To

From Dr. S.Vediappan, M.Sc., Ph.d., Deputy Director, Dept of Geology and Mining, Krishnagiri.

M/s. Sri Devaraajaa M Sand, D.no. 58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri - 635 001.

### Roc.No.1121/2020/Mines Dated: .02.2023

Sir,

- Sub: Mines and Minerals Rough stone Krishnagiri District – Krishnagiri Taluk – Kothapetta Villagepatta land in S.F.No. 78/1A(P) & 78/1B(P) Over an extent of 4.00.00 Hects – Quarry lease granted to M/s. Sri Devaraajaa M Sand - Scheme of mining submitted - approved – Other quarry situated in 500 mtrs radial distance – Details furnished - reg.
- Ref: 1. The District Collector, Krishnagiri Proc.Roc.No.418/ 2017/ Mines Dated: 31.05.2018.
  - Mining Plan approved by the Deputy Director of Geology and Mining, Krishnagiri in Rc.no. 418/2017/Mines dated: 29,12.2017.
  - 1<sup>™</sup> Scheme of Mining plan approved by Deputy Director of Geology and Mining, Krishnagiri in Rc.no. 1121/2020/Mines dated: 27.01.2023.
  - Assistant Director Geology and Mining, Krishnagiri Proc. Rc.no. 1121/2020/mines dated: 26.04.2021.
  - M/s. Sri Devarazjaa M Sand, Gandhi Nagar, Krishnagiri letter dated: 09.02.2023.

Kind attention is invited to the references cited above.

2. A quarry lease had been granted in favour of M/s. Sri Devaraajaa M Sand, to quarry Rough stone for a period of 10 years over an extent of 4.00.00 hects of Patta land in S.F.No. 78/1A(P) & 78/1B(P) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District vide the District Collector, Krishnagiri Proc.Roc.No.418/2017/Mines dated: 31.05.2018 and Assistant Director Geology and Mining Proc. Rc.No. 1121/2020/Mines dated: 26.04.2021 under TNMMCR Rules 1959. The lease deed has been executed on 31.05.2018 and the lease period is valid upto 30.05.2028.

\*\*\*\*\*\*\*\*\*

3. The Mining plan for the subject Rough stone quarry was approved by the Deputy Director of Geology and Mining, vide letter Rc. No. 418/2017/Mines Dated: 29,12.2017.

4. The lessee has submitted 1st Scheme of mining for the 2nd five years which was approved by the Deputy Director of Geology and Mining, Krishnagiri vide letter dated: 27.01.2023.

5. In this connection, the details of quarries situated within 500mts for

the subject quarry requested by the lessee vide letter dated: 09.02.2023 to furnish the same before SELAA in orders to get Environmental Clearance I. Details of Existing quarries.

Sf No 78/1a, 78/1b,78/2,78/3 Kothapetta Kothapetta,635001

Subject:- Implementation of the E.S.I. Act, 1948 and Registration of Employees of the Factories and Establishments under Section 2(12) of the Act, as amended.

Dear Sir(s),

 It is informed that under section 1(3) of the esi, act, 1948 is applicable to all factories/establishments covered under the act within the area where your factory/establishment is situated

2. It is further informed that the appropriate government has extended the provisions of the act to other establishments under section 1(5) of the act in this area

3. Under section 2 a of the act such a factory/establishment is required to register itself under the act and chapter iv thereof casts a responsibility on the principal employer thereof to get his employees registered and pay contributions in respect of these employees covered under the act.

4. On the basis of the particulars in respect of your factory/establishment submitted by you, the report of the inspection conducted by the Social Security Officer, who inspected your factory on -NA-, your factory falls within the purview of Section 2(12) of the Act with effect from 01-12-2021. In case, however, subsequent facts reveal that your factory was coverable from a date prior to the date mentioned above, you shall make yourself liable to comply with the provisions of the Act from such earlier date.

5. It is requested to take immediate steps for registration of your employees by submitting declaration forms online, payment of contribution, maintenance of records etc. from the date of coverage of your factory/establishment under the act. \*\*You are also requested to submitt employer's registration form (form 01) as required under the provisions of sec.2-a of the esi act , 1948 read with regulation 10-b of the esi(general), regulations, 1950.

6. For the sake of convenience your establishment has been allotted code No 63001052950000499 which may kindly be used in all communications sent to this office and on all forms at the place indicated for the purpose. The Branch Office of the Corporation situated at ESI Hospital Complex, SIPCOT, Hosur 635126 has been instructed to render necessary assistance to you in connection with registration of your employees. In case you find any difficulty or for any other purpose which may be necessary in connection with the Scheme you are requested to contact the Manager of the above Branch Office who will render necessary help in the matter.

7 A State wise list of ESI Dispensaries is available on our website <u>www.esic.nic.in</u> under the link Directories which can be downloaded. It is requested that publicity may be given about the Employees' State Insurance Dispensaries to enable your employees to choose their E.S.I. Dispensaries 8. The corporation officials would be pleased to give all necessary and possible guidance to you in discharging your duties and obligations under the esi act, 1948 and I am confident of prompt and timely compliance under the provisions of the ESI act and regulations on your part.

9. All the Branches of State Bank of India are authorized to accept the ESI Contribution .

10. The brochures/leaflets containing benefits available under the scheme and obligation of the employer etc are available on our website <u>www.esic.nic.in</u> under the link Publications which may be downloaded for wide publicity for the smooth functioning of the scheme

11. Please indicate your code no. on all correspondences to avoid delay

Yours faithfully,

Encl. ! As state above

Asstt /Dy. Director

#### FORM 'O'

(Refer rules 29 - F (2) and 29 - L)

### REPORT OF MEDICAL EXAMINATION UNDER RULE 29- B

(To be issued in triplicate)

Certificate No. :- 01

a) Is medically fit for a , employment in mines.

b) Is suffering from \_\_\_\_\_\_ and is medically unfit for

- I. 参 Any employment in mines; or :::
- ii. Any employment below ground ; or
- III. Any employment or work \_\_\_\_\_

c) Is suffering from \_\_\_\_\_\_ and should get this disability cured / controlled and should be again examined within a period of \_\_\_\_\_\_ months. He will appear for re-examination with the result "of" test of test of \_\_\_\_\_\_ and the opinion of \_\_\_\_\_\_ he may be permitted / not permitted to carry on his duties during this period.

Place: RRISHNAGIRI Date: 08/02/2019. Signature of examination authority

Krishnagiri Town,

Krishnagiri District

#### Sir / Madam,

- Sub: SEIAA, Tamil Nadu Terms of Reference with Public Hearing (ToR) for the Proposed Rough Stone quarry over an extent of 4.00.0 Ha of Patta land in S.F.Nos. 78/1B(P), of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu by Tmt. K.M.Vijaya - under project category – "B1" and Schedule S.No.1(a) – ToR issued along with Public Hearing - preparation of EIA report – Regarding.
- Ref: 1. Online proposal No. SIA/TN/MIN/430521/2023, 24.06.2023.
  - 2. Your application submitted for Terms of Reference dated: 26.07.2023.
  - 3. Minutes of the 407th meeting of SEAC held on 07.09.2023.
  - 4. Minutes of the 658th meeting of SEIAA held on 26.09.2023 & 27.09.2023.
  - 5. Minutes of the 439th meeting of SEAC held on 10.01.2024.
  - 6. Minutes of the 696th meeting of SEIAA held on 14.02.2024.

Kindly refer to your proposal submitted to the State Level Impact Assessment Authority for Terms of Reference.

MEMBER SECRETARY SEIAA-TN

Page 1 of 25

The proponent, Tmt. K.M.Vijaya has submitted application for Terms of Reference with Public Hearing (ToR), in Form-I, Pre-Feasibility report for the Proposed Rough Stone quarry over an extent of 4.00.0 Ha of Patta land in S.F.Nos. 78/1B(P), of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu.

#### Discussion by SEAC and the Remarks:-

Proposed Rough Stone quarry over an extent of 4.00.0 Ha of Patta land in S.F.Nos. 78/1B(P), of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu by Tmt. K.M.Vijaya -For Terms of Reference. (SIA/TN/MIN/430521/2023, 24.06.2023)

The proposal was earlier placed in the 407<sup>th</sup> meeting of SEAC held on 07.09.2023. The Project Proponent made a detailed presentation on the proposed project. The details of the project furnished by the proponent are available on the PARIVESH web portal (parivesh.nic.in).

#### The SEAC noted the following:

- The Project Proponent, Tmt. K.M.Vijaya has applied seeking Terms of Reference for EIA study for the Proposed Rough Stone quarry over an extent of 4.00.0 Ha of Patta land in S.F.Nos. 78/1B(P), of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu.
- The proposed quarry/activity is covered under Category "B1" of Item 1(a) "Mining Projects" of the Schedule to the EIA Notification, 2006 as amended.
- DEIAA EC vide DEIAA KGI Lr No 34/DEIAA-KGI/Ec.No. 26/2018 Dated 27.02.2018.

Based on the request of the Project Proponent, the SEAC directed the PP to submit the details of last date of mining carried out at the project site validated by Department of Geology & Mining. On receipt of the details sought the SEAC will deliberate further and decide on future course of action.

Subsequently the subject was taken up for discussion in the 430<sup>th</sup> meeting of SEAC held on 14.12.2023. The EIA coordinator informed the Committee that the Environmental Clearance Dated:27.02.2018 issued for their proposal by DEIAA is valid up to **29.05.2024** (Including COVID Extension) and that the PP wish to avail the benefit of DEIAA-SEIAA Reappraisal OM Dated:28.04.2023 & 03.11.2023 and further requested that the PP may be permitted to submit the CCR of the existing quarry along with final EIA. Hence the SEAC decided to defer the proposal to later date.

Now the subject was taken up for discussion in this 439th meeting of SEAC held on 10.01.2024. The PP informed the Committee that the CCR for the existing quarry is still to be obtained. Based on the

MEMBER SECRETARY SEIAA-TN

presentation made by the proponent SEAC recommended grant of **Terms of Reference (TOR) with Public Hearing** as per the **Annexure I** of this minute, subject to the following TORs, in addition to the standard terms of reference for EIA study for non-coal mining projects and details issued by the MOEF & CC to be included in EIA/EMP Report:

- 1. The proponent is requested to carry out a survey and enumerate on the structures located within the radius of (i) 50 m, (ii) 100 m, (iii) 200 m and (iv) 300 m (v) 500m shall be enumerated with details such as dwelling houses with number of occupants, whether it belongs to the owner (or) not, places of worship, industries, factories, sheds, etc with indicating the owner of the building, nature of construction, age of the building, number of residents, their profession and income, etc.
- The PP shall furnish the ownership details of the physical structures located near the proposed mine lease area, number of workers, time period of working etc
- 3. If the existing depth of quarry has already reached 30 m, for the safety of the persons employed in the quarry, the PP shall carry out the scientific studies and to furnish the report with assessing the slope stabilization & protective measures while designing the proposed benches, by involving any one of the reputed Research and Academic Institutions CSIR-Central Institute of Mining & Fuel Research / Dhanbad, NIRM/Bangalore, Division of Geotechnical Engineering-IIT-Madras, NIT-Dept of Mining Engg, Surathkal, and Anna University Chennai-CEG Campus, A copy of such scientific study report shall be submitted to the SEIAA, MoEF, TNPCB, AD/Mines-DGM and DMS, Chennai as a part of Environmental Compliance without any deviation.
- The project proponent shall furnish Certified Compliance Report (CCR) obtained from IRO(SZ), MoEF&CC and with mitigation measures along with the budgetary allocation for the non-compliance stated therein.
- 5. The Project Proponent shall furnish the revised EMP based on the study carried out on impact of the dust & other environmental impacts due to proposed quarrying operations on the nearby agricultural lands for remaining life of the mine in the format prescribed by the SEAC considering the cluster situation.
- The PP shall prepare a conceptual working plan accommodating the remedial actions such as inclusion of haul road accessibility keeping the benches intact, based on the studies carried

MEMBER SECRETARY SEIAA-TN

Page 3 of 25

out to assess the slope stability of the working benches to be constructed and existing quarry wall. The PP shall submit a copy of the aforesaid report indicating the stability status of the quarry wall and slope stability action plan during the time of appraisal for obtaining the EC.

 The PP shall undertake Hydrogeology study considering nearby existing wells, Aquifers, Ground water & surface water levels etc within the radius of 1km.

#### ANNEXURE-I

- The PP shall furnish the letter obtained from the AD (Mines) indicating the existing pit dimensions and pit conditions showing the details on mine having worked during the earlier lease period.
- The PP shall furnish DFO letter stating that the proximity distance of Reserve Forests, Protected Areas, Sanctuaries, Tiger reserve etc., up to a radius of 25 km from the proposed site.
- The PP shall provide individual notice regarding the Public Hearing to the nearby house owners located in the vicinity of the project site.
- 4. The Proponent shall justify the selection of the site for carrying out the stone quarrying with the total volume arrived for the excavation & production adequate details such as lithology of the deposit, reserve estimation, place for waste dump/mined mineral storage, end-use of mined materials, identified potential customers/end-users and travel path.
- The PP shall also justify the selection of mining methodology (conventional or nonconventional) adopting blasting techniques/non-explosive techniques with proper ground reality & laboratory testing.
- 6. The proponent shall submit the "Blast Design Parameters for controlling the vibration and fly rock from the quarry blasting" considering the existence of sensitive structures including habitations within 500 m from the lease boundary.
- The PP shall justify the estimation of HEMM population for excavation and transportation in the proposed quarries with proper calculation methodology adopted.
- The PP shall enumerate the environmental settings situated within a radial distance of 1 km such rivers/water bodies/reserve forests/ grazing land/existence of the hospitals and educational institutions/structures.
- The PP shall provide the details of the anticipated impacts of the mining operations on the surrounding environment and the remedial measures for the same.

MEMBER SECRETARY SEIAA-TN

- 10. The proponent is requested to carry out a survey and enumerate on the structures located within the radius of (i) 50 m, (ii) 100 m, (iii) 200 m and (iv) 300 m (v) 500m with details such as dwelling houses with number of occupants, whether it belongs to the owner (or) not, places of worship, industries, factories, sheds, etc with indicating the owner of the building, nature of construction, age of the building, number of residents, their profession and income, etc.
- 11. The PP shall submit a 'Slope Stability Action Plan' for the proposed quarry where the proposed depth exceeds 30 m and it shall cover the aspects of stability of quarry walls including the access ramp keeping the benches intact.
- 12. If the blasting operation is to be carried out, the PP shall present a conceptual design for carrying out the NONEL initiation based controlled blasting operation including the line drilling & muffle blasting techniques and a Simulation Model indicating the anticipated Blastinduced Ground Vibration levels in the proposed quarry as stipulated by the DGMS Circular No.7 of 1997, during the EIA Proposal.
- 13. The PP shall furnish the affidavit stating that the blasting operation in the proposed quarry is carried out by the statutory competent person as per the MMR 1961 such as blaster, mining mate, mine foreman, II/I Class mines manager appointed by the proponent.
- 14. The PP shall give an affidavit stating that no contractual persons provided by the explosive suppliers will be employed for carrying out the blasting operations in the proposed quarry.s
- 15. The PP shall also give an affidavit that no highly sensitive structure such as fire-cracker manufacturing units, Gas godown/explosive Magazine, LPG Bottling Units, etc are located within a radial distance of 300 m from the lease boundary of the proposed quarry.
- 16. The PP shall present a conceptual design for carrying out only controlled blasting operation involving line drilling and muffle blasting in the proposed quarry such that the blast-induced ground vibrations are controlled as well as no fly rock travel beyond 20 m from the blast site.
- 17. The EIA Coordinators shall obtain and furnish the details of quarry/quarries operated by the proponent in the past, either in the same location or elsewhere in the State with video and photographic evidences.
- The PP shall provide the environmental mitigation measures implemented for the crusher(s) located within the mining lease.
- 19. If the proponent has already carried out the mining activity in the proposed mining lease area after 15.01.2016, then the proponent shall furnish the following details from AD/DD, mines,

MEMBER SECRETARY SEIAA-TN

Page 5 of 25

- a. What was the period of the operation and stoppage of the earlier mines with last work permit issued by the AD/DD mines?
- b. Quantity of minerals mined out.
- c. Highest production achieved in any one year
- d. Detail of approved depth of mining.
- e. Actual depth of the mining achieved earlier.
- f. Name of the person already mined in that leases area.
- g. If EC and CTO already obtained, the copy of the same shall be submitted.
- h. Whether the mining was carried out as per the approved mine plan (or EC if issued) with stipulated benches.
- 20. If any quarrying operations were carried out in the proposed quarrying site for which now the EC is sought, the Project Proponent shall furnish the detailed compliance to EC conditions given in the previous EC with the site photographs which shall duly be certified by MoEF&CC, Regional Office, Chennai (or) the concerned DEE/TNPCB.
- 21. All corner coordinates of the mine lease area, superimposed on a High-Resolution Imagery/Topo sheet, topographic sheet, geomorphology, lithology and geology of the mining lease area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and buffer zone).
- 22. The PP shall carry out Drone video survey covering the cluster, Green belt, fencing etc.,
- 23. The proponent shall furnish photographs of adequate fencing, green belt along the periphery including replantation of existing trees & safety distance between the adjacent quarries & water bodies nearby provided as per the approved mining plan.
- 24. The Project Proponent shall provide the Organization chart indicating the appointment of various statutory officials and other competent persons to be appointed as per the provisions of Mines Act 1952 and the MMR, 1961 for carrying out the quarrying operations scientifically and systematically in order to ensure safety and to protect the environment.
- 25. The Project Proponent shall conduct the hydro-geological study considering the contour map of the water table detailing the number of ground water pumping & open wells, and surface water bodies such as rivers, tanks, canals, ponds etc. within 1 km (radius) along with the collected water level data for both monsoon and non-monsoon seasons from the PWD / TWAD so as to assess the impacts on the wells due to mining activity. Based on actual

MEMBER SECRETARY SEIAA-TN monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided.

- 26. The proponent shall furnish the baseline data for the environmental and ecological parameters with regard to surface water/ground water quality, air quality, soil quality & flora/fauna including traffic/vehicular movement study.
- 27. The Proponent shall carry out the Cumulative impact study due to mining operations carried out in the quarry specifically with reference to the specific environment in terms of soil health, biodiversity, air pollution, water pollution, climate change and flood control & health impacts. Accordingly, the Environment Management plan should be prepared keeping the concerned quarry and the surrounding habitations in the mind.
- Rain water harvesting management with recharging details along with water balance (both monsoon & non-monsoon) be submitted.
- 29. Land use of the study area defineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompass preoperational, operational and post operational phases and submitted. Impact, if any, of change of land use should be given.
- 30. Details of the land for storage of Overburden/Waste Dumps (or) Rejects outside the mine lease, such as extent of land area, distance from mine lease, its land use, R&R issues, if any, should be provided.
- 31. Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.
- 32. If the Village road/State highway/National highway are located within a radial distance of 500 m from the lease boundary of the quarry proposal, the PP shall carry out traffic studies to indicate impact on local transport infrastructure due to the Project and mitigation measures.
- 33. A tree survey study shall be carried out (nos., name of the species, age, diameter etc.,) both within the mining lease applied area & 300m buffer zone and its management during mining activity.
- 34. A detailed mine closure plan for the proposed project shall be included in EIA/EMP report which should be site-specific.
- 35. Public Hearing points raised and commitments of the Project Proponent on the same along

MEMBER SECRETARY & SEIAA-TN

Page 7 of 25

with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the Project and to be submitted to SEIAA/SEAC with regard to the Office Memorandum of MoEF& CC accordingly.

- The Public hearing advertisement shall be published in one major National daily and one most circulated vernacular daily.
- 37. The PP shall produce/display the EIA report, Executive summary and other related information with respect to public hearing in Tamil Language also.
- 38. As a part of the study of flora and fauna around the vicinity of the proposed site, the EIA coordinator shall strive to educate the local students on the importance of preserving local flora and fauna by involving them in the study, wherever possible.
- 39. The purpose of Green belt around the project is to capture the fugitive emissions, carbon sequestration and to attenuate the noise generated, in addition to improving the aesthetics. A wide range of indigenous plant species should be planted as given in the appendix-I in consultation with the DFO, State Agriculture University and local school/college authorities. The plant species with dense/moderate canopy of native origin should be chosen. Species of small/medium/tall trees alternating with shrubs should be planted in a mixed manner.
- 40. Taller/one year old Saplings raised in appropriate size of bags, preferably eco-friendly bags should be planted as per the advice of local forest authorities/botanist/Horticulturist with regard to site-specific choices. The proponent shall earmark the greenbelt area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in between blocks in an organized manner
- 41. A Disaster Management Plan shall be prepared and included in the EIA/EMP Report for the complete life of the proposed quarry (or) till the end of the lease period.
- 42. A Risk Assessment and Management Plan shall be prepared and included in the EIA/EMP Report for the complete life of the proposed quarry (or) till the end of the lease period.
- 43. Occupational Health impacts of the Project should be anticipated and the proposed preventive measures spelt out in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP. The project specific occupational health mitigation measures with required facilities proposed in the mining area may be detailed.

MEMBER SECRETARY SEIAA-TN

253 A

- 44. Public health implications of the Project and related activities for the population in the impact zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.
- 45. The Socio-economic studies should be carried out within a 5 km buffer zone from the mining activity. Measures of socio-economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.
- 46. Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.
- 47. Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.
- 48. If any quarrying operations were carried out in the proposed quarrying site for which now the EC is sought, the Project Proponent shall furnish the detailed compliance to EC conditions given in the previous EC with the site photographs which shall duly be certified by MoEF&CC, Regional Office, Chennai (or) the concerned DEE/TNPCB.
- 49. The PP shall prepare the EMP for the entire life of mine and also furnish the sworn affidavit stating to abide the EMP for the entire life of mine.
- 50. Concealing any factual information or submission of false/fabricated data and failure to comply with any of the conditions mentioned above may result in withdrawal of this Terms of Conditions besides attracting penal provisions in the Environment (Protection) Act, 1986.

#### Discussion by SEIAA and the Remarks:-

Proposed Rough Stone quarry over an extent of 4.00.0 Ha of Patta land in S.F.Nos. 78/1B(P), of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu by Tmt. K.M.Vijaya -For Terms of Reference.

The subject was placed in this 696<sup>th</sup> meeting of Authority held on 14.02.2024. The Authority noted that the subject was placed in the 439<sup>th</sup> meeting of SEAC held on 22.12.2023 and the SEAC has furnished its recommendations for the grant of **Terms of Reference (TOR) with Public Hearing** to the project subject to the conditions stated therein.

MEMBER SECRETARY SELAA-TN

Page 11 of 25

After detailed discussions, the Authority accepted the recommendation of SEAC and decided to grant **Terms of Reference (ToR) with Public Hearing** based on studies, assessments and records to be produced as sought by the SEAC and SEIAA, for undertaking the Environment Impact Assessment Study and preparation of Environment Management Plan subject to the conditions as recommended by SEAC & normal conditions and conditions in **Annexure 'B'** of this minutes.

#### Annexure 'B'

#### **Cluster Management Committee**

- Cluster Management Committee shall be framed which must include all the proponents in the cluster as members including the existing as well as proposed quarry.
- The members must coordinate among themselves for the effective implementation of EMP as committed including Green Belt Development, Water sprinkling, tree plantation, blasting etc.,
- The List of members of the committee formed shall be submitted to AD/Mines before the execution of mining lease and the same shall be updated every year to the AD/Mines.
- 4. Detailed Operational Plan must be submitted which must include the blasting frequency with respect to the nearby quarry situated in the cluster, the usage of haul roads by the individual quarry in the form of route map and network.
- 5. The committee shall deliberate on risk management plan pertaining to the cluster in a holistic manner especially during natural calamities like intense rain and the mitigation measures considering the inundation of the cluster and evacuation plan.
- 6. The Cluster Management Committee shall form Environmental Policy to practice sustainable mining in a scientific and systematic manner in accordance with the law. The role played by the committee in implementing the environmental policy devised shall be given in detail.
- The committee shall furnish action plan regarding the restoration strategy with respect to the individual quarry falling under the cluster in a holistic manner.
- 8. The committee shall furnish the Emergency Management plan within the cluster.
- The committee shall deliberate on the health of the workers/staff involved in the mining as well as the health of the public.
- 10. The committee shall furnish an action plan to achieve sustainable development goals with reference to water, sanitation & safety.
- 11. The committee shall furnish the fire safety and evacuation plan in the case of fire accidents.

MEMBER SECRETARY

257 A

#### Impact study of mining

- 12. Detailed study shall be carried out in regard to impact of mining around the proposed mine lease area covering the entire mine lease period as per precise area communication order issued from reputed research institutions on the following
  - a) Soil health & soil biological, physical land chemical features .
  - b) Climate change leading to Droughts, Floods etc.
  - c) Pollution leading to release of Greenhouse gases (GHG), rise in Temperature, & Livelihood of the local people.
  - d) Possibilities of water contamination and impact on aquatic ecosystem health.
  - e) Agriculture, Forestry & Traditional practices.
  - f) Hydrothermal/Geothermal effect due to destruction in the Environment.
  - g) Bio-geochemical processes and its foot prints including environmental stress.
  - h) Sediment geochemistry in the surface streams.

#### Agriculture & Agro-Biodiversity

- 13. Impact on surrounding agricultural fields around the proposed mining Area.
- 14. Impact on soil flora & vegetation around the project site.
- 15. Details of type of vegetations including no. of trees & shrubs within the proposed mining area and. If so, transplantation of such vegetations all along the boundary of the proposed mining area shall committed mentioned in EMP.
- 16. The Environmental Impact Assessment should study the biodiversity, the natural ecosystem, the soil micro flora, fauna and soil seed banks and suggest measures to maintain the natural Ecosystem.
- Action should specifically suggest for sustainable management of the area and restoration of ecosystem for flow of goods and services.
- The project proponent shall study and furnish the impact of project on plantations in adjoining patta lands, Horticulture, Agriculture and livestock.

#### Forests

 The project proponent shall detailed study on impact of mining on Reserve forests free ranging wildlife.

MEMBER SECRETARY SEIAA-TN

Page 13 of 25

- The Environmental Impact Assessment should study impact on forest, vegetation, endemic, vulnerable and endangered indigenous flora and fauna.
- The Environmental Impact Assessment should study impact on standing trees and the existing trees should be numbered and action suggested for protection.
- 22. The Environmental Impact Assessment should study impact on protected areas, Reserve Forests, National Parks, Corridors and Wildlife pathways, near project site.

#### Water Environment

- 23. Hydro-geological study considering the contour map of the water table detailing the number of ground water pumping & open wells, and surface water bodies such as rivers, tanks, canals, ponds etc. within 1 km (radius) so as to assess the impacts on the nearby waterbodies due to mining activity. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided, covering the entire mine lease period.
- 24. Erosion Control measures.
- 25. Detailed study shall be carried out in regard to impact of mining around the proposed mine lease area on the nearby Villages, Water-bodies/ Rivers, & any ecological fragile areas.
- 26. The project proponent shall study impact on fish habitats and the food WEB/ food chain in the water body and Reservoir.
- 27. The project proponent shall study and furnish the details on potential fragmentation impact on natural environment, by the activities.
- 28. The project proponent shall study and furnish the impact on aquatic plants and animals in water bodies and possible scars on the landscape, damages to nearby caves, heritage site, and archaeological sites possible land form changes visual and aesthetic impacts.
- 29. The Terms of Reference should specifically study impact on soil health, soil erosion, the soil physical, chemical components and microbial components.
- The Environmental Impact Assessment should study on wetlands, water bodies, rivers streams, lakes and farmer sites.

#### Energy

31. The measures taken to control Noise, Air, Water, Dust Control and steps adopted to efficiently utilise the Energy shall be furnished.

MEMBER SECRETARY SEIAA-TN

#### Climate Change

- 32. The Environmental Impact Assessment shall study in detail the carbon emission and also suggest the measures to mitigate carbon emission including development of carbon sinks and temperature reduction including control of other emission and climate mitigation activities.
- 33. The Environmental Impact Assessment should study impact on climate change, temperature rise, pollution and above soil & below soil carbon stock.

#### Mine Closure Plan

34. Detailed Mine Closure Plan covering the entire mine lease period as per precise area communication order issued.

#### EMP

- 35. Detailed Environment Management Plan along with adaptation, mitigation & remedial strategies covering the entire mine lease period as per precise area communication order issued.
- 36. The Environmental Impact Assessment should hold detailed study on EMP with budget for Green belt development and mine closure plan including disaster management plan.

#### **Risk Assessment**

 To furnish risk assessment and management plan including anticipated vulnerabilities during operational and post operational phases of Mining.

#### **Disaster Management Plan**

38. To furnish disaster management plan and disaster mitigation measures in regard to all aspects to avoid/reduce vulnerability to hazards & to cope with disaster/untoward accidents in & around the proposed mine lease area due to the proposed method of mining activity & its related activities covering the entire mine lease period as per precise area communication order issued.

#### Others

- 39. The project proponent shall furnish VAO certificate with reference to 300m radius regard to approved habitations, schools, Archaeological sites, Structures, railway lines, roads, water bodies such as streams, odai, vaari, canal, channel, river, lake pond, tank etc.
- 40. As per the MoEF& CC office memorandum F.No.22-65/2017-IA.III dated: 30.09.2020 and 20.10.2020 the proponent shall address the concerns raised during the public consultation and all the activities proposed shall be part of the Environment Management Plan.

MEMBER SECRETARY SEIAA-TN

Page 15 of 25

41. The project proponent shall study and furnish the possible pollution due to plastic and microplastic on the environment. The ecological risks and impacts of plastic & microplastics on aquatic environment and fresh water systems due to activities, contemplated during mining may be investigated and reported.

#### A. STANDARD TERMS OF REFERENCE

- Year-wise production details since 1994 should be given, clearly stating the highest production achieved in any one year prior to 1994. It may also be categorically informed whether there had been any increase in production after the EIA Notification 1994 came into force, w.r.t. the highest production achieved prior to 1994.
- A copy of the document in support of the fact that the Proponent is the rightful lessee of the mine should be given.
- 3) All documents including approved mine plan, EIA and Public Hearing should be compatible with one another in terms of the mine lease area, production levels, waste generation and its management, mining technology etc. and should be in the name of the lessee.
- 4) All corner coordinates of the mine lease area, superimposed on a High Resolution Imagery/ topo sheet, topographic sheet, geomorphology and geology of the area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and buffer zone).
- 5) Information should be provided in Survey of India Topo sheet in 1:50,000 scale indicating geological map of the area, geomorphology of land forms of the area, existing minerals and mining history of the area, important water bodies, streams and rivers and soil characteristics.
- 6) Details about the land proposed for mining activities should be given with information as to whether mining conforms to the land use policy of the State; land diversion for mining should have approval from State land use board or the concerned authority.
- 7) It should be clearly stated whether the proponent Company has a well laid down Environment Policy approved by its Board of Directors? If so, it may be spelt out in the EIA Report with description of the prescribed operating process/procedures to bring into focus any infringement/deviation/ violation of the environmental or forest norms/ conditions? The hierarchical system or administrative order of the Company to deal with the environmental issues and for ensuring compliance with the EC conditions may also be given. The system of reporting of non-compliances / violations of environmental norms to the Board of Directors of

MEMBER SECRETARY SEIAA-TN

the Company and/or shareholders or stakeholders at large, may also be detailed in the EIA Report.

- 8) Issues relating to Mine Safety, including subsidence study in case of underground mining and slope study in case of open cast mining, blasting study etc. should be detailed. The proposed safeguard measures in each case should also be provided.
- 9) The study area will comprise of 10 km zone around the mine lease from lease periphery and the data contained in the EIA such as waste generation etc. should be for the life of the mine / lease period.
- 10) Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to encompass preoperational, operational and post operational phases and submitted. Impact, if any, of change of land use should be given.
- Details of the land for any Over Burden Dumps outside the mine lease, such as extent of land area, distance from mine lease, its land use, R&R issues, if any, should be given.
- 12) Certificate from the Competent Authority in the State Forest Department should be provided, confirming the involvement of forest land, if any, in the project area. In the event of any contrary claim by the Project Proponent regarding the status of forests, the site may be inspected by the State Forest Department along with the Regional Office of the Ministry to ascertain the status of forests, based on which, the Certificate in this regard as mentioned above be issued. In all such cases, it would be desirable for representative of the State Forest Department to assist the Expert Appraisal Committees.
- 13) Status of forestry clearance for the broken up area and virgin forestland involved in the Project including deposition of Net Present Value (NPV) and Compensatory Afforestation (CA) should be indicated. A copy of the forestry clearance should also be furnished.
- 14) Implementation status of recognition of forest rights under the Scheduled Tribes and other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 should be indicated.
- 15) The vegetation in the RF / PF areas in the study area, with necessary details, should be given.
- 16) A study shall be got done to ascertain the impact of the Mining Project on wildlife of the study area and details furnished. Impact of the project on the wildlife in the surrounding and any other protected area and accordingly, detailed mitigative measures required, should be worked out

MEMBER SECRETARY SEIAA-TN

Page 17 of 25

with cost implications and submitted.

- 17) Location of National Parks, Sanctuaries, Biosphere Reserves, Wildlife Corridors, Ramsar site Tiger/ Elephant Reserves/(existing as well as proposed), if any, within 10 km of the mine lease should be clearly indicated, supported by a location map duly authenticated by Chief Wildlife Warden. Necessary clearance, as may be applicable to such projects due to proximity of the ecologically sensitive areas as mentioned above, should be obtained from the Standing Committee of National Board of Wildlife and copy furnished.
- 18) A detailed biological study of the study area [core zone and buffer zone (10 km radius of the periphery of the mine lease)] shall be carried out. Details of flora and fauna, endangered, endemic and RET Species duly authenticated, separately for core and buffer zone should be furnished based on such primary field survey, clearly indicating the Schedule of the fauna present. In case of any scheduled-I fauna found in the study area, the necessary plan along with budgetary provisions for their conservation should be prepared in consultation with State Forest and Wildlife Department and details furnished. Necessary allocation of funds for implementing the same should be made as part of the project cost.
- 19) Proximity to Areas declared as 'Critically Polluted' or the Project areas likely to come under the 'Aravali Range', (attracting court restrictions for mining operations), should also be indicated and where so required, clearance certifications from the prescribed Authorities, such as the SPCB or State Mining Department should be secured and furnished to the effect that the proposed mining activities could be considered.
- 20) Similarly, for Coastal Projects, a CRZ map duly authenticated by one of the authorized agencies demarcating LTL. HTL, CRZ area, location of the mine lease with respect to CRZ, coastal features such as mangroves, if any, should be furnished. (Note: The Mining Projects falling under CRZ would also need to obtain approval of the concerned Coastal Zone Management Authority).
- 21) R&R Plan/compensation details for the Project Affected People (PAP) should be furnished. While preparing the R&R Plan, the relevant State/National Rehabilitation & Resettlement Policy should be kept in view. In respect of SCs /STs and other weaker sections of the society in the study area, a need based sample survey, family-wise, should be undertaken to assess their requirements, and action programmes prepared and submitted accordingly, integrating the sectoral programmes of line departments of the State Government. It may be clearly brought out

MEMBER SECRETARY SEIAA-TN

263 A

#### Lr No.SEIAA-TN/F.No.10248/SEAC/ToR- 1676/2024 Dated:14.02.2024.

whether the village(s) located in the mine lease area will be shifted or not. The issues relating to shifting of village(s) including their R&R and socio-economic aspects should be discussed in the Report.

- 22) One season (non-monsoon) [i.e. March-May (Summer Season); October-December (post monsoon season); December-February (winter season)] primary baseline data on ambient air quality as per CPCB Notification of 2009, water quality, noise level, soil and flora and fauna shall be collected and the AAQ and other data so compiled presented date-wise in the EIA and EMP Report. Site-specific meteorological data should also be collected. The location of the monitoring stations should be such as to represent whole of the study area and justified keeping in view the pre-dominant downwind direction and location of sensitive receptors. There should be at least one monitoring station within 500 m of the mine lease in the pre-dominant downwind direction. The mineralogical composition of PM10, particularly for free silica, should be given.
- 23) Air quality modeling should be carried out for prediction of impact of the project on the air quality of the area. It should also take into account the impact of movement of Vehicles for transportation of mineral. The details of the model used and input parameters used for modeling should be provided. The air quality contours may be shown on a location map clearly indicating the location of the site, location of sensitive receptors, if any, and the habitation. The wind roses showing pre-dominant wind direction may also be indicated on the map.
- 24) The water requirement for the Project, its availability and source should be furnished. A detailed water balance should also be provided. Fresh water requirement for the Project should be indicated.
- Necessary clearance from the Competent Authority for drawl of requisite quantity of water for the Project should be provided.
- 26) Description of water conservation measures proposed to be adopted in the Project should be given. Details of rainwater harvesting proposed in the Project, if any, should be provided.
- 27) Impact of the Project on the water quality, both surface and groundwater, should be assessed and necessary safeguard measures, if any required, should be provided.
- 28) Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided. In case the working will intersect groundwater table, a detailed Hydro Geological Study should be undertaken and Report furnished. The Report inter-alia, shall include details of the aquifers

MEMBER SECRETARY

Page 19 of 25

present and impact of mining activities on these aquifers. Necessary permission from Central Ground Water Authority for working below ground water and for pumping of ground water should also be obtained and copy furnished.

- 29) Details of any stream, seasonal or otherwise, passing through the lease area and modification / diversion proposed, if any, and the impact of the same on the hydrology should be brought out.
- 30) Information on site elevation, working depth, groundwater table etc. Should be provided both in AMSL and bgl. A schematic diagram may also be provided for the same.
- 31) A time bound Progressive Greenbelt Development Plan shall be prepared in a tabular form (indicating the linear and quantitative coverage, plant species and time frame) and submitted, keeping in mind, the same will have to be executed up front on commencement of the Project. Phase-wise plan of plantation and compensatory afforestation should be charted clearly indicating the area to be covered under plantation and the species to be planted. The details of plantation already done should be given. The plant species selected for green belt should have greater ecological value and should be of good utility value to the local population with emphasis on local and native species and the species which are tolerant to pollution.
- 32) Impact on local transport infrastructure due to the Project should be indicated. Projected increase in truck traffic as a result of the Project in the present road network (including those outside the Project area) should be worked out, indicating whether it is capable of handling the incremental load. Arrangement for improving the infrastructure, if contemplated (including action to be taken by other agencies such as State Government) should be covered. Project Proponent shall conduct Impact of Transportation study as per Indian Road Congress Guidelines.
- 33) Details of the onsite shelter and facilities to be provided to the mine workers should be included in the EIA Report.
- 34) Conceptual post mining land use and Reclamation and Restoration of mined out areas (with plans and with adequate number of sections) should be given in the EIA report.
- 35) Occupational Health impacts of the Project should be anticipated and the proposed preventive measures spelt out in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP. The project specific occupational health mitigation measures with required facilities proposed in the mining area may be detailed.
- 36) Public health implications of the Project and related activities for the population in the impact

MEMBER SECRETARY SEIAA-TN

#### Lr No.SEIAA-TN/F.No.10248/SEAC/ToR-1676/2024 Dated:14.02.2024.

zone should be systematically evaluated and the proposed remedial measures should be detailed along with budgetary allocations.

- 37) Measures of socio economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.
- 38) Detailed Environmental Management Plan (EMP) to mitigate the environmental impacts which, should inter-alia include the impacts of change of land use, loss of agricultural and grazing land, if any, occupational health impacts besides other impacts specific to the proposed Project.
- 39) Public Hearing points raised and commitment of the Project Proponent on the same along with time bound Action Plan with budgetary provisions to implement the same should be provided and also incorporated in the final EIA/EMP Report of the Project.
- 40) Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.
- 41) The cost of the Project (capital cost and recurring cost) as well as the cost towards implementation of EMP should be clearly spelt out.
- 42) A Disaster management Plan shall be prepared and included in the EIA/EMP Report.
- 43) Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.
- 44) Besides the above, the below mentioned general points are also to be followed:
  - a) Executive Summary of the EIA/EMP Report
  - b) All documents to be properly referenced with index and continuous page numbering.
  - c) Where data are presented in the Report especially in Tables, the period in which the data were collected and the sources should be indicated.
  - d) Project Proponent shall enclose all the analysis/testing reports of water, air, soil, noise etc. using the MoEF&CC/NABL accredited laboratories. All the original analysis/testing reports should be available during appraisal of the Project.
  - Where the documents provided are in a language other than English, an English translation should be provided.
  - f) The Questionnaire for environmental appraisal of mining projects as devised earlier by the Ministry shall also be filled and submitted.
  - g) While preparing the EIA report, the instructions for the Proponents and instructions for

MEMBER SECRETARY SEIAA-TN

Page 21 of 25

the Consultants issued by MoEF&CC vide O.M. No. J-11013/41/2006-IA.II (I) dated 4th August, 2009, which are available on the website of this Ministry, should be followed.

- h) Changes, if any made in the basic scope and project parameters (as submitted in Form-I and the PFR for securing the TOR) should be brought to the attention of MoEF&CC with reasons for such changes and permission should be sought, as the ToR may also have to be altered. Post Public Hearing changes in structure and content of the draft EIA/EMP (other than modifications arising out of the P.H. process) will entail conducting the PH again with the revised documentation.
- i) As per the circular no. J-11011/618/2010-IA.II (I) dated 30.5.2012, certified report of the status of compliance of the conditions stipulated in the Environment Clearance for the existing operations of the project, should be obtained from the Regional Office of Ministry of Environment, Forest and Climate Change, as may be applicable.
- j) The EIA report should also include (i) surface plan of the area indicating contours of main topographic features, drainage and mining area, (ii) geological maps and sections and (iii) sections of the mine pit and external dumps, if any, clearly showing the land features of the adjoining area.

### In addition to the above, the following shall be furnished:-

# The Executive summary of the EIA/EMP report in about 8-10 pages should be prepared incorporating the information on following points:

- 1. Project name and location (Village, District, State, Industrial Estate (if applicable).
- Process description in brief, specifically indicating the gaseous emission, liquid effluent and solid and hazardous wastes.
- 3. Measures for mitigating the impact on the environment and mode of discharge or disposal.
- 4. Capital cost of the project, estimated time of completion.
- The proponent shall furnish the contour map of the water table detailing the number of wells located around the site and impacts on the wells due to mining activity.
- 6. A detailed study of the lithology of the mining lease area shall be furnished.
- 7. Details of village map, "A" register and FMB sketch shall be furnished.
- Detailed mining closure plan for the proposed project approved by the Geology of Mining department shall be shall be submitted along with EIA report.
- 9. Obtain a letter /certificate from the Assistant Director of Geology and Mining standing that there

MEMBER SECRETARY SEIAA-TN

267 A

is no other Minerals/resources like sand in the quarrying area within the approved depth of mining and below depth of mining and the same shall be furnished in the EIA report.

- 10. EIA report should strictly follow the Environmental Impact Assessment Guidance Manual for Mining of Minerals published February 2010.
- 11. Detail plan on rehabilitation and reclamation carried out for the stabilization and restoration of the mined areas.
- The EIA study report shall include the surrounding mining activity, if any.
- 13. Modeling study for Air, Water and noise shall be carried out in this field and incremental increase in the above study shall be substantiated with mitigation measures.
- 14. A study on the geological resources available shall be carried out and reported.
- 15. A specific study on agriculture & livelihood shall be carried out and reported.
- Impact of soil erosion, soil physical chemical and biological property changes may be assumed.
- 17. Site selected for the project Nature of land Agricultural (single/double crop), barren, Govt/ private land, status of is acquisition, nearby (in 2-3 km.) water body, population, with in 10km other industries, forest, eco-sensitive zones, accessibility, (note - in case of industrial estate this information may not be necessary)
- 18. Baseline environmental data air quality, surface and ground water quality, soil characteristic, flora and fauna, socio-economic condition of the nearby population
- 19. Identification of hazards in handling, processing and storage of hazardous material and safety system provided to mitigate the risk.
- 20. Likely impact of the project on air, water, land, flora-fauna and nearby population
- 21. Emergency preparedness plan in case of natural or in plant emergencies
- 22. Issues raised during public hearing (if applicable) and response given
- 23. CER plan with proposed expenditure.
- 24. Occupational Health Measures 25. Post project monitoring plan
- 26. The project proponent shall carry out detailed hydro geological study through intuitions/NABET Accredited agencies.
- 27. A detailed report on the green belt development already undertaken is to be furnished and also submit the proposal for green belt activities.
- The proponent shall propose the suitable control measure to control the fugitive emissions during

MEMBER SECRETARY SEIAA-TN

Page 23 of 25

the operations of the mines.

- A specific study should include impact on flora & fauna, disturbance to migratory pattern of animals.
- 30. Reserve funds should be earmarked for proper closure plan.
- 31. A detailed plan on plastic waste management shall be furnished. Further, the proponent should strictly comply with, Tamil Nadu Government Order (Ms) No.84 Environment and forests (EC.2) Department dated 25.06.2018 regarding ban on one time use and throw away plastics irrespective of thickness with effect from 01.01.2019 under Environment (Protection) Act, 1986. In this connection, the project proponent has to furnish the action plan.

#### Besides the above, the below mentioned general points should also be followed:-

- a. A note confirming compliance of the TOR, with cross referencing of the relevant sections / pages of the EIA report should be provided.
- b. All documents may be properly referenced with index, page numbers and continuous page numbering.
- c. Where data are presented in the report especially in tables, the period in which the data were collected and the sources should be indicated.
- d. While preparing the EIA report, the instructions for the proponents and instructions for the consultants issued by MoEF & CC vide O.M. No. J-11013/41/2006-IA.II (1) dated 4th August, 2009, which are available on the website of this Ministry should also be followed.
- e. The consultants involved in the preparation of EIA/EMP report after accreditation with Quality Council of India (QCI)/National Accreditation Board of Education and Training (NABET) would need to include a certificate in this regard in the EIA/EMP reports prepared by them and data provided by other organization/Laboratories including their status of approvals etc. In this regard circular no F. No.J -11013/77/2004-IA-II(I) dated 2<sup>nd</sup> December, 2009, 18<sup>th</sup> March 2010, 28<sup>th</sup> May 2010, 28<sup>th</sup> June 2010, 31<sup>st</sup> December 2010 & 30<sup>th</sup> September 2011 posted on the Ministry's website http://www.moef.nic.in/ may be referred.
  - After preparing the EIA (as per the generic structure prescribed in Appendix-III of the EIA Notification, 2006) covering the above mentioned points, the proponent will take further necessary action for obtaining environmental clearance in accordance with the procedure prescribed under the EIA Notification, 2006.

MEMBER SECRETARY SEIAA-TN

- The final EIA report shall be submitted to the SEIAA, Tamil Nadu for obtaining Environmental Clearance.
- The TORs with public hearing prescribed shall be <u>valid for a period of three vears</u> from the date of issue, for submission of the EIA/EMP report as per OMNo.J-11013/41/2006-IA-II(I)(part) dated 29<sup>th</sup> August, 2017.

### Roc.No. 1120/ 2020 /Mines Dated: 27 .01.2023.

#### Sir,

- Sub: Mines and Minerals Minor Mineral Rough stone Quarry lease for granted in favour of Tmt. K.M. Vijaya over an extent of 4.00.00 Hects of Patta land in S.F.No. 78/1B(P) of Kothapetta Village, Krishnagiri Taluk and District for a period of 10 years - Scheme of Mining submitted for the 2<sup>nd</sup> five year period 2023-2024 to 2027-2028 - Approved - Reg.
- Ref: 1. The District Collector, Krishnagiri Proc. Roc. No.419/2017/ Mines dated: 30.05.2018.
  - Mining plan approved by the Deputy Director of Geology and Mining, Krishnagiri in Roc.No.419/2017/Mines dated: 29.12.2017.
  - The Assistant Director (Mines) Krishnagiri, Proc. Rc.No. 1120/2020/Mines dated: 26.04.2021.
  - 1<sup>st</sup> Scheme of mining plan for the next five year period from 2023-2024 to 2027-2028 submitted by the lessee at District office on 13.01.2023.

Kind attention is invited to the references cited.

2) A quarry lease had been granted in favour of Tmt. K.M. Vijaya W/o. D. Madhiazhagan, to quarry Rough stone for a period of 5 years over an extent of 4.00.00 hects of Patta land in S.F.No. 78/1B(P) of Kothapetta Village, Krishnagiri Taluk and District vide the District Collector, Krishnagiri Proc. Roc. No. 419/2017/Mines dated: 30.05.2018 under TNMMCR Rules 1959. The lease deed has been executed on 30.05.2018 and the lease period is valid upto 29.05.2023.

Concernance of the second s

3) The Mining plan for the subject Rough stone quarry was approved by the Deputy Director of Geology and Mining, vide letter Rc. No. 419/2017/Mines Dated: 29.12.2017 which came into effect from the date of execution i.e. on 30.05.2018.

4) Meanwhile, the lessee Tm<sup>X, 4</sup>K.M. Vijaya W/o. Mathiazhagan has requested to extend the lease period for the said quarry lease from 5years to 10 years as per G.O.(MS) No. 208 Industries (MMC.1) Department dated: 21.09.2020.

5) Based on the requeste of the lessee Tmt. K.M. Vijaya and report submitted by Assistant Geologist (Mines), Special Deputy Thasildhar (Mines), Special Revenue Insepctor (Mines) and Surveyor (Mines) the lessee was extended a further period of 5 years from the expiry of the existing lease period i.e. from 30.05.2023 vide Assistant Director (Mines) Proc. Rc.No. 1120/2020/Mines dated: 26.04.2021.

6) In this regard, the lessee has submitted the scheme of mining for the next five years period from 2023-2024 to 2027-2028 (31.05.2023 to 30.05.2028).

7) As per the scheme of mining plan submitted for approval, it is mentioned that the total available geological reserves are calculated as 920148 Cbm with 95% recovery and after providing spaces for necessary benches the mineable reserves are calculated as 753546 Cbm @ 95% recovery upto a maximum of depth of 41m.

Proposed five years are as follows.

| lio2 qoT | reserves @ (m <sup>3</sup> )<br>Recoverable | Хеаг                      |
|----------|---------------------------------------------|---------------------------|
| 11702    | 526955                                      | \$0.05.2023 to 29.05.2024 |
|          | 128208                                      | 80.05.2024 to 29.05.2025  |
|          | ¢286€I                                      | 80.05.2025 to 29.05.2026  |
| 12       | 122489                                      | 7202.20.62 of 9202.20.05  |
| 74       | 106053                                      | 80.05.2027 to 29.05.2028  |
| 11702    | 753546                                      | Total                     |

9) The lessee had obtained transport permits for a quantity of 1,11,600 Cbm of rough stone as against the proposed production of 10,80,884 Cbm (for the Mining plan period from 2018-19 to 2022-23). Upto 01.11.2022.

5

10) The lessee has obtained Environment Clearance from DEIAA vide Lr. No. 34/DEIAA-KGI/EC.No. 26/2018 dated: 27.02.2018. For a quantity of 10,80,884 Cbm of rough stone for the first five years.

11) The draft Scheme of Mining submitted by Tmt. K.M. Vijaya has been scrutinized as per the guide lines/ Instructions issued by the Commissioner of Geology and Mining, Chennai-32. The Scheme of mining is prepared in accordance with the guidelines/ instructions issued.

12) Hence, in accordance with the TNMMCR 1959 and instructions issued by the Commissioner of Geology and Mining, Chennai, the said scheme of mining for the next five year period 2023-2024 to 2027-2028 (30.05.2023 to 29.05.2028) submitted by the lessee Tmt. K.M. Vijaya in respect of the area granted to quarry rough stone in Patta land S.F.No 78/1B (P) over an extent of 4.00.00 Hects is hereby approved subject to the following conditions.

- i. Based on the above details and in exercise of the powers conferred under Rule 41(9)(iii) of TNMMCR 1959 the scheme of mining submitted by Tmt. K.M. Vijaya W/o. D. Madhiazhagan, Krishnagiri is here by approved subject to the following conditions.
- ii. That the scheme of mining is approved without prejudice to any other law applicable to the quarry lease from time to time whether such laws are made by the Central Government, State Government or any other authority.
- iii. This approval of the scheme of mining does not in any way imply the approval of the Government in terms of any other provisions of Mines and Minerals Development and Regulation) Act 1957,or any other connected laws including Forest (Conservation)Act 1957, or any other connected Laws industry Forest (Conservation) Act 1980, Forest Conservation Rules 1981 Environment protection Act 1980, Indian Explosive Act 1884 (Central Act IV of 1884) and the rules made there under, Mineral Conservation and Development Rules 1988 and The Tamil Nadu Minor Mineral Concession rules, 1959.

- This scheme of Mining including progressive mine closure plan iv. is approved without prejudice to any other order or direction from any court of competent jurisdiction.
- Provisions of the Mines Act, 1952 and the Rules and Regulations v. made there under including submission of notice of opening,
- appointment of manager and other statutory officials as required 21 under Mines Act, 1952 shall be complied with.
- Provisions made under Mines and Minerals (Development and vi. Regulation) Act, 1957, MMDR amendment Act, 2015 made there under shall be complied with.
- This approval of scheme of mining is restricted to the mining vii. lease area only. The mining lease area is as shown on the statutory plan under TNMMCR Rules, 1959.
- The lessee should obtain environmental clearance from the viii. appropriate authority.
- The earlier instances of irregular/illegal quarrying, if any shall ix. not be regularized through the approval of this document.
- The lessee shall remit the penalty/ cost of mineral/ other dues if х. any as arrived by the District Collector/ Deputy Director of Geology and Mining, Krishnagiri District.
- Non adherence to any condition set-out above, the approval xi. shall be deemed to have been withdrawn with immediate effect.

Tmt. K. M. Vijaya, W/o. D. Mathiazhagan, D. No.58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri District- 635 001.

#### CONSENT LETTER FROM LESSEE

I hereby give my consent for preparing the Scheme of Mining with Progressive Mine Closure Plan in respect of Rough Stone Quarry over an extent of 4.00.0 Ha. in S.F. No.78/1B (Part) of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu State has been prepared by Shri S. DHANASEKAR, M.Sc., Qualified Person.

I request the Department of Geology and Mining, Krishnagiri to make further correspondence regarding modification of the Scheme of Mining with Progressive Mine Closure Plan with the said Qualified Person in his following Address:

#### S.DHANASEKAR, M.Sc.,

Qualified Person No.5/30-7B, Avvai Nagar, Ponkumar Mines Road, Jagir Ammapalayam, Salem District-636 302. E-mail: geodhana@yahoo.co.in Cell: 98946-28970

I hereby undertake that all the modifications, if any, made in the Scheme of Mining with Progressive Mine Closure Plan by the Qualified Person may be deemed to have been made with our knowledge and consent and shall be acceptable to me and binding on me in all respects.

### SCHEME OF MINING WITH PROGRESSIVE MINE CLOSURE PLAN FOR

### KOTHAPETTA ROUGH STONE OUARRY

Shi Quar (Prepared Under Rule 12 of MCDR, 1988(as amended upto 02.08.2011) & as per the amendments Under Rule 41 & 42 of TNMMCR, 1959)

#### 1.0 General:

The Scheme of Mining along with Progressive Mine Closure Plan has been prepared in respect of Rough Stone Quarry in Patta Land S.F.No.78/1B (Part) over an extent of 4.00.0 Ha. in Kothapetta Village, Krishnagri Taluk, Krishnagiri District, prepared for Tmt. K. M. Vijaya, W/o. D. Mathiazhagan, D.No.58B, Gandhi Nagar, Krishnagiri Town, Krishnagiri District - 635 001.

The fresh Mining Plan was approved by Deputy Director, Geology and Mining, Krishnagiri vide letter Roc No. 419/2017/Mines dated: 29.12.2017 for a period of five years from 2018-2019 to 2022-2023. Please refer Annexure-X. Copy of Approved Mining plan Letter.

Accordingly, the Lessee had obtained Environmental Clearance from DEIAA-KGI vide order Lr. No.34/DEIAA-KGI/Ec.No.26/2018 dated 27.02.2018. Please refer Annexure- III.

The Mining Lease was granted Vide Proceeding No. Proc.No. 419/2017/Mines dated 30.05.2018 for a period of Five years.

The lease deed was executed on 30.05.2018. Mining operation commenced on 01.06.2018. The lease will expire on 29.05.2023.

However as per the recent Amendment TNMMCR, G.O.(Ms)No.208 Industries (MMC.1) Department dated 21.09.2020, the lease period will be extended for another five years subject to the condition that the approved scheme of mining must be submitted along with the prescribed form in Appendix VI.

This Scheme of Mining for the period 2023-2024 to 2027-2028 is now being prepared and submitted under Rule 12 of MMCDR, 2010 and 41 & 42 of TNMMCR, 1959 for approval.

The mining operations are done by opencast semi-mechanized methods with jack hammer drilling and blasting, hydraulic excavators are used for loading the Rough stone from pithead to the needy crushers.

Please refer Location Plan and Mine lease plan - Plate No. I & II.

#### c) Existence of public road/railway line, if any nearby and approximate distance:

Extent of the area is shown in the FMB. The District Head Quarter Krishnagiri is at a distance about 3.0 Km. from quarry site. The area is at a distance of about 2.0 kms from Krishnagiri Village. Krishnagiri – Hosur Main Road (NH-44) is at a distance of about 1.2 kms Western side of the lease area.

Nearest Railhead is Rayakkottai Railway Station that is located about 29.3 kms from the Quarry, Post office are available in Krishnagiri at a distance of about 3.6Kms. Police Station are available in Krishnagiri at a distance of about 8.6 Kms. Air Port is available in Bangalore, about 120.0 kms. from the Quarry. Nearest Port is Chennai about 259.0 kms. from the area.

#### d) The Mining lease area is bounded by four corners and the coordinates are:

Table No:2

e) A general location map showing area and access routes. It is preferred that the area be marked on a Survey of India topographical map or a cadastral map or forest map as the case may be. However, if none of these are available, the area may be shown on an administrative map:

A general location map showing area boundaries and existing access routes shown on the Toposheet Plan (Key Plan) which is enclosed as Plate No.Ib. Since existing routes are being followed to reach the lease area no fresh access routes are proposed hence not shown.

Top Sheet No. : Topo Sheet No.57 L/2

| Latitude  | : 12° 32' 42.0172" N to 12° 32' 44.4928" N | N |
|-----------|--------------------------------------------|---|
| Longitude | : 78° 12' 54.6408" E to 78° 12' 42.8804" I | E |

## f) Land use pattern:

Dry Mineral bearing land.

## g) Location of the Area:

The Kothapetta Rough Stone Quarry is over an extent of 4.00.0 Ha. in S.F.No.78/1B (Part), Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamilnadu State.

## 3.0 DETAILS OF APPROVED MININGPLAN/SCHEME OF MINING:

## 3.1 Date and reference of earlier approved MP:

The fresh Mining Plan was approved by Deputy Director, Department of Geology and Mining, Krishnagiri vide letter Roc No. 419/2017/Mines dated 29.12.2017 for a period of five years 2018-2019 to 2022-2023. Please refer Annexure-X. Copy of Approved Mining plan Letter.

3.2 Details of last modifications if any (for the previous approved period) of approved MP/SOM, indicating date of approval, reason for modification:

-Nil-

3.3 Give review of earlier approved proposal (if any) in respect of exploration, excavation, reclamation etc:

## i) Exploration:

In the previous approved Mining Plan, it was mentioned that no exploration was carried out.

Massive rough stone exposures were clearly visible in the lease area.

Present Mine working had reached a depth of about 12.0m.

There is only one working pit available in this area, the dimension of which is given below 1411 2023

Table No.3

**Existing Pit Details** 

95.0m(L)Avg X 93.0m(W) Avg X 12.0m(D)Avg

The area is very small. The attitude of the deposits like width and length are clearly known. Depth persistence of Rough Stone in this area is already proved upto 12.0m.

## ii) Mine Development:

The Mine workings have reached a depth of nearly 12.0m. Development of the pits has been done only in the areas where the Rough Stone could be easily mined.

## iii)Exploitation:

The Quarry workings have reached a depth of nearly 12.0m.

There is only one working pit, the dimension of which is given below:

Table No.4

| Existing Pit Details                     |  |
|------------------------------------------|--|
| 95.0m(L)Avg X 93.0m(W) Avg X 12.0m(D)Avg |  |

The Planned and Actual Production for last approved Mining Plan period figures are given as follows:

Table No.5

| YEAR                                    | PLANNED(Cu.m)<br>ROUGH STONE | ACTUAL(Cu.m)<br>ROUGH STONE |
|-----------------------------------------|------------------------------|-----------------------------|
| 30.05.2018 - 29.05.2019                 | 216863                       | 18000                       |
| 30.05.2019 - 29.05.2020                 | 216298                       | 27600                       |
| 30.05.2020 - 29.05.2021                 | 217601                       | 28000                       |
| 30.05.2021 - 29.05.2022                 | 214476                       | 24000                       |
| 30.05.2022 - 29.05.2023<br>(01.11.2022) | 215646                       | 8400                        |
| TOTAL                                   | 1080884                      | 106000                      |

## iv) Waste Management:

In the Previous approved Mining Plan Period, the mine waste has been used for roads in the low laying adjacent area.

# v) Reserves and Resources estimated in the earlier approved mining plan period (2018-2019 to 2022-2023) with grade: 27 JAN 2023

Geological Reserve (insitu) under Proved category Mineable Reserve

: 1137773 cu.m : 1080884 cu.m

: 2387000 cu.m/

8

While calculating Mineable Reserve, the boundary barrier and bench width, height and slope are taken into account. Hence, the Mineable Reserve will be always less than the insitu reserve.

## vi) Depletion of Reserve:

Year wise Production

The actual production of Rough Stone for the last five years (2018-2019 to 2022-2023) is about 106000 cu.m of saleable Rough Stone.

## vii) Afforestation and Reclamation:

Presently, lessee had planted some trees in the lease area in scattered manner. Since, the Quarry is active. Mining should be carried out in such a manner that after certain period, some part is available for reclamation.

## viii) Control of Dust. Noise & Ground Vibrations:

Ouarrying of Rough Stone had been carried out by drilling and control blasting by using low power explosives, and hence, noise will be very minimum.

The dust control was taken care by water sprinkling on the haul roads. The amount of ground vibration is very less since only control blasting by using low power explosives is used.

## Reclamation & Rehabilitation:

Reclamation of mined out area does not arise and has not reached the full extent of working. After closure of the Mine, the pit will be allowed to collect seepage and rain water. This will help to charge the nearby agricultural wells.

## PART - 'A'

#### 1.0 GEOLOGY AND EXPLORATION

A) Briefly Describe the Topography, Drainage Pattern, Vegetation, Climate, Rainfall Data of the Area Applied/Mining Lease Area:

## a) Topography:

The Mining Lease area is approximately at 12° 32' 42.0172" N to 12° 32' 44.4928" N latitude and 78° 12' 54.6408" E to 78° 12' 42.8804" E longitude and is represented by Topo Sheet No.57 L/2 of Survey of India.

The lease area is a slightly elevated terrain and sloping towards. North Eastern side. The general trend of formation is NE – SW and dip towards SE-70°. The attitude of the area is about 537 MSL.

## Vegetation:

It is a dry Mineral bearing. It is a dry place with a Gravel cover of about 1.0m.

## Water table and Drainage Pattern:

Water table is touched at a depth of 76m in rainy season, ie. during North-East monsoon and at 82m in summer months. The water table fluctuation is verified by observing the water levels in the above seasons in the nearby wells.

## **Climatic Conditions:**

The area receives rainfall of about 800mm to 900mm per annum and the rainy season is mainly from October-January during Northeast Monsoon. The summer is hot with maximum temperature of 38°C and winter encounters a minimum temperature of 18°C.

## Rainfall Data:

The area receives scanty rainfall and the annual rainfall of the area varies between 800mm to 900mm.

## b) Geology of the Area:

The lease area is slightly elevated topography, the area has been quarrying operation earlier Rough stone exposures are clearly visible in existing pit within the lease applied area. Gravel are noticed at the average thickness of 1m. The slope is gentle towards North Eastern side. The altitude of the area is above 537m from MSL.

Peninsular gneiss forms the oldest rock formations, in which the massive formation of charnockite lies over with rich accumulation of recent quaternary formation. On regional scale the charnockite body trends NE-SW with dipping towards SE70<sup>0</sup>.

The general geological sequences of the rocks in this area are given below

| AGE      | FORMATION                      |
|----------|--------------------------------|
| Recent   | Quaternary Recent (Gravel)     |
| Archaean | Charnockite (Granitoid Gneiss) |
|          | Peninsular Gneiss Complex II.  |

## c) Details of Exploration already carried out:

The area was thoroughly explored by the Qualified Person and his geological team. Massive rough stone exposures are clearly visible from the existing pit within the lease area.

In this area, the mine working has reached a depth of about 12.0m.

There is only one working pit available in this area, the dimension of which is given before: <u>Table No.6</u>

\$1501010

8

Existing Pit Details 95.0m(L)Avg X 93.0m(W) Avg X 12.0m(D)Avg

The area is very small. The attitude of the deposits like width and length are clearly known. Depth persistence of Rough Stone in this area is already proved upto 12.0m.

## d) The Physical Character of the Rough Stone:

Rough stone texture is medium to coarse grained and is composed of recrystallized minerals, hence it is a metamorphic rock. The grains are subhedral, inequigranular, with a granoblastic texture. The grains are crystalline ie. Complete crystallization has occurred. Cleavage is absent. The color is dark olive green. The details collected during the field survey and found to be sufficient for the preparation of the Scheme of Mining with PMCP.

e) Number of boreholes indicating type (Core/RC/DTH), diameter, spacing, inclination, Collar level, depth etc... with standard bore hole logs duly marking on

Nil

## i)RESERVES :

## a. Method of Estimation of Reserves:

The Geological and Recoverable reserves are estimated by cross sectional method up to a depth of 41.0m (1.0m Gravel+ 40.0m Rough Stone. In the earlier plan instead of mentioning the topography as elevated land by tacking contour map it was mentioned as deposit having thickness of 25 meters above ground level. But in the field, it is revealed that there is no deposit above ground level, but it is an elevated terrain. Plans and Sections have been drawn with a scale of 1:1000 respectively.

Selecting a method of reserve estimation depends upon the geology of the mineral deposit, exploration method, purpose of computation and the required degree of accuracy and also on the contemplated mining system.

The ideal method should be simple, rapid, reliable, consistent with the character of the mineral body and available data and suitable for rapid checking. The method adopted for calculation of reserves in this area is by computing the volume by cross sectional method upto a particular level. The volume is calculated by multiplying the cross-sectional area with the length of the sectional influences.

The details of estimation of Geological Reserves and Mineable Reserves with reference to the Geological Plan & Cross section and Conceptual Plan & Section as shown in (Plate No.III &III-A and VII & VII-A) respectively.

## b. GEOLOGICAL RESERVES:

The Geological reserve of Rough Stone and Gravel is calculated upto a depth of 41.0m (1.0m Gravel + 40.0m Rough Stone). In the earlier plan instead of mentioning the topography as elevated land by taking contour map it was mentioned as deposit having thickness of 25 meters above ground level. But in the field it is revealed that there is no deposit above ground level, but it is an elevated terrain. Total Geological reserve is estimated at **1604820 Cu.m** by area cross sectional method.

## C. MINEABLE RESERVES:

The Mineable reserves are calculated by deducting 7.5m Safety distance and Bench Loss. The Mineable Reserve is calculated upto a depth of 41.0m (1.0m Gravel+ 40.0m Rough Stone).

## Table No.8

| Gravel                         | H | 20711 cu.m  |
|--------------------------------|---|-------------|
| Total Mineable Reserves in ROM | - | 968575 cu.m |
| Recoverable Reserves 95%       | = | 920148 cu.m |
| Mine waste @ 5%                | Ħ | 48427 cu.m  |

The geological reserves computed based on the geological cross sections up to the economically workable depth of 41m (1.0m Gravel + 40.0m Rough Stone) works out to **1524579cu.m** (**95%** recovery) (Table-7) and mineable reserves have been computed as **920148 cu.m** (Table-8) at the rate of **95%** recovery upto a depth of 41.0m (1.0m Gravel+ 40.0m Rough Stone). (Refer plate No.VII & VII-A). The above projections are for the Next Five years plan period.

ANGULEN

Mineable reserves have been computed as 920148 cu.m at the rate of 95% recovery up to a depth of 41m (1.0m Gravel+ 40.0m Rough Stone). The Mineable reserves are calculated by deducting 27 JAN 202 7.5m Safety distance & Bench Loss. El con

## A. Open Cast Mining

a) Briefly describe the existing as well as proposed method for excavation with all design parameters indicating on plans / sections:-

## Existing method:

The mining operations are done by opencast semi-mechanized methods with jack hammer drilling and blasting, hydraulic excavators are used for loading the Rough stone from pithead to the needy crushers.

There is only one existing working pit, the dimension of which is given below :

| 63 | Table No.9                                |
|----|-------------------------------------------|
|    | Existing Pit Details                      |
|    | 95.0m(L) Avg X 93.0m(W) Avg X 12.0m(D)Avg |

## Proposed method :

The quarry is proposed to carry out mining operation with semi-mechanized opencast method ("B2" category of small mine). The quarry operation involves shallow jack hammer drilling, slurry blasting, excavation, loading and transportation of Rough Stone.

As Instructed in the Environmental Clearance, the working hours were restricted between 7AM & 5PM (Present working hours 8AM to 4PM with a total working hours of 8 hours including lunch break). The operation will be confined to general shift only ie. from 8.00 AM to 4.00 PM with one hour lunch interval between 12.00 PM to 1.00 PM.

In Gravel, a bench will be 1.0m height and width with 45° slope.

The Rough Stone, totally six benches will be of 5.0m height and 5.0m width for next Five years only. Please refer Plate No. IV & IV-A. The advancement of the pit will be from boundary towards middle side of the lease area for the next Five years. Please refer Plate No.IV.

A bund will be constructed around the pit to prevent accident call and inrush of rainwater. Proper footpaths are provided between benches for easy accessibility for workers.

Haul roads, to conform to statutory standards are made according to convenience for smooth transport of Rough stone and waste. Wherever necessary, crossing platforms are provided in the haul roads at suitable point for safe crossing as tractors, tippers, trucks etc.

The Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

Average annual production is about 150709 cum of Rough Stone with 300 working days in a year. Considering the nature of the deposit and the anticipated daily production, level, semi-mechanized mining is proposed.

A boundary barrier of 7.5m width are maintained as per statute. Rough Stone locked up in this barrier will be excavated after obtaining permission from DGMS under Regulation 111 of Mines and Mineral Regulation, 1961. The sequence of working for the next Five years is indicated in Plate Nos. IV and the rate of production is given in Table No.11.

## b) Indicate Year-Wise Tentative Excavation in Cu.m indicating Production & development, ROM, pit wise as in table below.

## i) Planned Development for next Five years is given below :

Gravel of the lease area is 20711m<sup>3</sup>. Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

## ii) Planned Production for next Five years is given below :

The proposed rate of production of Rough Stone is about 753546 cu.m for Five Years at the rate of 95% recovery up to 31m depth (1m Gravel+ 30m Rough Stone).

| Year                    | ROM<br>Cu.m | Production<br>95% (cu.m) |
|-------------------------|-------------|--------------------------|
| 30.05.2023 - 29.05.2024 | 238865      | 226922                   |
| 30.05.2024 - 29.05.2025 | 166535      | 158208                   |
| 30.05.2025 - 29.05.2026 | 147235      | 139874                   |
| 30.05.2026 - 29.05.2027 | 128935      | 122489                   |
| 30.05.2027 - 29.05.2028 | 111635      | 106053                   |
| TOTAL                   | 793205      | 753546                   |

| Table No. | 10 |
|-----------|----|
|-----------|----|

From Total ROM the Rough Stone deposits are categorized with the following percentage. Rough stone: 95%.

The average production of Rough Stone per year will be about 150709 cu.m. Please refer Table No.11 and Plate No.IV.

## YEARWISE DEVELOPMENT & PRODUCTION SCHEDULE FOR NEXT FIVE YEARS

The proposed rate of production of **Rough Stone** is about **753546cu.m** for **Five Years**. The average proposed rate of production of **Rough Stone** is about **150709cu.m**. at the rate of 95% recovery up to a **31m** depth (1m Gravel+ 30m Rough Stone).

| Total Reserves             | =                   | 793205 cu.m |
| Recoverable Reserves @ 95% | =                   | 753546 cu.m |
| Mine waste @ 5%            | n                   | 39659 cu.m  |

ROM: The material excavated from mineralized zone and includes mineral reject and useable mineral component.

**OB:** Means overburden capping waste.

| iv) Estimated Life of the quarry                |               |
|-------------------------------------------------|---------------|
| Mineable ROM                                    | = 968575 cu.m |
| Mineable Reserves @ 95%                         | = 920148 cu.m |
| Average production (Rough Stone) per year @ 95% | = 150709 cu.m |
| Estimated Life of the Quarry = 920148 / 150709  | = 6.0 years   |

## Life = 6 years

The average proposed rate of production of Rough Stone is about 150709cu.m per year.

のときのあれ どうりょうの

The proposed rate of production when the quarry is fully developed is **753546m**<sup>3</sup> for next Five years and **150709m**<sup>3</sup> per annum. (Table-11) The production schedule for the subsequent five year is drawn mainly in consideration of reserves position, market demand and the cost of production.

## vi) Mineable Reserves and Anticipated Life of Mine

The Rough Stone is Massive in nature. The depth persistence of the Rough Stone will be beyond the economically workable depth. An optimum depth of 41.0m (1.0m Gravel+ 40.0m Rough Stone) for entire lease period has been established as economically viable depth. Eventually this depth is the optimum depth for safe and scientific quarrying.

The mineable reserves are calculated by excluding the mining loss due to formation of benches, ultimate depth of mine, the mineral reserve held up within the safety distances all along the boundary of quarry lease applied area.

The mineable reserves for this Rough stone is thus arrived as **920148cu.m** (Table-8) for an assumed depth of 41m from top surface (1.0m Gravel + 40.0m Rough Stone). The details of estimation of five years development & production plan (plate no. IV) is furnished in Table-11. The average rate of production of Rough Stone from this quarry is **150709 cu.m** per year and mineable recoverable reserves **920148cu.m**.

Based on the above, and taking into consideration of the available Mineable Reserves, the life of mine will be about 6 years, if the quarry is being worked continuously with prevailing market conditions and according to this Scheme of mining period.

## c). Composite development plans showing pit layouts, dumps, stacks of mineral reject, if any, etc. and year wise sections in case of 'B' category mines:

A composite development year wise Plan and Sections are shown in Plate Nos. IV & IV-A. The details are furnished in Table-11. The average annual production of Rough Stone per year will be about 150709 cu.m.

## d). Describe briefly giving salient features of the proposed method of working Indicating Category of mine:

The quarry is proposed to carry out mining operation with semi-mechanized opencast method ("B2" category of small mine). The quarry operation involves shallow jack hammer drilling, slurry blasting, excavation, loading and transportation of Rough Stone. The removal of blasted Rough Stone material is loaded into 10 MT capacity trucks with the help of hydraulic excavators. The mine will be worked by semi-mechanized method. However for drilling and hauling, jack hammers, hydraulic excavators and tippers will be used respectively.

## **Drilling Machines :**

Drilling of shot holes will be carried out using compressor and jack hammer. Depth of holes shall be 1 to 2m bench height and spacing shall be 0.75m and burden shall be 0.60m from the preface. Details of drilling equipments are given below.

| Туре        | Nos | Dia of<br>hole | Size /<br>Capacity | Make             | Motive<br>power | H.P |
|-------------|-----|----------------|--------------------|------------------|-----------------|-----|
| Jack Hammer | 5   | 25.5 mm        | Hand held          | Atlas copco 2Nos | Diesel          | 60  |

Table No.12

## Loading Equipment:

Loading of rough stone shall be carried out by 10 tonne capacity tippers by Hydraulic Excavator from the working place periodically. Details of loading equipment are given as under.

|                     |     | 60000000000000000000000000000000000000 |              |                 |      |
|---------------------|-----|----------------------------------------|--------------|-----------------|------|
| Туре                | Nos | Bucket Capacity<br>(MT)                | Make         | Motive<br>power | H.P. |
| Hydraulic excavator | 2   | $1.2 \text{ M}^3$                      | L&T or Ex200 | Diesel          | 120  |

## Table No.13

## Transportation:

Transport of raw materials and waste shall be done by Tipper of 10 M.T. capacity.

Table No.14

| Туре   | Nos | Size / Capacity | Make          | Motive power | H.P. |
|--------|-----|-----------------|---------------|--------------|------|
| Tipper | 3   | 10 M.T          | Ashok Leyland | Diesel       | 110  |

## Miscellaneous :

There is no other miscellaneous operation worth mentioning except drilling by jack hammer, working of Rough stone deposit by opencast semi-mechanized methods, transport of Rough stone by tippers and trucks and pumping out seepage water during rainy season.

## Afforestation :

The safety distance along the boundary has been identified to be utilized for afforestation purpose. Yearly 100 Neem trees will be planted in this lease area. These trees will be planted along the boundary line, (Please refer Plate No.V for Mine layout, Land use and Afforestation Plan).

The soil will be spread over the same and vegetative cover with suitable species will be provided. The extent of area to be afforested in next Five years is 0.56.0 Ha. interval between trees – 5m, survival rate – 60%. A retaining wall will be constructed around the dumping yard.

2)1601611st

27 JAN 2023 The Afforestation programme for the next Five years are described as follows : Table No. 15 Name of the No. of Area Survival Year Interval species species in Ha. rate 2023-2024 Neem 100 Sm 0.11.0 60% 2024-2025 Neem 100 5m 0.11.0 60% 2025-2026 Neem 100 5m 0.11.0 60% 2026-2027 Neem 100 5m 0.11.0 60% 2027-2028 Neem 100 5m 0.12.0 60% TOTAL 500 0.56.0

e). Describe briefly the layout of mine workings, pit road layout, the layout of faces and sites for disposal of Topsoil/waste along with ground preparation prior to disposal of waste, reject etc. A reference to the plans and sections may be given. UPL or ultimate size of the pit is to be shown for identification of the suitable dumping site:

The quarry is proposed to carry out mining operation with semi-mechanized opencast method ("B2" category of small mine). The quarry operation involves shallow jack hammer drilling, slurry blasting, excavation, loading and transportation of Rough Stone.

As Instructed in the Environmental Clearance, the working hours were restricted between 7AM & 5PM (Present working hours 8AM to 4PM with a total working hours of 8 hours including lunch break). The operation will be confined to general shift only ie. from 8.00 AM to 4.00 PM with one hour lunch interval between 12.00 PM to 1.00 PM.

The Rough Stone, totally six benches will be 5.0m height and 5.0m width for next Five years only. Please refer Plate No. IV & IV-A. The advancement of the pit will be from boundary towards middle side of the lease area for the next Five years. Please refer Plate No.IV.

A bund will be constructed around the pit to prevent accident call and inrush of rainwater. Proper footpaths are provided between benches for easy accessibility for workers.

Haul roads, to conform to statutory standards are made according to convenience for smooth transport of Rough Stone and waste. Wherever necessary, crossing platforms provided in the haul roads at suitable point for safe crossing as tractors, tippers, trucks etc.,

Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

Average annual production is about 150709 cum of Rough Stone with 300 working days in a year. Considering the nature of the deposit and the anticipated daily production level, semimechanized mining is proposed.

2110316314

A boundary barrier of 7.5m width will be maintained as per statute. Rough Stone locked up in this barrier will be excavated after obtaining permission from DGMS under Regulation 111 of Mines and Mineral Regulation, 1961. The sequence of working for the next Five years is indicated in Plate Nos. IV and the rate of production is given in Table No.11.

f) Conceptual Mine planning upto the end of lease period taking into consideration the present available reserves and resources describing the excavation, recovery of ROM, Disposal of waste, backfilling of voids, reclamation and rehabilitation showing on a plan with few relevant sections:

## **Conceptual Mining Plan :**

Conceptual mining plan is prepared with an object of long-term systematic development of benches, lay outs, selection of permanent ultimate pit limit, depth of quarrying and ultimate pit, selection of sites for construction of infrastructure etc.,

While making the Conceptual Mining Plan and deciding the ultimate pit limits the following factors are considered.

i) Pit dimension :

## a. Table No:16

|               | PIT   |  |
|---------------|-------|--|
| Length(m)     | 286.0 |  |
| Width (m) Avg | 136.0 |  |
| Depth (m)     | 41.0m |  |

## 01. Boundary Barriers

In this case a barrier of 7.5m is left along the lease boundary.

## 02. Depth of Mining :

The depth of mining is about 31.0m (1.0m Gravel+ 30.0m Rough Stone).

## 03. No. of benches :

The no. of benches will be seven including the Gravel bench.

## 04. Size and slope of benches :

In Gravel, the bench height will be 1.0m with 45° slope.

In Rough Stone, the bench 5.0m height and width 5.0m for next Five years.

## 05. Nature of Gravel:

The nature of the soil in this area is gravelly soil. The top most gravelly soil, this layer which is thickness of about 1.0m from general ground level.

## 06. The size of the lease hold :

The lease area has an extent of 4.00.0Ha.

## 07. Nature of ore body :

In the area Rough Stone is of massive Deposit and without much of geological disturbances.

304 A

## i) The ultimate pit limits will be :

Ultimate pit limits have been marked in the Conceptual Mining Plan.

## Ultimate pit boundaries:

Ultimate pit limits have been marked in the Conceptual Plan in Plate No.VII.

## ii) Waste dumps :

The mine waste (5%) will be backfilled in the mined out area.

Table No. 20

| Proposed                             | Backfilling | Area: |
|--------------------------------------|-------------|-------|
| The first sector and a second second | 0           |       |

149.0 m(L) x 61.0m(W) x 4.36m (H)= 39659 M<sup>3</sup>

100 Neem trees/per year is to be afforested all sides of the boundary barrier.

The Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

## **Blasting Pattern:**

The massive formation shall be broken into pieces of portable size by drilling and Proposed Control Blasting using jack hammers and shot hole Blasting. Power factor of explosives for breaking such hard rock shall be in the order of 6 to 7 tonnes per K.g of explosives.\*

TENTI CHAN

## Proposed Control Blasting parameters are as follows.

| Diameter of the hole                 |      | 32-36 mm                                                  |
|--------------------------------------|------|-----------------------------------------------------------|
| Spacing                              | :    | 60 Cms                                                    |
| Depth                                | 3    | 1 to 1.5m                                                 |
| Charge / Hole                        | 12   | D.Cord with water or 70 gms of gun<br>powder or Gelatine. |
| Pattern of hole                      | :    | Zig Zag                                                   |
| Inclination of hole                  |      | 70° from the horizontal.                                  |
| Quantity of rock broken              | :    | 0.45 MT x 2.6 = 1.17 MT                                   |
| Control Blasting<br>efficiency @ 90% | 3    | 1.17 x 90% = 1.05MT / hole                                |
| Charge per hole                      | 1    | 140 gms of 25mm dia cartridge                             |
| Quantity of rock broken<br>per day   | (100 | 502.36M <sup>2</sup> .                                    |

Table No 10

## b) During dry season, Nitrate mixture as base charge and any conventional type of explosives as booster charge will be used:

In rainy season, it is preferable to use only conventional type of explosives like slurry based explosives. Since it is a small mine and the working of the mine is also seasonal, drilling will be done by contractors and supply of explosives will be done by authorized dealer. However, blasting will be done by a qualified mate or Blaster.

## c) Secondary Blasting:

Secondary blasting is not needed, since the primary blasting itself will take care of the required fragmentation of waste rock and mineral body.

## d) Storage of Explosives:

The explosive shall be supplied by the authorized contractor at the blasting site at the time of blasting. The explosive shall be directly used so no storage of explosive is proposed.

## e) Safety Precautions:

- 1. During handling all care shall be taken that no inflammable elements should be there.
- Only safety explosive container with explosive license shall be used for safe and secure transportation of explosive.
- 3. Efficient Siren will be blown prior to the blasting & after clearance of blasting.

## f) Underground Mines :

Not applicable.

## 3.0 MINE DRAINAGE

The area is a slightly elevated terrain. Rain water finds its natural coarse. The water table is touched at a depth of 76m in summer and at 82m in NE monsoon. The water table fluctuation is verified by observing the water levels in the above seasons in the nearby wells.

कार्डा द्य

During the mining of Fourteenth benches, it may be necessary to pump out water. A 5 HP pump can easily deal rain water and seepage water and keep the mine dry. The pumped out water will be left out far away from the Northeastern boundary.

## a. Depth of Mining:

The working in Rough Stone will reach a depth of 31.0m (1.0m Gravel + 30.0m Rough Stone) in the next Five years.

## b. Quantity and quality of water likely to be encountered:

In the next Five years, the water table will not pose any problem. However, to deal with storm water and seepage water, a diesel pump of 5 HP capacities is proposed.

In future, proper dewatering pumping arrangements to be made from pit bottom to nearby agricultural lands.

## c. Describe regional and local drainage pattern. Also indicate annual rain fall, catchments area, and likely quantity of rain water to flow through the lease area, arrangement for arresting solid wash off etc.

Ground water is the main source in this area, apart from rain in the monsoon period. The water table is at a depth of 82m in summer and at 76m in rainy season. The ground water will be collected in the sump for the deposition of solid particles. Once the suspended particles are deposited it will be pumped out for domestic purpose, dust suppression system, gardening and Afforestation purpose. The excess water only will be pumped out to the ponds/closer water bodies-pond after the deposition of solid particles. There are no toxic elements found in the sump water.

To cope up with storm water and seepage water, an energy efficient electrical pump of 5 H.P capacity will be installed and the discharge will be left-out in the nallah/pond. Garland drains will be made all along the periphery of dumpsites to prevent the water carrying the wash-offs from the dumps. The water collected in the garland drains will flow towards a settling tank formed near by the dumpsite.

The water will be allowed to settle the wash offs from the dumps in the settling tank and pure and clear water will be utilized for Afforestation purposes and for haul roads arrest the dust generation.

# 4.0. STACKING OF MINERAL REJECT /SUB GRADE MATERIAL AND DISPOSAL O

a) Indicate briefly the nature and quantity of Topsoil, Topsoil/waste and Mineral Reject to be disposed off.

## Topsoil:

The Topsoil is gravelly soil. It occurs to a depth of 1.0m. The generation of Gravel for next Five years is about 20711 M<sup>3</sup>. Gravel formation will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

## Side burden:

There is no sideburden in this lease area.

## Sub-grade Mineral:

There is no Sub-grade Mineral produced in the next Five years.

## Mineral reject:

The mine waste (5%) will be backfilled in the mined out area.

Proposed Backfilling Area: 149.0 m(L) x 61.0m(W) x 4.36m (H)= 39659 M<sup>3</sup>

b) The proposed dumping ground within the lease area be proved for presence or absence of mineral and be outside the UPL unless simultaneous backfilling is proposed or purely temporary dumping for a short period is proposed in mineralized area with technical constraints & justification.

Construction of garland drain in around the pit and dump and settling tank will be provided to guard against the heavy rainwater.

Periodically sprinkling/spraying water on roads leading from working face to waste dump, so that areas are always kept wet to prevents emission of air borne dust. Retaining wall will be constructed around the pit.

c) Attach a note indicating the manner of disposal of waste, configuration and sequence of year wise buildup of dumps along with the proposals for protective measures.

The dumping of waste material, will be done steps to avoid sliding. One end of the waste dump to be matured for stabilization will be taken up for Afforestation.

Construction of garland drain in and around the pit. Settling tank will be provided to guard against the heavy rainwater.

Periodically sprinkling/spraying water on roads, so these areas are always kept wet to prevent emission of air borne dust. Retaining wall and garland drain will be constructed around the pit Afforestation programme will be carried out.

## 5.0 USE OF MINERAL AND MINERAL REJECT:

## a) Describe briefly the requirement of end-use industry specifically in terms of

The entire mined out mineral is been utilized by the nearby Crusher unit in Krishnagiri.

 b) Give brief requirement of intermediate industries involved in up gradation of Mineral before its end-use:

There is no intermediate industries involved for up gradation of Mineral.

## c) Give detail requirements for other industries, captive consumption, export,

### Associated industrial use etc:

Not Applicable.

## d). Physical specifications:

Rough stone texture is medium to coarse grained and is composed of recrystallized minerals, hence it is a metamorphic rock. The grains are subhedral, inequigranular, with a granoblastic texture. The grains are crystalline ie. Complete crystallization has occurred. Cleavage is absent. The color is dark olive green.

## Supply of buyers :

Used in nearby Crusher units at Krishnagiri.

e) Give details of processes adopted to upgrade the ROM to suit the user Requirements: Not applicable.

## 6.0 PROCESSING OF ROM AND MINERAL REJECT :

a) If processing / beneficiation of the ROM or Mineral Reject is planned to be conducted, briefly describe nature of processing / beneficiation. This may indicate size and grade of feed material and concentrate (finished marketable product), recovery etc:

The minerals produced from the mines need only specific sorting & grading for Size, Grade & Recovery factor. No mineral beneficiation processing is involved. Besides there is no other processing or beneficiation is required for upgrading.

## Mineral Beneficiation of Mineral :

Not applicable, no beneficiation is being carried out at the mine. Since the entire mineral was supplied in raw form.

## Beneficiation Test Done On Sub-Grade Mineral:

Not applicable, since no sub-grade mineral is anticipated.

b) Give a material balance chart with a flow sheet or schematic diagram of the Processing procedure indicating feed, product, recovery, and its grade at each stage of - Glencon processing:

Not applicable.

c) Explain the disposal method for tailings or reject from the processing plant: Not applicable.

d) Quantity and quality of tailings /reject proposed to be disposed, size and capacity of tailing pond, toxic effect of such tailings, if any, with process adopted to neutralize any such effect before their disposal and dealing of excess water from the tailings dam:

Not applicable.

e) Specify quantity and type of chemicals if any to be used in the processing plant: Not applicable.

f) Specify quantity and type of chemicals to be stored on site / plant:

Not applicable.

g) Indicate quantity (cum per day) of water required for mining and processing and sources of supply of water, disposal of water and extent of recycling:

Water balance chart may be given.

Not applicable.

## 7.0. OTHERS:

## a. Site Services :

The proposed site services are:

Drinking water, rest shed, store room, public convenience etc., mines office and blaster shelter etc., please refer Plate Nos.IV, V, VII and VIII.

## **Employment Potential:**

i)Skilled Labour:

| Foreman/ Part time Mining Engineer | ۲  | 1  |
|------------------------------------|----|----|
| Excavator operator                 |    | 2  |
| Co- operator                       |    | 2  |
| Jack hammer operator               | 5  | 6  |
| Blaster/mate                       | ž. | 1  |
| ii)Semi-skilled:                   |    | 3  |
| watchman                           | ×. | 1  |
| iii)Unskilled helper Muzdoor       | ŝ. | 5  |
| Total                              | 2  | 21 |
|                                    |    |    |

Nos.

23

## FACE WORKER

The drilling will be done by contractors. The mine will work in a single shift from 8.00 AM to 4.00 PM with one hour lunch interval between 12.00 Noon and 1.00 PM.

## 8.0 PROGRESSIVE MINE CLOSURE PLAN

## Water Regime

Ground water is touched at a depth of 82m in summer and at 76m in NE monsoon season. The average rainfall is 800-900mm. There is no lake, reservoir or river near the area. Villagers use open well water for drinking and other domestic purposes for ages without any adverse health effects. However drinking water will be supplied from the public water supply system from nearby hamlets.

## Air-Quality:

The air quality will be affected during the quarrying period due to blasting and jack hammer drilling, which will be within permissible limits. Since this is an open area, the impact on air quality will be to the minimum. The mine roads will be sprinkled with water before starting the transportation of rough stone and wastes to minimize air pollution.

## Noise Level:

Quarrying of Rough Stone had been carried out by drilling and control blasting by using low power explosives, and hence, noise will be very minimum.

## Flora and Fauna

Since the lease area is a stony waste, it does not contain much vegetation. There is no report of existence of wild animals in this region.

## **Climate Conditions**

The area receives rainfall of about 800mm to 900mm per annum and the rainy season is mainly from October-January during North East Monsoon. The summer is hot with maximum temperature of 38°C and winter encounters a minimum temperature of 18°C.

## Human Settlement

| Name of Hamlet   | Population | Direction from the | Distance |
|------------------|------------|--------------------|----------|
| Kallukurikki     | 240        | N                  | 1.5 kms  |

| Krishnagiri      | 680        | S                  | 2.0 kms. |

within ale

## Public building, Places of worship and Monuments

There is no public building, places of worship or archaeological or national monuments near the area. There is no wild life or bird sanctuary or no reserve or any protected social forest closer to the area.

8.2 Impact Assessment: Attach an Environmental Impact Assessment Statement Describing the impact of mining and beneficiation on environment on the following:

#### a) **Environmental Impact Assessment Statement:**

The factors that should be covered in this Para are: -

- 01. Land
- 02. Air Quality
- 03. Water Quality
- 04. Noise Levels
- 05. Vibration Levels
- 06. Water Regime
- 07. Socio-Economics
- 08. Historical Monuments etc.

## Land:

It is a working mine. There is a proposal for backfilling. Before closure of the mine, a parapet wall will be constructed to prevent inadvertent entry of cattle and human beings. The dumps will be vegetated to prevent sliding. After closure of the mine, the pit will be allowed to collect seepage and rain water.

This will help to charge the nearby agricultural wells. Fish forming will also be attempted.

Afforestation will be attempted in the boundary barrier.

## Air-Quality:

The air quality will be affected during the quarrying period due to blasting and jack hammer drilling, which will be within permissible limits. Since this is an open area, the impact on air quality will be to the minimum. The mine roads will be sprinkled with water before starting the transportation of rough stone and wastes to minimize air pollution.

## Water Quality:

Mining operation will not produce any toxic effluent in the form of solid, liquid or gas. The existing water quality will not be affected by mining operation. The Surface rain water flow through the seasonal water course as usual.

## Noise Level:

Quarrying of Rough Stone had been carried out by drilling and control blasting by using low power explosives, and hence, noise will be very minimum.

## Vibration levels:

The ground vibration will be caused due to movement of earth moving equipment and blasting. But the impact on the environment will be negligible, since the quantity of explosives used will be very small and the movement of equipment will be intermittent.

## Water Regime:

Mining operation will not produce any toxic effluent in the form of solid, liquid or gas and will not have any impact on quality of water and also on ground water.

## Socio-Economics:

The local population is mostly agriculture based. Agricultural is done only on seasonal basis. Mining in this area is an avenue for employment. Mining certainly has created an impact in the Socio-economic standards of the local people. It has improved the life style of the local people and has improve the standard of living.

## **Historical Monuments:**

There is no historical or Archaeological monument near the area. The mining operation does not have any impact on these aspects.

## 8.3 PROGRESSIVE RECLAMATION PLAN:

Since, it is an existing mine, the only proposal now is to plant 100 Neem trees every year in the boundary barrier. A retaining wall will be constructed around the pit. Please refer Plate Nos.V. The Afforestation programme for the next Five years are described as follows :

Table No. 22

| Year      | Name of the<br>species | No. Of species | Interval | Area<br>in Ha. | Survival<br>rate |
|-----------|------------------------|----------------|----------|----------------|------------------|
| 2023-2024 | Neem                   | 100            | 5m       | 0.11.0         | 60%              |
| 2024-2025 | Neem                   | 100            | 5m       | 0.11.0         | 60%              |
| 2025-2026 | Neem                   | 100            | 5m       | 0.11.0         | 60%              |
| 2026-2027 | Neem                   | 100            | 5m       | 0.11.0         | 60%              |
| 2027-2028 | Neem                   | 100            | 5m       | 0.12.0         | 60%              |
| TOTAL     |                        | 500            |          | 0.56.0         |                  |

After complete extraction of mineral, the pit will be allowed to collect rain and seepage water to serve as a reservoir to charge the nearby wells. Fish culture will also be attempted. A bund will be constructed around the pits.

27

## 8.3.1. MINED OUT LAND:

It is an existing mining lease. There is a proposal for back filling at the conceptual stage. 1 JAN 2023

A DIBIT CHENON

anisate P

: 3.42/0-Ha

: 0.02.0 Ha.

: Nil

: 0.56.8 Ha. L

01. The area covered by pits

02. The area covered by waste dumps & Afforestation

03. The area covered by roads, infrastructure

04. Unutilized area

## 8.3.2. Topsoil management:

The Topsoil is Gravel. It will be removed and hydraulic excavators are used for loading the gravel into the tipper from pit head to needy buyers. This will be done only after obtaining permission and paying necessary seigniorage fees to the Government.

### 8.3.3. Tailing Dam Management

Does not arise.

8.3.4 Acid mine drainage, if any and its mitigative measures. Not applicable.

## 8.3.5 Safety And Security

All the quarry workers will be provided with safety equipments like helmets, Mine Goggles, Ear plugs, Ear muffs, Dust mask, reflector jackets and Safety Shoes as personal protective device as per the specification approved by Director of mines safety. Periodically medical checkup will be conducted for all workers for any mine health related problems. Proper training and induction will be given by qualified and experienced safety officer to all employed about the safe and systematic Rough stone quarrying operations. The drillers and workers will be sent for vocational training periodically to carry out the quarrying operations scientifically to safe guard the men machinery and mineral and to create awareness of conventional opencast quarrying operations.

Parapet wall or bund have been constructed on all sides of the openings. Proper pumping arrangements during rainy season. Trees planted all along the mining lease boundary.

#### 8.4 Disaster Management And Risk Assessment

The nearby hamlet is Krishnagiri which is at a distance of 2.0 kms where facilities like District government Centre etc., are available. Mode of transport available is Jeep. All the employee will be shifted to the nearest hamlet Krishnagiri. Mobile phone will be provided to the Mines Manager. The Manager/Supervisor will be provided with a mobile phone. The Mining area is very small. There is no chance for risk for any disaster. However, the details of contact person are given : Contact person 125 Tmt.K.M. Vijaya,

Postal Address

W/o, Mathiazhagan, D.No.58B, Gandhi Nagar,

Krishnagiri Town,

Krishnagiri District - 635 001.

28

## 8.5 Care and maintenance during temporary discontinuance:

In case, of any temporary closure or discontinuance of mining operations, the following steps are proposed.

山的市市市

CHEUR

- a. Watchman will be posted round the clock to prevent any unauthorized or inadvertent entry of general public.
- b. Works on stabilization of dumps to provide vegetal cover will be taken up.
- c. Construction of garland drains in the pit and retaining walls around the dumps will be attempted.

## 8.6 .Project Cost:

| <ul> <li><u>A. Fixed Asset Cost</u>:</li> <li>1. Land Cost</li> <li>2. Labour Shed</li> <li>3. Sanitary Facility</li> <li>4. Table No.23

## 9.0 Any Other Information:

The Scheme of Mining proposed has fully covered the aspects of Tamil Nadu Minor Mineral Concession Rules with a plan to extend the proposed working of the mine to the maximum possible depth of the deposit. To avoid wastage, the deposit has to be carefully and economically mined. Work persons have to be educated about the value of mineral. The Lessee endeavours every attempt to win mineral economically without wastage and to improve the environment and ecology.

This Mining Plan is approved based on guidelines / instruction issued and in corporation of the particulars specified in the letter Roc. No. Duputy Director of Geology and Mining, Krishnegiri and subject to further fulfiliment of the conditions laid down under Tamii Nadu Minor Mineral Concession Rules, 1959 and Minor Mineral Conservation and Development Rula 2010.

#### ORDER:

Tmt. K.M. Vijaya W/o D. Mathiazhagan No. 58B Gandhi Nagar, Krishnagiri Town and Taluk have applied for the grant of quarry lease to quarry Rough stone for a period of five years over an extent of 4.00.0 hects. in patta land in. S.F.Nos. 78/1B (part) of Kothapetia Village of Krishnagiri Taluk and District vide in their application 1\* cited. 2. The Revenue Divisional Officer, Krishnagiri had furnished land availability and inspection report vide in the reference 3<sup>rd</sup> cited. From her report, the following facts are revealed.

a) The applied area in S.F.Nos. 78/1B (part) over an extent of 4.00.0 Hects. Stands registered in the name of Tmt. K.M.Vijaya W/o D. Madhiazhagan vide patta NO. 1521 in kothapetta Village records.

b) There is no residential area, Natham, School Buildings, Place of worship are situated within 300 mts. Radial of proposed from the applied area.

c) There is No Odai, river EB lines, Telephone lines, situated within 50 mts

d) There is no objection for the A1 Notice published in Kothapetta Village on 11.08.2017.

e) There is no litigation in the area, and it is not acquired by the Government and it is not registered in the prohibitory area book.

f) Approach road to the area is available from Krishnagiri- Maharajakadai Road through the remaining portion of the patta land S.F No. 78/1B of the applicant.

g) Finally he had recommended for the issue of quarry lease for Rough Stone to the applicant for a period of five years over an extent of 4.00.0 hects in patta land S.F No. 78/1B (part) of Kothapetta Village, Krishnagiri Taluk and District subject to the condition that no quarrying should be carried out in the adjacent. Government land and no hinderance should be given to the public.

3) Deputy Director (G&M), Krishnagiri had inspected the area on 17.11.2017 and furnished his technical report vide in the reference 4<sup>th</sup> cited. From his report the following facts are revealted.

a) The applied area stands registered in the name of the applicant Tmt. K.M. Vijaya W/o D. Madhiaghagan vide patta NO. 1521 in Kothapetta village records.

b) The area is in the form of small mount having a height of 15 mts. Sloping on East and West side with bouldry out crops topsoil cover is very meager and observed only interstitial filling of the boulders. The Country rock of the area is granitic Gneiss having a general trend of NE-SW almost vertical dipping. The rock type available in the area is suitable for making rough stone, cut stone and jellys.

c) The area in virgin, Age old pit with average dimension of  $40x 22.5 \times 3.7$  Mts is observed on the South-East corner of the area with water logged condition

d) Approach road to the area is available.

e) No habitation is situated within 300 meters radial distance from the applied area.

i) NO permanent structes observe with in 50 mts radial distance.

g) There is no fauna and flora of botanical importance noticed in the applied area. The village in which the lease applied area is situated is not classified as a

II) Conditions imposed for rough stone quarrying:

குத்தகை காலம், குத்தகை ஒப்பந்தப்பத்திரம் நிறைவேற்றும் நாளிலிருந்து ஐந்து ஆண்டுகளாகும்.

 குவாரி குத்தகை வழங்கப்பட்ட இடத்தில் குவாரி செய்யும் வேலிக்கல் / குண்டுக்கல் / கட்டுக்கல் / சக்கை மற்றும் ஜல்லி ஆகியவற்றை மேற்படி இடத்திலிருந்து வெளியில் எடுத்துச் செல்வதற்கு முன்பு அவை ஒவ்வொன்றிற்கும் அவற்றிற்குரிய வீதத்தில் சீனியரேஜ் தீர்வை செலுத்தி இவ்வலுவலகத்தில் பாயிட் மற்றும் நடைச்சீட்டு பெற்ற பின்புதான் மேற்படி கனியங்களை குவாரியிலிருந்து வெளியில் எடுத்துச் செல்ல வேண்டும். 1959 ஆம் வருடத்திய சிறுகனிம சலுகை விதிகள், இணைப்பு II–ல் அவ்வப்போது அரசால் நிர்ணயிக்கப்படும் வீதத்தில் பரப்பு தீர்வை செலுத்த வேண்டும். மேற்கண்ட தொகையைத் தவிர அரசால் அவ்வப்போது நிர்ணயிக்கப்படும் இதர தொகைகளையும் குத்தகைதாரர் செலுத்த வேண்டும்.

3. குத்தகை இடத்திற்கு அருகிலுள்ள குடியிருப்புகள், கட்டடங்கள், நீர்நிலைகள், குளங்களின் கரைகள், மரங்கள், சாலைகள், வண்டிப்பாதைகள், நடைபாதைகள் மற்றும் இதர பொதுச் சொத்துக்களுக்கு பாதகமில்லாமல் குவாரி செய்ய வேண்டும். 4.

குத்தகை வழங்கப்பட்ட இடத்திற்கு அருகாமையில் உள்ள பட்டாதாரர்கள் மற்றும் பொது மக்களுக்கு பாதகமில்லாமல் குவாரி செய்ய வேண்டும்.

எதாலைபேச் சும்பிகளுக்கு 50 மீட்டரும், குடியிருப்பு பகுதியிலிருந்து 300 மீட்டரும், நடைபாதைகள், கிராம சானைகளுக்கு 10 மீட்டரும் பாதுதாப்பு இடைவெளி விட்டு குவாரி செய்ய வேண்டும்.

- 6. மாவட்ட ஆட்சித்தலைவர் (அல்லது) அரசால் அதிகாரம் வழங்கப்பட்ட அலுவலரை குத்தகை வழங்கப்பட்ட இடத்தைப் பார்வையிடவும், குவாரி பதிவேடுகள், ஆவணங்கள் மற்றும் கணக்கை சரிபார்க்கவும் அனுமதிக்கு வேண்டும். இது சம்மந்தமாக அவர்கள் கோரும் அனைத்து விவரங்களையும் வழங்க வேண்டும்.
- சுற்றுப்புற சூழ்நிலை பாதுகாப்பு, கனிம பாதுகாப்பு, தொழிலாளர் பாதுகாப்பு முதலியவற்றைக் கருத்தில் கொண்டு விஞ்ஞர்ன அடிப்படையில் திறமையுடன் முறையாகக் குவாரி செய்ய வேண்டும்.
- மாவட்ட ஆட்சித்தலைவர் மற்றும் ஆணையர், புவியியல் மற்றும் சுரங்கத்துறை, ஆகியோரால் அதிகாரம் வழங்கப்பட்ட அலுவலரை மேலே பத்தி (5)–ல் குறிப்பிட்டுள்ள நிபந்தனைகள் தொடர்பாகவும், மேற்கண்ட அலுவலா்களின் ஆணையை நிறைவேற்றவும் குத்தன்க வழங்கப்பட்ட இடத்தைப் பார்வையிட அனுமதிக்க வேண்டும்.
- குத்தகைதாரரின் செலவில் குத்தகை ஒப்பந்தப்பத்திரம் நிறைவேற்றி அதனை பதிவு செய்வதற்கு முன்பு குத்தகை இடத்தில் குவாரி மற்றும் இது சம்மந்தப்பட்ட வேலைகளைத் தொடங்கக்கூடாது.
- குத்தகை வழங்கப்பட்டுள்ள இடத்திற்குள் எல்லையிலிருந்து 7.5 மீட்டர் துரைத்திற்குள் குவாரி
   செய்யக் கூடாது.
- பொது சாலைகளிலிருந்து குத்தகை வழங்கப்பட்ட இடத்திற்குச் செல்ல பாதை வசதி குத்தகைதாரா சொந்த பொறுப்பில் செய்து கொள்ள வேண்டும்.
- குத்தகை ஒப்பந்தப்பத்திரத்தான் இணைத்துள்ள வரைபடத்தில் காட்டியுள்ள குத்தகை இடத்தைச் கற்றிலும் எல்லைக்கற்கள் நட்டு அவற்றைச் சரியானபடி பராமரிக்க வேண்டும்.
   13 1050 பல் விலைக்கற்கள் நட்டு அவற்றைச் சரியானபடி பராமரிக்க வேண்டும்.
- 13. 1959 ஆம் வருடத்திய தமிழ்நாடு சிறுகனிமச் சலுசை விதிகள் இணைப்பு XII மற்றும் XII-ல் உள்ள படிவங்களில் முறையே இசைவாணைச்சிட்டு மற்றும் நடைச்சிட்டிணைத் தயார் செய்து அவற்றில் மாவட்ட ஆட்சித்தலைவரால் அதிகாரம் வழங்கப்பட்ட அலுவலரின் கையொப்ப முத்திரை மற்றும் அலுவலக முத்திரைகள் மெற்று குவாரியிலிருந்து குண்டுக்கல், கட்டுக்கல்,சக்கை மற்றும் தல்லி ஆகியவற்றை வெளியில் எடுத்துச் செல்லும் ஒவ்வொரு வாகனத்திற்கும் ஒவ்வொரு நடைக்கும் வழங்கப்படவேண்டும். குண்டுக்கல், கட்டுக்கல், சக்கைகல், ஜல்லி ஆகியவற்றை ஏற்றிச் செல்லும் ஒவ்வொரு வாகனமும் அதனைச் சேய்வதற்கு அதிகாரம் பெற்ற அலுவலர் சோதனைச் செய்யும்போது நடைச்சீட்டின்னக் காண்பிக்க வேண்டும். இசைவாணைச்சீட்டு மற்றும் நடைச்சீட்டின் நகல்களை குவாரியில் வைத்திருக்க வேண்டும். இசைவாணைச்சீட்டு மற்றும் நடைச்சீட்டின் நகல்களை குவாரியில் வைத்திருக்க வேண்டும். முறையான இசைவாணைச்சீட்டு மற்றும் தவிழ்நாடு சிறுகனிமச் சலுகை விதிகள் மற்றும் கரங்கங்கள் மற்றும் கனிமங்கள் 1959–ம் வருடத்திய மற்றும் அபிவிருத்தி சட்டம், 1957-ன்படி கைப்பற்றப்பட்டு, குத்தகைதாரர் மீது நடவடிக்கை எடுக்கப்படுவதுடன் குவாரிக் குத்தகையையும் ரத்து செய்ய நடவடிக்கை எடுக்கப்படும்.
- 14. குத்தகை வழங்கப்பட்ட இடத்தை குண்டுக்கல், கட்டுக்கல், சக்கை மற்றும் ஐல்லி குவாரி செய்ய மட்டும் பயன்படுத்த வேண்டும். குத்தகை உரிம ஆணை அல்லது குத்தகை ஒப்பீந்தப்பத்திரத்தில் தவறுதலாக கனிம விவரம் குறிக்கப்பட்டு இருந்தால் அதனை எந்த நேரத்திலும் திருத்துவதற்கு மாவட்ட ஆட்சியருக்கு அதிகாரம் உண்டு. குத்தகைதாரர் அதனடிப்படையில் எந்த உரிமையும் கோரமுடியாது.
- மெருகேற்றுவதற்கும், அபல் நாட்டிற்கு ஏற்றுமதி செய்வதற்கும் பயன்படும் பெரிய கற்துண்டங்கள் வடிவத்தில் கற்குவாரி செய்யக் கூடாது.
   குக்கதை வியர்கும் கிறை வியர்கள் குட்பாது.
- 16. குத்தகை ஒப்பந்தப்பத்திரத்தில் குறிக்கப்படாத வேறு ஏதாவதொரு களியம் கிடைத்தால், அதனை சம்மந்தப்பட்ட அலுவலரின் அனுமதியைப் பெறாமலும், அதற்குரிய சீனியரேஜ் தொகையைச் செலுத்தாமலும் எடுக்கக்கூடாது. புதிய கனியம் கிடைத்த விவரத்தை 30 தினங்களுக்குள் தெரிவிக்காமல் எடுத்துச் சென்றால் இக்குற்றத்திற்கு அந்த கனிமத்திற்குரிய சாதராண சீனியரேஜ் கட்டணத்தைப்போல் 15 மடங்குவரை மாவட்ட ஆட்சித்தலைவரால் அப்பாதம் விதித்து வசூலிக்கப்படும்.
- 17. குத்தகை காலம் முடிந்தபிறகு, குத்தகை வழங்கப்பட்ட இடத்திலிருந்து குண்டுக்கல், கட்டுக்கல், சக்கை மற்றும் ஜல்லியை குவாரி செய்து வெளியில் எடுத்துச் செல்ல குத்தகைதாரருக்கு உரிமையில்லை.
- 18. குத்தகை காலம் முடிவடைந்த பிறகு குத்தகை இடத்தில் எஞ்சின், மெஷின் போன்ற எந்தவிதமான தளவாட பொருட்களையும் வைத்திருக்கக்கூடாது. அவற்றை குத்தகை காலத்தில் கடைசி நாளன்று குத்தகைதாரர் எடுத்துச் சென்றுவிட வேண்டும்.
- 19. குத்தனையை வேறு எவருக்கும் உன் குத்தனைக்கு விடக்கடாது

- 20. குவாரி செய்வதில் இழப்பு ஏற்படின் நஷ்டஈடு கேட்கக்கடாது.

III) a) The conditions imposed by the Tamil Nadu Pollution Control Board in the consent to establishment in Air and Water Pollution Act should be strictly adhered and the consent should be renewed periodically.

b) The Environment Clearance issued by the DEIAA, Tamil Nadu should be renewal within the prescribed time limit.

IV) Conditions imposed .

1. (i) The Environment Clearance is granted to Mining of Rough Stone for the production quantity 10,80,884 cbm of rough stone for the period of five years from the date of execution of the mining lease period.

(ii) The approved quantity of rough stone to be quarried = 10,80,884 cbm (iii) Depth of mining permitted = 71 mts. (25 Mts. Above ground level and 46 mts below ground level) from a period of 5 years.

2.) Conditions to complied before the commencing of mining operation

1. The applicant has to obtain land use classification as industrial use , before issue / renewal of mining lease.

2. NOC from the Standing committee of the NBWL shall be obtained, if protected areas are located within 10 km from the proposed project site.

3. The project proponent shall comply the conditions laid down in section V Rule 36 of Tamil Nadu Minor Mineral Concession Rules, 1959.

to the concerned Panchayat, Town Panchayat / Panchayat union/ Municipal Corporation, Urban Local Body and the Local NGO, if any, from whom suggestions/ representations, if any, were received while processing the proposal. The clearance letter shall also be put on the website of the proponent and also kept at the site, for the general public to see.

5. Quarry lease area should be demarcated on the ground with wire fencing to show the boundary of the lease area on all sides with red flags on every pillar shall be erected before commencement of quarrying.

6. The proponent shall ensure that First Aid Box is available at site.

7. The excavation activity shall not alter the natural drainage pattern of the area.

8. The excavated pit shall be restored by the project proponent for useful purposes. In this regard, the proponent shall deposit a sum of Rs. 5,00,000/- (Rupees Five Lakhs only) in the name of District Collector, Krishnagiri in the form of fixed deposit. The said fixed deposit will be refunded after restoration of pit after end of the lease period.

9. The proponent shall quarry and remove only in the permitted areas as per the approved Mining Plan details.

10. The quarrying operation shall be restricted between 7AM and 5 PM.

11. The proponent shall take necessary measures to ensure that there shall not be any adverse impacts due to quarrying operation on the nearby human habitations, by way of pollution to the environment.

12. A minimum distance of 15 mts. From any civil structure shall be kept from the periphery of any excavation area.

13. Depth of quarrying shall be 2m above the ground water table /approved depth of mining whichever is lesser to be considered as a safe guard against Environmental Contamination and over exploitation of resources.

14. The mined out pits should be backfilled where warranted and area should be suitably landscaped to prevent environmental degradation. The mine closure plan as furnished in the proposal shall be strictly followed with back filling and tree plantation.

15. Wet drilling method is to be adopted to control dust emissions. Delay detonators and shock tube initiation system for blasting shall be used so as to reduce vibration and dust.

16. Drilling and blasting shall be done only either by licensed explosive agent or by the proponent after obtaining required approvals from Competent Authorities.

17. The explosives shall be stored at site as per the conditions the permits issued by the licensing Authority. stipulated in

BELTON BIDIOLOU

JAN 2023

Elking

18. Blasting shall be carried out after announcing to the public adequate through public address system to avoid any accident.

19. A study has to be conducted to assess the optimum blast parameters and blast design to keep the vibration limits less than prescribed levels and only such design and parameters should be implemented while blasting is done. Periodical monitoring of the vibration at specified location to be conducted and records kept for inspection.

20. The Proponent shall take appropriate measures to ensure that the GLC shall comply with the revised NAAQ norms notified by MoEF, GoI on 16.11.2009.(GLC = Ground Level Concentration), (NAAQ= Noise and Ambient Air

21. The following measures are to be implemented to reduce Air Pollution during transportation of mineral

- i. Roads shall be graded to mitigate the dust emission.
- ii. Water shall be sprinkled at regular interval on the main road and other service roads to suppress dust.
- 22. The following measures are to be implemented to reduce Noise Pollution
- i. Proper and regular maintenance of vehicles and other equipment.
- ii. Limiting time exposure of workers to excessive noise.
- iii. The workers employed shall be provided with protection equipment and
- iv. Speed of trucks entering or leaving the mine is to be limited to moderate speed of 25 kmph to prevent undue noise from empty trucks.

23. Measures should be taken to comply with the provisions laid under Noise Pollution (Regulation and Control) (Amendment) Rules, dt:11.01.2010 issued by the MoE&F, GoI to control noise to the prescribed levels. 2010.

24. Suitable conservation measures to augment groundwater resources in the area shall be planned and implemented in consultation with Assistant Director, Ground Water Division, PWD, Dharmapuri.

25. Rain water harvesting to collect and utilize the entire water falling in land area should be provided by construction of a storage tank with a capacity of 5,00,000 litrs and the rain water harvested in the entire quarry area should be. stored in it and used for the quarry purpose like dust prevention, wet drilling, providing water for green belt etc.

26. Permission from the competent authority should be obtained for drawl of ground water, if any, required for this project.
28. The following measures are to be adopted to control erosion of dumps:-

- i. Retention/ toe walls shall be provided at the foot of the dumps.
- Worked out slopes are to be stabilized by planting appropriate shrub / grass species on the slopes.

29. Waste oils, used oils generated from the EM machines, mining operations, if any, shall be disposed as per the Hazardous Wastes (Management, Handling, and trans boundary movement) Rules, 2008 and its amendments thereof to the recyclers authorized by TNPCB.

30. Concealing the factual data or failure to comply with any of the conditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of Environment (Protection) Act, 1986.

31. Rain water getting accumulated in the quarry floor shall not be discharged directly to the nearby stream or water body. If it is to be let into the nearby water body, it has to be discharged into a silt trap on the surface within the (lease area and only the overflow after allowing settling of soil be let into the nearby waterways. The silt trap should be of sufficient dimensions to catch all the silt water being pumped out during one season. The silt trap should be cleaned of all the deposited silt at the end of the season and kept ready for taking care of the silt in the next season. Photographs of the silt trap should be furnished before commencing quarry operation.

32. The lease holder shall undertake adequate safeguard measures during extraction of material and ensure that due to this activity, the hydro-geological regime of the surrounding area shall not be affected. Regular monitoring of ground water level and quality shall be carried out around the mine lease area during the mining operation. If at any stage, that the ground water is getting depleted carried out. The Assistant Director Ground water Division, PWD Dharmpuri shall monitor.

• 33. No tree-felling shall be done in the leased area, except only with the permission from competent Authority.

34. To take up environmental monitoring of the proposed quarty site before, during and after the mining activities including vibration study data, water, air & flora/fauna environment, slurry water generated/disposed and method of disposal, involving a reputed academic Institution and it should be monitor by the District Environmental Engineer, TNPCB, Hosur on yearly basis.

35. It shall be ensured that the total extent of nearby quarties (existing, abandoned and proposed) located within 500 meter radius from the periphery of this quarry is not exceeding 25.00.0 hectares within the mining lease period of this application.

36. It shall be ensured that there is no habitation is located within 500 meter radius from the periphery of the quarry site and also ensure that no hindrance will be caused to the people of the habitation located within 500m radius from the periphery of the quarry site

のないも思いす みんのの

27 JAN 2023.

る間

37. Ground water quality monitoring should be conducted once in 3 Months.

38. Transportation of the quarried materials shall not cause any hindrance to the Village people/Existing Village road.

39. Free Silica test should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF, GOI once in three months.

40. Air sampling at intersection point should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF, GOI periodically once in six months.

41. Bunds to be provided at the boundary of the project site and it should be properly maintained.

42. The project proponent shall undertake plantation / afforestation work by planting the native species on all side of the lease area at the rate of 400/Ha. Suitable tall tree saplings should be planted on the bunds and other suitable areas in and around the work place.

43. At least 10 Neem trees should be planted around the boundary of the quarry site.

44. Floor of excavated pit to be levelled and sides to be sloped with gentle slope (Except for granite quarries) in the mine closure phase.

45. The Project Proponent shall ensure a minimum of 2.5% of the annual turnover will be utilized for the CSR Activity

46. The Project Proponent shall provide solar lighting system to the nearby villages

47. The Project Proponent shall comply with the mining and other relevant

48. Rainwater shall be pumped out Via Settling Tank only.

49. Earthen bunds and barbed wire fencing around the pits with green belt all along the boundary shall be developed and maintained

50. As per MoEF & CC, GoI, Office Memorandum dated 30.03.2015, prior clearance from Forestry &Wild Life angle including clearance from obtaining committee of the National Board for Wild life as applicable shall be obtained before starting the quarrying operation, if the project site is located within 10KM from National Park and Sanctuaries. the Mining plan is quarried even before the expiry of the quarry lease period and the same shall be monitored by the District Authorities.

52. Safety equipments to be provided to all the employees.

53. Safety distance of 50 m has to be provided in case of railway, reservoir, canal / odai.

54. The Assistant / Deputy Director, Department of Geology & Mining shall ensure that the proponent has engaged the blaster with valid Blasting license / certificate\_obtained\_from the competent authority before execution of mining lease.

55. The proponent shall furnish the Baseline data covering the Air, Water, Noise and land environment quality for the proposed quarry site before execution of mining lease.

56. The proponent shall erect the pillars in accordance with the Rules for depicting GPS details in the earmarked quality for the proposed quarry site before execution of mining lease.

57. The proponent shall furnish the date obtained from the Public Works Department regarding the details of ground water table in the quarry site.

58. The proponent has to display the name board at the quarry site showing the details of Proponent, lease period, extent etc., with respect to the existing activity before execution of mining lease.

59. The proponent has to display the name board at the quarry site showing the details of proponent, leased period, extent etc. with respect to the existing activity before execution of mining.

60. Heavy earth machinery equipments if utilized, after getting approval from the competent authority.

61. The environmental norms shall be monitored by the District Environmental Engineer, Tamil Nadu Pollution Control Board, Hosur.

62. The Assistant Director Public Works Department, Ground water Division Dharmapuri shall monitor whether the quarrying activity is carried out above the ground water level on yearly basis.

63.NOC for sanitary certificate shall be obtained from the Deputy Director of Health Services, Krishnagiri.

64. Yearly medical examination of the quarry workers should be carried out by a registered medical practitioner and the report should be filed in the quarry office in a separate file and copy should be sent to the Deputy Director, Health Services, Krishnagiri. 65. Closed circuit camera should be erected at the quarry slip and the passage of vehicles in and out of the quarry should be recorded and the footage of the recording of the camera should be maintained and should be produced before the enforcing officials when ever called for.

27 JAN 2023

66. Vehicles used for transportation of quarried materials should be fitted with GPS and monitored.

67. Pit mouth register should be maintained in on line.

68. Auditor report on the annual turn over amount should be submitted to the District Collector within one month from the end of the financial year.

69. 02.5% of the turn over amount should be utilized for the CSR activity after consultation with the District Collector.

## **B.** General Conditions:

- EC is given only on the factual records, documents and the commitment furnished in non judicial stamp paper by the proponent.
- The Proponent shall obtain the Consent for Establishment from the TNPC Board before commencing the activity.
- No change in mining technology and scope of working should be made without prior approval of the DEIAA, Krishnagiri.
- No change in the calendar plan including excavation, quantum of mineral (minor mineral) should be made.
- 5. Effective safeguard measures, such as regular water sprinkling shall be carried out in critical areas prone to air pollution and having high levels of particulate matter such as loading and unloading point and all transfer points. Extensive water sprinkling shall be carried out on haul roads. It should be ensured that the Ambient Air Quality parameters in this regard.
- Effective safeguards shall be adopted against health risks on account of breeding of vectors in the water bodies created due to excavation of earth.
- A berm shall be left from the boundary of adjoining field having a width equal to at least half the depth of proposed excavation.
- Mineral handling area shall be provided with adequate number of high efficiency dust extraction system. Loading and unloading areas including all the transfer points should also have efficient dust control arrangements. These should be properly maintained and operated.
- 9. Vehicular emissions shall be kept under control and operated, monitored. The mineral transportation shall be carried out through the covered trucks only and the vehicles carrying them mineral shall not be overloaded.
- Access and haul roads to the quarrying area should be restored in a mutually agreeable manner where these are considered unnecessary after extraction has been completed.
- 11. All Personnel shall be provided with protective respiratory devices including safety shoes, Masks, gloves etc. Supervisory people should be provided with adequate training and information on safety and health aspects. Occupational health surveillance program of the workers should

to dust and take corrective measures, if needed.

12. Periodical medical examination of the workers engaged in the project shall be carried out and records maintained. For the purpose, schedule of health examination of the workers should be drawn and followed accordingly. The workers shall be provided with personnel protective measures such as masks, gloves, boots etc.

- 13. Workers/labourers shall be provided with facilities for drinking water and sanitation facility for Female and Male separately.
- 14. The project proponent shall ensure that child labour is not employed in the project as per the sworn affidavit furnished.
- 15. The funds earmarked for environmental protection measures should be kept in separate account and should not be diverted for other purpose. Year wise expenditure should be reported to the Ministry of Environment and Forests and its regional office located at Chennai.
- 16. The Invisonmental Clearance does not obsolve the applicant/proponent of his obligation/requirement to obtain other statutory and administrative clearances from other statutory and administrative
- 17. This Environmental Clearance does not imply that the other statutory / administrative clearances shall be granted to the project by the concerned authorities. Such authorities would be considering the project on merits and be taking decisions independently of the Environmental
- 18. The DEIAA, Krishnagiri may alter/modify the above conditions or stipulate any further conditions in the interest of environment protection.
- 19. The DEIAA, Krishnagiri may cancel the environmental clearance granted to this project under the provisions of EIA Notification, 2006, at any stage of the validity of this environmental clearance, if it is found or if it comes to the knowledge of this DEIAA.KGI that the project proponent has deliberately concealed and/or submitted false or misleading information or inadequate data for obtaining the environmental
- 20. Failure to comply with any of the conditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of the Environment (Protection) Act, 1986.
- 21. The above conditions will be enforced inter-alia, under the provisions of the Water (Prevention & Control of Pollution) Act, 1974, the Air (Prevention & Control of Pollution) Act, 1981, the Environment (Protection) Act, 1986, the Public Liability Insurance Act, 1991, along with their amendments, draft Minor Mineral Conservation & Development Rules, 2010 framed under MMDR Act 1957, National Commission for protection of Child Right Rules,2006 and rules made there under and also any other orders passed by the Hon'ble Supreme Court of India/Hon'ble High Court of Madras and any other Courts of Law relating to the subject matter. 22. Any other conditions stipulated by other Statutory/ Government
- authorities shall be complied.

V. The lessee should strictly adhere all the conditions imposed in the

environmental clearance issued by The DEIAA Krishnagiri and consent order of the Tamil Nadu Pollution Control Board.

VI. The lessee should periodically renew the environmental clearance and the consent orders of the Tamil Nadu Pollution Control Board without any lapse.

VII. If any illicit quarrying is found in the area over an extent of 4.00.0 hectares in S.F.Nos. 78/1B (part) of Kothapetta Village, Krishanagiri Taluk and District before the date of execution of lease deed, this lease deed is liable to be cancelled and criminal action will be initiated.

VII. If the quarry area is situated within 10 km distance from any protected areas NOC from the Standing committee of NBWL should be obtained before commencing the quarry operation.

IX. If the lease holder wants to quarry more than the quantity permitted in the environmental clearance within the lease period, modified mining plan / scheme and Environment Clearance for the additional quantity should be

ONE THOUSAND R

Rs.1000

WHEREAS the registered holder holds (mungst functs) up holds described of

AND WHEREAS, the registered holder has made application to the stilleoroe of the District of Krishnagiri (haveinafter referred to as " the collector) seeking error of quarrying lease for quarrying Rough stone in the said lands basic to rescale and has lodged with the Collector an accurate map or sketch of the said lands;

AND WHEREAS, the Collector, acting for and on behalf of the Government has granted a quarrying lease to the registered holder and allowed him to commence quarrying operations for Rough store in the said lands and to deposit mining wave thereon by the registered holder;

AND WHEREAS, the registered holder have deposited with the Collector, the sum of Rs. 5,000/- (Rupers five thousand only) as security against any loss or damage which may be incurred by the Government, by reason of any of the said lands being rendered unfit for cultivation by any mining operations therein of the registered holder or by the deposit of mining waste thereon by the registered holder.

NOW THESE PRESENTS WITNESS and the registered holder doth hereby agree with the Government in the manner following, that is to say :-

1. The registered holder shall be at liberty at all times during the period of the lease to carry on mining operations for Rough stone in the said limits in a proper and workman like manner and to deposit mining waste on the said lands and shall at all times he answerable and accountable to the Government for all acts and defaults by any of his nominees, servants or agents in carrying on such operations or le anddag such deposit.

2. The registered holder shall and will on the day of next and on the day of overy succeeding year during to long as he shall have carried on any such mining operations as aforesaid pay to the Collector for and on behalf of the Government in addition to the hand assessment for the time being payable in respect of the said landa, seigniorage on the minor minerals at the rate specified in Appendix II to the TamilNadu Minor Minerals Concession Rules 1959.

3. The registered holder shall and will keep currect accounts in such form as the Collector shall from time to time require and direct showing the quantities and other particulars of all minerals obtained by the registered holder from the said lands and also the number of persons employed in carrying on the said mining operations therein and shall from time to time when so directed by the Collector prepare and maintain complete and correct plans of all mines and working in the anid lands and shall from time to time when so directed by the Collector prepare and maintain complete and correct plans of all mines and working in the anid lands and shall allow any officer hereinto authorised by the Commissioner/ Director of Coology and Mining, Tamil Nado from time to time and at any time to examine such accounts and any such plans and shall when so required supply and formish all such informations and require and direct.

4. The registered holder shall and will at all times allow any officer authorised by the Commissioner/Director of Geology and Mining, Tamil Nodu in that behalf to enter upon any part of the said lands where any mining operations may be carried on for the purpose of inspecting the same.

Bockment Ha JV45 of 2018 of Book LESSER Cont all Streets & Sheet DISTRIC De Munipity B OFF DUCTOR stutating Otflean

5. The registered holder shall forthwith send to the District Collection 3a report of any accident which may occur at or in the raid lands and have of the discovery of any mineral other than Rough stone.

6. It shall be lawful for the registered holder at any time to cease mining operations under these presents provided he shall pay to collector for and on behalf of the government, land assessment, cess and seigniorage due to the Government and required by the collector and upon his so doing these presents shall cease and determine.

7. In case the registered holder shall relinquish the whole or any part of the said lands or in case of the expiry or sooner determination of this agreement then and in any such case, he shall restore the lands so relinquished or so much thereof as the collector shall require to be restored or so much thereof as the Collector shall require to be restored to a state fit for cultivation or shall securely and permanently fence or fill in all such abandoned pits and excavations there in as the collector shall require to be so fenced or filled in, and in case the registered holder shall fail or neglect to restore any such land which he shall be required to restore to a state fit for cultivation or to so fence, or fill in any such abandoned pit, or excavation which he shall be required to so fence, or fill in them and in any such case, it shall be lawful for the Collector to so restore any such lands, or as the case may be to so fence or fill any such pits or excavation at the expense of the registered holder and to apply the said sum of Rs 5,000/- (Rupces five thousand only) so deposited in or towardsthe cost of so doing and to deduct from the amount of the said deposit and retain on behalf of the Government a sum equal to thirty times the assessment of the said lands which shall have been rendered unfit for cultivation. If however, the amount of deposit is not sufficient to cover the cost of such restoration of fencing or filling in or to meet thirty times the assessment on the area rendered uncultivable, it shall be lawful for the Government to recover the balance by resort to civil court.

8. The registered holder shall not be entitled to any remission of assessment in respect of any of the said lands which shall be rendered unfit for surface cultivation by the carrying on of any mining operations or by the deposit of mining waste, unless thirty times the assessment thereon has already been deducted under the preceding clause.

9. The registered holder shall not assign, lease or part with the possession of the said lands or any part thereof for the whole or any part of the said term without previous intimation in writing to the Collector.

10. If the registered holder does not intend to carry on mining operations himself, but intends to lease out the right to do so to another person, the registered holder and his Lessee shall enter into an agreement with Government binding themselves jointly and severally to accept the conditions and stipulations herein contained which agreement shall be in the Form set out in Appendix V to the Tamil Nadu Minor Mineral Concession Rules, 1959.

11. All land assessment, cess and seigniorage payable under these presents shall be recoverable under the provisions of the TamilNadu Revenue Recovery Act, 1864, as if they were arrears of land revenue.

h) The grantee should sent the notice for opening of the quarry to the Director of Mines safety, Bangalore.

i) Quarrying operation should be carried out only after appointing Mines Manager/ Mines Mate and Foremen.

j) At any cost the blasting activity should be carried out under the Supervistion of Mines Mate.

k) If any accident occur in the quarry area the lessees should give intimation to the Director of Mines safety Bangalore and District Collector, Krishnagiri at once and lessee is solely responsible for any violation.

## 19. நிபந்தனைகள்

(1) குத்தகை காலம், குத்தகை ஒப்பந்தப்பத்திரம் நிறைவேற்றும் நாளிவிருந்து ஐந்து ஆண்டுகளாகும்.

குவாரி குத்தகை வழங்கப்பட்ட இடத்தில் குவாரி கொடிம் வேலிக்கல்/ குண்டுக்கல்/ கட்டுக்கல்/ சக்கை மற்றும் ஜல்லி ஆகியவற்றை மேற்படி இடத்திலிருந்து வெளியில் எடுத்துச் செல்வதற்கு முன்பு அவை ஒவ்வொன்றிற்கும் அவற்றிற்குரிய வீதத்தில் சீனியதேத் தீர்வை செலுத்தி இவ்வலுவலகத்தில் பர்மிட் மற்றும் நடைச்சட்டு பெற்ற பின்பதான் பேற்படி கனியங்களை குவாரியிலிருந்து வெளியில் எடுத்துச் செல்ல வேண்டும். 1959 ஆம் வருடத்திய தமிழ்நாடு சிறுகனிம் சலுகை விதிகள், இணைப்பு II-ல் அவ்வப்போது அரசால் நிர்ணபிக்கப்படும் வீதத்தில் பரப்பு தீர்வை செலுத்து வேண்டும். மேற்கண்ட தொகையைத் தவிர அரசால் அவ்லப்போது நிர்ணயிக்கப்படும் இதர தொகைகளையும் குத்தகைதாரர் செலுத்த வேண்டும்.

குத்தகை இடத்திற்கு அருகிலுள்ள குடியிருப்புகள், கட்டடங்கள், நீர்நிலைகள், குளங்களின் கலாகள், மரங்கள், சாலைகள், வண்டிப்பாதைகள், நடைபாதைகள் மற்றும் இதர பொனுச் சொத்துக்களுக்கு பாதகமில்லாமல் குலாரி செய்ய வேண்டும்.

- குத்தகை வழங்கப்பட்ட இடத்திற்கு அருகாமையில் உள்ள பட்டாதாரர்கள் மற்றும் பொது மக்களுக்கு பாதகமில்லாமல் குவளி செய்ய வேண்டும்.
- குத்தகை வழங்கப்பட்ட இடத்திற்கு அருகிலுள்ள ரமில்பாதைகள், சாலைகள், மின்னரம் மற்றும் தொலைபேசி கம்பிகளுக்கு 50 மீட்டரும், குடியிருப்பு பகுதியிலிருந்து 300 மீட்டரும், நடைபாதைகள், கிரம ளலைகளுக்கு 10 மீட்டரும் பாதுகாப்பு இடைவெளி விட்டு குவாரி செய்ய வேண்டும்.
- மாவட்ட ஆட்சித்தலைவர் (அல்லது அரசால் அதிகாரம் வழங்கப்பட்ட அலுவலனா குத்தகை வழங்கப்பட்ட இடத்தைப் பார்வையிடலும், குவாரி பதிவேடுகள், ஆவணங்கள் மற்றும் கணக்கை சரிபார்த்தவும் அனுமதில்க வேண்டும், இது சம்மந்தமாக அவர்கள் கோரும் அனைத்து விரைங்களையும்
- கற்றுப்புற சூழ்நிலை பாதுகாப்பு, கனிம் பாதுகாப்பு, தொழிலாளர் பாதுகாப்பு முதலியனற்றைக் கருத்தில் (7)கொண்டு விஞ்ஞான அடிப்படையில் திறமையுடன் முறையாகக் குவாரி செப்ப வேண்டும்.
- மாவட்ட ஆட்சித்தலைவர் மற்றும் ஆணையர், புவியியல் மற்றும் கரங்கத்துறை, ஆகியோராம் அதிகாரம் வரங்கப்பட்ட அதுவலரை மேலே பத்தி (5)–ல் குறிப்பிட்டுள்ள திபந்தனைகள் தொடர்பாகவும், மேற்கண்ட அலுவலர்களின் ஆணையை நிறைவேற்றவும் குத்தகை வழங்கப்பட்ட இடற்தைப் பார்வையிட அனுமதிக்க Causin Gia.
- குத்தகைதாரரின் செலவில் குத்தகை ஒப்பத்தப்பத்திரம் நிறைவேற்றி அதனை பதிவு செய்வதற்கு முன்பு (9) ருத்தகை இடத்தில் குவாரி மற்றும் இது சம்மத்தப்பட்ட வேலைகளைத் தொடங்கக்கூடாது.
- குத்தகை வழங்கப்பட்டுள்ள இடத்திற்குள் எல்லையிலிருத்து 7.5 மீட்டர் துருத்திற்குள் குவாரி வெய்லக் On L IT dit
- போது சாலைகளிலிருந்து குத்தகை வழங்கப்பட்ட இடத்திற்குச் செல்ல பாதை வசதி குத்தகைதாரர். (11) சொந்த பொறுப்பில் செம்து மொள்ள வேண்டும்.

LESSEE DISTRICTO DLLECTOR Goostanat No. 1745 of 2018 of Book Contains 81 5 Sheet Sheets\_ Registering Officer. 12.577.123

(12) குத்தனை ஒப்பந்தப்பத்திரத்துடன் இணைத்துள்ள வரைபடத்தில் காப்பில்ளா கற்றிலும் எல்லைக்கற்கள் நட்டு அவற்றைச் சரியானாடி பராமரிக்க வேண்டும்.

(13) 1959 ஆம் வருடத்திய தமிழ்நாடு சிறுகனிமச் சலுமை விதிகள் இணைப்பு XII மன்றம் XII-ல் உள்ள படிவாகளில் முறையே இசைவாணைச்சிட்டு மற்றும் நடைச்சிட்டினைத் தயார் செய்து அவற்றில் மாவட்ட ஆட்சித்தலைவரால் அதிகாரம் வழங்கப்பட்ட அதுவலரின் கையொப்ப முத்திரை வற்றும் அலற்றில் மாவட்ட முத்திரைகள் பெற்று குவாரியிலிருந்து குண்டுக்கல், கட்டுக்கல்,சுக்கை மற்றும் ஐக்கி ஆகியலற்றை வெளியில் எடுத்துச் செல்லும் ஒல்வொரு வாசனத்திற்கும் ஒவ்வொரு நடைக்கும் வற்றும் இக்கி ஆகியலற்றை வெளியில் எடுத்துச் செல்லும் ஒல்வொரு வாசனத்திற்கும் ஒவ்வொரு நடைக்கும் வற்றுல் ஆகியலற்றை குண்டுக்கல், கட்டுக்கல், சக்கைகல், ஐவ்வி ஆகியலற்றை ஏற்றிச் செல்லும் ஒவ்வொரு வாசனமும் அதனைச் சோதனைச் செய்வதற்கு அதிகாரம் பெற்ற அனுவலர் சேரதனைச் செல்லும் துன்பைத் தடைச்சிட்டினைச் வாண்டும் இசைவாணைச்சிட்டு மற்றும் நடைச்சிட்டின் நகல்களை குளாயில் எற்றுக்கே வேண்டும், முறையான இசைவாணைச்சிட்டு மற்றும் நடைச்சிட்டின் நலைகளை குளாயில் எற்றித் கொண்டுக் வாண்டும் இசைவாணைச்சிட்டு மற்றும் நடைச்சிட்டின் தல்களை குளாயில் எற்றிச் செல்லும் வாசுனங்கள் 1959–ம் வருடத்தில தமிழ்நாடு சிறுகனிமச் சலுமை விதிகர் மற்றும் குற்தன் வருக்கை எடுக்கை எடுக்கப்படுவனுடன் ஆயிலிருத்தி சட்டம், 1957–ன் நடைச்சுமைதன் குற்றும் குற்தனைதாறும் களரிமங்கள் ( ஒழுவகுமுறை மற்றும் அயிலிருத்தி சட்டிர், 1957–ன் நடைப்பற்றப்பட்டு குற்தனைதாறான் மீதி நடவடிக்கை எடுக்கப்படுவனுடன் குவரில் குத்தனையும் சத்து செய்ய நடலடிக்கை எடுக்கப்படும்.

20) a) The conditions imposed by the Tamil Nadu Pollution Control Board in the consent to establishment in Air and Water Pollution Act should be strictly adhered and the consent should be renewed periodically.

b) The Environment Clearance issued by the DEIAA, Krishnagiri should be renewed within the prescribed time limit. 21) Conditions imposed.

1. i) This Environmental Clearance is granted to Mining of Rough Stone for the production quantity of 10,80,884 cbm of rough stone for the period of five years from the date of execution of the mining lease period.

ii) The approved quantity of rough stone to be quarries = 10,80,884 chm

iii) Depth of mining permitted = 71 mts. ( 25 mts above ground level and 46 mts below ground level) from a period of 5 years.

2. A.Conditions to be complied before the commencing of mining operation

1. The applicant has to obtain land use classification as industrial use before issue / renewal of mining lease.

2. NOC from the Standing committee of the NBWL shall be obtained, if protected areas are located within 10 Km from the proposed project site.

3. The project proponent shall comply the conditions laid down in section V Rule 36 of Tamil Nadu Minor Mineral Concession Rules, 1959.

4. A copy of the Environment Clearance letter shall be sent by the proponent to the concerned Panchayat, Town Panchayat / Panchayat union/ Municipal Corporation, Urban Local Body and the Local NGO, if any, from whom suggestions/ representations, if any, were received while processing the proposal. The clearance letter shall also be put on the website of the proponent and also kept at the site, for the general public to see.

5. Quarry lease area should be demarcated on the ground with wire fencing to show the boundary of the lease area on all sides with red flags on every pillar shall be erected before commencement of quarrying.

6. The proponent shall ensure that First Aid Box is available at site.

7. The excavation activity shall not alter the natural drainage pattern of the area.

8. The excavated pit shall be restored by the project proponent for useful purposes. In this regard, the proponent shall deposit a sum of Rs. 5,00,000/14 Rupees Five Lakhs only) in the name of District Collector Krishnagiri in the form of fixed deposit. The said fixed deposit will be refunded after restoration of pitafter end of the lease period.

9. The proponent shall quarry and remove only in the permitted areas as perthe approved Mining Plan details.

10. The quarrying operation shall be restricted between 7AM and 5 PM.

11. The proponent shall take necessary measures to ensure that there shall not be any adverse impacts due to quarrying operation on the nearby human habitations, by way of pollution to the environment.

12. A minimum distance of 15 mts. From any civil structure shall be kept from the periphery of any excavation area.

13. Depth of quarrying shall be 2m above the ground water taple faile depth of mining whichever is lesser to be considered as a safe guard against Environmental Contamination and over exploitation of recourses.

WERE THE PARENT SHOLEN

14. The mined out pits should be backfilled where warranted and area should be suitably landscaped to prevent environmental degradation. The mine closure plan as furnished in the proposal shall be strictly followed with back filling

15. Wet drilling method is to be adopted to control dust emissions. Delay detonators and shock tube initiation system for blasting shall be used so as to reduce vibration and dust.

16. Drilling and blasting shall be done only either by licensed explosive agent or by the proponent after obtaining required approvals from Competent

17. The explosives shall be stored at site as per the conditions stipulated in the permits issued by the licensing Authority.

18. Blasting shall be carried out after announcing to the public adequate through public address system to avoid any accident.

19. A study has to be conducted to assess the optimum blast parameters and blast design to keep the vibration limits less than prescribed levels and only such design and parameters should be implemented while blasting is done. Periodical monitoring of the vibration at specified location to be conducted and records kept for inspection.

20. The Proponent shall take appropriate measures to ensure that the GLC shall comply with the revised NAAQ norms notified by MoEF, GoI on 16.11.2009. ( GLC= Ground Level Concentration), (NAAQ= Noise and Ambient Air Quality).

21. The following measures are to be implemented to reduce Air Pollution during transportation of mineral

- i. Roads shall be graded to mitigate the dust emission.
- ii. Water shall be sprinkled at regular interval on the main road and other service roads to suppress dust.

22. The following measures are to be implemented to reduce Noise Pollution

- i. Proper and regular maintenance of vehicles and other equipment.
- ii. Limiting time exposure of workers to excessive noise.
- iii. The workers employed shall be provided with protection equipment and carmuffs etc.
- iv. Speed of trucks entering or leaving the mine is to be limited to moderate speed of 25 kmph to prevent undue noise from empty trucks.

23. Measures should be taken to comply with the provisions laid under Noise Pollution (Regulation and Control) (Amendment) Rules, 2010, dt:11.01.2010 issued by the MoE&F, GoI to control noise to the prescribed levels.

24. Suitable conservation measures to augment groundwater resources in the area shall be planned and implemented in consultation with Assistant Director, Ground Water Division, PWD, Dharmapuri.

25. Rain water harvesting to collect and utilize the entire water falling in land area should be provided by construction of a storage tank with a capacity of 5,00,000 litrs and the rain water harvested in the entire quarry area should be stored in it and used for the quarry purpose like dust prevention, wet drilling, providing water for green belt etc.

26. Permission from the competent authority should be obtained for drawl of ground water, if any, required for this project.

27. Topsoil, if any, shall be stacked properly with proof. measures and should be used for plantation purpose. 111 DOG X A

28. The following measures are to be adopted to control enum

i. Retention/ toe walls shall be provided at the h of duto

H 2Halan

ii. Worked out slopes are to be stabilized by planting appropriate shorth

/ grass species on the slopes. -

29. Waste oils, used oils generated from the EM muchines, mining operations, if any, shall be disposed as per the Hozardoun Wastes (Management, Handling, and trans boundary movement) Roles, 2008 and its minut thereof in the recyclers authorized by TNPCB.

30. Concealing the factual data or failure to comply with any of the conditions mentioned above may result in withdrawal of this dedrause and attract action under the provisions of Environment (Protection) Act, 1986.

31. Rain water getting accumulated in the quarry floor shall not be discharged directly to the nearby stream or water body. If it is to be let into the nearby water loody, it has to be discharged into a slit trap on the surface within the flease area and only the overflow after allowing settling of soil he let into the nearby waterways. The sill trap should be of sufficient dimensions to catch all the silt water being pumped out during one season. The silt trap should be elemed of all the deposited silt at the end of the season and kept ready for taking care of the silt in the next season. Photographs of the silt trap should be furnished before commoncing quarry operation.

32. The lease holder shall undertake adequate safeguard measures during extraction of material and ensure that due to this activity, the hydro-geological regime of the surrounding area shall not be affected. Regular monitoring of ground water level and quality shall be carried out around the mine lease area during the mining operation. If at any stage, that the ground water is getting depleted carried out. The Assistant Director Ground water Division, PWD

33. No tree-felling shall be done in the leased area, except only with the permission from competent Authority.

34. To take up environmental monitoring of the proposed quarty site before, during and after the mining activities including vibration study data, water, air h flora/fauna environment, slurry water generated/disposed and method of disposal, involving a reputed academic Institution and it should be monitored by the District Environmental Engineer, TNPCE, Hosur o yearly hours.

35. It shall be ensured that the total extent of nearby quarries jexisting, abandoned and proposed) located within 500 meter radius from the periphery of this quarry is not exceeding 25.00.0 hectares within the mining lease period of this application.

36. It shall be ensured that there is no habitation is located within 500 meter radius from the periphery of the quarry site and also ensure that no hindrance will be caused to the people of the habitation located within 500m radius from the periphery of the quarry site.

37. Ground water quality monitoring should be conducted once in 3 Months.

38. Transportation of the quarried materials shall not cause any hindrance to the Village people/Existing Village road.

39. Free Silica test should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF, GOI once in three months,

40. Air sampling at interacction point should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF, GOI periodically once in six months,

41. Bunds to be provided at the boundary of the proper alle u properly maintained.

42. The project proponent shall undertake plauntid Adjorestation work in planting the native species on all side of the lease area Suitable tail tree suplings should be planted on the burne, and other sulin the marie way the

こうのの

43. At least 10 Nouin trees should be planted around the boundary of the quarry site.

44. Floor of excavated pit to be levelled and nides to be aloped with genuie slope (Except for granite quarries) in the mine closure phase.

45. The Project Proponent shall ensure a minimum of 2.5% of the annual turnover will be utilized for the CSR Activity

46. The Project Proposent shall provide solar fighting system to the nearby villages

47. The Project Proposent shall comply with the atining and other relevant rules and regulations where ever applicable.

48. Rainwater shall be pumped out Via Settling Tank only

49. Earthen bunds and barbed wire fencing around the pits with green best all along the boundary shall be developed and maintained.

50. As per MoEF & CC, Gol, Office Memorandum dated 30.03.2015, prior clearance from Forestry & Wild Life angle including clearance from obtaining committee of the National Board for Wild life as applicable shall be obtained before starting the quarrying operation, if the project site is located within 10KM frees National Park and Sanctuaries.

51. The quarrying activity shall be stopped if the entire quantity indicated in the Mining plan is quarried even before the expiry of the quarry lease period and the same shall be monitored by the District Authorities.

52. Safety equipments to be provided to all the employees.

53. Safety distance of 50 m has to be provided in case of railway, manyoir, canal / odai.

54. The Assistant / Deputy Director, Department of Geology & Mining shail ensure that the proponent line engaged the blaster with valid Elusting lineane , certificate obtained from the competent authority before execution of mining lense.

55. The proponent shall furnish the Easeline data envering the Air, Water, Noise and land environment quality for the proposed quarry site before execution of mining lease.

56. The proponent shall crect the pillars in accordance with the Rules for depicting GPS details in the carmarked quality for the proposed quarry site before execution of mining lease.

57. The proponent shall furnish the date obtained from the Public Works. Department regarding the details of ground water table in the quarry site.

58. The proponent has to display the name board at the quarty site showing the details of Proponent, lease period, extent etc., with respect to the existing activity before execution of mining lease.

59. The proponent has to display the name board at the quarry site showing the details of propanent, icased period, extent etc. with respect to the existing activity before execution of mining.

60. Heavy earth machinesy equipments if utilized, after gotting approval from the competent authority.

61. The environmental norms shall be monitored by the District Environmental Engineer, Tamil Nadu Pollution Control Board, Hostar,

62. The Ansistant Director Public Works Department, Ground water Division Dharmapuri shall monitor whether the quartying activity is carried out above the ground water level on yearly basis.

63.NOC for sanifary certificate shall be obtained from the Deputy Director of Health Services, Krishnagiri.

65. Clossed circuit camera should be erected at the quary site and the passage of vehicles in and out of the quary should be recorded and the lowing; of the camera should be maintained and should be produced before the entering officials when ever called for.

66. Vehicles used for transportation of quarried materials should be fitted with GPS and monitored and vehicles should not earry the products more than the quantity allowed in the registration certificate.

67. Pit mouth register should be maintained in on line.

68. Auditor report on the annual turn over amount should be submitted to the District Collector within one month from the end of the financial year.

69, 02.5% of the turn over amount should be utilized for the CSR activity after consultation with the District Collector.

#### B. General Conditions:

 EC is given only on the factual records, documents and the commitmum furnished in non-judicial stamp paper by the proponent.

(2) The Proponent shall obtain the Consent for Establishment from the TNPC Board before commencing the activity.

(3) No change in mining technology and scope of working should be made without prior approval of the SEIAA, Tamil Nadu.

(4) No change in the calendar plan including excavation, quantum of mineral (minor mineral) should be made.

(5) Effective safeguard measures, such as regular water oprinking shall be carried out in critical areas prone to air pollution and having high levels of particulate matter such as loading and unloading point and all transfer points. Extensive water oprinking shall be carried out on hauf rands. It about the ensured that the Ambient Air Quality parameters conform to the norms prescribed by the Central Pollution Control Board in this regard.

(6) Effective safeguards shall be adopted against health tisks on account of breeding of vectors in the water bodies created due to excavation of earth.

(7) A berm shall be left from the boundary of adjoining field having a width equal to at least half the depth of proposed excavation.

(8) Mineral handling area shall be provided with adequate number of high efficiency dust extraction system. Loading and unloading areas including all the transfer points should also have efficient dust control prrangements. These should be properly maintained and operated.

(9) Vehicular emissions shall be kept under centrol and Be regularly monitored. The mineral transportation shall be carried out through the covered trucks only and the vehicles currying them mineral shall not be overloaded.

(10) Access and hard roads to the quarrying area should be restored in a mutually agreeable manner where these are considered transcessiony after extraction has been completed.

(11) All Personnel shall be provided with protective respiratory devices including safety shoes. Masks, gloves etc. Supervisory people should be provided with adequate training and information on safety and health aspects. Occupational health surveillance program of the workers should be undertaken periodically to observe any contractions due to exposure to dust and take corrective measures, if needed.

(12) Periodical medical examination of the workers english

be carried out and moveds maintained. For the period of the move set of the workers shall be provided with personnel protective means and satisfies could be gloves, boois etc.

93116(C))

AND ON

16

JAN 2023

(13) Workers/labourers shall be provided with facilities for drinking water and sumitation facility for Female and Male separately.

(14) The project proponent shall ensure that child labour is not employed in the project as per the sworn affidavit furnished.

(15) The funds carmarked for environmental protection measures should be kept in separate account and should not be diverted for other purpose. Year wise expenditure should be reported to the Miniatry of Environment and Forests and its regional office located at Chennal.

(16) The Environmental Clearance does not absolve the applicant/proponent of his obligation/requirement to obtain other statutory and administrative clearances from other statutory and administrative authorities.

(17) This Environmental Clearance does not imply that the other stantory administrative clearances shall be granted to the project by the concerned authorities. Such authorities would be considering the project on merits and be taking decisions independently of the Environmental Clearance.

(18) The SEIAA, Tamil Nadu may alter/modify the above conditions or atipulate any further conditions in the interest of environment protection.

(19) The SEIAA, Tamif Nadu may cancel the environmental elements granted to this project under the provisions of EIA Notification, 2006, at any stage of the validity of this environmental cleanance, if it is found or if it comes to the knowledge of this DEIAA.RGI that the project proparent has deliberinely concented and/or submitted false or misleading information or implequate data for obtaining the environmental cleanance.

(20) Failure to comply with any of the conditions mentioned above may result in withdrawal of this electronee and attract action under the provisions of the Environment (Protection) Act, 1985.

(21) The above conditions will be enforced inter-alia, under the provisions of the Water (Prevention & Control of Pollution) Act, 1974, the Air (Prevention & Control of Pollution) Act, 1981, the Environment (Protection) Act, 1980, the Public Liability Insurance Act, 1991, along with their amendments, draft Minor Mineral Conservation & Development Enles, 2010 framed under MMDR Act 1957, National Commission for protection of Child Right Rules, 2006 and rules made there under and also any other orders panaed by the Houble Supreme Court of India/Houble High Court of Madras and any other Courts of Law relating to the subject matter.

(22) Any other conditions stipulated by other Statutory/ Government muthorities shall be complied.

22. The lessee should strictly adhere all the conditions imposed in the environmental elesance issued by The DEIAA Krishnagiri and consent order of the Tamil Nadu Pollution Control Board.

23. The lease should periodically renew the environmental eleasione and the consent orders of the Tamil Nadu Pollution Control Board without any lopue.

24. If any illicit quarrying is found in the area over an extent of 2.30.0 hectares in S.F.No. 78/1B of Kothapetta Village, Krishnagiri Taluk and District before the date of execution of lease deed, this lease deed is liable to be cancelled and criminal action will be initiated.

25. If the quarry area is situated within 10 km distance from any protected areas NOC from the Standing committee of NBWL should be obtained before commencing the quarry operation.

26. If the lease holder wants to quarry more than the monthed mining plant the environmental clearance within the lease period, modified mining plant scheme and Environment Clearance for the additional mantity shauld be

27. The lessce should obtain consent for operation of the Tamil Nadu Polluction Control Board before commenceing quarry operations,

Pollution Control Board.

- The project has been accorded Environmental Clearance. Copies of clearance letters are available with the Tamil Nadu
- ii)

Environmental Clearance may also be seen of the Level Environment Impact Assessment Authors

iv) The advertisement should be made within receipt of the clearance letter and a conforwarded to the SEIAA.

(2). The applicant has to obtain land use classifications an industrial use before issue/renewal of mining lease.

wind of the Side

laterof

same still by

Hary Trod

(3). NOC from the Standing committee of the NBWL shall be obtained, if protected areas are located within 10 Km from the proposed project site.

(4). The project proponent shall comply the conditions laid down in the Section V, Rule 36 of Tamil Nadu Minor Minerals Concession Rules 1959.

(5). A copy of the Environment Clearance letter shall be sent by the proponent to the concerned Panchayat, Town Panchayat / Panchayat union/ Municipal Corporation, Urban Local Body and the Local NGO, if any, from whom suggestions/ representations, if any, were received while processing the proposal. The clearance letter shall also be put on the website of the proponent and also kept at the site, for the general public to see.

(6). Quarry lease area should be demarcated on the ground with wire fencing to show the boundary of the lease area on all sides with red flags on every pillar shall be erected before commencement of quarrying.

(7). The proponent shall ensure that First Aid Box is evailable at site.

(8). The excavation activity shall not alter the natural drainage pattern of the area.

(9). The excavated pit shall be restored by the project proponent for useful purposes. In this regard, the proponent shall deposit a sum of Rs.5,00,000/-(Rupees Five Lakhs only) in the name of District Collector Krishnagiri in the form of fixed deposit. The said fixed deposit will be refunded after restoration of pit after end of the lease period.

, (10). The proponent shall quarty and remove only in the permitted areas as per the approved Mining Plan details.

(11). The quarrying operation shall be restricted between 7 AM and 5 PM.

(12). The proponent shall take necessary measures to ensure that there shall not be any adverse impacts due to quarrying operation on the nearby human habitations, by way of pollution to the environment.

(13). A minimum distance of 15 mts. From any civil structure shall be kept from the periphery of any excavation area.

(15). The mined out pits should be backfilled where varianted and area should be suitably landscaped to prevent environmental cost of the mine closure plan as furnished in the proposal shall be strictly follow the proposal

(16) Wet drilling method is to be adopted to control dust emissions. Delay defonators and shock tube initiation system for blasting shall be used so as to reduce vibration and dust.

(17). Drilling and blasting shall be done only either by licensed explosive agent or by the proponent after obtaining required approvals from Competent Authorities.

(18). The explosives shall be stored at site as per the conditions stipulated in, the permits issued by the licensing Authority.

(19). Blasting shall be carried out after announcing to the public adequate through public address system to avoid any accident.

(20). A study has to be conducted to assess the optimum blast parameters and blast design to keep the vibration times less than prescribed levels and enly such design and parameters should be implemented while blasting is done Periodical monitoring of the vibration at specified location to be conducted and records kept for inspection.

(21). The Proponent shall take appropriate measures to ensure that the OLC shall comply with the revised NAAO norms notified by MoRF. Col. in 16.11.2009. (GLC = Ground Level Concentration). (NAAQ = Noise and Ambient Air Quality)

(22). The following measures are to be implemented to reduce Air Pallution during transportation of mineral

(i). Roads shall be graded to mitigate the dust emission.

(ii). Water shall be sprinkled at regular interval on the main-mad and other service roads to suppress dust

(23). The following measures are to be implemented to reduce Noise Politition

(i). Proper and regular maintenance of vehicles and other equipment.

(ii). Limiting time exposure of workers to excessive noise

(iii). The workers employed shall be provided with protection equipment and earmuffs etc.

(iv). Speed of trucks entering or leaving the mine is to be limited to moderate speed of 25 kmph to prevent undue noise from empty trucks

1241. Measures should be taken to comply with the provision should under Noise Poilution (Regulation and Control) (Amendment) Rules, 201 (2010) (1.01.2010)

×

(25). Suitable conservation measures to augment ground devresources of the area shall be planned and implemented in consultation of Assistant Director, Ground Water Division, PWD, Dharmapuri

(26) Rain water harvesting to collect and utilize the entire water falling in land area should be provided by construction of a storage tank with a capacity of 5,00,000 litrs and the rain water harvested in the entire quarry area should be stored in it and used for the quarry purpose like dust prevention, wet drilling, providing water for green belt etc.

(27). Permission from the competent authority should be obtained for drawl of ground-water, if any, required for this project.

4 (28) \*Topsoil, if any, shall be stacked properly with proper slope with adequate measures and should be used for plantation surpose.

(29). The following measures are to be adopted to control erosion of dumps:-

(i). Retention/ toe walls shall be provided at the foot of the dumps.

(ii). Worked out slopes are to be stabilized by planting appropriate shrub/ grass species on the slopes.

(30). Waste oils, used oils generated from the EM machines, mining operations, if any, shall be disposed as per the Hazardous Wastes (Management, Handling, and trans boundary movement) Rules, 2008 and its amendments thereof to the recyclers authorized by TNPCI3.

(31). Concealing the factual data or failure to comply with any of the coaditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of Environment (Protection) Act. 1985.

(32) Bain water getting accumulated in the quarry floor shall not be discharged directly to the nearby stream or water body. If it is to be let into the nearby water body, it has to be discharged into a silt trap on the surface within the flease area and only the overflow after allowing setting of soil be let into the nearby waterways. The silt trap should be of sufficient dimensions to catch all the silt water being pumped out during one season. The silt trap should be cleaned of all the deposited silt at the end of the season and kept ready for taking care of the silt in the next season. Photographs of the silt trap should be furnished before commencing quarry operation.

(33). The leave holder shall undertake adequate soleguare measures during extraction of material and ensure that due to this activity, the hydro-geological regime of the surrounding area shall not be affected. Regular monitoring of groups water level and quality shall be carried out around the main loase area during one

minute operation. If at any stage, that the ground water is getting of Busice B

only with the

1.1211 192

, 134). No tree-felling shall be done in the leased area, entry

(35). To take up environmental monitoring of the proposed distribution before, during and after the mining activities including vibration starty fam water, air & flora/fauna environment, slurry water generated/disposed and method of disposal, involving a reputed academic institution and it should be monitored by the District Environmental Engineer, TNPCB, Hosur on yearly basis.

(36). It shall be ensured that the total extent of nearby quarries relating, abandoned and proposed) located within 500 meter realing ions dis periodery of this quarry is not exceeding 25 bectares within the mining loose period, of this application.

[37]. It shall be ensured that there is no habitation is located within 500meter radius from the periphery of the quarry site and also ensure that no hindrance, will be caused to the people of the administration located within source radius from the periphery of the quarry site

(38). Ground water quality monitoring should be conducted once in 3 Months.

(39). Transportation of the quarried materials shall not stuse any hindrance to the Village people/Existing Village road.

(40). Free Silica test should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoFF- GOI once in three months.

(44). Air sampling at intersection point should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MqEP, 0001 periodically once in six months.

(42). Bunds should be provided at the boundary of the project site and it should be properly maintained.

(4.3). The project proponent shall undertake plantation? afforestation work by planting the native species on all side of the lease area at the rate of 400/Hz. Suitable tall free saplings should be planted on the bunds and other suitable areas in and around the work place.

(44). At least 10 Neem trees should be planted around the boundary of the quarry site.

1451. Floor of excavated pit to be leveled and mores to be shored with service slope (Except for granite quarries) in the mitre classice abase.

(46). The Project Proponent shall ensure a minimula 2.5 of the Millian turnover will be utilized for the CSR Activity.

- 147). The Project Proponent shall provide solar lighting villages.

รายเสียงเลือก เอาไป [48]. The Project Proponent shall comply with the mining and other relevant. rules and regulations where ever applicable.

Alla

(49). Rainwater shall be pumped out Via Settling Tank only

(50). Earthen bunds and barbed wire fencing around the pits with green belt all along the injundary shall be developed and maintained.

(51). As per MoEF & CC, Gol, Office Memorandum dated 30.03.2015, prior clearance from Forestry &Wild Life angle including clearance from obtaining committee of the National Board for Wild life as applicable shall be obtained before starting the quarrying operation, if the project site is located within JOEM from National Park and Sanctuaries.

2 (52). The quarrying activity shall be stopped if the entire quarticy indicated in the Mining plan is quarried even before the expirit of the quarry lease period and the same shall be monitored by the District Authorities.

(53) Safety equipments to be provided to all the employees.

(54) Safety distance of 50 m has to be provided in case of milway, reservoir, analyodai.

(55) The Assistant / Deputy Director Department of Geology and Mining shall ensure that the proponent has engaged the blaster with valid Blasting license-/certificate obtained from the competent authority before execution of mining, lease.

(56) The proponent shall furnish the Baseline data covering the Air, Water, Noise and land environment quality for the proposed quarry site-before execution of mining lease. .

(57) The proponent shall erect the pillars in accordance with the Rules for depicting GPS details in the carmarked boundary of the quarry site to monitor electronically before execution of mining.

(58) The proponent shall furnish the data obtained from the Public Works Department regarding the details of ground water table in the quarry site.

(59) The proponent has to provide insurance protection to the workers in the case of existing mining or provide the affidavit in case of fresh case before execution of mining lease.

(60) The proponent has to display the name boar as the quarres showing the details of proponent, leased period, extent of a with resplay all existing activity before execution of mining.

(61) Heavy earth machinery equipments if utilized, section inpuroval

(62) The environmental norms shall be monitored by the District Environmental Engineer, Tamil Nadu Pollution Control Board, Hour.

 (63) The Assistant Director Public Works Department, Ground Water Division Dharmapuri shall monitor whether the quarrying activity is carried out
 above the ground water level on yearly basis

(64) NOC for sanitary certificate shall be obtained from the Deputy Divertor of Health Services, Krishnagiri.

(65) Yearly medical examination of the quarry workers should be carried out by a registered medical practitioner and the report should be filed in the quarry office in a separate file and copy should be sent to the Deputy Director. Health Services, Krishnagiri.

(66) Closed circuit camera should be erected at the quarry site and the passage of vehicles in and out of the quarry should be recorded and the footage of the recordings of the camera should be maintained and should be produced before the enforcing officials when ever called for.

(67) Vehicles used for transportation of quarried materials should be fitted with GPS and monitored.

(68)Pit Mouth register should be maintained in maline

(69) Auditor report on the annual turnover amount should be submitted to the District Collector within one month from the end of the financial year.

(70) 02.5% of the turn over amount should be utilized for the CSR activity after consultation with the District Collector.

### B. General Conditions:

(1) EC is given only on the factual records, documents and the communication furnished in non-judicial stamp paper by the proponent.

(2) The Proponent shall obtain the Consent for Establishment from the TNEC Board before commencing the activity.

(3) No change in mining technology and scope of working should be made without prior approval of the SEIAA, Tamit Nada.

(4) No change in the calendar plan including excavation, quantum of maneral (minor mineral) should be made.
(5) Effective safeguard measures, such as regular water and the high work of particulate matter such as loading and unloading the high work of particulate matter such as loading and unloading the high work of a fail range, should be ensured that the Ambient Air Quality parameters configure to the norms prescribed by the Central Pollution Control Board articles and the second

toj Effective safeguards shall be adopted against health risks on account of breeding of vectors in the water bodies created due to excavation of earth

(7) A berm shall be left from the boundary of adjoining field having a width equal to at least half the depth of proposed excavation.

(8) Mineral handling area shall be provided with adequate number of high efficiency dust extraction system. Loading and unloading areas including effithe transfer points should also have efficient dust central arrangements. These should be properly maintained and operated.

(9) Vehicular emissions shall be kept under control and be regulariy monitored. The mineral transportation shall be carried that through the covered trucks only and the vehicles carrying them mineral shall not be overloaded.

(10) Access and haul roads to the quarrying area should be restored in  $\pi$  mutually agreeable manner where these are considered transformation during extraction has been completed.

[11] All Personnel shall be provided with protective complicatory devices including safety shoes. Masks, gloves etc. Supervisory geople should be provided with adequate training and information on safety and health species. Occupational health surveillance program of the workers should be undertaken periodically to observe any contractions due to exposure to dust and take corrective measures, if needed.

(12) Periodical medical examination of the workers counged at the project shall be carried out and records maintained. For the purpose, schedule of realth examination of the workers should be drawn and followed accordingly. The, workers shall be provided with personnel protective measures such as mosks; ployes, boots etc.

(13) Workers/labourers shall be provided with facilities for druking water and sanitation facility for Female and Male separately.

(14) The project proponent shall ensure that child below it's net employed in the project as per the sworn affidavit furnished.

(15) The funds earmarked for environmental protection measures should be kept in separate account and should not be diverted for other purpose. Year wise expenditure should be reported to the Monstey of Environment and Forests and its regional office located at Chennal (16) The Environmental Clearance does not obsolve the scheme/propose of his obligation/requirement to obtain other statutory and administrative and obligation, MN 2020

(17) This Environmental Cleatance does not imply that the other manifest of administrative clearances shall be granted to the profest by the concarner authorities. Such authorities would be considering the concerner and be taking decisions independently of the Environmental Clearance

(18) The DEIAA. Krishnagiri may alter/modify the allove conditions or stipulate any further conditions in the interest of environment protection.

(19) The DEIAA, Krishnagiri may cancel the environmental clearance granted to this project under the provisions of EIA Notification, 2006, at any stage of the validity of this environmental clearance, if it is found or if it comes to the knowledge of this DEIAA. Krishnäsirithat the project proponent has deliberately concealed and/or submitted laise of misleading information or inadequate data for obtaining the environmental clearance.

(20) Failure to comply with any of the conditions mentioned above may omnit in withdrawal of this clearance and attract action under the provisional of the Environment (Protection) Act., 1986

(21) The above conditions will be enforced intervalial under two provisions of the Water (Prevention & Control of Pollution Act, 1974, rite, air (Presention & Control of Pollution) Act, 1981, the Environment (Protection) Act, 1986, the Public Liability Insurance Act, 1991, along with their minimizents, degr-Minor Mineral Conservation & Development Rules, 2010 frames under 585.02 Act 1957, National Commission for protection of Child Right Sales, 2005 and rules made there under and also any other orders passed by the Honthal Supreme Court of India/Hontble High Court of Medras and 855 takes Courts of Law relating to the subject matter.

(22) Any other conditions stipulated by other Starulory, Covernment authorities shall be complied.

(23) Any appeal against this environmental Clearance shall be with the 'Hon'ble National Green Tribupal, if preferred within a period of 30 dows as prescribed under section 16 of the National Green Tribupal Act 2016.

## TARGE MARIN FORLITTICK CONTROL BUARD

3(c) The Ambient Noise Level in the industrial plant area shall not exceed the limits prescribed below:

| Limits in L.eqdB(A)    | Day Time | Night Time |
|------------------------|----------|------------|
| <b>ResidentialArea</b> | 55       | 45         |

All units of the Air pollution control measures shall be operated efficiently and continuously so as to 4: achieve the standards prescribed in SI. No.3 above.

The occupier shall not change or alter quality or quantity or the rate of emission or replace or alter the 5. air pollution control equipment or change the raw material or manufacturing process resulting in change in quality and/or quantity of emissions without the previous written permission of the Board.

The occupier shall maintain log book regarding the stack monitoring system or operation of the plant 6. . or any other particulars for each of the unit operations of air pollution control systems to reflect the working condition which shall be furnished for verification of the Board officials during inspection.

- 7. The occupier shall at his own cost get the samples of emission/air/noise levels collected and analyzed by the TNPC Board Laboratory once in every 6 months/once in a year/periodically for the parameters as prescribed.
- Any upset condition in any of the plants of the factory which is likely to result in increased emissions 8. and result in violation of the standards mentioned in SI.No.3 shall be reported to the Member Secretary / Joint Chief Environmental Engineer-Monitoring and the concerned District/Assistant Environmental Engineer of the Board by e-mail immediately and subsequently by Post with full details of such upset condition.
- The occupier shall always comply and carryout the order/directions issued by the Board in this 0 Consent Order and from time to time without any negligence. The occupier shall be liable for action as per provisions of the Act in case of non compliance of any order/directions issued.

#### Additional Conditions:

1. The unit shall operate and maintain the Air Pollution Control measures efficiently so as to achieve the Ambient Air Quality emission / Ambient Noise level standards prescribed by the Board.

2. The unit shall comply with the provisions as laid down in the Tamil Nadu Prevention of illegal mining, transportation and storage of mineral and mineral dealers Rules, 2011. 3. The unit shall comply with the conditions stipulated in the Environmental Clearance accorded to the

unit by the DEIAA vide Lr.No.34/DEIAA-KGI/EC No.26/2018 dated 27.02.2018.

4. In case of revision of consent fee by the Government, the unit shall remit the difference in amount within one month from the date of notification. Failing to remit the consent fee, this consent order will be withdrawn without any notice and further action will be initiated against the unit as per law

### TRANSPORT PRODUCTION CONTROL DOALD

### GENERAL CONDITIONS

- The occupier shall make an application along with the prescribed consent fee for grant of renewal of consent at least 60 days before the date of expiry of this Consent Order along with all the required particulars ensuring that there is no change in production quantity and emission.
   This Consent is given by the Board in grant density of the consent of the consent of the consent is given by the Board in grant density of the consent of the consent of the consent of the consent is given by the Board in grant density of the consent o
- This Consent is given by the Board in consideration of the particulars given in the application. Any change or alteration or deviation made in actual practice from the particulars furnished, in the application will also be ground for review/variation/revocation of the Consent Order under Section 21 of the Act.
   The conditions imposed shall employ in for a section 21.
- The conditions imposed shall continue in force until revoked under Section 21 of the Act.
   After the issue of this order all the iffer and the iffer the issue of this order.
- After the issue of this order, all the 'Consent to Operate' orders issued previously under Air (Prevention and Control of Pollution) Act, 1981 as amended stands defunct.
   The occupier shall maintain an Inconstitute Paulous in the Stands defunct.
- 5. The occupier shall maintain an Inspection Register in the factory so that the inspecting officer shall record the details of the observations and instructions issued to the unit at the time of inspection for adherence.
- 6. The occupier shall provide and maintain an alternate power supply along with separate energy meter for the Air Pollution Control measures sufficient to ensure continuous operation of all pollution control equipments to ensure compliance.
- The occupier shall provide all facilities to the Board officials for collection of samples in and around the factory at any time.
   The amplicant shall dimba the flow discuss of the
- The applicant shall display the flow diagram of the sources of emission and pollution control systems provided at the site.
   The liquid effluent arising out of the commission of the close fluctuation.
- 9. The liquid effluent arising out of the operation of the air pollution control equipment shall also be treated in a manner and to the satisfaction of standards prescribed by the Board in accordance with the provisions of Water (Prevention and Control of Pollution) Act, 1974 as amended.
- The air pollution control equipments, location of inspection chambers and sampling port holes shall be mude easily accessible at all time.
- In case of any episodal discharge of emission, the industry shall take immediate action to bring down the emission within the limits prescribed by the Board.
- If applicable, the occupier has to comply with the provisions of Public Liability Insurance Act, 1991 to
  provide immediate relief in the event of any hazard to human beings, other living creatures/plants and
  properties while bandling and storage of hazardous substances.
- The issuance of this consent does not authorize or approve the construction of any physical structures or facilities or the undertaking of any work in any natural watercourse or in Government Poromboke lands.
- 14. The issuance of this Consent does not convey any property right in either real personal property or any exclusive privileges, nor does it authorize any injury to private property or Government property or any invasion of personal rights nor any infringement of Central, State laws or regulation.
- 15. The occupier shall forth with keep the Board informed of any accident of unforeseen act or event of any poisonous, noxious or polluting matter or emissions are being discharged into stream or well or air as a result of such discharge, water or air is being polluted.
- 16. If due to any technological improvements or otherwise the Board is of opinion that all or any of the conditions referred to above requires variation (including the change of any treatment system, either in whole or in part) the Board shall, after giving the applicant an opportunity of being heard, vary all or any of such conditions and thereupon the applicant shall be bound to comply with the conditions as so varied.
- 17. In case there is any change in the constitution of the management, the occupier of the new management shall file fresh application under Air (Prevention and Control of Pollution) Act, 1981, as amended in Form-I alongwith relevant documents of change of management immediately and get the necessary amendment with renewal of consent order.
- 18. In case there is my change in the name of the company alone, the occupier shall inform the same with relevant documents immediately and get the necessary amendments for the change of name from the Board.

 Tmt.K.M.Vijaya,W/o,D.Mathiyalagan No.58 B Gandhi Nagar, Krishnagiri Town and District Letter. Dated: Nil received on 29.12.2017

In the reference 2<sup>nd</sup> cited Tmt.K.M.Vijaya, W/o,D.Mathiyalagan, No.58 B Gandhi Nagar,Krishnagiri Town and District. Pin-63500 1have been issued precise area over an extent of 4.00.0 heets. in patta land in S.F.No. 78/1B(P) of Kothapetta village, Krishnagiri Taluk, and District for the proposed grant of rough stone quarry lease for a period of 5 years under the provisions of Rule 19(1) and 20 of Tamil Nadu Minor Mineral Concession Rules, 1959 and had been directed to submit approved mining plan and Environment Clearance.

 In this regard, in the reference 3<sup>nd</sup> cited Tmt.K.M.Vijaya,W/o,D.Mathiyalagan, No.58 B Gandhi Nagar,Krishnagiri Town and District. Pin-63500 had submitted 03 copies of draft Mining Plan for approval for the said quarry lease.

3. The Draft Mining Plan submitted by Tmt.K.M.Vijaya,W/o,D.Mathiyalagan has been scrutinized as per the guide lines/ Instructions issued by the Commissioner of Geology and Mining, Chennai-32 in the reference first cited. The mining plan is prepared in accordance with the guidelines / instructions issued and tallies with the field conditions. The special conditions imposed in the precise area letter had been incorporated in the Mining Plan.

4. The details of quarries situated within 500 mts radial distance from the proposed area is as follows:

| Name of the<br>lessee    | Village                                  | S.F.No.<br>Extent in<br>Hect                           | Collector's<br>Proceeding<br>No. & date            | Lease<br>period                |

1.

5. Hence, as per the guidelines / instructions issued by the Commissioner of Geology and Mining, Chennai, the said mining plan is hereby approved subject to the following conditions.

i)That the mining plan is approved without prejudice to any other law applicable to the quarry lease from time to time whether such laws are made by the Central Government, State Government or any other authority.

ii)This approval of the mining plan does not in any way imply the approval of the Government in terms of any other provisions of Mines and Minerals Development and Regulation) Act 1957, or any other connected laws including Forest (Conservation) Act 1957, or any other connected Laws industry Forest (Conservation) Act 1980, Forest Conservation Rules 1981 Environment protection Act 1980, Indian Explosive Act 1884 (Central Act IV of 1884) and the rules made there under, Minor Mineral Conservation and Development Rules, and The Tamil Nadu Minor Mineral Concession rules, 1959.

iii) That the mining plan is approved without prejudice to any other order or directions from any court of competent jurisdiction. iv)The following special conditions imposed in the District Collector, Krishnagiri letter in Roc.No.412/2017/Mines-1 dated 11.12.2017 should be adhered without any deviation while quarrying.

- a) A safety zone of 7.5 mts. should be left out for the adjoining patta lands.
- b) At any cost no quarrying should be carried out in the adjacent Government land and no hindrance should be given to the public.

6.The applicant should get prior clearance from the District level Environment Impact Assessment Authority, Krishnagiri District and should submit it to the District Collector, Krishnagiri.

30 Deputy Director, Geology and Mining, Krishnagiri.

## CERTIFIED COMPLIANCE REPORT

Subject: DEIAA – Application for Environmental Clearance for the proposed Rough Stone Quarrying over an extent of 4.00.0 Hectares in Patta land S.F.No.78/1B (Part) of Kothabetta Village of Krishnagiri Taluk and District preferred by Tmt.K.M. Vijaya, W/o. Madhiazhagan, No. 58B, Gandhi Nagar, Krishnagiri Town and District - issue of Environmental Clearance – Reg.

### EC Ref. No: Lr.No.34/DEIAA-KGI/ EC.No.26/2018 dated 27.02.2018

## **Project Proponent:**

Tmt. K.M. Vijaya W/o. Madhiazhagan, No.58B Gandhi Nagar, Krishnagiri Town and District.

## Present Status of the Project:

The District Level Environment Impact Assessment Authority (DEIAA), Krishnagiri - Tamil Nadu was accorded Environmental Clearance (EC) to the Rough Stone Quarry of Tmt.K.M.Vijaya, Kothabetta Village, Krishnagiri Taluk and District. It is an open cast, semimechanized mining with an approved depth of mining of 71 m (25 meter above ground level and 46 meter below ground level). Now they had mined up to a depth of 12 meter. The present mining has not intersected the ground water table. The total Mine Lease (ML) Area is 4.00.0 Ha. Out of total ML area, broken-up area is 3.41.5 Ha. The project cost is Rs.30,30,000/-. EMP cost is Rs.3,70,000/-.

The quarry is not in operation. As informed by the Project Proponent, the mining work was stopped on 28<sup>th</sup> May 2023. The mine had valid lease from 30.05.2018 to 29.05.2023. Now, they had applied for renewal of EC with SEIAA – TN.

The Project Proponent (PP) has obtained Consent to Operate (CTO) for Air vide proceedings No.F.1682HSR/RS/DEE/TNPCB/HSR/A/2022 dated 22.08.2022 and Water vide proceeding No.F.1682HSR/RS/DEE/TNPCB/HSR/W/2022 dated 22.08.2022 from Tamil Nadu Pollution Control Board (TNPCB), Hosur and is valid up to 28.05.2023.

The PP stated that, there is no habitation and approved layouts are situated within a radius of 300 meters from the lease area. However, the nearest village of Chinimalpalli situated at the distance of 0.77 km on the North-East side of the quarry lease area. The National Highway (NH- 48) Chennai - Mumbai road is situated about 1 km on the West side of the quarry lease area.

There is no reserve forest/social forest/wildlife sanctuary observed within 1 km radius of the quarry lease area. There is no major water bodies like river, lake, etc., within 500 m radius. There is no temple or any other archeological importance within the radius of 300 meters from the lease area. However, the Krishnagiri Fort is located at a distance of 0.51 km on South side of the quarry lease area. The Krishnagiri Reservoir Project (KRP) dam is located at a distance of 8.28 km in the south-western part of the quarry area.

Environmental monitoring was carried out in the core and buffer zone of the lease area by a NABL accredited laboratory. Ambient Air Quality (AAQ) was carried out at 3 locations in and around the quarry site and the results of all parameters are well within the prescribed limits of NAAQ Standards, 2009. Personal Exposure Monitoring (PEM) for free silica was carried out as per National Institute for Occupational Safety and Health (NIOSH) guidelines. Ambient Noise level monitoring and Work Place Noise Monitoring was carried out at 4 locations of the quarry site and the monitoring results are within prescribed limits as per MoEFCC/ CPCB norms. A Water sample was collected from a bore well near the quarry and analysed as per Indian Standard (IS). Results of all parameters are well within the permissible limits of IS: 10500:2012.

The Project Proponent has requested the Integrated Regional Office, Ministry of Environment, Forest & Climate Change (MoEF & CC), Chennai to provide Certified Compliance Report on Environmental Clearance towards applying for renewal of Environmental Clearance with the SEIAA-TN.

The above project was monitored on 25.07.2023 along with representative of the Project Proponent. The status of compliance on the stipulated conditions contained in the EC cited above is given below in Part III.

Date of Monitoring: 25.7.2023.

## PART-III

## Environment Clearance Conditions: Conditions to be Complied before Commencing Mining Operations:-

Party Of Second

Peda

Whereas, in the above terms First party and Second Part shall mean and include wherever the context so permits, their legal heir, successors, representatives, administrators and assigns etc.

Whereas the party of the second part has obtained Quarry Lease for carrying out Quarrying and Carrying away of minor minerals, referred in the Survey No. 78/1B (Part), Extent in 4.00.00 Hectares in KothapettaVillage in the Sub Registration Krishnagiri, Krishnagiri District from Government of Tamilnadu under lease agreement registered with the sub-registrar in Krishnagiri as TmtK.M.Vjaya Rough Stone Quarry Lease Holder & Prop. Tmt K.M Vijaya w/o Mathiahagan,

Whereas the party of the second part having his own Mines Manager, Foreman and Blaster requires explosive materials for doing blasting in the said quarry. For possession of the explosive materials, a license under the Indian Explosives Act and Indian Explosive Rules, 2008 issued by the competent authority is necessary and the party of the first part is having a valid explosive License No. **E/SC/TN/22/732 (E104893)** issued by Joint Controller of Explosives, Chennai and Magazines at Survey No 737/1B, 737/2B Maniyathahalli Village, Purikal Post Naliampalli Police Station Dharmapuri District, Tamilnadu- 636 401 and they are authorized and entitles to make, supply and use of explosives for blasting rocks in Quarries.

The party of the second part approached the party of the first part to assist him in extraction of minor minerals from the said leased quarry by providing required explosive materials as and when required under the license issued to him by the competent authority and the party of the first part having agreed to do so.

The lease period of Five years starts from 30<sup>th</sup> of May 2018 and ends on the 29<sup>th</sup>May of 2023

Now the agreement witness as follows:

- It is agreed that the party of the first part shall supply explosives to the party of the second part, under his license for the blasting of rocks in the aforesaid licensed quarry, as per the provisions of Mines Act 1952.
- The second party shall place the requirement of explosives and accessories, depending on the site requirements, holes drilled etc., and

Party of First

the explosives will be used by Competent Mining Personnel's / authority like Mines Managers, Mines Foreman, Mines Mate, Blaster etc. appointed by the owner as per the provisions of Mines Act 1952. After completion of the blasting operation by the competent personnel, left out or unused explosives will be returned to the magazine on the same day from when the supply was effected.

- 3. The party of the Second part is solely responsible for using the explosives and accessories in the leased area and Survey Nos, where mining lease has been obtained. The responsibility of the first party ceases once the explosives are delivered at the site. The Mine owner shall appoint competent Mining Personnel's for carrying out Mining & Quarrying operations including blasting operations in the quarry as per the provisions of the Mines Act 1952. The explosives will be used and handled by Mines Mate, Blaster, Mines Foreman and Mines Manager appointed by the Mine owner and all safety aspects will by scrupulously followed by the competent persons as per the provisions of the Mines Act 1952 and Explosives Rules 2008.
- 4. The party of the first part will charge GST, as per the GST act and the second party will pay the GST amount as per the bills. The bills will be settled pramptly on fortnight basis by Ch, NEFT/RTGS, by the party of the second part as mutually agreed.
- This agreement shall be in force until the expiry of the license of the first party from the date of this agreement and is subjected to renewal of such terms and conditions, as may be mutually agreed upon.

In witnesses the parties herein have set their hands to this agreement on this day month and year first mentioned above in the presence of the following.

Subject:- Implementation of the E.S.I. Act, 1948 and Registration of Employees of the Factories and Establishments under Section 2(12) of the Act, as

amended.

Dear Sir(s),

 It is informed that under section 1(3) of the esi. act, 1948 is applicable to all factories/establishments covered under the act within the area where your factory/establishment is situated

2. It is further informed that the appropriate government has extended the provisions of the act to other establishments under section 1(5) of the act in this area

3. Under section 2 a of the act such a factory/establishment is required to register itself under the act and chapter iv thereof casts a responsibility on the principal employer thereof to get his employees registered and pay contributions in respect of these employees covered under the act.

4. On the basis of the particulars in respect of your factory/establishment submitted by you, the report of the inspection conducted by the Social Security Officer, who inspected your factory on -NA-, your factory falls within the purview of Section 2(12) of the Act with effect from 01-12-2021. In case, however, subsequent facts reveal that your factory was coverable from a date prior to the date mentioned above, you shall make yourself liable to comply with the provisions of the Act from such earlier date.

5. It is requested to take immediate steps for registration of your employees by submitting declaration forms online, payment of contribution, maintenance of records etc. from the date of coverage of your factory/establishment under the act. \*\*You are also requested to submit employer's registration form (form 01) as required under the provisions of sec.2-a of the esi act , 1948 read with regulation 10-b of the esi(general), regulations, 1950.

6. For the sake of convenience your establishment has been allotted code No 63001052950000499 which may kindly be used in all communications sent to this office and on all forms at the place indicated for the purpose. The Branch Office of the Corporation situated at ESI Hospital Complex, SIPCOT, Hosur 635126 has been instructed to render necessary assistance to you in connection with registration of your employees. In case you find any difficulty or for any other purpose which may be necessary in connection with the Scheme you are requested to contact the Manager of the above Branch Office who will render necessary help in the matter.

7. A State wise list of ESI Dispensaries is available on our website <u>www.esic.nic.in</u> under the link Directories which can be downloaded. It is requested that publicity may be given about the Employees' State Insurance Dispensaries to enable your employees to choose their E.S.I. Dispensaries 8. The corporation officials would be pleased to give all necessary and possible guidance to you in discharging your duties and obligations under the esi act, 1948 and I am confident of prompt and timely compliance under the provisions of the ESI act and regulations on your part.

9. All the Branches of State Bank of India are authorized to accept the ESI Contribution .

10. The brochures/leaflets containing benefits available under the scheme and obligation of the employer etc are available on our website <u>www.esic.nic.in</u> under the link Publications which may be downloaded for wide publicity for the smooth functioning of the scheme

11. Please indicate your code no. on all correspondences to avoid delay

Yours faithfully,

Encl. : As state above

Asstt./Dy. Director

The Client requires detailed information on Ground Water Occurrences at Proposed Project Site of Rough Stonequarry. The objective of the present study is to assess the availability of groundwater and comment on aspects of depth to potential aquifers, aquifer availability and type, possible yields and water quality. For this purpose all available hydrogeological information of the areas has been analyzed, and a geophysical survey was done.

The investigations involved hydrogeological, geophysical field investigations and a detailed study in which the available relevant geological and hydrogeological data were collected, analyzed, collated and evaluated within the context of the Client's requirements. The data sources consulted were mainly:

- a) Central Ground Water Board (CGWB) Data
- b) State & District Geological and Hydrogeological Reports and Maps.
- c) Technical reports of the area by various organizations.

### 2. SCOPE OF THE WORKS -

The scope of works includes:

- Site visits to familiarize with the project areas. Identify any issues that might impact the Ground Water Scenario due to proposed mining activities.
- To obtain, study and synthesize background information including the geology, hydrogeology and existing borehole data, for the purpose of improving the quality of assessment and preparing comprehensive hydrogeological reports,
- To carry out hydrogeological evaluation and geophysical investigations in the selected sites in order to determine potential for groundwater at project site.
- To prepare hydrogeological survey reports in conformity with the provisions of the rules and procedure outlined by the Central Ground Water Board (CGWB), by Assessment of water quality and potential infringement of National standards, Assessment of availability of groundwater and Impact of proposed activity on aquifer, water quality and other abstractors.

#### 3. BACKGROUND INFORMATION

#### Location

The area is marked in the Survey of India, Topo Sheet No. 57 L/12. The area is between the Latitudes of 12°32'42.0172''N to 12°32'44.4928''N and Longitudes of 78°12'54.6408''E to 78°12'42.8804''E on WGS datum-1984.

#### 4. GEOMORPHOLOGY

Krishnagiri district forms part of the upland plateau region with many hill ranges and undulating plains. The western part of the district has hill ranges of Mysore plateau with achain of undulating hills and deep valleys extending in NNE-SSW direction. The plains of the district have an average elevation of 488 m amsl. The plateau region along the western boundary and the northwestern part of the district has an average elevation of 914 m amsl. The GuthrayanDurg with an elevation of 1395 m amsl is the highest peak in the district.

#### Soils

Soils have been classified into Black soil, mixed soil, red loamy soil, gravelly and sandysoils. Red loamy and sandy soils are predominant in Hosur taluk. Vast stretches of loam soils and black soils occur in Krishnagiri district.

## Rainfall

The district receives the rain under the influence of both southwest and northeastmonsoons. The normal annual rainfall over the district varies from about 750 to about 900 mm. It is the minimum around Hosur (767.7 mm) and Rayakottai (768.0 mm) in the northern and central parts of the district. It gradually increases towards west and east and is the maximum around Denkanikotai (910.7 mm) in the western part.

The climate of Krishnagiri district is comparatively more pleasant than that of the surrounding districts due to general dryness of atmosphere and appreciable drop in temperature in the monsoon season. The year may be divided into four seasons namely dry season from January to March, summer season April and May, southwest monsoon season from June to Sept. and northeast monsoon season from October to December.

#### Climate

During summer season (April to May) the maximum temperature is about 37°C, and the mean daily minimum temperature of about 25°C in the plains. There is a gradual decrease of both day and night temperatures from June onwards till December, when the mean daily maximum temperature is about 30°C and the mean daily min. is about 19°C in plains.

The day temperature increases gradually from January onwards. The lowest temperature is reached in January when the mean daily minimum is about 19°C. However, in higher areas i.e., Hosur, Thally and Krishnagiri taluks day and night temperature is lower by about 2 to 3°C. In these areas weather is comparatively pleasant round the year.

### 5. GEOLOGY

## Regional Geology of Krishnagiri District-

The geological formations of the Krishnagiri district belong mainly to Archaean age along with rock of Proterozoic age. The former is represented by Khondalite Group of rocks, Charnockite Group of rocks, Migmatites Complex, Sathyamangalam Group of rocks, while the latter is represented by alkaline rocks.

The Khondalite Group includes garnet sillimanite gneiss and quartzite which occur as small patches. The migmatite complex includes garnetiferousquartzofeldspathic gneiss and hornblendsbiotite gneiss, the former exposed on the western part of the district. The Sathyamangalam Group includes fuchsite quartzite, sillimanite mica schist and amphibolites.

The Bhavani Group in this area includes fissile hornblende-biotite gneiss, granitoid gneiss and pink migmatite. Amphibolites with barbed ferruginous quartzite and associated quartzo-feldspathic rocks (Champion Gneiss) represent the Kolar group and are found west and southwest of Veppanapalli. Following this there are basic intrusions occurring as dykes.

The Charnockite Group occupies a major part of the south-west portion of this district with small bands of Garnetiferousquartzo-feldspathic gneiss, Granite gneiss and dolerite dykes. The North-East and Northern part of the District mainly consist of granite gneiss with small patches of Pink Migmatite, hornblende-biotite gneiss and dolerite dykes. The Easternpart of the district consists of Epidote-Hornblende Gneiss, Ultra Mafics, Syenite and Carbonatite.

The Alkaline Complex is represented by epidote-hornblende gneiss, ultramafics, syenite and carbonatite and these are distributed in the eastern part of the district. Innumerable basic dykes and felsites, quartz, barites and pegmatite veins form part of the Alkali Complex.

## 

## 6. GEOPHYSICAL INVESTIGATION METHODS

A variety of methods are available to assist in the assessment of geological subsurface conditions. The main emphasis of the fieldwork undertaken was to determine the thickness and composition of the sub-surface formations and to identify water-bearing zones.This information was principally obtained in the field using, and vertical electrical soundings (VES). The VES probes the resistivity layering below the site of measurement. This method is described below.

#### **Resistivity Method**

Vertical electrical soundings (VES) were carried out to probe the condition of the subsurface and to confirm the existence of deep groundwater. The VES investigates the resistivity layering below the site of measurement.

## **Basic Principles**

The electrical properties of rocks in the upper part of the earth's crust are dependent upon the lithology, porosity, and the degree of pore space saturation and the salinity of the pore water. Saturated rocks have lower resistivity than unsaturated and dry rocks. The higher the porosity of the saturated rock, or the higher the salinity of the saturating fluids, the lower is the resistivity. The presence of clays and conductive minerals also reduces the resistivity of the rock.

The resistivity of earth materials can be studied by measuring the electrical potential distribution produced at the earth's surface by an electric current that is passed through the earth. Current is moved through the subsurface from one current electrode to the other and

the potential difference is recorded as the current passes. From this information, resistivity values of various layers are acquired and layer thickness can be identified.

The apparent resistivity values determined are plotted as a log function versus the log of the spacing between the electrodes. These plotted curves identify thickness of layers. If there are multiple layers (more than 2), the acquired data is compared to a master curve to determine layer thickness.

This method is least influenced by lateral in-homogeneities and capable of providing higher depth of investigation.

The resistance R of a certain material is directly proportional to its length L and crosssectional area A, expressed as:

$$R = Rs * L/A$$
 (in Ohm)

Where Rs is known as the specific resistivity (characteristic of the material and independent of its shape or size)

With Ohm's Law,

$$R = dV/I$$
 (Ohm)

Where dV is the potential difference across the resistor and I is the electric current through the resistor. The specific resistivity may be determined by:

Rs = (A/L) \* (dV/I) (in Ohm m)

#### Vertical Electrical Sounding (VES)

When carrying out a resistivity sounding, current is led into the ground by means of two electrodes. With two other electrodes, situated near the center of the array, the potential field generated by the current is measured. From the observations of the current strength and the potential difference, and taking into account the electrode separations, the ground resistivity can be determined. During aresistivity sounding, the separation between the electrodes is step-wise increased (known as a Schlumberger Array), thus causing the flow of current to penetrate greater depths. When plotting the observed resistivity values against depth on double logarithmic paper, a resistivity graph is formed, which depicts the variation of resistivity with depth. This graph can be interpreted with the aid of a computer, and theactual resistivity layering of the subsoil is obtained. The depths and resistivity values provide the hydro geologist with information on the geological layering and thus the occurrence of groundwater.

#### 7. Conclusions -

Based on the available information and the geophysical investigations it is concluded that the project area is considered to have medium groundwater potential. Productive aquifers are expected at depth of 85m to 90m where minor fractures are observed and shallow aquifers are expected above 75m to 80m BGL. The ultimate pit limit as per the approved mining plan depth is 31m below ground level which will have no impact on the Ground Water.

Ref:

K.M.Vijaya Rough Stone, No.58-B, Gandhi Nager, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu 635-001.

Sir,

Sub: Willingness to do Explosives Blasting Works - Reg.

With respect to the above subject, we would like to introduce myself as the Explosives Blasting Contractors, for which our LICENCE NO: E/HQ/TN/22/335(E64278) & E/SC/TN/22/463(E37227) S.F.No.344/3B, Paiyur Village, Krishnagiri Taluk magazine is situated in No.273-A, Keel Paiyur Village, Kaveripattinam, Krishnagiri, Tamilnadu-635 112.

We were engaged in professional blasting contract works with all facilities and License holders to carry out blasting works in specified time and period covered under Explosives Rules, 2008.

We kindly request yourself to engage us to do Explosives Blasting Works in your proposed Rough stone Quarry situated at S.F.No: 78/1B (P) in KothapettaVillage, Krishnagiri Taluk, Krishnagiri District over an extent of 4.00.0 hectares.

SERVING BEST AT ALL TIMES

Thanking you.

EXPLOSIVES, For VISHIN

Enclosure: Magazine License Copy.

| 2.1   | <ol> <li>In the case of existing/operating mines, a letter obtained from the concerned AD (Mines) shall be submitted and it shall include the following:         <ul> <li>(i) Original pit dimension</li> <li>(ii) Quantity achieved Vs EC Approved Quantity</li> <li>(iii) Balance Quantity as per Mineable Reserve calculated.</li> <li>(iv) Mined out Depth as on date Vs EC Permitted depth</li> <li>(v) Details of illegal/illicit mining</li> <li>(vi) Violation in the quarry during the past working.</li> <li>(vii) Quantity of material mined out outside the mine lease area</li> <li>(viii) Quantity of material mined out outside the mine lease area</li> <li>(viii) Condition of Safety zonc/benches</li> <li>(ix) Revised/Modified Mining Plan showing the benches of not exceeding 6 m height and ultimate depth of not exceeding 50m.</li> </ul> </li> <li>Details of habitations within 300m radius from the periphery of the site.</li> <li>The PP shall submit a detailed hydrological report indicating the impact of proposed quarrying operations on the waterbodies like lake, water tanks, etc are located within 1 km of the proposed quarry.</li> <li>4. The Proponent shall carry out Bio diversity study through reputed Institution and the same shall be included in EIA Report.</li> <li>The DFO letter stating that the proximity distance of Reserve Forests, Protected Areas, Sanctuaries, Tiger reserve etc., up to a radius of 25 km from the proposed site.</li> <li>6. In the case of proposed lease in an existing (or old) quarry where the benches to be constructed and existing guarry wall, by involving any one of the reputed Research and Academic Institutos - SIR-Central Institute of Mining &amp; Fuel Research / Dhanbad, NIRM/Bangalore, Division of Geotechnical Engineering-IIT-Madras, NIT-Dept of Mining Engg, Surathkal, and Anna University Chennai-CEG Campus. The PP shall subm</li></ol> |

| S. No | Terms of Reference                                                                                                                                                                                                                                                                                                                                                                              |  |  |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
|       | 10. The EIA Coordinators shall obtain and furnish the details of quarry/quarries operated by the proponent in the past, either in the same location or elsewhere in the State with video and photographic evidences.                                                                                                                                                                            |  |  |
|       | <ul> <li>11. If the proponent has already carried out the mining activity in the proposed mining lease area after 15.01.2016, then the proponent shall furnish the following details from AD/DD, mines,</li> <li>12. What was the period of the operation and stoppage of the earlier mines with last work permit issued by the AD/DD mines?</li> </ul>                                         |  |  |
|       | 13 Quantity of minerals mined out                                                                                                                                                                                                                                                                                                                                                               |  |  |
|       | • Highest production achieved in any one year                                                                                                                                                                                                                                                                                                                                                   |  |  |
|       | • Detail of approved depth of mining.                                                                                                                                                                                                                                                                                                                                                           |  |  |
|       | • Actual depth of the mining achieved earlier.                                                                                                                                                                                                                                                                                                                                                  |  |  |
|       | • Name of the person already mined in that leases area.                                                                                                                                                                                                                                                                                                                                         |  |  |
|       | • If EC and CTO already obtained, the copy of the same shall be submitted.                                                                                                                                                                                                                                                                                                                      |  |  |
|       | • Whether the mining was carried out as per the approved mine plan (or EC if issued) with stipulated benches.                                                                                                                                                                                                                                                                                   |  |  |
|       | 14. All corner coordinates of the mine lease area, superimposed on a High-Resolution Imagery/Topo sheet, topographic sheet, geomorphology, lithology and geology of the mining lease area should be provided. Such an Imagery of the proposed area should clearly show the land use and other ecological features of the study area (core and buffer zone).                                     |  |  |
|       | 15. The PP shall carry out Drone video survey covering the cluster, green belt, fencing, etc.,                                                                                                                                                                                                                                                                                                  |  |  |
|       | 16. The proponent shall furnish photographs of adequate fencing, green belt along the periphery including replantation of existing trees & safety distance between the adjacent quarries & water                                                                                                                                                                                                |  |  |
|       | bodies nearby provided as per the approved mining plan.                                                                                                                                                                                                                                                                                                                                         |  |  |
|       | 17. The Project Proponent shall provide the details of mineral reserves and mineable reserves, planned production capacity, proposed working methodology with justifications, the anticipated impacts of the mining operations on the surrounding environment, and the remedial measures for the same.                                                                                          |  |  |
|       | 18. The Project Proponent shall provide the Organization chart indicating the appointment of various statutory officials and other competent persons to be appointed as per the provisions of the Mines Act'1952 and the MMR, 1961 for carrying out the quarrying operations scientifically and systematically in order to ensure safety and to protect the environment.                        |  |  |
|       | 19. The Project Proponent shall conduct the hydro-geological study considering the contour map of the water table detailing the number of groundwater pumping & open wells, and surface water bodies such as rivers, tanks, canals, ponds, etc. within 1 km (radius) along with the collected water level data for both monsoon and non-monsoon seasons from the PWD / TWAD so as to assess the |  |  |
|       | impacts on the wells due to mining activity. Based on actual monitored data, it may clearly be<br>shown whether working will intersect groundwater. Necessary data and documentation in this<br>regard may be provided                                                                                                                                                                          |  |  |
|       | 20. The proponent shall furnish the baseline data for the environmental and ecological parameters with regard to surface water/ground water quality, air quality, soil quality & flora/fauna including traffic/vehicular movement study.                                                                                                                                                        |  |  |
|       | 21. The Proponent shall carry out the Cumulative impact study due to mining operations carried out in the quarry specifically with reference to the specific environment in terms of soil health, biodiversity air pollution water pollution climate change and flood control & health impacts                                                                                                  |  |  |
|       | Accordingly, the Environment Management plan should be prepared keeping the concerned quarry and the surrounding habitations in the mind.                                                                                                                                                                                                                                                       |  |  |
|       | 22. Rain water harvesting management with recharging details along with water balance (both                                                                                                                                                                                                                                                                                                     |  |  |
|       | monsoon & non-monsoon) be submitted.                                                                                                                                                                                                                                                                                                                                                            |  |  |
|       | 23. Land use of the study area delineating forest area, agricultural land, grazing land, wildlife sanctuary, national park, migratory routes of fauna, water bodies, human settlements and other ecological features should be indicated. Land use plan of the mine lease area should be prepared to                                                                                            |  |  |

|       | within the mining lease applied area & 300m buffer zone and its management during mining activity.                                                                                                                                                                                                                                                                                                                                                                                                                           |
|       | 29. A detailed mine closure plan for the proposed project shall be included in EIA/EMP report which should be site-specific.                                                                                                                                                                                                                                                                                                                                                                                                 |
|       | 30. As a part of the study of flora and fauna around the vicinity of the proposed site, the EIA coordinator shall strive to educate the local students on the importance of preserving local flora and fauna by involving them in the study, wherever possible.                                                                                                                                                                                                                                                              |
|       | 31. The purpose of Green belt around the project is to capture the fugitive emissions, carbon sequestration and to attenuate the noise generated, in addition to improving the aesthetics. A wide range of indigenous plant species should be planted as given in the appendix-I in consultation with the DFO, State Agriculture University. The plant species with dense/moderate canopy of native origin should be chosen. Species of small/medium/tall trees alternating with shrubs should be planted in a mixed manner. |
|       | 32. Taller/one year old Saplings raised in appropriate size of bags, preferably ecofriendly bags should be planted as per the advice of local forest authorities/botanist/Horticulturist with regard to site specific choices. The proponent shall earmark the greenbelt area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in between blocks in an organized manner.                                                                                                      |
|       | <ul> <li>33. A Disaster management Plan shall be prepared and included in the EIA/EMP Report for the complete life of the proposed quarry (or) till the end of the lease period.</li> <li>34. A Risk Assessment and management Plan shall be prepared and included in the EIA/EMP Report for the complete life of the proposed quarry (or) till the end of the lease period.</li> </ul>                                                                                                                                      |
|       | 35. Occupational Health impacts of the Project should be anticipated and the proposed preventive measures spelt out in detail. Details of pre-placement medical examination and periodical medical examination schedules should be incorporated in the EMP. The project specific occupational health mitigation measures with required facilities proposed in the mining area may be detailed. 36. Public health implications of the Project and related activities for the population in the impact                         |
|       | <ul><li>along with budgetary allocations.</li><li>37. The Socio-economic studies should be carried out within a 5 km buffer zone from the mining activity. Measures of socio-economic significance and influence to the local community proposed to be provided by the Project Proponent should be indicated. As far as possible, quantitative dimensions may be given with time frames for implementation.</li></ul>                                                                                                        |
|       | <ul><li>38. Details of litigation pending against the project, if any, with direction /order passed by any Court of Law against the Project should be given.</li><li>39. Benefits of the Project if the Project is implemented should be spelt out. The benefits of the Project shall clearly indicate environmental, social, economic, employment potential, etc.</li><li>40. If any quarrying operations were carried out in the proposed quarrying site for which now the</li></ul>                                       |

|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.1   | An EIA-EMP Report shall be prepared for peak capacity (MTPA)operation in an ML/project area ofha based on the generic structure specified in Appendix III of the EIA Notification, 2006.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1.2   | An EIA-EMP Report would be prepared for peak capacity operation to cover the impacts and environment management plan for the project specific activities on the environment of the region, and the environmental quality encompassing air, water, land, biotic community, etc. through collection of data and information, generation of data on impacts including prediction modeling for MTPA of mineral production based on approved project/Mining Plan forMTPA. Baseline data collection can be for any season (three months) except monsoon.                                                                                                                                                                                                                        |
| 1.3   | Propoer KML file with pin drop and coordinate of mine at 500-1000 m interval be provided                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1.4   | A Study area map of the core zone (project area) and 10 km area of the buffer zone (1: 50,000 scale) clearly delineating the major topographical features such as the land use, surface drainage pattern including rivers/streams/nullahs/canals, locations of human habitations, major constructions including railways, roads, pipelines, major industries, mines, and other polluting sources. In case of ecologically sensitive areas such as Biosphere Reserves/National Parks/WL Sanctuaries/ Elephant Reserves, forests (Reserved/Protected), migratory corridors of fauna, and areas where endangered fauna and plants of medicinal and economic importance found in the 15 km study area should be given. The above details to be furnished in tabular form also |
| 1.5   | Map showing the core zone delineating the agricultural land (irrigated and un-irrigated, uncultivable land as defined in the revenue records, forest areas (as per records), along with other physical features such as water bodies, etc should be furnished.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 1.6   | A contour map showing the area drainage of the core zone and 25 km of the study area (where the water courses of the core zone ultimately join the major rivers/streams outside the lease/project area) should also be clearly indicated in the separate map.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 1.7   | Catchment area with its drainage map of 25 km area within and outside the mine shall be provided with names, details of rivers/ riverlet system and its respective order. The map should clearly indicate drainage pattern of the catchment area with basin of major rivers. Diversion of drains/ river need eloboration in form of lengthe, quantity and quality of water to be diverted                                                                                                                                                                                                                                                                                                                                                                                 |

| S. No | Terms of Reference                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |  |  |  |

|       | corridor of any endangered fauna should be given. If the study area has endangered flora and fauna, or if the area is occasionally visited or used as a habitat by Schedule-I species, or if the project falls within 15 km of an ecologically sensitive area, or used as a migratory corridor then a Comprehensive Conservation Plan along with the appropriate budgetary provision should be prepared and submitted with EIA-EMP Report; and comments/observation from the CWLW of the State Govt. should also be obtained and furnished.                                                                                                                                                                                                                                                                                                         |  |  |  |  |
| 1.14  | One-season (other than monsoon) primary baseline data on environmental quality - air (PM10, PM2.5, SOx, NOx and heavy metals such as Hg, Pb, Cr, As, etc), noise, water (surface and groundwater), soil - along with one-season met data coinciding with the same season for AAQ collection period should be provided. The detail of NABL/ MoEF&CC certification of the respective laboratory and NABET accreditation of the consultant to be provided.                                                                                                                                                                                                                                                                                                                                                                                             |  |  |  |  |
| 1.15  | Map (1: 50, 000 scale) of the study area (core and buffer zone) showing the location of various sampling stations superimposed with location of habitats, other industries/mines, polluting sources, should be provided. The number and location of the sampling stations in both core and buffer zones should be selected on the basis of size of lease/project area, the proposed impacts in the downwind (air)/downstream (surface water)/groundwater regime (based on flow). One station should be in the upwind/upstream/non-impact/non-polluting area as a control station. The monitoring should be as per CPCB guidelines and parameters for water testing for both ground water and surface water as per ISI standards and CPCB classification wherever applicable. Observed values should be provided along with the specified standards. |  |  |  |  |
| 1.16  | For proper baseline air quality assessment, Wind rose pattern in the area should be reviewed and accordingly location of AAMSQ shall be planned by the collection of air quality data by adequate monitoring stations in the downwind areas. Monitoring location for collecting baseline data should cover overall the 10 km buffer zone i.e. dispersed in 10 km buffer area. In case of expansion, the displayed data of CAAQMS and its comparison with the monitoring data to be provided                                                                                                                                                                                                                                                                                                                                                         |  |  |  |  |
| 1.17  | A detailed traffic study along with presence of habitation in 100 mts distance from both side of road, the impact on the air quality with its proper measures and plan of action with timeline for widening of road. The project will increase the no. of vehicle along the road which will indirectly contribute to carbon emission so what will be the compensatory action plan should be clearly spell out in EIA/ EMP report.                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |  |
| 1.18  | The socio-economic study to conducted with actual survey report and a comparative assessment to be provided from the census data should be provided in EIA/ EMP report also occupational status & economic status of the study area and what economically project will contribute should be clearly mention. The study should also include the status of infrastructural facilities and amenities present in the study area and a comparative assessment with census data to be provided and to link it with the initialization and quantification of need based survey for CSR activities to be followed.                                                                                                                                                                                                                                          |  |  |  |  |
| 1.19  | The Ecology and biodiversity study should also indicate the likely impact of change in forest area for surface infrastructural development or mining activity in relation to the climate change of that area and what will be the compensatory measure to be adopted by PP to minimize the impact of forest diversion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |  |
| 1.20  | Baseline data on the health of the population in the impact zone and measures for occupational health and safety of the personnel and manpower for the mine should be submitted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |  |

| S. No | Terms of Reference                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |  |  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
| 1.21  | Impact of proposed project/activity on hydrological regime of the area shall be assessed and report be submitted. Hydrological studies as per GEC 2015 guidelines to be prepared and submitted                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |  |  |
| 1.22  | Impact of mining and water abstraction from the mine on the hydrogeology and groundwater regime within the core zone and 10 km buffer zone including long-term monitoring measures should be provided. Details of rainwater harvesting and measures for recharge of groundwater should be reflected in case there is a declining trend of groundwater availability and/or if the area falls within dark/grey zone.                                                                                                                                                               |  |  |  |  |  |
| 1.23  | Study on land subsidence including modeling for prediction, mitigation/prevention of subsidence, continuous monitoring measures, and safety issues should be carried out.                                                                                                                                                                                                                                                                                                                                                                                                        |  |  |  |  |  |
| 1.24  | Detailed water balance should be provided. The break up of water requirement as per different activities in the mining operations, including use of water for sand stowing should be given separately. Source of water for use in mine, sanction of the Competent Authority in the State Govt. and impacts vis-à-vis the competing users should be provided.                                                                                                                                                                                                                     |  |  |  |  |  |
| 1.25  | PP shall submit design details of all Air Pollution control equipment (APCEs) to be implemented as part of Environment Management Plan vis-à-vis reduction in concentration of emission for each APCEs                                                                                                                                                                                                                                                                                                                                                                           |  |  |  |  |  |
| 1.26  | PP shall propose to use LNG/CNG based mining machineries and trucks for mining operation and transportation of mineral. The measures adopted to conserve energy or use of renewable sources shall be explored                                                                                                                                                                                                                                                                                                                                                                    |  |  |  |  |  |
| 1.27  | PP to evaluate the green house emission gases from the mine operation/ washery plant and corresponding carbon absorption plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |  |  |
| 1.28  | Site specific Impact assessment with its mitigation measures, Risk Assessment and Disaster Preparedness and Management Plan should be provided.                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |  |  |
| 1.29  | Impact of choice of mining method, technology, selected use of machinery and impact on air quality, mineral transportation, handling & storage/stockyard, etc, Impact of blasting, noise and vibrations should be provided.                                                                                                                                                                                                                                                                                                                                                      |  |  |  |  |  |
| 1.30  | Impacts of mineral transportation within the mining area and outside the lease/project along with flow-chart indicating the specific areas generating fugitive emissions should be provided. Impacts of transportation, handling, transfer of mineral and waste on air quality, generation of effluents from workshop etc, management plan for maintenance of HEMM and other machinery/equipment should be given. Details of various facilities such as rest areas and canteen for workers and effluents/pollution load emanating from these activities should also be provided. |  |  |  |  |  |
| 1.31  | Details of various facilities to be provided to the workers in terms of parking, rest areas and canteen, and effluents/pollution load resulting from these activities should also be given.                                                                                                                                                                                                                                                                                                                                                                                      |  |  |  |  |  |
| 1.32  | The number and efficiency of mobile/static water jet, Fog cannon sprinkling system along the main mineral transportation road inside the mine, approach roads to the mine/stockyard/siding, and also the frequency of their use in impacting air quality should be provided.                                                                                                                                                                                                                                                                                                     |  |  |  |  |  |
| 1.33  | Conceptual Final Mine Closure Plan and post mining land use and restoration of land/habitat to the                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |  |  |

| 1.49  | In case of expansion of the proposal, the status of the work done as per mining plan and approved mine closure plan shall be detailed in EIA/ EMP report                                                                                                                                                                                                                                                                                                                      |  |  |  |  |
| 1.50  | Details on Public Hearing should cover the information relating to notices issued in the newspaper, proceedings/minutes of Public Hearing, the points raised by the general public and commitments made by the proponent and the time bound action proposed with budgets in suitable time frame. These details should be presented in a tabular form. If the Public Hearing is in the regional language, an authenticated English Translation of the same should be provided. |  |  |  |  |
| 1.51  | PP shall carry out survey through drone highlighting the ground reality for atleast 10 minutes                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |  |
| 1.52  | Detailed Chronology of the project starting from the first lease deed alloted/Block allotment/ Land acquired to its No. of renewals, CTO /CTE with details of no. renewals, previous EC(s) granted details and its compliance details, NOC details from various Govt bodies like Forest NOC(s), CGWA permissions, Power permissions, etc as per the requisites respectively to be furnished in tabular form.                                                                  |  |  |  |  |
| 1.53  | The first page of the EIA/ EMP report must mention the peak capacity production, area, detail of PP, Consultant (NABET acrreditation) and Laboratory (NABL / MoEF & CC certification)                                                                                                                                                                                                                                                                                         |  |  |  |  |
| 1.54  | The compliances of ToR must be properly cited with respective chapter section and page no in tabular form and also mention sequence of the respective ToR complied within the EIA-EMP report in all the chapter,s section.                                                                                                                                                                                                                                                    |  |  |  |  |

Additional Terms of Reference SEIAA Conditions:

Payments

Standard:

#### **Cluster Management Committee**

1. Cluster Management Committee shall be framed which must include all the proponents in the cluster as members including the existing as well as proposed quarry.

2. The members must coordinate among themselves for the effective implementation of EMP as committed including Green Belt Development, Water sprinkling, tree plantation, blasting etc.,

3. The List of members of the committee formed shall be submitted to AD/Mines before the execution of mining lease and the same shall be updated every year to the AD/Mines.

4. Detailed Operational Plan must be submitted which must include the blasting frequency with respect to the nearby quarry situated in the cluster, the usage of haul roads by the individual quarry in the form of route map and network.

5. The committee shall deliberate on risk management plan pertaining to the cluster in a holistic manner especially during

natural calamities like intense rain and the mitigation measures considering the inundation of the cluster and evacuation plan.

6. The Cluster Management Committee shall form Environmental Policy to practice sustainable mining in a scientific and systematic manner in accordance with the law. The role played by the committee in implementing the environmental policy devised shall be given in detail.

7. The committee shall furnish action plan regarding the restoration strategy with respect to the individual quarry falling under the cluster in a holistic manner.

8. The committee shall furnish the Emergency Management plan within the cluster.

9. The committee shall deliberate on the health of the workers/staff involved in the mining as well as the health of the public.

10. The committee shall furnish an action plan to achieve sustainable development goals with reference to water, sanitation & safety.

11. The committee shall furnish the fire safety and evacuation plan in the case of fire accidents.

#### Impact study of mining

12. Detailed study shall be carried out in regard to impact of mining around the proposed mine lease area covering the entire mine lease period as per precise area communication order issued from reputed research institutions on the following

a) Soil health & soil biological, physical land chemical features .

b) Climate change leading to Droughts, Floods etc.

c) Pollution leading to release of Greenhouse gases (GHG), rise in Temperature, & Livelihood of the local people.

d) Possibilities of water contamination and impact on aquatic ecosystem health.

e) Agriculture, Forestry & Traditional practices.

f) Hydrothermal/Geothermal effect due to destruction in the Environment.

g) Bio-geochemical processes and its foot prints including environmental stress.

h) Sediment geochemistry in the surface streams.

#### Agriculture & Agro-Biodiversity

13. Impact on surrounding agricultural fields around the proposed mining Area.

14. Impact on soil flora & vegetation around the project site.

15. Details of type of vegetations including no. of trees & shrubs within the proposed mining area and. If so, transplantation of such vegetations all along the boundary of the proposed mining area shall committed mentioned in EMP.

16. The Environmental Impact Assessment should study the biodiversity, the natural ecosystem, the soil micro flora, fauna and soil seed banks and suggest measures to maintain the natural Ecosystem.

17. Action should specifically suggest for sustainable management of the area and restoration of ecosystem for flow of goods and services.

18. The project proponent shall study and furnish the impact of project on plantations in adjoining patta lands, Horticulture, Agriculture and livestock.

#### Forests

19. The project proponent shall detailed study on impact of mining on Reserve forests free ranging wildlife.

20. The Environmental Impact Assessment should study impact on forest, vegetation, endemic, vulnerable and endangered indigenous flora and fauna.

21. The Environmental Impact Assessment should study impact on standing trees and the existing trees should be numbered and action suggested for protection.

22. The Environmental Impact Assessment should study impact on protected areas, Reserve Forests, National Parks, Corridors and Wildlife pathways, near project site.

#### Water Environment

23. Hydro-geological study considering the contour map of the water table detailing the number of ground water pumping & open wells, and surface water bodies such as rivers, tanks, canals, ponds etc. within 1 km (radius) so as to assess the impacts on the nearby waterbodies due to mining activity. Based on actual monitored data, it may clearly be shown whether working will intersect groundwater. Necessary data and documentation in this regard may be provided, covering the entire mine lease period.

24. Erosion Control measures.

25. Detailed study shall be carried out in regard to impact of mining around the proposed mine lease area on the nearby Villages, Water-bodies/ Rivers, & any ecological fragile areas.

26. The project proponent shall study impact on fish habitats and the food WEB/ food chain in the water body and

Reservoir.

27. The project proponent shall study and furnish the details on potential fragmentation impact on natural environment, by the activities.

28. The project proponent shall study and furnish the impact on aquatic plants and animals in water bodies and possible scars on the landscape, damages to nearby caves, heritage site, and archaeological sites possible land form changes visual and aesthetic impacts.

29. The Terms of Reference should specifically study impact on soil health, soil erosion, the soil physical, chemical components and microbial components.

30. The Environmental Impact Assessment should study on wetlands, water bodies, rivers streams, lakes and farmer sites. **Energy** 

31. The measures taken to control Noise, Air, Water, Dust Control and steps adopted to efficiently utilise the Energy shall be furnished.

#### **Climate Change**

32. The Environmental Impact Assessment shall study in detail the carbon emission and also suggest the measures to mitigate carbon emission including development of carbon sinks and temperature reduction including control of other emission and climate mitigation activities.

33. The Environmental Impact Assessment should study impact on climate change, temperature rise, pollution and above soil & below soil carbon stock.

#### Mine Closure Plan

34. Detailed Mine Closure Plan covering the entire mine lease period as per precise area communication order issued. **EMP** 

35. Detailed Environment Management Plan along with adaptation, mitigation & remedial strategies covering the entire mine lease period as per precise area communication order issued.

36. The Environmental Impact Assessment should hold detailed study on EMP with budget for Green belt development and mine closure plan including disaster management plan.

#### **Risk Assessment**

37. To furnish risk assessment and management plan including anticipated vulnerabilities during operational and post operational phases of Mining.

Disaster Management Plan

38. To furnish disaster management plan and disaster mitigation measures in regard to all aspects to avoid/reduce vulnerability to hazards & to cope with disaster/untoward accidents in & around the proposed mine lease area due to the proposed method of mining activity & its related activities covering the entire mine lease period as per precise area communication order issued.

#### Others

39. The project proponent shall furnish VAO certificate with reference to 300m radius regard to approved habitations, schools, Archaeological sites, Structures, railway lines, roads, water bodies such as streams, odai, vaari, canal, channel, river, lake pond, tank etc.

40. As per the MoEF& CC office memorandum F.No.22-65/2017-IA.III dated: 30.09.2020 and 20.10.2020 the proponent shall address the concerns raised during the public consultation and all the activities proposed shall be part of the Environment Management Plan.

41. The project proponent shall study and furnish the possible pollution due to plastic and microplastic on the environment. The ecological risks and impacts of plastic & microplastics on aquatic environment and fresh water systems due to activities, contemplated during mining may be investigated and reported.

Kind attention is invited to the references cited above.

2. M/s. A.M.Quality Stone has been preferred an application for quarrying Rough stone over an extent of 4.74.90 Hects of patta land in S.F.No. 87/1B1B & 87/1B2B in Kothapetta Village, Krishnagiri Taluk, Krishnagiri District for a period of 10 year under the provisions of Rule 19 (1) of Tamil Nadu Minor Mineral Concession Rules, 1959. In this regard, the precise area communication has been issued to the applicant for the grant of lease for a period of 05 years only vide letter dated: 12.10.2023 with a direction to submit approved mining plan and Environment Clearance.

HISCOLE

3. Accordingly, M/s. A.M.Quality Stone had submitted 03 copies of draft Mining Plan vide letter dated: 02.11.2023 and the same has been examined in details and approved by Deputy Director of Geology and Mining, Krishnagiri vide Letter.No.1314/2023/ Mines dated: 10.11.2023

4) In this connection, M/s. A.M.Quality Stone has requested vide letter dated: 18.11.2023 to issue the details of other quarries situated within 500 mts radial distance from the subject quarry is furnished as follows.

| SI.<br>No | Name of the Lessee                                                                                               | Village                                        | SF.No                               | Extent<br>in Heet | GO.No./Proceedin<br>g No. & Date           | Lease Period                                                    |

2. M/s. A.M.Quality Stone has been preferred an application for quarrying Rough stone over an extent of 4.74.90 Hects of patta land in S.F.No. 87/1B1B & 87/1B2B in Kothapetta Village, Krishnagiri Taluk, Krishnagiri District for a period of 10 year under the provisions of Rule 19 (1) of Tamil Nadu Minor Mineral Concession Rules, 1959. In this regard, the precise area communication has been issued to the applicant for the grant of lease for a period of 05 years only vide letter dated: 12.10.2023 with a direction to submit approved mining plan and Environment Clearance.

 Accordingly, M/s. A.M.Quality Stone had submitted 03 copies of draft Mining Plan vide letter dated: 02.11.2023 and the same has been examined in details and it is found correct.

Historyton

 As per the Mining Plan the year wise production for the proposed first five years are as follows.

| ACAL                 | Reserves (m <sup>3</sup> )<br>@ 100%                                     | in (m <sup>3</sup> )                                                                                                                                                                  |

5. Hence, the power delegated under Rule 41 of TNMMCR, 1959 and as per the guidelines/instructions issued by the Commissioner of Geology and Mining, vide letter Rc.No.3868/LC/2012 dated:19.11.2012, the said mining plan submitted by M/s. A.M.Quality Stone is hereby approved subject to the following conditions.

i) That the mining plan is approved without prejudice to any other law applicable to the quarry lease from time to time whether such laws are made by the Central Government, State Government or any other authority.

ii) This approval of the mining plan does not in any way imply the approval of the Government in terms of any other provisions of Mines and Minerals Development and Regulation) Act 1957, or any other connected laws including Forest (Conservation) Act 1957, or any other connected Laws industry Forest (Conservation) Act 1980, Forest Conservation Rules 1981 Environment protection Act 1980, Indian Explosive Act 1884 (Central Act IV of 1884) and the rules made there under, Minor Mineral Conservation and Development Rules, and The Tamil Nadu Minor Mineral Concession rules, 1959.

iii) That the mining plan is approved without prejudice to any other order or directions from any court of competent jurisdiction.

HISCOSTAN

w) All the conditions mentioned in the precise area letter should be followed during quarry operation as per rules.

 v) The applicant should get prior Environmental dearance from the appropriate authority and should submit it to the District Collector, Krishnagiri.

vi) Every Mining Plan duly approved under rule 4100 of TNMMCR, 1959 shall be valid for a period of five years.

# MINING PLAN FOR MINOR MINERALS ROUGH STONE QUARRY TOTAL LEASE GRANTED PERIOD 5 YEARS PERIOD OF MINING 5 YEARS

Buindant Agrand

1 0 NOV 2023

Say Spensel

an assi

Over an extent of 4.74.9Hectares of Patta Land in S.F.Nos.87/1B1B & 87/1B2B of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu State. (Prepared Under Rules 41 & 42 as amended in Tamil Nadu Minor Mineral Concession Rules, 1959)

#### 1.0 INTRODUCTION :

- M/s. A.M. Quality Stone, having its registered office at S.F.Nos.87/1B1 & 87/1B2, Akkalapuram, Kothapetta Village, Krishnagiri Taluk & District -635 001, has obtained quarry lease for Rough Stone over an extent of 4.74.90Hectares of Patta Land in S.F.Nos.87/1B1B & 87/1B2B of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu State for a period of Five Years.
- 2. The Deputy Director, Krishnagiri in his letter Rc. No. 1314/2023/Minerals dated: 12.10.2023 directed the applicant to produce approved Mining Plan and Environmental Clearance certificate from the State Environment Impact Assessment Authority (SEIAA) for the grant of quarry lease for the applied area.
- 3. Accordingly, Mining Plan is prepared under Rules 41 & 42 as amended in Tamil Nadu Minor Mineral Concession Rules, 1959 by incorporating the conditions imposed in the precise area communication letter and by incorporating all the details proposed in the letter to obtain environmental clearance from State Environment Impact Assessment Authority.
- 4. In the above circumstances, the mining plan has been prepared for the Applicant M/s. A.M. Quality Stone, for approval and subsequent submission of Form-I and Pre-Feasibility report to obtain environmental clearance from the SEIAA of Tamil Nadu.
- This Mining Plan is prepared for the Rough Stone Quarry for the period of Five Years by considering the TNMMCR 1959, and as per the EIA Notification 2006 and subsequent amendments and judgments.
- 6. The Geological Reserves is estimated as 811453M<sup>3</sup> and Mineable & recoverable Reserves is estimated as 481920M<sup>3</sup> of Rough Stone after leaving necessary safety distance from the lease boundary as indicated while granting the quarry lease Proceedings and relevant mining laws in force.

S. DHANASEKAR, M.Sc., (Geo) Qualified Person

- 7. The proposed production scheduled for the Five years is estimated as 481920M3 of Rough Stone Proposed average annual production of Rough stone 96384M3 யைக்குநர் அவ (P. 80)
- 8. Estimated Life of the Quarry
  - Total Mineable ROM Recoverable Reserves @ 100% Average production per year Estimated Life of the Quarry
- = 481920 M<sup>3</sup> = 481920 M<sup>3</sup> = 96384 M3

in and all and = 481920 / 96384 = 5.0 years

3

D NOV 2023

9

#### Life = 5.0 years

The Life of mine may change depend upon the prospecting results, rate of production and the extent of mechanization done by the applicant in near future.

- 9. Environmental parameters,
  - There is no interstate boundary around 10Kms radius. i)
  - There is no wild life animal sanctuary within 10Kms radius form the project site area under the Wildlife (Protection) Act, 1972. Therefore the project seeks clearance only from State Environment Impact Assessment Authority (SEIAA), under B2 Category.

10. Environmental measures already adopted are,

- Dust Control at source while drilling and blasting, i)
- ii) Dust suppression at loading point and transport haul roads,
- iii) Noise Control in blasting, control of fly rock missiles and vibration by doing peak particle velocity with in standard as prescribed by the DGMS and MoEF.
- iv) Unnecessary land degradation should be avoided or damaged land should be reclaimed or rehabilitated.
- v) Uneven rat hole mining is avoided and follow scientific and systematic mining by safe bench system of open cast mining.
- vi) Mining near major fracture zones already avoided to control ground water fluctuation in the adjacent agricultural lands.
- vii) Emission test of vehicles should be in stack maintain minimum emission level of flue gases.
- viii) Noise level should not exceed 80db and the vehicles use only permitted Air Horn while on road near residential areas.

- ix) Safety zones as prescribed by the Department of Geology and Mining from adjacent infrastructures should be strictly adhering to.
- x) And any other conditions as stipulated by the concerned authorities will be followed to protect the environment. 1 D NOV 2023

The Mineable reserves are calculated by deducting 7.5m safety distance for Patta land and Bench Loss.

#### **Top Soil :**

The Thickness of Topsoil in this area is 1.0m and the total volume of Topsoil will be 8706m<sup>3</sup>.

#### **Rough Stone :**

The mineable reserves and the Recoverable Reserves are 481920m<sup>3</sup> respectively, at the rate of 100% recovery upto the permissible depth. The Mineable reserve of Rough stone and Topsoil is calculated upto a Total Depth-45m (1m Topsoil + 45m Rough Stone).

#### Year wise reserves calculations :

#### Rough stone & Topsoil production details as follows:

The proposed rate of production of **Rough Stone** is estimated as **481920m<sup>3</sup> & Top Soil** is about **8706m<sup>3</sup>** for five years. The average proposed rate of production of **Rough Stone** is about **96384m<sup>3</sup>** per year at the rate of 100% recovery upto the permissible depth. Reserves depth is Calculated upto **45m** (**1m** Topsoil + **44m** Rough Stone).

| 73  | Measures proposed<br>to minimize ground<br>vibration due to<br>blasting           | <ul> <li>The following steps are being adopted to control ground vibration due to blasting.</li> <li>1. The minimum recommended delay fine of bms was introduced to minimize ground constructive interference of blast vibration waves and hence its impact or amplitude is less.</li> <li>2. Use of Ammonium nitrate fuel oil mixture for shot holes is avoided because which cause high fly of rocks in view critical diameter problem. Only high strength explosives like slurry are used in the form of cartridge.</li> <li>3. Charge per hole will exceed the powder factor designed for each hole based on the quantum of blasting, strength of rocks, fracture pattern etc.</li> </ul> |

| 8.1 | Depth of Water<br>table                                                                      | The ground water table is reported as 67m below ground level<br>in nearby open wells and bore wells of this area. Mining<br>reserves calculated taken as 45m. Now, proposed quarry depth<br>is above the water table. Hence, quarrying may not affect the<br>ground water.                                                                                                             |
|-----|----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8.2 | Arrangement and<br>Places where the<br>mine water is<br>finally proposed to<br>be discharged | The ground water may not rise immediately in this type of mining. However, the rain water percolation and collection of water from the seepage shall be less than 300 lpm and it shall be pumped about periodically by a stand by diesel powered Centrifugal pump motivated with 7.5 H.P. Motor. The quality of water is potable and it is not contaminated with any hazardous things. |

# 9. மற்றும் உரிய ஆவணங்கள்

பார்வைகளின் மீது கனிவான கவனம் வேண்டப்படுகிறது.

2. கிருஷ்ணகிரி மாவட்டம் மற்றும் வட்டம், கொத்தபெட்டா கிராமம், பட்டா புல எண்கள்: 87/1பி1பி மற்றும் 87/1பி2பி (பகுதி)-ல் 4.74.90 ஹெக்டேர் பரப்பில் சாதாரண வகை கற்குவாரி செய்ய உரிமம் வழங்க கோரி தி/ள்.ஏ எம் குவாலிட்டி ஸ்டோன் என்ற நிறுவனத்தினர் விண்ணப்பத்தினை உரிய ஆவணங்களுடன் சமர்ப்பித்துள்ளனர்.

3. மேற்கண்ட விண்ணப்பம் தொடர்பாக வட்டாட்சியர், கிருஷ்ணகிரி, வருவாய் கோட்டாட்சியர், கிருஷ்ணகிரி, வன உயிரினக்காப்பாளர், ஒசூர், உதவி புலியியலாளர் (கனிமம்) மற்றும் சார் ஆய்வாளர் நில அளவர் (கனிமம்) கிருஷ்ணகிரி ஆகியோர் புலத்தணிக்கை மேற்கொண்டு கிருஷ்ணகிரி வட்டம், கொத்தபெட்டா கிராமம், பட்டா புல எண்கள்: 87/1பி1பி மற்றும் 87/1பி2பி-ல் 4.74.90 ஹெக்டேர் பரப்பளவில் விண்ணப்பதாரர் தி/ள்.ஏ எம் குவாலிட்டி ஸ்டோன் என்ற நிறுவனத்திற்கு மேற்கண்ட நிபந்தனைகளுக்குட்பட்டு அனுமதி வழங்கலாம் என பரிந்துரை செய்துள்ளனர்.

# நிபந்தனைகள்:

a.

8

c.

- 1959ம் வருடத்திய தமிழ்நாடு சிறு கனிய சலுகை விதிகள், அட்டவணை IIல் கண்டுள்ளபடி குவாரி செய்யப்படும் கனிமங்களுக்குரிய சீனியரேஜ் தொகை அவ்வப்போது செலுத்தி கனிமம் கொண்டு செல்லப்பட வேண்டும். அருகிலுள்ள பட்டா நிலங்களுக்கு 7.5 மீ பாதுகாப்பு இடைவெளி விட்டு குவாரிப்பணி மேற்கொள்ள வேண்டும்.
  - அனுபவம் வாய்ந்த வெடிபொருள் பயன்படுத்துவோர் மூலம் குறைந்த அளவு சக்தி கொண்ட வெடிபொருட்களை பயன்படுத்தி அருகிலுள்ள பட்டாதாரர்களுக்கு எவ்வித இடையூறுமின்றி / அருகிலுள்ள பட்டா மற்றும் அரசு புலங்களில் எவ்வித ஆக்கிரமிப்பும் இன்றி குவாரிப்பணி மேற்கொள்ள வேண்டும்.

விதிகளின்படி ஏற்பளிக்கப்பட்ட சுரங்கத்திட்டத்தினை உரிய காலத்திற்குள் சயர்பிக்க வேண்டும். குவாரி உரிமம் வழங்க உள்ள பகுதிக்கு சுற்றுச்சூழல் தாக்க மதிப்பீட்டு ஆணையத்தின் தடையின்மை சான்று பெற்று சமர்பிக்கும் பட்சத்தில் மட்டுமே குவாரி உரிமம் வழங்கப்படும்..

எனவே, 4 வட்டாட்சியர், கிருஷ்ணகிரி, வருவாய் கோட்டாட்சியர். கிருஷ்ணகிரி, வன உயிரினக்காப்பாளர், ஒதூர், உதவி புவியியலாளர் (கனிமம்), மற்றும் சார் ஆய்வாளர் நில அளவர் (கனிமம்) கிருஷ்ணகிரி ஆகியோரின் பரிந்துரை மற்றும் நிபந்தனைகளின் அடிப்படையில், கிருஷ்ணகிரி மாவட்டம் மற்றும் வட்டம், கொத்தபேட்டா கிராம பட்டா 87/1பி1பி மற்றும் 87/1பி2பி-ல் 4.74.90 ஹெக்டோ் பரப்பளவில் மட்டும் 1959-ம் வருட தமிழ்நாடு சிறுகனிம விதிகள், விதி எண். 19(1)-ன்படி மேற்கண்ட நிபந்தனைகளுக்குட்பட்டு உரிமம் ஏற்கனவே வழங்கப்பட்ட பகுதி என்பதால் 05 (ஐந்து) வருட காலத்திற்கு மட்டுமே சாதாரண கற்குவாரி உரிமம் வழங்குவதற்குரிய தகுதியான நிலப்பரப்பாக கருதப்படுகிறது.

5. மேலும், தமிழ்நாடு சிறு கனிம சலுகை விதிகள்-1959 விதி எண். 41-ன்படி குவாரிப்பணி மேற்கொள்வது தொடர்பாக வரைவு சுரங்க திட்டத்தினை 90 தினங்களுக்குள் சமர்ப்பிக்குமாறு மனுதாரரைக் கேட்டுக்கொள்ளப்படுகிறது. மேலும் ஏற்பளிக்கப்பட்ட சுரங்கத்திட்டத்தின் தொடர்ச்சியாக 1959ம் வருடத்திய தமிழ்நாடு சிறுகனிம சலுகை விதிகள், விதி எண்.42-ன்படி சுற்றுச்சூழல் தாக்க மதிப்பீட்டு ஆணையத்தின் தடையின்மை சான்று பெற்று சமர்பிக்கும் பட்சத்தில் மட்டுமே குவாரி உரிமம் வழங்கப்படும் என இதன் மூலம் தெரிவிக்கப்படுகிறது.

துணை இயக்குநர், புவியியல் மற்றும் சுரங்கத்துறை,

கிருஷ்ணகிரி.

## CONSENT ORDER NO. 2008132730454 DATED: 20/06/2020.

PROCEEDINGS NO.F.0770HSR/RS/DEE/TNPCB/HSR/W/2020 DATED: 20/06/2020

SUB: Tamil Nadu Pollution Control Board - RENEWAL OF CONSENT - M/s. QAMRUNNISA ROUGH STONE QUARRY, S.F.No. 87/1B1 (Part), 87/1B2 (Part), KOTTAPETA village, Krishnagiri Taluk and Krishnagiri District - Renewal of Consent for the operation of the plant and discharge of sewage and/or trade effluent under Section 25 of the Water (Prevention and Control of Pollution) Act, 1974 as amended in 1988 (Central Act 6 of 1974) - Issued- Reg.

REF: 1. CTO's Proc.No. F.0770 HSR/RS/DEE/TNPCB/HSR/W&A/2016, Dated:13.05.2016.

2. Proc. No.F.0770 HSR/RS/DEE/TNPCB/HSR/W&A/2019, Dated: 12.04.2019.

3. Unit's OCMMS application No.32730454 for RCO, Dated: 27.05.2020.

4, IR.No: F.0770 HSR/RS/AE/HSR/2020, Dated: 08.06.2020.

RENEWAL OF CONSENT is hereby granted under Section 25 of the Water (Prevention and Control of Pollution) Act, 1974 as amended in 1988 (Central Act, 6 of 1974) (hereinafter referred to as "The Act") and the rules and orders made there under to

The Proprietrix M/s.QAMRUNNISA ROUGH STONE QUARRY, S.F.No. 87/1B1 (Part), 87/1B2 (Part), KOTTAPETA village, K @ ugiri Taluk, Krishnagiri District.

Authorising the occupier to make discharge of sewage and /or trade effluent.

This is subject to the provisions of the Act, the rules and the orders made there under and the terms and conditions incorporated under the Special and General conditions stipulated in the Consent Order issued earlier and subject to the special conditions annexed.

This RENEWAL OF CONSENT is valid for the period ending January 04, 2021

District Environmental Engineer, Tamil Nadu Pollution Control Board, HOSUR

## SPECIAL CONDITIONS

 This renewal of consent is valid for operating the facility for the manufacture of products/byproducts (Col. 2) at the rate (Col 3) mentioned below. Any change in the product/byproduct and its quantity has to be brought to the notice of the Board and fresh consent has to be obtained.

596 A

#### Additional Conditions:

 The unit shall comply all the conditions prescribed in the Environmental Clearance issued by the SEIAA, TN, Chennai vide Letter No. SEIAA-TN/F.No.3215/EC/1(a)/2645/2015, Dated: 05.01.2016 valid for 5 years.

The unit shall comply all the conditions imposed in the Mining Lease Agreement made with the District Administration without any deviations.

 The unit shall treat and dispose the sewage generated from the unit through Septic Tank and Soak Pit arrangement as reported.

4. The unit shall ensure that no trade effluent is generated at any stage of its manufacturing process.

5. The unit's operation/ activity for the mining shall not disturb the nearby agricultural land if any at any circumstances.

6. The unit shall take necessary precautionary measures to prevent any adverse impact on the nearby habitation.

7. The consent issued is subject to the final outcome of National Green Tribunal (South Zone) in application No. 165/2013.

8. In case of revision of consent fee by the Government, the unit shall remit the difference in amount within one month from the date of notification, failing which this order will be withdrawn without any notice and further action will be initiated against the unit as per law.

#### CONSENT ORDER NO. 2008232730454 DATED: 20/06/2020.

## PROCEEDINGS NO.F.0770HSR/RS/DEE/TNPCB/HSR/A/2020 DATED: 20/06/2020

SUB: Tamil Nadu Pollution Control Board - RENEWAL OF CONSENT -M/s. QAMRUNNISA ROUGH STONE QUARRY , S.F.No. 87/1B1 (Part), 87/1B2 (Part), KOTTAPETA village, Krishnagiri Taluk and Krishnagiri District - Renewal of Consent for the operation of the plant and discharge of emissions under Section 21 of the Air (Prevention and Control of Pollution) Act, 1981 as amended in 1987 (Central Act 14 of 1981) -Issued- Reg.

REF: 1. CTO's Proc.No. F.0770 HSR/RS/DEE/TNPCB/HSR/W&A/2016, Dated:13.05.2016.

Proc. No.F.0770 HSR/RS/DEE/TNPCB/HSR/W&A/2019, Dated: 12.04.2019.

3. Unit's OCMMS application No.32730454 for RCO, Dated: 27.05.2020.

4. IR.No: F.0770 HSR/RS/AE/HSR/2020, Dated: 08.06.2020.

RENEWAL OF CONSENT is hereby granted under Section 21 of the Air (Prevention and Control of Pollution) Act, 1981 as amended in 1987 (Central Act 14 of 1981) (hereinafter referred to as "The Act") and the rules and orders made there under to

The Proprietrix M/s.QAMRUNNISA ROUGH STONE QUARRY, S.F.No. 87/1B1 (Part), 87/1B2 (Part), KOTTAPETA village, Kronagiri Taluk, Krishnagiri District.

Authorizing the occupier to operate the industrial plant in the Air Pollution Control Area as notified by the Government and to make discharge of emission from the stacks/chimneys.

This is subject to the provisions of the Act, the rules and the orders made there under and the terms and conditions incorporated under the Special and General conditions stipulated in the Consent Order issued earlier and subject to the special conditions annexed.

This RENEWAL OF CONSENT is valid for the period ending January 04, 2021

District Environmental Engineer, Tamil Nadu Pollution Control Board, HOSUR

#### SPECIAL CONDITIONS

 This renewal of consent is valid for operating the facility for the manufacture of products (Col. 2) at the rate (Col. 3) mentioned below. Any change in the products and its quantity has to be brought to the notice of the Board and fresh consent has to be obtained.

| SL.<br>No. | Description                                                                                                                        | Quantity | Unit                        |

| n            | Fugitive/Noise emission :             |                                   |                                           |                                |  |  |  |  |  |
| SL<br>No.    | Fugitive or Noise Emission<br>sources | Type of emission                  | Control<br>measures                       |                                |  |  |  |  |  |
| 1.           | Vehicle Movement                      | Fugitive                          | Water<br>sprinkler<br>system              |                                |  |  |  |  |  |
| 2.           | Mining Area                           | Fugitive                          | Water<br>sprinkler<br>system              |                                |  |  |  |  |  |

## Special Additional Conditions:

The unit shall install retrofit emission control device, with atleast 70% Particulate matter reduction efficiency on all DG sets with rated capacity more than 125 KVA installed within the industrial premises before 30.06.2020 or otherwise the unit should be shifting to gas based generators by employing new gas based generators. The retrofit emission control device should be tested from one of the five laboratories recognised by CPCH.

#### Additional Conditions:

27

 The unit shall comply all the conditions prescribed in the Environmental Clearance issued by the SEIAA, TN, Chennai vide Letter No. SEIAA, TN/F.No.3215/EC/1(a)/2645/2015, Dated: 05.01.2016 valid for 5 years.

2. The unit shall comply all the conditions imposed in the Mining Lease Agreement made with the District Administration without any deviations.

The unit shall operate and maintain the APC measures in the form of portable water sprinklers effectively and continuously so as to satisfy the NAAQ / Emission standards prescribed by the Board.

4. The unit shall adhere to the ANL standards as prescribed by the Hoard.

5. The unit shall continue to develop more green belt around the unit's premises.

6. The unit's operation/ activity for the mining shall not disturb the nearby agricultural land if any at any circumstances.

7. The unit shall take necessary precautionary measures to prevent any adverse impact on the nearby habitation.

 The consent issued is subject to the final outcome of National Green Tribunal (South Zone) in application No. 165/2013.

9. The unit shall not use 'Use and throwaway plastics' such as plastic sheets used for food wrapping, spreading on dining table etc, plastic plates, plastic coated tea cups, plastic tumbler, water pouches and packets, plastic straw, plastic carry bag and plastics flags irrespective of thickness, within the industry premises. Instead unit shall encourage use of eco friendly alternative such as banana leaf, areca nut palm plate, stainless steel, glass, porcelain plates/cups, cloth bag, jute bag etc.,

10. In case of revision of consent fee by the Government, the unit shall remit the difference in amount within one month from the date of notification, failing which this order will be withdrawn without any notice and further action will be initiated against the unit as per law.

# HYDRO - GEOLOGICAL STUDIES AT M/S A.M QUALITY STONE KOTHAPETTA VILLAGE, KRISHNAGIRI TALUK, KRISHNAGIRI DISTRICT, TAMIL NADU.

#### **1. INTRODUCTION**

Proprietor of M/s A.M. Quality Stone Over an extent of 4.74.90 hectares of Patta land in S.F. Nos. 87/1B1B & 87/1B2B of Kothapetta village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu state on the hydrological regime of thearea, the above area has been studied & investigated for finding out Ground water level and aquifer thickness and water quality in and around mine lease area. The electrical resistivity method, TEM study in Rough stone and gravel quarry and genesis rock with determine the shallow and deeper freshwater aquifer in the proposed mining area in M/s. A. M. Quality Stone Kothapetta Village.

## 1.1. Scope of Study

In the present study, the main aim of the shallow and deeper aquifer investigation through electrical resistivity VES, Method is used to measure the apparent resistivity of the Study area. The present study is estimating the ground water level in Kothapetta village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu village proposed leasehold area and their surrounding area. The study area is mostly covered by Water level, type of sand, type of rock and their basement rock characters. The main aim of the study is to determine the water table and flow movement of this Lease and surrounding area (**Fig.1**).

HERCOLIN

## **1.2.** Profiles in the Study Area.

| Name of the Lessee | : M/S. A.M. Quality Stone |
|--------------------|---------------------------|
| Survey No          | : 87/1B1B & 87/1B2B       |
| Extent             | : 4.74.90 hectares.       |
| Village            | : Kothapetta village,     |
| Taluka             | : Krishnagiri Taluk,      |
| District           | : Krishnagiri             |
| State              | : Tamil Nadu              |

## 2. STUDY AREA DESCRIPTION

Figure. 1. Shows proposed mine lease area

The lease applied area is located in **Topo sheet No. 57 - L/2** at Latitude and Longitude between **12° 33' 05.33'' N to 12° 32' 58.37'' N** and **78° 12' 53.41'' E to 78° 12' 52.97'' E** in northern side at a distance of 4km of Akkalapuram town, along Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu.

87

## 2.1 Topography of the Lease Area and Its Surrounding Environments:

The area is situated almost an elevated terrain sloping towards west covered with Rough Stone which does not sustain any type of vegetation. The altitude of the area is 565m above MSL. No major river is found nearby the lease area. Water table is noticed at a depth of 67m from below the surface in the adjacent open well and bore well. Temperature of the area is reported to be 18 °c to a maximum of 38°c during summer. Rainfall of this area is about 800mm to 900 mm during the monsoons in a year.

Figure 2. Topography and Outcrop in the lease area

## **3** REGIONAL GEOLOGY OF KRISHNAGIRI DISTRICT

The geological formations of the district belong mainly to Archaean age along with rock of Proterozoic age. The former is represented by Khondalite Group of rocks, Charnockite Group of rocks, Migmatites Complex, Sathyamangalam Group of rocks, while the latter is represented by alkaline rocks. The Khondalite Group includes garnet sillimanite gneiss and quartzite which occur as small patches. The migmatite complex includes garnetiferous quartzo-feldspathic gneiss and hornblends biotite gneiss, the former exposed on the western part of the district. The Sathyamangalam Group includes fuchsite quartzite, sillimanite mica schist and amphibolites. The Bhavani Group in this area includes fissile hornblende-biotite gneiss, granitoid gneiss and pink migmatite. Amphibolites with barbed ferruginous quartzite and associated quartzo-feldspathic rocks (Champion Gneiss) represent the Kolar group and are found west and southwest of Veppanapalli. Following this there are basic intrusions occurring as dykes.

The Charnockite Group occupies a major part of the south-west portion of this district with small bands of garnetiferous quartzo-feldspathic gneiss, Granite gneiss and dolerite dykes. The North-East

and Northern part of the District mainly consist of granite gneiss with small patches of Pink Migmatite, hornblende-biotite gneiss and dolerite dykes. The Eastern part of the district consists of Epidote-Hornblende Gneiss, Ultra Mafics, Syenite and Carbonatite.

The Alkaline Complex is represented by epidote-hornblende gneiss, ultra mafics, syenite and carbonatite and these are distributed in the eastern part of the district. Innumerable basic dykes and felsites, quartz, barites and pegmatite veins form part of the Alkali Complex.

Krishnagiri District is comprised of Archaean peninsular gneisses such as Charnockites, Hornblende gneisses, Biotite gneisses and migmatites, dolerites and are intruded by younger formations like pegmatite and quartz veins. The peninsular gneisses/ migmatite consists of biotite mica, plagioclase and orthoclase feldspar and quartz and are found as sheet rocks running to several kms from NNE-SSW as a massive rock formations with almost vertical dip.

The order of superposition of geological sequence are given as under, Description:

| Age                    | Formation                   |
|------------------------|-----------------------------|

## Stratigraphy Sequences of Krishnagiri District

## 4. HYDROGEOLOGY

## 4.1 Major Geological formations:

Krishnagiri District is underlain by crystalline metamorphic complex in the western parts of district and sedimentary tract in eastern side. An area of 4551 Sq.km is covered by crystalline rocks (63%) and 2671 Sq.km is covered by sediments (37%). The general geological sequence of formation is given below:

HISCOLIN

| Quaternary | - Laterites, Sands and Clays                                |
|------------|-------------------------------------------------------------|
| Tertiary   | - Sandstone, Gravels and Clays                              |
| Cretaceous | - Limestone, Calcareous Sandstone and Clay unconformity.    |
| Archaean   | - Charnockites, Gneisses, Granites, Dolerites and Pegmatite |

The major part of the area is covered by metamorphic crystalline rocks of charnockite, granitic gneiss of Archaean age intruded by dolerite dykes and pegmatite veins. These rocks are highly metamorphosed and have been subjected to very severe folding, crushing and faulting.

• Ground Water occurs under the phreatic condition and wherever there are deep seated fractures, it occurs under semi-confined to confined conditions.

• Occurrence of Ground Water in hard rock depends upon the intensity and depth of weathering, fractures and fissures present in the rocks.

- Granites and gneisses yield moderately compared to the yield in Charnockites.
- Depth of well in hard rock generally ranges between 8 and 15m below ground level.

• Generally yield in open wells ranges from 30 to 250m3 /day and in bore well between 260 and 430 m3 /day. The weathered thickness varies from 2.5 m to 42m in general there are 3 to 5 fracture zones within 100 m and 1 to 4 fracture zones between 100 and 200 m.

The **Cretaceous formation** is represented by Arenaceous Lime stone, Calcareous sand - stone and marl.

The **Tertiary formation** is argillaceous comprising of Silty clay stones, argillaceous Lime stone. The **Quaternary deposits** represented by the river deposits of Ponnaiyar and Varahanadhi spread over as patches in Villupuram District. The alluvium consists of unconsolidated sands, gravelly sands, clays and clayey sands. The thickness of the sands ranges between 15 and 25 m in the alluvial formation which also form potential aquifers. In some areas, sand stone of tertiary formation are the potential groundwater reservoirs.

## 4.2 Aquifer Systems:

Occurrence and storage of groundwater depend upon three factors viz., Geology, Topography and rainfall in the form of precipitation. Apart from Geology, wide variation in topographic profile and intensity of rainfall constitutes the prime factors of groundwater recharge. Aquifers are part of the more complex hydro geological system and the behaviour of the entire system cannot be interpreted easily. In hard rock 5 terrain the occurrence of Ground Water is limited to

HERCOLAN

top weathered, fissured and fractured zone which extends to maximum 30 m on an average it is about 10-15 m in Krishnagiri District.

In Sedimentary formations, the presence of primary inter granular porosity enhances the transmitting capacity of groundwater where the yield will be appreciable. The sedimentary area which occupies the eastern part of the District along the coastal tract is more favourable for groundwater recharge. Ground Water occurs both in semi confined and confined conditions. A brief description of occurrence of groundwater in each formation is furnished below.

#### **4.2.1 Alluvial Formations**

In the river alluvium groundwater occurs under water table condition. The maximum thickness is 37 m and the average thickness of the aquifer is approximately 12 m. These formations are porous and permeable which have good water bearing zones.

#### 4.2.2 Tertiary Cuddalore sandstone

Tertiary formations are represented by Cuddalore Sandstone and characterised as fluvial to brackish marine deposits. Predominantly this formation is divided into Lower and Upper Cuddalore formations. In the Upper Cuddalore formations the groundwater occurs in semi confined conditions, whereas in the Lower Cuddalore the groundwater occurs in confined condition with good groundwater potential.

## 4.2.3 Cretaceous Formations

Groundwater occurring in the lens shape in the sandy clay lenses and fine sand is underlain by white and black clay beds which constitute phreatic aquifer depth which ranges 10m to 15m below ground level. Phreatic aquifer in Limestone is potential due to the presence of Oolitic Limestone.

## **4.2.4 Hard Rock Formations**

Groundwater occurs under water table conditions but the intensity of weathering, joint, fracture and its development is much less in other type of rocks when compared to gneissic formation. The groundwater potential is low, when compared with the gneissic formations.

## • Granitic Gneiss

Groundwater occurs under water table conditions in weathered, jointed and fractural formations. The pore space developed in the weathered mantle acts as shallow granular aquifers and forms the potential water bearing and yielding zones water table is shallow in canal and tank irrigation regions and it is somewhat deeper in other regions.

## • Charnockite

Groundwater occurs under water table conditions but the intensity of weathering, joint, fracture and its development is much less when compared to gneissic formations. The groundwater potential is low, when compared with the gneissic formations.

## 5. METHODOLOGY OF STUDY

- 1. Open well and bore well water level measurement, depth of water level diameter of open well, agriculture land survey.
- 2. Geophysical survey for deep aquifer in nearby site Rock and soil geology also collected for the aquifer characteristic study
- 3. Aquifer thickness and quality measurement study in nearby proposed mine site areas of the study area

## 5.1 Geophysical Investigation

## 5.1.1 Vertical Electrical resistivity sounding for aquifer study.

The electrical resistivity study is used to determine aquifer and occurred rock in the proposed site. The DDR 3 equipment was used for data collection (Fig.3)

Figure 3. Electrical resistivity survey Instruments.

## 5.2.2 Basic Principles

The electrical properties of rocks in the upper part of the earth's crust are dependent upon the lithology, porosity, and the degree of pore space saturation and the salinity of the pore water. Saturated rocks have lower resistivity than unsaturated and dry rocks. The higher the porosity of the saturated rock, or the higher the salinity of the saturating fluids, the lower is the resistivity. The presence of clays and conductive minerals also reduces the resistivity of the rock.

The resistivity of earth materials can be studied by measuring the electrical potential distribution produced at the earth's surface by an electric current that is passed through the earth. Current is moved through the subsurface from one current electrode to the other and the potential difference is recorded as the current passes. From this information, resistivity values of various layers are acquired and layer thickness can be identified.

The apparent resistivity values determined are plotted as a log function versus the log of the spacing between the electrodes. These plotted curves identify thickness of layers. If there are multiple layers (more than 2), the acquired data is compared to a master curve to determine layer thickness.

This method is least influenced by lateral in-homogeneities and capable of providing higher depth of investigation.

The resistance R of a certain material is directly proportional to its length L and crosssectional area A, expressed as:

## R = Rs \* L/A (in Ohm)

Where Rs is known as the specific resistivity (characteristic of the material and independent of its shape or size)

With Ohm's Law,

## R = dV/I (Ohm)

Where dV is the potential difference across the resistor and I is the electric current through the resistor. The specific resistivity may be determined by:

$$Rs = (A/L) * (dV/I) (in Ohm m)$$

## 8. CONCLUSION

- The mine area is an elevated terrain slopping towards west covered with rough stone. Which does not sustain any type of vegetation. The altitude of the area is 565m above MSL.
- The geological study of the given area covered by rough stone in the entire area. The discharge of the groundwater controlled by the massive charnockite rock.
- The study area exhibit vertical dipping formation. So it act as a barrier and restrict the groundwater flow movement.
- Based on the geophysical investigation, Vertical Electrical Sounding (VES) were conducted to determine the subsurface water table and rock types up to depth of 50 m.
- ✤ The subsurface formation up to this depth can be categorized as follows,
  - \* 0m to 2m (Average) Top Soil
  - ✤ 3m to 50m (Average) weathered & Charnockite Formation (Massive Formation)
- In this mine lease area, groundwater occurs at deeper level, depending on the intensity of weathering and its development is much less compared to gneissic formation. The mine area such no major intersections of water table are expected up to 50m.
- The aquifer are found within the weathered / fractured metamorphic terrain. Currently the aquifers are located at 65 to 70 meters below ground level (BGL). However, considering the approved mining plan depth, which is 45 meters below ground level. It will not impact the groundwater table.
- From the above study it can be concluded there will be no adverse effect on the hydrological regime, water drainage, environment, and livelihood. Agricultural activity in the region.

Sir.

Sub: Willingness to do Explosives Blasting Works - Reg.

With respect to the above subject, we would like to introduce myself as the Explosives Blasting Contractors, for which our LICENCE NO: E/SC/TN/22/463(E37227) S.F.No.344/3B, Paiyur Village, Krishnagiri Taluk magazine is situated in No.273-A, Keel Paiyur Village, Kaveripattinam, Krishnagiri, Tamilnadu-635 112.

We were engaged in professional blasting contract works with all facilities and License holders to carry out blasting works in specified time and period covered under Explosives Rules, 2008.

We kindly request yourself to engage us to do Explosives Blasting Works in your proposed Rough stone Quarry situated at S.F.No: 87/1B1B & 87/1B2B (Part) in Kothapetta Village, Krishnagiri Taluk, Krishnagiri District over an extent of 4.74.90 hectares.

# SERVING BEST AT ALL TIMES

AM Quality stone என்ற நிறுவனத்தாரால்– குவாரி உரிமம் கோரியுள்ள புலத்திற்கு அருகிலுள்ள காப்பு காடுகள், வனவிலங்கு சரணாலயம் மற்றும் யானை வலசை பாதைகள் விவரம் கோருதல் – தொடர்பாக..
- பார்வை

: 1. M/s. AM Quality stone, S.F.No.87/1B1, 87/1B2, அக்காலபுரம், கொத்தபேட்டா கிராமம், கிருஷ்ணகிரி நகரம், கிருஷ்ணகிரி வட்டம் (ம) மாவட்டம் என்பவரது மனு நாள்.06.06.2023.

- மாவட்ட ஆட்சியர், கிருஷ்ணகிரி மாவட்டம், ந.க.எண்.1314/2023/கனிமம் நாள்.15.06.2023
- வனச்சரக அலுவலர், கிருஷ்ணகிரி. ந. க. எண். 190/2023 நாள்.07.07.2023.

பார்வை 1ல் கண்ட கடிதத்தில் M/s. AM Quality stone, S.F.No.87/1B1, 87/1B2, அக்காலபுரம், கொத்தபேட்டா கிராமம், கிருஷ்ணகிரி நகரம், கிருஷ்ணகிரி வட்டம் (ம) மாவட்டம் என்ற நிறுவனத்தாரால், கிருஷ்ணகிரி மாவட்டம் (ம) வட்டம், கொத்தபேட்டா கிராமம் பட்டா புல எண்கள். 87/1B1 (பகுதி) மற்றும் 87/1B2 (பகுதி)–ல் 4.75.0 ஹெக்டர் பரப்பளவில் சாதாரண கற்கள் வெட்டியெடுக்க, அனுமதி கோரியுள்ள புலத்திற்கு அருகிலுள்ள காப்புக்காடுகள், காட்டுயிரி வடக்கு வனஉயிரின சரணாலயம், யானைகள் வலசை பாதை ஆகியவற்றின் தொலைவு குறித்த அறிக்கை பார்வை 2ல் காணும் மாவட்ட ஆட்சித்தலைவர், கிருஷ்ணகிரி மாவட்டம் அவர்களால் கோரப்பட்டது.

எனவே, மேற்படி புலத்திற்கு அருகிலுள்ள காப்புக்காடுகள், காட்டுயிரி வடக்கு மற்றும் தெற்கு வனஉயிரின சரணாலயம் அமைந்துள்ள விவரம் பின்வருமாறு தெரிவிக்கப்படுகிறது.

- 1. மேற்படி சாதாரண கற்கள் வெட்டியெடுக்க அனுமதி கோரியுள்ள இடத்தின் GPS அளவுகள் N12.551262, E78.213312 ஆகும்.
- 2. மேற்படி தொலைவு விவரம் கோரியுள்ள புலமானது பெத்ததாளப்பள்ளி காப்புக்காட்டின் எல்லையிலிருந்து 2.70 கி.மீ தொலைவிலும், காவேரி வடக்கு வனஉயிரின சரணாலய எல்லையிலிருந்து (ஊடேதுர்கம் காப்புக்காடு) 26.50 கி.மீ தொலைவிலும் மற்றும் காவேரி வடக்கு வனஉயிரின சரணாலயத்திற்கான சூழல் உணர்திறன் மண்டலத்தின் எல்லையிலிருந்து (Eco-Sensitive Zone)25.50 கி.மீ தொலைவிலும் அமைந்துள்ளது.
- 3. மேலும், மேற்படி தொலைவு விவரம் கோரியுள்ள புலமானது, காவேரி தெற்கு வனஉயிரின சரணாலய எல்லையிலிருந்து (கேசரகுளி காப்புக்காடு– தருமபுரி வனக்கோட்டம்) 40.80 கிமீ தொலைவிலும் அமைந்துள்ளதனால், சரணாலயம் அறிவிக்கை செய்து, Eco-Sensitive Zone எல்லை நிர்ணயம் செய்யப்படாத நிலையில், நடைமுறையிலுள்ள வழிகாட்டுதல்களின்படி சரணாலய எல்லையிலிருந்து 10 கிலோமீட்டர் சுற்றளவிற்கு Eco-Sensitive Zone–ஆக கருத்தில் கொண்டு நடவடிக்கை மேற்கொள்ளப்பட வேண்டும் என்ற அடிப்படையில், இப்புலமானது காவேரி தெற்கு வனஉயிரின சரணாலயத்திற்கான Eco-Sensitive Zone எல்லைக்குள் வருவதில்லை.

மேற்படி, கிருஷ்ணகிரி மாவட்டம் (ம) வட்டம், கொத்தபேட்டா கிராமம் பட்டா புல எண்கள். 87/1B1 (பகுதி) மற்றும் 87/1B2 (பகுதி)–ல் 4.75.0 ஹெக்டர் பரப்பளவு பலத்திலிருந்து கீழ்கண்ட காப்புக்காடுகள் அமைந்துள்ளன.

The Proponent has furnished affidavit in Hundred Rupees stamp paper attested by the Notary stating that

I, M/s. MA- Quality Stone, registered office at 58B, Gandhi Nagar, Krishnagiri District- 635001, Tamilnadu State, solemnly declare and sincerely affirm that, I had applied for Prior Environment Clearance to SEIAA- Tamil Nadu for rough stone quarry in Patta land in S.F.No. 87/1B2 (P), over an extent of 3.70.0hectares of Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu State.

I swear to confirm that within 10km radial distance of the quarry site none of the following is situated.

- There are no protected areas notified under the wild life (Protection) Act, 1972 around 10km radius.
- No critically polluted areas as notified by the central pollution control board constituted under water (Prevention and Control of Pollution) Act 1974.

MEMBER SECR

- 3. No eco-Sensitive areas as notified around 10km radius.
- The Karnataka interstate boundary is situated about 7.37km away on the Northern side of the proposed site.
- There is no coastal zone found around 10km radius and this project site doesn't attract CRZ Notification, 2011.
- I will complete the following Corporate Environment Responsibility (CER) activities before commencement of the quarrying activity.

| S. No | Description                          | CER Cost in INR |  |
|-------|--------------------------------------|-----------------|--|
| 1     | Renovation of Existing Class Rooms   | 2,50,000        |  |
| 2     | Plantation in School                 | 50,000          |  |
| 3     | Library Books related to Environment | 50,000          |  |

- There will not be hindrance or disturbance to the people living no enrooted / nearby our quarry site while transporting the mineral our material and due to quarrying activities.
- 9. There is no approved habitation within 300m radius from the periphery of our quarry.
- I swear that afforestation will be carried out during the course of quarrying operation and maintained.
- 11. The required insurance will be taken in the name of the laborers working in our quarry site.
- 12. The existing road from the main road to quarry is in good condition and the same will be maintained and utilized for transportation of rough stone.
- 13. I will not engage any child labor in our quarry site and we aware that engaging child labor is punishable under the law.
- All types of safety/ protective equipment will be provided to all the laborers working in our quarry.
- No permanent structures, temples etc., are located within 500m radius from the periphery of our quarry.

I ensure to do all the social and Environment commitment as mentioned in the Mining plan to the best of our knowledge.

#### Details of 500M radius Proposed quarry:

The Project Proponent has submitted a copy of the letter obtained from the Deputy Director, Department of Geology & Mining, Krishnagiri District in his letter Roc.No.1179/2020/Mines, dated: 10.03.2022 has stated that the details of other quarries (Proposed / Existing / Abandoned Quarries) within a radius 500m from the boundary of the proposed quarry site as follows:

## Appraisal by SEAC:-

Proposed Rough stone quarry lease over an extent of 3.70.0Ha in S.F.Nos.87/1B2(P), Kothapetta Village, Krishnagiri Taluk, Krishnagiri District, Tamil Nadu by M/s.MA Quality Stone - For Environmental Clearance

The project proposal was placed for appraisal in this 316th meeting of SEAC held on 30.9.2022. The details of the project furnished by the proponent are available in the PARIVESH web portal (parivesh.nic.in).

The Committee noted that,

- 1. The project/activity is covered under category "B1" of Item 1 (a) "Mining of Minerals Projects" of the schedule to the EIA Notification, 2006.
- 2. ToR with Public Hearing issued vide Lr No.SEIAA-TN/F.No.8687/SEAC/ToR-1067/2022 Dated: 01.03.2022.
- Public hearing was conducted on 07.06.2022.
- EIA report was submitted on 18.07.2022.

Based on the presentation and document furnished by the project proponent, SEAC decided to recommend the proposal for the grant of Environmental Clearance for a production quantity of 5,00,977 cu.m of rough stone for an ultimate depth of 50 m below ground level, subject to the standard conditions as per the Annexure of this minutes & normal conditions stipulated by MOEF&CC, in addition to the following specific conditions:

MBER SECRE SEIAA-TN

- The prior Environmental Clearance granted for this mining project shall be valid for the project life including production value as laid down in the mining plan approved and renewed by competent authority, from time to time, subject to a maximum of thirty years, whichever is earlier vide MoEF&CC Notification S.O. 1807(E) dated 12.04.2022.
- The proponent shall mandatorily appoint the statutory Mines Manager and other statutorily competent persons such as Blaster, Mine Mate, Mine Foreman in relevant to the proposed quarry size as per the provisions of Mines Act 1952 and Metalliferrous Mines Regulations, 1961 respectively.
- The PP shall communicate the 'Notice of Opening' of the quarry to the Director of Mines Safety, Chennai Region before obtaining the CTO from the TNPCB.
- 4. The proponent shall maintain the 'S3 (or) G2' type of fencing all around the boundary of the proposed working quarry with gates for entry/exit before the commencement of the operation as recommended in the DGMS Circular, 11/1959 and shall furnish the photographs showing the same before obtaining the CTO from TNPCB.
- 5. Further, the PP shall maintain the garland drain with proper size, gradient and length along the boundary of the pit leaving behind the mandatory safety zone of 7.5 m as it is designed to take care of run-off water (size, gradient and length) before obtaining the CTO from TNPCB.
- 6. The PP shall maintain a safety zone of 7.5 m invariably along the South side of the proposed quarry adjacent to the neighbouring quarry and it shall not be extracted unless a statutory permission is obtained from the Chief Inspector of Mines (also designated as Director-General of Mines Safety) under the provisions of Regulations 111 (3) of MMR, 1961.
- 7. The PP shall carry out the shallow depth Jack hammer drilling (of 32-34 mm dia & 1.5 m depth) & NONEL initiation based 'controlled' blasting operation involving muffle blasting in the proposed quarry such that the blast-induced ground vibrations are controlled within the permissible limits as stipulated by the DGMS as well as no fly rock travel beyond 20 m from the blast site.
- The PP shall ensure that the blasting operations are carried out by the blaster/Mine Mate/Mine Foreman employed by him as per the provisions of MMR 1961.

22 Page 9 of 32

EC Identification No. - EC22B001TN163426 File No. - 8687 Date of Issue EC - 08/11/2022

- The PP shall use the jack hammer drill machine fitted with the dust extractor for the drilling operations such that the fugitive dust is controlled effectively at the source.
- 10. As it was revealed during the deliberations, the PP is instructed to carry out the scientific studies on design of controlled blasting for reducing the impact of blast-induced ground/air vibrations and fly rock in the proposed quarry, by involving a reputed Research and Academic Institution such as NIRM, IIT (ISM)/Dhanbad, Anna University Chennai-Dept of Mining Engg, NIT Surathkal-Dept of Mining Engg, and any CSIR Laboratories etc shall be carried out before the commencement of mining operations. A copy of such scientific study report shall be submitted to the SEIAA, MoEF, TNPCB, and DMS, Chennai as a part of Environmental Compliance.
- 11. The Project Proponent (PP) shall submit a 'Slope stability action plan' incorporating the haul road ramp keeping the benches intact for the proposed quarry lease as the depth of the proposed quarry is exceeding 40 m agl after having approved by the concerned AD (Geology & Mines) to the DEE/TNPCB before obtaining CTO.
- 12. Since few habitations are situated close to the mine lease boundary, the PP shall carry out the scientific studies on impacts of blasting operations on the surroundings such as ground vibration, air-blast and fly rock within one year after the commencement of mining operations, by involving a reputed Research and Academic Institution such as NIRM, IITs, Anna University Chennai-Dept of Mining Engg, NIT Surathkal-Dept of Mining Engg, and any CSIR Laboratories etc. A copy of such scientific study report shall be submitted to the SEIAA, MoEF, TNPCB, AD/Mines-DGM and DMS, Chennai as a part of Environmental Compliance.
- 13. The PP shall carry out the tree plantation to act as a barrier to reduce noise level and dust pollution along the boundary of the quarrying site considering the wind direction before obtaining the CTO from the TNPCB.
- 14. The Project Proponent shall ensure that the funds earmarked for environmental protection measures should be kept in separate account and should not be diverted for other purpose. Year-wise expenditure should be reported to the MoEF & CC Ministry and its Integrated Regional Office (IRO) located in Chennai.
- 15. The Project Proponent shall send a copy of the clearance letter marked to concerned Panchayat from whom any suggestion/representation has been received while processing the proposal.

MEMBER SECR

- 16. Mitigating measures shall be undertaken to control dust and other fugitive emissions all along the roads by providing a dedicated water sprinkler. Adequate corrective measures shall be undertaken to control dust emissions, which would include mechanized sweeping, water sprinkling/mist spraying on haul roads and loading sites, long range misting/fogging arrangement, wind barrier wall and vertical greenery system, green belt, etc.
- 17. The PP shall include the Mine closure activities as an integral part of the whole lifeof-mine plan and, also protect the environment and public health & safety by using safe & responsible closure practices. The PP shall carry out the Progressive closure activities from the commencement of mining operation as provided in their EMP and it shall be reviewed by the concerned AD (Mines) annually.
- 18. As per the MoEF&CC Office Memorandum F.No. 22-65/2017-1A.III dated: 30.09.2020 and 20.10.2020 the proponent shall adhere to the EMP as committed.
- 19. As accepted by the Project proponent the CER cost is Rs. 5 lakhs and the amount shall be spent for providing infrastructure facilities and plantation of trees for panchayat Union Primary School, Kothapetta Village before obtaining CTO from TNPCB.

#### ANNEXURE - I

- 1. The proponent shall mandatorily appoint the required number of statutory officials and the competent persons in relevant to the proposed quarry size as per the provisions of Mines Act 1952 and Metalliferrous Mines Regulations, 1961.
- 2. The proponent shall erect fencing all around the boundary of the proposed area with gates for entry/exit before the commencement of the operation and shall furnish the photographs/map showing the same before obtaining the CTO from TNPCB.
- 3. Perennial maintenance of haulage road/village / Panchayat Road shall be done by the project proponent as required in connection with the concerned Govt. Authority.
- 4. The Project Proponent shall adhere to the working parameters of mining plan which was submitted at the time of EC appraisal wherein year-wise plan was mentioned for total excavation i.e. quantum of mineral, waste, over burden, inter burden and top soil etc.. No change in basic mining proposal like mining technology, total excavation, mineral & waste production, lease area and scope of working (viz. method of mining, overburden & dump management, O.B & dump mining, mineral transportation mode, ultimate depth of mining etc.) shall not be carried out without prior approval of the Ministry of Environment, Forest

File No. - 8687 Date of Issue EC - 08/11/2022 Page 11 of 32 EC Identification No. - EC22B001TN163426

and Climate Change, which entail adverse environmental impacts, even if it is a part of approved mining plan modified after grant of EC or granted by State Govt. in the form of Short Term Permit (STP), Query license or any other name.

- 5. The reject/waste generated during the mining operations shall be stacked at earmarked waste dump site(s) only. The physical parameters of the waste dumps like height, width and angle of slope shall be governed as per the approved Mining Plan as per the guidelines/circulars issued by DGMS w.r.t. safety in mining operations shall be strictly adhered to maintain the stability of waste dumps.
- 6. The proponent shall ensure that the slope of dumps is suitably vegetated in scientific manner with the native species to maintain the slope stability, prevent crosion and surface run off. The gullies formed on slopes should be adequately taken care of as it impacts the overall stability of dumps.
- Perennial sprinkling arrangement shall be in place on the haulage road for fugitive dust suppression. Fugitive emission measurements should be carried out during the mining operation at regular intervals and submit the consolidated report to TNPCB once in six months.
- 8. The Project Proponent shall carry out slope stability study by a reputed academic/research institution such as NIRM, IIT, Anna University for evaluating the safe slope angle if the proposed dump height is more than 30 meters. The slope stability report shall be submitted to concerned Regional office of MoEF&CC, Govt. of India, Chennai as well as SEIAA, Tamilnadu.
- 9. The Proponent shall ensure that the Noise level is monitored during mining operation at the project site for all the machineries deployed and adequate noise level reduction measures undertaken accordingly. The report on the periodic monitoring shall be submitted to TNPCB once in 6 months.
- 10. Proper barriers to reduce noise level and dust pollution should be established by providing greenbelt along the boundary of the quarrying site and suitable working methodology to be adopted by considering the wind direction.
- 11. The purpose of Green belt around the project is to capture the fugitive emissions, carbon sequestration and to attenuate the noise generated, in addition to improving the aesthetics. A wide range of indigenous plant species should be planted as given in the appendix in consultation with the DFO, State Agriculture University and local school/college authorities.

MER SEC

The plant species with dense/moderate canopy of native origin should be chosen. Species of small/medium/tall trees alternating with shrubs should be planted in a mixed manner.

- 12. Taller/one year old Saplings raised in appropriate size of bags, preferably eco-friendly bags should be planted in proper escapements as per the advice of local forest authorities/botanist/Horticulturist with regard to site specific choices. The proponent shall earmark the greenbelt area with GPS coordinates all along the boundary of the project site with at least 3 meters wide and in between blocks in an organized manner.
- 13. Noise and Vibration Related: (i) The Proponent shall carry out only the Controlled Blasting operation using NONEL shock tube initiation system during daytime. Usage of other initiation systems such as detonating cord/fuse, safety fuse, ordinary detonators, cord relays, should be avoided in the blasting operation. The mitigation measures for control of ground vibrations and to arrest fly rocks should be implemented meticulously under the supervision of statutory competent persons possessing the I / II Class Mines Manager / Foreman / Blaster certificate issued by the DGMS under MNIR 1961, appointed in the quarry. No secondary blasting of boulders shall be carried out in any occasions and only the Rock Breakers (or) other suitable non-explosive techniques shall be adopted if such secondary breakage is required. The Project Proponent shall provide required number of the security sentries for guarding the danger zone of 500 m radius from the site of blasting to ensure that no human/animal is present within this danger zone and also no person is allowed to enter into (or) stay in the danger zone during the blasting. (ii) Appropriate measures should be taken for control of noise levels below 85 dBA in the work environment. Workers engaged in operations of HEMM, etc. should be provided with ear plugs/muffs, (iii) Noise levels should be monitored regularly (on weekly basis) near the major sources of noise generation within the core zone.
- 14. Ground water quality monitoring should be conducted once in every six months and the report should be submitted to TNPCB.
- 15. The operation of the quarry should not affect the agricultural activities & water bodies near the project site and a 50 m safety distance from water body should be maintained without carrying any activity. The proponent shall take appropriate measures for "Silt Management" and prepare a SOP for periodical de-siltation indicating the possible silt content and size in case of any agricultural land exists around the quarry.

MEMBER SECRET

Page 13 of 32 File No. - 8687 Date of Issue EC - 08/11/2022 646 A EC Identification No. - EC22B001TN163426

- The proponent shall provide sedimentation tank / settling tank with adequate capacity for runoff management.
- 17. The proponent shall ensure that the transportation of the quarried materials shall not cause any hindrance to the Village people/Existing Village Road and shall take adequate safety precautionary measures while the vehicles are passing through the schools / hospital. The Project Proponent shall ensure that the road may not be damaged due to transportation of the quarried rough stones; and transport of rough stones will be as per IRC Guidelines with respect to complying with traffic congestion and density.
- 18. To ensure safety measures along the boundary of the quarry site, security guards are to be posted during the entire period of the mining operation.
- 19. After mining operations are completed, the mine closure activities as indicated in the mine closure plan shall be strictly carried out by the Proponent fulfilling the necessary actions as assured in the Environmental Management Plan.
- 20. The Project proponent shall, after ceasing mining operations, undertake re-grassing the mining area and any other area which may have been disturbed due to their mining activities and restore the land to a condition that is fit for the growth of fodder, flora, fauna etc.
- 21. The Project Proponent shall comply with the provisions of the Mines Act, 1952, MMR 1961 and Mines Rules 1955 for ensuring safety, health and welfare of the people working in the mines and the surrounding habitants.
- 22. The project proponent shall ensure that the provisions of the MMRD, 1956, the MCDR 2017 and Tamilnadu Minor Mineral Concession Rules 1959 are compiled by carrying out the quarrying operations in a skillful, scientific and systematic manner keeping in view proper safety of the labour, structure and the public and public works located in that vicinity of the quarrying area and in a manner to preserve the environment and ecology of the area.
- 23. The quarrying activity shall be stopped if the entire quantity indicated in the Mining plan is quarried even before the expiry of the quarry lease period and the same shall be informed to the District AD/DD (Geology and Mining) District Environmental Engineer (TNPCB)and the Director of Mines Safety (DMS), Chennai Region by the proponent without fail.
- 24. The Project Proponent shall abide by the annual production scheduled specified in the approved mining plan and if any deviation is observed, it will render the Project Proponent liable for legal action in accordance with Environment and Mining Laws.

MEMBER SEC

- 25. Prior clearance from Forestry & Wild Life including clearance from committee of the National Board for Wildlife as applicable shall be obtained before starting the quarrying operation, if the project site attracts the NBWL clearance, as per the existing law from time to time.
- 26. All the conditions imposed by the Assistant/Deputy Director, Geology & Mining, concerned District in the mining plan approval letter and the Precise area communication letter issued by concerned District Collector should be strictly followed.
- 27. The mining lease holders shall, after ceasing mining operations, undertake re-grassing the mining area and any other area which may have been disturbed due to their mining activities and restore the land to a condition which is fit for growth of fodder, flora, fauna etc.
- 28. The Project proponent shall install a Display Board at the entrance of the mining lease area/abutting the public Road, about the project information as shown in the Appendix -II of this minute.

SEIAA Page 17 of 32

EC Identification No. - EC22B001TN163426 File No. - 8687

Date of Issue EC - 08/11/2022 650 A
#### Discussion by SEIAA and the Remarks:-

The proposal was placed before the 562<sup>nd</sup> Authority meeting held on 25.10.2022 & 26.10.2022. SEAC has furnished its recommendations to the Authority for granting Environmental Clearance to the Project subject to the conditions stated therein. After detailed discussion, SEIAA decided to grant Environmental Clearance for the quantity of 366486 m<sup>3</sup> of Rough stone with restricted depth upto 45m AGL for a period of 5 years subject to the conditions as recommended by SEAC in addition to the following condition & conditions stated vide Annexure A.

- The AD/DD, Dept. of Geology & Mining shall ensure operation of the proposed quarry after the submission slope stability study conducted through the reputed research & Academic Institutions such as NIRM, IITs, NITS Anna University, and any CSIR Laboratories etc.
- The AD/DD, Dept. of Geology & Mining & Director General of Mine safety shall ensure strict compliance and implementation of bench wise recommendations/action plans as recommended in the scientific slope stability study of the reputed research & Academic Institutions as a safety precautionary measure to avoid untoward accidents during mining operation.
- 3. No trees in the area should be removed and all the trees numbered and protected. In case trees fall within the proposed quarry site the trees may be transplanted in the Greenbelt zone. The proponent shall ensure that the activities in no way result in disturbance to forest and trees in vicinity. The proponent shall ensure that the activity does not disturb the movement of grazing animals and free ranging wildlife. The proponent shall ensure that the activity does not disturb the biodiversity, the flora & fauna in the ecosystem. The proponent shall ensure that the activities do not disturb the resident and migratory birds. The proponent shall ensure that the activities do not disturb the vegetation and wildlife in the adjoing reserve forests and areas around.
- The proponent shall ensure that the operations do not result in loss of soil biological properties and nutrients.
- The activity should not result in CO<sub>2</sub> release and temperature rise and add to micro climate alternations.

RER SEC

- 6. The proponent shall ensure that the activity does not disturb the water bodies and natural flow of surface and ground water, nor cause any pollution, to water sources in the area.
- The proponent shall ensure that the activities undertaken do not result in carbon emission, and temperature rise, in the area.
- The proponent shall ensure that Monitoring is carried out with reference to the quantum of particulate matter during excavation; blasting; material transport and also from cutting waste dumps and haul roads.
- The proponent shall ensure that the activities do not disturb the agro biodiversity and agro farms. Actions to be taken to promote agro forestry, mixed plants to support biodiversity conservation in the mine restoration effort.
- The proponent shall ensure that activity does not deplete the indigenous soil seed bank and disturb the mycorrizal fungi, soil organism, soil community nor result in eutrophication of soil and water.
- The activities should not disturb the soil properties and seed and plant growth. Soil amendments as required to be carried out, to improve soil heath
- Bio remediation using microorganisms should be carried out to restore the soil environment to enable carbon sequestration.
- 13. The proponent shall ensure that all mitigation measures listed in the EIA/EMP are taken to protect the biodiversity and natural resources in the area.
- 14. The proponent shall ensure that the activities do not impact the water bodies/wells in the neighboring open wells and bore wells. The proponent shall ensure that the activities do not in any way affect the water quantity and quality in the open wells and bore wells in the vicinity or impact the water table and levels. The proponent shall ensure that the activities do not disturb the river flow, nor affect the Odai, Water bodies, Dams in the vicinity.
- 15. The proponent shall ensure that in the green belt development more indigenous trees species (Appendix as per the SEAC Minutes) to be planted.
- 16. The proponent shall ensure the area is restored and rehabilitated with native trees as recommended in SEAC Minutes (in Appendix).
- The proponent shall ensure that the mine restoration is done using mycorrizal VAM, vermin-composting, Biofertilizers to ensure soil health and biodiversity conservation.
- The proponent shall ensure that the topsoil is protected and used in planting activities in the area.

Page 19 of 32

EC Identification No. - EC22B001TN163426 File No. - 8687 Date of Issue EC - 08/11/2022

19. The proponent should ensure that there is no disturbance to the agriculture plantations, social forestry plantations, waste lands, forests, sanctuary or national parks. There should be no impact on the land, water, soil and biological environment and other natural resources due to the mining activities.

ALC: A DESCRIPTION

- The proponent shall ensure that topsoil to be utilized for site restoration and Green belt alone within the proposed area.
- 21. The proponent shall ensure that the activities do not impact green lands/grazing fields of all types surrounding the mine lease area which are food source for the grazing cattle.
- 22. The project proponent shall store/dump the waste generated within the earmarked area of the project site for mine closure as per the approved mining plan.

#### Directions for Reclamation of mine sites

- The mining closure plan should strictly adhere to appropriate soil rehabilitation measures to ensure ecological stability of the area. Reclamation/Restoration of the mine site should ensure that the Geotechnical, physical, chemical properties are sustainable that the soil structure composition is buildup, during the process of restoration.
- 2. The proponent shall ensure that the mine closure plan is followed as per the mining plan and the mine restoration should be done with native species, and site restored to near original status. The proponent shall ensure that the area is ecologically restored to conserve the ecosystems and ensure flow of goods and services.
- 3. A crucial factor for success of reclamation site is to select sustainable species to enable develop a self-sustaining eco system. Species selected should easily establish, grow rapidly, and possess good crown and preferably be native species. Species to be planted in the boundary of project site should be un palatable for cattle's/ goats and should have proven capacity to add leaf-litter to soil and decompose. The species planted should be adaptable to the site conditions. Should be preferably pioneer species, deciduous in nature to allow maximum leaf-litter, have deep root system, fix atmospheric nitrogen and improve soil productivity. Species selected should have the ability to tolerate altered pit and toxicity of and site. They should be capable of meeting requirement of local people in regard to fuel fodder and should be able to attract bird, bees and butterflies. The species should be planted in mixed association.
- For mining area reclamation plot culture experiments to be done to identify/ determine suitable species for the site.

MEMBER SECRETAR SEIAA-TN

- Top soil with a mix of beneficial microbes (Bacteria/Fungi) to be used for reclamation of mine spoils. AM Fungi (Arbuscular mycorrhizal fungi), plant growth promoting Rhizo Bacteria and nitrogen fixing bacteria to be utilized.
- Soil and moisture conservation and water harvesting structures to be used where ever possible for early amelioration and restoration of site.
- 7. Top soil is most important for successful rehabilitation of mined sites. Topsoil contains majority of seeds and plant propagation, soil microorganism, Organic matter and plant nutrients. Wherever possible the topsoil should be immediately used in the area of the for land form reconstruction, to pre mining conditions.
- Over burdens may be analyzed and tested for soil characteristics and used in the site for revegetation. Wherever possible seeds, rhizome, bulbs, etc of pioneering spices should be collected, preserved and used in restoring the site.
- Native grasses seeds may be used as colonizers and soil binders, to prevent erosion and allow diverse self- sustaining plant communities to establish. Grasses may offer superior tolerance to drought, and climatic stresses.
- 10. Reclamation involves planned topographical reconstruction of site. Care to be taken to minimize erosion and runoff. Topsoils should have necessary physical, chemicals, ecological, properties and therefore should be stored with precautions and utilized for reclamation process. Stocked topsoil should be stabilized using grasses to protect from wind. Seeds of various indigenous and local species may be broad casted after topsoil and treated overburden are spread.
- 11. Alkaline soils, acidic soils, Saline soils should be suitably treated/amended using green manure, mulches, farmyard manure to increase organic carbon. The efforts should be taken to landscape and use the land post mining. The EMP and mine closure plan should provide adequate budget for reestablishing the site to pre-mining conditions. Effective steps should be taken for utilization of over burden. Mine waste to be used for backfilling, reclamation, restoration, and rehabilitation of the terrain without affecting the drainage and water regimes. The rate of rehabilitation should be similar to rate of mining. The land disturbed should be reshaped for long term use. Mining should be as far as possible be ecofriendly. Integration of rehabilitation strategies with mining plan will enable speedy restoration.
- 12. Efforts should to taken to aesthetically improve the mine site. Generally there are two approaches to restoration i.e Ecological approach which allows tolerant species to establish

Page 21 of 32

EC Identification No. - EC22B001TN163426 File No. - 8687 Date of Issue EC - 08/11/2022

following succession process allowing pioneer species to establish. The other approach i.e plantation approach is with selected native species are planted. A blend of both methods may be resorted to restore the site by adding soil humas and mycorrhiza.

 Action taken for restoration of the site should be specifically mentioned in the EC compliances.

Part-A: Conditions to be Complied before commencing mining operations:-

- 1. The project proponent shall advertise in at least two local newspapers widely circulated in the region, one of which shall be in the vernacular language informing the public that
  - I. The project has been accorded Environmental Clearance.
  - II. Copies of clearance letters are available with the Tamil Nadu Pollution Control Board.
  - III. Environmental Clearance may also be seen on the website of the SEIAA.
  - IV. The advertisement should be made within 7 days from the date of receipt of the clearance letter and a copy of the same shall be forwarded to the SEIAA.
- Mining activity should be reviewed by the District Collector after three years and decide for further extension.
- NOC from the Standing committee of the NBWL shall be obtained, if protected areas are located within 10 Km from the proposed project site.
- The project proponent shall comply the conditions iaid down in the Section V, Rule 36 of Tamil Nadu Minor Minerals Concession Rules 1959.
- 5. A copy of the Environment Clearance letter shall be sent by the proponent to the concerned Panchayat, Town Panchayat / Panchayat union/ Municipal Corporation, Urban Local Body and the Local NGO, if any, from whom suggestions/ representations, if any, were received while processing the proposal. The clearance letter shall also be put on the website of the proponent and also kept at the site, for the general public to sec.
- Quarry lease area should be demarcated on the ground with wire fencing to show the boundary of the lease area on all sides with red flags on every pillar shall be erected before commencement of quarrying.
- 7. The proponent shall ensure that First Aid Box is available at site.

BER SECR

- 8. The excavation activity shall not alter the natural drainage pattern of the area.
- 9. The excavated pit shall be restored by the project proponent for useful purposes.
- The proponent shall quarry and remove only in the permitted areas as per the approved Mining Plan details.
- 11. The quarrying operation shall be restricted between 7AM and 5 PM.
- 12. The proponent shall take necessary measures to ensure that there shall not be any adverse impacts due to quarrying operation on the nearby human habitations, by way of pollution to the environment.
- A minimum distance of 50mts. from any civil structure shall be kept from the periphery of any excavation area.
- 14. The mined out pits should be backfilled where warranted and area should be suitably landscaped to prevent environmental degradation. The mine closure plan as furnished in the proposal shall be strictly followed with back filling and tree plantation.
- 15. Wet drilling method is to be adopted to control dust emissions. Delay detonators and shock tube initiation system for blasting shall be used so as to reduce vibration and dust.
- 16. Drilling and blasting shall be done only either by licensed explosive agent or by the proponent after obtaining required approvals from Competent Authorities.
- Blasting shall be carried out after announcing to the public adequate through public address system to avoid any accident.
- 18. A study has to be conducted to assess the optimum blast parameters and blast design to keep the vibration limits less than prescribed levels and only such design and parameters should be implemented while blasting is done. Periodical monitoring of the vibration at specified location to be conducted and records kept for inspection.
- The Proponent shall take appropriate measures to ensure that the GLC shall comply with the revised NAAQ norms notified by MoEF& CC, GoI on 16.11.2009.
- 20. The following measures are to be implemented to reduce Air Pollution during transportation of mineral
  - Roads shall be graded to mitigate the dust emission.
  - Water shall be sprinkled at regular interval on the main road and other service roads to suppress dust
- 21. The following measures are to be implemented to reduce Noise Pollution
  - Proper and regular maintenance of vehicles and other equipment

Page 23 of 32

EC Identification No. - EC22B001TN163426 File No. - 8687

Date of Issue EC - 08/11/2022 656 A

- ii. Limiting time exposure of workers to excessive noise.
- The workers employed shall be provided with protection equipment and earmuffs etc.
- Speed of trucks entering or leaving the mine is to be limited to moderate speed of 25 kmph to prevent undue noise from empty trucks.
- All noise generating machinery the compressor, generator to be enclosed in acoustic enclosure so as to reduce noise in working area.
- 22. Measures should be taken to comply with the provisions laid under Noise Pollution (Regulation and Control) (Amendment) Rules, 2010, dt: 11.01.2010 issued by the MoEF& CC, GoI to control noise to the prescribed levels.
- 23. Suitable conservation measures to augment groundwater resources in the area shall be planned and implemented in consultation with Regional Director, CGWB. Suitable measures should be taken for rainwater harvesting.
- Permission from the competent authority should be obtained for drawl of ground water, if any, required for this project.
- 25. Topsoil, if any, shall be stacked properly with proper slope with adequate measures and should be used for plantation purpose.
- 26. The following measures are to be adopted to control erosion of dumps:-
  - Retention/ toe walls shall be provided at the foot of the dumps.
  - Worked out slopes are to be stabilized by planting appropriate shrub/ grass species on the slopes.
- 27. Waste oils, used oils generated from the EM machines, mining operations, if any, shall be disposed as per the Hazardous& other wastes (Management, and Trans Boundary Movement) Rules, 2016 and its amendments thereof to the recyclers authorized by TNPCB.
- Concealing the factual data or failure to comply with any of the conditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of Environment (Protection) Act, 1986.
- Rain water harvesting to collect and utilize the entire water falling in land area should be provided.
- 30. Rain water getting accumulated in the quarry floor shall not be discharged directly to the nearby stream or water body. If it is to be let into the nearby water body, it has to be

BER SECRE

discharged into a silt trap on the surface within the lease area and only the overflow after allowing settling of soil be let into the nearby waterways. The silt trap should be of sufficient dimensions to catch all the silt water being pumped out during one season. The silt trap should be cleaned of all the deposited silt at the end of the season and kept ready for taking care of the silt in the next season.

- 31. The lease holder shall undertake adequate safeguard measures during extraction of material and ensure that due to this activity, the hydro-geological regime of the surrounding area shall not be affected. Regular monitoring of ground water level and quality shall be carried out around the mine lease area during the mining operation. If at any stage, if it is observed that the groundwater table is getting depleted due to the mining activity; necessary corrective measures shall be earried out. District Collector/mining officer shall ensure this.
- 32. No tree-felling shall be done in the leased area, except only with the permission from competent Authority.
- 33. To take up environmental monitoring of the proposed quarry site before, during and after the mining activities including vibration study data, water, air & flora/fauna environment, slurry water generated/disposed and method of disposal, involving a reputed academic Institution.
- 34. It shall be ensured that the total extent of nearby quarries(existing, abandoned and proposed) located within 500 meter radius from the periphery of this quarry is not exceeding 5 hectares within the mining lease period of this application.
- 35. It shall be ensured that there is no habitation is located within 300 meter radius from the periphery of the quarry site and also ensure that no hindrance will be caused to the people of the habitation located within 300m radius from the periphery of the quarry site.
- 36. Free Silica test should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF& CC. GOI.
- 37. Air sampling at intersection point should be conducted and reported to TNPCB, Department of Geology and Mining and Regional Director, MoEF& CC, GOI.
- Bunds to be provided at the boundary of the project site.
- 39. The project proponent shall undertake plantation/afforestation work by planting the native species on all side of the lease area at the rate of 400/Ha. Suitable tall tree saplings should be planted on the bunds and other suitable areas in and around the work place.

Date of Issue EC - 08/11/2022 658 A EC Identification No. - EC22B001TN163426 File No. -8687

- 40. Floor of excavated pit to be levelled and sides to be sloped with gentle slope (Except for granite quarries) in the mine closure phase.
- The Project Proponent shall ensure a minimum of 2.5% of the annual turnover will be utilized for the CSR Activity
- 42. The Project Proponent shall provide solar lighting system to the nearby villages.
- 43. Earthen bunds and barbed wire fencing around the pits with green belt all along the boundary shall be developed and maintained.
- 44. Safety equipments to be provided to all the employees.
- 45. Safety distance of 50m has to be provided in case of railway, reservoir, canal/odai
- 46. The Assistant/Deputy Director, Department of Geology & mining shall ensure that the proponent has engaged the blaster with valid Blasting license/certificate obtained from the competent authority before execution of mining lease.
- 47. The proponent shall furnish the Baseline data covering the Air, Water, Noise and land environment quality for the proposed quarry site before execution of mining lease.
- 48. The proponent shall erect the pillars in accordance with the Rules for depicting GPS details in the earmarked boundary of the quarry site to monitor electronically before execution of mining.
- 49. The proponent has to provide insurance protection to the workers in the case of existing mining or provide the affidavit in case of fresh lease before execution of mining lease.
- 50. The proponent has to display the name board at the quarry site showing the details of Proponent, lease period, extent, etc., with respect to the existing activity before execution of mining.
- Heavy earth machinery equipments if utilized, after getting approval from the competent authority.
- 52. The Proponent shall ensure that the project activity including blasting, mining transportation etc should in no way have adverse impact to the other forests, such as reserve forests and social forests, tree plantation and bio diversity, surrounding water bodies etc.
- 53. The proponent shall provide Green Belt development at the rate of not less than 400 trees/Hectare. The tree saplings shall be not less than 3m height.
- 54. The fugitive emissions should be monitored during the mining activity and should be reported to TNPCB once in a month and the operation of the quarry should no way impact the agriculture activity & water bodies near the project site.

MEMBER SECRETA

- 55. All the commitment made by the project proponent in the proposal shall be strictly followed.
- 56. The mining lease holders shall, after ceasing mining operations, undertake re-grassing the mining area and any other area which may have been disturbed due to their mining activities and restore the land to a condition which is fit for growth of fodder, flora, fauna etc.
- The Project proponent has to strictly comply the outcome/direction of the Hon'ble NGT, Principle Bench, New Delhi in the O.A No.186 of 2016 (M.A.No.350/2016), O.A. No.200/2016, O.A.No.580/2016 (M.A.No.1182/2016), O.A.No.102/2017, O.A.No.404/ 2016 (M.A.No. 758/2016, M.A. No. 920 /2016, M.A.No.1122/2016, M.A.No. 12/2017 & M.A.No.843/2017), O.A.No.405/2016 and O.A.No.520 of 2016 (M.A.No.981/2016, M.A.No.982/2016 & M.A.No.384/2017).
- 58. All required sanitary and hygienic measures should be in place before starting construction activities and they have to be maintained throughout the construction phase.
- 59. The company shall stress upon the preventive aspects of occupational health.
- 60. A separate environment and safety management cell with qualified staff shall be set up before commissioning of construction activities and shall be retained throughout the lifetime of the industry, for implementation of the stipulated environmental safeguards.
- 61. A scientific site/ ecological rehabilitation and restoration plan on long term basis should be drawn to carryout restoration with native species and Bio diversity.
- 62. The Green/Blue plan should guide the restoration of the site. The rehabilitation/restoration plan should be submitted to SEIAA-TN within one month. If applicable.
- 63. The existing water bodies should not be disturbed to ensure sustainable environment for aquatic life forms.
- 64. The proponent should completely implement all environmental pollution control measures as detailed in the EIA report and in the additional report.
- 65. Avenue plantation wherever needed has to be carried out along the route for dust suppression.
- 66. The green belt developed for the prevention of dust pollution should not form a part of the larger green belt development envisaged in the EIA report.
- 67. Regular monitoring and check up for pulmonary and carcinogenic diseases to be carried out regularly, not only for the workers involved in the mines but also to the people in the

Date of Issue EC - 08/11/2022

EC Identification No. - EC22B001TN163426 File No. - 8687 Date of Iss

villages adjoining the mines. Interaction with the Primary Health Centre & district medical officer should be on regular basis to monitor the incidence of the diseases if any and to provide suitable medical facility for the patients.

- 68. Monitoring of well water levels and water quality of the wells in the locations furnished in the EIA report shall be done during pre-monsoon and post monsoon period and results submitted to the Regional Office of MoEF, Chennai and SEIAA.
- 69. Monitoring of water quality and air quality in and around the project site in the selected monitoring points as mentioned in the EIA report shall be continued regularly involving Academic Institutions.
- Hydro geological study including infiltration test shall be conducted by any reputed agency to estimate leachate quantity.
- Regular medical check-up for mine workers and nearby residents around the project site involving community medical centre/NIMH shall be conducted.
- 72. As per norms, the health study should be conducted through competent/approved health organization and report submitted for one year.
- 73. The effective safe guard measures shall be provided to control particulate dust level in critical areas, transfer points and haul road within the mine area.
- 74. NOC from the State GWA for drawing ground water shall be obtained, if ground water table is intersected.
- Green belt shall be provided as per norms of MoEF & CC, GOI, in consultation with local DFO.
- 76. All the recommendations made in the EIA report of the project shall be effectively implemented.
- 77. A booklet containing the Dos and Don'ts shall be prepared in vernacular languages for the use of the mine engineers/ managers and the workers to ensure that all necessary environmental, safety and health measures are undertaken.
- 78. All the environmental protection measures and safeguards as recommended in the EIA report shall be complied with.
- 79. Hydro geological study of the area shall be reviewed annually and report submitted to the Authority. No water bodies including natural drainage system in the area shall be disturbed due to activities associated with the operation of the Mining activity.

MEMBER SECRETA

- 80. A separate Environmental Management Cell equipped with full fledged laboratory facilities to carry out the various Environmental Management and Monitoring functions shall be set up under the control of a Senior Executive.
- 81. The project proponent shall upload the status of compliance of the stipulated environmental clearance conditions, including results of monitored data on their website and shall update the same periodically. It shall simultaneously be sent to the Regional Office of the MoEF at Chennai, the respective Zonal Office of CPCB and the SPCB. The criteria pollutant levels namely; RSPM, SO2, NOx or critical sector parameters, indicated for the projects shall be monitored and displayed at a convenient location near the main gate of the company in the public domain.

#### Part B: General Conditions:

- EC is given only on the factual records, documents and the commitment furnished in non judicial stamp paper by the proponent.
- The Proponent shall obtain the Consent from the TNPC Board before commencing the activity.
- No change in mining technology and scope of working should be made without prior approval of the SEIAA, Tamil Nadu.
- No change in the calendar plan including excavation, quantum of mineral (minor mineral) should be made.
- 5. Effective safeguard measures, such as regular water sprinkling shall be carried out in critical areas prone to air pollution and having high levels of particulate matter such as loading and unloading point and all transfer points. Extensive water sprinkling shall be carried out on haul roads. It should be ensured that the Ambient Air Quality parameters conform to the norms prescribed by the Central Pollution Control Board in this regard.
- Effective safeguards shall be adopted against health risks on account of breeding of vectors in the water bodies created due to excavation of earth.
- A berm shall be left from the boundary of adjoining field having a width equal to at least half the depth of proposed excavation.
- Loading and unloading areas including all the transfer points should also have efficient dust control arrangements. These should be properly maintained and operated.

MEMBER SECR Page 29 of 32

- Vehicular emissions shall be kept under control and be regularly monitored. The mineral transportation shall be carried out through the covered trucks only and the vehicles carrying the mineral shall not be overloaded.
- Access and haul roads to the quarrying area should be restored in a mutually agreeable manner where these are considered unnecessary after extraction has been completed.
- 11. All Personnel shall be provided with protective respiratory devices including safety shoes, masks, gloves etc. Supervisory people should be provided with adequate training and information on safety and health aspects. Occupational health surveillance program of the workers should be undertaken periodically to observe any contractions due to exposure to dust and take corrective measures, if needed.
- 12. Periodical medical examination of the workers engaged in the project shall be carried out and records maintained. For the purpose, schedule of health examination of the workers should be drawn and followed accordingly. The workers shall be provided with personnel protective measures such as masks, gloves, boots etc.
- Workers/labourers shall be provided with facilities for drinking water and sanitation facility for Female and Male separately.
- The project proponent shall ensure that child labour is not employed in the project as per the sworn affidavit furnished.
- 15. The funds earmarked for environmental protection measures should be kept in separate account and should not be diverted for other purpose. Year wise expenditure should be reported to the Ministry of Environment and Forests and its Regional Office located at Chennai.
- 16. The Environmental Clearance does not absolve the applicant/proponent of his obligation/requirement to obtain other statutory and administrative clearances from other statutory and administrative authorities.
- 17. This Environmental Clearance does not imply that the other statutory / administrative clearances shall be granted to the project by the concerned authorities. Such authorities would be considering the project on merits and be taking decisions independently of the Environmental Clearance
- The SEIAA, Tamil Nadu may alter/modify the above conditions or stipulate any further conditions in the interest of environment protection.

MEMBER SECRI

87 Date of Issue EC - 08/11/2022 663 A

- 19. The SEIAA, Tamil Nadu may cancel the Environmental Clearance granted to this project under the provisions of EIA Notification, 2006, at any stage of the validity of this Environmental Clearance, if it is found or if it comes to the knowledge of this SEIAA, TN that the project proponent has deliberately concealed and/or submitted false or misleading information or inadequate data for obtaining the Environmental Clearance.
- Failure to comply with any of the conditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of the Environment (Protection) Act, 1986.
- 21. The above conditions will be enforced inter-alia, under the provisions of the Water (Prevention & Control of Pollution) Act, 1974, the Air (Prevention & Control of Pollution) Act, 1981, the Environment (Protection) Act, 1986, the Public Liability Insurance Act, 1991, along with their amendments, Minor Mineral Conservation & Development Rules, 2010 framed under MMDR Act 1957, National Commission for protection of Child Right Rules, 2006, Wildlife Protection Act, 1972, Forest Conservation Act, 1980, Biodiversity Conservation Act, 2016, the Biological Diversity Act, 2002 and Biological diversity Rules, 2004 and Rules made there under and also any other orders passed by the Hon'ble Supreme Court of India/Hon'ble High Court of Madras and any other Courts of Law relating to the subject matter.
- Any other conditions stipulated by other Statutory/Government authorities shall be complied.
- 23. Any appeal against this Environmental Clearance shall lie with the Hon'ble National Green Tribunal, if preferred, within a period of 30 days as prescribed under Section 16 of the National Green Tribunal Act, 2010.
- 24. The Environmental Clearance is issued based on the documents furnished by the project proponent. In case any documents found to be incorrect/not in order at a later date the Environmental Clearance issued to the project will be deemed to be revoked/ cancelled.

National Accreditation Board for Education and Training

# **Certificate of Accreditation**

## Geo Exploration & Mining Solutions, Salem

No. 17, Advaitha Ashram Road, Fairlands, Salem – 636 004, Tamilnadu, India.

The organization is accredited as **Category-A** under the QCI-NABET Scheme for Accreditation of EIA Consultant Organization, Version 3: for preparing EIA-EMP reports in the following Sectors –

| S.No | Sector Description                                                                                                                                |    | Sector (as per) |      |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------|----|-----------------|------|
|      |                                                                                                                                                   |    | MoEFCC          | Cal. |
| 1    | Mining of minerals opencast only                                                                                                                  | 1  | 1 (a) (i)       | Α    |
| 2    | Industrial estates/ parks/ complexes/areas, export processing<br>Zones (EPZs), Special Economic Zones (SEZs), Biotech Parks, Leather<br>Complexes | 31 | 7 (c)           | В    |
| 3    | Building and construction projects                                                                                                                |    | 8(a)            | В    |

Note: Names of approved EIA Coordinators and Functional Area Experts are mentioned in RAAC minutes dated Jan 06, 2023 and posted on QCI-NABET website.

The Accreditation shall remain in force subject to continued compliance to the terms and conditions mentioned in QCI-NABET's letter of accreditation bearing no QCI/NABET/ENV/ACO/23/2684 dated Feb 20, 2023. The accreditation needs to be renewed before the expiry date by Geo Exploration & Mining Solutions, Salem following due process of assessment.
