan Shall be prepared and included in the ELA/EMP Report. 36 Occupational Health impacts of the Project should be anticipated and the proposed prevenitor measures when aduits boat be incorporated in the ELA/EMP Report. A Risk Assessment and management Plan shall be prepared and included realised examination schedules should be incorporated in the ELA/EMP Report. No Public Health implacts of the Project should be anticipated and the proposed prevenitor schedules should be carried out within a S km buff? zone from the mining activity. 37 Poolic health implications of the Project and influence to the local commonity proposed to revenitors. 38 The Socio-economic signi		and to attenuate the noise generated, in addition to	count of 2000 Nos of trees were planted as a part of
plant species should be planted as given in the appendix in consultation with the DFO, State Agriculture University. The plant species with dense-moderate canepy of native origin should be chosen. Species of Small mechanization with the thosen. Species of Small mechanization with the planted as per the advice of local forest authorities. As per the recommendations during SEAC TOR Presentation of the proposal and commitment of PP a count of 2000 Nos of trees were planted as a part of choices. The proponent shall earnaw the greenbel area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and included in the HA/PMR Paport. Disaster management Plan shall be preprived vide lease applied area and approach rough and village rouds. 34 A Disaster management Plan shall be prepared and included in the ELMPAMP Report. Disaster management Plan shall be prepared and included in the ELMPAMP Report. 35 A Risk Assessment and management Plan shall be project specific occupational health mitigation measures with require discillities proposed in the mining area may be detailed. A Risk Assessment and management Plan Chapter-7 36 Occupational Health mitigation measures of socio-economic singlineance and included in the IMPAMP Report. A Risk Assessment and management Plan Chapter-10 37 Public health implications of the Project and related alouid be systematically evaluated and the proposed in the indicated. As far as possible, quantitive dimensions may be given with time frames for implementation. No Public Health Implications anticipated due to this project. Details of lifegiation pending against the project, ff any, with direction order prased by any Court of b		improving the aesthetics. A wide range of indigenous	greenbelt development programme all along the
appendix in consultation with the DFO, State and village roads. Agriculture University. The plant species with dense-moderate canopy of native origin should be chosen. Species of Small medium/hall trees alternating with shrobs should be planted to a mixed planted as per the advice of local forest authorities. As per the recommendations during SEAC TOR Presentation of the proposal and commitment of PP a count of 2000 Nos of trees were planted as a part of the project site with at least 3 metry wide and in between blocks in an organized manner. 34 A Disaster management Plan shall be prepared and included in the EIA/EMP Report. Disaster management Plan shall be prepared and included in the EIA/EMP Report. 36 Occupational Health impacts of the Project should be anticipated and the proposed preventive measures spel tout in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP Report. Disaster management Plan Chapter-7 37 Public health impacts of the Project should be anticipated and the proposed preventive measures spel tout in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP Report. No Public Health Implications anticipated due to this project. Details of CER are discussed under the project should be quark of the project and related activities for the population in the impact of the project and influence to the local community proposed to re- medial measures should be detailed along with budgetary allocations. No Public Health Implications anticipated due to this project. Details of CER are discussed under there proposed quarying site for which now the EC is so		plant species should be planted as given in the	periphery of the lease applied area and approach roads
Apriculture University. The plant species with dense/moderate canopy of native origin should be chosen. Species of Small medium/all trees alternating with shrubs should be planted io a mixed mamer. 33 Taller/one year old Saplings raised in appropriate size of bugs; preferable yeco-friendly bugs should be choices. The proponent shall cemark the greenbel area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in choices. The proponent shall cemark the greenbel area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in included in the EIA/EMP Report. Disaster management Plan shall be prepared and included in the EIA/EMP Report. 34 A Disaster management Plan shall be prepared and included in the EIA/EMP Report. Disaster management Plan Shall be prepared and included in the EIA/EMP Report. 36 Occupational Health impacts of the Project should be autivipated and the proposed preventive mesures spelt out in detail. Details of pre-place tones when excludes should be incorporated in the EMP. The project specific occupational health impacts one broposed in measures with required facilities proposed in the mining area may be detailed. No Public Health impacts are discussed under Chapter 8. 37 Public health implications of the Project and related and influence to the local community proposed to the provided by the Project Froponent should be provided by the Project for proponent should be provided by the Project is for proponent should be provided by the Project is for proposed to the provided by the Project is for proposed to provided by the Project is for proposed to provided by the Project is for proponent should be given with time Frames for implementation.		appendix in consultation with the DFO. State	and village roads.
dense/moderate campy of native origin should be chosen. Species of Small medium/fall trees alternating with shubs should be planted as part of advice of local forest authorities. 33 Taller/one year old Saplings raised in appropriate planted as per the advice of local forest authorities. botanis / Horticulturist with regard to site specific choices. The proponent shall earmark the greenbelt area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in the development programme all along the project site with at least 3 meters wide and in the development programme all along the propert dimediated in the ELA/EMP Report. 34 A Disster management Plan shall be prepared and included in the ELA/EMP Report. 35 A Risk Assessment and management Plan shall be prepared and included in the ELA/EMP Report. 36 Occupational Health impacts of the Project should be anticipated and the proposed preventive mesures spelt out in deall. Details of pre-placement medical examination and periodical medical examination and periodical medical examination so the Project and related and medical facilities proposed in the mining activity. Measures of socio-economic studies should be encorporated in the FMP. The project specific occupational health mitigation measures solut be detailed along with budgetary allocations. 37 Public health implications of the Project and related along with budgetary allocations. No Public Health Implications anticipated due to this project. Chant & Should be carried and within a 5 km buffer zone from the mining activity. Measures of socio-economic studies should be the project. No Public Health Implications anticipated due to this project		Agriculture University The plant species with	
 chosen. Species of Small medium/tall trees alternating with shrubs should be planted io a mixed mammer. The Socio-economic studies should be parted to a mixed miniters. I doing the boundary of the lease applied area and approach roads in the transmitter of the project site with at least 3 meters wide and in between blocks in an organized mammer. A Risk Assessment and management Plan shall be prepared and included in the EIA/EMP Report. A Risk Assessment and management Plan shall be prepared and included in the EIA/EMP Report. 5 The committee shall deliberate on risk management The risk management plan and disaster management			
plan pertaining to the cluster in a holistic manner plan will be followed as per this EIA report.			
especially during natural calamities like intense rain			
inundation of the cluster and evacuation plan			
6 The Cluster Management Committee shall form Environmental policy is described in the EIA report			
Environmental Policy to practice sustainable mining Chapter No. 6 and the same will be followed			
in a scientific and systematic manner in accordance			
with the law. The role played by the committee in			
implementing the environmental policy devised shall			
be given in detail.			
7 The committee shall furnish action plan regarding the A proper action plan regarding the restoration will			
restoration strategy with respect to the individual be followed by the committee			
quarry failing under the cluster in a holistic manner.			
Management plan within the cluster management plan to the respective authority in the			
management plan while elusion.			
9 The committee shall deliberate on the health of the The risk management plan and disaster management			
workers/staff involved in the mining as well as the plan will be followed as not the ELA report			
health of the public.			
10 The committee shall furnish an action plan to achieve A proper action plan with reference to water.			
sustainable development goals with reference to sanitation & safety will be devised and submitted by			
water, sanitation & safety. the committee to the respective authority.			
11 The committee shall furnish the fire safety and The fire safety and evacuation plan will be carried			
evacuation plan in the case of fire accidents. Out by as per the respective quarry mines managers			
Impact study of mining			
12 Detailed study shall be caried out in regard to impact Details of Soil health is given in Chapter No 3 and			
of mining around the proposed mine lease area biodiversity is given in Chapter No 3.			
covering the entire mine lease period as per precise The project will not cause any significant changes in the			
climate			

Agric	 arca communication order issued from reputed research institutions on the following a) Soil health & bio-diversity, physical land chemical features. b) Climate change leading to Droughts, Floods etc. c) Pollution leading to release of Greenhouse gases (GHG), rise in Temperature' & Livelihood of the local people. d) Possibilities of water contamination and impact on aquatic ecosystem health' e) Agriculture, Forestry & Traditional practices. 1) Hydrothermal/Geothermal effect due to destruction in the Environment' g) Bio-geochemical processes and its foot prints including environmental stress' h) Sediment geochemistry in the surface steams. 	Climatic changes and GHG are described in Chapter No 4. Details of water contamination and impact on aquatic ecosystem is given in Chapter No 4. Hydrothermal/ Geothermal effects due to destruction in the environment, Bio geochemical process and sediment geo chemistry given in the Chapter No 7.	
13	Impact on surrounding agricultural fields around the	As the proposed lease area is dominantly surrounded by	
	proposed mining Area.	mining land, barren land, and fallow land, the impact on the surrounding agricultural fields if present will be low. With proper mitigation measures, the project will be carried out to reduce the impact further to the level of negligence.	
14	Impact on soil flora & vegetation around the project site.	The vegetation details have been provided in chapter III. There is no schedule I species of animals observed within study area as per Wildlife Protection Act, 1972 and no species falls in vulnerable, endangered or threatened category as per IUCN. There is no endangered red list species found in the study area.	
15	Details of type of vegetations including no. of trees & shrubs within the proposed mining area and. If so, transplantation of such vegetations all along the boundary of the proposed mining area shall committed mentioned in EMP.	The vegetation details have been provided in chapter III. There is no schedule I species of animals observed within study area as per Wildlife Protection Act, 1972 and no species falls in vulnerable, endangered or threatened category as per IUCN. There is no endangered red list species found in the study area	
16	The Environmental Impact Assessment should study the biodiversity, the natural ecosystem, the soil micro flora. fauna and soil seed banks and suggest measures to maintain the natural Ecosystem.	Details are discussed in Chapter No.3	
17	Action should specifically suggest for sustainable management of the area and restoration of ecosystem for flow of goods and services.	The Eco System of the area will be retained during the mining operation by the way of planting trees in the boundary barrier and un utilized areas. After completion of mining operation, the quarried-out pit will be facilitated to collect the rainwater to pit act as temporary reservoir	
18	The project proponent shall study and furnish the impact of project on plantations in adjoining patta lands. Horticulture, Agriculture and livestock.	The project area is bounded by dry barren land on all the sides.	
Forest			
19	The project proponent shall detail study on impact of mining on Reserve forests free ranging wildlife.	There is no Reserve Forest within 1km radius from the project area (Peddathalapalli R.F-2.30km-SW. The mining operation will not cause any significant impact to the Reserve Forest and Wild life Sanctuaries.	
20	The Environmental Impact Assessment should study	There is no forest/wildlife within 10km radius, chapter 3	
	impact on forest, vegetation, endemic, vulnerable and endangered indigenous flora and fauna.	details of Ecology and Biodiversity, and 4 endemic vulnerable and endangered indigenous flora and fauna.	

21	The Environmental Impact Assessment should study	Inside trees 840, outside trees 1560 detailed in greenbelt
	impact on standing trees and the existing trees should	plan chapter-4 and 10.
	be numbered and action suggested for protection.	
22	The Environmental Impact Assessment should study	Anticipated Environment Impact and Mitigation
	impact on protected areas, Reserve Forests,	measures are detailed in Chapter No.4
	National Parks, Corridors and Wildlife pathways,	
	near project site.	
Water	r Environment

TERMS OF REFERENCE (ToR) COMPLIANCE

Tmt.K.M. Vijaya -P2

ToR Obtained vide Lr No. SEIAA-TN/F.No.10248/SEAC/ToR-1676/2024 Dated:14.02.2024

	SPECIFIC CONDITIONS		
Sl. No.	ToR Condition	Reply	
1	The proponent is requested to carry out a survey and enumerate on the structures located within the radius i)50m ii)100m iii)200m and iv)500m shall be enumerated with details such as dwelling houses with number of occupants, whether it belongs to the owner (or) not, place of worship, industries, factories, sheds, etc with indicating the owner of the building, nature	Chapter-3 Socio economic environment details in structure map 300m Radius with table.	

	of construction, age of the building number of	
	residents, their profession and income, etc.,	
2	The PP shall furnish the ownership details of the physical structures located near the proposed mine lease area, number of workers, time period of working etc	Noted and agreed
3	If the existing depth of quarry has already reached 30 m, for the safety of the persons employed in the quarry, the PP shall aarry out the scientific studies and to furnish the report with assessing the slope stability of the working benches and existing quarry walls for evaluating the slope stabilization & protective measures while designing the proposed benches, by involving any one of the reputed Research and Academic Institutions - CSIR-Central Institute of Mining & Fuel Research / Dhanbad, NIRM/Bangalore, Division of Geotechnical Engineering-IITMadras, NIT-Dept of Mining Engg, Surathkal, and Anna University Chennai-CEG Campus. A copy of such scientific study report shall be submitted to the SEIAA, MoEF, TNPCB, AD/Mines-DGM and DMS, Chennai as a part of Environmental Compliance without any deviation.	Existing quarry EC approval Depth 71m
4	The project proponent shall fumish Certified Compliance Report (CCR) obtained from IRO(SZ), MoEF&CC and with mitigation measures along with the budgetary allocation for the non-compliance stated therein.	Proponent obtained Certified Compliance report from the MoEF & CC, Regional Office, Chennai vide F.1682HSR/RS/DEE/TNPCB/HSR/A/2022 Dated: 22.08.2022. Proponent has carried out Mitigation measures for the Non compliances addressed in the CCR and ensure the remaining activities will be completed after Starting the mining Operation.
5	The Project Proponent shall furnish the revised EMP based on the study carried out on impact of the dust & other environmental impacts due to proposed quarrying operations on the nearby agricultural lands for remaining life of the mine in the format prescribed by the SEAC considering the cluster situation.	The Revised EMP has been incorporated in the Chapter No. X
6	The PP shall prepare a conceptual working plan accommodating the remedial actions such as inclusion of haul road accessibility keeping the benches intact, based on the studies carried out to assess the slope stability of the working benches to be constructed and existing quarry wall. The PP shall submit a copy of the aforesaid report indicating the stability status of the quarry wall and slope stabiliry action plan during the time of appraisal for obtaining the EC.	Noted and agreed
7	The PP shall undertake Hydrogeology study considering nearby existing wells, Aquifers, Ground water & surface water levels etc within the radius of 1km.	The hydro-geological study was conducted to evaluate the possible impact on the ground water table. No significant impacts are anticipated on the water bodies around the project area. Details are discussed under Chapter No. 4 Chapter-3 details in water environment

	Annexure	2-1
1	The PP shall furnish the letter obtained from the AD (Mines) indicating the existing pit dimensions and pit conditions showing the details on mine having worked during the earlier lease period.	Noted and agreed
2	The PP shall fumish DFO letter stating that the proximity distance of Reserve Forests, Protected Areas, Sanctuaries, Tiger reserve etc., up to a radius of 25 km from the proposed site.	Noted, it will submit final EIA
3	The PP shall provide individual notice regarding the Public Hearing to the nearby house owners located in the vicinity of the project site.	Noted and agreed
4	The Proponent shall justif the selection of the site for carrying out the stone quarrying with the total volume arrived for the excavation & production adequate details such as lithology of the deposit, reserve estimation, place for waste dump/mined mineral storage, end-use of mined materials, identified potential customers/end-users and travel path.	Rough Stone quarry (Volume) 9,68,575m ³ Production of Rough Stone quarry (Scheme of Mining plan period) Volume 7,93,205m ³
5	The PP shall also justify the selection of mining methodology (conventional or nonconventional) adopting blasting techniques/non-explosive techniques with proper ground reality & laboratory testing.	Noted and agreed
6	The proponent shall submit the "Blast Design Parameters for controlling the vibration and fly rock from the quarry blasting" considering the existence of sensitive structures including habitations within 500 m from the lease boundary.	Noted and agreed
7	The PP shall justify the estimation of HEMM population for excavation and transportation in the proposed quarries with proper calculation methodology adopted.	Chapter- 2 Transport density and calculation of truck load.
8	The PP shall enumerate the environmental settings situated within a radial distance of 1km such rivers/water bodies/reserve forests/ grazing land /existence of the hospitals and educational institutions/structures.	Details in Chapter-3 Environment settings with 1km radius landuse map
9	The PP shall provide the details of the anticipated impacts of the mining operations on the surrounding environment and the remedial measures for the same.	Details in chapter-4 anticipated impacts of the mining operations
10	The proponent is requested to carry out a survey and enumerate on the structures located within the radius i)50m ii)100m iii)200m and iv)500m shall be enumerated with details such as dwelling houses with number of occupants, whether it belongs to the owner (or) not, place of worship, industries, factories, sheds, etc with indicating the owner of the building, nature of construction, age of the building number of residents, their profession and income, etc.,	Chapter-3 Socio economic environment details in structure map 300m Radius with table.
11	The PP shall submit a 'Slope Stability Action Plan' for the proposed quarry where the proposed depth exceeds 30 m and it shall cover the aspects of stability of quarry walls including the access ramp	Existing quarry Proposed depth 31m (1m Gravel +30m Rough
	keeping the benches intact.	stone)

12	If the blasting operation is to be carried out, the PP shall present a conceptual design for carrying out the NONEL initiation based controlled blasting operation including the line drilling & muffle blasting techniques and a Simulation Model indicating the anricipated Blast induced Ground vibration levels in the proposed quarry as stipulated by the DGMS circular No.7 of 1997, during the EIA Proposal.	Details in chapter-4 sub-4.4.3.1 Common Mitigation Measures for carrying out the NONEL initiation based controlled blasting method.
13	The PP shall furnish the affidavit stating that the blasting operation in the proposed quarry is carried out by the statutory competent person as per the MMR 1961 such as blaster, mining mate, mine foreman, II/I Class mines manager appointed by the proponent.	The PP affirms that post execution of Quarry Lease Deed the application for Notice of Opening of the Mine along with Notice of Appointment of Competent Person shall be submitted to Director General Mines Safety, Chennai as per MMR, 1961. And ensure the quarry is operated under the Competent Person Employed.
14	The PP shall give an affidavit stating that no contractual persons provided by the explosive suppliers will be employed for carrying out the blasting operations in the proposed quarries.	This is an Existing quarrry
15	The PP shall also give an affidavit that no highly sensitive structure such as fire-cracker manufacturing units, Gas godown/explosive Magazine, LPG Bottling Units, etc are located within a radial distance of 300 m from the lease boundary of the proposed quarry.	Noted and agreed
16	The PP shall present a conceptual design for carrying out only controlled blasting operation involving line drilling and mufIle blasting in the proposed quarry such that the blast-induced ground vibrations are controlled as well as no fly rock travel beyond 20 m from the blast site.	The details of design for carrying out controlled blasting operation involving line drilling and muffle blasting to minimize blast-induced ground vibrations and controlled fly rock travel beyond 30 m from the blast site is detailed in Chapter 4.
17	The EIA Coordinators shall obtain and furnish the details of quarry/quarries operated by the proponent in the past, either in the same location or elsewhere in the State with video and photographic evidences.	The PP has submitted self-declaration affidavit that there are no other quarries applied or existing in his name elsewhere in the state.
18	The PP shall provide the environmental mitigation measures implemented for the crusher(s) located within the mining lease.	Details in environmental mitigation Chapter-4
19	 If the proponent has already carried out the mining activity in the proposed mining lease area after 15.01.2016, then the proponent shall furnish the following details from AD/DD mines, a) What was the period of the operation and stoppage of the earlier mines with last work permit issued by the AD/DD mines b) Quantity of minerals mined out. c) Highest production achieved in any one year d) Detail of approved depth of mining. e) Actual depth of the mining achieved earlier. f) Name of the person already mined in that leases area. g) If EC and CTO already obtained, the copy of the same shall be submitted. h) Whether the mining was carried out as per the approved mine plan (or EC if issued) with stimulated benchar. 	 a) Existing quarry b) Quantity of minerals is 1,06,000 m³ for five years. c) Highest Production 28,000m³ (2020-2021) d) EC Approved Depth of mining 71m e) 12m Depth f) Tmt.K.M.Vijaya g) EC: DEIAA – KGI Letter No. 34/DEIAA-KGI/Ec.No. 26/2018 Dated 27.02.2018 CTO(Renewal): F.1682HSR/RS/DEE/TNPCB/HSR/A/2022 Dated: 22.08.2022 h) Actual depth is 12m, but EC approved depth is 71m.

20	If any quarrying operations were carried out in the	
	proposed quarrying site for which now the EC is	This is an Existing quarry
	sought, the Project Proponent shall fumish the	EC: DEIAA – KGI Letter No. 34/DEIAA-

	Environment Management plan should be prepared	environmental management plan has been prepared
	keeping the concerned quarry and the surrounding	and given in Chapter No. 10. Pg. No 141.
	habitations in the mind.	

28	Rain water harvesting management with recharging details along with water balance (both monsoon & non-monsoon) be submitted.	The lower part of the mine pit will be utilized as rain water harvesting structure (Temporary) and the water will be used for the water sprinkling on haul roads and Greenbelt development purpose. Rainwater harvesting structure will be constructed near the mine office.
29	Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompass pre operational, operational and post operational phases and submitted. Impact, if any, of change of land use should be given.	Land use and land cover of the study area is discussed in Chapter No. 3. Land use plan of the project area showing pre- operational, operational and post-operational phases are discussed in Chapter No. 3, Table No 3.3, Page No. 39.
30	Details of the land for storage of Overburden/Waste Dumps (or) Rejects outside the mine lease, such as extent of land area, distance from mine lease, its land use, R&R issues, if any, should be provided.	Not applicable
31	Description of water conservation measures proposed to be adopted in the project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.	The lower part of the mine pit will be utilized as rain water harvesting structure (Temporary) and the water will be used for the water sprinkling on haul roads and Greenbelt development purpose. Rainwater harvesting structure will be constructed near the mine office.
32	If the Village Road/State highway/National highway are located within a radial distance of 500 m from the lease boundary of the quarry proposal, the PP shall carry out traffic studies to indicate impact on local transport infrastructure due to the Project and mitigation measures.	Traffic density survey was carried out to analyse the impact of Transportation in the study area as per IRC guidelines 1961 and it is inferred that there is no significant impact due to the proposed transportation from the project area. Details in Chapter 2.
33	A tree survey study shall be carried out (nos., name of the species, age, diameter etc.,) both within the mining lease applied area & 300m buffer zone and its management during mining activity.	There are no trees present in the target mining area. As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000Nos of trees were planted as a part of greenbelt development programme all along the periphery of the lease applied area and approach roads and village roads.
34	A detailed mine closure plan for the proposed project shall be included in EIA/EMP report which should be site-specific.	Noted & agreed. Mine closure plan is detailed in Chapter:4.
35	Public Hearing points raised and commitments of the Project Proponent on the same along with time bound Action pran with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the project and to be submitted ro SEIAA/SEAC with regard to the office Memorandum of MoEF& CC accordingly.	Noted & agreed.
36	The Public hearing advertisement shall be published in one major National daily and one most circulated vernacular daily.	Noted and agreed
37	The PP shall produce/dispray the EIA report, Executive summary and other related information with respect to public hearing in Tamil Language also.	Enclosed as separate booklet.
38	As a part of the study of flora and fauna around the vicinity of the proposed site, the EIA coordinator shall strive to educate the local students on the	It will be submit final EIA/EMP report.

	importance of preserving local flora and fauna by	
39	The purpose of green belt around the project is to capture the fugitive emissions. Carbon sequestration and to attenuate the noise generated, in addition to improving the aesthetics. A wide range of indigenous plant species should be planted as given in the appendix in consultation with the DFO, State Agriculture University. The plant species with dense/moderate canopy of native origin should be chosen. Species of Small medium/tall trees alternating with shrubs should be planted io a mixed manner.	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000Nos of trees were planted as a part of greenbelt development programme all along the periphery of the lease applied area and approach roads and village roads.
40	Taller/one year old Saplings raised in appropriate size of bags; preferably eco-friendly bags should be planted as per the advice of local forest authorities / botanist / Horticulturist with regard to site specific choices. The proponent shall earmark the greenbelt area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in between blocks in an organized manner.	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000 Nos of trees were planted as a part of greenbelt development programme all along the periphery of the lease applied area and approach roads and village roads.
41	A Disaster management Plan shall be prepared and included in the EIA/EMP Report	Disaster management Plan is detailed in Chapter-7
42	A Risk Assessment and management Plan shall be prepared and included in the EIA/EMP Report.	A Risk Assessment and management Plan Chapter- 7
43	Occupational Health impacts of the Project should be anticipated and the proposed preventive measures spelt out in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP. The project specific occupational health mitigation measures with required facilities proposed in the mining area may be detailed.	Occupational Health impacts are discussed in chapter-10
44	Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.	No Public Health Implications anticipated due to this project. Details of CER and CSR are discussed under Chapter 8.
45	The Socio-economic studies should be carried out within a 5 km buffer zone from the mining activity. Measures of socio-economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.	Details are listed in Chapter:3. Socio-economic studies
46	Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.	No Litigation is pending
47	Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.	Project benefit is given in the Chapter No.8.
48	If any quarrying operations were carried out in the proposed quarrying site for which now the EC is sought, the Project Proponent shall furnish the detailed compliance to EC conditions given in the previous EC with the site photographs which shall	PreviousEC: F.1682HSR/RS/DEE/TNPCB/HSR/A/2022 Dated: 22.08.2022 It is an Existing Lease.

	duly be certified by MoEF & CC, Regional Office,	
	Chennai (or) the concerned DEE/TNPCB.	
49	The PP shall prepare the EMP for the entire life of mine and also furnish the sworn affidavit stating to abide the EMP for the entire life of mine.	Noted and agreed
50	Concealing any factual information or submission of false/fabricated data and failure to comply with any of the conditions mentioned above may result in withdrawal of this Terms of Reference besides attracting penal provisions in the Environment (Protection) Act, 1986.	Noted and agreed
	NORMAL CONDITIO	NS- Annexure-B
Clust	er Management committee	
1.	Cluster Management Committee shall be framed which must include all the proponents in the cluster as members including the existing as well as proposed quarry.	Cluster Management Committee has been constituted initially with 2quarry.
2	The members must coordinate among themselves for the effective implementation of EMP as committed including Green Belt Development, Water sprinkling. tree plantation, blasting etc	The information will be shared to the cluster management committee during the monthly meeting
3	The List of members of the committee formed shall be submitted to AD/Mines before the execution of mining lease and the same shall be updated every year to the AD/Mines.	The list of members of the committee formed will be submitted to AD/Mines before the execution of mining lease.
4	Detailed operational Plan must be submitted which must include the blasting frequency with respect to the nearby quarry situated in the cluster, the usage of haul roads by the individual quarry in the form of route map and network.	All the information has been discussed in Chapter No.2
5	The committee shall deliberate on risk management plan pertaining to the cluster in a holistic manner especially during natural calamities like intense rain and the mitigation measures considering the inundation of the cluster and evacuation plan	The risk management plan and disaster management plan will be followed as per this EIA report.
6	The Cluster Management Committee shall form Environmental Policy to practice sustainable mining in a scientific and systematic manner in accordance with the law. The role played by the committee in implementing the environmental policy devised shall be given in detail.	Environmental policy is described in the EIA report Chapter No. 6 and the same will be followed.
7	The committee shall furnish action plan regarding the restoration strategy with respect to the individual quarry falling under the cluster in a holistic manner.	A proper action plan regarding the restoration will be followed by the committee
8	The committee shall furnish the Emergency Management plan within the cluster.	The committee will submit the emergency management plan to the respective authority in the stipulated time period.
9	The committee shall deliberate on the health of the workers/staff involved in the mining as well as the health of the public.	The risk management plan and disaster management plan will be followed as per the EIA report.
10	The committee shall furnish an action plan to achieve sustainable development goals with reference to water, sanitation & safety.	A proper action plan with reference to water, sanitation & safety will be devised and submitted by the committee to the respective authority.

11	The committee shall furnish the fire safety and	The fire safety and evacuation plan will be
	evacuation plan in the case of fire accidents.	carried out by as per the respective quarry
		mines managers
Impac	ct study of mining	<u> </u>

	Dust Control and steps adopted to efficiently utilize	details.
	the Energy shall be furnished.	
Clime	ate Change	
32	The Environmental Impact Assessment shall study in detail the carbon emission and also suggest the measures to mitigate carbon emission including development of carbon sinks and temperature reduction including control of other emission and climate mitigation activities.	Details of carbon emission and mitigation activities are given int the Chapter No.4
33	The Environmental impact Assessment should study impact on climate change, temperature rise, pollution and above soil & below soil carbon stock	The project will not cause significant impact on climatic change. Description about the project and climatic changes is described in Chanter No.4.
Mine	Closure Plan	eninate changes is described in Chapter No.4.
24	Detailed Mine Closure Plan acyoring the antire	Details in Chapter 2 mins alogure plan
54	mine lease period as per precise area communication order issued.	Details in Chapter 2 mine closure plan
EMP		
35	Detailed Environment Management Plan along with adaptation, mitigation & remedial strategies covering the entire mine lease period as per precise area communication order issued.	Details in EMP in chapter 10
36	The Environmental Impact Assessment should hold detailed study on EMP with budget for green belt development and mine closure plan including disaster management plan.	Detailed Environment Management Plan for the project to mitigate the anticipated impacts described under Chapter 4 is discussed under Chapter 10.
Disas	ter Management Plan	
38	To furnish disaster management plan and disaster mitigation measures in regard to all aspects to avoid/reduce vulnerability to hazards & to cope with disaster/untoward accidents in & around the proposed mine lease area due to the proposed method of mining activity & its related activities covering the entire mine lease period as per precise area communication order issued.	Disaster management Plan details in Chapter-7
Other	[#] S	
39	The project proponent shall furnish VAO certificate with reference to 300m radius regard to approved habitations. schools. Archaeological sites. Structures. railway lines, roads. Water bodies such as streams, odai, vaari, canal, channel. river, lake pond, tank etc.	The letter detailing habitations around the proposed mining is obtained from Kothapetta Village Administrative Office vide Letter Nil Dated: 04.11.2022 and enclosed as Annexure – 3
40	As per the MoEF & CC office memorandum tr.No.22-651201 7-1A.111 dated: 30.09.2020 and 20.10.2020 the proponent shall address the concerns raised during the public consultation and all the activities proposed shall be part of the Environment Management Plan.	Noted and agreed
41	The project proponent shall study and furnish the possible pollution due to plastic and microplastic on the environment. The ecological risks and impacts of plastic & microplastics on aquatic environment and fresh water systems due to activities, contemplated during mining may be investigated and reported.	Details of plastic management is in chapter 7

TERMS OF REFERENCE (ToR) COMPLIANCE

M/s. A.M. Quality Stone-P-3 ToR Identification No TO23B0108TN5558418N dated 13.03.2024

SPECIFIC CONDITIONS

51		
No.	ToR Condition	Reply
1	The proponent shall study the impact of carrying out blasting on the structures located within 500m from the cluster by carrying out Blast-Induced Ground vibration study in the any of the operating mines in the same cluster by involving any one of the reputed scientific / academic institutions - CSIR-Central Institute of Mining and Fuel Research (CIMFR), Dhanbad; NIRM, Bengaluru; IIT(ISM), Dhanbad; Anna University, Chennai; NITK, Surathkal and IIT, Madras.	The details of design for carrying out controlled blasting operation involving line drilling and muffle blasting to minimize blast-induced ground vibrations and controlled fly rock travel beyond 30 m from the blast site is detailed in Chapter 4.
2	The proponent is requested to carry out a survey and enumerate on the structures located within the radius i)50m ii)100m iii)200m and iv)500m shall be enumerated with details such as dwelling houses with number of occupants, whether it belongs to the owner (or) not, place of worship, industries, factories, sheds, etc with indicating the owner of the building, nature of construction, age of the building number of residents, their profession and income, etc.,	Chapter-3 Socio economic environment details in structure map 300m Radius with table.
3	The PP shall obtain Certified Compliance Report (CCR) from Integrated Regional Office, MoEF&CC, Chennai, for the earlier Environmental Clearance, if applicable.	Noted and agreed
	Annexu	ıre-1
1	In the case of existing/operating mines, a letter obtained from the concerned AD (Mines) shall be submitted and it shall include the following i. original pit dimension of the existing quarry	Yes. Existing quarry Existing Pit Dimension
		Pit1: 19,730 sq.mt. 15m (D) Max Pit II: 10,240 Sq.mt. 7m (D) Max
	ii. Quantity achieved vs EC approved quantity	-
	iii. Balance quantity as per Mineable Reserve calculated	Available Mineable Reserves 4,81,920m ³ of Rough Stone (Volume)
	iv. Mined out Depth as on date vs EC permitted depth	-
	v. Details of illegal/Illicit Mining carried out, if any	Non Illigal
	vi. Non-Compliance / violation in the quarry during the past working	Non violence
	vii. Quantity of material mine out outside the mine	-
	lease area (or) in the adjacent quarry/field	Addressed in the Mining Dlan by providing adequate
	vin. condition of safety / benches	safety and making bench formations.
	ix. Revised/Modified Mining Plan showing the benches of not exceeding 6 m height and ultimate depth of not exceeding 50m.	Ultimate pit =229m(L) x 144m (W) x45m(D) for Mining Plan
2	Details of habitations around the proposed mining area and latest VAO certificate regarding the location of habitations within 300m radius from the periphery of the site.	The letter detailing habitations around the proposed mining is obtained from Kothapetta Village Administrative Office vide Letter nil Dated: $04.11.2022$ and enclosed as Annexure – 3

3	The PP shall submit a detailed hydrological report indicating the impact of proposed quarrying operations on the waterbodies like lake, water tanks, etc are located within 1km of the proposed quarry.	The hydro-geological study was conducted to evaluate the possible impact on the ground water table. No significant impacts are anticipated on the water bodies around the project area. Details are discussed under Chapter No. 4
4	The proponent shall carry out Bio diversity study through reputed institution and the same shall be included in EIA Report.	The Bio diversity study has been conducted by the Functional Area Expert approved by the NABET. The same has been detailed in the Chapter No.3
5	The DFO letter stating that the proximity distance of Reserve Forests, Protected Areas, Sanctuaries, Tiger reserve etc., up to a radius of 25 km from the proposed site.	Request to consider the secondary source data detailing the nearest reserve forest from Tamil Nadu Geographical Information System (TNGIS). The Nearest Reserve Forest is Peddathalapalli R.F – 3.46km – South East
6	In the case of proposed lease in an existing (or old) quarry where the benches are not formed (or) partially formed as per the approved Mining Plan, the Project Proponent (PP) shall the PP shall carry out the scientific studies to assess the slope stability of the working benches to be constructed and existing quarry wall, by involving any one of the reputed Research and Academic Institutions - CSIR-Central Institute of Mining & Fuel Research / Dhanbad, NIRI/Bangalore, Division of Geotechnical Engineering-IIT-Madras, NIT-Dept of Mining Engg, Surathkal, and Anna University Chennai-CEG Campus'' The PP shall submit a copy of the aforesaid report indicating the stability status of the quarry wall and possible mitigation measures during the time of appraisal for obtaining the EC.	The applied area has an Existing Pit Dimension Pit1: 19,730 sq.mt. 15m (D) Max Pit II: 10,240 Sq.mt. 7m (D) Max. This was operated without Prior Environmental Clearance. Now, the Mining Plan is prepared considering the bench formation and working safety parameters and approve by Department of Geology & Mining.
7	However, in case of the fresh/virgin quarries, the Proponent shall submit a conceptual 'Slope Stability Plan' for the proposed quarry during the appraisal while obtaining the EC, when the depth of the working is extended beyond 30 m below ground level.	Existing quarry
8	The PP shall furnish the affidavit stating that the blasting operation in the proposed quarry is carried out by the statutory competent person as per the MMR 1961 such as blaster, mining mate, mine foreman, II/I Class mines manager appointed by the proponent.	The PP affirms that post execution of Quarry Lease Deed the application for Notice of Opening of the Mine along with Notice of Appointment of Competent Person shall be submitted to Director General Mines Safety, Chennai as per MMR, 1961. And ensure the quarry is operated under the Competent Person Employed.
9	The PP shall present a conceptual design for carrying out only controlled blasting operation involving line drilling and muffle blasting in the proposed quarry such that the blast-induced ground vibrations are controlled as well as no fly rock travel beyond 30 m from the blast site.	The details of design for carrying out controlled blasting operation involving line drilling and muffle blasting to minimize blast-induced ground vibrations and controlled fly rock travel beyond 30 m from the blast site is detailed in Chapter 4.
10	The EIA Coordinators shall obtain and furnish the details of quarry/quarries operated by the proponent in the past, either in the same location or elsewhere in the State with video and photographic evidences.	The PP has submitted self-declaration affidavit that there are no other quarries applied or existing in his name elsewhere in the state.
11	If the proponent has already carried out the mining activity in the proposed mining lease area after 15.01.2016, then the proponent shall furnish the following details from AD/DD mines,	Yes. DEIAA – KGI Lr No 35/DEIAA-KGI/Ec.No. 27/2018 Dated 27.02.2018
12	What was the period of the operation and stoppage of the earlier mines with last work permit issued by the AD/DD mines?	This is an Existing quarry

13	Quantity of minerals mined out.	This is an Existing quarry
	c) Highest production achieved in any one year	-
	d) Detail of approved depth of mining.	Approved depth of mining 45m Agl.
	e) Actual depth of the mining achieved earlier.	-
	f) Name of the person already mined in that leases area.	M/s. A.M. Quality Stone (Kowshik dev- Managing Partner)
	g) If EC and CTO already obtained, the copy of the same shall be submitted.	EC: Lr. No. SEIAA-TN/F.No.3215/EC/1(a)/2645/2015, Dated:05.01.2016, Lessee : Tmt. Qamrunnisa (Lease period 02.03.2016 – 01.03.2021) EC approved Quantity: 52,620m ³ Depth 10m
		CTO: F.0770HSR/RS/DEE/TNPCB/HSR/W/2020 Dated: 20.06.2020
	h) Whether the mining was carried out as per the approved mine plan (or EC if issued) with stipulated benches.	Existing depth is 15m, mining plan depth is 45m Agl.
14	All corner coordinates of the mine lease area, superimposed on a high-resolution Imagery/Toposheet, Geomorphology, Lithology and geology of the mining lease area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and Buffer zone area).	Satellite imagery of the project area along with boundary coordinates is given in the Chapter No 2,
15	The PP shall carry out Drone video survey covering the cluster, green belt, fencing etc.,	The Drone Video of the project site is taken covering the Greenbelt and Fencing around the Project and enclosed as soft copy as CD.
16	The proponent shall furnish photographs of adequate fencing, green belt along the periphery including replantation of existing trees & safety distance between the adjacent quarries & water bodies nearby provided as per the approved mining plan.	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000 Nos of trees were planted as a part of greenbelt development programme all along the periphery of the lease applied area and approach roads and village roads. As well the pp has provided wire fencing as recommended all along the boundary of the lease applied area.
17	The Project proponent shall provide the details of mineral reserves and mineable reserves, planned production capacity, proposed working methodology justifications, with the anticipated impacts of the mining operations on the surrounding environment and the remedial measures for the same.	Details of mineral reserves and mineable reserves, planned production capacity, proposed working methodology justifications are provided in Chapter 2. The anticipated impacts of the mining operations on the surrounding environment and the remedial measures for the same are provided in Chapter 4.
18	The Project proponent shall provide the Organization chart indicating the appointment of various statutory officials and other competent persons to be appointed as per the provisions of Mines Act, 1952 and the MMR, 1961 for carrying out the quarrying operations scientifically and systematically in order to ensure safety and to protect the environment.	The Organization chart indicating the appointment of various statutory officials and other competent persons to be appointed as per the provisions of Mines Act, 1952 and the MMR, 1961 for carrying out the quarrying operations scientifically and systematically in order to ensure safety and to protect the environment.
19	The Project Proponent shall conduct the hydro- geological study considering the contour map of the water table detailing the number of ground water pumping & open wells, and surface water bodies such as rivers' tanks, canals, ponds etc. within 1 km (radius) along with the collected water level data for both monsoon and non-monsoon seasons from the PWD / TWAD so as to assess the impacts on the wells due to mining activity. Based on actual	The hydro-geological study was conducted to evaluate the possible impact on the ground water table. No significant impacts are anticipated on the water bodies around the project area. Details are discussed under Chapter No. 3.

	monitored data' it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be Provided	
20	The proponent shall furnish the baseline data for the environmental and ecological parameters with regard to surface water/ground water quantity, air quality, soil quality & flora/fauna including Traffic/vehicular movement study.	Baseline Data were collected for (Post Monsoon) Oct 2023 to Dec 2023. Details in Chapter No. 3.
21	The Proponent shall carry out the Cumulative impact study due to mining operations carried out in the quarry specifically with reference to the specific environment in terms of soil, health, biodiversity, air pollution, water pollution, climate change and flood control & health impacts. Accordingly, the Environment Management plan should be prepared keeping the concerned quarry and the surrounding habitations in the mind.	Cumulative impact study has been carried out covering proposed and existing quarries in the cluster and results related to air pollution, water pollution, & health impacts have been given in chapter No. 7, Based on the results, environmental management plan has been prepared and given in Chapter No. 10.
22	Rain water harvesting management with recharging details along with water balance (both monsoon & non-monsoon) be submitted.	The lower part of the mine pit will be utilized as rain water harvesting structure (Temporary) and the water will be used for the water sprinkling on haul roads and Greenbelt development purpose. Rainwater harvesting structure will be constructed near the mine office.
23	Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompass pre operational, operational and post operational phases and submitted. Impact, if any, of change of land use should be given.	Land use and land cover of the study area is discussed in Chapter No. 3. Land use plan of the project area showing pre- operational, operational and post-operational phases are discussed in Chapter No. 3, Table No 3.3
24	Details of the land for storage of Overburden/Waste Dumps (or) Rejects outside the mine lease, such as extent of land area, distance from mine lease, its land use, R&R issues, if any, should be provided.	Not applicable
25	Proximity to Areas declared as 'Critically Polluted' (or) the Project areas which attracts the court restrictions for mining operations, should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the TNPCB (or) Dept. of Geology and Mining should be secured and furnished to the effect that the proposed mining activities could be considered.	Not Applicable. Project area / Study area is not declared in 'Critically Polluted' Area and does not come under 'Aravalli Range.
26	Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.	The lower part of the mine pit will be utilized as rain water harvesting structure (Temporary) and the water will be used for the water sprinkling on haul roads and Greenbelt development purpose. Rainwater harvesting structure will be constructed near the mine office.
27	Impact on local transport infrastructure due to the Project should be indicated.	Traffic density survey was carried out to analyze the impact of transportation in the study area as per IRC guidelines 1961 and it is inferred that there is no significant impact due to the proposed transportation from the project area. Details have been provided in Chapter No.2
28	A tree survey study shall be carried out (nos., name of the species, age, diameter etc.,) both within the mining lease applied area & 300m buffer zone and its management during mining activity.	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000Nos of trees were planted as a part of greenbelt development programme all along the

		periphery of the lease applied area and approach roads and village roads.
29	A detailed mine closure plan for the proposed project shall be included in EIA/EMP report which should be site-specific.	Noted & agreed. Mine closure plan is detailed in Chapter:4.
30	As a part of the study of flora and fauna around the vicinity of the proposed site, the EIA coordinator shall strive to educate the local students on the importance of preserving local flora and fauna by involving them in the study, wherever possible.	Noted, it will submit final EIA/EMP report.
31	The purpose of green belt around the project is to capture the fugitive emissions. Carbon sequestration and to attenuate the noise generated, in addition to improving the aesthetics. A wide range of indigenous plant species should be planted as given in the appendix in consultation with the DFO, State Agriculture University. The plant species with dense/moderate canopy of native origin should be chosen. Species of Small medium/tall trees alternating with shrubs should be planted io a mixed manner.	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000 Nos of trees were planted as a part of greenbelt development programme all along the periphery of the lease applied area and approach roads and village roads.
32	Taller/one year old Saplings raised in appropriate size of bags; preferably eco-friendly bags should be planted as per the advice of local forest authorities / botanist / Horticulturist with regard to site specific choices. The proponent shall earmark the greenbelt area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in between blocks in an organized manner.	As per the recommendations during SEAC ToR Presentation of the proposal and commitment of PP a count of 2000 Nos of trees were planted as a part of greenbelt development programme all along the periphery of the lease applied area and approach roads and village roads.
33	A Disaster management Plan shall be prepared and included in the EIA/EMP Report.	Disaster management Plan is detailed in Chapter-7
34	A Risk Assessment and management Plan shall be prepared and included in the EIA/EMP Report.	A Risk Assessment and management Plan Chapter- 7
35	Occupational Health impacts of the Project should be anticipated and the proposed preventive measures spelt out in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP. The project specific occupational health mitigation measures with required facilities proposed in the mining area may be detailed.	Occupational Health impacts are discussed in chapter- 10
36	Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.	No Public Health Implications anticipated due to this project. Details of CER and CSR are discussed under Chapter 8.
37	The Socio-economic studies should be carried out within a 5 km buffer zone from the mining activity. Measures of socio-economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.	Details are listed in Chapter:3.
38	Details of litigation pending against the project, if any, with direction /order passed by any Court of	No Litigation is pending
39	Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall	Project benefit is given in the Chapter No.8.

	clearly indicate environmental, social, economic,	
40	If any quarrying operations were carried out in the proposed quarrying site for which now the EC is sought, the Project Proponent shall furnish the detailed compliance to EC conditions given in the previous EC with the site photographs which shall duly be certified by MoEF & CC, Regional Office, Chennai (or) the concerned DEE/TNPCB.	Not Applicable. The applied area is a new proposal for Environmental Clearance.
41	The PP shall prepare the EMP for the entire life of mine and also furnish the sworn affidavit stating to abide the EMP for the entire life of mine.	Noted and agreed
42	Concealing any factual information or submission of false/fabricated data and failure to comply with any of the conditions mentioned above may result in withdrawal of this Terms of Reference besides attracting penal provisions in the Environment (Protection) Act, 1986.	Noted and agreed
	ADDITIONAL CONDI	TIONS- Annexure-B
Clust	er Management committee	
1.	Cluster Management Committee shall be framed which must include all the proponents in the cluster as members including the existing as well as proposed quarry.	Cluster Management Committee has been constituted initially with 3 quarries.
2	The members must coordinate among themselves for the effective implementation of EMP as committed including Green Belt Development, Water sprinkling. tree plantation, blasting etc	The information will be shared to the cluster management committee during the monthly meeting.
3	The List of members of the committee formed shall be submitted to AD/Mines before the execution of mining lease and the same shall be updated every year to the AD/Mines.	The list of members of the committee formed will be submitted to AD/Mines before the execution of mining lease.
4	Detailed operational Plan must be submitted which must include the blasting frequency with respect to the nearby quarry situated in the cluster, the usage of haul roads by the individual quarry in the form of route map and network.	All the information has been discussed in Chapter No.2
5	The committee shall deliberate on risk management plan pertaining to the cluster in a holistic manner especially during natural calamities like intense rain and the mitigation measures considering the inundation of the cluster and evacuation plan	The risk management plan and disaster management plan will be followed as per this EIA report.
6	The Cluster Management Committee shall form Environmental Policy to practice sustainable mining in a scientific and systematic manner in accordance with the law. The role played by the committee in implementing the environmental policy devised shall be given in detail.	Environmental policy is described in the EIA report Chapter No. 6 and the same will be followed.
7	The committee shall furnish action plan regarding the restoration strategy with respect to the individual quarry falling under the cluster in a holistic manner.	A proper action plan regarding the restoration will be followed by the committee
8	The committee shall furnish the Emergency Management plan within the cluster.	The committee will submit the emergency management plan to the respective authority in the stipulated time period.
9	The committee shall deliberate on the health of the workers/staff involved in the mining as well as the health of the public.	The risk management plan and disaster management plan will be followed as per the EIA report.

10	The committee shall furnish an action plan to achieve	A proper action plan with reference to water, sanitation
	sustainable development goals with reference to	& safety will be devised and submitted by the committee
	water, sanitation & safety.	to the respective authority.
11	The committee shall furnish the fire safety and	The fire safety and evacuation plan will be carried out by
	evacuation plan in the case of fire accidents.	as per the respective quarry mines managers
Impa	ct study of mining	
12	Detailed study shall be caried out in regard to impact	Details of Soil health is given in Chapter No 3 and
	of mining around the proposed mine lease area	biodiversity is given in Chapter No 3.
	covering the entire mine lease period as per precise	The project will not cause any significant changes in the
	arca communication order issued from reputed	climate
	research institutions on the following	Climatic changes and GHG are described in Chapter No
	a) Soil health & bio-diversity, physical land	4. Details of water contamination and impact on equation
	b) Climate change leading to Droughts Floods etc	ecosystem is given in Chapter No 4
	c) Pollution leading to release of Greenhouse gases	Hydrothermal/ Geothermal effects due to destruction in
	(GHG), rise in Temperature' & Livelihood	the environment, Bio geochemical process and sediment
	of the local people.	geo chemistry given in the Chapter No 7.

Agric	ulture & Agro-Biodiversity	
13	Impact on surrounding agricultural fields around the	As the proposed lease area is dominantly surrounded by mining land barren land and fallow land the impact on
	proposed mining Area.	the surrounding agricultural fields if present will be low.
		With proper mitigation measures, the project will be
		carried out to reduce the impact further to the level of
		negligence.
14	Impact on soil flora & vegetation around the project	The vegetation details have been provided in chapter III.
	Site.	study area as per Wildlife Protection Act, 1972 and no
		species falls in vulnerable, endangered or threatened
		category as per IUCN. There is no endangered red list
		species found in the study area.
15	Details of type of vegetations including no. of trees	The vegetation details have been provided in chapter III.
	& shrubs within the proposed mining area and. If so,	There is no schedule I species of animals observed within
	houndary of the proposed mining area shall	sudy area as per wildlife Protection Act, 1972 and no
	committed mentioned in EMP.	category as per IUCN. There is no endangered red list
		species found in the study area
16	The Environmental Impact Assessment should study	Details are discussed in Chapter No.3
	the biodiversity, the natural ecosystem, the soil micro	
	flora. fauna and soil seed banks and suggest measures	
17	to maintain the natural Ecosystem.	The Fee System of the area will be rateined during the
1/	management of the area and restoration of ecosystem	mining operation by the way of planting trees in the
	for flow of goods and services.	boundary barrier and un utilized areas.
		After completion of mining operation, the quarried-out
		pit will be facilitated to collect the rainwater to pit act as
4.5		temporary reservoir.
18	The project proponent shall study and furnish the	The project area is bounded by dry barren land on all the
	Impact of project on plantations in adjoining patta	sides.
	ianus. morticulture, Agriculture allu investock.	

Fores	t	
19	The project proponent shall detail study on impact of mining on Reserve forests free ranging wildlife.	There is no Reserve Forest within 1km radius from the project area (Peddathalapalli R.F-2.30km-SW). The mining operation will not cause any significant impact to the Reserve Forest and Wild life Sanctuaries.
20	The Environmental Impact Assessment should study impact on forest, vegetation, endemic, vulnerable and endangered indigenous flora and fauna.	chapter 3 details of Ecology and Biodiversity, and 4 endemic vulnerable and endangered indigenous flora and fauna.
21	The Environmental Impact Assessment should study impact on standing trees and the existing trees should be numbered and action suggested for protection.	850trees inside lease area. Outside trees 1550 trees
22	The Environmental Impact Assessment should study impact on protected areas, Reserve Forests, National Parks, Corridors and Wildlife pathways, near project site.	Anticipated Environment Impact and Mitigation measures are detailed in Chapter No.4
Water	r Environment	
23	Hydro-geological study considering the contour map of the water table detailing the number of ground water pumping & open wells, and surface water bodies such as rivers, tanks. canals, ponds etc. within 1 km (radius) so as to assess the impacts on the nearby waterbodies due to mining activity. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided, covering the entire mine lease period.	Hydro-geological study considering the contour map of the water table detailing Chapter-3
24	Erosion Control measures.	Garland drainage structures will be constructed around the lease area to control the erosion, as discussed in Section 4.3 under Chapter 4.
25	Detailed study shalt be carried out in regard to impact of mining around the proposed mine lease area on the nearby villages, water-bodies/ Rivers. & any ecological fragile areas.	In the EIA report Chapter No. IV enumerate the anticipated impact due to the project and mitigation measures
26	The project proponent shall study impact on fish habitats and the food WEB/ food chain in the water body and Reservoir.	Detailed under Chapter 3.
27	The project proponent shall study and furnish the details on potential fragmentation impact on natural environment by the activities.	Details are given in the Chapter No 4.
28	The project proponent shall study and furnish the impact on aquatic plants and animals in water bodies and possible scars on the landscape, damages to nearby caves, heritage site, and archaeological sites possible land form changes visual and aesthetic impacts.	Detailed discussed in the chapter 4
29	The Terms of Reference should specifically study impact on soil health, soil erosion, the soil, physical, chemical components and microbial components.	Details of impact on soil environment is detailed in Chapter No.4.
30	The Environmental impact Assessment should study on wetlands, water bodies, rivers streams, lakes and farmer sites.	The nearest water bodies from the project area are an Odai located $150m - S$
Energ	gy	
31	The measures taken to control Noise. Air, Water. Dust Control and steps adopted to efficiently utilize the Energy shall be furnished.	Details in Chapter 3 environmental monitoring details.
Clima	ate Change	
32	The Environmental Impact Assessment shall study in detail the carbon emission and also suggest the	Details of carbon emission and mitigation activities are given int the Chapter No.4

	measures to mitigate carbon emission including	
	development of carbon sinks and temperature	
	reduction including control of other emission and	
	climate mitigation activities.	
33	The Environmental impact Assessment should study	The project will not cause significant impact on climatic
	impact on climate change, temperature rise, pollution	change. Description about the project and climatic
	and above soil & below soil carbon stock.	changes is described in Chapter No.4.

Standard Terms of Reference for (Mining of minerals)

S.	Terms of Reference	Reply
No		
1.1	An EIA-EMP Report shall be prepared for peak capacity (MTPA) operation in an ML/project area ofha based on the generic structure specified in Appendix III of the EIA Notification, 2006.	Noted and agreed

1.2	An EIA-EMP Report would be prepared for peak capacity operation to cover the impacts and environment management plan for the project specific activities on the environment of the region, and the environmental quality encompassing air, water, land, biotic community, etc. through collection of data and information, generation of data on impacts including prediction modeling for MTPA of mineral production based on approved project/Mining Plan for MTPA. Baseline data collection can be for any season (three months) except monsoon.	Peak capacity of 1,33,980m ³ operation to cover the impacts and environment management plan in chapter- IV and Chapter 10 covered in project specific activities. Baseline Data were collected for Post monsoon Season Oct– Dec 2023 as per CPCB Notification and MoEF & CC Guidelines. Details in Chapter No. III
1.3	Propoer KML file with pin drop and coordinate of mine at 500-1000 m interval be provided.	Noted, Google earth image showing lease area with Coordinates of pillars in chapter-II.
1.4	A Study area map of the core zone (project area) and 10 km area of the buffer zone (1: 50,000 scale) clearly delineating the major topographical features such as the land use, surface drainage pattern including rivers/streams/nullahs/canals, locations of human habitations, major constructions including railways, roads, pipelines, major industries, mines, and other polluting sources. In case of ecologically sensitive areas such as Biosphere Reserves/National Parks/WL Sanctuaries/ Elephant Reserves, forests (Reserved/Protected), migratory corridors of fauna, and areas where endangered fauna and plants of medicinal and economic importance found in the 15 km study area should be given. The above details to be furnished in tabular form also.	Land use and land cover of the 10km Radius of study area is discussed in Chapter No. III. Geology map of the project area covering 10km radius Figure No. 2.5, Page No. 20. Geomorphology of the area is given in Chapter No 2 Figure No 2.6, Page No. 20 There are No National Parks, Biosphere Reserves, Wildlife Corridors, and Tiger/Elephant Reserves within 10 km Radius from the periphery of the project area.
1.5	Map showing the core zone delineating the agricultural land (irrigated and un-irrigated, uncultivable land as defined in the revenue records, forest areas (as per records), along with other physical features such as water bodies, etc should be furnished.	Land use and land cover of the study area is discussed in Chapter No. III with Physical features such as waterbodies, odai, canal etc.,
1.6	A contour map showing the area drainage of the core zone and 25 km of the study area (where the water courses of the core zone ultimately join the major rivers/streams outside the lease/project area) should also be clearly indicated in the separate map.	DEM data using Drainage pattern around 10km radius showing streams and lakes etc., discussed in Chapter No. 3.
1.7	Catchment area with its drainage map of 25 km area within and outside the mine shall be provided with names, details of rivers/ riverlet system and its respective order. The map should clearly indicate drainage pattern of the catchment area with basin of major rivers. Diversion of drains/ river need eloboration in form of length, quantity and quality of water to be diverted.	Drainage pattern around 10km radius showing streams and lakes etc is discussed in Chapter No. 3.

1.8	(Details of mineral reserves, geological status of the study area and the seams to be worked, ultimate working depth and progressive stage-wise working scheme until the end of mine life should be provided on the basis of the approved rated capacity and calendar plans of production from the approved Mining Plan. Geological maps and sections should be included. The Progressive mine development and Conceptual Final Mine Closure Plan should also be shown in figures. Details of mine plan and mine closure plan approval of Competent Authority should be furnished for green field and expansion projects.	Details in chapter-2 showing the land features. And also enclosed Approved mining plan in annexure
1.9	Details of mining methods, technology, equipment to be used, etc., rationale for selection of specified technology and equipment proposed to be used vis- à-vis the potential impacts should be provided.	It is an opencast quarrying operation proposed to operate in Mechanized method. The Rough Stone quarry formation is a hard, compact and homogeneous body. The height and width of the bench will be maintained as 5m with 90 ⁰ bench angles. Quarrying activities will be carried out under the supervision of Competent Persons like Mines Manager, Mines Foreman and Mining Mate. Necessary permissions will be obtained from DGMS after obtaining Environmental Clearance.
1.10	Impact of mining on hydrology, modification of natural drainage, diversion and channeling of the existing rivers/water courses flowing though the ML and adjoining the lease/project and the impact on the existing users and impacts of mining operations	Impact Studies and Mitigation Measures of Water Environment including Surface Water and Ground Water are discussed in Chapter 4.
1.11	A detailed Site plan of the mine showing the proposed break-up of the land for mining operations such as the quarry area, OB dumps, green belt, safety zone, buildings, infrastructure, Stockyard, township/colony (within and adjacent to the ML), undisturbed area -if any, and landscape features such as existing roads, drains/natural water bodies to be left undisturbed along with any natural drainage adjoining the lease /project areas, and modification of thereof in terms of construction of embankments/bunds, proposed diversion/re- channelling of the water courses, etc., approach roads, major haul roads, etc should be indicated.	Not Applicable. The details of waste dump management are given in the Chapter No. 4

	Original land use (agricultural	Land use and land cover of the study area is discussed in
	land/forestland/grazing land/wasteland/water	Chapter No. 3.
	bodies) of the area should be provided as per the	
	tables given below. Impacts of project, if any on	Land use plan of the project area showing pre-
	the land use, in particular, agricultural	operational, operational and post-operational phases are
	land/forestland/grazing land/water bodies falling	discussed in Chapter No. 2, Table No 2.3.
	within the lease/project and acquired for mining	
	operations should be analyzed Extent of area under	
	surface rights and under mining rights should be	
	specified Area under Surface Rights

	of vehicle along the road which will indirectly	
	contribute to carbon emission so what will be the	
	compensatory action plan should be clearly spell out	
	The socio-economic study to conducted with actual	Detailed in chapter-3 socio-economic study with
	survey report and a comparative assessment to be	occupational status & economic status of the study area.
	provided from the census data should be provided in	The study should also include the status of infrastructural
1.18	EIA/ EMP report also occupational status &	facilities and amenities present in the study area
	economic status of the study area and what	
	economically project will contribute should be	CSR are discussed under Chapter 8.
	clearly mention. The study should also include the	
	status of infrastructural facilities and amenities	
	present in the study area and a comparative	
	assessment with census data to be provided and to	
	link it with the initialization and quantification of	
	need-based survey for CSR activities to be followed.	

_		
1.19	The Ecology and biodiversity study should also indicate the likely impact of change in forest area for surface infrastructural development or mining activity in relation to the climate change of that area and what will be the compensatory measure to be adopted by PP to minimize the impact of forest diversion.	Detailed Ecology and biodiversity study in chapter-3
1.20	Baseline data on the health of the population in the impact zone and measures for occupational health and safety of the personnel and manpower for the mine should be submitted.	Detailed in chapter-4 population in the impact zone and measures for occupational health and safety and proposed occupational health in chapter-X
1.21	Impact of proposed project/activity on hydrological regime of the area shall be assessed and report be submitted. Hydrological studies as per GEC 2015 guidelines to be prepared and submitted.	Noted and agreed
1.22	Impact of mining and water abstraction from the mine on the hydrogeology and groundwater regime within the core zone and 10 km buffer zone including long- term monitoring measures should be provided. Details of rainwater harvesting and measures for recharge of groundwater should be reflected in case there is a declining trend of groundwater availability and/or if the area falls within dark/grey zone.	The ground water table is at 67m below ground level.In these projects, ultimate depth is 45m Maximum from the general ground profile.It is inferred the quarrying activities in the Cumulative EIA project (Quarry) will not intersect the Ground water table.
1.23	Study on land subsidence including modeling for prediction, mitigation/prevention of subsidence, continuous monitoring measures, and safety issues should be carried out.	Detailed in Chapter-IV Anticipated and mitigation measures of in the study area.
1.24	Detailed water balance should be provided. The break up of water requirement as per different activities in the mining operations, including use of water for sand stowing should be given separately. Source of water for use in mine, sanction of the Competent Authority in the State Govt. and impacts vis-à-vis the competing users should be provided.	Total Water Requirement: 2.3 KLD Discussed under Chapter 2, Table No 2.17, Page No. 44 The required water will be met from rainwater accumulated in mine pit (when available) and from the approved water vendors.
1.25	PP shall submit design details of all Air Pollution control equipment (APCEs) to be implemented as part of Environment Management Plan vis-à-vis reduction in concentration of emission for each APCEs	Methodology And Instrument Used For Air Quality Analysis in chapter-3 and Air Pollution control equipment (APCEs) in chapter-10 sub 10.2 Environmental policy.
1.26	PP shall propose to use LNG/CNG based mining machineries and trucks for mining operation and transportation of mineral. The measures adopted to conserve energy or use of renewable sources shall be explored.	Details in Machinery and equipments details in Chapter-2
1.27	PP to evaluate the green house emission gases from the mine operation/ washery plant and corresponding carbon absorption plan.	Noted and Agreed
1.28	Site specific Impact assessment with its mitigation measures, Risk Assessment and Disaster	A Risk Assessment and Disaster Preparedness and management Plan Chapter- 7
------	--	---
1.29	Preparedness and Management Plan should be Impact of choice of mining method, technology, selected use of machinery and impact on air quality, mineral transportation, handling & storage/stockyard, etc, Impact of blasting, noise and vibrations should be provided.	Detailed in Machinary and technology used Chapter-3 Table 3.17 – Methodology and Instrument Used for Air Quality Analysis Detailed study in chapter-4 Impact of choice of mining method and impact on air quality and blasting and noise and vibrations.
1.30	Impacts of mineral transportation within the mining area and outside the lease/project along with flow- chart indicating the specific areas generating fugitive emissions should be provided. Impacts of transportation, handling, transfer of mineral and waste on air quality, generation of effluents from	Traffic density survey was carried out to analyse the impact of Transportation in the study area as per IRC guidelines 1961 and it is inferred that there is no much significant impact due to the proposed transportation from the project area. Details in Chapter 2.
	workshop etc, management plan for maintenance of HEMM and other machinery/equipment should be given. Details of various facilities such as rest areas and canteen for workers and effluents/pollution load emanating from these	Infrastructure & other facilities will be provided to the Mine Workers after the grant of quarry lease and the same has been discussed in the Chapter No.2.
1.31	Details of various facilities to be provided to the workers in terms of parking, rest areas and canteen, and effluents/pollution load resulting from these activities should also be given.	Infrastructure & other facilities will be provided to the Mine Workers after the grant of quarry lease and the same has been discussed in the Chapter No.2
1.32	The number and efficiency of mobile/static water jet, Fog cannon sprinkling system along the main mineral transportation road inside the mine, approach roads to the mine/stockyard/siding, and also the frequency of their use in impacting air quality should be provided.	Noted and agreed
1.33	Conceptual Final Mine Closure Plan and post mining land use and restoration of land/habitat to the pre- mining status should be provided. A Plan for the ecological restoration of the mined-out area and post mining land use should be prepared with detailed cost provisions. Impact and management of wastes and issues of re-handling (wherever applicable) and backfilling and progressive mine closure and reclamation should be furnished.	Discussed under Chapter 2. Mine Closure Plan is a part of Approved Mining Plan enclosed as Annexure Volume – 1.
1.34	Adequate greenbelt nearby areas, mineral stock yard and transportaion area of mineral shall be provided with details of species selected and survival rate Greenbelt development should be undertaken particularly around the transport route.	Greenbelt Development Plan is discussed under Chapter 4,
1.35	Cost of EMP (capital and recurring) should be included in the project cost and for progressive and final mine closure plan.	The total cost and the details are given in the Chapter No. 10

	Details of R&R. Detailed project specific R&R	Not Applicable.
1 36	Plan with data on the existing socio- economic status of the population (including tribals, SC/ST, BPI families) found in the study area and broad plan	There are no approved habitations within a radius of 300 meters.
1.50	for resettlement of the displaced population, site for the resettlement colony, alternate livelihood concerns/employment for the displaced people, civic and housing amenities being offered, etc and costs along with the schedule of the implementation of the R&R Plan should be given.	Therefore, R&R Plan / Compensation details for the Project Affected People (PAP) is not anticipated and Not Applicable for this project.
1.37	CSR Plan along with details of villages and specific budgetary provisions (capital and recurring) for specific activities over the life of the project should be given.	CSR are discussed under Chapter 8. And specific budgetary provisions (capital and recurring) for specific activities over the life of the project in chapter-10
1.38	Corporate Environment Responsibility:	CER are discussed under Chapter 8.
1.39	a) The Company must have a well laid down Environment Policy approved by the Board of Directors.	Noted and agreed
1.40	b) The Environment Policy must prescribe for standard operating process/procedures to bring into focus any infringements/deviation/violation of the environmental or forest norms/conditions.	Detailed in chapter-10 The Environment Policy
1.41	c) The hierarchical system or Administrative Order of the company to deal with environmental issues and for ensuring compliance with the environmental clearance conditions must be furnished.	Noted and agreed
1.42	 d) To have proper checks and balances, the company should have a well laid down system of reporting of non-compliances/violations of environmental norms to the Board of Directors of the company and/or shareholders or stakeholders at large. 	Noted and agreed
1.43	e) Environment Managament Cell and its responsibilities to be clearly spleel out in EIA/ EMP report	The Environment Monitoring Cell discussed under Chapter 6
1.44	f) In built mechanism of self-monitoring of compliance of environmental regulations should be indicated.	Noted and agreed
1.45	Status of any litigations/ court cases filed/pending on the project should be provided.	No litigation is pending in any court against this project
1.46	PP shall submit clarification from DFO that mine does not fall under corridors of any National Park and Wildlife Sanctuary with certified map showing distance of nearest sanctuary.	DFO: No.6846/2023/L dated: 10.07.2023 Cauvery North Wildlife Sanctuary-36.5km-SW Cauvery South Wildlife Sanctuary-41km-SW
1.47	Copy of clearances/approvals such as Forestry clearances, Mining Plan Approval, mine closer plan approval. NOC from Flood and Irrigation Dept. (if req.), etc. wherever applicable	Noted and agreed

CHAPTER – 1: INTRODUCTION

1.0 **Preamble**

Environmental Impact Assessment (EIA) is the management tool to ensure the sustainable development and it is a process, used to identify the environmental, social and economic impacts of a project prior to decision-making. It is a decision-making tool, which guides the decision makers in taking appropriate decisions for any project. EIA systematically examines both beneficial and adverse consequences of the project and ensures that these impacts are taken into account during the project designing. It also reduces conflicts by promoting community participation, information, decision makers, and helps in developing the base for environmentally sound project.

Rough Stone quarry are the major requirements for construction industry. This EIA report is prepared by considering Cumulative load of all proposed & existing quarries of Kothapetta Rough Stone Cluster Quarries consisting of thee Proposed quarries and one existing quarry with total extent of Cluster of 16.44.9Ha in Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu State, cluster area calculated as per MoEF & CC Notification S.O. 2269(E) Dated 1st July 2016.

This EIA Report is prepared in compliance with ToR obtained for the below proposals in Table 1.1 and the Baseline Monitoring study has been carried out during the period of Oct -Dec 2023

CODE	Name of the proponent	Extent (Ha)	Terms of Reference (ToR)

TABLE 1.1: TOR OBTAINED PROJECTS

Source: ToR Letter's of the respective project proponents

1.1 Purpose of the report

The Ministry of Environment and Forests, Govt. of India, through its EIA notification S.O. 1533(E) of 14^{th} September 2006 and its subsequent amendments as per Gazette Notification S.O. 3977 (E) of 14^{th} August 2018, Mining Projects are classified under two categories i.e. A (> 100 Ha) and B (\leq 100 Ha), and Schematic Presentation of Requirements on Environmental Clearance of Minor Minerals including cluster situation in Appendix – XI.

Now, as per Order Dated: 04.09.2018 & 13.09.2018 passed by Hon'ble National Green Tribunal, New Delhi in O.A. No. 173 of 2018 & O.A. No, 186 of 2016 and MoEF & CC Office Memorandum F. No. L-11011/175/2018-IA-II (M) Dated: 12.12.2018 clarified the requirement for EIA, EMP and therefore, Public Consultation for all areas from 5 to 25 ha falling in Category B1 and appraised by SEAC/ SEIAA as well as for cluster situation.

The proposed projects are categorized under category "B1" Activity 1(a) (mining lease area in cluster situation) and will be considered at SEIAA – TN after conducting Public Hearing and Submission of EIA/EMP Report for Grant of Environmental Clearance.

<u>"Draft EIA report prepared on the basis of ToR Issued for carrying out public hearing for the grant</u> of Environmental Clearance from SEIAA, Tamil Nadu"

FIG.1.1 SATELLITE IMAGERY CLUSTER QUARRIES

Cluster area is calculated as per MoEF & CC Notification - S.O. 2269 (E) Dated: 01.07.2016

Note: As per above notification S.O.2269(E) dated: 01.07.2016 in para (b) in Appendix XI, - (i)(6) A cluster shall be formed when the distance between the peripheries of one lease is less than 500 meters from the periphery of other lease in a homogeneous mineral area which shall be applicable to the mine lease or quarry licenses granted on and after 9_{th} September, 2013

1.2 Identification of Project and Project Proponent

1.2.1 Identification of Project

The project areas in the cluster are Patta Land., no forest land is involved

Source: Approved Scheme of Mining and Mining Plan with PMCP of the respective projects

1.3 Brief description of the project1.3.1 Nature and size of the Project

The quarrying operation is proposed to be carried out by Opencast Mechanized Mining method with 5.0m bench height and 5.0m bench width by deploying Jack Hammer Drilling & Slurry Explosive during blasting. Hydraulic Excavator and tippers are used for Loading and transportation. Rock Breakers are deployed to avoid secondary blasting.

1.4 Environmental Clearance

The Environmental Clearance process for the project will comprise of four stages. These stages in sequential order are given below: -

- 1. Screening
- 2. Scoping
- 3. Public consultation &
- 4. Appraisal

SCREENING -

Project – P1 –

- Lease Granted vide Proceeding No 418/2017/Mines Dated 29.12.2017 for five years.
- Mining plan approved by the Deputy Director, Department of Geology and Mining vide Rc. No 418/2017/Mines Dated 31.05.2018
- Environmental Clearance granted at DEIAA KGI DEIAA vide *Letter No. 35/DEIAA-KGI/Ec.No. 27/2018* Dated 27.02.2018
- As per G.O (Ms) No 208 Industries (MMC.1) Department Dated 21.09.2020 lease period extended for another five year.
- Scheme of Mining plan prepared for the period of 2023-24 to 2026-27 and got approval vide Roc.No. 1121/2020/Mines Dated 27.01.2023
- Based on the 500m Radius Cluster Letter obtained from the Deputy Director, Department of Geology and Mining, Krishnagiri vide Letter No 1121/2020/Mines Dated 14.02.2023 the proposal falls under Cluster Category "B1"
- Proponent applied for ToR for Environmental Clearance vides online Proposal No. SIA/TN/MIN/430407/2023, Dated:23.05.2023.

Project – P2 –

- Lease Granted vide Proceeding No 419/2017/Mines, Dated 30.05.2018- for five years.
- Mining plan approved by the Deputy Director, Department of Geology and Mining, Krishnagiri vide Roc. No 419/2017/Mines Dated 29.12.2017
- Environmental Clearance granted at DEIAA KGI vide *Letter No. 34/DEIAA-KGI/Ec. No. 26/2018 Dated* 27.02.2018
- As per G.O (MS) No 208 Industries (MMC.1) Department Dated 21.09.2020 lease period extended for another five year.
- Scheme of Mining plan prepared for the period of 2023-24 to 2027-28 and got approval vide Roc. No. 1120/2020/Mines Dated 27.01.2023
- Based on the 500m Radius Cluster Letter obtained from the Deputy Director, Department of Geology and Mining, Krishnagiri vide Letter No 1120/2020/Mines Dated 14.02.2023 the proposal falls under Cluster Category "B1"

• Proponent applied for ToR for Environmental Clearance vides online Proposal No. SIA/TN/MIN/430521/2023, Dated:24.06.2023.

Project – P3–

- The application was processed by the Deputy Director; the precise area communication letter was received from the Deputy Director, Krishnagiri vide *Rc.No. 1314/2023/Minerals Dated:12.10.2023 (Enclosed Annexure I).* To obtain Approved Mining plan and Environmental Clearance from the State Level Environmental Impact Assessment Authority (SEIAA).
- Mining plan approved by the Deputy Director, Department of Geology and Mining vide Rc.No. 1314/2023/Mines Dated: 10.11.2023.
- Previous Environmental Clearance granted at Lr. No. SEIAA-TN/F.No.3215/EC/1(a)/2645/2015, Dated:05.01.2016
- Based on the 500m Radius Cluster Letter obtained from the Deputy Director, Department of Geology and Mining, Krishnagiri vide Letter No 1314/2023/Mines Dated 22.11.2023 the proposal falls under Cluster Category "B1"
- Proponent applied for ToR for Environmental Clearance vides online Proposal No. SIA/TN/MIN/456285/2023 dated 21.12.2023.

SCOPING -

Project – P1

- The proposal was placed in 407th SEAC meeting held on 07.09.2023 and reply by the proponent dated 14.11.2023. again 430th SEAC meeting held on 14.12.2023 and 439th SEAC meeting held on 10.01.2024 the committee recommended for issue of ToR.
- The proposal was considered in 696th SEIAA meeting held on 14.02.2024 and issued ToR vide Lr No. SEIAA-TN/F.No.10244/2023/SEAC/ToR- 1681/2024 Dated:14.02.2024.

Project – P2

- The proposal was placed in 407th SEAC meeting held on 07.09.2023 and 439th SEAC meeting held on 10.01.2024 the committee recommended for issue of ToR.
- The proposal was considered in 658th and SEIAA meeting held on 26.09.2023-27.09.2023 and 696th SEIAA meeting held on 14.02.2024 issued ToR vide Lr No. SEIAA-TN/F.No.10248/SEAC/ToR-1676/2024 Dated:14.02.2024.

Project – P3

- The proposal was placed in 441th SEAC meeting held on 31.01.2024 the committee recommended for issue of ToR.
- The proposal was considered in 698th SEIAA meeting held on 02.03.2024 issued **ToR Identification No TO23B0108TN5558418N dated 13.03.2024**.

Public Consultation –

Application to The Member Secretary of the Tamil Nadu Pollution Control Board (TNPCB) to conduct Public Hearing in a systematic, time bound and transparent manner ensuring widest possible public participation at the project site or in its close proximity in the district is submitted along with this Draft EIA/ EMP Report and the outcome of public hearing proceedings will be detailed in the Final EIA/EMP Report.

Appraisal

Appraisal is the detailed scrutiny by the State Expert Appraisal Committee (SEAC) of the application and other documents like the final EIA & EMP Report, outcome of the Public Consultations including Public Hearing Proceedings, submitted by the proponent to the regulatory authority concerned for grant of environmental clearance. The report has been prepared using the following references:

- Guidance Manual of Environmental Impact Assessment for Mining of Minerals, Ministry of Environment and Forests, 2010
- EIA Notification, 14th September, 2006
- ToR vide SEIAA-TN/F.No.10244/2023/SEAC/ToR- 1681/2024 Dated:14.02.2024- P1
- ToR vide SEIAA-TN/F.No.10248/SEAC/ToR-1676/2024 Dated:14.02.2024- P2
- ToR Identification No TO23B0108TN5558418N dated 13.03.2024 -P3

Approved Mining of P1 to P3 the Rough Stone quarry projects

1.5 Post Environment Clearance Monitoring

The Project Proponents in the Cluster will submit a half-yearly compliance report in respect of stipulated Environmental Clearance terms and conditions to MoEF & CC Regional Office & SEIAA after grant of EC on 1st June and 1st December of every year.

1.6 Generic Structure of EIA Document

The overall contents of the EIA report follow the list of contents prescribed in the EIA Notification 2006 and the "Environmental Impact Assessment Guidance Manual for Mining of Minerals" published by MoEF & CC. A brief description of each Chapter is presented in Table No. 1.5.

S. No	Chapters	Title	Particulars
1	Chapter 1	Introduction	Presents, an Introduction along with Scope and Objective
			of this EIA/EMP Studies
2	Chapter 2	Project Description	Presents the Technical Details of the Project
3	Chapter 3	Description of Environment	Presents the Baseline Status for various Environmental
			Parameters in the Study Area for One Season (3 Months)
4	Chapter 4	Anticipated Environmental	Presents the Identification, Prediction and Evaluation of
		Impacts and Mitigation	overall Environmental Impacts due to the Proposed
		Measures	Projects Activities. Also presents Proposed Mitigation
			Measures.

TABLE 1.5 – STRUCTURE OF THE EIA REPORT

5	Chapter 5	Analysis of Alternatives	Presents Analysis of alternatives with respect to site
		(Technology & Site)	
6	Chapter 6	Environment Monitoring	Present details of post project environment monitoring
		Programme	
7	Chapter 7	Additional Studies	Presents Public Consultation, Risk Assessment and
			Disaster Management Plan
8	Chapter 8	Project Benefits	Presents project benefits as: Improvements in the Physical
			Infrastructure, Social Infrastructure Employment Potential
			-Skilled; Semi-Skilled and Unskilled etc.,
9	Chapter 9	Cost Benefit Analysis	Environmental Cost Benefit Analysis has not been
			recommended at Scoping Stage - thus no analysis carried
			out separately in this EIA/EMP Report.
10	Chapter 10	Environmental Management	Description of the administrative aspects to ensure the
		Plan	Mitigation Measures are implemented and their
			effectiveness monitored, after approval of the project.
11	Chapter 11	Summary & Conclusion	Summary of the EIA Report
12	Chapter 12	Disclosure of Consultants	Disclosure of the Consultants
		Engaged	

1.7 Scope of the Study

The main scope of the EIA study is to quantify the cumulative impact in the study area due to cluster quarries and formulate the effective mitigation measures for each individual leases. A detailed account of the emission sources, emissions control equipment, background Air quality levels, Meteorological measurements, Dispersion model and all other aspects of pollution like effluent discharge, Dust generation etc., have been discussed in this report. The baseline monitoring study has been carried out during the Post monsoon season (Oct – Dec 2023) for various environmental components so as to assess the anticipated impacts of the cluster quarry projects on the environment and suggest suitable mitigation measures for likely adverse impacts due to the proposed project.

Sl.No.	Attributes	Parameters	Source and Frequency
1	Ambient Air Quality	PM ₁₀ , PM _{2.5} , SO ₂ , NO ₂	24 hourly samples twice a week for three months at 7locations
2	Meteorology	Wind speed and direction, temperature, relative humidity and rainfall	Near project site continuous for three months with hourly recording and from secondary sources of IMD station, Krishnagiri
3	Water quality	Physical, Chemical and Bacteriological parameters	Grab samples were collected at 4 ground water and 2 surface water locations once during study period.
4	Ecology	Existing terrestrial and aquatic flora and fauna within 10 km radius circle.	Limited primary survey and secondary data was collected from the Forest department.

 TABLE 1.6 - ENVIRONMENT ATTRIBUTES

5	Noise levels	Noise levels in dB(A)	At 7 locations data monitored once for 24 hours during EIA study.
6	Soil Characteristics	Physical and Chemical Parameters	Once at 6 locations during study period
7	Land use	Existing land use for different categories	Based on Survey of India topographical sheet and satellite imagery and primary survey.
8	Socio-Economic Aspects	Socio-economic and demographic characteristics, worker characteristics	Based on primary survey and secondary sources data like census of India 2011.
9	Hydrology	Drainage pattern of the area, nature of streams, aquifer characteristics, recharge and discharge areas	Based on data collected from secondary sources as well as hydro-geology study report prepared.
10	Risk assessment and Disaster Management Plan	Identify areas where disaster can occur by fires and explosions and release of toxic substances	Based on the findings of Risk assessment done for the mining associated activities

Source: Field Monitoring Data

The data has been collected as per the requirement of the ToR issued by SEIAA – TN and Standard ToR Published by MoEF & CC.

1.7.1 Regulatory Compliance & Applicable Laws/Regulations

- Application for Quarrying Lease as per Tamil Nadu Minor Mineral Concession Rules, 1959
- Obtained Precise Area Communication Letter as per Tamil Nadu Minor Mineral Concession Rules, 1959 for Preparation of Mining Plan and obtaining Environmental Clearance
- The Mining Plan of Rough Stone quarry has been approved under Rule 41 & 42 as amended of Tamil Nadu Minor Mineral Concession Rules, 1959
 - ToR vide SEIAA-TN/F.No.10244/2023/SEAC/ToR- 1681/2024 Dated:14.02.2024- P1
 - ToR vide SEIAA-TN/F.No.10248/SEAC/ToR-1676/2024 Dated:14.02.2024- P2
 - ToR Identification No TO23B0108TN5558418N dated: 13.03.2024 -P3

Approved Mining of P1 to P3 the Rough Stone quarry projects.

CHAPTER – 2: PROJECT DESCRIPTION

2.0 General

The Proposed Rough Stone Quarries requires Environmental Clearance. There are two proposed quarries forming a cluster; calculated as per MoEF & CC Notification S.O. 2269(E) Dated 1st July 2016 and the total extent of cluster is 16.44.9 ha.

As the extent of cluster are more than 5 ha, the proposal falls under B1 Category as per the Order Dated: 04.09.2018 & 13.09.2018 passed by Hon'ble National Green Tribunal, New Delhi in O.A. No. 173 of 2018 & O.A. No, 186 of 2016 and MoEF & CC Office Memorandum F. No. L-11011/175/2018-IA-II (M) Dated: 12.12.2018, and requirement for EIA, EMP and Public Consultation for obtaining Environmental Clearance.

2.1 Description of the Project

The proposed projects are site specific and there is no additional area required for this project. There is no effluent generation/discharge from the proposed quarries.

Method is mining is common for all the proposed quarries in the cluster. Rough Stone quarries are proposed to be excavated by opencast mechanized method involving splitting of rock mass of considerable volume from the parent rock mass by jackhammer drilling and blasting, hydraulic excavators are used for loading the Rough Stone quarry from pithead to the needy crushers and rock breakers to avoid secondary blasting.

2.2 Location of the Project

- The Cluster quarries are located in Kothapetta village, Krishnagiri taluk, Krishnagiri District, Tamil Nadu State.
- The project falls in Toposheet No: 57 L/2. The cluster areas fall in the Latitude between 12°32'44.51"N to 12°32'49.86"Nand Longitude between 78°12'42.92"E to 78°12'49.39"E.
- The projects under the cluster are classified as Poramboke land (Non-Forest Land) & does not fall within 10 km radius of any Eco – sensitive zone, Wild life Sanctuary, National Park, Tiger Reserve, Elephant Corridor and Biosphere Reserves.

2.3 GEOLOGY

2.3.1 Geology of the Area:

The lease area is slightly elevated topography, the area has been quarrying operation earlier Roughstone exposures are clearly visible in existing pit within the lease applied area. Gravel is noticed at the average thickness of 1m. the slope is gentle towards North Eastern side. The altitude of the area is above 537m from MSL.

Peninsular gneiss forms the oldest rock formations, in which the massive formation of charnockite lies over with rich

accumulation of recent quaternary formations. On regional scale the charnockite body trends NE-SW with dipping

towards SE70⁰

The general geological sequences of the rocks in this area are given below: AGE FORMATION

 Recent
 - Quaternary formation (Gravel)

 ------Unconformity----- - Charnockite

 Archaean
 - Charnockite

 Peninsular Gneiss complex

2.3.3 Hydrogeology

The origin, occurrence and movement of groundwater are controlled by geological setup of a terrain. During the study it is inferred that the entire cluster area is a Hard rock terrain and the low -resistance encountered at the depth between 65-70 m bgl, hence it is assumed that the possibility of Ground water occurrence will be below this level and it also proved that this hard batholith above 60 m will not encounter any subsurface water.

In the geophysical study it has been clearly inferred that the depth of the quarrying operation will not intersect the ground water table.

2.4 RESOURCES AND RESERVES

The Resources and Reserves of Rough Stone quarry were calculated based on Cross-Section Method by plotting sections to cover the maximum lease area.

Based on the availability of Geological Resources the Mineable Reserves are calculated by considering excavation system of bench formation and leaving essential safety distance of 7.5 m (Safety Barrier all around the applied area) and safety distance as per precise area communication letter and deducting the locked up reserves during bench formation (Also called as Bench Loss) and the Mineable Reserves is calculated considering there is no waste / overburden / side burden (100% Recovery Anticipated).

Disposal of Waste-P1

The overburden in the form of Gravel. The Gravel and Existing Gravel Dump will be directly loaded into tippers for the filling and levelling of low-lying areas. The excavated Rough Stone (100%) will be directly loaded into tippers to the needy customers. There is no Waste anticipated during this plan period hence, disposal of waste does not arise

Disposal of Waste-P2

The overburden in the form of Gravel. The Gravel will be directly loaded into tippers for the filling and levelling of low-lying areas, this will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

Disposal of Waste-P3

The overburden in the form of Topsoil is 8,706m³ up to depth 1m for during this lease period. Topsoil formation will be remove and dumped at all side boundary barrier of the lease area. It will be utilized for afforestation and road low lying areas.

Conceptual Mining Plan/ Final Mine Closure Plan

The ultimate pit size is designed based on certain practical parameters such as economical depth of mining, safety zones, permissible area, etc.

	P1						
Pit	Length (Max) (m)	Width (Max) (m)	Depth (Max) (m)				
Ι	287	121	41m

Ι	229	144	45m				

Source: Approved Mining Plan

- At the end of life of mine, the excavated mine pit / void will act as artificial reservoir for collecting rain water and helps to meet out the demand or crises during drought season.
- After mine closure the greenbelt developed along the safety barrier and top benches and temporary water reservoir will enhance the ecosystem
- Mine Closure is a process of returning a disturbed site to its natural state or which prepares it for other productive uses that prevents or minimizes any adverse effects on the environment or threats to human health and safety.
- The principle closure objectives are for rehabilitated mines to be physically safe to humans and animals, geotechnically stable, geo-chemically non-polluting/ non-contaminating, and capable of sustaining an agreed postmining land use.

Closure Objectives

- Access to be limited, for the safety of humans and wildlife.
- The open pit mine workings and pit boundary are physically and geo-technically stable.
- Water quality in flooded pits is safe for humans, aquatic life, and wildlife.
- Discharge of contaminated drainage has been minimized and controlled.
- Original or desired new surface drainage patterns have been established.
- For flooded pits, in-pit aquatic habitat has been established where practical and feasible.
- Emergency access and escape routes from flooded pits for humans and wildlife are in place.
- Dust levels are safe for people, vegetation, aquatic life, and wildlife.

Closure Planning & Options Considerations in Mine Design -

- The closure of mine is well planned at the initial stage of planning & design consideration by the internal and external stake holders
- Construction of 2m height bund all along the mine pit boundary and ensure its stability all time & construction of garland drain along the natural slope to avoid sliding and collection of soil to the pit & surface runoff during rainfall
- After complete exploitation of mineral, the lowest bench foot wall side will be maintained as plain surface without any sump pits to avoid any accidents
- All the sharp edges will be dressed to smoother face before the closure of mine and ensure no loose debris on hanging wall side
- There is a river on southern side of the project area. The river will not be hindered by any of mine closure activities
- The project proponent as a part of social responsibilities assures to supply the stored mine pit water to the nearby villages after effective treatment process as per the standards of TNPCB & TWAD
- Native species will be planted in 3 row patterns on the boundary barriers and 1st bench, a full-time sentry will be appointed at the gate to prevent inherent entry of public & cattle.
- The access road to the quarry will be cut-off immediately after the closure
- The layout design shall be prepared and get approved from Department of Geology and Mining.
- The proponent is instructed to construct as per the layout approved
- Physical and chemical stability of structures left in place at the site, the natural rehabilitation of a biologically diverse, stable environment, the ultimate land use is optimized and is compatible with the surrounding area and the requirements of the local community, and taking the needs of the local community into account and minimizing the socio-economic impact of closure
- There will be a positive change in the environmental and ecology due to the mine closure

Post-Closure Monitoring -

The purpose of post-closure monitoring with respect to open pit mine workings is to ensure the attainment of closure objectives.

- Monitor physical and geotechnical stability of remnant pit walls.
- Monitor the ground regime in pit walls to confirm achievement of design objectives.
- Monitor water level in pit to confirm closure objectives regarding fish, fish habitat, and wildlife safety are being achieved.
- Sample water quality and quantity at controlled pit discharge points.
- Identify and test unanticipated areas where water management is an issue.
- Inspect integrity of barriers such as berms & fences.
- Monitor wildlife interactions with barriers to determine effectiveness.
- Inspect aquatic habitat in flooded pits where applicable.
- Monitor dust levels.

2.5 Method of Mining

The method of mining is common for all the proposed projects – The method of mining is Opencast Mechanized Mining Method is being proposed by formation of 5.0-meter height bench with a bench width not less than the bench height. However, as far as the quarrying of Rough Stone quarry is concerned, observance of the provisions of Regulation 106 (2) (b) as above is seldom possible due to various inherent petro genetic factors coupled with mining difficulties. Hence it is proposed to obtain relaxation to the provisions of the above regulation from the Director of Mines Safety for which necessary provision is available with the Regulation 106 (2) (b) of MMR-1961, under Mine Act – 1952.

2,40,000

The top layer of overburden (Gravel) will be Excavate directly by Hydraulic Excavators and loaded into tippers directly and sold to needy customers. The Rough Stone quarry is a batholith formation and the splitting of rock

2,40,000

7,35,000

mass of considerable volume from the parent rock mass will be carried out by deploying jackhammer drilling and Slurry Explosives will be used for blasting. Hydraulic Excavators attached with Rock Breakers unit will be deployed for breaking large boulders to required fragmented sizes to avoid secondary blasting and hydraulic excavators attached with bucket unit will be deployed for loading the Rough Stone quarry into the tippers and then the stone is transported from pithead to the nearby crushers.

2.5.1 Drilling

Drilling will be carried out as per parameters given below: -

Spacing - 1.2m, Burden - 1.0, Depth of hole - 1.5m

2.5.2 Blasting

Blasting will be done as per details below: -

- Controlled blasting parameter: -
 - Spacing -1.2mBurden -1.0 mDepth of hole -1.5mCharge per hole -50grams Powder factor -6.0 tonnes/kg Dia of hole -30-32 mm

Details of blasting design and parameters are discussed in approved mining plan.

Volume of Rough Stone quarry will be excavated from	one hole	= 3 Tonnes
Total Volume from three proposed quarries	=	17,88,490 m ³
	=	17,88,490 /5
	=	3,57,698 /300
	=	1,192* 2.6
	=	3,100 Tonnes per day
Therefore, Number of Holes per day	=	3,100 /3
	=	1033 Holes per day (for 3 Quarries)

Type of Explosives to be used -

Slurry explosives (An explosive material containing substantial portions of a liquid, oxidizers, and fuel, plus a thickener), NONEL / Electric Detonator & Detonating Fuse.

2.6 General Features

2.6.1 Existing Infrastructures

Infrastructures like Mine office, Temporary Rest shelters for workers, Latrine and Urinal Facilities are available in the Existing quarries and the same infrastructure as per the Mine Rule will be arranged after the grant of quarry lease in the proposed quarries.

2.6.1 Drainage Pattern

The general drainage pattern of the area is dendritic. There are no streams, canals or water bodies crossing within the project area, hence there is no requirement of stream or canals diversion in the near future.

2.6.2 Traffic Density

Traffic density measurements were performed as per IRC 1960 Guidelines at three locations based on the transportation route. Traffic density measurement were made continuously for 24 hours by visual observation and counting of vehicles under three categories, viz., heavy motor vehicles, light motor vehicles and two/three wheelers. As traffic densities on the roads are high, two skilled persons were deployed simultaneously at each station during each shift- one person on either direction for counting the traffic. At the end of each hour, fresh counting and recording was undertaken.

2.6.3 Mineral Beneficiation and Processing

There is no proposal for the mineral processing or ore beneficiation in this project

2.6.4 Existing Infrastructure

It is an existing quarry, no infrastructural facility available within the project area. The infrastructural facilities to be made after the start of the quarrying operations will be prepared outside limit as per the rules and safe distance to be adopted.

2.6.2 Drainage Pattern

The drainage pattern of the area is dendritic – sub dendritic.

2.7 Project Requirement

2.7.1 Water Source & Requirement

Detail of Total water requirements in KLD as given below:

PROPOSAL – P1						
*Purpose	Quantity	Source				
Dust Suppression	1.0KLD	From Existing bore wells from nearby area				
Green Belt development	0.5KLD	From Existing bore wells from nearby area				
Drinking and Domestic purpose		From existing, bore wells and drinking water will be sourced				
	1.0KLD	from Approved water vendors.				
Total	2.5 KLD					
	PR	OPOSAL – P2				
*Purpose	Quantity	Source				
Dust Suppression	1.0KLD	From Existing bore wells from nearby area				
Green Belt development	0.5KLD	From Existing bore wells from nearby area				
Drinking and Domestic purpose		From existing, bore wells and drinking water will be sourced				
	1.0KLD	from Approved water vendors.				
Total 2.5 KLD						
	PR	OPOSAL – P3

Source: Prefeasibility Report

About 50% water will be required for the suspension of the dust, Water shall be obtained from accumulated rainwater/seepage water in quarry pits. Packaged Drinking Water is available from the nearby approved water vendors.

2.7.2 Power and Other Infrastructure Requirement

The project's does not require power supply for the quarry operation. The quarrying activity is proposed during day time only (General Shift 8 AM - 5 PM, Lunch Break 1 PM - 2 PM). Electricity for use in office and other internal infrastructure will be obtained from TNEB. For the quarrying operation like compressor for drilling Diesel will be utilized.

The temporary infrastructures such as Mine Office, First Aid Room, Rest Shelter etc., will be constructed within the project area before commencing the quarry operation. No workshops are proposed inside the project area hence there will not be any process effluent generation from the project area. Domestic effluent from the mine office will be discharged to septic tank and soak pit. There is no toxic effluent expected to generate in the form of solid, liquid or gaseous form hence there is no requirement of waste treatment.

2.7.3 Fuel Requirement -P1

Fuel is to be used inform of diesel for quarrying operations, compressors and running of tippers and other transportation vehicles. Quantity for fuel will depend upon the usage of transportation vehicle and other machineries and level of achievement of estimated production. Diesel will be out sourced from nearby diesel pumps.

Fuel Requirement - P1

Gravel:

Per hour Excavator will consume	=	10 liters / hour
Per hour Excavator will excavate	=	60m ³ of Gravel
Gravel quantity	=	799/60 = 13 hours
Diesel consume	=	13 hours x 10 liters
Total diesel consumption	=	130 Liters of HSD will be utilized for Gravel

Rough stone:

Per hour Excavator will consume	=	16 liters / hour
Per hour Excavator will excavate	=	20m ³ of Rough stone
Rough stone quantity	=	5,13,365/20 = 25,668 hours
Diesel consume	=	25,668 hours x 16 liters
Total diesel consumption	= 4	4,10,688Liters of HSD will be utilized for Rough stone
Total diesel consumption	=]	130 Liters of HSD will be utilized for five years.

Fuel Requirement - P2

Gravel:

Per hour Excavator will consume	=	10 liters / hour
Per hour Excavator will excavate	=	60m ³ of Gravel
Gravel quantity	=	20,711/60 = 345 hours
Diesel consume	=	345 hours x 10 liters
Total diesel consumption	=	3450 Liters of HSD will be utilized for Gravel

Rough stone:

Per hour Excava	ator will consume	=	16 liters / hour
Per hour Excava	ator will excavate	=	20m ³ of Rough stone
Rough stone qua	antity	=	5,13,365/20 = 39,660 hours
Diesel consume		=	39,660 hours x 16 liters
Total diesel con	sumption	=	6,34,560 Liters of HSD will be utilized for Rough stone
Total diesel con	sumption	=	6,38,010 Liters of HSD will be utilized for five years.

Fuel Requirement -P3

Top soil:

Per hour Excavator will consume = 10 liters / hour

	Per hour Excavator will excavate	=	60m ³ of Top soil
	Top soil quantity	=	8,706/60 = 145hours
	Diesel consume	=	145hours x 10 liters
	Total diesel consumption	=	1,450Liters of HSD will be utilized for Top soil
<u>Rough s</u>	tone:		
	Per hour Excavator will consume	=	16 liters / hour
	Per hour Excavator will excavate	=	20m ³ of Rough stone
	Rough stone quantity	=	4,81,920/20 = 2,40,961hours
	Diesel consume	=	2,40,961hours x 16 liters

CHAPTER – 3: DESCRIPTION OF ENVIRONMENT

3.0 General

This chapter presents a regional background to the baseline data at the very onset, which will help in better appreciation of micro-level field data, generated on several environmental and ecological attributes of the study area. The baseline status of the project environment is described section wise for better understanding of the broad-spectrum conditions. The baseline environment quality represents the background environmental scenario of various environmental components such as Land, Water, Air, Noise, Biological and Socio-economic status of the study area. Field monitoring studies to evaluate the base line status of the project site were carried out covering Oct 2023 – Dec 2023 with CPCB guidelines. Environmental data has been collected with reference to cluster quarries by EHS 360 Labs Private Limited, – An accredited by ISO/IEC 17025:2017 (NABL) Laboratory for the below attributes- for the below attributes -

- o Land
- o Water
- o Air
- o Noise
- Biological
- Socio-economic status

Study Area

An area of 10 km radius (aerial distance) from the periphery of the cluster is considered for EIA study. The data collection has been used to understand the existing environment scenario around the cluster quarries against which the potential impacts of the project can be assessed. The study area has been divided into two zones viz **core zone** and **buffer zone** where core zone is considered as cluster and buffer zone taken as 10km radius from the periphery of the Cluster. Both Core zone and Buffer zone is taken as the study area.

Study Period

The baseline study was conducted during the Post monsoon season i.e., Oct 2023-Dec 2023

Methodology

Baseline data was generated for various environmental parameters including Land, Soil, Water (surface and groundwater), Air, Noise, Ecology & Biodiversity and Socio-economic status to determine the quality of the prevailing environmental settings. A MoEF accredited Laboratory was used for generating the baseline data.

- The project area (Core zone) was surveyed in detail with the help of Total Station survey instrument and the boundary pillars were picked up with the help of handheld GPS. The boundary coordinates were superimposed on the satellite imagery to understand the relief of the area, besides Land use pattern of the area was studied through the Bhuvan (ISRO).
- Soil samples were collected and analysed for relevant physico-chemical characteristics, exchangeable cations, nutrients & micro nutrients etc., in order to assess the impact of mining activities and proposed greenbelt development.
- 3. Ground water samples were collected during the study period from the open wells and bore wells, while surface water was collected from river and lake in the buffer zone. The samples were analysed for

parameters necessary to determine water quality (based on IS: 10500:2012 criteria) and those which are relevant from the point of view of environmental impact of the proposed quarries.

- 4. A meteorological station was setup in pachapalayam village. Wind speed, Wind direction, Dry and wet bulb temperature, Relative humidity, Rainfall with cloud cover and general weather conditions were recorded throughout the study period.
- 5. In order to assess the Ambient Air Quality (AAQ), samples of Ambient Air were collected by installation of Respiratory Dust Samplers (RDS) for Fugitive dust, PM₁₀ and SO₂, NO_X with gaseous attachments & Fine Dust Samplers (FDS) for PM_{2.5} and other parameters as per NAAQ norms and analysed for primary air pollutants to work out the existing status of air quality.
- 6. The noise level measurements were also made at various locations in different intervals of time with the help of sound level meter to establish the baseline noise levels in the impact zone.
- 7. Baseline biological studies were carried out to assess the ecology of the study area to study the existing flora and fauna pattern of the area.
- Socio-Economic survey was conducted at village and household level in the study area to understand the present socio-economic conditions and assess the extent of impact due to the proposed mining project. The sampling methodologies for the various environmental parameters required for the study, frequency

of sampling, method of samples analysis, etc., are given below Table 3.1.

Attribute	Parameters	Frequency of Monitoring	No. of Locations	Protocol
Land-use Land cover	Land-use Pattern within 10 km radius of the study area	Data from census handbook 2011 and from the satellite imagery	Study Area	Satellite Imagery Primary Survey
*Soil	Physio-Chemical Characteristics	Once during the study period	6 (2 core & 4 buffer zone)	IS 2720 Agriculture Handbook - Indian Council of Agriculture Research, New Delhi
*Water Quality	Physical, Chemical and Bacteriological Parameters	Once during the study period	6 (2 surface water & 4 ground water)	IS 10500& CPCB Standards
Meteorology	Wind Speed Wind Direction Temperature Cloud cover Dry bulb temperature Rainfall	1 Hourly Continuous Mechanical/Automatic Weather Station	1	Site specific primary data& Secondary Data from IMD Station
*Ambient Air Quality	PM ₁₀ PM _{2.5} SO ₂ NO _X Fugitive Dust	24 hourly twice a week (October – December 2023)	7 (2 core &5 buffer)	IS 5182 Part 1-23 National Ambient Air Quality Standards, CPCB
*Noise Levels	Ambient Noise	Hourly observation for 24 Hours per location	7 (2core & 5 buffer zone)	IS 9989 As per CPCB Guidelines
Ecology	Existing Flora and Fauna	Through field visit during the study period	Study Area	Primary Survey by Quadrate & Transect Study

Socio Economic Aspects	Socio–Economic Characteristics, Population Statistics and Existing Infrastructure in the study area	Site Visit & Census Handbook, 2011	Study Area	Primary Survey, census handbook & need based assessments.

Source: On-site monitoring/sampling by EHS 360 Labs Private Limited in association with GEMS

* All monitoring and testing are been carried out as per the Guidelines of CPCB and MoEF & CC.

3.1 LAND ENVIRONMENT

The main objective of this section is to provide a baseline status of the study area covering 10km radius around the proposed mine site so that temporal changes due to the mining activities on the surroundings can be assessed in future.

3.1.1 LAND USE/LAND COVER

To study the land use pattern of the core as well as a buffer zone, land use/land cover details have been identified/ maps have been prepared in accordance with the **Standard ToR point no. 4 & 10 Stating**:

Point No. 4 All comer coordinates of the mine lease area, superimposed on a High-Resolution Imagery/ topo sheet. topographic sheet, geomorphology and geology of the area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and buffer zone).

Point No. 10. Lard use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary. national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompass preoperational, operational and post operational phases and submitted.

Current vintage data of Indian Remote Sensing Satellite ResourceSat-2A L-III (False Color Composite) has been used for Land Use / Land Cover study. Satellite image has been procured from National Remote Sensing Centre, Hyderabad.

3.1.2 OBJECTIVE

The objectives of the LULC study are as follow:

- To develop the Land use & Land cover map using land coordinates of the plant area (Core Zone) and 10 km radius from the plant site (Buffer area).
- To Identify and mark the important Land use and Land cover features using the primary and secondary data collected.
- To evaluate the impacts on existing land use/cover features of the buffer area by the Proposed Project activities.
- To identify the mitigative measures for the sustainable use of land and to protect the buffer zone from the adverse impacts.

Technical specification of Satellite imagery Data Used:

Current vintage data of Indian Remote Sensing Satellite RESOURCESAT1 (LISS-III) digital FCC (False Color Composite) has been used for preparation of Land use/ Land cover thematic map of study area. Satellite

image has been procured from National Remote Sensing Centre, Hyderabad. Survey of India Toposheet as a reference map on 1:50,000 scale has been used for preparation of base layer data like road, rail network; village for geo-referencing of satellite image.

- Satellite Image Resourcesat1-LISSIII, 23.5m Resolution
- 80 Satellite Data Source NRSC, Hyderabad
- 80 Satellite Vintage 14st Sept 2022, Swath 141km wide.
- と SOI Toposheet No 57 L/2

Software Used - ArcGIS 10.8

The satellite image (FCC color 3,2,1) of the buffer zone is given in 3.1

The spatial resolution and the spectral bands in which the sensor collects the remotely sensed data are two important parameters for any land use survey. Resourcesat1-LISSIII, 23m Resolution of 23.5m and a 141 km wide swath of the earth in 23.5m resolution covering wide areas the data is collected in 4 visible bands namely band number and Resolution.

Band Number	Description	Wavelength	Resolution
Band 1	Green	0.52-0.59 μm	23.5 meters
Band 2	Red	0.62-0.68 μm	23.5meters
Band 3	NIR	0.77-0.86 μm	23.5meters
Band 4	SWIR	1.55-1.70 μm	70meters

 TABLE 3.2: Resourcesat1-LISSIII SENSOR characteristics

Source: NRSC, Hyderabad

3.1.3 METHODOLOGY

The land use / land cover map is prepared by adopting the interpretation techniques of the Satellite image in combination with collateral data such as Survey of India topographical maps. Image classification is done by using visual interpretation techniques and digital classification using any of the image processing software. The various activities for preparation of LULC include preprocessing, rectification, image enhancements and classifying the satellite data for assessing the change in land use land cover due to proposed developmental activities.

- **80** Preliminary/primary data collection of the study area
- Satellite data procurement from NRSC
- **80** Secondary data collection from authorized bodies
- Survey of India Toposheet (SOI)
- 80 Mine Layout
- & Cadastral / Khasra map
- **&** GPS Coordinates of Lease Boundary

Processing of satellite data using ArcGIS 10.8 and preparing the Land Use & Land cover maps (e.g. Plant/Mine area, Existing Quarries, Settlements, Agriculture land, Non agriculture land, water bodies, etc.) by Digital Image Processing (DIP) technique.

- **80** Geo-Referencing of the Survey of India Toposheet
- 80 Geo-Referencing of satellite Imagery with the help of Geo-Referenced Toposheets
- **&** Enhancement of the Satellite Imagery
- Base Map layer creation (Roads, Railway, Village Names, and other Secondary data, etc.)
- **80** Data analysis and Classification using Digital interpretation techniques.
- **&** Ground truth studies or field Verification.
- **&** Error fixing / Reclassification
- **80** Final Map Generation.

The land use/Land cover Map of the buffer zone is given in 3.4(b).

Land Use Pattern of the Buffer Zone (Study area)

Details of the same are given in Table - 3.3 and the map is shown in Figure - 3.2

Geo Exploration and Mining Solutions

3.1.4 Interpretation

- The 10 km radius study area mainly comprises of crop land & Agriculture land accounting of 56.54% & 0.42% of the total study area. The study area also consists of fallow land of 13.76%.
- The buffer zone studied has no ecological sensitive area (National Park, Wildlife Sanctuary, Biosphere Reserve/ etc.).
- Water Bodies such as Rivers, Ponds/ lakes comprises of 6.36% of the total buffer area. The two seasonal rivers such as Ponnaiyar River 7.1km-SW, Badethala Lake 1.9km in NE and Krishnagiri Dam 4.5km-SW direction of the total study area.
- The Scrub land accounts of 11.64%. As per the primary survey, it was observed the scrub land is mainly occupied by the stony waste and left-over domestic waste generated by the nearby areas.
- 80 The Peddathalapalli R.F-2.2km-SW direction in 5.50% covered in buffer zone.
- 80 0.44% of the total study area has occupied by the mine industries. The area occupied by Mainly Roughstone of the total buffer area. As also observed within the primary survey, the 10 km buffer area is also occupied by the medium scaled granite and small Brick kiln industries also located in the study area.
- 2.69% of the area is covered under the Builtup Land. The nearest village within the 3 km radius from the project site boundary is observed to be villages Kothapetta, Chinnampalli, Kallukurukki, and Krishnagiri Town & Panchayat etc.,

3.1.5 Cropping Pattern of the Buffer Zone

Krishnagiri district is one of the potential districts for cultivation of agricultural and horticultural crops. total cultivated area of 224767 Hectares, out of which 180902 Ha Net cultivated area against the 5,14,325 Ha. of total geographical area.

It is one of the potential districts for agricultural and horticultural crop production. The major agricultural crops in the district are grown Paddy, Ragi, Redgram, Cowpea, Maize, Cumbu, Groundnut, Horsegram and minor millets. The major cultivated area of agricultural crops occupied by rainfed agriculture. The major horticultural crops grown in the district are fruit crops like Mango, Banana and Guava, Vegetable like eggplant, okra, capsicum, onion and chilli, spices like Turmeric, Black pepper and flower crops like Rose, Gerbera and Carnations.

Source: https://www.agrifarming.in/district-wise-crop-production-in-tamil-nadu#krishnagiri

3.1.6 Interpretation and Conclusion

80 Kothapetta village Roughstone cluster quarries has proposed Project. It is a Patta land.

Total project area is 33545.36 ha around 10km radius.

Existing/ Proposed mine is coming in the area, percentage of human settlement will be increased in surrounding of project site and Infrastructure facilities also will be developed on the basis of requirement.

The 10 km study area mostly covers of crop land 56.54%. As per current study area is occupied by scrub land 11.6%, Barren rocky land 2.64% and Forest land is 5.50%, Water bodies 6.36% in 10 km radius from the study area land use into quarrie purpose for this proposed project.
The project site falls under the Roughstone region. Therefore, the area is appropriate for developing Road development and building etc., it shows that the region has good prospects in the future. Due to proposed Roughstone in this region, economic condition of locals is expected to be improved directly & indirectly. Hence project will prove to be the best economic proposal for the coming times.

3.1.7 Topography

The project area is slightly elevated topography, surrounded by quarries and Crushing units. Altitude of the area is 537m AMSL there are no hilly regions in and around the area.

3.1.8 Drainage Pattern of the Area

There are no developed surface drainage channels in the study area. Ponnaiyar River a perennial pass 7.2km-South West from the project site. The area is studded with few tanks that serve as the source of drinking water and also their surplus feeds adjoining tanks. The area is mostly dry in all seasons except rainy seasons.

The general drainage pattern of the area is of sub dendritic and dendritic pattern. No prominent water course or nallah is inferred. During rainy season the surface run off flows in N to SW direction. The drainage pattern of the study area is given in Fig. 3.5. The quarrying activity will not hinder the natural flow of rainwater.

3.1.9 Environmental Features in the Study Area

There is no Wildlife Sanctuaries, National Park and Archaeological monuments within the study area. No Protected and Reserved Forest area is involved in the project area. Therefore, there will be no need to acquisition/diversion of forest land. The details related to the environment sensitivity around the mine lease area i.e., 10 km radius of the mine lease area, are given in the below Table 3.3.

3.1.10 Seismic Sensitivity

The proposed project site falls in the seismic Zone III, low damage risk zone as per BMTPC, Vulnerability Atlas of Seismic zone of India IS: 1893 – 2002. The project area falls in the hard rock terrain on the peninsular shield of south India which is highly stable.

Sl. No	Sensitive Ecological Features	Name	Arial Distance in km from Mine Lease Boundary	
1	National Park /	Cauvery North Wildlife	26km-SW	
1	Wild life Sanctuaries	Santuary		
2	Reserve Forest	Peddathalapalli R. F	2.2km-SW

9	Mining Area	23.24
10	Scrub Land	25.68
11	Trees Plantation	1.95
	TOTAL	206.65

Interpretation

Land use Landcover of the area within 500m radius were studied in detailed that the majority of the land within 500m is Barren land (103.31ha) followed by Mining area (23.24ha), Scrub land (25.68ha) Crop land (13.80ha), Trees Plantation (1.95ha) are contributing majority of the land use.

3.1.11 Soil Environment

Soil quality of the study area is one of the important components of the land environment. The composite soil samples were collected from the study area and analysed for different parameters. The locations of the monitoring sites are detailed in Table 3.6 and Figure 3.6.

TABLE 3.6 – SOIL SAMPLING LOCATIONS

Source: On-site monitoring/sampling by EHS 360 Labs Private Limited in association with GEMS

FIGURE 3.6: SITE PHOTOGRAPHS OF SOIL SAMPLING LOCATIONS

The objective of the soil sampling is -

- 1. To determine the baseline soil characteristics of the study area;
- 2. To determine the impact of proposed activity on soil characteristics and;

To determine the impact on soil more importantly agriculture production point of view.

Methodology -

For studying soil quality, sampling locations were selected to assess the existing soil conditions in and around the proposed quarry site representing various land use conditions. The samples were collected by auger boring into the soil up to 90-cm depth. six (6) locations were selected for soil sampling on the basis of soil types, vegetative cover, industrial & residential activities including infrastructure facilities, which would accord an overall idea of the soil characteristics. The samples were analysed for physical and chemical characteristics. The sealed samples were sent to laboratory for analysis. The samples were filled in Polythene bags, coded and sent to laboratory for analysis and the details of methodology in respect are given in below Table 3.7.

Particulars	Details					
Frequency	One grab sample from each station-once during the study period					
Methodology	Composite grab samples of the topsoil were collected from 3 depths, and mixed to provide a					
	representative sample for analysis. They were stored in airtight Polythene bags and analysed at the					
	laboratory.					

TABLE 3.7 – METHODOLOGY OF SAMPLING COLLECTION

Source: On-site monitoring/sampling by EHS 360 Labs Private Limited

Soil Testing Result -

The samples were analysed as per the standard methods prescribed in "Soil Chemical Analysis (M.L. Jackson, 1967) & Department of Agriculture, Cooperation & Farmers Welfare, Ministry of Agriculture & Farmers Welfare, Government of India". The important properties analysed for soil are bulk density, porosity, infiltration rate, pH and Organic matter, kjeldahi Nitrogen, Phosphorous and Potassium. The standard classification of soil and physico-chemical characteristics of the soils are presented below in Table 3.6 & Test Results in Table 3.7.

Interpretation & Conclusion

Physical Characteristics –

The physical properties of the soil samples were examined for texture, bulk density, porosity and water holding capacity. The soil texture found in the study area is Clay to Sandy Soil and Bulk Density of Soils in the study area varied between 0.96– 1.14 g/cm³. The Water Holding Capacity (45.4-48.7%) and Porosity of the soil samples is found to be medium i.e., ranging from 42.8– 46.1%.

Chemical Characteristics –

- The nature of soil is slightly alkaline to strongly alkaline in nature with pH range 7.59 to 8.71
- The available Nitrogen content range between 300.2 mg/kg to 381.7 mg/kg
- The available Phosphorus content range between 1.7 mg/kg to 4.1 mg/kg
- The available Potassium range between 30.1 mg/kg to 49.7 mg/kg

Whereas, the micronutrient as zinc (Zn), iron (Fe) and copper (Cu) were found in the range of 1.09 to 2.9 mg/kg;

1.19 to 2.76mg/kg.

Wilting co efficient in significant level would mean that the soil would support the vegetation. The soil properties in the buffer zone reveal that the soil can sustain vegetation. If amended suitability the core area can also withstand plantation.

3.2 Water Environment

The water resources, both surface and groundwater play a significant role in the development of the area. The purpose of this study is to assess the water quality characteristics for critical parameters and evaluate the impacts on agricultural productivity, domestic community usage, recreational resources and aesthetics in the vicinity. The water samples were collected and transported as per the norms in pre-treated sampling cans to laboratory for analysis.

3.2.1 Surface Water Resources:

The study area is studded with few tanks that serve as the source of drinking water and also their surplus feeds adjoining tanks. The rainfall over the area is moderate, the rainwater storage in open wells and trenches are in practice over the area and the stored water acts as source of freshwater for couple of months after rainy season.

3.2.3 Methodology

Reconnaissance survey was undertaken to collect the sampling and locations were finalized based on;

- 1. Drainage pattern;
- 2. Location of residential areas representing different activities/likely impact areas; and
- 3. Likely areas, which can represent baseline conditions

Two (2) surface water and four (4) ground water samples were collected in the study area and physico-chemical, heavy metals and bacteriological parameters were analysed. The samples were analysed as per the procedures specified by CPCB, IS-10500:2012 and 'Standard methods for the Examination of Water and Waste water' published by American Public Health Association (APHA). The water sampling locations are given in Table 3.8 and shown as Figure 3.5.

FIGURE 3.10: WATER SAMPLING LOCATIONS AROUND 10 KM RADIUS

3.2.4 Interpretation& Conclusion

Surface Water

The pH of surface 7.55-7.73 while turbidity found within the standards. Total Dissolved Solids 423-504mg/l and Chloride 93.8-118mg/l. Nitrates 6.4-6.6 mg/l, while sulphates 51.1-67.4mg/l.

Ground Water

The pH of the water samples collected ranged from 7.01 to 7.97 and within the acceptable limit of 6.5 to 8.5. pH, Sulphates and Chlorides of water samples from all the sources are within the limits as per the Standard. on Turbidity, the water samples meet the requirement. Total Dissolved Solids were found in the range of 401-572mg/l in all samples. The Total hardness varied between 145.62 - 194.24 mg/l for all samples.

On Microbiological parameters, the water samples from all the locations meet the requirement. The parameters thus analysed were compared with IS 10500:2012 and are well within the prescribed limits.

3.2.5 Hydrology and Hydrogeological studies

The district is underlain by hard rock formation Fissured and Fractured crystalline rocks constitute the important aquifer systems in the district. Geophysical prospecting was carried out in that area by SSRMP-ATS Instrument by qualified Geo physicist with the help of IGIS software and it was inferred that the low resistance encountered at the depth between 31-45m Bgl. the quarrying operations is restricted upto 45m hence there is no possibilities of water table intersection during the entire mine life period besides it is also inferred topographically that there are no major water bodies intersecting the project area. There is no necessity of stream, channel diversion due to this upcoming project.

During the rainy season there is a possibility of collection of seepage water from the subsurface levels this is due to the high intensity of fracture and weathered portion upto a depth of 31-45m thus the collected seepage water will be stored in the mine sump pits and will be used for dust suppression and greenbelt development and during the end of the life of the mine this collected water will be as a temporary reservoir in that area.

3.2.6 Ground Water Resources:

Krishnagiri district is underlain entirely by Archaean Crystalline formations with Recent alluvial deposits occurring along the river and streams courses and colluvium of valley-fills. The important aquifer systems in the district are constituted by weathered, fissured and fractured crystalline rocks and the recent alluvial deposits.

Ground water occurs under phreatic conditions. The maximum saturated thickness of these aquifers is upto 5 m depending upon the topographic conditions. The study area falls in the Kothapetta which is categorized as Safe (< 70%) as per G.O (MS) No 113 dated 09.06.2016.

There are eight open wells and Eight Bore wells within the radius of 1km Most of the wells are almost in dry conditions: - The details of the well and depth in monsoon and non-monsoon is described below:

3.2.6 Methodology and Data Acquisition

Electric Resistivity Method is well established for delineating lateral as well vertical discontinuities in the resistive structure of the Earth's subsurface. The present study makes use of vertical electric sounding (VES) to delineate the Vertical Resistivity structure at depth. Schlumberger electrode set up was employed for making sounding measurements. Since it is least influenced by lateral in homogeneities and is capable of providing higher depth of investigation. This is four electrodes collinear set up where in the outer electrodes send current into the ground and the inner electrodes measure the potential difference.

The present study utilizes maximum current electrode separation AB/2. The data from this survey are commonly arranged and contoured in the farm of Pseudo-section that gives an approximate of the subsurface resistivity. This technique is used for the inversion of Schlumberger VES data to predict the layer parameter namely layer resistivity and Geo electric layer thickness. The main goal of the present study is to search the vertical in homogeneities that is consistent with the measured data.

For a Schlumberger among the Apparent resistivity can be calculated as follows

 $\rho_a = G\Delta V$

 ΔV = potential difference between receiving electrodes

G = Geometric Factor.

Rocks show wide variation in resistivity ranging from 10-8 more than 10+14 ohmmeter. On a broad classification, one can group the rocks falling in the range of 10-8 to 1 ohmmeter as good conductors. 1 to 106 ohmmeter as intermediate conductors and 106 to 1012 ohmmeter as more as poor conductor. The resistivity of rocks and subsurface lithology, which is mostly dependent on its porosity and the pore fluid resistivity is defined by Archie's Law,

 $\rho_r = F \rho_w = a \ Omega^m \rho_w$

- $\rho r = Resistivity of Rocks$
- ρw = Resistivity of water in pores of rock
- F = Formation Factor
- \emptyset = Fractional pore volume
- A = Constants with values ranging from 0.5 to 2.5

3.2.7 Survey Layout

The layout for a resistivity survey depends on the choice of the current and potential electrode arrangement, which is called electrode array. Here the present study is considered with Schlumberger array. In which the distance may be used for current electrode separation while potential electrode separation is kept on third to one fifth of the same. One interesting aspect in VES is the principle of reciprocity, which permits interchange of the potential and current electrode without any effect on the measured apparent resistivity.

The field equipment deployed for the study is in a deep resistivity meter with a model of SSRMP ATS this Signal stacking Resistivity meter is a high-quality data acquisition system incorporating several innovation features for Earth resistivity. In the presence of random earth Noises the signal to nose ration can be enhanced by \sqrt{N} where N

is the number of stacked readings. This SSR meter in which running averages of measurements [1, (1+2)/2, (1+2+3)/3 ... (1+2...+16/16)] up to the chosen stacks are displayed and the final average is stored automatically, in memory utilizing the principles of stacking to achieve the benefit of high signals to noise ratio. Based on these above significations the signal stacking resistivity meter was used for (VES) Vertical Electric Resistivity Sounding.

RESISTIVITY SURVEY PROFILE

Measurements of ground Resistivity is essentially done by sending a current through two electrodes called current electrodes ($C_1 \& C_2$) and measuring the resulting potential by two other electrodes called potential electrode ($P_1 \& P_2$). The amount of current required to be sent into the ground depends on the contact resistance at the current electrode, the ground resistivity and the depth of interest.

3.2.8 Data Presentation

It was inferred that the low resistance encountered at the depth between 31-45m Bgl. The maximum depth proposed out of proposed projects is 31-45m BGL. Hence there is no possibilities of water table intersection during the entire mine life period besides it is also inferred topographically that there are no major water bodies intersecting the project area.

3.2.9 Geophysical Data Interpretation

The geophysical data was obtained to study the lateral variations, vertical in homogeneities in the sub – surface with respect to the availability of groundwater. From the interpreted data, it has inferred that the area has moderate groundwater potential in the investigated area. This small quarrying operation will not have any significant impact on the natural water bodies.

3.3 Air Environment

The ambient air quality with respect to the study area of 10 km radius including the cluster quarries forms the baseline information. The prime objective of baseline air quality monitoring is to assess existing air quality of the area. This will also be useful in assessing the conformity to standards of the ambient air quality during the operations

The existing ambient air quality of the area is important for evaluating the impact of mining activities on the ambient air quality. These will also be useful for assessing the conformity to standards of the ambient air quality during the proposed quarries within the radius of 500m.

The sources of air pollution in the region are mostly due to vehicular traffic, dust arising from unpaved village road and domestic & agricultural activities. This section describes the identification of sampling locations, methodology adopted during the monitoring period and sampling frequency.

The baseline status of the ambient air quality has been assessed through scientifically designed ambient air quality network. The design of monitoring network in the air quality surveillance program has been based on the following considerations:

- Meteorological conditions.
- Topography of the study area.
- Likely impact area.

3.3.1 Meteorology & Climate

Meteorology is the key to understand the air quality. The essential relationship between meteorological condition and atmospheric dispersion involves the wind in the broadest sense. Wind fluctuations over a very wide range of time, accomplish dispersion and strongly influence other processes associated with them.

A temporary meteorological station was installed at project site. The station was installed at a height of 4 m above the ground level in such a way that there are no obstructions facilitating flow of wind, wind speed, wind direction, humidity and temperature are recorded on hourly basis.

Climate

- The climate is tropical in Krishnagiri. In Krishnagiri, the quantity of rainfall during summers surpasses that of winters. This climate is considered to be Aw according to the Köppen-Geiger climate classification. The temperature here averages 25.5 °C | 77.9 °F. The annual precipitation in this location is approximately 773 mm | 30.4 inch.
- Krishnagiri are in the middle of our planet and the summers are not easy to define. The optimal period to plan a visit would be during the months of January, February, March, April, May, June, July, August, September, October, November.
- The driest month is February. There is 6 mm | 0.2 inch of precipitation in February. On average, the highest amount of rainfall occurs during October with a mean value of 144 mm | 5.7 inch.
- With an average of 29.0 °C | 84.2 °F, April is the warmest month. On average, the month of December is considered to be the coldest time of year with temperatures averaging at around 21.9 °C | 71.4 °F. <u>https://en.climate-data.org/asia/india/tamil-nadu/krishnagiri-34157</u>

Rainfall

The average annual rainfall and the 5 years rainfall is as follows: TABLE 3.15 – RAINFALL DATA

3.3.2 Correlation between Secondary and Primary Data

The meteorological data collected at the site is almost similar to that of secondary data collected from IMD Krishnagiri. A comparison of site data generated during the three months with that of IMD, Krishnagiri Agro reveals the following:

- The average maximum and minimum temperatures of IMD, Krishnagiri agro showed a higher in respect of on-site data i.e. in Kothapetta village.
- The relative humidity levels were lesser at site as compared to IMD, Krishnagiri agro.
- The wind speed and direction at site shows similar trend that of IMD, Krishnagiri agro.

Windrose diagram of the study site is depicted in Figure. 3.8. Predominant downwind direction of the area during study season is North East to South West.

FIGURE 3.15: WINDROSE DIAGRAM

Environmental In the abstract of collected data wind rose were drawn on presented in figure No.3.15 during the monitoring period in the study area

1.Predominant winds were from E, ENE,

- 2. Wind velocity readings were recorded between 0.50 to 5.70 km / hour
- 3.Calm conditions prevail of about 0.00% of the monitoring period
- 4.Temperature readings ranging from 19.48 to 26.4°C
- 5.Relative humidity ranging from 75.78 to 85.87%
- 6. The monitoring was carried out continuously for three months

3.3.3 Methodology and Objective

The prime objective of the ambient air quality study is to assess the existing air quality of study area and its conformity to NAAQS. The observed sources of air pollution in the study area are industrial, traffic and domestic activities. The baseline status of the ambient air quality has been established through a scientifically designed ambient air quality monitoring network considering the followings:

- Meteorological condition on synoptic scale;
- Topography of the study area;
- Representatives of regional background air quality for obtaining baseline status;
- Location of residential areas representing different activities;
- Accessibility and power availability; etc

*Annual Arithmetic mean of minimum 104 measurements in a year taken twice a Week 24 hourly at uniform interval, ** 24 hourly / 8 hourly or 1 hourly monitored value as applicable shall be complied with 98 % of the time in a year. However, 2% of the time, they may exceed the limits but not on two consecutive days of monitoring.

3.3.5 Frequency & Parameters for Sampling

Ambient air quality monitoring has been carried out with a frequency of two samples per week at Eight (8) locations, adopting a continuous 24 hourly (3 shift of 8-hour) schedule for the period Mar2023-May2023. The baseline data of ambient air has been generated for PM₁₀, PM_{2.5}, Sulphur Dioxide (SO₂) & Nitrogen Dioxide (NO₂).

3.3.6 Ambient Air Quality Monitoring Stations

Seven (7) monitoring stations were set up in the study area as depicted in Figure 3.17 for assessment of the Proposed ambient air quality. Details of the sampling locations are as per given below.

S. No	Location Code	Monitoring Locations	Distance & Direction	Coordinates			
1	AAQ-1	Core Zone	Project Area	12°32'41.10"N 78°12'49.36"E

FIGURE 3.20 : BAR DIAGRAM OF PARTICULATE MATTER (PM2.5)

FIGURE 3.22: BAR DIAGRAM OF PARTICULATE MATTER (NO₂)

3.3.6 Interpretations & Conclusion

As per monitoring data, PM_{10} ranges from $39.1 \mu g/m^3$ to $45.2 \mu g/m^3$, $PM_{2.5}$ data ranges from $17.2 \mu g/m^3$ to $23.9 \mu g/m^3$, SO_2 ranges from $4.4 \mu g/m^3$ to $8.9 \mu g/m^3$ and NO_2 data ranges from $19.1 \mu g/m^3$ to $25.6 \mu g/m^3$. The concentration levels of the above criteria pollutants were observed to be well within the limits of NAAQS prescribed by CPCB.

The minimum & maximum concentrations of PM_{10} were found to be 39.1 µg/m³ in Core area & 45.2 µg/m³ in MC Palli Village respectively. The minimum & maximum concentrations of $PM_{2.5}$ were found to be 17.2 µg/m³ in Pedattalapalli Village & 23.9 µg/m³ in core area respectively. The maximum concentration in the core zone is due to the cluster of quarries situated within 500m radius.

3.3.7 FUGITIVE DUST EMISSION

Fugitive dust was recorded at 7AAQ monitoring stations for 30 days average during the study period.

3.4 Noise Environment

The vehicular movement on road and mining activities is the major sources of noise in study area, the environmental assessment of noise from the mining activity and vehicular traffic can be undertaken by taking into consideration various factors like potential damage to hearing, physiological responses, and annoyance and general community responses.

The main objective of noise monitoring in the study area is to establish the baseline noise level and assess the impact of the total noise expected to be generated during the project operations around the project site.

3.4.1 Identification of Sampling Locations

In order to assess the ambient noise levels within the study area, noise monitoring was carried out at seven (7) locations. The noise level monitoring locations were carried out by covering commercial, residential, rural areas within the radius of 10km. A noise monitoring methodology was chosen such that it best suited the purpose and objectives of the study.

S. No	Location code	Monitoring Locations	Distance & Direction	Coordinates

FIGURE 3.23: SITE PHOTOGRAPHS OF NOISE MONITORING IN CLUSTER

3.4.2 Method of Monitoring

Digital Sound Level Meter was used for the study. All reading was taken on the 'A-Weighting' frequency network, at a height of 1.5 meters from ground level. The sound level meter does not give a steady and consistent reading and it is quite difficult to assess the actual sound level over the entire monitoring period. To mitigate this shortcoming, the Continuous Equivalent Sound level, indicated by Leq, is used. Equivalent sound level, 'Leq', can be obtained from variable sound pressure level, 'L', over a time period by using following equation.

Leq = 10 Log L / T \sum (10Ln/10)

Where L = Sound pressure level at function of time dB (A)

T = Time interval of observation

3.4.3 Analysis of Ambient Noise Level in the Study Area

An analysis of the different Leq data obtained during the study period has been made. Variation was noted during the day-time as well as night-time. The results are presented in below Table 3.6

Day time : 6:00 hours to 22.00 hours.

Night time : 22:00 hours to 6.00 hours

S. No	Locations	Noise level (dB (A) Leq)		
		Day Time	Night Time	Ambient Noise Standards
1	Core Zone	41.5	34.7	Industrial Day Time- 75 dB (A) Night Time- 70 dB (A)
2	Core Zone	40.3	35.1	
3	Chinimalpalli	42.3	33.2	
4	Billanakuppam	41.1	35.2	
5	Peddanapalli	40.5	34.2	Residential Day Time– 55 dB (A) Night Time- 45 dB (A)

20

10

0

N1 34.7

N2 35.1

Ambient noise levels were measured at 7 (Seven) locations around the project area considering cluster quarries. Noise levels recorded in core zone during day time were from 40.3-41.5 dB (A) Leq and during night time were from 34.7-35.1 (A) Leq. Noise levels recorded in buffer zone during day time were from 38.3-42.3 dB (A) Leq and during night time were from 33.2-35.2 dB (A) Leq.

N4 35.2

45

N5 34.2

45

N6 34.2

45

N7 34.5

45

The values of noise observed in some of the areas are primarily owing to quarrying activities due to cluster of quarries within 500m radius, movement of vehicles and other anthropogenic activities. Noise monitoring results reveal that the maximum & minimum noise levels at day time were recorded in the range of 48.5 dB(A) in Core area and 31.3dB(A) in MC Palli, Pedattalapalli Village in Minimum noise levels. 39.4 dB (A) billanakuppam Village and 29.5 dB (A) Peddanapalli Village, MC Palli Village respectively in night time noise levels. Thus, the noise level for Industrial and Residential area meets the requirements of CPCB.

3.5 **Biological Environment**

3.5.1.Study area Ecology

In this project, the total area of the Cluster with in 10km radius from the periphery of this quarry is reported as **12.74.9 Ha with 3 No. of quarries**. In such Cluster situation, a common Ecology and Biodiversity study for the entire cluster of quarries is enough to capture all the possible externalities. The common EIA/EMP data can be used for all quarries fall under this cluster but the present work was carried out on detailed study of the impacts Kothapetta Village Rough stone quarry on the ecology and biodiversity of the core lease area with the proper mitigation and sustainable management plan. The proposed mine lease area is slightly elevated topography. The following methods were applied during the baseline study of flora, fauna and diversity assessment.

3.5.2. Objectives of Biological Studies

- a) Undertake an intensive field survey to assess the status of floral & faunal component in different habitats in the core and buffer areas of the project site.
- b) Identification and listing of flora and fauna which are important as per the Wildlife (Protection) Act 1972.
- c) Suggest Wildlife conservation (species specific/habitat specific) and management plan for the threatened (critically endangered & endangered species schedule I) faunal species if any reported within the study area.
- d) To identify the impacts of mining on agricultural lands and how it affects.
- e) Proper collection of information about wildlife Sanctuaries/ national parks/ biosphere reserves of the project area.
- f) Devise management & conservation measures for biodiversity.

3.5.2.1. Field surveys

The field visit was carried out to understand and assess the impacts of mining activities on flora & and fauna and natural habitats and prediction after the enhancement of the production capacity of the mine. We evaluated the distribution and abundance of flora and fauna in the study area through primary and secondary data sources.

3.5.2.2. Floral Study

- The floral survey of the project area is based on field survey of the area.
- The local flora was identified by their morphological observation, such as the size, age and shape of the leaf, flowers, fruits, and their bark features of the stem, and also documented their habitat viz. Trees, Shrubs, Herbs, Grasses, Climbers etc.
- After surveying the core and the buffer areas, a detailed floral inventory has been compiled. A list of all
 plants from the study area was prepared and their habitats were recorded.
- Selection of sampling locations was made with reference to topography, land use, vegetation pattern, wind pattern, etc. The observations were taken on natural vegetation, roadside plantations, and non-forest areas (agricultural fields, in plain areas, village wasteland, etc.) for quantitative representation of different species.

3.5.3. Methodology of Sampling

Identification of vegetation in relation to the natural flora and crops was conducted through reconnaissance field surveys and onsite observations in core and buffer zone. The plant species identification was done based on the reference materials and also by examining the morphological characteristics and reproductive materials i.e. flowers, fruits and seeds. Land use pattern in relation to agriculture crop varieties were identified through physical verification of land and interaction with local villagers.

The faunal elements (animal species) of core and buffer zone were identified by direct sightings or indirect evidences viz. pug marks, skeletal remains, scats and droppings etc. (Jayson and Easa 2004). Standard binocular was used for the observations. The authenticity of faunal elements occurrence was confirmed by interaction with the local people. Avifauna identification was done with pictorial descriptions of published literature. Information pertaining to existence of any migratory corridors and paths were obtained from local inhabitants. The status of each faunal element was determined and the Wildlife schedule category was ascertained as per the IUCN-Red Data Book and Indian wildlife (Protection) Act, 1972.

Plot method is used in the floral documentation in the core and buffer zone. For trees (10x10-m), shrubs (5x5-m) and herbs (1x1-m) plots were taken. Birds and butterflies were mainly focused during faunal assessment, transect method was employed for birds and butterflies. Transect is a path along which one counts and records the occurrence of an individual for study. A straight-line walk covering desired distance, within a time span of one hour to 30 minutes was carried out in the proposed region. Bird species were recorded during the hours of peak activity. 0700 to 1100 Hrs and 1430 to 1730 Hrs (Bibby et al. 2000).

Direct observations and bird calls were used for bird documentation. Same transects were used for counting butterflies. Opportunistic observations were made for Amphibians, reptiles and ordinates. Presence of mammals was recorded by direct and indirect signs. All possible transects were taken for birds and butterflies. Birds and butterflies were classified into species level. Recorded bird species were identified to species level using standard books (Ali & Ripley 1987, Grimmett et al., 2016).

3.5.3.1. Sampling

A stratified simple random sampling procedure was employed to obtain a sample from study area. The study area was further stratified in different land use/ecosystems.

3.5.3.2. Sampling Size

Keeping in mind both random sampling technique and covering all land use patterns for the study following sampling locations were chosen depending up on the area of the proposed site.

3.5.3.3. Timing of Study

The study was carried out during morning and evening hours, to cover the different activity phases for important species such as time resting, feeding, hunting, and daily movements.

3.5.3.4. Observations from Sampling

The various observations relating to flora and fauna species are discussed in detail below, in separate sections.

3.5.3.5. Equipment/ References

- Canon Mark III Camera with 50-500mm lens- Snap shots taken
- Leica Binoculars (8x 20) to spot/identify species
- IUCN Red Data Book https://www.iucnredlist.org/species
Chapter - 3

Ornithological/Entomological/Herpetological/Mammalian catalogues and pictorial descriptions from various authors and websites are followed for species identification.

3.5.4. Part I Field Sampling Techniques

3.5.4.1. Transect walk – Birds

Six no transect lines with varying length (100m-300m) and fixed width (2m) were laid which cuts through the core and buffer areas of proposed site. The transect surveys were conducted from 0700 to 1100Hrs and 1430 to 1730Hrs (Bibby et al. 2000). All avifauna found along these transects were recorded for analysing the data. Counts were conducted while there is no heavy rain, mist or strong wind.

3.5.4.2. Modified Pollard Walk - for Butterflies

The Modified Pollard Walk (Pollard 1977, 1993, Walpole 1999) using fixed width transect walk method were employed to investigate butterfly spatial distribution, diversity and abundance at the different survey sites.

3.5.4.3. Visual Encounter Survey (VES) - reptiles and Amphibians

VES is a time-constrained sampling technique (Campbell and Christman, 1982; Corn and Bury, 1990). It needs a systematic search through an area or habitat for a prescribed time period (Campbell and Christman, 1982). The result of VES is measured against the time spent on search. VES technique is one of the simplest methods, and an appropriate technique for both inventory and monitoring Herpetofauna (Heyer et al. 1994).

3.5.4.4. Observational methods- Mammals

For the purpose of recording mammals, we used two different observational techniques: (1) direct observations, and (2) recording of occurrences like holes, markings, scats, hairs, and spines (Menon 2003). For identification confirmations, photographs with a scale reference were used, and locations were recorded using a portable GPS device. Indigenous knowledge particularly that of the locals, was occasionally employed to compile a preliminary list of species and/or aid in the recognition of indicators.

3.5.4.5. Multiple Stage Quadrat – Vegetation

A variety of habitat or vegetation structure variables were measured using the Multiple Stage Quadrat sampling protocol (Sykes and Horrill 1977). All of those areas were sampled, and the major corners were temporarily delineated with colored ribbons. Each site was identified in the field using a compass and clinometer, and the plot's latitude, longitude, and elevation were recorded using a handheld Global Positioning System (Garmin 12XL).

3.5.5. Flora

The quadrat sampling technique was used for sampling vegetation. Sampling quadrats of the regular shape of dimensions 10×10 m, 5×5 m, and 1×1 m, were nested within each other and were defined as the units for sampling the area and measuring the diversity of trees, Shrubs, and herbs respectively.

3.5.5.1. Flora Composition in the Core Zone

Taxonomically a total of 26 species belonging to 15 families have been recorded from the core zone mining lease area. The area is slightly elevated topography. Based on the habitat classification of the enumerated plants the majority of species were Herbs 10, followed by Shrubs 6, Trees 5, and Grass 3 and Climber/ Creepers 2. Details of flora with the scientific name were mentioned in Table No. 3.53. The result of the core zone of flora studies shows that Fabaceae and Poaceae, Lamiaceae are the main dominating species in the study area mentioned in Table No.3.26. No species were found as threatened category.

Chapter - 3

3.5.5.2. Economically important Flora of the study area

The major irrigated crops in the district are paddy, ragi, turmeric, sugarcane, banana, tomato, groundnut, cotton, coconut and flowers. The irrigated area under vegetables, fruit and flowers. Farmers have adopted to cultivation methods through judicious use of water with modern water management techniques and technology.

3.5.5.3. Major Crops in the District

Owing to the climate and soil conditions Krishnagiri District suits to diverse type of cultivation. There are about 26 type of crops grown in the District including medicinal plants. Important crops grown in the District are Paddy, Ragi, Cholam, Red gram, Black gram, Horse Gram, Mango, Coconut, Cabbage, Banana, Tomato, Califlower etc., and the major cash crops are groundnut, flowers and cotton.

Source: DDS - Krishnagiri, 2019

3.6. Flora Composition in the Buffer Zone

Similar habitats may be found in the buffer area as well, although there is a wider variety of plants there than in the core zone area. The buffer zone has some forests located away from the proposed project site and there are 135 species in the buffer zone study area in total, based on records. The floral (135) varieties among them Trees 48, Herbs 44, Shrubs 26, Climbers/Creepers 11, and Grasses 7 were identified. The result of the buffer zone of flora studies shows that Fabaceae and Cucurbitaceous, Euphorbiaceae is the main dominating species in the study area mentioned in Table No.3.28. There are no impacts due to this mining activity. There are no Rare, Endangered, and Threatened Flora species in the mining area and their surrounding study area. Apart from the proposed project area, there is agricultural land. Horticulture and agricultural land are untouched. There are no Rare, Endangered, and Threatened Flora species in the mining area and their surrounding study area. A list of floral species has been prepared based on primary survey (site observations) and discussion with local people. The total number of different plant life forms under trees, shrubs, herbs, and climbers is shown in Table 3.28 and their % distribution is shown in Figure 3.28.

S. No	Plant Life Form	Number of Species
1	Trees	47
2	Shrubs	26
3	Herbs	44
4	Climber	11
6	Grasses	7
То	tal No. of Species	135

Table 3.28: Number of floral life forms in the Study Area

Fig No. 3.28: Graph Showing % Distribution of Floral Life Forms (Buffer Zone)

3.5.7. The vegetation in the RF / PF areas, ecologically sensitive areas etc.

There are no National Parks, Sanctuaries, Biosphere Reserves, Wildlife Corridors, Ramsar sites, Tiger/Elephant Reserves/(existing as well as proposed) within 10 km of the mine lease area. There is no Reserve Forest situated within in 1 km radius. There is no Reserve Forest situated within in 1 km radius. There is no Reserve Forest situated within in 1 km radius. The nearest Reserve Forest is Peddathalapalli R.F-2.30km-SW. There are no protected forests within the project area. In addition, No Biosphere Reserves, Wildlife corridors, or, Tiger/ Elephant reserves within 10 km of the project area. No protected (PF) forests either in the mine lease area or in the buffer zone. Thus, no forest land is involved in any manner.

There are no protected or ecologically sensitive areas such as National parks or Important Bird Areas (IBAs), or Wetlands or migratory routes of fauna or water bodies or human settlements within the proposed mine lease area. There are no Biosphere reserves or wildlife sanctuaries or National parks or Important Bird Areas (IBAs), or migratory routes of fauna. Thus, the area under study (Mine lease area and the 10 Km buffer zone) is not ecologically sensitive.

Thus, no forest land is involved in any manner. There are no impacts due to this mining activity. There are neither forests nor forest dwellers nor forest-dependent communities in the mine lease area. There shall be no forest-impacted families (PF) or people (PP). Thus, the rights of Traditional Forest Dwellers will not be compromised on account of the project.

3.6. Fauna

The faunal survey has been carried out as per the methodology cited and listed out Mammals, birds, Reptiles, Amphibians, and Butterflies. All the listed species were compared with Red Data Book and Indian Wildlife Protection Act, 1972. There are no rare, endangered, threatened (RET) and endemic species present in the core area.

3.6.1. Fauna Composition in the Core Zone

A total of 24 varieties of species were observed in the Core zone of Kothapetta Village, Black Granite quarry (Table No.3.29) among them numbers of Insects/ Butterflies 7, Reptiles 5, Mammals 3, and Avian 9. A total of 24 species have been recorded from the core mining lease area. None of these species are threatened or endemic in the study area and surroundings. There is no Schedule I species and 17 species are under Schedule IV according to the Indian Wildlife Act 1972. A total of 9 species of bird were sighted in the mining lease area. There are no critically

endangered, endangered, vulnerable, and endemic species were observed. Details of fauna in the core zone with the scientific name were mentioned in Table No. 3.56.

	Tamil Na	adu	

Fig No. 3.29: Pie chart Showing distribution of Fauna Life Forms (Core Zone) 3.6.2. Fauna Composition in the Buffer Zone

As animals, especially vertebrates move from place to place in search of food, shelter, mate or other biological needs, separate lists for core and buffer areas are not feasible however, a separate list of fauna pertaining to core and buffer zone are listed separately. Though there is no reserved forests in the buffer zone. As such there are no chances of occurrence of any rare or endangered or endemic or threatened (REET) species within the core or buffer area.

There are no Sanctuaries, National Parks, Tiger Reserve or Biosphere reserves or Elephant Corridor or other protected areas within 10 km radius of from the core area. It is evident from the available records, reports, and circumstantial evidence that the entire study area including the core and buffer areas were free from any endangered animals. There were no resident birds other than common bird species such as Red-whiskered Bulbul, Asian Koel, House crow, Black drangos, Crows, Pond heron etc.

The list of Mammals (*directly sighted animals & Secondary data) is given in table No.3.30. The list of bird species recorded during the field survey and literature from the study area are given in Table 3.31. The list of reptilian species recorded during the field survey and literature from the study area is given in Table 3.32. The list of insect species recorded during the field survey and literature from the study area are given in Table 3.33. The list of Butterflies species recorded during the field survey and literature from the study area are given in Table 3.33. The list of Butterflies species recorded during the field survey and literature from the study area are given in Table 3.34. It is apparent from the list that none of the species either spotted or reported is included in Schedule I of the Wildlife Protection Act. Similarly, none of them comes under the REET category.

Taxonomically a total of 79 species recorded were from the buffer zone area. Based on habitat classification the majority of species were birds 36, followed by Butterflies 15, Reptiles 10, Insects 5, Mammals 9, and Amphibians 4. There are five Schedule II species, two species are under the schedule III and fortyseven species are under Schedule IV according to the Indian Wildlife Act 1972. A total of 36 species of bird were sighted in the study area. There are no critically endangered, endangered, vulnerable, and endemic species were observed. There are no impacts on nearby fauna species.

Chapter - 3

Dominant species are mostly birds, butterflies, and insects, and four amphibian was observed during the extensive field visit Sphaerotheca breviceps, Euphlyctis hexadactylus, Bufomelanostictus, etc. There is no Schedule I Species in the study area. There are no critically endangered, endangered, vulnerable, and endemic species were observed.

Fig No. 3.30: Pie Chart Showing distribution Of Fauna Life Forms (Buffer Zone)

Livestock like cattle, buffalo, goat, poultry, duck and pig are reared for dairy products, meat, and egg and for agriculture purpose. Majority of cattle and buffalo are of local variety. Backyard poultry farms are mostly common in this area; however, some commercial poultry farms are also recorded in the study area.

The study area is marked with moderate population of flora and fauna. With reference to the Wildlife Protection Act 1972 total number of wildlife tabulated in this study can be characterized as given in the Table 3.35.

Table 3.36: Description of Flora & Fauna

A comprehensive Central Legislation namely Wild Life (Protection) Act was enforced in 1972 to provide protection to wild animals. Schedule-I of this act contains the list of rare and endangered species, which are completely protected throughout the country. The list of wild animals and their conservation status as per Wild Life Act (1972) presented in Table 3.63 are the species recorded/reported from the study area, out of which 3 species belongs to schedule-II, 2 species belongs to schedule-III, 1 species belongs to schedule-V and rest of the species belongs to schedule-IV of Wildlife protection Act, 1972.

The study area intersected by few natural drainage and lakes. A number of samples were investigated for enumeration of aquatic fauna. In order to study aquatic flora and faunal life one time survey was conducted during the winter season. Major component of the aquatic life under the study area are listed below

- Phytoplankton
- Zooplankton

Chapter - 3

• Aquatic vertebrates like fish, amphibians etc.

To assess the planktonic profile of Phytoplankton and Zooplankton, few water samples from nearby seasonal water bodies etc. of the project side were collected at sub-surface level. The aquatic ecological study was conducted in different water bodies of the study area and the flora and fauna was recorded.

3.6.3. Aquatic Flora

While considering assessment of aquatic pollution and its implications, it must be realized that, despite many changes in the physico-chemical properties of the water body and sediment, the ultimate consequences of pollutants may be reflected inevitably on the biological system. Hence, the investigations of an ecosystem and particularly of its communities constitute an integral part of any ecological assessment. This can be achieved by selecting a few reliable parameters from a complex community structure. The parameters considered have phytoplankton (cell count, and generic diversity), zooplankton (standing stock i.e., biomass and faunal groups), fishery and mammals as well as birds. The first two reflect the productivity of a water column at the primary and secondary levels, respectively. Benthic organisms being sedentary animals associated with the seabed, provide information regarding the integrated effects of stress, if any, and hence serve as good indicators of early warnings of potential damages.

3.6.3.1. Significance of Plankton

Planktons can be broadly grouped into two categories those with plant origin are called 'Phytoplankton' and those with animal origin are called 'Zooplankton'.

3.6.3.2. Significance of Phytoplankton

In aquatic environments, phytoplanktons are the main primary producers of organic matter, particularly in seas where they account for 90% of the production. When taken as a whole, they either directly or indirectly sustain all animal populations. In the spring, phytoplanktons are exposed to more intense light from the upper sun when the water column becomes shallow. One of the main abiotic elements that promotes phytoplankton growth is light. The enormous accumulation of phytoplankton in the spring directly supplies fresh organic carbon to nourish the zooplankton, which supports fish, crabs, mollusks, and avian species—larger aquatic animals.

Phytoplankton group reported from the study area were Basillariophyceae, Chlorophyceae, and Myxophyceae and Euglenophyceae members. About 4 species of phytoplankton were reported from all the locations. Dominance of Bacillariophyceae members followed by Myxophyceae was observed in studies samples.

S.No	Name of species	Name of Family
1.	Achnanthes affinis	Achnanthaceae
2.	Spirulina sp., Oscillatoria sp.	Myxophyceae
3.	Ankistrodesmus falcatus, Pediastrum boryanum,	Chlorophyceae
	Scenedesmus bijuga	
4.	Synedra balthica	Fragilariaceae

Table No: 3.37. Phytoplankton species

3.6.3.3. Significance of Zooplankton:

Because they help move biological production from phytoplankton to larger species in the food web, zooplanktons are important. Numerous types of phytoplankton are fed on by tiny copepods, tunicates, protozoans, and other crustaceans. These then feed other animals, creating a further link in the food chain. As a result, fluctuations in plankton production would have an impact on the survival of juvenile fish that depend on them.

S.No	Name of species	Name of Family
1.	Mesocyclops leuckarti, Mesocyclops hyalinus	Cyclopidae
2.	Penilia avirostris, Evadna tergestina, Daphnia sp.	Cladocera
3.	Filinia sp., Asplanchana sp.	Rotifera
4.	Keratella monospina, Brachionus caudatus	Brachionidae

Table No: 3	3.38.	Zooplankton	Sp	ecies
-------------	-------	-------------	----	-------

3.6.3.4. Aquatic Fish Fauna

Among all the aquatic life in the study area the fish fauna occupies an important place. The fish fauna of the area includes: Major carps includes Catla, Rahu, Mirgal, Exotic carps includes Silver carp, Grass carp, Minor carps etc.

3.6.3.3. Aquatic Faunal Diversity

Amphibian species like the common Indian Burrowing frog, and green pond frog, and etc. were sighted near the water bodies located in the study area.

SI.	Scientific Name	Common	Schedule list wildlife
No	Scientific Name	Name/English Name	Protection act 1972
1.	Sphaerotheca breviceps	Indian Burrowing frog	Schedule IV
2.	Euphlyctis hexadactylus	Green pond frog	Schedule IV
3.	Bufomelanostictus	Indian Toad	Schedule IV
4.	Euphlyctiscynophlyctis	Skipper	Schedule IV

Table no. 3.39. Amphibians Observed/Recorded from the Study Area

3.6.3.4. Aquatic Vegetation

Aquatic weeds are found to be growing everywhere in 10 km radius area, in every water bog, pond, etc. Typha angustata can be found growing all along the drains of villages, small water-logged depressions, and agricultural fields lacking water but containing enough moisture to support its growth. And where water is present, Eichhornia crassipes has taken its roots and covers the entire water surface by its sprawl and invasion. All the aquatic plant species listed in Table 3.67.

 Table No: 3.39. List of aquatic plants observed in the study area

S.No	Scientific Name	Common Name	Туре
1.	Typha angustifolia	Lesser Bulrush	Emergent hydrophytes
2.	Ipomea aquatica	Water Morning Glory	Marshy amphibious hydrophytes
3.	Hydrilla verticillata	Hydrilla	Submerged hydrophytes
4.	Pistia stratiotes	Water lettuce	Free floating hydrophytes
5.	Cyperus articulates	Jointed flatsedge	Emergent Hydrophytes
6.	Eichhornia crassipes	Common water hyacinth	Free floating hydrophytes

*LC- Least Concern, NA-Not yet assesse

3.10. Findings/Results

The assessment was carried out during the Post monsoon season. The inspection day was quite all right with respectable weather. The details of the flora and fauna observed are given below.

S. No	Ecological sensitive habitat	Direction and Distance from the project
		site
1.	National Parks/ Wildlife Sanctuary/	Nil
	Biosphere reserves/ Elephant Reserve/	
	Any Other Reserve	
2.	Reserved Forests	There is no Reserve forest situated within in 1
		km radius. The nearest Reserve Forest is
		Peddathalapalli R.F-2.30km-SW.
3.	Wildlife Corridors & Routes	No notified wildlife corridors are present in 10
		km vicinity.
4.	Wetlands / Water bodies	-
5.	Ramsar Site	Nil
6.	Important Bird Habitats	Nil
7.	Breeding/nesting areas of endangered	Not present
	species	
8.	Mangroves	None

There are no critically endangered, endangered, vulnerable, and endemic species were observed. As the rainfall in the area is scanty and as no toxic wastes are produced or discharged on account of mining, the proposed mining activity is not going to have any additional and adverse impacts on these RET species. There are no ecologically sensitive areas or protected areas within the 10 Km radius. Hence no specific conservation for conservation of any RET species or Wildlife is envisaged.

3.8. Conclusion

The observations and assessment of the overall ecological scenario involve details such as classification of Biogeographic zone, eco-region, habitat types, and land cover, distances from natural habitats, vegetation/forest types, and sensitive ecological habitats such as Wetlands sites, Important Bird areas, migration corridors of important wildlife etc. Such baseline information provides better understanding of the situation and overall ecological importance of the area. This baseline information viewed against proposed project activities help in predicting their impacts on the wildlife and their habitats in the region. Data collected and information gathered from secondary literature on flora, fauna, protected area, natural habitats, and wildlife species etc., and consulted and discussed with local people, from the villages, herders and farmers who inhabit close to the proposed project area.

3.6 SOCIO ECONOMIC ENVIRONMENT

An essential part of environmental study is socio-economic environment incorporating various facts related to socio-economic conditions in the area, which deals with the total environment. Socio economic study includes demographic structure of the area, provision of basic amenities viz., housing, education, health and medical services, occupation, water supply, sanitation, communication, transportation, prevailing diseases pattern as well as features of aesthetic significance such as temples, historical monuments etc. at the baseline level. This would help in visualizing and predicting the possible impact depending upon the nature and magnitude of the project. Socio-economic study of

Chapter - 3

an area provides a good opportunity to assess the socio-economic conditions and possibly makes a change in living and social standards of the particular area benefitted due to the Project. It can undoubtedly be said that the project will provide direct and indirect employment and improve the infrastructural facilities and standards of living of the area.

3.6.1 Objectives of the Study

- The objective of this socio-economic study is:
- To know the current socio-economic situation in the study area covering the sub factors of education, health, sanitation, water, employment and business
- To recommend practical strategic interventions to improve the area
- To help in providing better living standards
- To help in providing better employment opportunities for locals in the study area.

3.6.2 Scope of Work

- ✤ To study the socio-economic environment of the study area
- Data collection during primary field survey and collate it with the secondary sources
- ✤ Identification of possible impacts from the project
- Prediction of probable impact due to the project
- Mitigation measures
- * Action plan for the implementation of mitigation measures.

3.6.3 Methodology

Collection of Data

Data for this project was collected from primary sources like Field survey, Interviews of locals and secondary sources like Government department, Maps, Literature research etc. GEMS conducted the socio-economic **baseline survey using a survey team of Field Assistants and a Supervisor apprising them about the project area and relevant documents**. The Survey was conducted **using Simple Random Sampling method** with a well-structured questionnaire prepared enabling subjects to reply appropriately. The questionnaires were designed to suit the subjects considering their rural background enabling them to furnish correct information and data to the extent possible. Primary data has been collected at village level, household level by questionnaires and focused group discussions. The study area for the field survey has been divided into three major segments namely Primary Zone (0 - 3 km), Secondary Zone (3 - 7 km) and Outer Zone (7 - 10 km).

Presentation of Data and Analysis

The data collected were presented in a suitable, concise form i.e., tabular or diagrammatic or graphic form for further analysis. These tabulated data were interpreted and analyzed with the help of various qualitative techniques and ideographic approaches.

A detailed socio-economic survey was conducted in the buffer zone (10 km radius of the Roughstone quarry at village: Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu) to identify the social and economic impacts. To get an overview of the villager's views and preferences about the plant, socio-economic parameters i.e., population

Chapter - 3

growth, density, literacy etc. were taken to determine the impact of the quarry production on the human population of the study area.

3.6.4 Population Growth Rate

In 1991, there were only 21 districts in the State of Tamil Nadu. In 2001, eight new districts were created by reorganising the territorial jurisdiction. The nine districts are – Krishnagiri, Namakkal, Perambalur, Viluppuram, Thiruvarur, Nagapattinam, and Theni. The population and its growth trend are important economic factors in a developing economy.

Year	Tamil Nadu	India
1941	11.91	14.22
1951	14.66	13.31
1961	11.85	21.51
1971	22.30	24.80
1981	17.50	24.66
1991	15.39	23.86
2001	11.19	21.34
2011	15.61	5.96
2021	5.96	1.0

3.6.5 Krishnagiri District

Krishna' refers to 'black' and 'giri' refers to 'hill'. This district is gifted with black granite hillocks and named as "krishnagiri". The region came under the rule of Krishna Deva Raya and hence it might have been named after this king.

Krishnagiri district is bounded by Vellore and Thiruvannamalai districts in the East, Karnataka state in the west, State of Andhra Pradesh in the North Dharmapuri District in the south. Its area is **5143 Sq. Kms.** This district is elevated from 300m to 1400m above the mean sea level. Source: <u>https://krishnagiri.nic.in/about-district/district-at-a-glance/</u>

It is located between 11° 12'N to 12° 49'N Latitude,77° 27'E to 78° 38'E Longitude.

3.6.6 Study Area

Detailed socio-economic survey was conducted in the study area (Core and buffer zone) within 10 km radius of the area village: Kothapetta Village, Krishnagiri Taluk, Krishnagiri District: Krishnagiri, Tamil Nadu. In order to determine the impact of the proposed project on nature and inhabitant. To get an overview of the villagers and their perspectives about this proposed activity, different demographic parameters and social aspects such population

density, sex ratio, literacy rate, worker ratio etc. has been identified, analyzed, studied together. These impacts may be beneficial or disadvantageous. If disadvantageous anticipated suggestions measures are advocated in order to have collective development.

3.6.7 Demographic pattern of 10km study area characteristics a comparative analysis

Table 3.40 Shows the socio-economic profile of the study area as compared to district, state and national level	el

Rough stone quarry is located in the Krishnagiri district of the State of Tamil Nadu. The Total No. of villages observed within the 10 km radius from the project area is 39. one taluk falls within the 10 km buffer area. The population as per 2011 Census records is 255882 (for 10 km radius) and there is total 59,669households residing within the studied area. Average household size is 4 which is the standard family size in India. Sex ratio of the study area is 999(females per 1000 males). Total SC and ST population distribution is 32,085,850respectively. The literacy rate in the Study area is observed to be 66%. The village - wise demographic features of the study area as per area classification are given in Table 3.42 below:

3.6.8 Population Distribution

Total number of males in the study area is **128026** and females are **127856**. The sex ratio was calculated to be 999 females per 1000 males within the 10 km buffer area which is not very poor compared to the national sex ratio. Within the study area, it was observed child population is increasing as per census 2011 participation increase in current scenario due to proper treatment provided to infants this is because of the awareness of the family.

Figure No. 3.32Population of study area

- ✓ Above table identifies the presence of villages and their subsequent population divided under three zones from plant boundary (i.e., Primary, secondary and tertiary zone).
- ✓ Primary zone has 3 villages where as much as 18246 households with 79678 population are located. Mostly lying on Built-up land for their livelihood and substance.
- ✓ Secondary and tertiary zone both comprise of 15 and 21 villages having a total population of 87867 and 88337respectively.

3.6.9 Gender and Sex Ratio

3

Sex ratio is used to describe the number of females per 1000 of males. Sex ratio is a valuable source for finding the population of women in India and what is the ratio of women to that of men in India. In the Population Census of 2011, it was revealed that the population ratio in India 2011 is 940 females per 1000 of males. The study area has 999females per 1000 males. Gender and sex ratio determine the Human Development Index (HDI) of an area thereby understanding the status of women in that region. Following table entails information about sex ratio of 39 villages lying in study area (buffer zone) as primary, secondary and tertiary zone.

		•
S. No.	Buffer Zone	Sex Ratio of Study are Female/ 1000 Male
1	Primary Zone (0-3 km)	1017
2	Secondary zone (3-7 km)	1005

3.6.10 Literacy Rate in Study Area

Literacy is the ability to read and write one's own name and further for knowledge and interest, write coherently, and think critically about the written word. The analysis of the literacy levels is done in the study area. The 10 km radius study area demonstrates a literacy rate of 70% as per census 2011. The male literacy rate works out to be 76.74% whereas the female literacy rate, which is an important factor for social change, is observed to be 63.18% in the study area. This indicates that the education facilities in the villages are not up to the mark and there is need to be aware as the female literacy as it is very important for our society and from the survey it is clear that the literacy rate of female is far low comparison to male.

 Table 3.46 Literacy Rate of the Study Area

Zone	No. of Villages	Male Literacy Population	Male literacy Rate	Female Literacy Population	Female literacy Rate	Total Literacy	Total Literacy Rate

3.6.11 Vulnerable Group

While developing an action plan, it is very important to identify the population that falls under the marginalized and vulnerable groups and special attention should be given towards these groups while making action plans. In the observed villages schedule caste (SC) population is \sim 13% and Schedule Tribe population \sim 0.33% in study area. 87% population observed as other.

		Vulnerable Groups								
Zone	No. of Villages	SC % Population		ST Population	%	Other Population	%

3.6.12 Economic Activities

The economy of an area is defined by the occupational pattern and income level of the people in the area. The occupational structure of residents in the study area is studied with reference to work category. The Population is divided occupation wise into three categories, viz., main workers, marginal workers and non-workers. The workers include cultivators, agricultural labourers, those engaged in household industry and other services. The marginal workers are those workers engaged in some work for a period of less than 180 days during the reference year. The non-workers include those engaged in unpaid household duties, students, retired persons, dependents, beggars, vagrants etc. besides institutional inmates or all other non-workers who do not fall under the above categories.

Zone	No. of Villages	Total Workers	%	Main Workers	%	Margina l Workers	%	Non- Workers	%
Primary Zone (0 - 3 Km)	3	27829	34.93	25789	32.37	220	0.28	51849	65.07
Secondary Zone (3 - 7 Km)	15	37632	42.83	31970	36.38	4241	4.83	50235	57.17
Tertiary Zone (7 - 10 Km)	21	42211	47.78	34404	38.95	5001	5.66	46126	52.22
Study Area (10 Km)	39	107672	42.08	92163	36.02	56047	21.90	148210	57.92

Table 3.48 shows the work force of the study area

Source: Census of India, 2011

Total working population within the 10 km study area are 42.08%, where 36.02% are main workers and 21.9% of the total working population are marginal worker 58% of the total population are non-Workers.

Figure 3.38 Working population in the study area 3.6.13 Population Projection of the Study Area

Krishnagiri Population 2021 – 2030

The last census of Krishnagiri was done in 2011and next census of 2021 has been postponed or cancelled. But we can do projection of future Krishnagiri 2022 Population on the basis likely Population Growth Rate.

Vaar	Projected Population
Year	(Estimation)
2001	1561118
2011	1879809
2021	2198500
2025	2325976
2030	2485322

Source: https://www.census2011.co.in

A population projection is an estimation of the number of people expected to be alive at a future date that is made based on assumptions of population structure, fertility, mortality and migration. It is an essential to assess the need for new jobs, schools, doctors and nurses, planning urban housing, foods, clothing and requirements of energy and resources. It is also needed for policy discourse i.e., helps to the policy-makers to understand the existing problems and finally supports to develop the suitable solutions.

A population projection gives a picture of what the future size and structure of the population by sex and age might look like. It is based on knowledge of the past trends, and, for the future, on assumptions made for three components: fertility, mortality and migration.

Table 3.49 Total Topulation of Study Area							
Population in 2001	Population in 2011						
r opulation in 2001							
223088	255882						
	Population in 2001 223088

S. No	Year	Projected Population
		(Approximately)
1.	2021	288676
2.	2031	321470
3.	2041	354264
4.	2051	387058

Table 3.50 Population Projection of Study Area

Source: Calculated by SPSS V23 Linear Regression Method.

Figure 3.39 Graph Showing Population Projection

Following formula has been used for the projection of population.

Y=a+bt

Where: Y= Dependent variable (Population)

a=Intercept

b=Slope

t=Interdependent variables (Time)

Above formula is applied to project population for the years (2021, 2031, 2041, 2051). Due to avoid the errors in manual calculation the statistical software SPSS (demo version 23) is used to calculate the intercept and the slope.

Due to the shortage of data on population the results show same value of growth for the years (2021,2031,2041,2051). If the researcher gets enough the data on population for earlier years the data projection will be accurate.

- Ref: Indian Economic survey, the SLR (Simple Linear Regression) techniques are used by statistical department, Government of India to project population.

3.6.14 Population Growth of the Study Area

Year	Actual Population	Growth Rate %
2001	223088	
2011	255882	11.47
2021	288676	11.28
2031	321470	11.14
2041	354264	11.02
2051	387058	10.93

Table 3.51 Population Growth rate in Study area

Above table no 3.41 is showing the growth rate of population since 2001, as per census in 2001 the population of study area was 233088 and 2011 it was 255882 if the population growth rate is 11.47%, it will approximately gradually an increase about 288676 in year 2021 and 387058 in the year of 2051. It has approximately population growth rate decline will be 10.93%.

Figure.3.40 Graph Showing Population Growth Rate

Source: Compiled by Author-2022

Planning Analysis:

Calculating Growth Rates

The percent change from one period to another is calculated from the formula:

Where:

 $\label{eq:PR} \begin{array}{l} PR = Percent \ Rate \\ V_{Present} = Present \ or \ Future \ Value \\ V_{Past} = Past \ or \ Present \ Value \end{array}$

$$PR = \frac{(V_{Present} - V_{Past})}{V_{Past}} \times 100$$

The *annual* percentage growth rate is simply the percent growth divided by N, the number of years. **Source:** <u>https://pages.uoregon.edu/rgp/PPPM613/class8a.htm</u>

3.6.18 Infrastructure Base

A. EDUCATION FACILITIES

Education and learning are one of the most important processes in today's society. Education is not just restricted to teaching a person the basic academics, say computers, mathematics, geography or history, education is a much larger term. It is really a means to discover new things which we don't know about and increase our knowledge. Government has provided educational facilities in each village instead some villages do not have school facility. According to census India handbook 2011, Primary Schools are available in every village and Middle, Secondary and Senior Secondary School (depend on population size) are available in some of the villages. It can be concluded from the available census data that people have to go far away from the villages for colleges and schooling. For higher education people have to migrate to the bigger cities. Educational and literacy details were collected from census India handbook 2011 and we observed lack of Education. After analysing the literacy rate from census data, we found that literacy rate is good. The available educational structure for the population in the case study area is mentioned in the table below.

Zone	No. of Villages	Primary School	Middle School	Higher Secondary School	Govt.College
Primary Zone (0 - 3 Km)	3	3	1	2	-
Secondary Zone (3 - 7 Km)	15	3	1	3	4
Tertiary Zone (7 - 10 Km)	21	2	2	4	-
Study Area (10 Km)	39	8	4	9	4

Table 3.55. Educational facilities in the study area

Source: DCHS census 2011,

B. HEALTH FACILITIES

Health is a premier asset of human capital which is an important factor for growth of any economy. It is a source of human welfare. Health and nutrition play a major role for developing a healthy society as it impacts the productivity of a person. The healthcare facilities in the study area consisted of Primary Health Centre (PHC), Primary Health Sub-Centre's (PHSC), Maternity and Child Welfare Centre (MCWS), Dispensaries and TB Clinic, Veterinary hospitals (VH), Non-Govt. medical facilities Medicine shops (MS), sub-centres and Primary Health Centres. As per the data of 10 km radius study area collected from Census India Handbook 2011, medical facilities are far below the basic need and patients have to move to Cities for any serious illness. So, the action plan which is to be prepared should focus on the more improvement of health facilities.

3.16.6 Other activities

1.Electrification in the Area

The source of electricity is fulfilled by the Government. Most of the villages are electrified and power supply is good in the study area.

2.Drinking Water Facilities:

As per the data collected from census India handbook 2011, it has been noticed that the requirement of drinking water is being fulfilled by Well and handpumps and lakes. All villagers are availing drinking water facilities from Hand pumps. The drinking and domestic water sources are open wells and hand pumps, tanks.

3.Transport and Road Infrastructure Facilities

Villages have fare road connectivity and Private bus operators operate transport service in the villages. Road condition of the villages is good and the area is well connected with the two major highways such as NH - 44 - Salem to Bangalore direction, SH - 225 Krishnagiri to Rayakottai direction connecting Road. As per the survey, in some villages, there are proper roads with the bus stops available for the people convenience.

4.Electrification

All the villages surveyed in the study area were electrified. Electricity is available for the various domestic, non-domestic, industrial, agricultural and public lighting purposes. But being a rural area, the electric supply is discontinuous most of the times and is supplied in shifts (eight hours in the morning or evening).

3.16.7 ECONOMIC EXPOSURE AND DEVELOPMENT

Implementation of the project will make financial institutions as well as related economic facilities, infrastructure and services available to the people. This will expose and introduce the local population to factors of economic development including the banking system, financial services, and credit and investment schemes. The exposure will enable community members to invest their income and prevent dependency or living a life of "tomorrow will take care of itself".

3.16.8 ADVERSE SOCIAL IMPACTS

Health Impacts

The project has the potential for triggering health impacts through increased dust, creation of breeding grounds for disease vectors, population influx which might introduce new diseases in the area, and inadequate sanitation facilities.

Noise and Vibration

The mining activity is carrying out by eco-friendly surface miner without drilling & blasting. The noise & vibration is generated only for short time due to transportation of vehicles thus there is no major adverse impact has seen.

Livelihood change

Due to the labour intensity of the mining sector, the project will attract the more able-bodied persons from the community which in turn will lead to low labour availability in other sectors of the economy including agricultural, education and health skilled workers. Local employment opportunities to be created by the project. This impact will not be significant due to low level of education and skills in the area which will result in sourcing skilled workforce from outside the immediate area. But the magnitude of this impact will be high due to high number of dependents in a household.

Managing Loss of Livelihood and Income

To cushion the population against impacts of mine closure, comprehensive retrenchment packages that include adequate advance warning to employees and contractors to allow them to source alternative opportunities should be undertaken. Skills development programmes should also be undertaken well before the closure of the Plant. However, adequate protection measures will be taken by the mine management to take care of environment and to guard against adverse environmental impact.

3.16.9 Inference of the Socio-economic Study

• The Socio-Economic study provides the clear picture of demographic as well as economic attributes such as population, average household size, working, non-working population, literacy rate, sex ratio, occupation etc.

• Percentage of the male population is observed to be higher than women population with the study area. As observed, the majority of the villages are spatially distributed with the secondary zone of the study area. The sex ratio is 968 females of every 1000 males in the study area which is not very poor compared to the national sex ratio.

• As far as the literacy rate is concerned, the study area has an average level as the literacy rate of people is growing.

Vulnerable people are very low in the buffer zone area.

3.16.10 Morbidity Pattern

Morbidity rate refers to the rate at which a disease or illness occurs in a population and can be used to determine the health of a population and its healthcare needs. Illnesses can range from acute to chronic, long-lasting conditions. There is no such major morbidity pattern has been found in the area as per the data sources of the health department. Some minor morbidity may be seen like respiratory diseases were commonest morbidity followed by cataract, cardiovascular. As the age increases chances of getting morbidities were more. Also, water quality results of

some of the villages indicates that there is fluoride content in the ground water which may lead to fluorosis disease among the population.

3.16.11 Recommendation and Suggestion

The village development plans are made in consultation with the community through Gram Sabah; these appear to address the needs of the community. However, it may be noted that at the implementation stage these plans often are fraught with problem of inadequate funds, lack of proper planning, corruption, vested interests and political agendas. Hence while ascertaining the scope for convergence with the government activities, care must be taken to ascertain realistic possibilities for implementation.

Women empowerment– Home based income generation activities, vocational training programme, Common education centre for increase the literacy.

Education – free uniform, construction of common rooms, secondary schools, colleges and library, computer education and physical education, additional schools for girls, furniture and equipment in schools to promote education.

Vocational Trainings – establishment of a vocational training center within the villages with a curriculum designed to suit market demands. Vocational training for disability persons.

Agriculture/livestock –infrastructure such as agriculture electric connections, assistance with buying improved tools and equipment, capacity building, supply and/or knowledge of better variety of seeds, pasture land development and trainings on animal husbandry& facility of veterinary doctor.

➢ Health − improvement in sanitary conditions of the villages, assistance with construction of latrines, improvement in drainage system, health camps and awareness campaigns for diseases like malaria, typhoid, tuberculosis, yellow fever and pneumonia. Repairing of PHCs and Aanganbadi centers, Provision of water tanks at discreet village locations for sanitation, extending health facility to needy amongst surrounding villages, ambulances to local health centres in improving facility to public health. Establishment of new PHCs and medicinal shops.

Persons with disability: Establishment of center for special education, sensitization of the community towards disabled and awareness on Govt.

Roads-- Laying of new roads and pucca roads in the study area which can increase in the transportation facilities.

3.16.12 CONCLUSION

The environment baseline study was conducted in the project area by both secondary data and primary data collections. Abiotic factors including air, water and soil were studied for the core and buffer zone. It was found that most of the parameters were within the limits as per the Standards. Similarly, the study for the biotic factors was conducted. It can be concluded that the present environment status of the study area is good enough for the project activity. Adoption of adequate pollution control measures will protect the surrounding environment.

Social Impact assessment study was also conducted during the study period which revealed that area further require improvement in the Economy, Employment and Infrastructure Development of the area. Hence, it can be concluded that the present baseline environment status of the study area will not be affected by the project Proponent will adopt adequate control measures to protect the surrounding environment and will contribute in social & economic development of the areas in vicinity & study area.

CHAPTER – 4: ANTICIPATED ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES

4.0 General

The environmental impact can be categorized as either primary or secondary, primary impacts which are attributed directly by the project; secondary impacts are those which are indirectly induced. The open cast mining operations involve development of benches, Approach Road, Haul Road, Excavation and handling of material. If adequate control measures are not taken to prevent/mitigate the adverse environmental impacts/lead to damage of the eco-system.

In order to maintain the environmental commensuration with the mining operation, it is essential to undertake studies on the existing environmental scenario and assess the impact on different environmental components. This would help in formulating suitable management plans for sustainable resource extraction. Based on the baseline environmental status at the existing mine site, the environmental factors that are likely to be affected (Impacts) are identified, quantified and assessed. The various anticipated impacts will be on.

- Land environment
- Water Environment
- Air Environment
- Noise Environment
- Socio economic environment
- Solid waste
- Soil environment

4.1 Land Environment

4.1.2 Anticipated Impact from all Proposed Projects

- Permanent or temporary change on land use and land cover.
- Change in Topography: Topography of the ML area will change at the end of the life of the mine.
- Movement of heavy vehicles sometimes cause problems to agricultural land, human habitations due to dust, noise and it also causes traffic hazards.
- Due to degradation of land by pitting the aesthetic environment of the core zone may be affected.
- Earthworks during the rainy season increase the potential for soil erosion and sediment laden water entering the water ways.
- If no due care is taken wash off from the exposed working area may choke the water course & can also causes the siltation of water course

4.1.2.1 Common Mitigation Measures for Respective Individual Proposed Projects

- The mining activity will be gradual confined in blocks and excavation will be undertaken progressively along with other mitigative measures like phase wise development of greenbelt etc.,
- Construction of garland drains all around the quarry pits and construction of check dam at strategic location in lower elevations to prevent erosion due to surface runoff during rainfall and also to collect the storm water for various uses within the proposed area.

- Green belt development along the boundary within safety zone. The small quantity of water stored in the minedout pit will be used for greenbelt.
- Thick plantation will be carried out on unutilized area, top benches of mined out pits, on safety barrier, etc.,
- At conceptual stage, the land use pattern of the quarry will be changed into Greenbelt area and temporary reservoir.
- In terms of aesthetics, natural vegetation surrounding the quarry will be retained (such as in a buffer area i.e., 7.5 m safety barrier and other safety provided) so as to help minimise dust emissions.
- Proper fencing will be carried out at the conceptual stage, Security will be posted round the clock, to prevent inherent entry of the public and cattle.

4.1.3 Soil Environment

4.1.4 Impact on Soil Environment

The top layer of the project site in the form of topsoil formation, it will be directly loaded into tippers for the filling and levelling of low-lying areas. There is no disposal of topsoil. The excavated Rough Stone quarry will be directly loaded into dumpers to the needy customers.

There will be no disposal of waste water from the quarry operation, No discharge of toxic effluent from the proposed projects. The dust emission at working face and haul roads will be controlled by water sprinkling and plantation.

Erosion and Sedimentation (Removal of protective vegetation cover; Exposure of underlying soil horizons that may be less pervious, or more erodible than the surface layers; Reduced capacity of soils to absorb rainfall; Increased energy in storm-water runoff due to concentration and velocity; and Exposure of subsurface materials which are unsuitable for vegetation establishment).

4.1.5 Common Mitigation Measures for Respective Individual Proposed Projects

- Run-off diversion Garland drains will be constructed all around the project boundary to prevent surface flows from entering the quarry works areas. And will be discharged into vegetated natural drainage lines, or as distributed flow across an area stabilised against erosion.
- Sedimentation ponds Run-off from working areas will be routed towards sedimentation ponds. These trap
 sediment and reduce suspended sediment loads before runoff is discharged from the quarry site.
 Sedimentation ponds should be designed based on runoff, retention times, and soil characteristics. There may
 be a need to provide a series of sedimentation ponds to achieve the desired outcome.
- Retain vegetation Retain existing or re-plant the vegetation at the site wherever possible.
- Monitoring and maintenance Weekly monitoring and daily maintenance of erosion control systems so that they perform as specified specially during rainy season.

4.1.6 Waste Dump Management

There are no wastages anticipated in this Rough Stone quarrying operation. The entire quarried out materials will be utilized (100%).

4.2 Water Environment

4.2.1 Anticipated Impact on Surface and ground water

The impact due to quarrying on the water quality is expected to be insignificant because of no use of chemicals or hazardous substances during quarrying process. The quarrying activity will not intersect ground water table as the maximum depth of the quarry in the cluster is 45m Agl and water table is found at a depth of 76-82m BGL The quarrying operation will be carried out well above the water table. There is no intersection of surface water bodies (Streams, Canal, Odai etc.,) in the project area. During rainy season rain water will be collected in the quarry pit and later used for greenbelt development and for the water sprinkling in the haul roads. There is no proposal for discharging of quarry pit water outside the project area.

PROPOSAL – P1					
*Purpose	Quantity	Source

Green Belt development		The required water will be met from rainwater			
	0.8KLD	accumulated in mine pit (when available) and from the			
		approved water vendors.			
Sanitation and Drinking purpose	0.6KLD	Approved water vendors.			
Total	2.3 KLD				

TABLE 4.1: WATER I	REQUIREMENTS
--------------------	--------------

* Water for drinking purpose will be brought from approved water vendors Source: Approved Mining Plan Pre-Feasibility Report

Total water requirement in the cluster quarries is about 7.3KLD, the water for dust suppression and greenbelt development will be sourced from the mine pit water collected during rainy seasons, the water for domestic purpose and drinking will be sourced from the approved water vendors.

4.2.2 Common Mitigation measures:

Garland drain, settling tank will be constructed along the proposed mining lease area. The Garland drain will
be connected to settling tank and sediments will be trapped in the settling traps and only clear water will be
discharged out to the natural drainage

- Rainwater will be collected in sump in the mining pits and will be allowed to store and pumped out to surface setting tank of 15 m x 10m x 3m to remove suspended solids if any. This collected water will be judiciously used for dust suppression and such sites where dust likely to be generated and for developing green belt. The proponent will collect and judicially utilize the rainwater as part of rainwater harvesting system.
- Providing benches with inner slopes and through a system of drains and channels, allowing rain water to
 descent into surrounding drains, so as to minimize the effects of erosion & water logging arising out of
 uncontrolled descent of water.
- Reuse the water collected during storm for dust suppression and greenbelt development within the mines
- Installing interceptor traps/oil separators to remove oils and greases. Water from the tipper wash-down
 facility and machinery maintenance yard will pass through interceptor traps/oil separators prior to its reuse;
- Using flocculating or coagulating agents to assist in the settling of suspended solids during monsoon seasons;
- Periodic (every 6 month once) analysis of quarry pit water and ground water quality in nearby villages.
- Domestic sewage from site office & urinals/latrines provided in ML is discharged in septic tank followed by soak pits.
- Waste water discharge from mine will be treated in settling tanks before using for dust suppression and tree plantation purposes.
- De-silting will be carried out before and immediately after the monsoon season.
- Regular monitoring (every 6 month once) and analysing the quality of water in open well, bore wells and surface water.

4.3 Air Environment

The air borne particulate matter is the main air pollutant in this opencast mining. The mining operation will be carried out by jackhammer drilling (35mm dia) and Hydraulic Excavators will be utilized for excavation of Rough Stone quarry waste.

4.3.1. Anticipated

Impact

- During mining, at various stages activities such as excavation, drilling, blasting, and transportation of materials, particular matter (PM), gases such as Sulphur dioxide, oxides of Nitrogen from vehicular exhaust are the main air pollutants.
- Emissions of noxious gases due to incomplete detonation of explosive may sometimes pollute the air.
- The fugitive dust released from the mining operations may cause effect on the mine workers who are directly exposed to the fugitive dust.
- Simultaneously, the air-borne dust may travel to longer distances and settle in the villages located near the mine lease area.

4.3.1.1. Modelling of Incremental Concentration from all Proposed Projects

Wind erosion of the exposed areas and the air borne particulate matter generated by quarrying operation, and transportation are mainly PM_{10} & $PM_{2.5}$ and emissions of Sulphur dioxide (SO₂) & Oxides of Nitrogen (NOx) due to excavation/loading equipment and vehicles plying on haul roads are the cause of air pollution in the project area.

Similarly, loading - unloading and transportation of Rough Stone quarry, wind erosion of the exposed area and movement of light vehicles causes of pollution. This leads to an impact on the ambient air environment around the project area.

Anticipated incremental concentration due to this quarrying activity and net increase in emissions due to quarrying activities within 500 meters around the project area is predicted by Open Pit Source modelling using AERMOD Software.

The impact on Air Environment is due to the mining and allied activities during Land Development phase, Mining process and Transportation. The emissions of Sulphur dioxide (SO₂), Oxides of Nitrogen (NOx) due to excavation/loading equipment and vehicles plying on haul roads are marginal. Loading - unloading and transportation of Rough Stone quarry, wind erosion of the exposed area and movement of light vehicles will be the main polluting source in the mining activities releasing Particulate Matter (PM_{10}) affecting Ambient Air of the area. Prediction of impacts on air environment has been carried out taking into consideration cumulative production three proposed quarries. Air environment and net increase in emissions by Open pit source modelling in AERMOD Software.

4.3.1.2 Emission Estimation

An emissions factor is a representative value that attempts to relate the quantity of a pollutant released to the atmosphere with an activity associated with the release of that pollutant.

The general equation for emissions estimation is:

$$\mathbf{E} = \mathbf{A} \mathbf{x} \mathbf{E} \mathbf{F} \mathbf{x} (\mathbf{1} - \mathbf{E} \mathbf{R} / \mathbf{100})$$

Where:

E = emissions;

A = activity rate;

EF = emission factor, and

ER =overall emission reduction efficiency, %

The proposed mining activity includes various activities like ground preparation, excavation, handling and transport of ore. These activities have been analysed systematically basing on USEPA-Emission Estimation Technique Manual, for Mining AP-42, to arrive at possible emissions to the atmosphere and estimated emissions are given in Table 4-2.

4.3.2 Frame work of Computation & Model details

The prediction included the impact of Excavation, Drilling, Blasting, loading and movement of vehicles during transportation and meteorological parameters such as wind speed, wind direction, temperature, rainfall, humidity and Cloud cover.

Impact was predicted over the distance of 10 km around the source to assess the impact at each receptor separately at the various locations and maximum incremental GLC value at the project site. Maximum impact of PM_{10} was observed close to the source due to low to moderate wind speeds. Incremental value of PM_{10} was superimposed on the base line data monitored at the proposed site to predict total GLC of PM_{10} due to combined impacts.

Air Pollution Dispersion Modelling

Baseline Air Quality –

Baseline air quality has been measured at 2 locations in the cluster and 5locations within the buffer zone of the study area. The 24 - hourly average samples of particulate matters (PM_{10} and $PM_{2.5}$), SO_2 and NO_x were measured following the National Ambient Air Quality Standards (NAAQS), 2009. Monitoring data of 7 sampling stations are given below –

Meteorological Data -

Meteorology is the key to understand the air quality. The essential relationship between meteorological condition and atmospheric dispersion involves the wind in the broadest sense. Wind fluctuations over a very wide range of time, accomplish dispersion and strongly influence other processes associated with them.

A temporary meteorological station was installed at project site and monitored continually for study period without break. The station was installed at a height of 4 m above the ground level in such a way that there are no obstructions facilitating flow of wind, wind speed, wind direction, humidity and temperature are recorded on hourly basis. A weather data was collected from IMD, Krishnagiri agro for the month of Oct2023 – Dec2023 to correlate with site data and found not much of change in the parameters.

TABLE 4.7: INCREMENTAL & RESULTANT GLC OF FUGITIVE DUST

From the resultant of cumulative concentration i.e., Background + Incremental Concentration of pollutant in all the receptor locations without effective mitigation measures are still within the prescribed NAAQ limits of 100, 80 & 80 µg/m3 for PM10, SO2 & NOX respectively. By adopting suitable mitigation measures, the pollutant levels in the atmosphere can be further being controlled.

4.3.4. Common Mitigation Measures for Respective Individual Proposed Projects

Drilling – To control dust at source, wet drilling will be practiced. Where there is a scarcity of water, suitably designed dust extractor will be provided for dry drilling along with dust hood at the mouth of the drill-hole collar.

Advantages of Wet Drilling: -

- In this system dust gets suppressed close to its formation. Dust suppression become very effective and the work environment will be improved from the point of occupational comfort and health.
- Due to dust free atmosphere, the life of engine, compressor etc., will be increased.
- The life of drill bit will be increased.
- The rate of penetration of drill will be increased.
- Due to the dust free atmosphere visibility will be improved resulting in safer working conditions.

Blasting -

- Establish time of blasting to suit the local conditions and water sprinkling on blasting face
- Avoid blasting i.e., when temperature inversion is likely to occur and strong wind blows towards residential areas
- Controlled blasting includes Adoption of suitable explosive charge and short delay detonators, adequate stemming of holes at collar zone and restricting blasting to a particular time of the day i.e., at the time lunch hours, controlled charge per hole as well as charge per round of hole
- Before loading of material water will be sprayed on blasted material
- Dust mask will be provided to the workers and their use will be strictly monitored

Haul Road & Transportation -

- Water will be sprinkled on haul roads twice a day to avoid dust generation during transportation
- Transportation of material will be carried out during day time and material will be covered with taurpaulin
- The speed of tippers plying on the haul road will be limited below 20 km/hr to avoid generation of dust.
- Water sprinkling on haul roads & loading points will be carried out twice a day
- Main source of gaseous pollution will be from vehicle used for transportation of mineral; therefore, weekly maintenance of machines improves combustion process & makes reduction in the pollution.
- The un-metalled haul roads will be compacted weekly before being put into use.
- Over loading of tippers will be avoided to prevent spillage.
- It will be ensured that all transportation vehicles carry a valid PUC certificate
- Grading of haul roads and service roads to clear accumulation of loose materials

Green Belt –

- Planting of trees all along main mine haul roads and regular grading of haul roads will be practiced to prevent the generation of dust due to movement of dumpers/trucks
- Green belt of adequate width will be developed around the project areas

Occupational Health –

- Dust mask will be provided to the workers and their use will be strictly monitored
- Annual medical checkups, trainings and campaigns will be arranged to ensure awareness about importance of wearing dust masks among all mine workers & tipper drivers
- Ambient Air Quality Monitoring will be conducted six months once to assess effectiveness of mitigation measures proposed

4.4 Noise Environment (Impact & Mitigation Measures)

Noise pollution is mainly due to operation like drilling & blasting and plying of trucks & HEMM. These activities will not cause any problem to the inhabitants of this area because there is no human settlement in close proximity to the project area. Noise modelling has been carried out considering blasting and compressor operation (drilling) and transportation activities.

Predictions have been carried out to compute the noise level at various distances around the working pit due to these major noise-generating sources. Noise modelling has been carried out to assess the impact on surrounding ambient noise levels. Basic phenomenon of the model is the geometric attenuation of sound. Noise at a point generates spherical waves, which are propagated outwards from the source through the air at a speed of 1,100 ft/sec, with the first wave making an ever-increasing sphere with time. As the wave spreads the intensity of noise diminishes as the fixed amount of energy is spread over an increasing surface area of the sphere. The assumption of the model is based on point source relationship i.e., for every doubling of the distance the noise levels are decreased by 6 dB (A).

For hemispherical sound wave propagation through homogeneous loss free medium, one can estimate noise levels at various locations at different sources using model based on first principle.

 $Lp_2 = Lp_1 - 20 \log (r_2/r_1) - Ae_{1,2}$

Where:

 $Lp_1\& Lp_2$ are sound levels at points located at distances $r_1\& r_2$ from the source.

 $Ae_{1,2}$ is the excess attenuation due to environmental conditions. Combined effect of all sources can be determined at various locations by logarithmic addition.

```
Lp_{total} = 10 \log \{10^{(Lp1/10)} + 10^{(Lp2/10)} + 10^{(Lp3/10)} + \dots\}
```

4.4.1 Anticipated Impact

Attenuation due to Green Belt has been taken to be 4.9 dB (A). The inputs required for the model are:

- Source data
- Receptor data
- Attenuation factor

Source data has been computed taking into account of all the machinery and activities used in the mining process. Same has been listed in Table 4-8.

Sl.No.	Machinery / Activity	Impact on Environment?	Noise Produced in dB(A) at 50 ft from source*
1	Blasting	Yes	94
2	Jack Hammer	Yes	88
3	Compressor	No	81
4	Excavator	No	85
5	Tipper	No	84
	Total Noise P	roduced	95.8

TABLE 4.8: ACTIVITY AND NOISE LEVEL PRODUCED BY MACHINERY

*50 feet from source = 15.24 meters

Source: U.S. Department of Transportation (Federal Highway Administration) - Construction Noise Handbook

The total noise to be produced by mining activity is calculated to be 95.8 dB (A). Generally, most mining operations produce noise between 100-109 dB (A). We have considered equipment and operation noise levels (max) to be approx. 109 dB (A) for nose prediction modelling.

Location ID	N1	N2	N3	N4	N5	N6	N7

TABLE 4.9: PREDICTED NOISE INCREMENTAL VALUES

4.4.2 Common Mitigation Measures for Respective Individual Proposed Projects

The following noise mitigation measures are proposed for control of Noise.

- Time intervals for each quarry during blasting.
- Use of personal protective devices i.e., earmuffs and earplugs by workers, who are working in high noise generating areas.
- Limiting time exposure of workers to excessive noise.

- Proper and regular maintenance of vehicles, machinery and other equipment's.
- The noise generated by the machinery will be reduced by proper lubrication of the machinery and other equipment's.
- Speed of trucks entering or leaving the quarry will be limited to moderate speed to prevent undue noise from empty vehicles...
- Noise levels will be controlled by using optimum explosive charge, proper delay detonators and proper stemming to prevent blow out of holes (occasionally).
- Providing proper noise proof enclosure for the workers separated from the noise source and noise prone equipment.
- Provision of Quiet areas, where employees can get relief from workplace noise.
- The development of green belts around the periphery of the quarry site to attenuate noise.
- Regular medical check-up and proper training to personnel to create awareness about adverse noise level effects.

4.4.3 Ground Vibrations

Ground vibrations due to the proposed mining activities are anticipated due to operation of Mining Machines like Excavators, drilling and blasting, transportation vehicles, etc., However, the major source of ground vibration from the quarry is blasting. The major impact of the ground vibrations is observed on the domestic houses located in the villages nearby the mine lease area. The kuchha houses are more prone to cracks and damage due to the vibrations induced by blasting whereas RCC framed structures can withstand more ground vibrations. Apart from this, the ground vibrations may develop a fear factor in the nearby settlements.

Another impact due to blasting activities is fly rocks. These may fall on the houses or agricultural fields nearby the mining lease area and may cause injury to persons or damage to the structures. Nearest habitation from the project area is located 550m North in Gulisandiram village. The ground vibrations due to the blasting in proposed mine are calculated using the empirical equation.

The empirical equation for assessment of peak particle velocity (PPV) is:

$$V = K [R/Q^{0.5}]^{-B}$$

Where -

- V = peak particle velocity (mm/s)
- K = site and rock factor constant
- Q = maximum instantaneous charge (kg)
- B = constant related to the rock and site (usually 1.6)
- R = distance from charge (m)

Location ID	Maximum Charge in kgs	Nearest Habitation in m	PPV in m/ms
P1	74	590	0.577
P2	140	700	0.731

TABLE 4.10: PREDICTED PPV VALUES DUE TO BLASTING

Chapter - 4

P3	139	210	4.987

P2

P3

From the above, the charge per blast of 140Kg is well below the Peak Particle Velocity of 8 mm/s as per Directorate General of Mines Safety for safe level criteria through Circular No. 7 dated 29/8/1997. It should be ensured that the explosives used for blasting at one blast should not exceed more than 28 Kg at any point of time. However, as per statutory requirement control measures will be adopted to avoid the impacts due to ground vibrations and fly rocks due to blasting.

4.4.3.1 Common Mitigation Measures for Respective Individual Proposed Projects

- The blasting operations in the cluster quarries are carried out without deep hole drilling and blasting using delay detonators, which reduces the ground vibrations;
- Proper quantity of explosive, suitable stemming materials and appropriate delay system will be adopted to avoid overcharging and for safe blasting;
- Adequate safe distance from blasting will be maintained as per DGMS guidelines;
- Blasting shelter will be provided as per DGMS guidelines;
- Blasting operations will be carried out only during day time;
- The charge per delay will be minimized and preferably a greater number of delays will be used per blasts;
- During blasting, other activities in the immediate vicinity will be temporarily stopped;
- Drilling parameters like depth, diameter and spacing will be properly designed to give proper blast;
- A fully trained explosives blast man (Mining Mate, Mines Foreman, 2nd Class Mines Manager/ 1st Class Mines Manager) will be appointed.
- A set of shot firing rules will be drawn up and blasting shall commence outlining the detailed operating procedures that will be followed to ensure that shot firing operations on site take place without endangering the workforce or public.
- Sufficient angular stemming material will be used to confine the explosive force and minimise environmental disturbance caused by venting / misfire.

- The detonators will be connected in a predetermined sequence to ensure that only one charge is detonated at any one time and a NONEL or similar type initiation system will be used.
- The detonation delay sequence shall be designed so as to ensure that firing of the holes is in the direction of free faces so as to minimise vibration effects.
- Appropriate blasting techniques shall be adopted such that the predicted peak particle velocity shall not exceed 8 Hz.
- Vibration monitoring will be carried out every 6 months to check the efficacy of blasting practices.

4.5 Impact on the Biological Environment

4.5.1. Impact Identification and Evaluation

In general, impact prediction methods argue that the foremost step in impact appraisal must consider and identify project actions that are likely to bring significant changes in the project environment. The present study determined to predict the likely impacts of the Proposed Rough stone quarry mining Project in the surrounding environment with a specific focus on biological attributes covering habitats/ecosystems and associated biodiversity. Likely impacts identified were categorized into different levels like direct or primary and indirect or secondary impacts based on the influence of sources of impacts.

4.5.2. Impact on Flora

The proposed mine lease area is slightly elevated topography and it is not fit for cultivation. It is mostly devoid of any considerable vegetation. The proposed mine lease area (core zone) does not encompass any designated forest land within it. The vegetation is very sparse and scanty. So, there will be no impact on flora from the mining operation. There will not be much contamination of soil or any other materials from the mining operation. No threatened plant species were reported in the core and buffer study area during the field survey.

4.5.2.1. Anticipated Impact on agricultural land associated with flora

- 1. There are no impacts on the nearby agricultural land due to this mining activity.
- 2. None of the plants will be cut during the operational phase of the mine.
- 3. There shall be negligible air emissions or effluents from the project site. During the loading of the truck, dust generation will be likely. This shall be a temporary effect and not anticipated to affect the surrounding vegetation significantly.

4.5.3 Mitigation Measures

4.5.3.1. General Guidelines for Green Belt Development

Drone survey was covered the green belt and fencing as per the terms of references. The green belt and plantation purposes in and around the proposed mine lease area native species, fruit-bearing trees, medicinal plants, and dense canopy trees should be selected. These species should be tolerant to pollution levels as per Bio- Geography zones of India.

After the operation of mining production capacity, green belt and Plantation species should be in accordance with the Terms and Conditions of the Environmental Clearance Green belt is created not only for the purpose of protecting sensitive areas or maintaining the ecological balance but because they also act as efficient biological filters or sinks for particulate and gaseous emissions, generated by vehicular movements and various industrial and mining activities. Optimally designed green belts can be effective in reducing the impact of fugitive emissions and pollutants accidentally or otherwise released at ground levels.

4.5.3.2. Proposed Green Belt

Extensive green belt development will be started during the construction phase, which will continue till the operation of the plant. About 1500-2000 trees will be planted per hectare all around the plant, approach roads, and township premises. Locally available types of trees that are resistant to pollutants will be planted. In addition to the above, all open spaces available within the premises will be developed as nurseries, parks, gardens, and other forms of greenery. 5 m wide greenbelt will be developed along the plant premises, as per land available.

4.5.3.3. Guidelines & Techniques for Green Belt Development

An extensive survey of the project area was undertaken to observe the structure and composition of vegetation. Hence a combination of plants is selected depending upon the topographical suitability and species selected as per the SPCB Guideline and ToR. The soil characteristics were kept in mind. Based on this survey and environmental conditions suitable native plant species have been proposed for the green belt development plan.

4.5.3.4. Development of Green Belt

The plantation matrix adopted for the green belt development includes pit of 0.3 m x 0.3 m in size with a spacing of 2 m x 2 m. In addition, earth filling and manure may also be required for the proper nutritional balance and nourishment of the sapling. It is also recommended that the plantation has to be taken up randomly and the landscaping aspects could be taken into consideration. Multi-layered plantations comprising of medium height trees (7 m to 10 m) and shrubs (5 m height) are proposed for the green belt.

A greenbelt is a set of rows of trees planted in such a fashion, to create an effective barrier between the project and its surroundings. The greenbelt helps to capture fugitive emissions, attenuate the noise levels in the existing project, and simultaneously improve aesthetics of the surroundings.

4.5.3.5. Design of Green Belt

The present plan comprises the details of field investigations. Plant species for greenbelt development are selected as per CPCB guidelines. The green belt will be developed along the periphery of the Proposed Rough stone quarry. The greenbelt development plan has been formulated considering the parameters such as climate, soil types, topography, etc.

a. Characteristic features of plants to be used for Absorption of pollutant gases

- Plant species should be perennial and evergreen with thick canopy cover.
- The crown of the tree (mass of foliage/leaves and branches growing outward from the trunk of the tree) should be either Oblong, Round, or Spreading for effective absorption of pollutant gases.
- Plant should have foliage of longer duration.
- The foliage should be freely exposed through: Adequate height of crown, Openness of foliage/leaves in canopy, big leaves (long and broad laminar surfaces).

The purpose of green belt around the project is to capture the fugitive emissions. Carbon sequestration and to attenuate the noise generated. In addition to improving the aesthetics. A wide range of indigenous plant species was

planted as given in the table No 4.1 & 4.2 in consulted with the DFO. The plant species with dense/moderate canopy of native origin was chosen are given below. Species of small/ medium/tall trees alternating with shrubs was planted.

- Plants that grow fast will be preferred.
- Preference for high canopy covers plants with local varieties.
- Perennial and evergreen plants will be preferred.
- The development of the Green Belt is an important aspect for any plant because:
 - a. It improves the ambient air quality by controlling Suspended Particulate Matter (SPM) in the air.
 - **b.** It helps in noise abatement for the surrounding area.
 - c. It helps in the settlement of new birds and insects within itself.
 - **d.** It maintains the ecological balance.
 - e. It increases the aesthetic value of the site.

 Table No 4.11. List of plant species proposed for Greenbelt development

Table No 4.12. Species suitable for aba	tement of noise and dust pollution
---	------------------------------------

S. No	Botanical name	Common name
1	Azadirachta indica	Vembhu maram
2	Ficus religiosa	Arasan maram
3	Ficus hispida	Aththi maram
4	Bombax ceiba	Mul Elavu
5	Syzygium cumini	Naval maram
6	Tamarindus indica	Puliyamaram
7	Mangifera indica	Manga maram

8	Harwickia binata	Anjan maram
9	Delonix regia	Neruppu Kondrai
10	Cassia Fistula	Sara Kondrai
(1.9		

(*Source: Guidance for Developing Green belts Manual, CPCB 2000)

The above-suggested list covers species with thick canopy cover, perennial green nature, native origin, and a large leaf area index. The proposed species will help in forming an effective barrier between the mine site area and the surroundings.

These species need to be planted along the periphery of the lease area for absorb fugitive emissions and noise levels which is generated during mining activities. All the open spaces, where tree plantation may not be possible, should be covered with shrubs and grass to prevent erosion of topsoil.

Some of the important aspects to be considered are:

- Planting of trees in each row will be in staggered orientation.
- In the front row, shrubs will be grown.
- Since the trunks of the tall trees are generally devoid of foliage, it will be useful to have shrubs in front of the trees so as to give coverage to this portion.
- The spacing between the trees will be maintained slightly less than the normal spaces, so that the trees may grow vertically and slightly increase the effective height of the green belt.

4.5.4. Anticipated Impact on Fauna

- Since the terrestrial fauna in the study area are distributed away from the mine site, the impacts of project are likely to be much low on terrestrial fauna of the region. The proposed mining lease area is devoid of any significant vegetation, it is not suitable for permanent habitat for any specific wildlife.
- Habitat degradation and disturbance to faunal group due to ground vibration and increase in noise level will be minimize or resolved by modern technologies. So, from above facts it is revealed that there will be no impact on fauna. No threatened fauna species reported in the core and buffer study area.

4.5.4.1. Measures for protection and conservation of wildlife species

- Topsoil has a large number of seeds of native plant species in the mining area.
- Topsoil will be used for restoration and suitable surfaces for planted seedlings.
- Checks and controls the movement of vehicles in and out of the mine.
- Undertaking mitigative measures for a conducive environment to the flora and fauna in consultation with Forest Department.
- A dust suppression system will be installed within the mine and periphery of the mine.
- Plantation around the mine area will help in creating habitats for small faunal species and create a better environment for various fauna. Creating and developing awareness for nature and wildlife in the adjoining villages.

4.5.3. Impact on Aquatic Biodiversity

Mining activities will not disturb the aquatic ecology as there is no effluent discharge proposed from the rough stone quarry. There is no natural perennial surface water body within the mine lease area, like wetlands, rivers streams, lakes, and farmer sites. There are few water bodies located in the study area. Badethala Lake is located about

1.5km on the east and Krishnagiri Dam is located about 5km on the west side, Avathanapatti Lake is located about 6km on the south side. There are a few Odai and Canals located in the study area. There is no impact on fish habitats and the food WEB/ food chain in the water body and Reservoir. Kindly refer the clause no 3.6.3. Aquatic biodiversity is observed in the study area.

4.5.4. Impacts on Bird Fauna:

The project does not involve any tree felling or removal of vegetation. Therefore, there may not be loss of nesting and roosting habitat of avian fauna.

4.5.5. Impacts on wildlife

There is no National Park, Biosphere Reserve, Wildlife corridors, and Tiger/Elephant Reserve found within 10km radius of the project site.

Fable No. 4.13. Overall Ecological impact assessments of Kothapetta Village, Rough Stone Quarry,
Krishnagiri Taluk, Krishnagiri District and Tamil Nadu.

S.No	Attributes	Assessment	
1	Impact of mining activity on agricultural	Agricultural land is located away from the propose	
	land nearby the proposed project site.	project site. There are no impacts on the agricultural	
		land & Horticulture. Kindly refer to the conclusion.

4.6 Socio Economic Impats 4.6.1 Construction Phase

Anticipated Impacts:

• No. of people will get employment during the construction stage resulting in the ancillary development and growth. Nearby Local people will be given preference for employment on the basis of their skill and experience.

• Further due to proposed project, influx of working community will also generate an indirect employment through development of nearby market/ shops, trade centers, activities, transportation etc.

Population influx during the construction phase can introduce various water and vector borne diseases which can lead to various unhygienic health problems in the area by disturbing the existing sanitation infrastructure.

A Rapid diverse population influx at the project site can create unusual behavioural activity such as worker-community conflicts, increase violence such as theft/stabbing and increased consumption of drugs/alcohol within the area.

♣ Impacts on the health of nearby villagers can be envisaged due to the transportation activities leading to short term exposure of fugitive dust, resulting in various acute diseases such as increased eye irritation, nausea, headache etc.

Mitigation measures:

• Deploying of mobile toilets or the construction of temporary toilets will be done near to the construction site with the adequate water supply.

Awareness programme will be conducted before the monsoon season regarding the spread of water borne/ vector diseases.

A Mosquito repellents will be provided in the nearby villages and at construction site to avoid the spread of diseases.

♣ To overcome behavioural impact, proper site in charge with timely supervision will be done. In advance, facilities with equipped medical and safety services will be provided to take a control over the incident/violence if any caused.

♣ To overcome behavioural impact, supervision will be done by site in charge. In advance, emergency cell will be formed with fully equipped communication system, medical and safety services to take control over the incident/violence caused.

4.6.2 Operation Phase:

Anticipated Impacts:

* Long term exposure to the pollutants such as PM, SO2 and NO2 dust have a potential to create health impacts such as risk of cardiovascular and respiratory disease, eye irritation, bronchitis, lung damage, increased heart ailments, etc.

• Other impacts, associated with the applied for rough stone quarry project will create a positive impact as it will result in the overall development of the area in respect to the infrastructure development, educational growth, health facilities etc., as a part of the CSR activity.

Mitigation Measures:

♣ In order to mitigate the long-term health impacts, efficient Air Pollution Control Equipment (APCE) like Bag House / Bag Filter / ESP will be installed at all major stacks to keep the emissions within the permissible limits. To reduce the gaseous emission, Pyro-process itself acts as a long SO2 scrubber and De - NOx system will be installed for fuel burning along with calciner for low NOx formation. To reduce fugitive emission from vehicles and machineries will be regularly monitored and maintained.

* For emergency, proposed to develop an occupational health centre for its employees and nearby villagers.

4.3 Impact Evaluation:

Table 4.14 Impact Evaluation Impact evaluation is given in table below.

4.7 Occupational Health and Safety

Occupational health and safety hazards occur during the operational phase of mining and primarily include the following:

Respiratory hazards

- Noise
 - Physical hazards
- Explosive storage and handling

4.7.1 Respiratory Hazards

Long-term exposure to silica dust may cause silicosis the following measures are proposed:

- Cabins of excavators and tippers will be enclosed with AC and sound proof
- Use of personal dust masks will be made compulsory

4.7.2 Noise

Workers are likely to get exposed to excessive noise levels during mining activities. The following measures are proposed for implementation

- No employee will be exposed to a noise level greater than 85 dB(A) for a duration of more than 8 hours per day
 without hearing protection
- The use of hearing protection will be enforced actively when the equivalent sound level over 8 hours reaches 85 dB(A), the peak sound levels reach 140 dB(C), or the average maximum sound level reaches 110 dB(A)
- Ear muffs provided will be capable of reducing sound levels at the ear to at least 85 dB(A)
- Periodic medical hearing checks will be performed on workers exposed to high noise levels.

4.7.3 Physical Hazards

The following measures are proposed for control of physical hazards

- Specific personnel training on work-site safety management will be taken up;
- Work site assessment will be done by rock scaling of each surface exposed to workers to prevent accidental rock falling and / or landslide, especially after blasting activities;
- Natural barriers, temporary railing, or specific danger signals will be provided along rock benches or other pit areas where work is performed at heights more than 2m from ground level;
- Maintenance of yards, roads and footpaths, providing sufficient water drainage and preventing slippery surfaces with an all-weather surface, such as coarse gravel will be taken up

4.7.4 Occupational Health Survey

All the persons will undergo pre-employment and periodic medical examination. Employees will be monitored for occupational diseases by conducting the following tests

- General physical tests
- Audiometric tests
- Full chest, X-ray, Lung function tests, Spirometric tests
- Periodic medical examination yearly
- Lung function test yearly, those who are exposed to dust
- Eye test

Essential medicines will be provided at the site. The medicines and other test facilities will be provided at free of

cost. The first aid box will be made available at the mine for immediate treatment.

First aid training will be imparted to the selected employees regularly. The lists of first aid trained members shall be displayed at strategic places.

4.8 Mine Waste Management

No waste is anticipated from any of the proposed quarries.

4.9 Mine Closure

Mine closure plan is the most important environmental requirement in mining projects. The mine closure plan should cover technical, environmental, social, legal and financial aspects dealing with progressive and post closure activities. The closure operation is a continuous series of activities starting from the decommissioning of the project. Therefore, progressive mine closure plan should be specifically dealt with in the mining plan and is to be reviewed along with mining plan. As progressive mine closure is a continuous series of activities, it is obvious that the proposals of scientific mining have included most of the activities to be included in the closure plan. While formulating the closure objectives for the site, it is important to consider the existing or the pre-mining land use of the site; and how the operation will affect this activity.

The primary aim is to ensure that the following broad objectives along with the abandonment of the mine can be successfully achieved:

- To create a productive and sustainable after-use for the site, acceptable to mine owners, regulatory agencies, and the public
- To protect public health and safety of the surrounding habitation
- To minimize environmental damage
- To conserve valuable attributes and aesthetics
- To overcome adverse socio-economic impacts.

4.9.1 Mine Closure Criteria

The criteria involved in mine closure are discussed below:

4.9.1.1 Physical Stability

All anthropogenic structures, which include mine workings, buildings, rest shelters etc., remaining after mine decommissioning should be physically stable. They should present no hazard to public health and safety as a result of failure or physical deterioration and they should continue to perform the functions for which they were designed. The design periods and factors of safety proposed should take full account of extreme events such as floods, hurricane, winds or earthquakes, etc. and other natural perpetual forces like erosion, etc.,

4.9.1.2 Chemical Stability

The solid wastes on the mine site should be chemically stable. This means that the consequences of chemical changes or conditions leading to leaching of metals, salts or organic compounds should not endanger public health and safety nor result in the deterioration of environmental attributes. If the pollutant discharge likely to cause adverse impacts is predicted in advance, appropriate mitigation measures like settling of suspended solids or passive treatment to improve water quality as well as quant ity, etc., could be planned. Monitoring should demonstrate that there is no adverse effect of

pollutant concentrations exceeding the statutory limits for the water, soil and air qualities in the area around the closed mine.

4.9.1.3 Biological Stability

The stability of the surrounding environment is primarily dependent upon the physical and chemical characteristics of the site, whereas the biological stability of the mine site itself is closely related to rehabilitation and final land use. Nevertheless, biological stability can significantly influence physical or chemical stability by stabilizing soil cover, prevention of erosion/wash off, leaching, etc.,

A vegetation cover over the disturbed site is usually one of the main objectives of the rehabilitation programme, as vegetation cover is the best long-term method of stabilizing the site. When the major earthwork components of the rehabilitation programme have been completed, the process of establishing a stable vegetation community begins. For revegetation, management of soil nutrient levels is an important consideration. Additions of nutrients are useful under three situations.

- Where the nutrient level of spread topsoil is lower than material in-situ e.g., for development of social forestry
- Where it is intended to grow plants with a higher nutrient requirement than those occurring naturally e.g. planning for agriculture.
- Where it is desirable to get a quick growth response from the native flora during those times when moisture is not a limiting factor e.g., development of green barriers.

The Mine closure plan should be as per the approved mining plan. The mine closure is a part of approved mine plan and activities of closure shall be carried out as per the process described in mine closure plan.

CHAPTER - 5: ANALYSIS OF ALTERNATIVES (TECHNOLOGY AND SITE)

5.0 Introduction:

Consideration of alternatives to a project proposal is a requirement of EIA process. This quarry is site specific. The site has been selected based on geological investigation and exploration from the Proposed quarry around the project site. Drilling, Blasting, Excavation, Loading & Transportation will be carried out in this quarrying operation.

- This area denotes the indicative of flow pattern of the rock mass in N30^oE to S30^oW with dipping SE60^o.
- Transportation facility for materials & manpower.
- Overall impact on environment and mitigation feasibility.
- Socio economic background.

Enough infrastructure exists and lesser resources are required to be deployed. Since, any major construction for infrastructure is not required and hence does not affect the environment considerably.

5.1 Factors Behind the Selection of Project Site

Rough Stone Quarry Projects at Kothapetta cluster quarries are a site specific. The proposed mining lease area has following advantages: -

- The mineral deposit occurs in a non-forest area.
- There is no habitation within the project area; hence no R & R issues exist.
- There is no river, stream, nallah and water bodies in the applied mine lease area.
- Availability of skilled, semi-skilled and unskilled workers in this region.
- All the basic amenities such as medical, fire fighting, education, transportation, communication and infrastructural facilities are well connected and accessible.
- The mining operations will not intersect the ground water level. Hence, no impact on ground water environment.
- Study area falls in seismic zone III, there is no major history of landslides, earthquake, subsidence etc., recorded in the past history.

5.2 Analysis of Alternative Site

The mineral deposits are site specific in nature; hence, question of seeking alternate site does not arise for this project.

5.3 Factors Behind Selection of Proposed Technology

Mechanized open cast mining operation with drilling and blasting method will be used to extract Rough Stone quarry in the area. The quarry areas fall in the clusters has following advantages –

- As the mineral deposition is homogeneous and batholith formation, therefore opencast method of working out deposit is preferred over underground method.
- The material will be loaded after sprinkling with water with the help of excavators into dumpers / trippers and transported to the needy customers.

Blasting and availability of drills along with controlled blasting technology gives desired fragmentation so
that the mineral is handled safely and used without secondary blasting.

Semi skilled labours fit for quarrying operations are easily available around the nearby villages.

5.4 Analysis of Alternative Technology

Open cast mechanized method has been selected for this project. This technology is having least gestation period, economically viable, safest and less labour intensive. The method has inbuilt flexibility for increasing or decreasing the production as per market condition.

CHAPTER – 6: ENVIRONMENTAL MONITORING PROGRAMME

6.0 General

Environmental Monitoring will be taken up for various environmental components as per conditions stipulated in Environmental Clearance Letter issued by MoEF & Consent to Operate issued by the State Pollution Control Board. Monitoring reports will be submitted to regulator as per statutory requirements. The entire monitoring work will be carried out by MoEF & CC / NABL recognized laboratories.

The monitoring and evaluation of environmental parameters indicates potential changes occurring in the environment, which paves way for implementation of rectifying measures wherever required to maintain the status of the natural environment. Evaluation is also a very effective tool to judge the effectiveness or deficiency of the measures adopted and provides insight for future corrections.

6.1 Methodology of Monitoring Mechanism

Implementation of EMP and periodic monitoring will be carried out by the proponents and respective quarry owners in the cluster quarries. A comprehensive monitoring mechanism has been devised for monitoring of impacts due to proposed project; Mine management level environmental protection measures like dust suppression, treatment and recycling of waste water, control of noise due to blasting and Ground vibration, maintenance of machinery and vehicles, housekeeping in the mine premises, plantation, implementation of other hand, implementation of area level protection measures like plantation and green Environmental Management Plan and environmental clearance conditions will be monitored by the proponent. On the belt development, environmental quality monitoring etc.,

An environment monitoring cell (EMC) will be constituted at the quarry consisting of following members to monitor the implementation of EMP and other environmental protection measures.

FIGURE 6.1 HIERARCHY OF ENVIRONMENTAL MONITORING CELL

The responsibilities of this cell will be:

- Implementation of pollution control measures
- Monitoring programme implementation
- Post-plantation care
- To check the efficiency of pollution control measures taken
- Any other activity as may be related to environment
- Seeking expert's advice when needed

The environmental monitoring cell will co-ordinate all monitoring programs at site and data thus generated will be regularly furnished to the State regulatory agencies. The sampling and analysis report of the monitored environmental attributes will be submitted to the Tamil Nadu Pollution Control Board (TNPCB) at a frequency of monthly, half-yearly and yearly. The half-yearly reports will be submitted to Ministry of Environment and Forest, Regional Office and SEIAA as well.

The sampling and analysis of the environmental attributes will be as per the guidelines of Central Pollution Control Board (CPCB)/Ministry of Environment, Forest and Climate Change (MoEF & CC).

6.2 Implementation Schedule of Mitigation Measures

The mitigation measures proposed in Chapter-4 will be implemented so as to reduce the impact on the environment due to the operations of the proposed project. Implementation schedule of mitigation measures is given in Table 6.1.

Sl No.	Recommendations	Time Period	Schedule
1	Land Environment Control Measures	Before commissioning of the project	Immediately after the commencement of the project
2	Soil Quality Control Measures	Before commissioning of the project	Immediately after the commencement of the project
3	Water Pollution Control Measures	Before commissioning of the project and along with mining operation	Immediately and as project progress
4	Air Pollution Control Measures	Before commissioning of the project and along with mining operation	Immediately and as project progress
5	Noise Pollution Control Measures	Before commissioning of the project and along with mining operation	Immediately and as project progress
6	Ecological Environment	Phase wise implementation every year along with mine operations	Immediately and as project progress

TABLE 6.1 IMPLEMENTATION SCHEDULE

6.3 Monitoring Schedule and Frequency

The environmental monitoring will be conducted in the mine operations as follows:

- Air quality;
- Water and wastewater quality;
- Noise levels;

• Soil Quality; and

• Greenbelt Development

The details of monitoring are detailed in Table 6.2

S.	Environment	Location	Monitoring		Parameters
No.	Attributes		Duration	Frequency	
1	Air Quality	2 Locations (1 Core & 1 Buffer)	24 hours	Once in 6 months	Fugitive Dust, $PM_{2.5}$, PM_{10} , SO_2 and NO_x .
2	Meteorology	At mine site before start of Air Quality Monitoring & IMD Secondary Data	Hourly / Daily	Continuous online monitoring	Wind speed, Wind direction, Temperature, Relative humidity and Rainfall
3	Water Quality Monitoring	2 Locations (1SW & 1 GW)	-	Once in 6 months	Parameters specified under IS:10500, 1993 & CPCB Norms
4	Hydrology	Water level in open wells in buffer zone around 1 km at specific wells	-	Once in 6 months	Depth in bgl
5	Noise	2 Locations (1 Core & 1 Buffer)	Hourly – 1 Day	Once in 6 months	Leq, Lmax, Lmin, Leq Day & Leq Night
6	Vibration	At the nearest habitation (in case of reporting)	_	During blasting Operation	Peak Particle Velocity
7	Soil	2 Locations (1 Core & 1 Buffer)	_	Once in six months	Physical and Chemical Characteristics
8	Greenbelt	Within the Project Area	Daily	Monthly	Maintenance

TABLE 6.2: PROPOSED MONITORING SCHEDULE POST EC

Source: Guidance of manual for mining of minerals, February 2010.

6.4 Environmental Policy of the Proponents

The project proponents in the proposed quarries are committed to ensure that:

- Protect the environment by control and prevention of pollution and promote green environment.
- To operate the quarry with an objective of no injuries and accidents at the work place and provide a safe work place for our employees, contractors and others who perform their duties.
- Adequate health care will be taken to all the employees and create process to reduce the adverse effect of the operations on Health of the employees.
- Provide safety appliance and continuous training in safety to employees to ensure safe production and achieve the target of zero accidents.
- Develop safe working methods and practices, remove unsafe work conditions and consider all the aspects at the early stages of process development to provide safe working atmosphere.
- Communicate Safety, Health and Environmental Policy to all employees for better understanding and practice.

6.5 Budgetary Provision for Environmental Monitoring Programme

The cost in respect of monitoring of environmental attributes, parameter to be monitored, sampling/monitoring locations with frequency and cost provision against each proposal is shown in Table 6.3. Monitoring work will be outsourced to external laboratory approved by NABL / MoEF.

The proposed total cost for Environmental Monitoring Programme for two proposed quarries in cluster for the Scheme of mining plan period is Rs 12,40,000/-.

Parameter	Code	Capital Cost
Air Quality, Meteorology, Water Quality, Hydrology, Soil	P1	Rs.4,30,000
Quality Noise Quality, Vibration Study Greenbelt	P2	Rs.4,30,000
	Р3	Rs.3,80,000
	Total	Rs. 12,40,000/-

TABLE 6.3 ENVIRONMENT MONITORING BUDGET

Source: Approved Mining Plan

6.6 Reporting Schedules of Monitored Data

The monitored data on Air quality, Water quality, Noise levels and other environmental attributes will be periodically examined by the proponent with Environmental Monitoring cell and necessary corrective measures will be carried out. The monitoring data will be submitted to Tamil Nadu State Pollution Control Board in the Compliance to CTO Conditions & environmental audit statements every year to MoEF & CC and Half-Yearly Compliance Monitoring Reports to MoEF & CC Regional Office and SEIAA.

Periodical reports to be submitted to: -

- MoEF & CC Half yearly status report
- TNPCB Half yearly status report
- Department of Geology and Mining: quarterly, half yearly annual reports
- SEIAA, Chennai, Tamil Nadu

Besides the Mines Manager/Agent will submit the periodical reports to -

- Director of mines safety,
- Labour enforcement officer,
- Controller of explosives as per the norms stipulated by the department.
CHAPTER – 7: ADDITIONAL STUDIES

7.0 General

The following Additional Studies were done as per items identified by project proponent and items identified by regulatory authority. Items identified by public and other stakeholders will be incorporated after Public Hearing.

- Public Consultation
- Risk Assessment
- Disaster Management Plan
- Cumulative Impact Study
- Plastic Waste Management

7.1. Public Consultation:

Application to The Member Secretary of the Tamil Nadu Pollution Control Board (TNPCB) to conduct Public Hearing in a systematic, time bound and transparent manner ensuring widest possible public participation at the project site or in its close proximity in the district is submitted along with this Draft EIA / EMP Report and the outcome of public hearing proceedings will be detailed in the Final EIA/EMP Report.

7.2 Risk Assessment

The methodology for the risk assessment has been based on the specific risk assessment guidance issued by the Directorate General of Mine Safety (DGMS), Dhanbad, vide Circular No.13 of 2002, dated 31st December, 2002. The DGMS risk assessment process is intended to identify existing and probable hazards in the work environment and all operations and assess the risk levels of those hazards in order to prioritize those that need immediate attention. Further, mechanisms responsible for these hazards are identified and their control measures, set to timetable are recorded along with pinpointed responsibilities.

The cluster quarry operation will be carried out under the direction of a Qualified Competent Mine manager holding certificate of competency to manage a metalliferous mine granted by the DGMS, Dhanbad. Risk Assessment is all about prevention of accidents and to take necessary steps to prevent it from happening. Factors of risks involved due to human induced activities in connection with mining & allied activities with detailed analysis of causes and control measures for the mine is given in below Table 7.1.

S. No	Risk factors	Causes of risk	Control measures
1	Accidents due to explosives and heavy mining machineries	Improper handling and unsafe working practice	 All safety precautions and provisions of Mine Act, 1952, Metalliferrous Mines Regulation, 1961 and Mines Rules, 1955 will be strictly followed during all mining operations; Entry of unauthorized persons will be prohibited; Fire fighting and first-aid provisions in the mine office complex and mining area;

TABLE 7.1 RISK ASSESSMENT & CONTROL MEASURES

			 Provisions of all the safety appliances such as safety boot, helmets, goggles etc. will be made available to the employees and regular check for their use. Working of quarry, as per approved plans and regularly updating the mine plans; Cleaning of mine faces shall be daily done in order to avoid any overhang or undercut; Handling of explosives, charging and firing shall be carried out by competent persons only under the supervision of a Mine Manager; Maintenance and testing of all mining equipment as per manufacturer 's guidelines.
2	Drilling& Blasting	Due to improper and unsafe practices Due to high pressure of compressed air, hoses may burst Drill Rod may break	 Safe operating procedure established for drilling (SOP) will be strictly followed. Only trained operators will be deployed. No drilling shall be commenced in an area where shots have been fired until the blaster/blasting foreman has made a thorough Examination of all places. Drilling shall not be carried on simultaneously on the benches at places directly one above the other. Periodical preventive maintenance and replacement of worn-out accessories in the compressor and drill equipment as per operator manual. All drills unit shall be provided with wet drilling shall be maintained in efficient working in condition. Operator shall regularly use all the personal protective equipment.
3	Blasting	Fly rock, ground vibration, Noise and dust. Improper charging, stemming & Blasting/ fining of blast holes Vibration due to movement of vehicles	 The maximum charge per delay and by optimum blast hole pattern, vibrations will be controlled within the permissible limit and blast can be conducted safely. SOP for Charging, Stemming & Blasting/Firing of Blast Holes will be followed by blasting crew during initial stage of operation Shots are fired during daytime only. All holes charged on any one day shall be fired on the same day. The danger zone is and will be distinctly demarcated (by means of red flags)
4	Transportation	Potential hazards and unsafe workings	 Before commencing work, drivers personally check the dumper/truck/tipper

contributing to accident for oil(s), fuel and water levels, tyre and injuries inflation, general cleanliness and inspect the brakes, steering system, warning devices including automatically operated Overloading of material audio-visual reversing alarm, rear view mirrors, side indicator lights etc., are in good condition. While reversal & Not allow any unauthorized person to ride overtaking of vehicle on the vehicle nor allow any unauthorized person to operate the vehicle. Operator of truck leaving Concave mirrors should be kept at all his cabin when it is loaded. corners All vehicles should be fitted with reverse

			 horn with one spotter at every tipping point Loading according to the vehicle capacity Periodical maintenance of vehicles as per operator manual.
5	Natural calamities	Unexpected happenings	 Escape Routes will be provided to prevent inundation of storm water Fire Extinguishers & Sand Buckets
6	Failure of Mine Benches and Pit Slope	Slope geometry, Geological structure	 Ultimate or over all pit slope shall be below 60° and each bench height shall be 5m height.

7.3 Disaster Management Plan

Natural disasters like Earthquake, Land slides has not been recorded in the past history as the terrain is categorized under seismic zone III. The area is far away from the sea hence the disaster due to heavy floods and tsunamis are not anticipated. The Disaster Management Plan is aimed to ensure safety of life, protection of environment, protection of installation, restoration of production and salvage operations in this same order of priorities.

The objective of the Disaster Management Plan is to make use of the combined resources of the mine and the outside services to achieve the following:

- Rescue and medical treatment of casualties;
- Safeguard other people;
- Minimize damage to property and the environment;
- Initially contain and ultimately bring the incident under control;
- Secure the safe rehabilitation of affected area; and
- Preserve relevant records and equipment for the subsequent inquiry into the cause and circumstances of the emergency.

In case a disaster takes place, despite preventive actions, disaster management will have to be done in line with the descriptions below. There is an organization proposed for dealing with the emergency situations and the coordination among key personnel and their team has been shown in Fig 7.1.

FIGURE 7.1: DISASTER MANAGEMENT TEAM LAYOUT FOR P1 & P2

The emergency organization shall be headed by emergency coordinator who will be qualified competent mine manager. There would be three teams for taking care of emergency situations – Fire-Fighting Team, Rescue Team and Support Team. The proposed composition of the teams is given in Table 7.2.

TABLE 7.2: PROPOSED TEAMS TO DEAL WITH EMERGENCY SITUATION

DESIGNATION	OUALIFICATION	
FIRE-FIGHTI	NG TEAM	
Team Leader/ Emergency Coordinator (EC)	Mines Manager	
Team Member	Mines Foreman	
Team Member	Mining Mate	
RESCUE	ГЕАМ	
Team Leader/ Emergency Coordinator (EC)	Mines Manager	
Team Member/ Incident Controller (IC)	Environment Officer	
Team Member	Mining Foreman	
SUPPORT	TEAM	
Team Leader/ Emergency Coordinator (EC)	Mines Manager	
Assistant Team Leader	Environment Officer	
Team Member	Mining Mate	
Security Team Leader/ Emergency Security Controller	Mines Foreman	

Once the mine becomes operational, the above table along with names of personnel will be prepared and made easily available to workers. A mobile communication network and wireless shall connect Mine Emergency Control Room (MECR) to control various departments of the mine, fire station and neighbouring industrial units/mines.

Roles and responsibilities of emergency team -

(a) Emergency coordinator (EC)

The emergency coordinator shall assume absolute control of site

(b) Incident controller (IC)

Incident controller shall be a person who shall go to the scene of emergency and supervise the action plan to overcome or contain the emergency. Shift supervisor or Environmental Officer shall assume the charge of IC.

(c) Communication and advisory team

The advisory and communication team shall consist of heads of Mining Departments i.e., Mines Manager

(d) Roll call coordinator

The Mine Foreman shall be Roll Call Coordinator. The roll call coordinator will conduct the roll call and will evacuate the mine personnel to assembly point. His prime function shall be to account for all personnel on duty. (e) Search and rescue team

There shall be a group of people trained and equipped to carryout rescue operation of trapped personnel. The people trained in first aid and fire-fighting shall be included in search and rescue team

(f) Emergency security controller

Emergency Security Controller shall be senior most security person located at main gate office and directing the outside agencies e.g. fire brigade, police, doctor and media men etc.,

Emergency control procedure

The onset of emergency, will in all probability, commence with a major fire or explosion or collapse of wall along excavation and shall be detected by various safety devices and also by members of operational staff on duty. If located by a staff member on duty, he (as per site emergency procedure of which he is adequately briefed) will go to nearest alarm call point, break glass and trigger off the alarms. He will also try his best to inform about location and nature of accident to the emergency control room. In accordance with work emergency procedure the following key activities will immediately take place to interpret and take control of emergency.

- On site fire crew led by a fireman will arrive at the site of incident with fire foam tenders and necessary equipment.
- Emergency security controller will commence his role from main gate office
- Incident controller shall rush to the site of emergency and with the help of rescue team and will start handling the emergency.
- Site main controller will arrive at MECR with members of his advisory and communication team and will assume absolute control of the site.
- He will receive information continuously from incident controller and give decisions and directions to:
 - Incident controller
 - Mine control rooms
 - Emergency security controller

Proposed fire extinguishers at different locations -

The following type of fire extinguishers is proposed at strategic locations within the quarry.

Location	Type of Fire Extinguishers
Electrical Equipment's	CO ₂ type, foam type, dry chemical powder type
Fuel Storage Area	CO ₂ type, foam type, dry chemical powder type, Sand bucket
Office Area	Dry chemical type, foam type

Alarm system to be followed during disaster

On receiving the message of disaster from Site Controller, fire-fighting team, the mine control room attendant will sound siren wailing for 5 minutes. Incident controller will arrange to broadcast disaster message through public address system.

On receiving the message of "Emergency Over" from Incident Controller the emergency control room attendant will give "All Clear Signal", by sounding alarm straight for 2 minutes.

The features of alarm system will be explained to one and all to avoid panic or misunderstanding during disaster.

In order to prevent or take care of hazard / disasters if any the following control measures have been adopted.

- All safety precautions and provisions of Metalliferous Mines Regulations (MMR), 1961 is strictly followed during all mining operations
- Fire fighting and first-aid provisions in the mines office complex and mining area will be provided.
- Provisions of all the safety appliances such as safety boot, helmets, goggles, dust masks, ear plugs and ear muffs etc. are made available to the employees and the use of same is strictly adhered to through regular monitoring
- Training and refresher courses for all the employees working in the quarry in phase manner
- Cleaning of mine faces will be carried out regularly
- Provision of high-capacity standby pumps with generator sets with enough quantity of diesel for emergency pumping especially during monsoon.
- A blasting SIREN will be used at the time of blasting for audio signal.
- Checking of blasting area for any un-blasted hole or material.
- Warning notice boards indicating the time of blasting and NOT TO TRESPASS will be displayed at prominent places

7.4 CUMULATIVE IMPACT STUDY

There are three proposed and one Existing quarries falls in the cluster. The list of quarries is as below -

PROPOSED QUARRIES					
CODE	Name of the Proponent and Address	S.F. Nos, Village & Taluk	Extent in Ha	G.O. No & Date	Status

Based on the above production quantities the emissions due to various activities in all the 3proposal quarries and 1 existing quary includes various activities like ground preparation, excavation, handling and transport of mineral. These activities have been analysed systematically basing on USEPA-Emission Estimation Technique Manual, for Mining AP-42, to arrive at possible emissions to the atmosphere and estimated emissions are given in Table 7.7.

TABLE 7.7: EMISSION ESTIMATION FROM CLUSTER

Noise Environment

Noise pollution is mainly due to operation like drilling & blasting and plying of trucks & HEMM. Cumulative Noise modelling has been carried out considering blasting and compressor operation (drilling) and transportation activities. Predictions have been carried out to compute the noise level at various distances around the different quarries within the 500 m radius.

For hemispherical sound wave propagation through homogeneous loss free medium, one can estimate noise levels at various locations at different sources using model based on first principle.

$Lp_2 = Lp_1 - 20 \log (r_2/r_1) - Ae_{1,2}$

Where:

 $Lp_1\& Lp_2$ are sound levels at points located at distances $r_1\& r_2$ from the source.

 $Ae_{1,2}$ is the excess attenuation due to environmental conditions. Combined effect of all sources can be determined at various locations by logarithmic addition.

 $Lp_{total} = 10 \log \{10^{(Lp1/10)} + 10^{(Lp2/10)} + 10^{(Lp3/10)} + \dots\}$

Attenuation due to Green Belt has been taken to be 4.9 dB (A). The inputs required for the model are:

Source data has been computed taking into account of all the machinery and activities used in the mining process.

Location ID	N1	N2	N3	N4	N5	N6	N7
Maximum Monitored Value (Day) dB(A)	48.5	48.5	46.8	45.7	45.7	42.9	42.5

Total Predicted Noise level dB(A)	60.4	57.2	47.8	45.7	45.8	42.9	42.7
NAAQ Standards	Industria Residenti	il Da ial Da	ny Time- ny Time–	75 dB (A) 55 dB (A)	Night Night	Time- 70 d Time- 45 d	IB (A) IB (A)

TABLE 7.9:	PREDICTED	NOISE	INCREMENTAL	VALUES	FROM	CLUSTER
-------------------	-----------	-------	--------------------	--------	------	---------

Source: Lab Monitoring Data

The incremental noise level is found within the range of 22.6– 41.0 dB (A) in Buffer zone. The noise level at different receptors in buffer zone is lower due to the distance involved and other topographical features adding to the noise attenuation. The resultant Noise level due to monitored values and calculated values at the receptors are based on the mathematical formula considering attenuation due to Green Belt as 4.9 dB (A) the barrier effect. From the above table, it can be seen that the ambient noise levels at all the locations near habitations are within permissible limits of Residential Area (buffer zone) as per THE NOISE POLLUTION (REGULATION AND CONTROL) RULES, 2000 (The Principal Rules were published in the Gazette of India, vide S.O. 123(E), dated 14.2.2000 and subsequently amended vide S.O. 1046(E), dated 22.11.2000, S.O. 1088(E), dated 11.10.2002, S.O. 1569 (E), dated 19.09.2006 and S.O. 50 (E) dated 11.01.2010 under the Environment (Protection) Act, 1986.).

Ground Vibrations

Ground vibrations due to mining activities in the all the 2-proposal quarry within cluster are anticipated due to operation of Mining Machines like Excavators, drilling and blasting, transportation vehicles, etc. However, the major source of ground vibration from the all the 2-proposal quarry is blasting. The major impact of the ground vibrations is observed on the domestic houses located in the villages nearby the mine lease area. The kuchha houses are more prone to cracks and damage due to the vibrations induced by blasting whereas RCC framed structures can withstand more ground vibrations. Apart from this, the ground vibrations may develop a fear factor in the nearby settlements.

Another impact due to blasting activities is fly rocks. These may fall on the houses or agricultural fields nearby the mining areas and may cause injury to persons or damage to the structures. Nearest Habitations from 2 mines respectively are as in below Table 7.10.

Location ID	Distance in Meters
Habitation Near P1	590-W
Habitation Near P2	700-W

TABLE 7.10: NEAREST HABITATION FROM EACH MINE

Habitation Near P3	210-Е
Habitation Near E1	325-NE

Source: Satellite Imagery and Field Data

The ground vibrations due to the blasting in all the mines are calculated using the empirical equation for assessment of peak particle velocity (PPV) is:

$$V = K [R/Q^{0.5}]^{-B}$$

Where -

V = peak particle velocity (mm/s)

K = site and rock factor constant

Q = maximum instantaneous charge (kg)

B = constant related to the rock and site (usually 1.6)

R = distance from charge (m)

TABLE 7.11: GROUND VIBRATIONS AT 2 MINES

Location ID	Maximum Charge in kgs	Nearest Habitation in m	PPV in m/ms
P1	74	590	0.577
P2	140	700	0.731
P3	139	210	4.987

Source: PPV Calculation

From the above table, the charge per blast is considered as maximum in each mine and the resultant PPV is well below the Peak Particle Velocity of 8 mm/s as per Directorate General of Mines Safety for safe level criteria through Circular No. 7 dated 29/8/1997.

Socio Economic Environment -

The 2 mines shall provide employment and revenue will be created to government.

Location Code	Employment	Project Cost	CER Cost
P1	21	Rs. 77,30,000/-	Rs.5,00,000/-
P2	21	Rs. 77,20,000/-	Rs.5,00,000/-
P3	18	Rs. 83,92,000/-	Rs.5,00,000/-
E1	15	Rs.66,40,000	Rs.5,00,000/-
Grand Total	75	Rs. 3,04,82,000/-	Rs.20,00,000/-

TABLE 7.12: SOCIO ECONOMIC BENEFITS FROM CLUSTER MINES

A total of 60people will get employment due to 3 mines in cluster. Allocation for Corporate Environment Responsibility (CER) shall be made as per Government of India, MoEF & CC Office Memorandum F.No.22-65/2017-IA.III, Dated: 01.05.2018 by all the mines.

As per para 6 (II) of the office memorandum, all the mines being a green field project & Capital Investment is ≤ 100 crores, they shall contribute 2% of Capital Investment towards CER as per directions of EAC/SEAC.

• 3 Proposed projects shall fund towards CER - Rs.15,00,000/-

TABLE 7.13: GREENBELT DEVELOPMENT BENEFITS FROM 3MINES

Based on the Proposed Mining Plans it's anticipated that there shall growth of native species of Neem, Pongamia Pinnata, Casuarina, etc in the Cluster at a rate of 6,400 Trees Planted over a period of 5 Years with Survival Rate of 80% over an area of all proposed quarries.

7.5 PLASTIC WASTE MANAGEMENT PLAN FOR P1 TO P3

All the Project Proponent shall comply with Tamil Nadu Government Order (Ms) No. 84 Environment and Forest (EC.2) Department Dated: 25.06.2018 regarding ban on one time use and throw away plastics irrespective of thickness with effect from 01.01.2019 under Environment (Protection) Act, 1986.

Objective –

- To investigate the actual supply chain network of plastic waste.
- To identify and propose a sustainable plastic waste management by installing bins for collection of recyclables with all the plastic waste
- Preparation of a system design layout, and necessary modalities for implementation and monitoring.

Sl.No.	Activity	Responsibility
1	Framing of Layout Design by incorporating provision of the Rules, user fee to be charged from waste generators for plastic waste management, penalties/fines for littering, burning plastic waste or committing any other acts of public nuisance	Mines Manager
2	Enforcing waste generators to practice segregation of bio-degradable, recyclable and domestic hazardous waste	Mines Manager
3	Collection of plastic waste	Mines Foreman
4	Setting up of Material Recovery Facilities	Mines Manager

TABLE 7.14: ACTION PLAN TO MANAGE PLASTIC WASTE

Chapter - 7

Kothapetta Rough Stone Cluster Quarries

5	Segregation of Recyclable and Non-Recyclable plastic waste at Material Recovery Facilities	Mines Foreman
6	Channelization of Recyclable Plastic Waste to registered recyclers	Mines Foreman
7	Channelization of Non-Recyclable Plastic Waste for use either in Cement kilns, in Road Construction	Mines Foreman
8	Creating awareness among all the stakeholders about their responsibility	Mines Manager
9	Surprise checking's of littering, open burning of plastic waste or committing any other acts of public nuisance	Mine Owner

CHAPTER – 8: PROJECT BENEFITS

8.0 General

The three Proposed Projects for Quarrying Rough Stone quarry at Kothapetta Village Cluster Quarries Village aims to produce cumulatively **17,23,164**m³ Rough Stone quarry over period of five Years & Gravel 21,510 m³ and 8,706 m³ of Topsoil over a period of 1 Years. This will enhance the socio-economic activities in the adjoining areas and will result in the following benefits

- Increase in Employment Potential
- Improvement in Socio-Economic Welfare
- Improvement in Physical Infrastructure
- Improvement in Social infrastructure

8.1 Employment Potential

It is proposed to provide employment to about 60 persons for carrying out mining operations and give preference to the local people in providing employment. In addition, there will be opportunity for indirect employment to many people in the form of contractual jobs, business opportunities, service facilities etc. the economic status of the local people will be enhanced due to mining project.

8.1 Socio-Economic Welfare Measures Proposed

The impact of mining activity in the area will be more positive than negative on the socio-economic environment in the immediate project impact area. The employment opportunities both direct and indirect will contribute to enhanced money incomes to job seekers with minimal skill sets especially among the local communities.

8.1 Improvement in Physical Infrastructure

The proposed project site is located in Kothapetta Village, Krishnagiri Taluk, Krishnagiri District of Tamil Nadu and the area have communications, roads and other facilities already well established. The following physical infrastructure facilities will further improve due to the cluster quarry projects.

- Road Transport facilities
- Communications
- Medical, Educational and social benefits will be made available to the nearby civilian population in addition to the workmen employed in the mine.

8.1 Improvement in Social Infrastructure

The quarry projects in the region will have positive impact on the social economic condition of the area by way of providing employment to the local peoples; thereby increasing the per capita income, housing, education, medical and transportation facilities, economic status, health and agriculture.

- Social welfare program like medical camps, educational facilities to the poverty level students, providing water supply from the quarries during drought seasons will be taken from the project proponents.
- Supplementing Govt. efforts in health monitoring camps, social welfare and various Awareness programs among the rural population.

8.1 Other Tangible Benefits

The proposed quarry project is likely to have other tangible benefits as given below.

- Indirect employment opportunities to local people in contractual works like construction of infrastructural facilities, transportation, sanitation, for supply of goods and services to the quarry site and other community services.
- Additional housing demand for rental accommodation will increase.
- Cultural, recreation and aesthetic facilities will also improve.
- Improvement in communication, transport, education, community development and medical facilities and overall change in employment and income opportunity.
- The State Government will also benefit directly from the proposed mine, through increased revenue from royalties, cess, DMF, GST etc.,

CORPORATE SOCIAL RESPONSIBILITY

Individual Project Proponents will take responsibility to develop awareness among all levels of their staff about CSR activities and the integration of social processes with business processes. Those involved with the undertaking of CSR activities will be provided with adequate training and re-orientation. Under this programme, the project proponents will take-up following programmes for social and economic development of villages within 10 km of the project site. For this purpose, separate budget will be provided every year. For finalization of these schemes, proponent will interact with LSG. The schemes will be selected from the following broad areas –

- Health Services
- Social Development
- Infrastructure Development
- Education & Sports
- Self-Employment

CSR Cost Estimation

CSR activities will be taken up in the Kothapetta village mainly contributing to education, health, training of
women self-help groups and contribution to infrastructure etc., CSR budget is allocated as 2.5% of the profit.

CORPORATE ENVIRONMENT RESPONSIBILITY-

Allocation for Corporate Environment Responsibility (CER) shall be made as per Government of India,

MoEF & CC Office Memorandum F.No.22-65/2017-IA.III, Dated: 01.05.2018.

As per para 6 (II) of the office memorandum, all the mines being a green field project & Capital Investment is ≤ 100 crores, they shall contribute 2% of Capital Investment towards CER as per directions of EAC/SEAC and the total CER amount from the 3 proposed mines is Rs Rs 15,00,000/-.

Code	CER	
P1	Rs 5,00,000/-	
P2	Rs 5,00,000/-	
P3	Rs 5,00,000/-	
Total	Rs 15,00,000/-	

 TABLE 8.1 CER – ACTION PLAN

Source: Field survey conducted by FAE, consultation with project proponent

CHAPTER – 9: ENVIRONMENTAL COST BENEFIT ANALYSIS

Not Applicable, Since Environmental Cost Benefit Analysis not recommended at the Scoping stage.

CHAPTER - 10: ENVIRONMENTAL MANAGEMENT PLAN – P1 10.1 General

Environment Management Plan (EMP) aims at the preservation of ecological system by considering in-built pollution abatement facilities at the proposed site. Good practices of Environmental Management plan will ensure to keep all the environmental parameters of the project in respect of Ambient Air quality, Water quality, Socio – economic improvement standards.

Mitigation measures at the source level and an overall environment management plan at the study area are elicited so as to improve the supportive capacity of the receiving bodies. The EMP presented in this chapter discusses the administrative aspects of ensuring that mitigative measures are implemented and their effectiveness monitored after approval of the EIA.

10.2 Environmental Policy

The Project Proponent is committed to conduct all its operations and activities in an environmentally responsible manner and to continually improve environmental performance.

The Proponent Sri M/s. Devaraajaa 'M' Sand (Thiru. D.Mathiazhagan- Managing Partner) will

- Meet the requirements of all laws, acts, regulations, and standards relevant to its operations and activities.
- Allocate necessary resources to ensure the implementation of the environmental policy.
- Ensure that an effective closure strategy is in place at all stages of project development and that progressive reclamation is undertaken as early as possible to reduce potential long-term environmental and community impacts.
- Implement a program to train employees in general environmental issues and individual workplace environmental responsibilities.
- Implement monitoring programmes to provide early warning of any deficiency or unanticipated performance in environmental safeguards.
- Conduct periodic reviews to verify environmental performance and to continuously strive towards improvement.

Description of the Administration and Technical Setup -

The Environment Monitoring Cell discussed under Chapter 6 will ensure effective implementation of environment management plan and to ensure compliance of environmental statutory guidelines through Mine Management Level of each Proposed Quarry.

The said team will be responsible for:

- Monitoring of the water/ waste water quality, air quality and solid waste generated
- Analysis of the water and air samples collected through external laboratory

- Implementation and monitoring of the pollution control and protective measures/ devices which shall include financial estimation, ordering, installation of air pollution control equipment, waste water treatment plant, etc.
- Co-ordination of the environment related activities within the project as well as with outside agencies
- Collection of health statistics of the workers and population of the surrounding villages
- Green belt development
- Monitoring the progress of implementation of the environmental monitoring programme
- Compliance to statutory provisions, norms of State Pollution Control Board, Ministry of Environment and Forests and the conditions of the environmental clearance as well as the consents to establish and consents to operate.

10.3 Land Environment Management –

Land degradation is one of the major adverse impacts of opencast mining in the form of excavated voids and contamination of soil affects the viability of the soil resource.

Soil contamination then has a number of flow-on effects like, Inhibition of plant growth, and death of existing plants in contaminated areas and contamination of soil also has potential to impact on a surface water quality and groundwater resources.

CONTROL	RESPONSIBILITY
Designing vehicle wash-down system so that all washed water is captured and	Mines Manager
passed through grease and oil separators.	
Re fueling will be carried out in a safe location, away from vehicle movement	Mine Foreman &
pathways	Mining Mate
Greenbelt development and its maintenance	Environment Officer
Garland drains with catch pits to be provided all around the project area to prevent	Environment Officer
run off affecting the surrounding lands.	
The periphery of Project area will be planted with thick plantation to arrest the	Mines Manager
fugitive dust, which will also act as acoustic barrier.	
Thick plantation using native flora spices will be carried out on the top benches.	Mines Manager
There will be formation of a small surface water body in the mined-out area, which	Environment Officer
can be used for watering the greenbelt at the conceptual stages.	

TABLE 10.1: PROPOSED CONTROLS FOR LAND ENVIRONMENT

Source: Proposed by FAE's & EIA Coordinator

10.4 Soil Management

Top Soil Management –

There is topsoil no Topsoil

Overburden / Waste and Side Burden Management -

• The overburden in the form of Gravel. The Gravel will be directly loaded into tippers for the filling and levelling of lowlying areas, this will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

TABLE 10.2: PROPOSED CONTROLS FOR SOIL MANAGEMENT

CONTROL	RESPONSIBILITY
Garland drains are to be paved around the quarry pit area to arrest possible wash off in the	Mines Manager
rainy seasons	
Surface run-off from the surface water via garland drains will be diverted to the mine pits	Mine Foreman &
	Mining Mate
Design haul roads and other access roads with drainage systems to minimize concentration	Environment Officer
of flow and erosion risk	
keeping records of mitigation of erosion events, to improve on management techniques	Environment Officer
A monitoring map with information including their GPS coordinates, erosion type,	Environment Officer
intensity, and the extent of the affected area, as well as existing control measures and	
assessment of their performance	
Empty sediment from sediment traps	Environment Officer
Maintain, repair or upgrade garland drain system	
Test soils for pH, EC, chloride, exchangeable cations, particle size and water holding	Mines Manager
capacity	

Source: Proposed by FAE's & EIA Coordinator

10.5 Water Management

In the proposed quarrying project, no process is involved for the effluent generation, only oil & grease from the machinery wash is anticipated and domestic sewage from mine office.

The quarrying operation is proposed upto a depth of 41m (1m gravel +40m Rough stone) the water table in the area is 76-82m below ground level, hence the proposed projects will not intersect the Ground water table during entire quarry period.

TABLE 10.3: PROPOSED CONTROLS FOR WATER ENVIRONMENT

CONTROL	RESPONSIBILITY
To maximize the reuse of pit water for water supply	Mines Foreman
Temporary and permanent garland drain will be constructed to contain the catchments	Mines Manager
of the mining area and to divert runoff from undisturbed areas through the mining areas	
Natural drains/nallahs/brooklets outside the project area should not be disturbed at any	Mines Manager
point of mining operations	
Ensure there is no process effluent generation or discharge from the project area into	Mines Foreman
water bodies	
Domestic sewage generated from the project area will be disposed in septic tank and	Mines Foreman
soak pit system	
Monthly or after rainfall, inspection for performance of water management structures	Mines Manager
and systems	
Conduct ground water and surface water monitoring for parameters specified by CPCB	Manager Mines

Source: Proposed by FAE's & EIA Coordinator

10.6 Air Quality Management

The proposed mining activities would result in the increase of particulate matter concentrations due to fugitive dust. Water sprinkling twice per day on the haul roads, approach roads in the vicinity would be undertaken and will be continued as there is possibility for dust generation due to truck mobility. It will be ensured that vehicles are properly maintained to comply with exhaust emission requirements.

TABLE 10.4: PROPOSED CONTROLS FOR AIR ENVIRONMENT

CONTROL	RESPONSIBILITY
Generation of dust during excavation is minimized by daily (twice) water sprinkling on working face and daily (twice) water sprinkling on haul road	Mines Manager
Wet drilling procedure /drills with dust extractor system to control dust generation during drilling at source itself is implemented	Mines Manager
Maintenance as per operator manual of the equipment and machinery in the mines to minimizing air pollution	Mines Manager
Ambient Air Quality Monitoring carried out in the project area and in surrounding villages to access the impact due to the mining activities and the efficacy of the adopted air pollution control measures	Mines Manager
Provision of Dust Mask to all workers	Mines Manager
Greenbelt development all along the periphery of the project area	Mines Manager

Source: Proposed by FAE's & EIA Coordinator

10.7 Noise Management

There will be intermittent noise levels due to vehicular movement, trucks loading, drilling and blasting and

other allied activities. No mining activities are planned during night time.

TABLE 10.5: PROPOSED CONTROLS FOR NOISE ENVIRONMENT

CONTROL	RESPONSIBILITY
Development of thick greenbelt all along the Buffer Zone (7.5 Meters) of the project area	Mines Manager
to attenuate the noise and the same will be maintained	
Preventive maintenance of mining machinery and replacement of worn-out accessories to	Mines Foreman
control noise generation	
Deployment of mining equipment with an inbuilt mechanism to reduce noise	Mines Manager
Provision of earmuff / ear plugs to workers working in noise prone zones in the mines	Mining Mate
Provision of effective silencers for mining machinery and transport vehicles	Mines Manager
Provision of sound proof AC operator cabins to HEMM	Mines Manager
Sharp drill bits are used to minimize noise from drilling	Mines Foreman
Controlled blasting technologies are adopted by using delay detonators to minimize noise	Mines Manager
from blasting	
Annual ambient noise level monitoring shall be carried out in the project area and in	Mines Manager
surrounding villages to access the impact due to the mining activities and the efficacy of	
the adopted noise control measures. Additional noise control measures will be adopted if	
required as per the observations during monitoring	
Reduce maximum instantaneous charge using delays while blasting	Mining Mate
Change the burden and spacing by altering the drilling pattern and/or delay layout, or	Mines Manager
altering the hole inclination	
Undertake noise or vibration monitoring	Mines Manager

Source: Proposed by FAE's & EIA Coordinator

TABLE 10.6: PROPOSED CONTROLS FOR GROUND VIBRATIONS & FLY ROCK

CONTROL	RESPONSIBILITY
Controlled blasting using delay detonators will be carried out to maintain the PPV value	Mines Manager
(below 8Hz) well within the prescribed standards of DGMS	
Drilling and blasting will be carried under the supervision of qualified persons	Mines Manager
Proper stemming of holes should be carried out with statutory competent qualified blaster	Mines Manager
under the supervision of statutory mines manager to avoid any anomalies during blasting	
Suitable spacing and burden will be maintained to avoid misfire / fly rocks	Manager Mines
Number of blast holes will be restricted to control ground vibrations	Manager Mines
Blasting will be carried out only during noon time	Mining Mate
Undertake noise or vibration monitoring	Mines Manager
ensure blast holes are adequately stemmed for the depth of the hole and stemmed with suitable	Mines Foreman
angular material	

Source: Proposed by FAE's & EIA Coordinator

10.9 Biological Environment Management

The proponent will take all necessary steps to avoid the impact on the ecology of the area by adopting suitable management measures in the planning and implementation stage. During mining, thick plantation will be carried out around the project periphery, on safety barrier zone, on top benches of quarried out area etc.,

Following control measures are proposed for its management and will be the responsibility of the Mines Manager.

- Greenbelt development all along the safety barrier of the project area.
- It is also proposed to implement the greenbelt development programme and post plantation status will be regularly checked for every season.
- The main attributes that retard the survival of sapling is fugitive dust, this fugitive dust can be controlled by water sprinkling on the haul roads and installing a sprinkler unit near the newly planted area.
- Year wise greenbelt development will be recorded and monitored
 - Based on the area of plantation.
 - Period of plantation
 - Type of plantation
 - Spacing between the plants
 - Type of manuring and fertilizers and its periods
 - Lopping period, interval of watering
 - Survival rate
 - Density of plantation
- The ultimate reclamation planned leaves a congenial environment for development of flora & immigration of small fauna through green belt and water reservoir. The green belt and water reservoir developed within the Project at the end of mine life will attract the birds and animals towards the project area in the post mining period.

10.9.1 Green Belt Development Plan

About 1600nos. of saplings is proposed to be planted for the Mining plan period in safety barrier of applied mine lease area with survival rate 80%. The greenbelt development plan has been prepared keeping in view the land use changes that will occur due to mining operation in the area.

PROPOSAL FOR P1					
Year	No. of trees proposed to be planted	Survial %	Area to be planted	Name of the species	
Ι	It is proposed to plant 2000 Nos of trees in the 1 st year	80%	Safety barrier, Un utilized areas and nearby village roads	Neem, Pongamia pinnata, Casuarina, etc	

Source: Conceptual Plan of Approved Mining plan& proposed by FAE's & EIA Coordinator

The objectives of the greenbelt development plan are -

- Provide a green belt around the periphery of the quarry area to combat the dispersal of dust in the adjoining areas,
- Protect the erosion of the soil, Conserve moisture for increasing ground water recharging,
- Restore the ecology of the area, restore aesthetic beauty of the locality and meet the requirement of fodder, fuel and timber of the local community.

A well-planned Green Belt with multi rows (three tiers) preferably with long canopy leaves shall be developed with dense plantations around the boundary and haul roads to prevent air, dust noise propagation to undesired places and efforts will be taken for the enhancement of survival rate.

10.9.2 Species Recommended for Plantation

Following points have been considered while recommending the species for plantation:

- Creating of bio-diversity.
- Fast growing, thick canopy cover, perennial and evergreen large leaf area,
- Efficient in absorbing pollutants without major effects on natural growth

TABLE 10.8: RECOMMENDED SPECIES TO PLANT IN THE GREENBELT – P1

0.110	Botanical Name	Local Name	Importance
1.	Azadirachta indica	Neem, Vembu	Neem oil & neem products
2.	Tamarindus indica	Tamarind	Edible & Medicinal and other Uses
3.	Polyalthia longifolia	Nettilinkam	Tall and evergreen tree
4.	Borassus Flabellifer	Palmyra Palm	Tall Wind breaker tree and its fruits are edible

Source: Proposed by FAE's & EIA Coordinator

10.10 Occupational Safety & Health Management

Occupational safety and health are very closely related to productivity and good employer-employee relationship. The main factors of occupational health impact in quarries are fugitive dust and noise. Safety of employees during quarrying operation and maintenance of mining equipment will be taken care as per Mines Act 1952 and Rule 29 of Mines Rules 1955. To avoid any adverse effect on the health of workers due to dust, noise and vibration sufficient measures have been provided.

10.10.1 Medical Surveillance and Examinations -

- Identifying workers with conditions that may be aggravated by exposure to dust & noise and establishing baseline measures for determining changes in health.
- Evaluating the effect of noise on workers
- Enabling corrective actions to be taken when necessary
- Providing health education

The health status of workers in the mine shall be regularly monitored under an occupational surveillance program. Under this program, all the employees are subjected to a detail medical examination at the time of employment. The medical examination covers the following tests under mines act 1952.

- General Physical Examination and Blood Pressure
- X-ray Chest and ECG
- Sputum test
- Detailed Routine Blood and Urine examination

The medical histories of all employees will be maintained in a standard format annually. Thereafter, the employees will be subject to medical examination annually. The below tests keep upgrading the database of medical history of the employees.

SI.		1 st	2 nd	3 rd	4 th	5 th

TABLE 10.9: MEDICAL EXAMINATION SCHEDULE – P1

Medical Follow ups: - Work force will be divided into three targeted groups age wise as follows: -				
Age Group	PME as per Mines Rules 1955	Special Examination		
Less than 25 years	Once in a Three Years	In case of emergencies		
Between 25 to 40 Years	Once in a Three Years	In case of emergencies		
Above 40 YearsOnce in a Three YearsIn case of emergencies				
Medical help on top priority immediately after diagnosis/ accident is the essence of preventive aspects.				

10.10.2 Proposed Occupational Health and Safety Measures -

- The mine site will have adequate drinking water supply so that workers do not get dehydrated.
- Lightweight and loose-fitting clothes having light colours will be preferred to wear.
- Noise exposure measurements will be taken to determine the need for noise control strategies.
- The personal protective equipment will be provided for mine workers.
- Supervisor will be instructed for reporting any problems with hearing protectors or noise control equipment.
- At noisy working activity, exposure time will be minimized.
- Dust generating sources will be identified and proper control measure will be adopted.
- Periodic medical examinations will be provided for all workers.
- Strict observance of the provisions of DGMS Acts, Rules and Regulations in respect of safety both by management and the workers.
- The width of road will be maintained more than thrice the width of the vehicle. A code of traffic rules will be implemented.
- In respect of contract work, safety code for contractors and workers will be implemented. They will be
 allowed to work under strict supervision of statutory person/officials only after they will impart training at
 vocational training centres. All personal protective equipment's will be provided to them.
- A safety committee meeting every month will be organized to discuss the safety of the mines and the persons employed.
- Celebration of annual mines safety week and environmental week in order to develop safety awareness and harmony amongst employees and co quarry owners.

FIGURE 10.1: PERSONAL PROTECTIVE EQUIPMENT TO THE MINE WORKERS - P1

10.10.3 Health and Safety Training Programme

The Proponents will provide special induction program along with machinery manufacturers for the operators and co-operators to run and maintain the machinery effectively and efficiently. The training program for the supervisors and office staffs will be arranged in the Group Vocational Training Centres in the State and engage Environmental Consultants to provide periodical training to all the employees to carry out the mining operation in and eco-friendly manner.

Course	Personnel	Frequency	Duration	Instruction
New-Employee Training	All new employees exposed to mine hazards	Once	One week	Employee rights Supervisor responsibilities Self-rescue Respiratory devices Transportation controls Communication systems Escape and emergency evacuation Ground control hazards Occupational health hazards Electrical hazards First aid Explosives
Task Training Like Drilling, Blasting, Stemming, safety, Slope stability, Dewatering, Haul road maintenance,	Employees assigned to new work tasks	Before new Assignments	Variable	Task-specific health & safety procedures and SOP for various mining activity. Supervised practice in assigned work tasks.
Refresher Training	All employees who received new-hire training	Yearly	One week	Required health and safety standards Transportation controls Communication systems Escape ways, emergency evacuations

10.10.4 Budgetary Provision for Environmental Management -

Adequate budgetary provision has been made by the Company for execution of Environmental Management Plan. The Table 10.11 gives overall investment on the environmental safeguards and recurring expenditure for successful monitoring and implementation of control measures.

TABLE 10.11: EMP BUDGET FOR PROPOSED PROJECT – P1

	Mitigation Measure	Provision for Implementation	Capital	Recurring
	Compaction, gradation and drainage on both sides for Haulage Road	Rental Dozer & drainage construction on haul road @ Rs. 10,000/- per hectare; and yearly maintenance @ Rs. 10,000/- per hectare	40000	40000
	Fixed Water Sprinkling Arrangements + Water sprinkling by own water tankers	Fixed Sprinkler Installation and New Water Tanker Cost for Capital; and Water Sprinkling (thrice a day) Cost for recurring	800000	50000
	Muffle blasting – To control fly rocks during blasting	Blasting face will be covered with sand bags / steel mesh / old tyres / used conveyor belts	0	5000
Air Environment	Wet drilling procedure / latest eco-friendly drill machine with separate dust extractor unit	Dust extractor @ Rs. 25,000/- per unit deployed as capital & @ Rs. 2500 per unit recurring cost for maintenance - 3 Units	125000	12500
	No overloading of trucks/tippers/tractors	Manual Monitoring through Security guard	0	5000
	Stone carrying trucks will be covered by tarpaulin	Monitoring if trucks will be covered by tarpaulin	0	10000
	nforcing speed limits of 20 km/hr within ML area Installation of Speed Governers @ Rs. 5000/- per Tipper/Dumper deployed - 3 Units		15000	750
	Regular monitoring of exhaust fumes as per RTO norms	Monitoring of Exhaust Fumes by Manual Labour	0	5000
	Regular sweeping and maintenance of approach roads for at least about 200 m from ML Area	Provision for 2 labours @ Rs.10,000/labour (Contractual) per Hectare	0	80000
	Installing wheel wash system near gate of quarry	Installation + Maintenance + Supervision	50000	20000
	Source of noise will be during operation of transportation vehicles, HEMM for this proper maintenance will be done at regular intervals.	Provision made in Operating Cost	0	0
	Oiling & greasing of Transport vehicles and HEMM at regular interval will be done	Provision made in Operating Cost	0	0
Noise Environment	Adequate silencers will be provided in all the diesel engines of vehicles.	Provision made in Operating Cost	0	0
	It will be ensured that all transportation vehicles carry a fitness certificate.	Provision made in Operating Cost	0	0
	Safety tools and implements that are required will be kept adequately near blasting site at the time of charging.	Provision made in OHS part	0	0

Kothapetta Rough Stone Cluster Quarries		Chapter - 10		
	Line Drilling all along the boundary to reduce the PPV from blasting activity and implementing controlled blasting.	Provision made in Operating Cost	0	0
	Proper warning system before blasting will be adopted and clearance of the area before blasting will be ensured.	Blowing Whistle by Mining Mate / Blaster / Compentent Person	0	0
	Provision for Portable blaster shed	Installation of Portable blasting shelter	50000	2000
	NONEL Blasting will be practiced to control Ground vibration and fly rocks	Rs. 30/- per 6 Tonnes of Blasted Material	0	1334749
Waste	Waste management (Spent Oil, Grease etc.,)	Provision for domestic waste collection and disposal through authorized agency	5000	20000
Management		Installation of dust bins	5000	2000
Management	Bio toilets will be made available outside mine lease on the land of owner itself	Provision made in Operating Cost	0	0
	1. Progressive Closure Activity - Surface Runoff managent	Provision for garland drain @ Rs. 10,000/- per Hectare with maintenance of Rs. 5,000/- per annum	40000	5000
	2. Progressive Closure Activity Barbed Wire Fencing to quarry area will be provisioned.	Per Hectare fencing Cost @ Rs. 2,00,000/- with Maintenance of Rs 10,000/- per annum	800000	10000
	3. Progressive Closure Activity Green belt development - 500 trees per one hectare - Proposal for 2000Trees - (840 Inside Lease Area & 1560 Outside Lease Area)	Site clearance, preparation of land, digging of pits / trenches, soil amendments, transplantation of saplings @ 200 per plant (capital) for plantation inside the lease area and @ 30 per plant maintenance (recurring)	168000	25200
Mine Closure		Avenue Plantation @ 300 per plant (capital) for plantation outside the lease area and @ 30 per plant maintenance (recurring)	468000	46800
	4. Implementation of Final Mine Closure Actity as per Approved Mining Plan on Last Year	A few activities already covered progressive closure activities as greenbelt development, wire fencing, and garland drain.*For Final Closure Activities 15% of the proposed closure cost will be spent during the final mine closure stage - Last Year	107550	0
	5. Contribution towards Green Fund. As per TNMMCR 1959, Rule 35 A	The Contribution towards Green Funds @ 10% of Seigniorage fee are indicated as part of EMP Budge and not necessarily implemented in the Project Site	3028854	0
Implementation of EC, Mining	Size 6' X 5' with blue background and white letters as mentioned in MoM Appendix II by the SEAC TN	Fixed Display Board at the Quarry Entrance as permanent structure mentioning Environmental Conditions	10000	1000

Kothapetta Rough Stone	othapetta Rough Stone Cluster Quarries Chapter - 10				
Plan & DGMS Condition	Air, Water, Noise and Soil Quality Sampling every 6 Months for Compliance Report of EC Conditions	Submission of 2 Half Yearly Compliance - Lab Monitoring Report as per CPCB norms	0	50000	
	Workers will be provided with Personal Protective Equipment's	Provision of PPE @ Rs. 4000/- per employee with recurring based on wear and tear (say, @ Rs. 1000/- per employee) - 21 Employees	84000	21000	
	Health check-up for workers will be provisioned	IME & PME Health check up @ Rs. 1000/- per employee	0	21000	
	First aid facility will be provided	Provision of 2 Kits per Hectare @ Rs. 2000/-	0	8000	
	Mine will have safety precaution signages, boards.	Provision for signages and boards made	10000	2000	
	No parking will be provided on the transport routes. Separate provision on the south side of the hill will be made for vehicles /HEMMs. Flaggers will be deployed for traffic management	Parking area with shelter and flags @ Rs. 50,000/- per hectare project and Rs. 10,000/- as maintenance cost	200000	10000	
	Installation of CCTV cameras in the mines and mine entrance	Camera 4 Nos, DVR, Monitor with internet facility	30000	5000	
	Implementation as per Mining Plan and ensure safe quarry working	Mines Manager (1 st Class / 2 nd Class / Mine Foreman) under regulation 34 / 34 (6) of MMR, 1961 and Mining Mate under regulation 116 of MMR,1961 @ 40,000/- for Manager & @ 25,000/- for Foreman / Mate	0	780000	
CER	As per MoEF &CC OM 22-65/2017-IA.III Dated 25.02.2021	Detailed Description in following slides and Budget allocation is included as per MoeEF & CC OM	500000	0	
	TOTAL				

In order to implement the environmental protection measures, an amount of Rs.34 lakhs as capital cost and recurring cost as Rs. 25.71 lakhs as recurring cost is proposed considering present market price considering present market scenario for the proposed project.

Year Wise Break Up	
1st Year	Rs. 59,71,999
2nd Year	Rs. 27,00,598.95
3rd Year	Rs. 28,35,628.898
4th Year	Rs. 29,77,410.342
5th Year	Rs. 32,33,830.859
Total	Rs. 177Lakshs

10.11 Conclusion

Various aspects of mining activities were considered and related impacts were evaluated. Considering all the possible ways to mitigate the environmental concerns Environmental Management Plan was prepared and fund has been allocated for the same. The EMP is dynamic, flexible and subjected to periodic review. For project where the major environmental impacts are associated, EMP will be under regular review. Senior Management responsible for the project will conduct review of EMP and its implementation to ensure that the EMP remains effective and appropriate. Thus, the proper steps will be taken to accomplish all the goals mentioned in the EMP and the project will bring the positive impact in the study area.

CHAPTER - 10: ENVIRONMENTAL MANAGEMENT PLAN – P2

10.1 General

Environment Management Plan (EMP) aims at the preservation of ecological system by considering in-built pollution abatement facilities at the proposed site. Good practices of Environmental Management plan will ensure to keep all the environmental parameters of the project in respect of Ambient Air quality, Water quality, Socio– economic improvement standards.

Mitigation measures at the source level and an overall environment management plan at the study area are elicited so as to improve the supportive capacity of the receiving bodies. The EMP presented in this chapter discusses the administrative aspects of ensuring that mitigative measures are implemented and their effectiveness monitored after approval of the EIA.

10.2 Environmental Policy

The Project Proponent is committed to conduct all its operations and activities in an environmentally responsible manner and to continually improve environmental performance.

The Proponent Tmt.K.M. Vijaya will -

- Allocate necessary resources to ensure the implementation of the environmental policy
- Meet the requirements of all laws, acts, regulations, and standards relevant to its operations and activities
- Implement a program to train employees in general environmental issues and individual workplace environmental responsibilities
- Ensure that an effective closure strategy is in place at all stages of project development and that progressive reclamation is undertaken as early as possible to reduce potential long-term environmental and community impacts
- Implement monitoring programmes to provide early warning of any deficiency or unanticipated performance in environmental safeguards
- Conduct periodic reviews to verify environmental performance and to continuously strive towards improvement

Description of the Administration and Technical Setup -

The Environment Monitoring Cell discussed under Chapter 6 will ensure effective implementation of environment management plan and to ensure compliance of environmental statutory guidelines through Mine Management Level of each Proposed Quarry.

The said team will be responsible for:

- Monitoring of the water/ waste water quality, air quality and solid waste generated
- Analysis of the water and air samples collected through external laboratory
- Implementation and monitoring of the pollution control and protective measures/ devices which shall include financial estimation, ordering, installation of air pollution control equipment, waste water treatment plant, etc.
- Co-ordination of the environment related activities within the project as well as with outside agencies
- Collection of health statistics of the workers and population of the surrounding villages
- Green belt development
- Monitoring the progress of implementation of the environmental monitoring programme
- Compliance to statutory provisions, norms of State Pollution Control Board, Ministry of Environment and Forests and the conditions of the environmental clearance as well as the consents to establish and consents to operate.

10.3 Land Environment Management –

Land degradation is one of the major adverse impacts of opencast mining in the form of excavated voids and contamination of soil affects the viability of the soil resource.

Soil contamination then has a number of flow-on effects like, Inhibition of plant growth, and death of existing plants in contaminated areas and contamination of soil also has potential to impact on a surface water quality and groundwater resources.

CONTROL	RESPONSIBILITY
Designing vehicle wash-down system so that all washed water is captured and	Mines Manager
passed through grease and oil separators.	
Re fueling will be carried out in a safe location, away from vehicle movement	Mine Foreman &
pathways	Mining Mate
Greenbelt development and its maintenance	Environment Officer
Garland drains with catch pits to be provided all around the project area to prevent	Environment Officer
run off affecting the surrounding lands.	
The periphery of Project area will be planted with thick plantation to arrest the	Mines Manager
fugitive dust, which will also act as acoustic barrier.	
Thick plantation using native flora spices will be carried out on the top benches.	Mines Manager
There will be formation of a small surface water body in the mined-out area, which	Environment Officer
can be used for watering the greenbelt at the conceptual stages.	

TABLE 10.1: PROPOSED CONTROLS FOR LAND ENVIRONMENT

Source: Proposed by FAE's & EIA Coordinator

10.4 Soil Management

Top Soil Management -

There is no topsoil.

Overburden / Waste and Side Burden Management -

• The overburden in the form of Gravel. The Gravel will be directly loaded into tippers for the filling and levelling of lowlying areas, this will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

CONTROL	RESPONSIBILITY
Garland drains are to be paved around the quarry pit area to arrest possible wash off in the	Mines Manager
rainy seasons	
Surface run-off from the surface water via garland drains will be diverted to the mine pits	Mine Foreman &
	Mining Mate
Design haul roads and other access roads with drainage systems to minimize concentration	Environment Officer
of flow and erosion risk	
keeping records of mitigation of erosion events, to improve on management techniques	Environment Officer
A monitoring map with information including their GPS coordinates, erosion type,	Environment Officer
intensity, and the extent of the affected area, as well as existing control measures and	
assessment of their performance	
Empty sediment from sediment traps	Environment Officer
Maintain, repair or upgrade garland drain system	
Test soils for pH, EC, chloride, exchangeable cations, particle size and water holding	Mines Manager
capacity	

Source: Proposed by FAE's & EIA Coordinator

10.5 Water Management

In the proposed quarrying project, no process is involved for the effluent generation, only oil & grease from the machinery wash is anticipated and domestic sewage from mine office.

The quarrying operation is restricted upto a depth 31m (1m Gravel +30m Rough stone) the water table in the area is 76-82m below ground level, hence the proposed projects will not intersect the Ground water table during entire quarry period.

TABLE 10.3: PROPOSED CONTROLS FOR WATER ENVIRONMENT

CONTROL	RESPONSIBILITY
To maximize the reuse of pit water for water supply	Mines Foreman
Temporary and permanent garland drain will be constructed to contain the catchments	Mines Manager
of the mining area and to divert runoff from undisturbed areas through the mining	
areas	
Natural drains/nallahs/brooklets outside the project area should not be disturbed at any	Mines Manager
point of mining operations	
Ensure there is no process effluent generation or discharge from the project area into	Mines Foreman
water bodies	
Domestic sewage generated from the project area will be disposed in septic tank and	Mines Foreman
soak pit system	
Monthly or after rainfall, inspection for performance of water management structures	Mines Manager
and systems	
Conduct ground water and surface water monitoring for parameters specified by	Manager Mines
CPCB	

Source: Proposed by FAE's & EIA Coordinator

10.6 Air Quality Management

The proposed mining activities would result in the increase of particulate matter concentrations due to fugitive dust. Water sprinkling twice per day on the haul roads, approach roads in the vicinity would be undertaken and will be continued as there is possibility for dust generation due to truck mobility. It will be ensured that vehicles are properly maintained to comply with exhaust emission requirements.

TABLE 10.4: PROPOSED CONTROLS FOR AIR ENVIRONMENT

CONTROL	RESPONSIBILITY
Generation of dust during excavation is minimized by daily (twice) water sprinkling on working face and daily (twice) water sprinkling on haul road	Mines Manager
Wet drilling procedure /drills with dust extractor system to control dust generation during drilling at source itself is implemented	Mines Manager
Maintenance as per operator manual of the equipment and machinery in the mines to minimizing air pollution	Mines Manager
Ambient Air Quality Monitoring carried out in the project area and in surrounding villages to access the impact due to the mining activities and the efficacy of the adopted air pollution control measures	Mines Manager
Provision of Dust Mask to all workers	Mines Manager
Greenbelt development all along the periphery of the project area	Mines Manager

Source: Proposed by FAE's & EIA Coordinator

10.7 Noise Management

There will be intermittent noise levels due to vehicular movement, trucks loading, drilling and blasting and other allied activities. No mining activities are planned during night time.

TABLE 10.5: PROPOSED CONTROLS FOR NOISE ENVIRONMENT

CONTROL	RESPONSIBILITY
Development of thick greenbelt all along the Buffer Zone (7.5 Meters) of the project area to attenuate the noise and the same will be maintained	Mines Manager
Preventive maintenance of mining machinery and replacement of worn-out accessories to control noise generation	Mines Foreman
Deployment of mining equipment with an inbuilt mechanism to reduce noise	Mines Manager
Provision of earmuff / ear plugs to workers working in noise prone zones in the mines	Mining Mate
Provision of effective silencers for mining machinery and transport vehicles	Mines Manager
Provision of sound proof AC operator cabins to HEMM	Mines Manager
Sharp drill bits are used to minimize noise from drilling	Mines Foreman
Controlled blasting technologies are adopted by using delay detonators to minimize noise from blasting	Mines Manager
Annual ambient noise level monitoring shall be carried out in the project area and in surrounding villages to access the impact due to the mining activities and the efficacy of the adopted noise control measures. Additional noise control measures will be adopted if required as per the observations during monitoring	Mines Manager
Reduce maximum instantaneous charge using delays while blasting	Mining Mate
Change the burden and spacing by altering the drilling pattern and/or delay layout, or altering the hole inclination	Mines Manager
Undertake noise or vibration monitoring	Mines Manager

Source: Proposed by FAE's & EIA Coordinator

10.8 Ground Vibration and Fly Rock Control

TABLE 10.6: PROPOSED CONTROLS FOR GROUND VIBRATIONS & FLY ROCK

CONTROL	RESPONSIBILITY
Controlled blasting using delay detonators will be carried out to maintain the PPV value (below 8Hz) well within the prescribed standards of DGMS	Mines Manager
Drilling and blasting will be carried under the supervision of qualified persons	Mines Manager
Proper stemming of holes should be carried out with statutory competent qualified blaster under the supervision of statutory mines manager to avoid any anomalies during blasting	Mines Manager
Suitable spacing and burden will be maintained to avoid misfire / fly rocks	Manager Mines
Number of blast holes will be restricted to control ground vibrations	Manager Mines
Blasting will be carried out only during noon time	Mining Mate
Undertake noise or vibration monitoring	Mines Manager
ensure blast holes are adequately stemmed for the depth of the hole and stemmed with suitable angular material	Mines Foreman

Source: Proposed by FAE's & EIA Coordinator

10.9 Biological Environment Management

The proponent will take all necessary steps to avoid the impact on the ecology of the area by adopting suitable management measures in the planning and implementation stage. During mining, thick plantation will be carried out around the project periphery, on safety barrier zone, on top benches of quarried out area etc.,

Following control measures are proposed for its management and will be the responsibility of the Mines Manager.

- Greenbelt development all along the safety barrier of the project area
- It is also proposed to implement the greenbelt development programme and post plantation status will be regularly checked for every season.
- The main attributes that retard the survival of sapling is fugitive dust, this fugitive dust can be controlled by water sprinkling on the haul roads and installing a sprinkler unit near the newly planted area.
- Year wise greenbelt development will be recorded and monitored
 - Based on the area of plantation.
 - Period of plantation
 - Type of plantation
- Spacing between the plants
- Type of manuring and fertilizers and its periods
- Lopping period, interval of watering
- Survival rate
- Density of plantation
- The ultimate reclamation planned leaves a congenial environment for development of flora & immigration of small fauna through green belt and water reservoir. The green belt and water reservoir developed within the Project at the end of mine life will attract the birds and animals towards the project area in the post mining period.

10.9.1 Green Belt Development Plan

About 1600nos. of saplings is proposed to be planted for the Mining plan period in safety barrier of applied mine lease area with survival rate 80%. The greenbelt development plan has been prepared keeping in view the land use changes that will occur due to mining operation in the area.

TABLE 10.7 PROPOSED GREENBELT ACTIVITIES FOR 5 YEAR PLAN PERIOD – P2PROPOSAL FOR P2

It is proposed to plant	80%	Safety barrier, Un	Neem Bongamia ninnata Casuarina
2000Nos of trees in the 1 st		utilized area's and	neem, ronganna phinata, Casuarina,
year		nearby village roads	etc.,

Source: Conceptual Plan of Approved Mining plan& proposed by FAE's & EIA Coordinator

The objectives of the greenbelt development plan are -

- Provide a green belt around the periphery of the quarry area to combat the dispersal of dust in the adjoining areas,
- Protect the erosion of the soil, Conserve moisture for increasing ground water recharging,
- Restore the ecology of the area, restore aesthetic beauty of the locality and meet the requirement of fodder, fuel and timber of the local community.

A well-planned Green Belt with multi rows (three tiers) preferably with long canopy leaves shall be developed with dense plantations around the boundary and haul roads to prevent air, dust noise propagation to undesired places and efforts will be taken for the enhancement of survival rate.

10.9.2 Species Recommended for Plantation

Following points have been considered while recommending the species for plantation:

- Creating of bio-diversity.
- Fast growing, thick canopy cover, perennial and evergreen large leaf area,
- Efficient in absorbing pollutants without major effects on natural growth

TABLE 10.8: RECOMMENDED SPECIES TO PLANT IN THE GREENBELT – P2

S.No	Botanical Name	Local Name	Importance
1	Azadirachta indica	Neem, Vembu	Neem oil & neem products
2	Tamarindus indica	Tamarind	Edible & Medicinal and other Uses
3	Polyalthia longifolia	Nettilinkam	Tall and evergreen tree
4	Borassus Flabellifer	Palmyra Palm	Tall Wind breaker tree and its fruits are edible

Source: Proposed by FAE's & EIA Coordinator

10.10 Occupational Safety & Health Management

Occupational safety and health are very closely related to productivity and good employer-employee relationship. The main factors of occupational health impact in quarries are fugitive dust and noise. Safety of employees during quarrying operation and maintenance of mining equipment will be taken care as per Mines Act 1952 and Rule 29 of Mines Rules 1955. To avoid any adverse effect on the health of workers due to dust, noise and vibration sufficient measures have been provided.

10.10.1 Medical Surveillance and Examinations -

 Identifying workers with conditions that may be aggravated by exposure to dust & noise and establishing baseline measures for determining changes in health.

- Evaluating the effect of noise on workers
- Enabling corrective actions to be taken when necessary
- Providing health education
- The health status of workers in the mine shall be regularly monitored under an occupational surveillance program.

Under this program, all the employees are subjected to a detail medical examination at the time of employment. The medical examination covers the following tests under mines act 1952.

- General Physical Examination and Blood Pressure
- X-ray Chest and ECG
- Sputum test
- Detailed Routine Blood and Urine examination

The medical histories of all employees will be maintained in a standard format annually. Thereafter, the employees will be subject to medical examination annually. The below tests keep upgrading the database of medical history of the employees.

TABLE 10.9: MEDICAL EXAMINATION SCHEDULE – P2

Sl.No	Activities	1 st Year	2 nd Year	3 rd Year	4 th Year	5 th Year
1	Initial Medical Examination (Mine Workers)					
А	Physical Check-up					
В	Psychological Test					
С	Audiometric Test					
D	Respiratory Test					
2	Periodical Medical Examination (Mine Workers)					
А	Physical Check – up					
В	Audiometric Test					
С	Eye Check – up					
D	Respiratory Test					
3	Medical Camp (Mine Workers & Nearby Villagers)					
4	Training (Mine Workers)					

Medical Follow ups:- Work force will be divided into three targeted groups age wise as follows:-			
Age Group	PME as per Mines Rules 1955	Special Examination	
Less than 25 years	Once in a Three Years	In case of emergencies	
Between 25 to 40 Years	Once in a Three Years	In case of emergencies	
Above 40 Years	Once in a Three Years	In case of emergencies	
Medical help on ton priority immediately after diagnosis / accident is the essence of preventive aspects			

Medical help on top priority immediately after diagnosis/ accident is the essence of preventive aspects.

10.10.2 Proposed Occupational Health and Safety Measures –

- The mine site will have adequate drinking water supply so that workers do not get dehydrated.
- Lightweight and loose-fitting clothes having light colours will be preferred to wear.
- Noise exposure measurements will be taken to determine the need for noise control strategies.
- The personal protective equipment will be provided for mine workers.
- Supervisor will be instructed for reporting any problems with hearing protectors or noise control equipment.
- At noisy working activity, exposure time will be minimized.
- Dust generating sources will be identified and proper control measure will be adopted.
- Periodic medical examinations will be provided for all workers.

- Strict observance of the provisions of DGMS Acts, Rules and Regulations in respect of safety both by management and the workers.
- The width of road will be maintained more than thrice the width of the vehicle. A code of traffic rules will be implemented.
- In respect of contract work, safety code for contractors and workers will be implemented. They will be
 allowed to work under strict supervision of statutory person/officials only after they will impart training at
 vocational training centres. All personal protective equipment's will be provided to them.
- A safety committee meeting every month will be organized to discuss the safety of the mines and the persons employed.
- Celebration of annual mines safety week and environmental week in order to develop safety awareness and harmony amongst employees and co quarry owners.

FIGURE 10.1: PERSONAL PROTECTIVE EQUIPMENT TO THE MINE WORKERS - P2

10.10.3 Health and Safety Training Programme

The Proponents will provide special induction program along with machinery manufacturers for the operators and co-operators to run and maintain the machinery effectively and efficiently. The training program for the supervisors and office staffs will be arranged in the Group Vocational Training Centres in the State and engage Environmental Consultants to provide periodical training to all the employees to carry out the mining operation in and eco-friendly manner.

TABLE 10.10: LIST OF PERIODICAL TRAININGS PROPOSED FOR EMPLOYEES – P2

10.10.4 Budgetary Provision for Environmental Management -

Adequate budgetary provision has been made by the Company for execution of Environmental Management Plan. The Table 10.11 gives overall investment on the environmental safeguards and recurring expenditure for successful monitoring and implementation of control measures.

TABLE 10.11: EMP BUDGET FOR PROPOSED PROJECT – P2

	Mitigation Measure	Provision for Implementation	Capital	Recurring
	Compaction, gradation and drainage on both sides for Haulage Road	Rental Dozer & drainage construction on haul road @ Rs. 10,000/- per hectare; and yearly maintenance @ Rs. 10,000/- per hectare	40000	40000
	Fixed Water Sprinkling Arrangements + Water sprinkling by own water tankers	Fixed Sprinkler Installation and New Water Tanker Cost for Capital; and Water Sprinkling (thrice a day) Cost for recurring	800000	50000
	Muffle blasting – To control fly rocks during blasting	Blasting face will be covered with sand bags / steel mesh / old tyres / used conveyor belts	0	5000
Air Environment	Wet drilling procedure / latest eco-friendly drill machine with separate dust extractor unit	Dust extractor @ Rs. 25,000/- per unit deployed as capital & @ Rs. 2500 per unit recurring cost for maintenance - 5 Units	125000	12500
	No overloading of trucks/tippers/tractors	Manual Monitoring through Security guard	0	5000
	Stone carrying trucks will be covered by tarpaulin	Monitoring if trucks will be covered by tarpaulin	0	10000
	Enforcing speed limits of 20 km/hr within ML area	Installation of Speed Governers @ Rs. 5000/- per Tipper/Dumper deployed - 3 Units	15000	750
	Regular monitoring of exhaust fumes as per RTO norms	Monitoring of Exhaust Fumes by Manual Labour	0	5000
	Regular sweeping and maintenance of approach roads for at least about 200 m from ML Area	Provision for 2 labours @ Rs.10,000/labour (Contractual) per Hectare	0	80000
	Installing wheel wash system near gate of quarry	Installation + Maintenance + Supervision	50000	20000
	Source of noise will be during operation of transportation vehicles, HEMM for this proper maintenance will be done at regular intervals.	Provision made in Operating Cost	0	0
	Oiling & greasing of Transport vehicles and HEMM at regular interval will be done	Provision made in Operating Cost	0	0
Naina	Adequate silencers will be provided in all the diesel engines of vehicles.	Provision made in Operating Cost	0	0
Noise Environment	It will be ensured that all transportation vehicles carry a fitness certificate.	Provision made in Operating Cost	0	0
	Safety tools and implements that are required will be kept adequately near blasting site at the time of charging.	Provision made in OHS part	0	0
	Line Drilling all along the boundary to reduce the PPV from blasting activity and implementing controlled blasting.	Provision made in Operating Cost	0	0

Kothapetta Rough Stone Cluster Quarries		Chapter - 10		
	Proper warning system before blasting will be adopted and clearance of the area before blasting will be ensured.	Blowing Whistle by Mining Mate / Blaster / Compentent Person	0	0
	Provision for Portable blaster shed	Installation of Portable blasting shelter	50000	2000
	NONEL Blasting will be practiced to control Ground vibration and fly rocks	Rs. 30/- per 6 Tonnes of Blasted Material	0	2062333
Wasta	Waste management (Spent Oil, Grease etc.,)	Provision for domestic waste collection and disposal through authorized agency	5000	20000
Wasic Management		Installation of dust bins	5000	2000
Management	Bio toilets will be made available outside mine lease on the land of owner itself	Provision made in Operating Cost	0	0
	1. Progressive Closure Activity - Surface Runoff managent	Provision for garland drain @ Rs. 10,000/- per Hectare with maintenance of Rs. 5,000/- per annum	40000	5000
Mine Closure	2. Progressive Closure Activity Barbed Wire Fencing to quarry area will be provisioned.	Per Hectare fencing Cost @ Rs. 2,00,000/- with Maintenance of Rs 10,000/- per annum	800000	10000
	 3. Progressive Closure Activity Green belt development - 500 trees per one hectare - Proposal for 2000Trees - 	Site clearance, preparation of land, digging of pits / trenches, soil amendments, transplantation of saplings @ 200 per plant (capital) for plantation inside the lease area and @ 30 per plant maintenance (recurring)	126000	18900
	(630 Inside Lease Area & 575 Outside Lease Area)	Avenue Plantation @ 300 per plant (capital) for plantation outside the lease area and @ 30 per plant maintenance (recurring)	172500	17250
	4. Implementation of Final Mine Closure Actity as per Approved Mining Plan on Last Year	A few activities already covered progressive closure activities as greenbelt development, wire fencing, and garland drain. *For Final Closure Activities 15% of the proposed closure cost will be spent during the final mine closure stage - Last Year	90975	0
	5. Contribution towards Green Fund. As per TNMMCR 1959, Rule 35 A	The Contribution towards Green Funds @ 10% of Seigniorage fee are indicated as part of EMP Budge and not necessarily implemented in the Project Site	4679910	0
Implementation of EC, Mining Plan & DGMS Condition	Size 6' X 5' with blue background and white letters as mentioned in MoM Appendix II by the SEAC TN	Fixed Display Board at the Quarry Entrance as permanent structure mentioning Environmental Conditions	10000	1000
	Air, Water, Noise and Soil Quality Sampling every 6 Months for Compliance Report of EC Conditions	Submission of 2 Half Yearly Compliance - Lab Monitoring Report as per CPCB norms	0	50000

Kothapetta Rough St	tone Cluster Quarries	Chapter - 10		
	Workers will be provided with Personal Protective Equipment's	Provision of PPE @ Rs. 4000/- per employee with recurring based on wear and tear (say, @ Rs. 1000/- per employee) - 21 Employees	84000	21000
	Health check up for workers will be provisioned	IME & PME Health check up @ Rs. 1000/- per employee	0	21000
	First aid facility will be provided	Provision of 2 Kits per Hectare @ Rs. 2000/-	0	8000
	Mine will have safety precaution signages, boards.	Provision for signages and boards made	10000	2000
	No parking will be provided on the transport routes. Separate provision on the south side of the hill will be made for vehicles /HEMMs. Flaggers will be deployed for traffic management	Parking area with shelter and flags @ Rs. 50,000/- per hectare project and Rs. 10,000/- as maintenance cost	200000	10000
	Installation of CCTV cameras in the mines and mine entrance	Camera 4 Nos, DVR, Monitor with internet facility	30000	5000
	Implementation as per Mining Plan and ensure safe quarry working	Mines Manager (1 st Class / 2 nd Class / Mine Foreman) under regulation 34 / 34 (6) of MMR, 1961 and Mining Mate under regulation 116 of MMR,1961 @ 40,000/- for Manager & @ 25,000/- for Foreman / Mate	0	780000
CER	As per MoEF &CC OM 22-65/2017-IA.III Dated 25.02.2021	Detailed Description in following slides and Budget allocation is included as per MoeEF & CC OM	500000	0
	TOTAL		3062500	3263733

In order to implement the environmental protection measures, an amount of Rs. 30.62 lakhs as capital cost and recurring cost as Rs. 32.63 lakhs as recurring cost is proposed considering present market price considering present market scenario for the proposed project.

Chapter -	- 10
-----------	------

Year Wise Break Up		
1st Year	Rs 6,32,6233	
2nd Year	Rs 34,26,919.65	
3rd Year	Rs 35,98,265.633	
4th Year	Rs 37,78,178.914	
5th Year	Rs 40,58,062.86	
Total	Rs.212 Lakhs	

10.11 Conclusion

Various aspects of mining activities were considered and related impacts were evaluated. Considering all the possible ways to mitigate the environmental concerns Environmental Management Plan was prepared and fund has been allocated for the same. The EMP is dynamic, flexible and subjected to periodic review. For project where the major environmental impacts are associated, EMP will be under regular review. Senior Management responsible for the project will conduct a review of EMP and its implementation to ensure that the EMP remains effective and appropriate. Thus, the proper steps will be taken to accomplish all the goals mentioned in the EMP and the project will bring the positive impact in the study area.

CHAPTER - 10: ENVIRONMENTAL MANAGEMENT PLAN – P3

10.1 General

Environment Management Plan (EMP) aims at the preservation of ecological system by considering in-built pollution abatement facilities at the proposed site. Good practices of Environmental Management plan will ensure to keep all the environmental parameters of the project in respect of Ambient Air quality, Water quality, Socio– economic improvement standards.

Mitigation measures at the source level and an overall environment management plan at the study area are elicited so as to improve the supportive capacity of the receiving bodies. The EMP presented in this chapter discusses the administrative aspects of ensuring that mitigative measures are implemented and their effectiveness monitored after approval of the EIA.

10.2 Environmental Policy

The Project Proponent is committed to conduct all its operations and activities in an environmentally responsible manner and to continually improve environmental performance.

The Proponent M/s. A.M. Quality Stone will -

- Allocate necessary resources to ensure the implementation of the environmental policy
- Meet the requirements of all laws, acts, regulations, and standards relevant to its operations and activities
- Implement a program to train employees in general environmental issues and individual workplace environmental responsibilities
- Ensure that an effective closure strategy is in place at all stages of project development and that progressive reclamation is undertaken as early as possible to reduce potential long-term environmental and community impacts
- Implement monitoring programmes to provide early warning of any deficiency or unanticipated performance in environmental safeguards
- Conduct periodic reviews to verify environmental performance and to continuously strive towards improvement

Description of the Administration and Technical Setup -

The Environment Monitoring Cell discussed under Chapter 6 will ensure effective implementation of environment management plan and to ensure compliance of environmental statutory guidelines through Mine Management Level of each Proposed Quarry.

The said team will be responsible for:

- Monitoring of the water/ waste water quality, air quality and solid waste generated
- Analysis of the water and air samples collected through external laboratory
- Implementation and monitoring of the pollution control and protective measures/ devices which shall include financial estimation, ordering, installation of air pollution control equipment, waste water treatment plant, etc.

- Co-ordination of the environment related activities within the project as well as with outside agencies
- Collection of health statistics of the workers and population of the surrounding villages
- Green belt development
- Monitoring the progress of implementation of the environmental monitoring programme
- Compliance to statutory provisions, norms of State Pollution Control Board, Ministry of Environment and Forests and the conditions of the environmental clearance as well as the consents to establish and consents to operate.

10.3 Land Environment Management –

Land degradation is one of the major adverse impacts of opencast mining in the form of excavated voids and contamination of soil affects the viability of the soil resource.

Soil contamination then has a number of flow-on effects like, Inhibition of plant growth, and death of existing plants in contaminated areas and contamination of soil also has potential to impact on a surface water quality and groundwater resources.

CONTROL	RESPONSIBILITY
Designing vehicle wash-down system so that all washed water is captured and	Mines Manager
passed through grease and oil separators.	
Re fueling will be carried out in a safe location, away from vehicle movement	Mine Foreman &
pathways	Mining Mate
Greenbelt development and its maintenance	Environment Officer
Garland drains with catch pits to be provided all around the project area to prevent	Environment Officer
run off affecting the surrounding lands.	
The periphery of Project area will be planted with thick plantation to arrest the	Mines Manager
fugitive dust, which will also act as acoustic barrier.	
Thick plantation using native flora spices will be carried out on the top benches.	Mines Manager
There will be formation of a small surface water body in the mined out area, which	Environment Officer
can be used for watering the greenbelt at the conceptual stages.	

TABLE 10.1: PROPOSED CONTROLS FOR LAND ENVIRONMENT

Source: Proposed by FAE's & EIA Coordinator

10.4 Soil Management

Top Soil Management

• The thickness of topsoil in this area is 1.0m and the total volume of Topsoil will be 8706m³.

Disposal of Overburden

• The overburden in the form of Topsoil is **8,706m³** up to depth 1m for during this lease period. Topsoil formation will be removed and dumped at all side boundary barrier of the lease area. It will be utilized for afforestation and road low lying areas.

CONTROL	RESPONSIBILITY
Garland drains are to be paved around the quarry pit area to arrest possible wash off in the	Mines Manager
rainy seasons	
Surface run-off from the surface water via garland drains will be diverted to the mine pits	Mine Foreman &
	Mining Mate
Design haul roads and other access roads with drainage systems to minimize concentration	Environment Officer
of flow and erosion risk	
keeping records of mitigation of erosion events, to improve on management techniques	Environment Officer
A monitoring map with information including their GPS coordinates, erosion type,	Environment Officer
intensity, and the extent of the affected area, as well as existing control measures and	
assessment of their performance	
Empty sediment from sediment traps	Environment Officer
Maintain, repair or upgrade garland drain system	
Test soils for pH, EC, chloride, exchangeable cations, particle size and water holding	Mines Manager
capacity	

TABLE 10.2: PROPOSED CONTROLS FOR SOIL MANAGEMENT

Source: Proposed by FAE's & EIA Coordinator

10.5 Water Management

In the proposed quarrying project, no process is involved for the effluent generation, only oil & grease from the machinery wash is anticipated and domestic sewage from mine office.

The quarrying operation is restricted upto a depth 45m (1m Topsoil +44m Rough stone) the water table in the area is 67 below ground level, hence the proposed projects will not intersect the Ground water table during entire quarry period.

TABLE 10.3: PROPOSED CONTROLS FOR WATER ENVIRONMENT

CONTROL	RESPONSIBILITY
To maximize the reuse of pit water for water supply	Mines Foreman
Temporary and permanent garland drain will be constructed to contain the catchments	Mines Manager
of the mining area and to divert runoff from undisturbed areas through the mining	
areas	
Natural drains/nallahs/brooklets outside the project area should not be disturbed at any	Mines Manager
point of mining operations	
Ensure there is no process effluent generation or discharge from the project area into	Mines Foreman
water bodies	
Domestic sewage generated from the project area will be disposed in septic tank and	Mines Foreman
soak pit system	
Monthly or after rainfall, inspection for performance of water management structures	Mines Manager
and systems	
Conduct ground water and surface water monitoring for parameters specified by	Manager Mines
CPCB	

Source: Proposed by FAE's & EIA Coordinator

10.6 Air Quality Management

The proposed mining activities would result in the increase of particulate matter concentrations due to fugitive dust. Water sprinkling twice per day on the haul roads, approach roads in the vicinity would be undertaken

and will be continued as there is possibility for dust generation due to truck mobility. It will be ensured that vehicles are properly maintained to comply with exhaust emission requirements.

TABLE 10.4: PROPOSED CONTROLS FOR AIR ENVIRONMENT

CONTROL	RESPONSIBILITY
Generation of dust during excavation is minimized by daily (twice) water sprinkling on working face and daily (twice) water sprinkling on haul road	Mines Manager
Wet drilling procedure /drills with dust extractor system to control dust generation during drilling at source itself is implemented	Mines Manager
Maintenance as per operator manual of the equipment and machinery in the mines to minimizing air pollution	Mines Manager
Ambient Air Quality Monitoring carried out in the project area and in surrounding villages to access the impact due to the mining activities and the efficacy of the adopted air pollution control measures	Mines Manager
Provision of Dust Mask to all workers	Mines Manager
Greenbelt development all along the periphery of the project area	Mines Manager

Source: Proposed by FAE's & EIA Coordinator

10.7 Noise Management

There will be intermittent noise levels due to vehicular movement, trucks loading, drilling and blasting and other allied activities. No mining activities are planned during night time.

TABLE 10.5: PROPOSED CONTROLS FOR NOISE ENVIRONMENT

CONTROL	RESPONSIBILITY
Development of thick greenbelt all along the Buffer Zone (7.5 Meters) of the project area to attenuate the noise and the same will be maintained	Mines Manager
Preventive maintenance of mining machinery and replacement of worn-out accessories to control noise generation	Mines Foreman
Deployment of mining equipment with an inbuilt mechanism to reduce noise	Mines Manager
Provision of earmuff / ear plugs to workers working in noise prone zones in the mines	Mining Mate
Provision of effective silencers for mining machinery and transport vehicles	Mines Manager
Provision of sound proof AC operator cabins to HEMM	Mines Manager
Sharp drill bits are used to minimize noise from drilling	Mines Foreman
Controlled blasting technologies are adopted by using delay detonators to minimize noise from blasting	Mines Manager
Annual ambient noise level monitoring shall be carried out in the project area and in surrounding villages to access the impact due to the mining activities and the efficacy of the adopted noise control measures. Additional noise control measures will be adopted if required as per the observations during monitoring	Mines Manager
Reduce maximum instantaneous charge using delays while blasting	Mining Mate
Change the burden and spacing by altering the drilling pattern and/or delay layout, or altering the hole inclination	Mines Manager
Undertake noise or vibration monitoring	Mines Manager
Source: Proposed by FAE's & EIA Coordinator	•

10.8 Ground Vibration and Fly Rock Control

TABLE 10.6: PROPOSED CONTROLS FOR GROUND VIBRATIONS & FLY ROCK

CONTROL	RESPONSIBILITY
Controlled blasting using delay detonators will be carried out to maintain the PPV value (below 8Hz) well within the prescribed standards of DGMS	Mines Manager
Drilling and blasting will be carried under the supervision of qualified persons	Mines Manager
Proper stemming of holes should be carried out with statutory competent qualified blaster under the supervision of statutory mines manager to avoid any anomalies during blasting	Mines Manager
Suitable spacing and burden will be maintained to avoid misfire / fly rocks	Manager Mines
Number of blast holes will be restricted to control ground vibrations	Manager Mines
Blasting will be carried out only during noon time	Mining Mate
Undertake noise or vibration monitoring	Mines Manager
ensure blast holes are adequately stemmed for the depth of the hole and stemmed with suitable angular material	Mines Foreman

Source: Proposed by FAE's & EIA Coordinator

10.9 Biological Environment Management

The proponent will take all necessary steps to avoid the impact on the ecology of the area by adopting suitable management measures in the planning and implementation stage. During mining, thick plantation will be carried out around the project periphery, on safety barrier zone, on top benches of quarried out area etc.,

Following control measures are proposed for its management and will be the responsibility of the Mines Manager.

- Greenbelt development all along the safety barrier of the project area
- It is also proposed to implement the greenbelt development programme and post plantation status will be regularly checked for every season.
- The main attributes that retard the survival of sapling is fugitive dust, this fugitive dust can be controlled by water sprinkling on the haul roads and installing a sprinkler unit near the newly planted area.
- Year wise greenbelt development will be recorded and monitored
 - Based on the area of plantation.
 - Period of plantation
 - Type of plantation
- Spacing between the plants
- Type of manuring and fertilizers and its periods
- Lopping period, interval of watering
- Survival rate
- Density of plantation
- The ultimate reclamation planned leaves a congenial environment for development of flora & immigration of small fauna through green belt and water reservoir. The green belt and water reservoir developed within the Project at the end of mine life will attract the birds and animals towards the project area in the post mining period.

10.9.1 Green Belt Development Plan

About 1900 nos. of saplings is proposed to be planted for the Mining plan period in safety barrier of applied mine lease area with survival rate 80%. The greenbelt development plan has been prepared keeping in view the land use changes that will occur due to mining operation in the area.

TABLE 10.7 PROPOSED GREENBELT ACTIVITIES FOR 5 YEAR PLAN PERIOD – P3PROPOSAL FOR -P3

80%	Safety barrier, Un	Neem Pongamia ninnata Casuarina
	utilized area's and	iveeni, i onganna phinata, Casuarina,
	nearby village roads	etc.,
	80%	80% Safety barrier, Un utilized area's and nearby village roads

Source: Conceptual Plan of Approved Mining plan& proposed by FAE's & EIA Coordinator

The objectives of the greenbelt development plan are -

- Provide a green belt around the periphery of the quarry area to combat the dispersal of dust in the adjoining areas,
- Protect the erosion of the soil, Conserve moisture for increasing ground water recharging,
- Restore the ecology of the area, restore aesthetic beauty of the locality and meet the requirement of fodder, fuel and timber of the local community.

A well-planned Green Belt with multi rows (three tiers) preferably with long canopy leaves shall be developed with dense plantations around the boundary and haul roads to prevent air, dust noise propagation to undesired places and efforts will be taken for the enhancement of survival rate.

10.9.2 Species Recommended for Plantation

Following points have been considered while recommending the species for plantation:

- Creating of bio-diversity.
- Fast growing, thick canopy cover, perennial and evergreen large leaf area,
- Efficient in absorbing pollutants without major effects on natural growth

TABLE 10.8: RECOMMENDED SPECIES TO PLANT IN THE GREENBELT – P3

S.No	Botanical Name	Local Name	Importance		
1	Azadirachta indica	Neem, Vembu	Neem oil & neem products		
2	Tamarindus indica	Tamarind	Edible & Medicinal and other Uses		
3	Polyalthia longifolia	Nettilinkam	Tall and evergreen tree		
4	Borassus Flabellifer	Palmyra Palm	Tall Wind breaker tree and its fruits are edible		

Source: Proposed by FAE's & EIA Coordinator

10.10 Occupational Safety & Health Management

Occupational safety and health are very closely related to productivity and good employer-employee relationship. The main factors of occupational health impact in quarries are fugitive dust and noise. Safety of employees during quarrying operation and maintenance of mining equipment will be taken care as per Mines Act 1952 and Rule 29 of Mines Rules 1955. To avoid any adverse effect on the health of workers due to dust, noise and vibration sufficient measures have been provided.

10.10.1 Medical Surveillance and Examinations -

 Identifying workers with conditions that may be aggravated by exposure to dust & noise and establishing baseline measures for determining changes in health.

- Evaluating the effect of noise on workers
- Enabling corrective actions to be taken when necessary
- Providing health education
- The health status of workers in the mine shall be regularly monitored under an occupational surveillance program.

Under this program, all the employees are subjected to a detail medical examination at the time of employment. The medical examination covers the following tests under mines act 1952.

- General Physical Examination and Blood Pressure
- X-ray Chest and ECG
- Sputum test
- Detailed Routine Blood and Urine examination

The medical histories of all employees will be maintained in a standard format annually. Thereafter, the employees will be subject to medical examination annually. The below tests keep upgrading the database of medical history of the employees.

TABLE 10.9: MEDICAL EXAMINATION SCHEDULE – P3

Sl.No	Activities	1 st Year	2 nd Year	3 rd Year	4 th Year	5 th Year
1	Initial Medical Examination (Mine Workers)					
А	Physical Check-up					
В	Psychological Test					
С	Audiometric Test					
D	Respiratory Test					
2	Periodical Medical Examination (Mine Workers)					
А	Physical Check – up					
В	Audiometric Test					
С	Eye Check – up					
D	Respiratory Test					
3	Medical Camp (Mine Workers & Nearby Villagers)					
4	Training (Mine Workers)					

Medical Follow ups:- Work force will be divided into three targeted groups age wise as follows:-					
Age GroupPME as per Mines Rules 1955Special Examination					
Less than 25 years	Once in a Three Years	In case of emergencies			
Between 25 to 40 Years	Once in a Three Years	In case of emergencies			
Above 40 YearsOnce in a Three YearsIn case of emergencies					
Medical help on ton priority imm	ediately after diagnosis / accident is the ess	sence of preventive aspects			

Medical help on top priority immediately after diagnosis/ accident is the essence of preventive aspects.

10.10.2 Proposed Occupational Health and Safety Measures –

- The mine site will have adequate drinking water supply so that workers do not get dehydrated.
- Lightweight and loose-fitting clothes having light colours will be preferred to wear.
- Noise exposure measurements will be taken to determine the need for noise control strategies.
- The personal protective equipment will be provided for mine workers.
- Supervisor will be instructed for reporting any problems with hearing protectors or noise control equipment.
- At noisy working activity, exposure time will be minimized.
- Dust generating sources will be identified and proper control measure will be adopted.
- Periodic medical examinations will be provided for all workers.

- Strict observance of the provisions of DGMS Acts, Rules and Regulations in respect of safety both by management and the workers.
- The width of road will be maintained more than thrice the width of the vehicle. A code of traffic rules will be implemented.
- In respect of contract work, safety code for contractors and workers will be implemented. They will be
 allowed to work under strict supervision of statutory person/officials only after they will impart training at
 vocational training centres. All personal protective equipment's will be provided to them.
- A safety committee meeting every month will be organized to discuss the safety of the mines and the persons employed.
- Celebration of annual mines safety week and environmental week in order to develop safety awareness and harmony amongst employees and co quarry owners.

FIGURE 10.1: PERSONAL PROTECTIVE EQUIPMENT TO THE MINE WORKERS - P3

10.10.3 Health and Safety Training Programme

The Proponents will provide special induction program along with machinery manufacturers for the operators and co-operators to run and maintain the machinery effectively and efficiently. The training program for the supervisors and office staffs will be arranged in the Group Vocational Training Centres in the State and engage Environmental Consultants to provide periodical training to all the employees to carry out the mining operation in and eco-friendly manner.

TABLE 10.10: LIST OF PERIODICAL TRAININGS PROPOSED FOR EMPLOYEES – P3

10.10.4 Budgetary Provision for Environmental Management -

Adequate budgetary provision has been made by the Company for execution of Environmental Management Plan. The Table 10.11 gives overall investment on the environmental safeguards and recurring expenditure for successful monitoring and implementation of control measures.

TABLE 10.11: EMP BUDGET FOR PROPOSED PROJECT – P3

	Mitigation Measure	Provision for Implementation	Capital	Recurring
	Compaction, gradation and drainage on both sides for Haulage Road	Rental Dozer & drainage construction on haul road @ Rs. 10,000/- per hectare; and yearly maintenance @ Rs. 10,000/- per hectare	47490	47490
	Fixed Water Sprinkling Arrangements + Water sprinkling by own water tankers	Fixed Sprinkler Installation and New Water Tanker Cost for Capital; and Water Sprinkling (thrice a day) Cost for recurring	800000	50000
	Muffle blasting – To control fly rocks during blasting	Blasting face will be covered with sand bags / steel mesh / old tyres / used conveyor belts	0	5000
Air Environment	Wet drilling procedure / latest eco-friendly drill machine with separate dust extractor unit	Dust extractor @ Rs. 25,000/- per unit deployed as capital & @ Rs. 2500 per unit recurring cost for maintenance - 3 Units	100000	10000
	No overloading of trucks/tippers/tractors	Manual Monitoring through Security guard	0	5000
	Stone carrying trucks will be covered by tarpaulin	Monitoring if trucks will be covered by tarpaulin	0	10000
	Enforcing speed limits of 20 km/hr within ML area	Installation of Speed Governers @ Rs. 5000/- per Tipper/Dumper deployed - 3 Units	15000	750
	Regular monitoring of exhaust fumes as per RTO norms	Monitoring of Exhaust Fumes by Manual Labour	0	5000
	Regular sweeping and maintenance of approach roads for at least about 200 m from ML Area	Provision for 2 labours @ Rs.10,000/labour (Contractual) per Hectare	0	94980
	Installing wheel wash system near gate of quarry	Installation + Maintenance + Supervision	50000	20000
	Source of noise will be during operation of transportation vehicles, HEMM for this proper maintenance will be done at regular intervals.	Provision made in Operating Cost	0	0
	Oiling & greasing of Transport vehicles and HEMM at regular interval will be done	Provision made in Operating Cost	0	0
Noise	Adequate silencers will be provided in all the diesel engines of vehicles.	Provision made in Operating Cost	0	0
Environment	It will be ensured that all transportation vehicles carry a fitness certificate.	Provision made in Operating Cost	0	0
	Safety tools and implements that are required will be kept adequately near blasting site at the time of charging.	Provision made in OHS part	0	0
	Line Drilling all along the boundary to reduce the PPV from blasting activity and implementing controlled blasting.	Provision made in Operating Cost	0	0

Kothapetta Rough Stone Cluster Quarries		Chapter - 10		
	Proper warning system before blasting will be adopted and clearance of the area before blasting will be ensured.	Blowing Whistle by Mining Mate / Blaster / Compentent Person	0	0
	Provision for Portable blaster shed	Installation of Portable blasting shelter	50000	2000
	NONEL Blasting will be practiced to control Ground vibration and fly rocks	Rs. 30/- per 6 Tonnes of Blasted Material	0	1252992
Weste	Waste management (Spent Oil, Grease etc.,)	Provision for domestic waste collection and disposal through authorized agency	5000	20000
waste Managamant		Installation of dust bins	5000	2000
Management	Bio toilets will be made available outside mine lease on the land of owner itself	Provision made in Operating Cost	0	0
	1. Progressive Closure Activity - Surface Runoff managent	Provision for garland drain @ Rs. 10,000/- per Hectare with maintenance of Rs. 5,000/- per annum	47490	5000
	2. Progressive Closure Activity Barbed Wire Fencing to quarry area will be provisioned.	Per Hectare fencing Cost @ Rs. 2,00,000/- with Maintenance of Rs 10,000/- per annum	949800	10000
	3. Progressive Closure Activity Green belt development - 500 trees per one hectare - Proposal for 2400Trees - (850 Inside Lease Area & 1550 Outside Lease Area)	Site clearance, preparation of land, digging of pits / trenches, soil amendments, transplantation of saplings @ 200 per plant (capital) for plantation inside the lease area and @ 30 per plant maintenance (recurring)	170000	25500
Mine Closure		Avenue Plantation @ 300 per plant (capital) for plantation outside the lease area and @ 30 per plant maintenance (recurring)	465000	46500
	4. Implementation of Final Mine Closure Actity as per Approved Mining Plan on Last Year	A few activities already covered progressive closure activities as greenbelt development, wire fencing, and garland drain.*For Final Closure Activities 15% of the proposed closure cost will be spent during the final mine closure stage - Last Year	110250	0
	5. Contribution towards Green Fund. As per TNMMCR 1959, Rule 35 A	The Contribution towards Green Funds @ 10% of Seigniorage fee are indicated as part of EMP Budge and not necessarily implemented in the Project Site	2843328	0
Implementation	Size 6' X 5' with blue background and white letters as mentioned in MoM Appendix II by the SEAC TN	Fixed Display Board at the Quarry Entrance as permanent structure mentioning Environmental Conditions	10000	1000
of EC, Mining Plan & DGMS Condition	Air, Water, Noise and Soil Quality Sampling every 6 Months for Compliance Report of EC Conditions	Submission of 2 Half Yearly Compliance - Lab Monitoring Report as per CPCB norms	0	50000
	Workers will be provided with Personal Protective Equipment's	Provision of PPE @ Rs. 4000/- per employee with recurring based on wear and tear (say, @ Rs. 1000/- per employee) - 18 Employees	72000	18000

Kothapetta Rough Stone Cluster Quarries	Chapter - 10		
Health check up for workers will be provisioned	IME & PME Health check up @ Rs. 1000/- per employee	0	18000
First aid facility will be provided	Provision of 2 Kits per Hectare @ Rs. 2000/-	0	9498
Mine will have safety precaution signages, boards.	Provision for signages and boards made	10000	2000
No parking will be provided on the transport routes. Separate provision on the south side of the hill will be made for vehicles /HEMMs. Flaggers will be deployed for traffic management	Parking area with shelter and flags @ Rs. 50,000/- per hectare project and Rs. 10,000/- as maintenance cost	237450	10000
Installation of CCTV cameras in the mines and mine entrance	Camera 4 Nos, DVR, Monitor with internet facility	30000	5000
Implementation as per Mining Plan and ensure safe quarry working	Mines Manager (1 st Class / 2 nd Class / Mine Foreman) under regulation 34 / 34 (6) of MMR, 1961 and Mining Mate under regulation 116 of MMR,1961 @ 40,000/- for Manager & @ 25,000/- for Foreman / Mate	0	780000
CER As per MoEF &CC OM 22-65/2017-IA.III Dated 25.02.2021	Detailed Description in following slides and Budget allocation is included as per MoeEF & CC OM	500000	0
TOTAL		3564230	2505710

In order to implement the environmental protection measures, an amount of Rs. 35.64 lakhs as capital cost and recurring cost as Rs. 25.05 lakhs as recurring cost is proposed considering present market price considering present market scenario for the proposed project.

Chapter - 12

Year Wise Break Up				
1st Year	Rs. 60,69940			
2nd Year	Rs. 26,30,995.5			
3rd Year	Rs. 27,62,545.275			
4th Year	Rs. 29,00,672.539			
5th Year	Rs. 31,55,956.166			
Total	Rs.175 Lakhs			

10.11 Conclusion

Various aspects of mining activities were considered and related impacts were evaluated. Considering all the possible ways to mitigate the environmental concerns Environmental Management Plan was prepared and fund has been allocated for the same. The EMP is dynamic, flexible and subjected to periodic review. For project where the major environmental impacts are associated, EMP will be under regular review. Senior Management responsible for the project will conduct a review of EMP and its implementation to ensure that the EMP remains effective and appropriate. Thus, the proper steps will be taken to accomplish all the goals mentioned in the EMP and the project will bring the positive impact in the study area.

CHAPTER – 11: SUMMARY AND CONCLUSIONS

Kothapetta Rough Stone Cluster Quarries (Extent 16.44.9 ha) falls under "B" category as per MoEF & CC Notification (S.O. 3977 (E)).

Now, as per Order Dated: 04.09.2018 & 13.09.2018 passed by Hon'ble National Green Tribunal, New Delhi in O.A. No. 173 of 2018 & O.A. No, 186 of 2016 and MoEF & CC Office Memorandum F. No. L-11011/175/2018-IA-II (M) Dated: 12.12.2018 clarified the requirement for EIA, EMP and therefore, Public Consultation for all areas from 5 to 25 ha falling in Category B-1 and appraised by SEAC/ SEIAA as well as for cluster situation.

A detailed Draft EIA/ EMP Report is prepared for public and other stakeholders' suggestions and a Final EIA/ EMP Report will be prepared based on the outcome of Public Consultation.

Environmental monitoring and audit mechanism have been recommended before and after commencement of the project, where necessary, to verify the accuracy of the EIA predictions and the effectiveness of recommended mitigation measures.

The main scope of the EIA study is to quantify the cumulative impact in the study area due to cluster quarries and formulate the effective mitigation measures for each individual leases. A detailed account of the emission sources, emissions control equipment, background Air quality levels, Meteorological measurements, Dispersion model and all other aspects of pollution like effluent discharge, Dust generation etc., have been discussed in this report. The baseline monitoring study has been carried out during the months **Oct 2023 to Dec 2023** for various environmental components so as to assess the anticipated impacts of the cluster quarry projects on the environment and suitable mitigation measures for likely adverse impacts due to the proposed project is suggested individually for the respective proposed project under Chapter 10.

The project proponent ensures to obtain necessary clearances and quarrying will be carried out as per rules and regulations. The Mining activity will be carried out in a phased manner as per the approved Scheme of mining plan after obtaining EC, CTO from TNPCB, execution of lease deed and obtaining DGMS Permission and working will be carried out under the supervision of Competent Persons employed.

Overall, the EIA/EMP report has predicted that the project will comply with all environment standards and legislation after commencement of the project and operational stage mitigation measures are implemented.

Mining operations has positive impact on environment and socio economy such as landscape improvement, water as by-product, economy development and better public services, providing and supply of Rough Stone quarry as per market demand.

Sustainable and modern mining leads us to see positive impact of mining operation and providing consistent employment for nearly 60 people directly in the cluster and indirectly around 100 people.

As discussed, it is safe to say that the proposed quarries are not likely to cause any significant impact to the ecology of the area, as adequate preventive measures will be adopted to keep the various pollutants within the permissible limits. Green belt development around the area will also be taken up as an effective pollution mitigate technique, as well as to serve as biological indicators for the pollutants released from the Kothapetta Rough Stone Cluster quarries (Extent: 12.74.9 ha).

CHAPTER 12: DISCLOSURE OF CONSULTANTS

The Project Proponent's –

1. M/s. Sri Devaraajaa 'M'Sand

2. Tmt.K.M.Vijaya

3. M/s. A.M. Quality Stone

have engaged M/s Geo Exploration and Mining Solutions, an Accredited Organization under Quality Council of

India - National Accreditation Board for Education & Training, New Delhi, for carrying out the EIA Study as per the

ToR Issued.

Name and address of the consultancy:

GEO EXPLORATION AND MINING SOLUTIONS

No 17, Advaitha Ashram Road, Alagapuram, Salem – 636 004 Tamil Nadu, India Email: infogeoexploration@gmail.com

TERMS OF REFERENCE (ToR)

Lr.No.SEIAA-TN/F.No.10244/2023/SEAC/ToR-1681/2024 Dated:14.02.2024.

To

M/s. Sri Devaraajaa M Sand

D.No.58B Gandhi Nagar.

Krishnagiri Town,

Krishnagiri District -635 001.

Sir / Madam,

Sub: SEIAA, Tamil Nadu – Terms of Reference with public Hearing (ToR) for the Proposed Rough stone Quarry over an extent of 4.00.0Ha at SF.No. 78/1A (P) & 78/1B (P) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu by M/s. Sri Devaraajan M Sand - under project category – "B1" and Schedule S.No.1 (a) – ToR issued along with Public Hearing - preparation of EIA report – Regarding.

Ref: 1. Online proposal No: SIA/TN/MIN/430407/2023, dated 23.05.2023.

- 2. Your application submitted for Terms of Reference dated:26.07.2023.
- 3. Minutes of the 407" SEAC meeting held on 07.09.2023.
- 4. Reply by the project proponent dated:14.11.2023.
- 5. Minutes of the 430th SEAC meeting held on 14.12.2023.
- 6. Minutes of the 439th SEAC meeting held on 10.01.2024.
- 7. Minutes of the 696th SEIAA meeting held on 14.02.2024.

Kindly refer to your proposal submitted to the State Level Impact Assessment Authority for Terms of Reference.

MEMBER SECRETARY SELAA-TN

Page 1 of 24

The proponent, M/s. Sri Devaranjaa M Sand has submitted application for Terms of Reference (ToR) in Form-I, Pre- Feasibility report for the Proposed Rough stone Quarry over an extent of 4.00.0Ha at SF.No. 78/1A (P) & 78/1B (P) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu.

Discussion by SEAC and the Remarks:-

Proposed Rough stone Quarry over an extent of 4.00.0Ha at SF.No. 78/1A (P) & 78/1B (F) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu by M/s. Sri Devaraajaa M Saud - For Terms of Reference. (SIA/TN/MIN/430407/2023, Dated:23.05.2023)

Earlier, the proposal was placed in the 407th SEAC Meeting held on 07.09.2023. The details of the project furnished by the proponent are given on the website (parivesh.nlc.in).

The SEAC noted the following:

- The Project Proponent, M/s. Sri Devaraajaa M Sand has applied for Terms of Reference for the Proposed Rough stone Quarry over an extent of 4.00.0Ha at SF.No. 78/1A (P) & 78/1B (P) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu.
- The project/activity is covered under Category "B1" of Item 1(a) " Mining of mineral of the Schedule to the EIA Notification, 2006.
- 3. As per the mining plan the lease period is for 5 years. The mining plan is for the period of five years & the production should not exceed 4.87.698m³ of rough stone & 799m³ of Gravel with an ultimate depth of mining is 41m (1m Gravel + 40m Rough stone). The annual peak production is 1.19.857m³ of rough stone & 799m³ of Gravel.
- Earlier, the PP has obtained Environmental Clearance from DEIAA vide Lr. No. 35/DEIAA-KGI/Ec.No.27/2018/Mines, Dt:27.02.2018.
- 5. The PP has furnished CCR vide EP/12.1/2023-24/SEIAA/65/TN/967 dated 09.08.2023.

Based on the details furnished by the Project Proponent, the SEAC directed the PP to submit the details of last date of mining carried out at the project site validated by the concerned AD (Mines), Department of Geology & Mining.

Again, the proposal was placed in 430th SEAC meeting held on 14,12,2023. The PP requested additional time to produce the details. Hence SEAC decided to defer the proposal.

Now the proposal was placed in 439th meeting of SEAC held on 10.01.2024. The Project proponent has made a presentation along with clarification for the above shortcomings observed by the SEAC.

The EIA Co-ordinator stated that, the latest OM dated 03.11.2023 is issued as a clarification of 28.04.2023, and hence the above query is not applicable.

MEMBER SECRETARY SELAA-TN
Based on the presentation made by the proponent, SEAC decided to recommend for grant of Terms of Reference (ToR) with Public Hearing, subject to the following ToRs, and subject to the standard conditions as per the Annexure I of this minute, in addition to the standard terms of reference for EIA study for non-coal mining projects and details issued by the MOEF & CC to be included in EIA/EMP Report:

- The PP shall submit the 'Action Plan' on the issues raised during the Public Hearing with budgetary provisions for the same.
- The PP shall submit the Comprehensive EIA with detailed mitigation measures including the controlled blasting measures for reducing the impacts due to the blasting operation air pollution and water pollution, etc on the surrounding structures existing within 1 km of the proposed quarry.
- 3. The PP shall exhibit the action plan for carrying out the quarrying activities systematically and scientifically keeping the structures belonging to the owner that exist within 300 m distance.
- The PP shall submit a "Conceptual Mining Plan" indicating the accessible ramp from the surface to the pit bottom keeping the benches intact for the dimension as stipulated in the Approved Mining Plan.
- The PP shall submit the nature of buildings/structures, occupants, and their profession, etc located within 500 m radius of the proposed quarry.
- The project proponent shall furnish Certified Compliance Report (CCR) obtained from IRO(SZ), MoEF&CC and with mitigation measures along with the budgetary allocation for the non-compliance stated therein.
- 7. The proponent is requested to carry out a survey and enumerate on the structures located within the radius of (i) 50 m, (ii) 100 m, (iii) 200 m and (iv) 300 m (v) 500m shall be enumerated with details such as dwelling houses with number of occupants, whether it belongs to the owner (or) not, places of worship, industries, factories, sheds, etc with indicating the owner of the building, nature of construction, age of the building, number of residents, their profession and income, etc.
- The PP shall furnish the ownership details of the physical structures located near the proposed mine lease area, number of workers, time period of working etc
- 9. If the existing depth of quarry has already reached 30 m, for the safety of the persons employed in the quarry, the PP shall carry out the scientific studies and to furnish the report with assessing the slope stability of the working benches and existing quarry walls for evaluating the slope

MEMBER SECRETARY SEIAA-TN

Page 3 of 24

stabilization & protective measures while designing the proposed benches, by involving any one of the reputed Research and Academic Institutions - CSIR-Central Institute of Mining & Fuel Research / Dhanbad, NIRM/Bangalore, Division of Geotechnical Engineering-IIT-Madras, NIT-Dept of Mining Engg, Surathkal, and Anna University Chennai-CEG Campus. A copy of such scientific study report shall be submitted to the SEIAA, MoEF, TNPCB, AD/Mines-DGM and DMS, Chennal as a part of Environmental Compliance without any deviation.

Annexure - I

- In the case of existing/operating mines, a letter obtained from the concerned AD (Mines) shall be submitted and it shall include the following:
 - (i) Original pit dimension
 - (ii) Quantity achieved Vs EC Approved Quantity
 - (iii) Balance Quantity as per Mineable Reserve calculated.
 - (iv) Mined out Depth as on date Vs EC Permitted depth
 - (v) Details of illegal/illicit mining
 - (vi) Violation in the quarry during the past working.
 - (vii) Quantity of material mined out outside the mine lease area
 - (viii) Condition of Safety zone/benches
 - (ix) Revised/Modified Mining Plan showing the benches of not exceeding 6 m height and ultimate depth of not exceeding 50m.
- Details of habitations around the proposed mining area and latest VAO certificate regarding the location of habitations within 300m radius from the periphery of the site.
- 3. The proponent is requested to carry out a survey and enumerate on the structures located within the radius of (i) 50 m. (ii) 100 m. (iii) 200 m and (iv) 300 m (v) 500m shall be enumerated with details such as dwelling houses with number of occupants, whether it belongs to the owner (or) not, places of worship, industries, factories, sheds, etc with indicating the owner of the building, nature of construction, age of the building, number of residents, their profession and income, etc.
- The PP shall submit a detailed hydrological report indicating the impact of proposed quarrying operations on the waterbodies like lake, water tanks, etc are located within 1 km of the proposed quarry.

MEMBER SECRETARY SELAA-TN

Lr.No.SEIAA-TN/F.No.10244/2023/SEAC/ToR-1681/2024 Dated: 14.02.2024 SEIAA-TN

- The Proponent shall carry out Bio diversity study through reputed Institution and the same shall be included in EIA Report.
- The DFO letter stating that the proximity distance of Reserve Forests, Protected Areas, Sanctuaries, Tiger reserve etc., up to a radius of 25 km from the proposed site.
- 7. In the case of proposed lease in an existing (or old) quarry where the benches are not formed (or) partially formed as per the approved Mining Plan, the Project Proponent (PP) shall the PP shall carry out the scientific studies to assess the slope stability of the working benches to be constructed and existing quarry wall, by involving any one of the reputed Research and Academic Institutions - CSIR-Central Institute of Mining & Fuel Research / Dhanbad, NIRM/Bangalore, Division of Geotechnical Engineering-IIT-Madras, NIT-Dept of Mining Engg, Surathkal, and Anna University Chennai-CEG Campus. The PP shall submit a copy of the aforesaid report indicating the stability status of the quarry wall and possible mitigation measures during the time of appraisal for obtaining the EC.
- 8. However, in case of the fresh/virgin quarries, the Proponent shall submit a conceptual 'Slope Stability Plan' for the proposed quarry during the appraisal while obtaining the EC, when the depth of the working is extended beyond 30 m below ground level.
- 9. The PP shall furnish the affidavit stating that the blasting operation in the proposed quarry is carried out by the statutory competent person as per the MMR 1961 such as blaster, mining mate, mine foreman, II/I Class mines manager appointed by the proponent.
- 10. The PP shall present a conceptual design for carrying out only controlled blasting operation involving line drilling and muffle blasting in the proposed quarry such that the blast-induced ground vibrations are controlled as well as no fly rock travel beyond 30 m from the blast site.
- The EIA Coordinators shall obtain and furnish the details of quarry/quarries operated by the proponent in the past, either in the same location or elsewhere in the State with video and photographic evidences.
- If the proponent has already carried out the mining activity in the proposed mining lease area after 15.01.2016, then the proponent shall furnish the following details from AD/DD, mines,
- 13. What was the period of the operation and stoppage of the earlier mines with last work permit issued by the AD/DD mines?
- 14. Quantity of minerals mined out.

MEMBER SECRETARY SEIAA-TN

Page 5 of 24

- · Highest production achieved in any one year
- · Detail of approved depth of mining.
- · Actual depth of the mining achieved earlier.
- · Name of the person already mined in that leases area.
- · If EC and CTO already obtained, the copy of the same shall be submitted.
- Whether the mining was carried out as per the approved mine plan (or EC if issued) with stipulated benches.
- 15. All corner coordinates of the mine lease area, superimposed on a High-Resolution imagery/Topo sheet, topographic sheet, geomorphology, lithology and geology of the mining lease area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and buffer zone).
- 16. The PP shall carry out Drone video survey covering the cluster, green belt, fencing, etc.,
- 17. The proponent shall furnish photographs of adequate fencing, green belt along the periphery including replantation of existing trees & safety distance between the adjacent quarries & water bodies nearby provided as per the approved mining plan.
- 18. The Project Proponent shall provide the details of mineral reserves and mineable reserves, planned production capacity, proposed working methodology with justifications, the anticipated impacts of the mining operations on the surrounding environment, and the remedial measures for the same.
- 19. The Project Proponent shall provide the Organization chart indicating the appointment of various statutory officials and other competent persons to be appointed as per the provisions of the Mines Act'1952 and the MMR, 1961 for carrying out the quarrying operations scientifically and systematically in order to ensure safety and to protect the environment.
- 20. The Project Proponent shall conduct the hydro-geological study considering the contour map of the water table detailing the number of groundwater pumping & open wells, and surface water bodies such as rivers, tanks, canals, ponds, etc. within 1 km (radius) along with the collected water level data for both monsoon and non-monsoon seasons from the PWD / TWAD so as to assess the impacts on the wells due to mining activity. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided.

MEMBER SECRETARY SEIAA-TN

Lr.No.SEIAA-TN/F.No.10244/2023/SEAC/ToR-1681/2024 Dated:14.02.2024 SEIAA-TN

- The proponent shall furnish the baseline data for the environmental and ecological parameters with regard to surface water/ground water quality, air quality, soil quality & flora/fauna including traffic/vehicular movement study.
- 22. The Proponent shall carry out the Cumulative impact study due to mining operations carried out in the quarry specifically with reference to the specific environment in terms of soil health, biodiversity, air pollution, water pollution, climate change and flood control & health impacts. Accordingly, the Environment Management plan should be prepared keeping the concerned quarry and the surrounding habitations in the mind.
- Rain water harvesting management with recharging details along with water balance (both monsoon & non-monsoon) be submitted.
- 24. Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompass preoperational, operational and post operational phases and submitted. Impact, if any, of change of land use should be given.
- Details of the land for storage of Overburden/Waste Dumps (or) Rejects outside the mine lease, such as extent of land area, distance from mine lease, its land use, R&R issues, if any, should be provided.
- 26. Proximity to Areas declared as 'Critically Polluted' (or) the Project areas which attracts the court restrictions for mining operations, should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the TNPCB (or) Dept. of Geology and Mining should be secured and furnished to the effect that the proposed mining activities could be considered.
- Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.
- 28. Impact on local transport infrastructure due to the Project should be indicated.
- A tree survey study shall be carried out (nos., name of the species, age, diameter etc.,) both within the mining lease applied area & 300m buffer zone and its management during mining activity.
- A detailed mine closure plan for the proposed project shall be included in EIA/EMP report which should be site-specific.

MEMBER SECRETARY SELAA-TN

Page 7 of 24

- 31. As a part of the study of flora and fauna around the vicinity of the proposed site, the EIA coordinator shall strive to educate the local students on the importance of preserving local flora and fauna by involving them in the study, wherever possible.
- 32. The purpose of Green belt around the project is to capture the fugitive emissions, carbon sequestration and to attenuate the noise generated, in addition to improving the aesthetics. A wide range of indigenous plant species should be planted as given in the appendix-I in consultation with the DFO, State Agriculture University. The plant species with dense/moderate canopy of native origin should be chosen. Species of small/medium/tall trees alternating with shrubs should be planted in a mixed manner.
- 33. Taller/one year old Saplings raised in appropriate size of bags, preferably ecofriendly bags should be planted as per the advice of local forest authorities/botanist/Horticulturist with regard to site specific choices. The proponent shall earmark the greenbelt area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in between blocks in an organized manner.
- 34. A Disaster management Plan shall be prepared and included in the EIA/EMP Report for the complete life of the proposed quarry (or) till the end of the lease period.
- 35. A Risk Assessment and management Plan shall be prepared and included in the EIA/EMP Report for the complete life of the proposed quarry (or) till the end of the lease period.
- 36. Occupational Health impacts of the Project should be anticipated and the proposed preventive measures spelt out in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP. The project specific occupational health mitigation measures with required facilities proposed in the mining area may be detailed.
- 37. Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.
- 38. The Socio-economic studies should be carried out within a 5 km buffer zone from the mining activity. Measures of socio-economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.
- Details of litigation pending against the project. If any, with direction /order passed by any Court of Law against the Project should be given.

MEMBER SECRETARY SEIAA-TN

8 A

- Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.
- 41. If any quarrying operations were carried out in the proposed quarrying site for which now the EC is sought, the Project Proponent shall furnish the detailed compliance to EC conditions given in the previous EC with the site photographs which shall duly be certified by MoEF&CC. Regional Office, Chennai (or) the concerned DEE/TNPCB.
- 42. The PP shall prepare the EMP for the entire life of mine and also furnish the sworn affidavit stating to abide the EMP for the entire life of mine.
- 43. Concealing any factual information or submission of false/fabricated data and failure to comply with any of the conditions mentioned above may result in withdrawal of this Terms of Conditions besides attracting penal provisions in the Environment (Protection) Act, 1986.

Discussion by SEIAA and the Remarks:-

The subject was placed in the 696th Authority meeting held on 14.02.2024. The Authority noted that the subject was appraised in the 439th SEAC meeting held on 10.01.2024. After detailed discussions, the Authority accepts the recommendation of SEAC and decided to grant **Terms of Reference (ToR)** along with Public Hearing under cluster for undertaking the combined Environment Impact Assessment Study and preparation of separate Environment Management Plan subject to the conditions as recommended by SEAC & normal conditions and conditions in **Annexare 'B'** of this minutes.

Annexure 'B'

Cluster Management Committee

- Cluster Management Committee shall be framed which must include all the proponents in the cluster as members including the existing as well as proposed quarry.
- The members must coordinate among themselves for the effective implementation of EMP as committed including Green Belt Development, Water sprinkling, tree plantation, blasting etc.,
- The List of members of the committee formed shall be submitted to AD/Mines before the execution of mining lease and the same shall be updated every year to the AD/Mines.
- 4. Detailed Operational Plan must be submitted which must include the blasting frequency with respect to the nearby quarry situated in the cluster, the usage of haul roads by the individual quarry in the form of route map and network.

MEMBER SECRETARY SEIAA-TN

Page 11 of 24

- 5. The committee shall deliberate on risk management plan pertaining to the cluster in a holistic manner especially during natural calamities like intense rain and the mitigation measures considering the inundation of the cluster and evacuation plan.
- 6. The Cluster Management Committee shall form Environmental Policy to practice sustainable mining in a scientific and systematic manner in accordance with the law. The role played by the committee in implementing the environmental policy devised shall be given in detail.
- The committee shall furnish action plan regarding the restoration strategy with respect to the individual quarry falling under the cluster in a holistic manner.
- 8. The committee shall furnish the Emergency Management plan within the cluster.
- The committee shall deliberate on the health of the workers/staff involved in the mining as well as the health of the public.
- 10. The committee shall furnish an action plan to achieve sustainable development goals with reference to water, sanitation & safety.

11. The committee shall furnish the fire safety and evacuation plan in the case of fire accidents.

Impact study of mining

- 12. Detailed study shall be carried out in regard to impact of mining around the proposed mine lease area covering the entire mine lease period as per precise area communication order issued from reputed research institutions on the following
 - a) Soil health & soil biological, physical land chemical features .
 - b) Climate change leading to Droughts, Floods etc.
 - c) Pollution leading to release of Greenhouse gases (GHG), rise in Temperature, & Livelihood of the local people.
 - d) Possibilities of water contamination and impact on aquatic ecosystem health.
 - c) Agriculture, Forestry & Traditional practices.
 - f) Hydrothermal/Geothermal effect due to destruction in the Environment.
 - g) Bio-geochemical processes and its foot prints including environmental stress.
 - h) Sediment geochemistry in the surface streams.

Agriculture & Agro-Biodiversity

- 13. Impact on surrounding agricultural fields around the proposed mining Area.
- 14. Impact on soil flora & vegetation around the project site.

MEMBER SECRETARY SELAA-TN

- 15. Details of type of vegetations including no. of trees & shrubs within the proposed mining area and. If so, transplantation of such vegetations all along the boundary of the proposed mining area shall committed mentioned in EMP.
- 16. The Environmental Impact Assessment should study the biodiversity, the natural ecosystem, the soil micro flora, fauna and soil seed banks and suggest measures to maintain the natural Ecosystem.
- Action should specifically suggest for sustainable management of the area and restoration of ecosystem for flow of goods and services.
- The project proponent shall study and furnish the impact of project on plantations in adjoining patta lands, Horticulture, Agriculture and livestock.

Forests

- The project proponent shall detailed study on impact of mining on Reserve forests free ranging wildlife.
- The Environmental Impact Assessment should study impact on forest, vegetation, endemic, vulnerable and endangered indigenous flora and fauna.
- The Environmental Impact Assessment should study impact on standing trees and the existing trees should be numbered and action suggested for protection.
- The Environmental Impact Assessment should study impact on protected areas, Reserve Forests, National Parks, Corridors and Wildlife pathways, near project site.

Water Environment

- 23. Hydro-geological study considering the contour map of the water table detailing the number of ground water pumping & open wells, and surface water bodies such as rivers, tanks, canals, ponds etc. within 1 km (radius) so as to assess the impacts on the nearby waterbodies due to mining activity. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided, covering the entire mine lease period.
- 24. Erosion Control measures.
- 25. Detailed study shall be carried out in regard to impact of mining around the proposed mine lease area on the nearby Villages, Water-bodies/ Rivers, & any ecological fragile areas.
- The project proponent shall study impact on fish habitats and the food WEB/ food chain in the water body and Reservoir.

MEMBER SECRETARY SELAA-TN

Page 13 of 24

- 27. The project proponent shall study and furnish the details on potential fragmentation impact on natural environment, by the activities.
- 28. The project proponent shall study and furnish the impact on aquatic plants and animals in water bodies and possible scars on the landscape, damages to nearby caves, heritage site, and archaeological sites possible land form changes visual and aesthetic impacts.
- 29. The Terms of Reference should specifically study impact on soil health, soil erosion, the soil physical, chemical components and microbial components.
- The Environmental Impact Assessment should study on wetlands, water bodies, rivers streams, lakes and farmer sites.

Energy

 The measures taken to control Noise, Air, Water, Dust Control and steps adopted to efficiently utilise the Energy shall be furnished.

Climate Change

- 32. The Environmental Impact Assessment shall study in detail the carbon emission and also suggest the measures to mitigate carbon emission including development of carbon sinks and temperature reduction including control of other emission and climate mitigation activities.
- 33. The Environmental Impact Assessment should study impact on elimate change, temperature rise, pollution and above soil & below soil carbon stock.

Mine Closure Plan

34. Detailed Mine Closure Plan covering the entire mine lease period as per precise area communication order issued.

EMP

- 35. Detailed Environment Management Plan along with adaptation, mitigation & remedial strategies covering the entire mine lease period as per precise area communication order issued.
- 36. The Environmental Impact Assessment should hold detailed study on EMP with budget for Green belt development and mine closure plan including disaster management plan.

Risk Assessment

 To furnish risk assessment and management plan including anticipated vulnerabilities during operational and post operational phases of Mining.

Disaster Management Plan

38. To furnish disaster management plan and disaster mitigation measures in regard to all aspects to avoid/reduce vulnerability to hazards & to cope with disaster/untoward actidents.in &

around the proposed mine lease area due to the proposed method of mining activity & its related activities covering the entire mine lease period as per precise area communication order issued.

Others

- 39. The project proponent shall furnish VAO certificate with reference to 300m radius regard to approved habitations, schools, Archaeological sites, Structures, railway lines, roads, water bodies such as streams, odai, vaari, canal, channel, river, lake pond, tank etc.
- 40. As per the MoEF& CC office memorandum F.No.22-65/2017-1A.III dated: 30.09.2020 and 20.10.2020 the proponent shall address the concerns raised during the public consultation and all the activities proposed shall be part of the Environment Management Plan.
- 41. The project proponent shall study and furnish the possible pollution due to plastic and microplastic on the environment. The ecological risks and impacts of plastic & microplastics on aquatic environment and fresh water systems due to activities, contemplated during mining may be investigated and reported.

A. STANDARD TERMS OF REFERENCE

- Year-wise production details since 1994 should be given, clearly stating the highest production achieved in any one year prior to 1994. It may also be categorically informed whether there had been any increase in production after the EIA Notification 1994 came into force, w.r.t. the highest production achieved prior to 1994.
- A copy of the document in support of the fact that the Proponent is the rightful lessee of the mine should be given.
- 3) All documents including approved mine plan, EIA and Public Hearing should be compatible with one another in terms of the mine lease area, production levels, waste generation and its management, mining technology etc. and should be in the name of the lessee.
- 4) All corner coordinates of the mine lease area, superimposed on a High Resolution Imagery/ topo sheet, topographic sheet, geomorphology and geology of the area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and buffer zone).
- 5) Information should be provided in Survey of India Topo sheet in 1:50,000 scale indicating geological map of the area, geomorphology of land forms of the area, existing minerals and mining history of the area, Important water bodies, streams and rivers and soil characteristics.
- 6) Details about the land proposed for mining activities should be given with information as to

MEMBER SECRETARY SELAA-TN

Page 15 of 24

whether mining conforms to the land use policy of the State; land diversion for mining should have approval from State land use board or the concerned authority.

- 7) It should be clearly stated whether the proponent Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating process/procedures to bring into focus any infringement/deviation/violation of the environmental or forest norms/ conditions? The hierarchical system or administrative order of the Company to deal with the environmental issues and for ensuring compliance with the EC conditions may also be given. The system of reporting of non-compliances / violations of environmental norms to the Board of Directors of the Company and/or shareholders or stakeholders at large, may also be detailed in the EIA Report.
- 8) Issues relating to Mine Safety, including subsidence study in case of underground mining and slope study in case of open cast mining, blasting study etc. should be detailed. The proposed safeguard measures in each case should also be provided.
- 9) The study area will comprise of 10 km zone around the mine lease from lease periphery and the data contained in the EIA such as waste generation etc. should be for the life of the mine / lease period.
- 10) Land use of the study area defineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompass preoperational, operational and post operational phases and submitted. Impact, if any, of change of land use should be given.
- Details of the land for any Over Burden Dumps outside the mine lease, such as extent of land area, distance from mine lease, its land use, R&R issues, if any, should be given.
- 12) Certificate from the Competent Authority in the State Forest Department should be provided, confirming the involvement of forest land, if any, in the project area. In the event of any contrary claim by the Project Proponent regarding the status of forests, the site may be inspected by the State Forest Department along with the Regional Office of the Ministry to ascertain the status of forests, based on which, the Certificate in this regard as mentioned above be issued. In all such cases, it would be desirable for representative of the State Forest Department to assist the Expert Appraisal Committees.
- 13) Status of forestry clearance for the broken up area and virgin forestland involved in the Project

16 A

MEMBER SECRETARY SEIAA-TN including deposition of Net Present Value (NPV) and Compensatory Afforestation (CA) should be indicated. A copy of the forestry clearance should also be furnished.

- Implementation status of recognition of forest rights under the Scheduled Tribes and other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 should be indicated.
- 15) The vegetation in the RF / PF areas in the study area, with necessary details, should be given.
- 16) A study shall be got done to ascertain the impact of the Mining Project on wildlife of the study area and details furnished. Impact of the project on the wildlife in the surrounding and any other protected area and accordingly, detailed mitigative measures required, should be worked out with cost implications and submitted.
- 17) Location of National Parks, Sanctuaries, Biosphere Reserves, Wildlife Corridors, Ramsar site Tiger/ Elephant Reserves/(existing as well as proposed), if any, within 10 km of the mine lease should be clearly indicated, supported by a location map duly authenticated by Chief Wildlife Warden. Necessary clearance, as may be applicable to such projects due to proximity of the ecologically sensitive areas as mentioned above, should be obtained from the Standing Committee of National Board of Wildlife and copy furnished.
- 18) A detailed biological study of the study area [core zone and buffer zone (10 km radius of the periphery of the mine lease)] shall be carried out. Details of flora and fauna, endangered, endemic and RET Species duly authenticated, separately for core and buffer zone should be furnished based on such primary field survey, clearly indicating the Schedule of the fauna present. In case of any scheduled-I fauna found in the study area, the necessary plan along with budgetary provisions for their conservation should be prepared in consultation with State Forest and Wildlife Department and details furnished. Necessary allocation of funds for implementing the same should be made as part of the project cost.
- 19) Proximity to Areas declared as 'Critically Polluted' or the Project areas likely to come under the 'Aravali Range', (attracting court restrictions for mining operations), should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the SPCB or State Mining Department should be secured and furnished to the effect that the proposed mining activities could be considered.
- 20) Similarly, for Coastal Projects, a CRZ map duly authenticated by one of the authorized agencies demarcating LTL. HTL, CRZ area, location of the mine lease with respect to CRZ, coastal features such as mangroves, if any, should be furnished. (Note: The Mining Projects falling under CRZ would also need to obtain approval of the concerned Coastal Zone Management

MEMBER SECRETARY SELAA-TN

Page 17 of 24

Authority).

- 21) R&R Plan/compensation details for the Project Affected People (PAP) should be furnished. While preparing the R&R Plan, the relevant State/National Rehabilitation & Resettlement Policy should be kept in view. In respect of SCs /STs and other weaker sections of the society in the study area, a need based sample survey, family-wise, should be undertaken to assess their requirements, and action programmes prepared and submitted accordingly, integrating the sectoral programmes of line departments of the State Government. It may be clearly brought out whether the village(s) located in the mine lease area will be shifted or not. The issues relating to shifting of village(s) including their R&R and socio-economic aspects should be discussed in the Report.
- 22) One season (non-monsoon) [i.e. March-May (Summer Season); October-December (post monsoon season); December-February (winter season)]primary baseline data on ambient air quality as per CPCB Notification of 2009, water quality, noise level, soil and flora and fauna shall be collected and the AAQ and other data so compiled presented date-wise in the EIA and EMP Report. Site-specific meteorological data should also be collected. The location of the monitoring stations should be such as to represent whole of the study area and justified keeping in view the pre-dominant downwind direction and location of sensitive receptors. There should be at least one monitoring station within 500 m of the mine lease in the pre-dominant downwind direction. The mineralogical composition of PM10, particularly for free silica, should be given.
- 23) Air quality modeling should be carried out for prediction of impact of the project on the air quality of the area. It should also take into account the impact of movement of Vehicles for transportation of mineral. The details of the model used and input parameters used for modeling should be provided. The air quality contours may be shown on a location map clearly indicating the location of the site, location of sensitive receptors, if any, and the habitation. The wind roses showing pre-dominant wind direction may also be indicated on the map.
- 24) The water requirement for the Project, its availability and source should be furnished. A detailed water balance should also be provided. Fresh water requirement for the Project should be indicated.
- Necessary clearance from the Competent Authority for drawl of requisite quantity of water for the Project should be provided.
- 26) Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.

MEMBER SECRETARY SEIAA-TN

18 A

- 27) Impact of the Project on the water quality, both surface and groundwater, should be assessed and necessary safeguard measures, if any required, should be provided.
- 28) Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided. In case the working will intersect groundwater table, a detailed Hydro Geological Study should be undertaken and Report furnished. The Report inter-alia, shall include details of the aquifers present and impact of mining activities on these aquifers. Necessary permission from Central Ground Water Authority for working below ground water and for pumping of ground water should also be obtained and copy furnished.
- 29) Details of any stream, seasonal or otherwise, passing through the lease area and modification / diversion proposed, if any, and the impact of the same on the hydrology should be brought out.
- 30) Information on site elevation, working depth, groundwater table etc. Should be provided both in AMSL and bgl. A schematic diagram may also be provided for the same.
- 31) A time bound Progressive Greenbelt Development Plan shall be prepared in a tabular form (indicating the linear and quantitative coverage, plant species and time frame) and submitted, keeping in mind, the same will have to be executed up front on commencement of the Project. Phase-wise plan of plantation and compensatory afforestation should be charted clearly indicating the area to be covered under plantation and the species to be planted. The details of plantation already done should be given. The plant species selected for green belt should have greater ecological value and should be of good utility value to the local population with emphasis on local and native species and the species which are tolerant to pollution.
- 32) Impact on local transport infrastructure due to the Project should be indicated. Projected increase in truck traffic as a result of the Project in the present road network (including those outside the Project area) should be worked out, indicating whether it is capable of handling the incremental load. Arrangement for improving the infrastructure, if contemplated (including action to be taken by other agencies such as State Government) should be covered. Project Proponent shall conduct Impact of Transportation study as per Indian Road Congress Guidelines.
- 33) Details of the onsite shelter and facilities to be provided to the mine workers should be included in the EIA Report.
- 34) Conceptual post mining land use and Reclamation and Restoration of mined out areas (with plans and with adequate number of sections) should be given in the EIA report.
- 35) Occupational Health impacts of the Project should be anticipated and the proposed preventive

MEMBER SECRETARY SELAA-TN ku

Page 19 of 24

19 A

measures spelt out in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP. The project specific occupational health mitigation measures with required facilities proposed in the mining area may be detailed.

- 36) Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.
- 37) Measures of socio economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.
- 38) Detailed Environmental Management Plan (EMP) to mitigate the environmental impacts which, should inter-alia include the impacts of change of land use, loss of agricultural and grazing land, if any, occupational health impacts besides other impacts specific to the proposed Project.
- 39) Public Hearing points raised and commitment of the Project Proponent on the same along with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final ELA/EMP Report of the Project.
- 40) Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.
- 41) The cost of the Project (capital cost and recurring cost) as well as the cost towards implementation of EMP should be clearly spelt out.
- 42) A Disaster management Plan shall be prepared and included in the EIA/EMP Report.
- 43) Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.
- 44) Besides the above, the below mentioned general points are also to be followed:
 - a) Executive Summary of the EIA/EMP Report
 - b) All documents to be properly referenced with index and continuous page numbering.
 - c) Where data are presented in the Report especially in Tables, the period in which the data were collected and the sources should be indicated.
 - d) Project Proponent shall enclose all the analysis/testing reports of water, air, soil, noise etc. using the MoEF&CC/NABL accredited laboratories. All the original analysis/testing reports should be available during appraisal of the Project.
 - e) Where the documents provided are in a language other than English, an English translation

MEMBER SECRETARY SEIAA-TN

should be provided.

- The Questionnaire for environmental appraisal of mining projects as devised earlier by the Ministry shall also be filled and submitted.
- g) While preparing the EIA report, the instructions for the Proponents and instructions for the Consultants issued by MoEF&CC vide O.M. No. J-11013/41/2006-IA. II(I) dated 4th August, 2009, which are available on the website of this Ministry, should be followed.
- h) Changes, if any made in the basic scope and project parameters (as submitted in Form-1 and the PFR for securing the TOR) should be brought to the attention of MoEF&CC with reasons for such changes and permission should be sought, as the ToR may also have to be altered. Post Public Hearing changes in structure and content of the draft EIA/EMP (other than modifications arising out of the P.H. process) will entail conducting the PH again with the revised documentation.
- i) As per the circular no. J-11011/618/2010-IA. II(1) dated 30.5-2012, certified report of the status of compliance of the conditions stipulated in the Environment Clearance for the existing operations of the project, should be obtained from the Regional Office of Ministry of Environment, Forest and Climate Change, as may be applicable.
- j) The EIA report should also include (i) surface plan of the area indicating contours of main topographic features, drainage and mining area, (ii) geological maps and sections and (iii) sections of the mine pit and external dumps, if any, clearly showing the land features of the adjoining area.

In addition to the above, the following shall be furnished:-

The Executive summary of the EIA/EMP report in about 8-10 pages should be prepared incorporating the information on following points:

- 1. Project name and location (Village, District, State, Industrial Estate (if applicable).
- Process description in brief, specifically indicating the gaseous emission, liquid effluent and solid and hazardous wastes.
- 3. Measures for mitigating the impact on the environment and mode of discharge or disposal.
- 4. Capital cost of the project, estimated time of completion.
- The proponent shall furnish the contour map of the water table detailing the number of wells located around the site and impacts on the wells due to mining activity.
- 6. A detailed study of the lithology of the mining lease area shall be furnished.

MEMBER SECRETARY SEIAA-TN

Page 21 of 24

- 7. Details of village map, "A" register and FMB sketch shall be furnished.
- Detailed mining closure plan for the proposed project approved by the Geology of Mining department shall be shall be submitted along with EIA report.
- 9. Obtain a letter /certificate from the Assistant Director of Geology and Mining standing that there is no other Minerals/resources like sand in the quarrying area within the approved depth of mining and below depth of mining and the same shall be furnished in the EIA report.
- EIA report should strictly follow the Environmental Impact Assessment Guidance Manual for Mining of Minerals published February 2010.
- Detail plan on rehabilitation and reclamation carried out for the stabilization and restoration of the mined areas.
- 12. The EIA study report shall include the surrounding mining activity, if any,
- 13. Modeling study for Air, Water and noise shall be carried out in this field and incremental increase in the above study shall be substantiated with mitigation measures.
- 14. A study on the geological resources available shall be carried out and reported.
- 15. A specific study on agriculture & livelihood shall be carried out and reported.
- 16. Impact of soil erosion, soil physical chemical and biological property changes may be assumed.
- 17. Site selected for the project Nature of land Agricultural (single/double crop), barren, Govt./ private land, status of is acquisition, nearby (in 2-3 km.) water body, population, with in 10km other industries, forest, eco-sensitive zones, accessibility, (note - in case of industrial estate this information may not be necessary)
- Baseline environmental data air quality, surface and ground water quality, soil characteristic, flora and fauna, socio-economic condition of the nearby population
- Identification of hazards in handling, processing and storage of hazardous material and safety system provided to mitigate the risk.
- 20. Likely impact of the project on air, water, land, flora-fauna and nearby population
- 21. Emergency preparedness plan in case of natural or in plant emergencies
- 22. Issues raised during public hearing (if applicable) and response given
- 23. CER plan with proposed expenditure.
- 24. Occupational Health Measures
- 25. Post project monitoring plan
- 26. The project proponent shall carry out detailed hydro geological study through intuitions/NABET Accredited agencies.

MEMBER SECRETARY SELAA-TN

22 A

- 27. A detailed report on the green belt development already undertaken is to be furnished and also submit the proposal for green belt activities.
- 28. The proponent shall propose the suitable control measure to control the fugitive emissions during the operations of the mines.
- 29. A specific study should include impact on flora & fluma, disturbance to migratory pattern of animals.
- 30. Reserve funds should be earmarked for proper closure plan.
- 31. A detailed plan on plastic waste management shall be furnished. Further, the proponent should strictly comply with, Tamil Nadu Government Order (Ms) No.84 Environment and forests (EC.2) Department dated 25.06.2018 regarding ban on one time use and throw away plastics irrespective of thickness with effect from 01.01.2019 under Environment (Protection) Act, 1986. In this connection, the project proponent has to furnish the action plan.

Besides the above, the below mentioned general points should also be followed:-

- A note confirming compliance of the TOR, with cross referencing of the relevant sections / pages of the EIA report should be provided.
- All documents may be properly referenced with index, page numbers and continuous page numbering.
- c. Where data are presented in the report especially in tables, the period in which the data were collected and the sources should be indicated.
- d. While preparing the EIA report, the instructions for the proponents and instructions for the consultants issued by MoEF & CC vide O.M. No. J-11013/41/2006-IA.II (I) dated 4th August, 2009, which are available on the website of this Ministry should also be followed.
- e. The consultants involved in the preparation of EIA/EMP report after accreditation with Quality Council of India (QCT)/National Accreditation Board of Education and Training (NABET) would need to include a certificate in this regard in the EIA/EMP reports prepared by them and data provided by other organization/Laboratories including their status of approvals etc. In this regard circular no F. No.J -11013/77/2004-IA-II(I) dated 2nd December, 2009, 18th March 2010, 28th May 2010, 28th June 2010, 31th December 2010 & 30th September 2011 posted on the Ministry's website http://www.moef.nic.in/ may be referred.
 - After preparing the EIA (as per the generic structure prescribed in Appendix-III of the EIA Notification, 2006) covering the above mentioned points, the proponent willtake

MEMBER SECRETARY SEIAA-TN

Page 23 of 24

further necessary action for obtaining environmental clearance in accordance with the procedure prescribed under the EIA Notification, 2006.

- The final EIA report shall be submitted to the SETAA, Tamit Nada for obtaining Environmental Clearance.
- The TORs with public hearing presented shall be <u>valid for a period of three years</u> from the date of issue, for submission of the ELA/EMP report as per OMNo.J-11013/41/2006-IA-II(I) (part) dated 29th August, 2017.

M/s. Sri Devaraajaa M Sand, D.no. 58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri District – 635 001.

Roc.No. 1121/ 2020 / Mines Dated: 27.01.2023.

Sir,

- Sub: Mines and Minerals Minor Mineral Rough stone Quarry lease granted in favour of M/s. Sri Devaraajaa M Sand over an extent of 4.00.00 Hects of Patta land in S.F.No. 78/1A(P), 78/1B(P) of Kothapetta Village, Krishnagiri Taluk and District for a period of 10 years - Scheme of Mining submitted for the 2nd five year period 2023-2024 to 2027-2028 - Approved - Reg.
- Ref: 1. The District Collector, Krishnagiri Proc. Roc. No.418/2017/ Mines dated: 30.05.2018.
 - Mining plan approved by the Deputy Director of Geology and Mining, Krishnagiri in Roc.No.418/2017/Mines dated: 29.12.2017.
 - The Assistant Director (Mines) Krishnagiri, Proc. Rc.No. 1121/2020/Mines dated: 26.04.2021.
 - 1st Scheme of mining plan for the next five year period from 2023-2024 to 2027-2028 submitted by the lessee at on 13.01.2023.

Kind attention is invited to the references cited.

2) A quarry lease had been granted in favour of M/s. Sri Devaraajaa M Sand, to quarry Rough stone for a period of 5 years over an extent of 4.00.00 hects of Patta lands in S.F.Nos. 78/1A(P) (1.75.00), 78/1B(P) (2.25.00) of Kothapetta Village, Krishnagiri Taluk and District vide the District Collector, Krishnagiri Proc. Roc. No. 418/2017/ Mines dated: 30.05.2018 under TNMMCR Rules 1959. The lease deed has been executed on 31.05.2018 and the lease period is valid upto 30.05.2023.

 The Mining plan for the subject Rough stone quarry was approved by the Deputy Director of Geology and Mining, vide letter Rc. No. 418/2017/Mines Dated: 29.12.2017 which came into effect from the date of execution i.e. on 31.05.2018.

4) Meanwhile, the lessee M/s. Sri Devaraajaa M Sand has requested to extend the lease period for the said quarry lease from 5years to 10 years as per G.O.(MS) No. 208 Industries (MMC.1) Department dated: 21.09.2020.

5) Based on the request of the lessee M/s. Sri Devaraajaa M Sand, the report submitted by Assistant Geologist (Mines), Special Deputy Thasildar (Mines), Special Revenue Insepctor (Mines) and Surveyor (Mines) the lease was extended a further period of 5 years from the expiry of the existing lease period i.e. from 31.05.2023 vide Assistant Director (Mines) Proc. Rc.No. 1121/2020/Mines dated: 26.04.2021 upto the periodending 30.05.2028.

6) In this regard the lessee has submitted the scheme of mining for the next five year period from 2023-2024 to 2027-2028 on 31.05.2023 to 30.05.2028.

7) As per the scheme of mining plan submitted for approval, it is mentioned that the total available geological reserves are calculated as 1031457 Cbm with 95% recovery and after providing benches for systematic and scientific mining the mineable reserves are calculated as 487698 Cbm @ 95% recovery upto a maximum of depth of 41m (1.0m Gravel +40.0m Rough stone).

Year	Recoverable reserves @ 95%(m ³)	Top Soil	
31.05.2023 to 30.05.2024	119857	799	
31.05.2024 to 30.05.2025	113003	•	
31.05.2025 to 30.05.2026	98420		
31.05.2026 to 30.05.2027	84788		
31.05.2027 to 30.05.2028	71630		
Total	487698	799	

8) As per the Scheme of mining the year wise production for the proposed five years are as follows.

9) The lessee had obtained transport permits for a quantity of 4,10,400 Cbm Upto 21.12.2022 of rough stone as against the proposed production of 10,25,995 Cbm (for the Mining plan period from 2018-19 to 2022-23).

OF.

10) The lessee has obtained Environment Clearance from DEIAA vide Lr. No. 35/DEIAA-KGI/EC.No. 27/2018 dated: 27.02.2018, for a quantity of 10,25,995 Cbm of rough stone for five years.

11) The draft Scheme of Mining submitted by Tmt. M/s. Sri Devaraajaa M Sand has been scrutinized as per the guide lines/ Instructions issued by the Commissioner of Geology and Mining, Chennai-32. The Scheme of mining is prepared in accordance with the guidelines/ instructions issued.

12) Hence, in accordance with the TNMMCR 1959 and instructions issued by the Commissioner of Geology and Mining, Chennai, the said scheme of mining for the next five year period 2023-2024 to 2027-2028 (31.05.2023 to 30.05.2028) submitted by the lessee M/s. Sri Devaraajaa M Sand in respect of the area granted to quarry rough stone in Patta land S.F.No 78/1A(P), 78/1B (P) over an extent of 4.00.00 Hects is hereby approved subject to the following conditions.

- i. Based on the above details and in exercise of the powers conferred under Rule 41(9)(iii) of TNMMCR 1959 the scheme of mining submitted by M/s. Sri Devaraajaa M Sand, Krishnagiri is here by approved subject to the following conditions.
- ii. That the scheme of mining is approved without prejudice to any other law applicable to the quarry lease from time to time whether such laws are made by the Central Government, State Government or any other authority.
- iii. This approval of the scheme of mining does not in any way imply the approval of the Government in terms of any other provisions of Mines and Minerals Development and Regulation) Act 1957,or any other connected laws including Forest (Conservation)Act 1957, or any other connected Laws industry Forest (Conservation) Act 1980, Forest Conservation Rules 1981 Environment protection Act 1980, Indian Explosive Act 1884

34 A

(Central Act IV of 1884) and the rules made there under, Mineral Conservation and Development Rules 1988 and The Tamil Nadu Minor Mineral Concession rules, 1959.

- iv. This scheme of Mining including progressive mine closure plan is approved without prejudice to any other order or direction from any court of competent jurisdiction.
- v. Provisions of the Mines Act, 1952 and the Rules and Regulations made there under including submission of notice of opening, appointment of manager and other statutory officials as required under Mines Act, 1952 shall be complied with.
- vi. Provisions made under Mines and Minerals (Development and Regulation) Act, 1957, MMDR amendment Act, 2015 made there under shall be complied with.
- vii. This approval of scheme of mining is restricted to the mining lease area only. The mining lease area is as shown on the statutory plan under TNMMCR Rules, 1959.
- viii. The lessee should obtain environmental clearance from the appropriate authority.
 - ix. The earlier instances of irregular/illegal quarrying, if any shall not be regularized through the approval of this document.
 - x. The lessee shall remit the penalty/ cost of mineral/ other dues if any as arrived by the District Collector/ Deputy Director of Geology and Mining, Krishnagiri District.
- xi. Non adherence to any condition set-out above, the approval shall be deemed to have been withdrawn with immediate effect.

LESSEE M/s. SRI DEVARAAJAA 'M' SAND,

D. No.58B, GANDHI NAGAR, KRISHNAGIRI TOWN, KRISHNAGIRI DISTRICT- 635 001.

PREPARED BY : S. DHANASEKAR, M.SC., QUALIFIED PERSON, NO. 5/30-7 B, AVVAI NAGAR, PONKUMAR MINES ROAD, JAGIR AMMAPALAYAM, SALEM DISTRICT – 636 302, E-mail: geodhana@vahoo.co.in CELL: 98946 28970 & 7373374702.

M/s. Sri Devaraajaa 'M' Sand, D. No.58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri District- 635 001.

CONSENT LETTER FROM LESSEE

I hereby give my consent for preparing the Scheme of Mining with Progressive Mine Closure Plan in respect of Rough Stone Quarry over an extent of 4.00.0 Ha. in S.F.Nos.78/1A(P) & 78/1B(P) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu State has been prepared by Shri S. DHANASEKAR, M.Sc., Qualified Person.

I request the Department of Geology and Mining, Krishnagiri to make further correspondence regarding modification of the Scheme of Mining with Progressive Mine Closure Plan with the said Qualified Person in his following Address:

S.DHANASEKAR, M.Sc.,

Qualified Person No.5/30-7B, Avvai Nagar, Ponkumar Mines Road, Jagir Ammapalayam, Salem District-636 302. E-mail: geodhana@yahoo.co.in Cell: 98946-28970

I hereby undertake that all the modifications, if any, made in the Scheme of Mining with Progressive Mine Closure Plan by the Qualified Person may be deemed to have been made with our knowledge and consent and shall be acceptable to me and binding on me in all respects.

For M/s. Sri Devaraajaa 'M' Sand, Bratengo

DECLARATION OF THE MINE OWNER

I hereby declare that the Scheme of Mining with Progressive Mine Closure Plan in respect of Rough Stone Quarry over an extent of 4.00.0 Ha. in S.F. Nos. 78/1A (P) & 78/1B (P) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu State has been prepared in full consultation with us by Shri S. DHANASEKAR, M.Sc., Qualified Person. I have understood its contents and agree to implement the same in accordance with Laws applicable to mines.

For M/s. Sri Devaraajaa 'M' Sand, Signature of the Lessee

Place: KRISHNAGIRI Date:

CERTIFICATE

This is to certify that, the provisions of Minerals Conservation and Development Rules, 1988(MMCDR) have been observed in the Scheme of Mining with Progressive Mine Closure Plan for Kothapetta Rough Stone Quarry over an extent of 4.00.0 Ha. in S.F. Nos. 78/1A (P) & 78/1B(P) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District prepared for M/s. Sri Devaraajaa 'M' Sand, D.No.58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri District- 635 001.

Whenever specific permissions, approvals, exemptions or relaxations are required, the lessee will approach the concerned authorities of Director General of Mines Safety (DGMS), 4th B Block, 100, No.5, 14th Main, 100 Feet Road, Koramangala, Bangalore, Karnataka– 560 034, for such permissions, exemptions, relaxations and approvals.

It is also certified that the information furnished in the above Scheme of Mining with Progressive Mine Closure Plan are true and correct to the best of our knowledge.

SCHEME OF MINING , WITH PROGRESSIVE MINE CLOSURE PLAN FOR KOTHAPETTA ROUGH STONE QUARRY (Prepared Under Rule 12 of MCDR, 1988(as amended upto 12:08.20 Procession of the second state of t

1.0 General:

The Scheme of Mining along with Progressive Mine Closure Plan has been prepared in respect of Rough Stone Quarry in Patta Land S.F.Nos.78/1A (P) & 78/1B (P) over an extent of 4.00.0 Ha. in Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, prepared for M/s. Sri Devaraajaa 'M' Sand, D.No.58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri District- 635 001.

The fresh Mining Plan was approved by Deputy Director, Geology and Mining, Krishnagiri vide letter Roc No. 418/2017/Mines dated:29.12.2017 for a period of five years from 2018-2019 to 2022-2023. Please refer Annexure-XII. Copy of Approved Mining plan Letter.

Accordingly, the Lessee had obtained Environmental Clearance from DEIAA-KGI vide order Lr. No.35/DEIAA-KGI/Ec.No.27/2018 dated 27.02.2018. Please refer Annexure- III.

The Mining Lease was granted Vide Proceeding No. Proc.No. 418/2017/Mines dated 31.05.2018 for a period of Five years.

The lease deed was executed on 31.05.2018. Mining operation commenced on 01.06.2018. The lease will expire on 30.05.2023.

However as per the recent Amendment TNMMCR, G.O.(Ms)No.208 Industries (MMC.1) Department dated 21.09.2020, the lease period will be extended for another five years subject to the condition that the approved scheme of mining must be submitted along with the prescribed form in **Appendix VI.**

This Scheme of Mining for the period 2023-2024 to 2027-2028 is now being prepared and submitted under Rule 12 of MMCDR, 1988(as amended upto 02.08.2011) and 41 & 42 of TNMMCR, 1959 for approval.

The mining operations are done by opencast semi-mechanized methods with jack hammer drilling and blasting, hydraulic excavators are used for loading the Rough stone from pithead to the needy crushers.

S. DHANASEKAR, M.Sc., (Geo) Qualified Person

1.1. Review of Mining Plan:

a) Name of lessee		M/s. Sri Devaraajaa 'M' Sand,
Address		D.No.58B, Gandhi Nagar,
		Krishnagiri Town,
		Krishnagiri District.
District	3	Krishnagiri
State	8	Tamil Nadu
Pin code	1	635 001

b) Status of lessee

The lessee is a Partnership Firm.

c) Mineral(s) which is / are included in the prospecting license (For Fresh grant): -Nil-

d) Mineral(s) which is / are included in the letter of Intent / lease deed:

Rough Stone occurs in the lease area and the Lessee intends to quarry the same.

e) Mineral(s), which is the lessee, intends to Quarry:

Rough Stone occurs in the lease area and the Lessee intends to quarry the same.

f) Name and Address of the Qualified Person :

Name	2	SHRI S. DHANASEKAR, M.Sc.,
Address	朝	Qualified Person No.5/30 7B, Avvai Nagar, Ponkumar Mines Road Jagir Ammapalayam, Salem – 636 302.
Cell No. Email	10 10	98946-28970 & 73733-74702. geodhana@yahoo.co.in

2.0 LOCATION AND ACCESSIBILITY

a) Lease Details (Existing Quarry)

Name of the Quarry	:	Kothapetta Rough Stone Quarry
Latitude of boundary point	8	12° 32' 49.8798" N to 12° 32' 46.6000" N
Longitude of boundary point		78° 12' 49.4269" E to 78° 12' 39.2801" E
Date of grant of lease		31.05.2018
Period/Expiry Date	8	30.05.2023.
Name of leaseholder		M/s. Sri Devaraajaa 'M' Sand,
Postal Address	8	D.No.58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri District - 635 001. Tamil Nadu.

b) Details of lease are	a with location ma	p (Quarry)

Total lease area		4.00.0 Ha
State	3	Tamil Nadu
District	21	Krishnagiri
Taluk	1	Krishnagiri
Village		Kothapetta
Whether the area is rec	orded :	This is Patta Land and is not covered
to be in forest		in Forest area of any kind.
Please refer Loc	cation Plan and Min	e lease plan – Plate No. I & II.

c) Existence of public road/railway line, if any nearby and approximate distance:

Extent of the area is shown in the FMB. The District Head Quarter Krishnagiri is at a distance about 3.1 Km. from quarry site. The area is at a distance of about 2.0 kms from Krishnagiri Village. Krishnagiri – Hosur Main Road (NH-44) is at a distance of about 1.7 kms Western side of the lease area.

Nearest Railhead is Rayakkottai Railway Station that is located about 30 kms from the Quarry. Post office are available in Krishnagiri at a distance of about 3.6Kms. Police Station are available in Krishnagiri at a distance of about 3.6 Kms. Air Port is available in Bangalore, about 120.0 kms. from the Quarry. Nearest Port is Chennai about 259.0 kms. from the area.

d) The Mining lease area is bounded by four corners and the coordinates are:

Table No:2

Toposheet No	: No. 57 – L/2
Latitude	: 12° 32' 49.8798" N to 12° 32' 46.6000" N
Longitude	: 78° 12' 49.4269" E to 78° 12' 39.2801" E
North East	: 12° 32' 49.8798" N 78° 12' 49.4269"E
South East	: 12° 32' 45.4896" N 78° 12' 49.4142"E
North West	: 12° 32' 48.3689" N 78° 12' 41.7620"E
South West	: 12° 32' 45.4109" N 78° 12' 41.5005"E

46 A

e) A general location map showing area and access routes. It is preferred that the area be marked on a Survey of India topographical map or a cadastral map or forest map as the case may be. However, if none of these are available, the area may be shown of an administrative map:

A general location map showing area boundaries and existing access sources shown on the Toposheet Plan (Key Plan) which is enclosed as Plate No.Ib. Since existing routes are being followed to reach the lease area no fresh access routes are proposed hence not shown

Top Sheet No.

: Topo Sheet No.57 L/2

Latitude	: 12° 32' 49.8798" N to 12° 32' 46.6000" N
Longitude	: 78° 12' 49.4269" E to 78° 12' 39.2801" E

f) Land use pattern:

Dry Mineral bearing land.

g) Location of the Area :

The area for quarrying lease of Kothapetta Rough Stone Quarry is located in S.F.Nos.78/1A (Part) & 78/1B (Part) over an extent of 4.00.0 Ha. in Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamilnadu State.

3.0 DETAILS OF APPROVED MININGPLAN/SCHEME OF MINING:

3.1 Date and reference of earlier approved MP:

The fresh Mining Plan was approved by Deputy Director, Department of Geology and Mining, Krishnagiri vide letter Roc No. 418/2017/Mines dated:29.12.2017 for a period of five years 2018-2019 to 2022-2023. Please refer Annexure-XII. Copy of Approved Mining plan Letter.

3.2 Details of last modifications if any (for the previous approved period) of approved MP/SOM, indicating date of approval, reason for modification:

-Nil-

3.3 Give review of earlier approved proposal (if any) in respect of exploration, excavation, reclamation etc:

i) Exploration:

In the previous approved Mining Plan, it was mentioned that no exploration was carried out. Massive rough stone exposures were clearly visible in the lease area.

Present Mine working had reached a depth of about 20.0m.

There is only one working pit available in this area, the dimension of which is given below: கிற்கும் அறுவல்கு

JAK 2023

5

Ø

Table No.3

Existing Pit Details 210.0m(L)Avg X 97.0m (W) Avg X 20.0m

The area is very small. The attitude of the deposits like width and length are clearly known. Depth persistence of Rough Stone in this area is already proved upto 20.0m and even more

ii) Mine Development :

The Mine workings have reached a depth of nearly 20.0m. Development of the pits has been done only in the areas where the Rough Stone could be easily mined.

iii)Exploitation :

The Quarry workings have reached a depth of nearly 20.0m.

There is only one working pit, the dimension of which is given below :

Table No.4

Existing Pit Details

210.0m(L)Avg X 97.0m (W) Avg X 20.0m (D)

The Planned and Actual Production for last approved Mining Plan period figures are given as follows:

Table No.5

YEAR	PLANNED(Cu.m) ROUGH STONE	ACTUAL(Cu.m) ROUGH STONE
31.05.2018-	204720	46800
30.05.2019		
31.05.2019-	205751	114000
30.05.2020	A SHORE AND AND A SHORE AND	1010 - 1010 - 2010 - 1010 - 20
31.05.2020-	204887	110800
30.05.2021	1072.07%1801II	
31.05.2021-	205020	- 100800
30.05.2022		10000000
31.05.2022-	205618	33600
30.05.2023		
(upto 01.11.2022)		
TOTAL	1025995	406000

iv) Waste Management:

In the Previous approved Mining Plan Period, the mine waste has been used for roads in the low laying adjacent area.

48 A

Geological Reserve (insitu) under Proved category Mineable Reserve : 2196691 cu.m : 1079995 cu.m

Year wise Production

: 1025995 cu.m

JAN 2023

6

While calculating Mineable Reserve, the boundary barrier and bench width height and slop are taken into account. Hence, the Mineable Reserve will be always less than the tast the serve

vi) Depletion of Reserve:

The actual production of Rough Stone for the last five years (31.05.2018-30.05.2019 to 31.05.2022-30.05.2023(upto 01.11.2022)) is about 406000 cu.m of saleable Rough Stone.

vii) Afforestation and Reclamation :

It was clearly stated in the approved Mining Plan that during afforestation programme tamarind/casuarinas trees will be planted in the lease area. Presently, lessee had planted some trees in the lease area in scattered manner. Since, the Quarry is active. Mining should be carried out in such a manner that after certain period, some part is available for reclamation.

viii) Control of Dust, Noise & Ground Vibrations:

Quarrying of Rough Stone had been carried out by drilling and control blasting by using low power explosives, and hence, noise will be very minimum.

The dust control was taken care by water sprinkling on the haul roads. The amount of ground vibration is very less since only control blasting by using low power explosives is used.

Reclamation & Rehabilitation :

Reclamation of mined out area does not arise and has not reached the full extent of working. After closure of the Mine, the pit will be allowed to collect seepage and rain water. This will help to charge the nearby agricultural wells.

PART - 'A'

1.0 GEOLOGY AND EXPLORATION

A) Briefly Describe The Topography, Drainage Pattern, Vegetation, Climate, Rainfall Data of the Area Applied/Mining Lease Area:

a) Topography :

The Mining Lease area is approximately at 12° 32' 49.8798" N to 12° 32' 46.6000" N latitude and 78° 12' 49.4269" E to 78° 12' 39.2801" E longitude and is represented by Topo Sheet No.57 L/2 of Survey of India.

The lease area is slightly elevated terrain and sloping towards North Eastern side. The general trend of formation is NE- SW and dip towards SE-70°. The altitude of the area is about 537 MSL. Quise Bit Digrano,

Vegetation:

It is a dry Mineral bearing. It is a dry place with a Gravel cover of about 1.0m

Water table and Drainage Pattern:

Water table is touched at a depth of 76m in rainy season, it shuring North-East monsoon and 160 101 at 82m in summer months. The water table fluctuation is verified by observing the water levels in the above seasons in the nearby wells.

9

Climatic Conditions:

The area receives rainfall of about 800mm to 900mm per annum and the rainy season is mainly from October-January during Northeast Monsoon. The summer is hot with maximum temperature of 38°C and winter encounters a minimum temperature of 18°C.

Rainfall Data:

The area receives scanty rainfall and the annual rainfall of the area varies between 800mm to 900mm.

b) Geology of the Area :

The lease area is slightly elevated topography, the area has been quarrying operation earlier Rough stone exposures are clearly visible in existing pit within the lease applied area. Gravel are noticed at the average thickness of 1m. The slope is gentle towards North Eastern side. The altitude of the area is above 537m from MSL.

Peninsular gneiss forms the oldest rock formations, in which the massive formation of charnockite lies over with rich accumulation of recent quaternary formation. On regional scale the charnockite body trends NE- SW with dipping towards SE70°.

The general geological sequences of the rocks in this area are given below

AGE	FORMATION
Recent	Quaternary Recent (Gravel)
Archaean	Charnockite (Granitoid Gneiss)
	Peninsular Gneiss Complex II.

c) Details of Exploration already carried out:

The area was thoroughly explored by the Qualified Person and his geological team. Massive rough stone exposures are clearly visible from the existing pit within the lease area.

In this area, the mine working has reached a depth of about 20.0m.

There is only one working pit available in this area, the dimension of which is given below : லுக்குநர் அலுவல

Cas

8

Table No.6

Existing Pit Details

210.0m(L)Avg X 97.0m (W) Avg X 20.0m (D)

The area is very small. The attitude of the deposits like width and length are clearly Depth persistence of Rough Stone in this area is already proved upto 20.0m and even more นๆแมล่ง เมช่ายา

d) The Physical Character of the Rough Stone :

Rough stone texture is medium to coarse grained and is composed of recrystallized minerals, hence it is a metamorphic rock. The grains are subhedral, inequigranular, with a granoblastic texture. The grains are crystalline ie. Complete crystallization has occurred. Cleavage is absent. The color is dark olive green. The details collected during the field survey and found to be sufficient for the preparation of the Scheme of Mining with PMCP.

e) Number of boreholes indicating type (Core/RC/DTH), diameter, spacing, inclination, Collar level, depth etc... with standard bore hole logs duly marking on

There is no borehole exist in the lease area.

i)RESERVES :

a. Method of Estimation of Reserves:

The Geological and Recoverable reserves are estimated by cross sectional method up to a depth of 41.0m (1.0m Gravel + 40.0m Rough Stone). In the earlier plan instead of mentioning the topography as elevated land by taking contour map it was mentioned as deposit having thickness of 25 meters above ground level. But in the field it is revealed that there is no deposit above ground level, but it is an elevated terrain. Plans and Sections have been drawn with a scale of 1:1000 & Hor: 1:1000, Ver: 1:500 respectively.

Selecting a method of reserve estimation depends upon the geology of the mineral deposit, exploration method, purpose of computation and the required degree of accuracy and also on the contemplated mining system.

The ideal method should be simple, rapid, reliable, consistent with the character of the mineral body and available data and suitable for rapid checking. The method adopted for calculation of reserves in this area is by computing the volume by cross sectional method upto a particular level. The volume is calculated by multiplying the cross sectional area with the length of the sectional influences.

The details of estimation of Geological Reserves and Mineable Reserves with reference to the Geological Plan & Cross section and Conceptual Plan & Section as shown in (Plate No.III, III-A & III-B and VII, VII-A & VII-B) respectively.

b. GEOLOGICAL RESERVES:

The Geological reserve of Rough Stone and Gravel is calculated upto a depth of 41 0m (1.0m Gravel + 40.0m Rough Stone). In the earlier plan instead of mentioning the topography as elevated land by taking contour map it was mentioned as deposit having thickness of 25 meters above ground level. But in the field it is revealed that there is no deposit above ground level, but it is an elevated terrain. Total Geological reserve is estimated at **1085740 Cu.m** by area cross sectional method.

Total Mineable Reserves in ROM	#	513365 cu.m
Recoverable Reserves 95%	<u>1</u> 27	487698 cu.m
Mine Waste @ 5%	E.	25667 cu.m.

The geological reserves computed based on the geological cross sections up to the economically workable depth of 41.0m (1.0m Gravel + 40.0m Rough Stone) works out to 1031457 cu.m (95% recovery) (Table-7) and mineable reserves have been computed as 487698 cu.m (Table Statute rate of 95% recovery upto a depth of depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031457 cu.m (P5% P6) at the rate of 95% recovery upto a depth of depth of 41.0m (1.0m Gravel) works out to 1031458 cu.m (P5% P6) at the rate of 95% recovery upto a depth of depth of 41.0m (1.0m Gravel) works out to 1031458 cu.m (P5% P6) at the rate of 95% recovery upto a depth of depth of 41.0m (1.0m Gravel) works out to 1031458 cu.m (P5% P6) at the rate of 95% recovery upto a depth of depth of 41.0m (1.0m Gravel) works out to 1031458 cu.m (P5% P6) at the rate of 95% recovery upto a depth of depth of 41.0m (1.0m Gravel) works out to 1031458 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031458 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031458 cu.m (P5% P6) at the rate of 95% recovery upto a depth of 41.0m (1.0m Gravel) works out to 1031458 cu.m (P5% P6) at the rate of

Mineable reserves have been computed as **487698 cu.m** at the rate of **95%** recover up to a depth of **41.0m** (1.0m Gravel + 40.0m Rough Stone). The Mineable reserves are calculated by deducting 7.5m & 10.0m Safety distance & Bench Loss.

2.0 MINING

A. Open Cast Mining

a) Briefly describe the existing as well as proposed method for excavation with all design parameters indicating on plans /sections:-

Existing method :

The mining operations are done by opencast semi-mechanized methods with jack hammer drilling and blasting, hydraulic excavators are used for loading the Rough stone from pithead to the needy crushers.

There is only one existing working pit, the dimension of which is given below :

Table No.9
Existing Pit Details
210.0m(L)Avg X 97.0m (W) Avg X 20.0m (D)

Proposed method :

The quarry is proposed to carry out mining operation with semi-mechanized opencast method ("B2" category of small mine). The quarry operation involves shallow jack hammer drilling, slurry blasting, excavation, loading and transportation of Rough Stone.

As Instructed in the Environmental Clearance, the working hours were restricted between 7AM & 5PM (Present working hours 8AM to 4PM with a total working hours of 8 hours including lunch break). The operation will be confined to general shift only ie. from 8.00 AM to 4.00 PM with one hour lunch interval between 12.00 PM to 1.00 PM.

In Gravel, a bench will be 1.0m height and width with 45° slope.

The Rough Stone, totally eight benches will be of 5.0m height and 5.0m width for next Five years only. Please refer Plate No.IV, IV-A & IV-B. The advancement of the pit will be from boundary towards middle side of the lease area for the next Five years. Please refer Plate No.IV.

A bund will be constructed around the pit to prevent accident call and inrush of rainwater. Proper footpaths are provided between benches for easy accessibility for workers.

The Gravel formation will be removed and hydraulic excavators are used for bading the gravel into the tipper from pit head to needy buyers. This will be done on Enter obtaining permission and paying necessary seigniorage fees to the Government.

Average annual production is about 97540 cum of Rough Stone with 300 working days in a year. Considering the nature of the deposit and the anticipated daily production level, semimechanized mining is proposed.

A boundary barrier of 7.5m & 10.0m width are maintained as per statute. Rough Stone locked up in this barrier will be excavated after obtaining permission from DGMS under Regulation 111 of Mines and Mineral Regulation, 1961. The sequence of working for the next Five years is indicated in Plate Nos. IV and the rate of production is given in Table No.11.

b) Indicate Year-Wise Tentative Excavation in Cu.m indicating Production & development, ROM, pit wise as in table below.

i) Planned Development for next Five years is given below :

Gravel of the lease area is **799m³**. Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

ii) Planned Production for next Five years is given below :

The proposed rate of production of **Rough Stone** is about **487698 cu.m** for **Five Years** at the rate of 95% recovery up to **41.0m** depth (1m Gravel + 40m Rough Stone).

Year	ROM Cu.m	Production 95% (cu.m)

Recoverable

Reserves in

ROM: The material excavated from mineralized zone and includes mineral reject and useable mineral component.

OB: Means overburden capping waste.

iv) Estimated Life of the quarry Mineable ROM

> Mineable Reserves @ 95% Average production (Rough Stone) per year @ 95% Estimated Life of the Quarry

14

Life = 5 years

The average proposed rate of production of Rough Stone is about 97540 cu.m per year.

v) Proposed Rate of Production When The Quarry Is Fully Developed

The proposed rate of production when the quarry is fully developed is **487698m³** for next Five years and **97540m³** per annum. (Table-11) The production schedule for the subsequent five year is drawn mainly in consideration of reserves position, market demand and the cost of production.

vi) Mineable Reserves and Anticipated Life of Mine

The Rough Stone is Massive in nature. The depth persistence of the Rough Stone will be beyond the economically workable depth. An optimum depth of 41.0m (1.0m Gravel + 40.0m Rough Stone) for entire lease period has been established as economically viable depth. Eventually this depth is the optimum depth for safe and scientific quarrying.

The mineable reserves are calculated by excluding the mining loss due to formation of benches, ultimate depth of mine, the mineral reserve held up within the safety distances all along the boundary of quarry lease applied area.

The mineable reserves for this Rough stone is thus arrived as **487698cu.m** (Table-8) for an assumed depth of 41.0m from top surface (1.0m Gravel + 40.0m Rough Stone). The details of estimation of five years development & production plan (plate no. IV) is furnished in Table-11. The average rate of production of Rough Stone from this quarry is **97540 cu.m** per year and mineable recoverable reserves **487698cu.m**.

Based on the above, and taking into consideration of the available Mineable Reserves, the life of mine will be about 5 years, if the quarry is being worked continuously with prevailing market conditions and according to this Scheme of mining period.

c). Composite development plans showing pit layouts, dumps, stacks of mineral reject, if any, etc. and year wise sections in case of 'B' category mines:

A composite development year wise Plan and Sections are shown in Plate Nos. IV-A & IV-B. The details are furnished in Table-11. The average annual production of Rough Stone per year 121 2023 200 will be about 97540 cu.m.

d). Describe briefly giving salient features of the proposed method of working Indicating Solution and Diff Category of mine:

The quarry is proposed to carry out mining operation with semi-mechanized opencast method ("B2" category of small mine). The quarry operation involves shallow jack hammer drilling, slurry blasting, excavation, loading and transportation of Rough Stone. The removal of blasted Rough Stone material is loaded into 10 MT capacity trucks with the help of hydraulic excavators.

Extent of Mechanization:

The mine will be worked by semi-mechanized method. However for drilling and hauling, jack hammers, hydraulic excavators and tippers will be used respectively.

Drilling Machines :

Drilling of shot holes will be carried out using compressor and jack hammer. Depth of holes shall be 1 to 2m bench height and spacing shall be 0.75m and burden shall be 0.60m from the preface. Details of drilling equipments are given below.

Туре	Nos	Dia of hole	Size / Capacity	Make	Motive power	H.P.
Jack Hammer	5	25.5 mm	Hand held	Atlas copco 2Nos	Diesel	60

Table No.12

Loading Equipment:

Loading of rough stone shall be carried out by 10 tonne capacity tippers by Hydraulic Excavator from the working place periodically. Details of loading equipment are given as under.

Table No.13

Туре	Nos	Bucket Capacity (MT)	Make	Motive power	H.P.
Hydraulic excavator	2	1.2 M ³	L&T or Ex200	Diesel	120

Transportation:

Transport of raw materials and waste shall be done by Tipper of 10 M.T. capacity.

Table No.14

Туре	Nos	Size / Capacity	Make	Motive power	H.P.
Tipper	3	10 M.T	Ashok Leyland	Diesel	110

Miscellaneous :

There is no other miscellaneous operation worth mentioning except drilling by jack hammer, working of Rough stone deposit by opencast semi-mechanized methods, transport of Rough stone by tippers and trucks and pumping out seepage water during rainy season.

Afforestation :

The safety distance along the boundary has been identified to be utilized for afforestation purpose. Yearly 100 Neem trees will be planted in this lease area. These trees will be planted along the boundary line, (Please refer Plate No.V for Mine layout, Land use and afforestation Plant.

The soil will be spread over the same and vegetative cover with suitable species will be provided. The extent of area to be afforested in next Five years is 0.56.0 Ha. interval between trees – 5m, survival rate – 50%. A retaining wall will be constructed around the dumping yard.

Table No. 15

Year	Name of the species	No. of species	Interval	Area in Ha.	Survival rate
2023-2024	Neem	100	5m	0.11.0	50%
2024-2025	Neem	100	5m	0.11.0	50%
2025-2026	Neem	100	5m	0.11.0	50%
2026-2027	Neem	100	5m	0.11.0	50%
2027-2028	Neem	100	5m	0.12.0	50%
TOTAL		500		0.56.0	

The Afforestation programme for the next Five years are described as follows :

e). Describe briefly the layout of mine workings, pit road layout, the layout of faces and sites for disposal of Topsoil/waste along with ground preparation prior to disposal of waste, reject etc. A reference to the plans and sections may be given. UPL or ultimate size of the pit is to be shown for identification of the suitable dumping site:

The quarry is proposed to carry out mining operation with semi-mechanized opencast method ("B2" category of small mine). The quarry operation involves shallow jack hammer drilling, slurry blasting, excavation, loading and transportation of Rough Stone.

As Instructed in the Environmental Clearance, the working hours were restricted between 7AM & 5PM (Present working hours 8AM to 4PM with a total working hours of 8 hours including lunch break). The operation will be confined to general shift only ie. from 8.00 AM to 4.00 PM with one hour lunch interval between 12.00 PM to 1.00 PM.

The Rough Stone, totally eight benches will be 5.0m height and 5.0m width for next Five years only. Please refer Plate No.IV & IV-A. The advancement of the pit will be from boundary towards middle side of the lease area for the next Five years. Please refer Plate No.IV.

A bund will be constructed around the pit to prevent accident call and invisit be rate water.

Haul roads, to conform to statutory standards are made according to convenience for smooth transport of Rough Stone and waste. Wherever necessary, crossing platforms provided in the haul roads at suitable point for safe crossing as tractors, tippers, trucks etc.

Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

Average annual production is about 97540 cum of Rough Stone with 300 working days in a year. Considering the nature of the deposit and the anticipated daily production level, semimechanized mining is proposed.

A boundary barrier of 7.5m & 10.0m width will be maintained as per statute. Rough Stone locked up in this barrier will be excavated after obtaining permission from DGMS under Regulation 111 of Mines and Mineral Regulation, 1961. The sequence of working for the next Five years is indicated in Plate Nos. IV & VII and the rate of production is given in Table No.11.

f) Conceptual Mine planning upto the end of lease period taking into consideration the present available reserves and resources describing the excavation, recovery of ROM, Disposal of waste, backfilling of voids, reclamation and rehabilitation showing on a plan with few relevant sections:

Conceptual Mining Plan :

Conceptual mining plan is prepared with an object of long-term systematic development of benches, lay outs, selection of permanent ultimate pit limit, depth of quarrying and ultimate pit, selection of sites for construction of infrastructure etc.,

While making the Conceptual Mining Plan and deciding the ultimate pit limits the following factors are considered.

i) Pit dimension :

a. Table No:16

02.

05. Nature of Topsoil : The nature of the soil in this area is gravelly soil. The top most gravelly soil, this layer which is thickness of about 1.0m from general ground level. 06. The size of the lease hold : The lease area has an extent of 4.00.0Ha. 07. Nature of ore body : In the area Rough Stone is of massive deposit and without much of geological disturbances.

i) The ultimate pit limits will be :

Boundary Barriers

Depth of Mining :

04. Size and slope of benches :

03. No. of benches :

Ultimate pit limits have been marked in the Conceptual Mining Plan.

In this case a barrier of 7.5m and 10.0m is left along the lease boundary

The depth of mining is about 41.0m (1.0m Gravel + 40.0m Royge Stone).

In Rough Stone, the bench 5.0m height and width 5.0m for next Five years.

The no. of benches will be nine including the Gravel bench.

In Gravel, the bench height will be 1.0m with 45° slope.

Ultimate pit limits have been marked in the Conceptual Plan in Plate Nos.VII

ii) Waste dumps :

இயக்குநர் அலுவலக் The mine waste (5%) will be dumped in the North, East and Southern Side of 14: 202 boundary barrier of the lease area. ଇ

Table No. 20

Pundie unin **Proposed Mine Waste Dump Dimensions:**

649.0m(L) x 7.5m(W) x 5.27m (H)= 25667 M³

100 Neem trees/per year is to be afforested all sides of the boundary barrier.

The Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

Blasting Pattern:

The massive formation shall be broken into pieces of portable size by drilling and Proposed Control Blasting using jack hammers and shot hole Blasting. Power factor of explosives for breaking such hard rock shall be in the order of 6 to 7 tonnes per K.g of explosives.

Proposed Control Blasting parameters are as follows.

Diameter of the hole	1	32-36 mm
Spacing	1	60 Cms
Depth	5	1 to 1.5m
Charge / Hole	:	D.Cord with water or 70 gms of gun powder or Gelatine.
Pattern of hole	1	Zig Zag
Inclination of hole	\$	70 ⁰ from the horizontal.
Quantity of rock broken	1	0.45 MT x 2.6 = 1.17 MT
Control Blasting efficiency @ 90%	120	1.17 x 90% = 1.05MT / hole
Charge per hole	2	140 gms of 25mm dia cartridge
Quantity of rock broken per day	3	325.13M ^P .

Table No.19

b) During dry season, Nitrate mixture as base charge and any conventional type of explosives as booster charge will be used:

In rainy season, it is preferable to use only conventional type of explosives like slurry based explosives. Since it is a small mine and the working of the mine is also seasonal, drilling will be done by contractors and supply of explosives will be done by authorized dealer. However, blasting will be done by a qualified mate or Blaster.

62 A

෯෭ඁ෬ඁ෧ඁ෧෨෭෯෦

c) Secondary Blasting:

Secondary blasting is not needed, since the primary blasting itself will take care of the required fragmentation of waste rock and mineral body.

பைக்குநர் அலுவலு

d) Storage of Explosives:

The explosive shall be supplied by the authorized contractor at the blasting site at the time of 61 blasting. The explosive shall be directly used so no storage of explosive is proposed. கருஷ்ணகிரி

e) Safety Precautions:

Roger in man 1. During handling all care shall be taken that no inflammable elements should be then

2. Only safety explosive container with explosive license shall be used for safe and secure transportation of explosive.

3. Efficient Siren will be blown prior to the blasting & after clearance of blasting.

f) Underground Mines :

Not applicable.

3.0 MINE DRAINAGE

The area is a slightly elevated topography. Rain water finds its natural coarse. The water table is touched at a depth of 82m in summer and at 76m in NE monsoon. The water table fluctuation is verified by observing the water levels in the above seasons in the nearby wells.

During the mining of Fourteenth benches, it may be necessary to pump out water. A 5 HP pump can easily deal rain water and seepage water and keep the mine dry. The pumped out water will be left out far away from the Northeastern boundary.

a. Depth of Mining:

The working in Rough Stone will reach a depth of 41.0m (1.0m Gravel + 40.0m Rough Stone in the next Five years.

b. Quantity and quality of water likely to be encountered:

In the next Five years, the water table will not pose any problem. However, to deal with storm water and seepage water, a diesel pump of 5 HP capacities is proposed.

In future, proper dewatering pumping arrangements to be made from pit bottom to nearby agricultural lands.

water table is at a depth of 82m in summer and at 76m in rainy seasch. The ground water will be collected in the sump for the deposition of solid particles. Once the suspended particles are deposited it will be pumped out for domestic purpose, dust suppression system, gardening and afforestation purpose. The excess water only will be pumped out to the ponds/closer water bodies-pond after the deposition of solid particles. There are no toxic elements found in the sump water.

The

21

To cope up with storm water and seepage water, an energy efficient electrical pump of 5 H.P capacity will be installed and the discharge will be left-out in the nallah/pond. Garland drains will be made all along the periphery of dumpsites to prevent the water carrying the wash-offs from the dumps. The water collected in the garland drains will flow towards a settling tank formed near by the dumpsite.

The water will be allowed to settle the wash offs from the dumps in the settling tank and pure and clear water will be utilized for Afforestation purposes and for haul roads arrest the dust generation.

4.0. STACKING OF MINERAL REJECT /SUB GRADE MATERIAL AND DISPOSAL OF WASTE

a) Indicate briefly the nature and quantity of Topsoil, Topsoil/waste and Mineral Reject to be disposed off.

Topsoil:

The Topsoil is gravelly soil. It occurs to a depth of 1.0m. The generation of Gravel for next Five years is about 799M³. Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

Sideburden:

There is no sideburden in this lease area.

Sub-grade Mineral:

There is no Sub-grade Mineral produced in the next Five years.

Mineral reject:

The mine waste(5%) will be dumped in the North, East & Southern side boundary barrier of the lease area.

> Proposed Mine Waste Dump Dimensions: $649.0m(L) \ge 7.5m(W) \ge 5.27m(H) = 25667 M^3$

b) The proposed dumping ground within the lease area be proved for presence of misence of mineral and be outside the UPL unless simultaneous backfilling is proposed or purely temporary dumping for a short period is proposed in mineralized area with technical constraints & justification.

Construction of garland drain in around the pit and dump and settling will be maxided to guard against the heavy rainwater.

Periodically sprinkling/spraying water on roads leading from working face to waste dump, so that areas are always kept wet to prevents emission of air borne dust. Retaining wall will be constructed around the pit.

c) Attach a note indicating the manner of disposal of waste, configuration and sequence of year wise buildup of dumps along with the proposals for protective measures.

The dumping of waste material, will be done steps to avoid sliding. One end of the waste dump to be matured for stabilization will be taken up for Afforestation.

Construction of garland drain in and around the pit. Settling tank will be provided to guard against the heavy rainwater.

Periodically sprinkling/spraying water on roads, so these areas are always kept wet to prevent emission of air borne dust.

Retaining wall and garland drain will be constructed around the pit. Afforestation programme will be carried out.

5.0 USE OF MINERAL AND MINERAL REJECT:

a) Describe briefly the requirement of end-use industry specifically in terms of

The entire mined out mineral is been utilized by the nearby Crusher unit in Krishnagiri.

b) Give brief requirement of intermediate industries involved in up gradation of

Mineral before its end-use:

There is no intermediate industries involved for up gradation of Mineral.

c) Give detail requirements for other industries, captive consumption, export,

Associated industrial use etc:

Not Applicable.

d). Physical specifications:

Rough stone texture is medium to coarse grained and is composed of recrystallized minerals, hence it is a metamorphic rock. The grains are subhedral, inequigranular, with a granoblastic texture. The grains are crystalline ic. Complete crystallization has occurred. Cleavage is absent. The color is dark olive green.

Supply of buyers :

Used in nearby Crusher units at Krishnagiri.

e) Give details of processes adopted to upgrade the ROM to suit the user Requirements: Not applicable.

6.0 PROCESSING OF ROM AND MINERAL REJECT :

a) If processing / beneficiation of the ROM or Mineral Reject is planner to the conducted briefly describe nature of processing / beneficiation. This may indicate size and grade of the material and concentrate (finished marketable product), recovery star

The minerals produced from the mines need only specific sorting & grading for Size, Grade, Recovery factor. No mineral beneficiation processing is involved desider mineral sector for upgrading.

Mineral Beneficiation of Mineral :

Not applicable, no beneficiation is being carried out at the mine. Since the entire mineral was supplied in raw form.

Beneficiation Test Done On Sub-Grade Mineral:

Not applicable, since no sub-grade mineral is anticipated.

b) Give a material balance chart with a flow sheet or schematic diagram of the Processing procedure indicating feed, product, recovery, and its grade at each stage of processing:

Not applicable.

c) Explain the disposal method for tailings or reject from the processing plant: Not applicable.

d) Quantity and quality of tailings /reject proposed to be disposed, size and capacity of tailing pond, toxic effect of such tailings, if any, with process adopted to neutralize any such effect before their disposal and dealing of excess water from the tailings dam:

Not applicable.

e) Specify quantity and type of chemicals if any to be used in the processing plant: Not applicable.

f) Specify quantity and type of chemicals to be stored on site / plant: Not applicable.

g) Indicate quantity (cum per day) of water required for mining and processing and sources of supply of water, disposal of water and extent of recycling:

Water balance chart may be given.

Not applicable.

वाल्या प्रमाधिवन

: M/s. Sri Devaraajaa 'M' Sand,* D.No.58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri District - 635 001. Tamil Nadu.

Location :

Extent	: 4.00.0 Ha.
S.F.Nos.	: 78/1A (P) & 78/1B (P)
Village	: Kothapetta
Taluk	: Krishnagiri
District	: Krishnagiri
Type of Lease Area	: Patta Land- Non-Forest area
Present land use pattern	: Quarrying of Rough Stone
Method of Mining	: Semi-mechanized
Mineral processing operation	: Nil

8.1 Environment Base line information: Attach a note on the status of baseline Information with regard to the following:

Existing land use pattern:

Sl. No.	Description	Present Area (Ha.)	Area in use during the quarrying period (Ha.)
01.	Area under Quarrying	2.50.0	3,42.0
02.	Infrastructure	Nil	0.01.0
03.	Roads	0.01.0	0.01.0
04.	Green Belt & Dump	0.01.0	0.56.0
06.	Unutilized Area	1.48.0	Nil
	TOTAL	4.00.0	4.00.0

Table No:20

Water Regime

Ground water is touched at a depth of 82m in summer and at 76m in NE monsoon season. The average rainfall is 800-900mm. There is no lake, reservoir or river near the area will be supplied from the public water supply system from hearby handers.

கருஷணகிரி

Air-Quality:

The air quality will be affected during the quarrying period due to blasting and lack hammer drilling, which will be within permissible limits. Since this is an open area, the impact on air quality will be to the minimum. The mine roads will be sprinkled with water before starting the transportation of rough stone and wastes to minimize air pollution.

Noise Level:

Quarrying of Rough Stone had been carried out by drilling and control blasting by using low power explosives, and hence, noise will be very minimum.

Flora and Fauna

Since the sub-seed area is a stony waste, it does not contain much vegetation. There is no report of existence of wild animals in this region.

Climate Conditions

The area receives rainfall of about 800mm to 900mm per annum and the rainy season is mainly from October-January during North East Monsoon. The summer is hot with maximum temperature of 38°C and winter encounters a minimum temperature of 18°C.

Human Settlement

The hamlets near the area are: Table No:21

Name of Hamlet	Population	Direction from the area	Distance	
Kallukurikki	240	N	1.5 kms.	
Kathinayanapalli	250	E	3.6 kms.	
Bayanapalli	280	W	2.0 kms.	
Krishnagiri	680	S	2.0 kms.	

Public building, Places of worship and Monuments

There is no public building, places of worship or archaeological or national monuments near the area. There is no wild life or bird sanctuary or no reserve or any protected social forest closer to the area. 8.2 Impact Assessment: Attach an Environmental Impact Assessment Statement Describing the impact of mining and beneficiation on environment on the following: Quisept Hanavage

0.000

1 JAN 2023

കന്നത്രത്തെകിന്

teria torno

3) **Environmental Impact Assessment Statement:**

The factors that should be covered in this Para are: -

- 01. Land
- 02. Air Quality
- 03. Water Quality
- 04. Noise Levels
- 05. Vibration Levels
- 06. Water Regime
- 07. Socio-Economics
- 08. Historical Monuments etc.

Land:

It is a working mine. There is no proposal for back filling and reclamation. Before closure of the mine, a parapet wall will be constructed to prevent inadvertent entry of cattle and human beings. The dumps will be vegetated to prevent sliding. After closure of the mine, the pit will be allowed to collect seepage and rain water.

This will help to charge the nearby agricultural wells. Fish forming will also be attempted.

Afforestation will be attempted in the boundary barrier.

Air-Quality:

The air quality will be affected during the quarrying period due to blasting and jack hammer drilling, which will be within permissible limits. Since this is an open area, the impact on air quality will be to the minimum. The mine roads will be sprinkled with water before starting the transportation of rough stone and wastes to minimize air pollution.

Water Quality:

Mining operation will not produce any toxic effluent in the form of solid, liquid or gas. The existing water quality will not be affected by mining operation. The Surface rain water flow through the seasonal water course as usual.

Noise Level:

Quarrying of Rough Stone had been carried out by drilling and control blasting by using low power explosives, and hence, noise will be very minimum.

Vibration levels:

The ground vibration will be caused due to movement of earth moving equipment and blasting. But the impact on the environment will be negligible, since the quantity of explosives used will be very small and the movement of equipment will be intermittent.

Water Regime:

Mining operation will not produce any toxic effluent in the form of solid, liquid or gas and will not have any impact on quality of water and also on ground water Subscript States

The local population is mostly agriculture based. Agricultural is done you's seasonal basis. Mining in this area is an avenue for employment. Mining certainly has created an impact in the Socioeconomic standards of the local people. It has improved the life style of the local people and has improve the standard of living.

Historical Monuments:

There is no historical or Archaeological monument near the area. The mining operation does not have any impact on these aspects.

8.3 PROGRESSIVE RECLAMATION PLAN:

Since, it is an existing mine, the only proposal now is to plant 100 Neem trees every year in the boundary barrier. A retaining wall will be constructed around the pit. Please refer Plate Nos.V. The Afforestation programme for the next Five years are described as follows :

Table No. 22

Year	lear Name of the No species spe		Interval	Area in Ha.	Survival rate
2023-2024	Neem	100	5m	0.110	50%
2024-2025	Neem	100	5m	0.11.0	50%
2025-2026	Neem	100	5m	0.11.0	50%
2026-2027	Neem	100	5m	0.11.0	50%
2027-2028	Neem	100	5m	0.12.0	50%
TOTAL		500		0.56.0	

After complete extraction of mineral, the pit will be allowed to collect rain and seepage water to serve as a reservoir to charge the nearby wells. Fish culture will also be attempted. A bund will be constructed around the pits.

8.3.1. MINED OUT LAND:

It is an existing mining lease. There is no proposal for back filling and reclamation at this stage.

01. The area covered by pits	: 3.42.0 Ha.
02. The area covered by waste dumps & Afforestation	: 0.56.0 Ha.
03. The area covered by roads, infrastructure	: 0.02.0 Ha.
04. Unutilized area	: Nil

8.3.2. Topsoil management:

The Topsoil is Gravel. It will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after availing permission 2000 and paying necessary seigniorage fees to the Government. 14: 2023

8.3.3. Tailing Dam Management

Does not arise.

8.3.4 Acid mine drainage, if any and its mitigative measures. Not applicable.

8.3.5 Safety And Security

All the quarry workers will be provided with safety equipments like helmets, Mine Goggles, Ear plugs, Ear muffs, Dust mask, reflector jackets and Safety Shoes as personal protective device as per the specification approved by Director of mines safety. Periodically medical checkup will be conducted for all workers for any mine health related problems. Proper training and induction will be given by qualified and experienced safety officer to all employed about the safe and systematic Rough stone quarrying operations. The drillers and workers will be sent for vocational training periodically to carry out the quarrying operations scientifically to safe guard the men machinery and mineral and to create awareness of conventional opencast quarrying operations.

Parapet wall or bund have been constructed on all sides of the openings. Proper pumping arrangements during rainy season. Trees planted all along the mining lease boundary.

8.4 Disaster Management And Risk Assessment

8

Ş)

The nearby hamlet is Krishnagiri which is at a distance of 2.0 kms where facilities like District government Hospital etc., are available. Mode of transport available is Jeep. All the employee will be shifted to the nearest hamlet Krishnagiri. Mobile phone will be provided to the Mines Manager. The Manager/Supervisor will be provided with a mobile phone. The Mining area is very small. There is no chance for risk for any disaster. However, the details of contact person are given :

ORDER:

Sri Devaraajaa M. Sand, No. 588 Gandhi Nagar, Krishnagiri 635001 have applied for the grant of quarry lease to quarry Rough stone for a period of five years over an extent of 4.00.0 hects. in patta land in. S.F.Nos. 78/1A (part) (1.75.0) and 78/1B (2.25.0) of Kothapetta Village of Krishnagiri Taluk and District vide in their application 1st cited. 2. The Revenue Divisional Officer, Krishnagiri had furnished land availability and inspection report vide in the reference 3rd cited. From her report, the following facts are revealed.

a) The applied area in S.F.Nos. 78/1A over an extent of 2.00.0 Hects. Stands registered in the name of Selvi. A.M. Shivani D/o. Mathiyazhagan, vide patta No. 1515, the applied area in S.F.No. 78/1B (part) over an extent of 11.92.0 Hects stands registered in the name of Tmt. K.M.Vijaya W/o D. Madhiazhagan vide patta No. 1521 in Kothapetta Village records. Thiru D. Madhiazhagan and Tmt. K.M. Vijaya are the partners of M/s. Devarak M. Sand and they have obtained consent for S.F.No. 78/1A over an extent of 2.00.0 Hects. From the pattadar Selvi. A.M. Shivani for a perio do 29 years from 01.06.2017 to 31.5.2049.

b) There is no residential area, Natham, School Buildings, Place of worship are situated within 300 mts. Radial of proposed from the applied area.

c) There is No Odai, liver EB lines, Telephone lines, situated within 50 mts

d)There is no objection for the A1 Notice published in Kothapetta Village on 11.08.2017.

e) There is no litigation in the area, and it is not acquired by the Government and it is not registered in the prohibitory area book.

f) Approach road to the area is available from Krishnagiri- Maharajakadai Road through the remaining portion of the patta land S.F No. 78/1B of the applicant.

0

1

g) Finally he had recommended for the issue of quarry lease for Rough Stone to the applicant for a period of five years over an extent of 4.00.0 hects in patta land S.F No. 78/1A (part) (1.75.0) and 78/1B (part) (2.25.0) of Kothapetta Village, Krishnagiri Taluk and District subject to the condition that no quarrying should be carried out in the adjacent Government land and no hinderance should be given to the public.

3) Deputy Director (G&M), Krishnagiri had inspected the area on 17.11.2017 and furnished his technical report vide in the reference 4th cited. From his report the following facts are revealted.

a) The applied area in S.F No. 78/1A (2.00.0 Hect) Stands registered in the name of Selvi A.M. Shivani D/o Mathiyazhagan, vide patta No. 1515 in Kothapetta Village, Records. Selvi A.M. Shivani had given surface rights to the applicant firm vide a lease deed dated 18.06.2016. The applied area in S.F No. 78/1B (11.92.0 Hects) stands registered in the name of Tmt. K.M. Vijaya, W/o D. Mathiyazhagan vide patta No. 1521 in Kottapetta Village, Records. Tmt. K.M. Vijaya, had given surface right to the applicant firm vide a notarized deed for a period of six years from 24.11.2017 to 23.11.2023.

b) The area is situated on the flank of a small mount having a height of 8 mts. Sipe of the area towards North and East. Topsoil cover is very meager and observed only interstitial filling of the boulders. Bouldry outcrops area observed all over the area. The Country rock of the area is granitic Gaciss having a general trend of NE-SW

almost vertical dipping. The rock type available in the area is suitable for making rough stone, cut stone and jellys.

c) The area in virgin.

d) Approach road to the area is available.

வியியல் மற்றும் e) No habitation is situated within 300 meters radial distance from the applied arca.

BUCHE

14% 200

കന്നപ്പെടുത്തകിനി

f) Government lands in S.F No. 56/1 is situated on the South side of the applied area. Besides there is no permanent structures area observed within 50 mts radial distance from the applied area.

g) There is no fauna and flora of botanical importance noticed in the applied area. The village in which the lease applied area is situated is not classified as a

h) Four boundaries of the applied area.

j) Finally, he had recommended that, a quarry lease for rough stone may be granted to M/s. Devaraajaaa M.Sand over an extent of 4.00.0 Hectars of patta lands in S.F No. 78/1A (part) and 78/1B (part) of Kothapetta Village Krishnagiri Taluk and District for a period of 5 years from the date of execution of lease deed under the provisions of Rule 19 (1) of Tamil Nadu Minor Mineral Concession Rules 1959, Subject to the following conditions.

A safety zone of 7.5 mts should be left out for the adjoining patta lands.
 A safety zone of 10 mts should be left out for the Government land S.F
 No. 56/1 situated on the south west of the applied area.

4. As per the amended provisions of Rule 41 & 42 of Tamil Nadu Minor Mineral Conession Rules 1959, the approved mining plan and Environmental Clearance are made mandatory for the grant of quarry lease for minor Minerals also.

5) Based on the recommendation of the Revenue Divisional Officer, Krishnagiri and Deputy Director (Geology and Mining), Krishnagiri precise area had been given over an extent of 4.00.0 Hects in S.F.Nos. 78/1A (part) and 78/1B (part) of Kothapetta Village, Krishnagiri Taluk and District for the proposed grant of quarry lease for rough stone for a period of five years from the date execution of lease deed subject to certain special conditions in addition to the usual conditions stipulated for rough stone quarry and the applicant had been directed to submit the Approved Mining Plan and Environmental Clearance from the District Level Environmental Impact Assessment Authority, Krishnagiri.

0

6

ð

9) The applicant have submitted the approved mining plan approved by the Deputy Director of Geology and Mining vide in the reference 5th cited and the Environment clearance given by the District Level Environment Impact Assessment Authority Krishnagiri in the reference 6th cited.

10) In the Deputy Director of Town & Country Planning Dharmapuri letter RC No. 1654/2017/Tha.ma dated 08.01.2018 it is informed that the lease granted area are classified as "Unclassified area" and if there is no residential area and other constructions are situated within 300 mts. From the said area, there is no objection for the carrying out of quarrying a activity in the area. In the G.O Ms. No. 129 Housing and Urban Development (UD4 (3)) Department dated 08.07.2016 construction of residential, commercial, industrial or institutional or any structure for occupation shall not be allowed within 300 mts from any quarry area is not allowed.

9) Further, the applicant had submitted the paper cuttings in which the grant of Environment Clearance is published in the daily news paper as per the condition imposed by the State Level Environment Impact Assessment Authority.

10) In view of the above a quarry lease for rough stone is here by granted to M/s. Devaraajaaa M. Sand No. 58B Gandhi Nagar, Krishnagin over an lettent of 4.00.0 Hects in patta land S.F.Nos. 78/1A (part) (1.75.0) and 78/1B (2.25 of of Kothapetta Village, Krishnagiri Taluk and District under the provisions of Rule 1958 (1) of Tamil Nadu Minor Mineral Concession Rules, 1959 for a period of five years from the date of execution of lease deed subject to the following special conditions and conditions.

- a) A safety zone of 7.5 mts should be left out for the adjacent patta lands.
- b) A safety zone of 10 mts should be left out for the Government land S.F No. 56/1 situated on the south west of the applied area.
- c) At any cost no quarrying should be carried out in the adjacent Government land and no hinderance should be given to the public.
- d) Mining plan shall be prepared by in corporating all the details as proposed in the Minor Mineral Conservation and Development Rules 2010.
- e) Mining Plan shall be prepared by the in corporating all the details as proposed in the letter No. SEIAA-TN/Minor Minerals/2012 dated 17.04.2013of the State Level Environment Impact Assessment Authority, Tamil Nadu.
- f) Quarrying activity should be carried out only from 7.00 A.M to 5.00 P.M.
- g) The grantee should sent the notice for opening of the quarry to the Director General of Mines safety, Bangalore.

i) Quarrying operation should be carried out only after appointing Mines Manager/Mines Mate and Foremen.

j) At any cost the blasting activity should be carried out under the Supervistion of Mines Mate.

k) If any accident occur in the quarry area the lessees should give immediate . intimation to the Director of Mines safety Bangalore and District Collector, Krishnagiri and lessee is solely held responsible for any violation.

 The grantee should remit Rs.10000/- towards security deposit and Rs. 3,000/- towards area assessment in the relevant head of account and submit the original challans.

m) The grantee should submit the non judicial stamp papers for the value of Rs. 6,05,500/- and to execute the lease deed with the District Collector in the prescribed time limit.

n) The grantee should remit a sum of Rs. 5,00,000 (Rupees five laksh) in the form of fixed deposit Jointly in the name of the District Collector and the grantee and submit the receipt of the fixed deposit caution deposit towards the restoration of the quarried pit.

11) Conditions imposed for rough stone quarrying:

- 1.
- குத்தகை காலம், குத்தகை ஒப்பந்தப்பத்திரம் நிறைவேற்றும் நாளிலிருந்து ஐந்து ஆண்டுகளாகும். குவாரி குத்தகை வழங்கப்பட்ட இடத்தில் குவாரி செய்யும் வேலிக்கல் / குண்டுக்கல் / கட்டுக்கல் / சக்கை மற்றும் ஜல்லி ஆகியவற்றை மேற்படி இடத்திலிருந்து வெளியில் எடுத்துச் செல்வதற்கு முன்பு அவை ஒவ்வொன்றிற்கும் அவற்றிற்குரிய வீதத்தில் சீனியரேஜ் தீர்வை செலுத்தி இவ்வலுவலகத்தில் பாமிட் மற்றும் நடைச்சட்டு பெற்ற பின்புதான் மேற்படி கனிமங்களை குவாரியிலிருந்து வெளியில் எடுத்துச் செல்ல வேண்டும். 1959 ஆம் வருடத்திய தமிழ்நாடு சிறுகனிம சலுகை விதிகள், இணைப்பு II–ல் அவ்வப்போது அரசால் நிர்ணயிக்கப்படும் வீதத்தில் பரப்பு தீர்வை செலுத்த வேண்டும். மேற்கண்ட தொகையைத் தவிர அரசால் அவ்வப்போது நிர்ணயிக்கப்படும் இதர தொகைகளையும் குத்தகைதாரர் செலுத்த வேண்டும்.

- 29. குத்தகைதாரா குவாரியில் குழந்தை தொழிலாளர்களை பணியமாத்தக்கூடாது.

III) a) The conditions imposed by the Tamil Nadu Pollution Control Board in the consent to establishment in Air and Water Pollution Act should be strictly adhered and the consent should be renewed periodically.

81 A

b) The Environment Clearance issued by the DEIAA, Tamil Nadu should be renewal within the prescribed time limit.

IV) Conditions imposed .

1. (i) This Environmental Clearance is granted to Mining of Rough stone for the peoduction quantity of 10,50,884 Cbm of rough stone for the period of five years from the date of execution of the mining lease period.

(ii) The approved quantity of rough stone to be quarried = 10,80,884 cbm

(iii) Depth of mining permitted = 71 mts.(25 Mts. Above ground level and 46 mts below ground level) from the period of 5 years.

2.) Conditions to complied before the commencing of mining operation

 The applicant has to obtain land use classification as industrial use before issue / renewal of mining lease.

NOC from the Standing committee of the NBWL shall be obtained, if protected areas are located within 10 km from the proposed project site.

3. The project proponent shall comply the conditions laid down in section V Rule 36 of Tamil Nadu Minor Mineral Concession Rules, 1959.

4. A copy of the Environment Clearance letter shall be sent by the proponent to the concerned Panchayat, Town Panchayat / Panchayat union/ Municipal Corporation, Urban Local Body and the Local NGO, if any, 'from whom suggestions/ representations, if any, were received while processing the proposal. The clearance letter shall also be put on the website of the proponent and also kept at the site, for the general public to see.

⁶ 5. Quarry lease area should be demarca ted on the ground with wire fencing to show the boundary of the lease area on all sides with red flags on every pillar shall be erected before commencement of quarrying.

6. The proponent shall ensure that First Aid Box is available at site.

7. The excavation activity shall not alter the natural drainage pattern of the area.

8. The excavated pit shall be restored by the project proponent for useful purposes. In this regard, the proponent shall deposit a sum of Rs. 5,00,000/- (Rupees Five Lakhs only) in the name of District Collector, Krishnagiri in the form of fixed deposit. The said fixed deposit will be refunded after restoration of pit after end of the lease period.

2

 The proponent shall quarry and remove only in the permitted areas as per the approved Mining Plan details.

10. The quarrying operation shall be restricted between 7AM and 5 PM.

11. The proponent shall take necessary measures to ensure that there shall habitations, by way of pollution to the course operation on the nearby human habitations, by way of pollution to the environment.

12. A minimum distance of 15.mts. From any civil structure shall be kept] LAN 2023 from the periphery of any excavation area.

கிருவிலாகிர 13. Depth of quarrying shall be 2m above the ground water table /approved up for its depth of mining whichever is lesser to be considered as a safe guard against Environmental Contamination and over exploitation of resources.

14. The mined out pits should be backfilled where warranted and area should be suitably landscaped to prevent environmental degradation. The mine closure plan as furnished in the proposal shall be strictly followed with back filling and tree plantation.

15. Wet drilling method is to be adopted to control dust emissions. Delay detonators and shock tube initiation system for blasting shall be used so as to reduce vibration and dust.

16. Drilling and blasting shall be done only either by licensed explosive agent or by the proponent after obtaining required approvals from Competent Authorities.

17. The explosives shall be stored at site as per the conditions stipulated in the permits issued by the licensing Authority.

18. Blasting shall be carried out after announcing to the public adequate through public address system to avoid any accident.

19. A study has to be conducted to assess the optimum blast parameters and blast design to keep the vibration limits less than prescribed levels and only such design and parameters should be implemented while blasting is done. Periodical monitoring of the vibration at specified location to be conducted and records kept for inspection.

20. The Proponent shall take appropriate measures to ensure that the GLC shall comply with the revised NAAQ norms notified by MoEF, GoI on 16.11.2009.(GLC = Ground Level Concentration), (NAAQ= Noise and Ambient Air

21. The following measures are to be implemented to reduce Air Pollution during transportation of mineral

- i. Roads shall be graded to mitigate the dust emission.
- ii. Water shall be sprinkled at regular interval on the main road and other service roads to suppress dust.

22. The following measures are to be implemented to reduce Noise Pollution

Proper and regular maintenance of vehicles and other equipment. L

ii. Limiting time exposure of workers to excessive noise.

- iii. The workers employed shall be provided with protection equipment and
- iv. Speed of trucks entering or leaving the mine is to be limited to moderate speed of 25 kmph to prevent undue noise from empty trucks.

23. Measures should be taken to comply with the provisions laid under Noise (Regulation and Control) (Amendment) Rules, dt:11.01.2010 issued by the MoE&F, GoI to control noise to the prescribed levels. 2010.

24. Suitable conservation measures to augment groundwater resources in the area shall be planned and implemented in consultation with Assistant Director, Ground Water Division, PWD, Dharmapuri.

25. Rain water harvesting to collect and utilize the entire water falling in land area should be provided by construction of a storage tank with a capacity of 5,00,000 litrs and the rain water harvested in the entire quarry area should be stored in it and used for the quarry purpose like dust prevention, wet drilling. providing water for green belt etc.

26. Permission from the competent authority should be obtained for drawl of ground water, if any, required for this project.

27. Topsoil, if any, shall be stacked properly with proper slope with adequate measures and should be used for plantation purpose:

28. The following measures are to be adopted to control erosion of dumps:-

i. Retention/ toe walls shall be provided at the foot of the dumps.

ii. Worked out slopes are to be stabilized by planting appropriate shrub / grass species on the slopes.

-30

29. Waste oils, used oils generated from the EM machines, mining operations, if any, shall be disposed as per the Hazardous Wastes (Management, Handling, and trans boundary movement) Rules, 2008 and its amendments thereof to the recyclers authorized by TNPCB.

30. Concealing the factual data or failure to comply with any of the conditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of Environment (Protection) Act, 1986.

31. Rain water getting accumulated in the quarry floor shall not be discharged directly to the nearby stream or water body. If it is to be let into the nearby water body, it has to be discharged into a silt trap on the surface within the (lease area and only the overflow after allowing settling of soil be let into the nearby waterways. The silt trap should be of sufficient dimensions to catch all the silt water being pumped out during one season. The silt trap should be cleaned of all the deposited silt at the end of the season and kept ready for taking care of the silt in the next season. Photographs of the silt trap should be furnished before commencing quarry operation.

32. The lease holder shall undertake adequate safeguard measures during extraction of material and ensure that due to this activity, the hydro geolescal regime of the surrounding area shall not be affected. Reprint additional states are a shall not be affected. Reprint additional states are a shall be carried out around the mine lease are a during the mining operation. If at any stage, that the ground water is getting depleted carried out. The Assistant Director Ground water Division, PWD be an operation.

33. No tree-felling shall be done in the leased area, except only with the

34. To take up environmental monitoring of the proposed quarry site before, during and after the mining activities including vibration study data, water, air & flora/fauna environment, slurry water generated/disposed and method of disposal, involving a reputed academic Institution and it should be monitor by the District Enviornmental Engineer, TNPCB, Hosur on yearly basis.

35. It shall be ensured that the total extent of nearby quarties (existing, abandoned and proposed) located within 500 meter radius from the periphery of this quarry is not exceeding 25.00.0 hectares within the mining lease period of this application.

36. It shall be ensured that there is no habitation is located within 500 meter radius from the periphery of the quarry site and also ensure that no hindrance will be caused to the people of the habitation located within 500m radius from the periphery of the quarry site

37. Ground water quality monitoring should be conducted once in 3 Months.

38. Transportation of the quarried materials shall not cause any hindrance to the Village people/Existing Village road.

39. Free Silica test should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF, GOI once in three months.

40. Air sampling at intersection point should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF, GOI periodically once in six months.

41. Bunds to be provided at the boundary of the project site and it should be properly maintained.

42. The project proponent shall undertake plantation / afforestation work by planting the native species on all side of the lease area at the rate of 400/Ha. Suitable tall tree saplings should be planted on the bunds and other suitable areas in and around the work place.

43. At least 10 Neem trees should be planted around the boundary of the quarry site.

44. Floor of excavated pit to be levelled and sides to be sloped with gentle slope (Except for granite quarries) in the mine closure phase.

45. The Project Proponent shall ensure a minimum of 2.5% of the annual turnover will be utilized for the CSR Activity

46. The Project Proponent shall provide solar lighting system to the nearby villages

47. The Project Proponent shall comply with the mining and other relevant rules and regulations where ever applicable.

48. Rainwater shall be pumped out Via Settling Tank only.

49. Earthen bunds and barbed wire fencing around the pits with green belt all along the boundary shall be developed and maintained.

50. As per MoEF & CC, GoI, Office Memorandum dated 30.03.2015, prior clearance from Forestry &Wild Life angle including clearance from obtaining committee of the National Board for Wild life as applicable shall' be obtained before starting the quarrying operation, if the project site is located within 10KM from National Park and Sanctuaries.

51. The quarrying activity shall be stopped if the entire quantity indicated in the Mining plan is quarried even before the expiry of the quarry lease period and the same shall be monitored by the District Authorities.

52. Safety equipments to be provided to all the employees.

53. Safety distance of 50 m has to be provided in case of railway, reservoir, canal / odai.

54. The Assistant / Deputy Director, Department of Geology & Mining shall ensure that the proponent has engaged the blaster with valid Blasting license / certificate obtained from the competent authority before execution of mining lease.

55. The proponent shall furnish the Baseline data covering the Air, Water, Noise and land environment quality for the proposed quarry site before execution of mining lease.

56. The proponent shall erect the pillars in accordance with the Rules for depicting GPS details in the earmarked quality for the proposed quarry site before execution of mining lease.

57. The proponent shall furnish the date obtained from the Public Works Department regarding the details of ground water table in the quarry site.

58. The proponent has to display the name board at the quarry site showing the details of Proponent, lease period, extent etc., with respect to the existing activity before execution of mining lease. 59. The proponent has to display the name board at the quarry site showing the details of proponent, leased period, extent etc. with respect to the existing activity before execution of mining.

60. Heavy earth machinery equipments if utilized, after getting approval from the competent authority.

61. The environmental norms shall be monitored by the District Environmental Engineer, Tamil Nadu Pollution Control Board, Hosur.

62. The Assistant Director Public Works Department, Ground water Division Dharmapuri shall monitor whether the quarrying activity is carried out above the ground water level on yearly basis.

63.NOC for sanitary certificate shall be obtained from the Deputy Director of Health Services, Krishnagiri.

64. Yearly medical examination of the quarry workers should be carried out by a registered medical practitioner and the report should be filed in the quarry office in a separate file and copy should be sent to the Deputy Director, Health Services, Krishnagiri.

65. Closed circuit camera should be erected at the quarry site and the passage of vehicles in and out of the quarry should be recorded and the footage of the recording of the camera should be maintained and should be produced before the enforcing officials when ever called for.

66. Vehicles used for transportation of quarried materials should be fitted with GPS and monitored.

67. Pit mouth register should be maintained in on line.

68. Auditor report on the annual turn over amount should be submitted to the District Collector within one month from the end of the financial year.

69. 02.5% of the turn over amount should be utilized for the CSR activity after consultation with the District Collector.

B. General Conditions:

- 1. EC is given only on the factual records, documents and the commitment furnished in non judicial stamp paper by the proponent.
- 2. The Proponent shall obtain the Consent for Establishment from the TNPC Board before commencing the activity.
- No change in mining technology and scope of working should be made without prior approval of the DEIAA. Krishnagiri.
- 4. No change in the calendar plan including excavation, quantum of mineral (minor mineral) should be made.
- 5. Effective safeguard measures, such as regular water sprinkling shall be carried out in critical areas prone to air pollution and having high levels of particulate matter such as loading and unloading point and all transfer points. Extensive water sprinkling shall be carried out on haul roads. It should be ensured that the Ambient Air Quality parameters

conform to the norms prescribed by the Central Pollution Control Board in this regard.

5. Effective safeguards shall be adopted against health risks on account of breeding of vectors in the water bodies created due to excavation of

- 7. A berm shall be left from the boundary of adjoining field having a width equal to at least half the depth of proposed excavation.
- 8. Mineral handling area shall be provided with adequate number of high efficiency dust extraction system. Loading and unloading areas including all the transfer points should also have efficient dust control arrangements. These should be properly maintained and operated.
- 9. Vehicular emissions shall be kept under control and be regularly monitored. The mineral transportation shall be carried out through the covered trucks only and the vehicles carrying them mineral shall not be
- 10. Access and haul roads to the quarrying area should be restored in a mutually agreeable manner where these are considered !unnecessary after extraction has been completed.
- 11. All Personnel shall be provided with protective respiratory devices including safety shoes, Masks, gloves etc. Supervisory people should be provided with adequate training and information on safety and health aspects. 4. A copy of the Environment Clearance letter that the Standard and proponent to the concerned Panchayat, Town Panchayat, Panchayat, union/ Municipal Corporation, Urban Lecal Body and University Panchayat, if any, from whom suggestions/ representations, if any, were received while processing the proposal. The clearance letter shall also be put on the website of the proponent and also kept at the site, for the general public to see.

10

இயக்கநர் அலுவல்

 Quarry lease area should be demarcated on the ground with wire fencing to abow the boundary of the lease area or all sides with red flags on every pillar shall be erected before commencement of quarrying.

6. The proponent shall ensure that First Aid Box is available at site.

The excavation activity shall not alter the natural drainage pattern of the area.

8. The excavated pit shall be restored by the project proponent for useful purposes. In this regard, the proponent shall deposit a sum of Rs. 5,00,000/- (Rupees Five Lakhs only) in the name of District Collector, Krishnagiri in the form of fixed deposit. The said fixed deposit will be refunded after restoration of pit after end of the lease period.

 The proponent shall quarry and remove only in the permitted areas as per the approved Mining Plan details.

 The quarrying operation shall be restricted between 7AM and 5 PM.

11. The proponent shall take necessary measures to ensure that there shall not be any adverse impacts due to quarrying operation on the nearby human habitations, by way of pollution to the environment.

 A minimum distance of 15 mts. From any civil structure shall be kept from the periphery of any excavation area.

13. Depth of quarrying shall be 2m above the ground water table /approved depth of mining whichever is lesser to be considered as a safe guard against Environmental Contamination and over exploitation of resources.

14. The mined out pits should be backfilled where warranted and area should be suitably landscaped to prevent environmental degradation. The mine closure plan as furnished in the proposal shall be strictly followed with back filling and tree plantation.

15. Wet drilling method is to be adopted to control dust emissions. Delay detonators and shock tube initiation system for blasting shall be used so as to reduce vibration and dust.

16. Drilling and blasting shall be done only tither by licenself explosive agent or by the proponent after obtaining tempired approvals from Competent Authorities.

கயக்குநர் அலுவல

17. The explosives shall be stored at site as per the conditions stipulated in the permits issued by the licensing Authority.

 Blasting shall be carried out after announcing to the public adequate through public address system to avoid any accident.

19. A study has to be conducted to assess the optimum blast parameters and blast design to keep the vibration limits less than prescribed levels and only such design and parameters should be implemented while blasting is done. Periodical monitoring of the vibration at specified location to be conducted and records kept for inspection.

20. The Proponent shall take appropriate measures to ensure that the GLC shall comply with the revised NAAQ norms notified by MoEF, GoI on 16.11.2009.(GLC = Ground Level Concentration), (NAAQ= Noise and Ambient Air Quality).

 The following measures are to be implemented to reduce Air Pollution during transportation of mineral

- i. Roads shall be graded to mitigate the dust emission.
- Water shall be sprinkled at regular interval on the main road and other service roads to suppress dust.

22. The following measures are to be implemented to reduce Noise Pollution

- Proper and regular maintenance of vehicles and other equipment.
- ii. Limiting time exposure of workers to excessive noise.
- iii. The workers employed shall be provided with protection equipment and earmuffs etc.
- iv. Speed of trucks entering or leaving the mine is to be limited to moderate speed of 25 kmph to prevent undue noise from empty trucks.

23. Measures should be taken to comply with the provisions laid under Noise Pollution (Regulation and Control) (Amendment) Rules, 2010, dt:11.01.2010 issued by the MoE&F, GoI to control noise to the prescribed levels.

24. Suitable conservation measures to augment groundwater resources in the area shall be planned and implemented in consultation with Regional Director, CGWB. Suitable measures should be taken for rainwater harvesting.

JAN 2023

26. Permission from the competent authority should be obtained for drawl of ground water, if any, required for this project.

27. Topsell, if any, shall be stacked properly with proper slope with adequate measures and should be used for plantation purpose.

28. The following measures are to be adopted to control erosion of dumps:-

- Retention/ toe walls shall be provided at the foot of the dumps.
- Worked out slopes are to be stabilized by planting appropriate shrub / grass species on the slopes.

29. Waste oils, used oils generated from the EM machines, mining operations, if any, shall be disposed as per the Hazardous Wastes (Management, Handling, and trans boundary movement) Rules, 2008 and its amendments thereof to the recyclers authorized by TNPCB.

30. Concealing the factual data or failure to comply with any of the conditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of Environment (Protection) Act, 1986.

31. Rain water getting accumulated in the quarry floor shall not be discharged directly to the nearby stream or water body. If it is to be let into the nearby water body, it has to be discharged into a silt trap on the surface within the flease area and only the overflow after allowing settling of soil be let into the nearby waterways. The silt trap should be of sufficient dimensions to catch all the silt water being pumped out during one season. The silt trap should be cleaned of all the deposited silt at the end of the season and kept ready for taking care of the silt in the next season. Photographs of the silt trap should be furnished before commencing quarry operation.

32: The lease holder shall undertake adequate safeguard measures during extraction of material and ensure that due to this activity, the hydro-geological regime of the surrounding area shall not be affected. Regular monitoring of ground water level and quality shall be carried out around the mine lease area during the mining operation. If at any stage, that the ground water is getting depleted carried out. The Assistant Director Ground water Division, PWD Dharmpuri shall

(4). The project proponent shall comply the conditions laid down in the Spir Shall and Section V, Rule 36 of Tamil Nadu Minor Minerals Concession Rules 1955 Superstant by the

(5). A copy of the Environment Clearance letter shall be sent by the proponent to the concerned Panchayat, Town Panchayat / Panchayat (Infon)AN 2023 Municipal Corporation, Urban Local Body and the Local NGO, if any, from whom suggestions/ representations, if any, were received while processing the proposed of the proponent and also. The clearance letter shall also be put on the website of the proponent and also.

(6). Quarry lease area should be demarcated on the ground with wire fencing to show the boundary of the lease area on all sides with red flags on every pillar shall be erected before commencement of quarrying.

(7). The proponent shall ensure that First Aid Box is available at site.

(8). The excavation activity shall not alter the natural drainage pattern of the area.

(9). The excavated pit shall be restored by the project proponent for useful purposes. In this regard, the proponent shall deposit a sum of Rs.5,00,000/-(Rupees Five Lakhs only) in the name of District Collector Krishnagiri in the form of fixed deposit. The said fixed deposit will be refunded after restoration of pit after end of the lease period.

(10). The proponent shall quarry and remove only in the permitted areas as per the approved Mining Plan details.

(11). The quarrying operation shall be restricted between 7 AM and 5 PM.

(12). The proponent shall take necessary measures to ensure that there shall not be any adverse impacts due to quarrying operation on the nearby human habitations, by way of pollution to the environment.

(13). A minimum distance of 15 mts. From any civil structure shall be kept from the periphery of any excavation area.

(14). Depth of quarrying shall be 2m above the ground water table /approved depth of mining whichever is lesser to be considered as a safe guard against Environmental Contamination and over exploitation of resources.

(15). The mined out pits should be backfilled where warranted and area should be suitably landscaped to prevent environmental degradation. The mine closure plan as furnished in the proposal shall be strictly followed with back filling and tree plantation.

(16). Wet drilling method is to be adopted to control dust emissions. Delay detonators and shock tube initiation system for blasting shall be used so as to reduce vibration and dust.

| 7.  |                                                            | Cost                                                                                                                                                             |                                                                                                                                                                                                                                 |  |  |

## Conditions to be Compiled before / during commencing operations:-

(1) The project proponent shall advertise in at least two local newspapers widely circulated in the region, one of which shall be in the vernacular language informing the public that

- i) The project has been accorded Environmental Clearance.
- Copies of clearance letters are available with the Tamil Nadu Pollution Control Board.
- Environmental Clearance may also be seen on the website of the State Level Environment Impact Assessment Authority.
- iv) The advertisement should be made within 7 days from the date of receipt of the clearance letter and a copy of the same shall be forwarded to the SEIAA.

(2). The applicant has to obtain land use classification as industrial use before issue/renewal of mining lease.

(3). NOC from the Standing committee of the NBWL shall be obtained, if protected areas are located within 10 Km from the proposed project site. (17). Drilling and blasting shall be done only either by licensed explosive agent or by the proponent after obtaining required approvals from Competent automotive Authorities.

(18). The explosives shall be stored at site as per the conditions stipulated in 27 JAN 2004 the permits issued by the licensing Authority.

the permits issued by the licensing from (19). Blasting shall be carried out after announcing to the public adequate signature through public address system to avoid any accident.

(20). A study has to be conducted to assess the optimum blast parameters and blast design to keep the vibration limits less than prescribed levels and only such design and parameters should be implemented while blasting is done. Periodical monitoring of the vibration at specified location to be conducted and records kept for inspection.

(21). The Proponent shall take appropriate measures to ensure that the GLC shall comply with the revised NAAQ norms notified by MoEF, GoI on 16.11.2009. (GLC = Ground Level Concentration), (NAAQ = Noise and Ambient Air Quality)

(22). The following measures are to be implemented to reduce Air Pollution during transportation of mineral

Roads shall be graded to mitigate the dust emission.

L'ALTERTERTERTERTERTERTERTERTERTER

(ii). Water shall be sprinkled at regular interval on the main road and other service roads to suppress dust.

(23). The following measures are to be implemented to reduce Noise Pollution

(i). Proper and regular maintenance of vehicles and other equipment.

(ii). Limiting time exposure of workers to excessive noise.

(iii). The workers employed shall be provided with protection equipment and earmuffs etc.

(iv). Speed of trucks entering or leaving the mine is to be limited to moderate speed of 25 kmph to prevent undue noise from empty trucks.

(24). Measures should be taken to comply with the provisions laid under Noise Pollution (Regulation and Control) (Amendment) Rules, 2010, dt: 11.01.2010 issued by the MoE&F, Gol to control noise to the prescribed levels.

(25). Suitable conservation measures to augment groundwater resources in the area shall be planned and implemented in consultation with Assistant Director, Ground Water Division, PWD, Dharmapuri.

(26) Rain water harvesting to collect and utilize the entire water falling in land area should be provided by construction of a storage tank with a capacity of 5,00,000 litrs and the rain water harvested in the entire quarry

TO COUNT

area should be stored in it and used for the quarry purpose like dust prevention, wet drilling, providing water for green belt etc.

(27). Permission from the competent authority should be obtained for drawl of ground water, if any, required for this project.

(28). Topsoil, if any, shall be stacked properly with proper slope with adequate measures and should be used for plantation purpose.

(29). The following measures are to be adopted to control erosion of dumps:-

(i). Retention/ toe walls shall be provided at the foot of the dumps.

(ii). Worked out slopes are to be stabilized by planting appropriate shrub/ grass species on the slopes.

(30). Waste oils, used oils generated from the EM machines, mining operations, if any, shall be disposed as per the Hazardous Wastes (Management, Handling, and trans boundary movement) Rules, 2008 and its amendments thereof to the recyclers authorized by TNPCB.

(31). Concealing the factual data or failure to comply with any of the conditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of Environment (Protection) Act, 1986.

(32). Rain water getting accumulated in the quarry floor shall not be discharged directly to the nearby stream or water body. If it is to be let into the nearby water body, it has to be discharged into a silt trap on the surface within the (lease area and only the overflow after allowing settling of soil be let into the nearby waterways. The silt trap should be of sufficient dimensions to catch all the silt water being pumped out during one season. The silt trap should be cleaned of all the deposited silt at the end of the season and kept ready for taking care of the silt in the next season. Photographs of the silt trap should be furnished before commencing quarry operation.

(33). The lease holder shall undertake adequate safeguard measures during extraction of material and ensure that due to this activity, the hydro-geological regime of the surrounding area shall not be affected. Regular monitoring of ground water level and quality shall be carried out around the mine lease area during the mining operation. If at any stage, that the ground water is getting depleted due to the quarrying activity, necessary corrective measures shall be carried out. The Assistant Director Ground water Division, PWD Dharmapuri shall monitor.

(34). No tree-felling shall be done in the leased area, except only with the permission from competent Authority.

(35). To take up environmental monitoring of the proposed quarry site before, during and after the mining activities including vibration study data water, air & flora/fauna environment, slurry water generated/disposed and method of disposal, involving a reputed academic Institution and it should be monitored by the District Environmental Engineer, TNPCB, Hosur on yearly basis.

(36). It shall be ensured that the total extent of nearby quarries consting, abandoned and proposed) located within 500 meter radius from the periphery of JAN 2023 this quarry is not exceeding 25 hectares within the mining lease period of this application.

(37). It shall be ensured that there is no habitation is located within 500 million is meter radius from the periphery of the quarry site and also ensure that no hindrance will be caused to the people of the habitation located within 500m radius from the periphery of the quarry site

(38). Ground water quality monitoring should be conducted once in 3 Months.

(39). Transportation of the quarried materials shall not cause any hindrance to the Village people/Existing Village road.

(40). Free Silica test should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF, GOI once in three months.

(41). Air sampling at intersection point should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF, GOI periodically once in six months.

(42). Bunds should be provided at the boundary of the project site and it should be properly maintained.

(43). The project proponent shall undertake plantation/ afforestation work by planting the native species on all side of the lease area at the rate of 400/Ha. Suitable tall tree saplings should be planted on the bunds and other suitable areas in and around the work place.

(44). At least 10 Neem trees should be planted around the boundary of the quarry site.

(45). Floor of excavated pit to be leveled and sides to be sloped with gentle slope (Except for granite quarries) in the mine closure phase.

(46). The Project Proponent shall ensure a minimum of 2.5 of the annual turnover will be utilized for the CSR Activity.

(47). The Project Proponent shall provide solar lighting system to the nearby villages.

(48). The Project Proponent shall comply with the mining and other relevant rules and regulations where ever applicable.

(49). Rainwater shall be pumped out Via Settling Tank only

(50). Earthen bunds and barbed wire fencing around the pits with green belt all along the boundary shall be developed and maintained.

(51). As per MoEF & CC, Gol, Office Memorandum dated 30.03.2015, prior clearance from Forestry &Wild Life angle including clearance from obtaining committee of the National Board for Wild life as applicable shall be obtained before starting the quarrying operation, if the project site is located within 10KM from National Park and Sanctuaries.

(52). The quarrying activity shall be stopped if the entire quantity indicated in the Mining plan is quarried even before the expiry of the quarry lease period and the same shall be monitored by the District Authorities.

(53) Safety equipments to be provided to all the employees.

(54) Safety distance of 50 m has to be provided in case of railway, reservoir, canal/odai

(55) The Assistant / Deputy Director Department of Geology and Mining shall ensure that the proponent has engaged the blaster with valid Blasting license /certificate obtained from the competent authority before execution of mining lease.

(56) The proponent shall furnish the Baseline data covering the Air, Water, Noise and land environment quality for the proposed quarry site before execution of mining lease.

(57) The proponent shall erect the pillars in accordance with the Rules for depicting GPS details in the earmarked boundary of the quarry site to monitor electronically before execution of mining.

(58) The proponent shall furnish the data obtained from the Public Works Department regarding the details of ground water table in the quarry site.

(59) The proponent has to provide insurance protection to the workers in the case of existing mining or provide the affidavit in case of fresh case before execution of mining lease.

(60) The proponent has to display the name board at the quarry site showing the details of proponent, leased period, extent etc., with respect to the existing activity before execution of mining.

(61) Heavy earth machinery equipments if utilized, after getting approval from the competent authority.

(62) The environmental norms shall be monitored by the District Environmental Engineer, Tamil Nadu Pollution Control Board, Hosur.

(63) The Assistant Director Public Works Department, Ground Water Division Dharmapuri shall monitor whether the quarrying activity is carried out above the ground water level on yearly basis. (64) NOC for sanitary certificate shall be obtained from the Deputy Directory and a sub-

(65) Yearly medical examination of the quarry workers should be carried out if by a registered medical practitioner and the report should be filed in the quarry office in a separate file and copy should be sent to the Deputy Director, Health Services, Krishnagiri.

(66) Closed circuit camera should be erected at the quarry site and the passage of vehicles in and out of the quarry should be recorded and the footage of the recordings of the camera should be maintained and should be produced before the enforcing officials when ever called for.

(67) Vehicles used for transportation of quarried materials should be fitted with GPS and monitored.

(68)Pit Mouth register should be maintained in online

(69) Auditor report on the annual turnover amount should be submitted to the District Collector within one month from the end of the financial year.

(70) 02.5% of the turn over amount should be utilized for the CSR activity after consultation with the District Collector.

#### **B.** General Conditions:

(1) EC is given only on the factual records, documents and the commitment furnished in non judicial stamp paper by the proponent.

(2) The Proponent shall obtain the Consent for Establishment from the TNPC Board before commencing the activity.

(3) No change in mining technology and scope of working should be made without prior approval of the SEIAA, Tamil Nadu.

(4) No change in the calendar plan including excavation, quantum of mineral (minor mineral) should be made.

(5) Effective safeguard measures, such as regular water sprinkling shall be carried out in critical areas prone to air pollution and having high levels of particulate matter such as loading and unloading point and all transfer points. Extensive water sprinkling shall be carried out on haul roads. It should be ensured that the Ambient Air Quality parameters conform to the norms prescribed by the Central Pollution Control Board in this regard.

(6) Effective safeguards shall be adopted against health risks on account of breeding of vectors in the water bodies created due to excavation of earth.

(7) A berm shall be left from the boundary of adjoining field having a width equal to at least half the depth of proposed excavation.

1.7

(8) Mineral handling area shall be provided with adequate number of high efficiency dust extraction system. Loading and unloading areas including all the transfer points should also have efficient dust control arrangements. These should be properly maintained and operated.

(9) Vehicular emissions shall be kept under control and be regularly monitored. The mineral transportation shall be carried out through the covered trucks only and the vehicles carrying them mineral shall not be overloaded.

(10) Access and haul roads to the quarrying area should be restored in a mutually agreeable manner where these are considered unnecessary after extraction has been completed.

(11) All Personnel shall be provided with protective respiratory devices including safety shoes, Masks, gloves etc. Supervisory people should be provided with adequate training and information on safety and health aspects. Occupational health surveillance program of the workers should be undertaken periodically to observe any contractions due to exposure to dust and take corrective measures, if needed.

(12) Periodical medical examination of the workers engaged in the project shall be carried out and records maintained. For the purpose, schedule of health examination of the workers should be drawn and followed accordingly. The workers shall be provided with personnel protective measures such as masks, gloves, boots etc.

(13) Workers/labourers shall be provided with facilities for drinking water and sanitation facility for Female and Male separately.

(14) The project proponent shall ensure that child labour is not employed in the project as per the sworn affidavit furnished.

(15) The funds earmarked for environmental protection measures should be kept in separate account and should not be diverted for other purpose. Year wise expenditure should be reported to the Ministry of Environment and Forests and its regional office located at Chennai.

(16) The Environmental Clearance does not absolve the applicant/proponent of his obligation/requirement to obtain other statutory and administrative clearances from other statutory and administrative authorities.

(17) This Environmental Clearance does not imply that the other statutory / administrative clearances shall be granted to the project by the concerned authorities. Such authorities would be considering the project on merits and be taking decisions independently of the Environmental Clearance

(18) The DEIAA, Krishnagiri may alter/modify the above conditions or stipulate any further conditions in the interest of environment protection.

(19) The DEIAA, Krishnagiri may cancel the environmental clearance chanted to this project under the provisions of EIA Notification, 2006, at my stage of the validity of this environmental clearance, if it is found or if is spores to the knowledge of this DEIAA. The that the project proponent has deliberately.

(20) Failure to comply with any of the conditions mentioned above may result. in withdrawal of this clearance and attract action under the provisions of the Environment (Protection) Act, 1986.

(21) The above conditions will be enforced inter-alia, under the provisions of the Water (Prevention & Control of Pollution) Act, 1974, the Air (Prevention & Control of Pollution) Act, 1981, the Environment (Protection) Act, 1986, the Public Liability Insurance Act, 1991, along with their amendments, draft Minor Mineral Conservation & Development Rules, 2010 framed under MMDR Act 1957, National Commission for protection of Child Right Rules, 2006 and rules made there under and also any other orders passed by the Hon'ble Supreme Court of India/Hon'ble High Court of Madras and any other Courts of Law relating to the subject matter.

(22) Any other conditions stipulated by other Statutory/ Government authorities shall be complied.

(23) Any appeal against this environmental Clearance shall lie with the Hon'ble National Green Tribunal, if preferred within a period of 30 days as prescribed under section 16 of the National Green Tribunal Act 2010

#### Special Additional Conditious-

The unit shall obtain No Objection Certificate (NOC) from the Tamil Nadu Bio Diversity Board /National Bio Diversity Authority if the unit is using my Biological resources or knowledge associated thereto as per the provisions of Biological Diversity Act 2002.

#### Additional Conditions-

Special Additional Conditions:

 The unit shall obtain No Objection Certificate (NOC) from the Tamil Nadu Bio Diversity Board Mational Bio Diversity Authority if the unit is using any Biological resources or knowledge associated thereto as per the provisions of Biological Diversity Act 2002.

#### Additional conditions:

1. The unit shall carryout the quarrying activity only with the quarry leave agreement made with the District collector, Krishnagiri,

 The unit shall comply all the conditions prescribed in the Environmental Clearnace issued vide Lr No. 35/DEIAA-RGI/EC.No.27/2018 Dated 27/02/2018.

3.The unit shall comply with the coaditions imposed in the Mining Lease Agreement entered with the District. Coffector, Krishnagiri dated on 31/05/2018.

4. The unit shall treat and dispose the sewage generated from the unit through Septie tank and Sook pit arrangement.

5. The unit shall ensure that no trade offluent is generated at any stage of its manufacturing process.
6. The unit's operation/activity for the mining shall not disturb the nearby agricultural land if any at any circumstances.

The unit shall take necessary precautionary measures to prevent any adverse impact on the nearby liabilitation.
 The content issuel is subject to the final outcome of National Green Tribunal (South Zone) in application No. 165/2013.

(0. The min shall not use 'Use and throwaway plastics' such as plastic sheets used for food wrapping, spreading on dining table etc. plastic platos, plastic coated tea cups, plastic tambler, water pourbes and packets, plastic straw, plastic carry bag and plastics flags irrespective of thickness, within the industry premises. Instead unit shall encourage use of eco friendly alternative such as banana leaf, arecanut palm plate, stainless steel, glass,

porcelain plates/cops, cloth bag, jute bag ste.,

11 In case of revision of consent for by the Government life unit shall remit the difference in amount within one month from the date of TONNERSAMINING WALLTERSAME CONTRACTOR AND ANY NOTICE and further action will be initiated against the unit as per law.

#### Special Additional Conditions-

i. The unit shall install the approved retrofit emission control device/equipment with at least 70% Particulate matter reduction efficiency on all DG sets with capacity of 125 KVA and above or otherwise the unit shall be shift to gas based generators within the time frame prescribed in the notification No.

TNPCB/Labs/DD(L)02151/2019 dated 10.06.2020 issued by TNPCB.

ii. The unit shall obtain No Objection Certificate (NOC) from the Tamil Nadu Bio Diversity Board /National Bio Diversity Authority if the unit is using any Biological resources or knowledge associated therato as per the provisions of Biological Diversity Act 2002.

Additional Conditions-

Special Additional Conditions:

i. The unit shall obtain No Objection Certificate (NOC) from the Tamil Nuth Bio Diversity Board/National Bio

Diversity Authority if the unit is using any Biological resources or knowledge associated thereto as per the

provisions of Biological Diversity Act 2002.

Additional conditions:

1. The unit shall carryout the quarrying activity only with the quarry lease agreement made with the District collector, Krishnagin,

 The unit shall comply all the conditions prescribed in the Environmental Clearance issued vide Lr No. 35/DELAA-KGDEC No.27/2018 Dated 27/02/2018.

 The unit shall couply with the conditiona imposed in the Mining Lease Agreement entered with the District Collector, Krishnagiri dated on 31/05/2018.

4. The unit shall operate and maintain the APC massures in the form of portable water sprinklers effectively and continuously so as to satisfy the NAAQ / Emission standards prescribed by the Board.

5 The unit shall adhere to the ANE standards as prescribed by the Board.

6. The unit shall continue to develop more grean belt with trees having thick canopy cover in the unit's premises. 7. The unit's operation/ activity for the mining shall not distorb the nearby agricultural land if any at any circumstances.

8. The unit shall take necessary precautionary measures to prevent any adverse impact on the nearby habitation.

2

9. The consent issued is subject to the final outcombackwalland Green Tribunal (South Zone) in application No. 165/2011. 1987

10. In case of invision of containing and the part of the and the part of the one month from the date of notification, failing which this order will be withdrawn without any notice and further action will be initiated against the unit as per law.

The remuneration to the partners has to be shared by the partners in the following ratio after reducing the salary paid to the partners:

| 51.1 | o. <u>Name</u>       | % of share |
|------|----------------------|------------|
| 1.   | Sri, D. Múthiazhagan | 50%        |
| 2.   | Smt.K. M. Vijaya     | 50%        |

# 8. Accounts and Profit and Loss sharing ratio equally:

Proper books of accounts shall be maintained in the usual course of business and the same shall be closed on 31<sup>st</sup> March in each year to ascertain the net profit or loss of the firm for that year. The interest and remuneration payable to the partners and the taxes due and payable on the taxable income of the firm for the year shall be treated as common item of expenditure. Balance Sheet shall be prepared as on 31<sup>st</sup> March every year and the net profit or loss of the firm so arrived at shall be divided between the partners and the share be credited or debited as the case may be in the respective current accounts of such partners in the following sharing ratio.

| 51.1 | Name                | % of share |
|------|---------------------|------------|
| 1.   | Sri. D.Mathiazhagan | 50%        |
| 2.   | Smt.K.M.Vijaya      | 50%        |

### 9. Duration of the Firm:

Boystill Hallow

0.0-0-0-0.0 (

Encl: As above.
## CERTIFIED COMPLIANCE REPORT

Subject: DEIAA – Application for Environment Clearance for the Proposed Rough Stone quarrying over an extent of 4.00.0 Hectare in patta land S.F. No. 78/1A (Part) & 78/1B (Part), Kothabetta Village of Krishnagiri Taluk, Krishnagiri District preferred by Sri Devarajaa 'M' Sand, No.58B Gandhi Nagar, Krishnagiri Town and District - issue of Environmental Clearance – Reg.

### EC Ref. No : Lr. No. 35/DEIAA-KGI/EC.No.27/2018 dated 27.02.2018

Project Proponent:

Sri Devaraajaa 'M' Sand No.58B, Gandhi Nagar, Krishnagiri Town and District.

### Present Status of the Project:

The District Level Environment Impact Assessment Authority (DEIAA), Krishnagiri - Tamil Nadu accorded Environmental Clearance (EC) to the Rough Stone Quarry of Sri Devaraajaa 'M' Sand, Kothabetta Village, Krishnagiri Taluk, Krishnagiri District, and Tamil Nadu. It is an open cast, semi-mechanized mining with an approved depth of mining of 71 meter (25m above ground level and 46m below ground level). Now they had mined up to a depth of 20 meter below ground level. The present mining has not intersected the ground water table. The total Mine Lease (ML) Area is 4.00.0 Ha. Out of total ML area, broken-up area is 2.50.0 Ha. The project cost is Rs. 30,30,000/-, EMP cost is Rs. 3,70,000/-,

The quarry is not in operation. As informed by the Project Proponent, the mining work was stopped on 30<sup>th</sup> May 2023. The mine had valid lease from 31.05.2018 to 30.05.2023. Now, they had applied for renewal of EC with SEIAA – TN.

The Project Proponent (PP) has obtained Consent to Operate (CTO) for Air vide proceedings No.F.1681HSR/RS/DEE/TNPCB/HSR/A/2022 dated 16.08.2022 and Water vide proceeding No.F.1681HSR/RS/DEE/TNPCB/HSR/W/2022 dated 16.08.2022 from Tamil Nadu Pollution Control Board (TNPCB), Hosur and is valid up to **29.05.2023**.

PP stated that there is no habitation and approved layouts are situated within a radius of 300 metres from the lease area. However, the nearest village of Chinimalpalli situated at the distance of 1.12 km on the North-East side of the quarry lease area.

The Nearest Railway station is Rayakottai which is located about 20.2 km on the Southwest side of the area. The Nearest National Highway (NH-44) Srinagar - Kanyakumari road is situated about 0.86 km on the Southwestern side of the quarry lease area.

There is no reserve forest / social forest / wildlife sanctuary observed within 1 km radius of the quarry lease area. There is no temple or any other archeological importance within the radius of 300 meters from the lease area. There are no wild life sanctuaries, Reserve Forest & National parks within the radius of 1 km from the quarry area. There is no Rivers, Lakes within the 500m distance from the quarry lease area. The Krishnagiri dam is located at the distance of 7.6 km Southwestern side of the lease area.

Environmental monitoring was carried out in the core and buffer zone of the lease area by a NABL accredited laboratory. Ambient Air Quality (AAQ) was carried out at 3 locations in and around the quarry site and the results of all parameters are well within the prescribed limits of NAAQ Standards, 2009. Personal Exposure Monitoring (PEM) for free silica was carried out as per National Institute for Occupational Safety and Health (NIOSH) guidelines. Ambient Noise level monitoring and Work Place Noise Monitoring was carried out at 4 locations of the quarry site and the monitoring results are within prescribed limits as per MoEFCC/ CPCB norms. A Water sample was collected from a bore well near the quarry and analysed as per Indian Standard (IS). Results of all parameters are well within the permissible limits of IS: 10500:2012.

The PP has requested the Integrated Regional Office, Ministry of Environment, Forest & Climate Change (MoEF & CC), Chennai to provide Certified Compliance Report on Environmental Clearance towards applying for renewal of EC with the SEIAA-TN.

The above project was monitored on 25.7.2023 along with representative of the Project Proponent. The status of compliance on the stipulated conditions contained in the EC cited above is given below in Part III.

Date of Monitoring: 25.07.2023.

## PART-III

### Environment Clearance Conditions: Conditions to be Complied before Commencing Mining Operations:-

| S. No. | EC Conditions                                                                                                                                                                                                                                                                                                                          | Status of Compliance                                                      |

# Deed of Agreement

Ruck

This agreement entered into at Kothapetta Village on the day of 12<sup>th</sup> December 2018. Between Sri Velava Minings (Occupier : C. Kirubashankaran), Door No.5/77F2, Rajaji Nagar, Mathaiyankuttai, Mettur Taluk, Salem Dist, Tamilnadu, Pin – 636 401.

Herein after referred to as party of the first part. And

Leese Address: M/s. Sri Devaraajaa M Sand Partner : D Mathiazhagan No. 58B, Gandhi Nagar, Krishnagiri Town and Taluk

10-1-2013

Site Address: Partner: D Matrhiazhagan M/s. Sri Devaraajaa M Sand SF No.78/1A (Part), Kothapetta Village, Krishnagiri Tk, Krishnagiri Dt.

Herein after referred to as party of the second part

Party of First ( for done)

Party of Second

State

Whereas, in the above terms First party and Second Part shall mean and include wherever the context so permits, their legal heir, successors, representatives, administrators and assigns etc.

Whereas the party of the second part has obtained Quarry Lease for carrying out Quarrying and Carrying away of minor minerals, referred in the Survey No.78/1A(Part) (1.75.00) and 78/1B (part)(2.25.00), Extent in 4.00.00 Hectares in Kothapetta Village in the Sub Registration Krishnagiri, Krishnagiri District from Government of Tamilnadu under lease agreement registered with the sub-registrar in Krishnagiri as M/s. Sri Devaraajaa M Sand Partner Shri D. Mathiazhagan S/o K.M Devaraj

Whereas the party of the second part having his own Mines Manager, Foreman and Blaster requires explosive materials for doing blasting in the said quarry. For possession of the explosive materials, a license under the Indian Explosives Act and Indian Explosive Rules, 2008 issued by the competent authority is necessary and the party of the first part is having a valid explosive License No. E/SC/TN/22/732 (E104893) issued by Joint Controller of Explosives, Chennai and Magazines at Survey No 737/1B, 737/2B Maniyathahalli Village, Purikal Post Nallampalli Police Station Dharmapuri District, Tamilnadu– 636 401 and they are authorized and entitles to make, supply and use of explosives for blasting rocks in Quarries.

The party of the second part approached the party of the first part to assist him in extraction of minor minerals from the said leased quarry by providing required explosive materials as and when required under the license issued to him by the competent authority and the party of the first part having agreed to do so.

The lease period of Five years starts from 31<sup>st</sup> of May 2018 and ends on the 30<sup>th</sup> May of 2023

Now the agreement witness as follows:

- It is agreed that the party of the first part shall supply explosives to the party of the second part, under his license for the blasting of rocks in the aforesaid licensed quarry, as per the provisions of Mines Act 1952.
- The second party shall place the requirement of explosives and accessories, depending on the site requirements, holes drilled etc., and

Party of First

& Dufters

Partry Of Second

9 Plunter

the explosives will be used by Competent Mining Personnel's / authority like Mines Managers, Mines Foreman, Mines Mate, Blaster etc. appointed by the owner as per the provisions of Mines Act 1952. After completion of the blasting operation by the competent personnel, left out or unused explosives will be returned to the magazine on the same day from where the supply was effected.

- 3. The party of the Second part is solely responsible for using the explosives and accessories in the leased area and Survey Nos, where mining lease has been obtained. The responsibility of the first party ceases once the explosives are delivered at the site. The Mine owner shall appoint competent Mining Personnel's for carrying out Mining & Quarrying operations including blasting operations in the quarry as perthe provisions of the Mines Act 1952. The explosives will be used and handled by Mines Mate, Blaster, Mines Foreman and Mines Manager appointed by the Mine owner and all safety aspects will by scrupulously followed by the competent persons as per the provisions of the Minus Act 1952 and Explosives Rules 2008.
- 4. The party of the first part will charge GST, as per the GST act and the second party will pay the GST amount as per the bills. The bills will be settled promptly on fortnight basis by Ch. NEFT/RTGS, by the party of the second part as mutually agreed.
- 5. This agreement shall be in force until the expiry of the license of the first party from the date of this agreement and is subjected to renewal of such terms and conditions, as may be mutually agreed upon.

In witnesses the parties herein have set their hands to this agreement on this day month and year first mentioned above in the presence of the following.
